Interest is figured on the value of the machine at the time when the accounts are made out, hence, for the first year on a $400 outfit, it will be $24; for the second year, $19.56 (figuring the value of the outfit at 81½ per cent. of cost as stated above); for the third year, $15.12, etc. At the fifth year, with the scrap value of the outfit as $30, the interest will be figured at $1.80 as long as the machine remains in the user's possession.

Operating Costs.

Operating costs, in addition to the fuel and oil consumed, include the wages of the driver, tire costs, replacements or spare parts, overhaul (usually annual), maintenance (when not figured under garaging), and licenses. Where the nature of the business permits, the ex-driver of a horse-wagon can often be employed at the same wages as before for the tricar, etc., but in other cases, as high as $16 to $18 a week must be counted on. The cost of tires varies according to the nature of the surfaces over which the vehicle is to travel, and more or less to the good or bad fortune of the user and the care used by his employee in driving. On a tricar or sidecar outfit, with three tires, about ⅓ cent per mile can be figured on as the cost of average replacements, repairing, etc. Replacements, other than tires, depend upon the care in driving, etc., but chiefly upon the suitability of the outfit for commercial uses. Thus, a light weight, high-powered twin, with tricar attached for loads of 300 pounds, is as suitable and economical as two brewery horses harnessed to a light one-horse delivery wagon would be. In both cases it is no reflection on the load-carrying portion of the outfit; the draught power is extravagant.

Maintenance consists in washing down, polishing, filling with oil and gasoline, making minor repairs, etc. The overhaul is usually done by the agent or manufacturer of the machine and with the maintenance is figured at 15 per cent. on the original value of the outfit each year. The license cost varies according to the locality. Thus the operating costs are:

Gasoline.
Oil.
Driver's wages.
Tires at ½ cent per mile.
Replacements.
Maintenance and overhaul, 15 per cent. per annum.
License.

Estimating Costs.

In estimating the total cost for any given year of a commercial motorcycle outfit, the annual mileage necessary for the work is first determined on. The standing costs are next calculated; then the operating costs, knowing the mileage per gallon of gasoline and oil, cost of license, and figuring the remaining costs as stated above. A typical example is here given:

Tricar; Price, $400.

Annual mileage, 12,000, or 40 miles per day for 300 working days. Gasoline consumption, 40 miles to a gallon; oil, 80 miles to a pint.

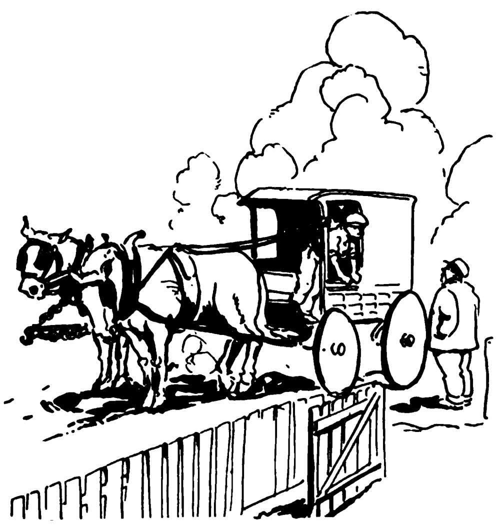
Standing Costs.

Interest on $400 at 6 per cent	$24.00
Depreciation, 18½ per cent	74.00
Garaging (kept in store)	....
Tax	3.00
Insurance	10.00
Total	$111.00

Operating Costs.

Gasoline, 40 miles to gallon (15 cents)	$45.00
Oil, 80 miles per pint (65 cents per gal.)	15.35
Driver at $3.50 per week	182.00
Tires at 1-3 cent per mile	40.00
Maintenance and overhaul, 15 per cent.	60.00
License	3.00
Replacements (estimated)	2.50
Total	$347.85
Total operating costs	$458.85

Average per mile, 3.82 cents; operating cost per mile, average, 2.89 cents; average standing cost per mile, 0.93. If the load is 300 pounds per trip, the cost per ton-mile is 15.29 cents. This ton-mile basis is that used in comparing the costs of various methods of transportation, and is figured as the cost of carrying one ton one mile. For a 300-pound capacity vehicle each load would be 3-20 of a ton per mile, hence the ton-mileage is 3,000 in this case, and the cost $458.85 ÷ 3,000.



"Two brewery horses harnessed to a light delivery wagon."

A Sensible Comparison.

The above costs look large, but they are not. The average cost per mile for a single horse and wagon in New York or like cities works out at 6.4 to 7.8 cents, and the horse is rarely good for 6,000 miles per year. The big department stores figure the useful life of a horse as 15 months; one of the largest renewing half his stable every year and working the horses in pairs to light wagons at that, with an average mileage of 19 per day, 300 days a year. The cost per ton-mile of a single horse and wagon is in the neighborhood of the 36 cents. Naturally, in smaller cities and towns and in the country, the costs will be less, but mile for mile the motorcycle, with tricar or side van, will always be the cheaper.

There is no doubt that the figures of 3.82 cents per mile could be reduced: by not insuring; where there is no tax; by the employment of a more economical motor; or where a number of vehicles are used, by the establishment of a stable or garage by the user for his own machines. If the insurance and tax items are taken off, the cost per mile will be 3.78 cents. The figures given apply to the three-wheel outfit; for a two-wheel machine, the costs would be much reduced, but the carrying capacity would be reduced also. However, in the case of the three-wheeled machines, the above figures give an idea of what the costs of operation, etc., may be to nearer the actual costs than are usually given in a prospectus, for, sad to relate, many agents are as blissfully ignorant of anything more than the mileage on fuel and oil as most people are of the canals of Mars. This is not to be wondered at, as the commercial use of the motorcycle has hardly passed out of the short clothes stage as yet, but the progress is nevertheless rapid. The results of this lack of information are to be seen in the many abandonments of tricars or two-wheelers fitted with carriers, which, having been bought under misunderstanding, are returned because they "cost more than we expected."

(*To be continued.*)

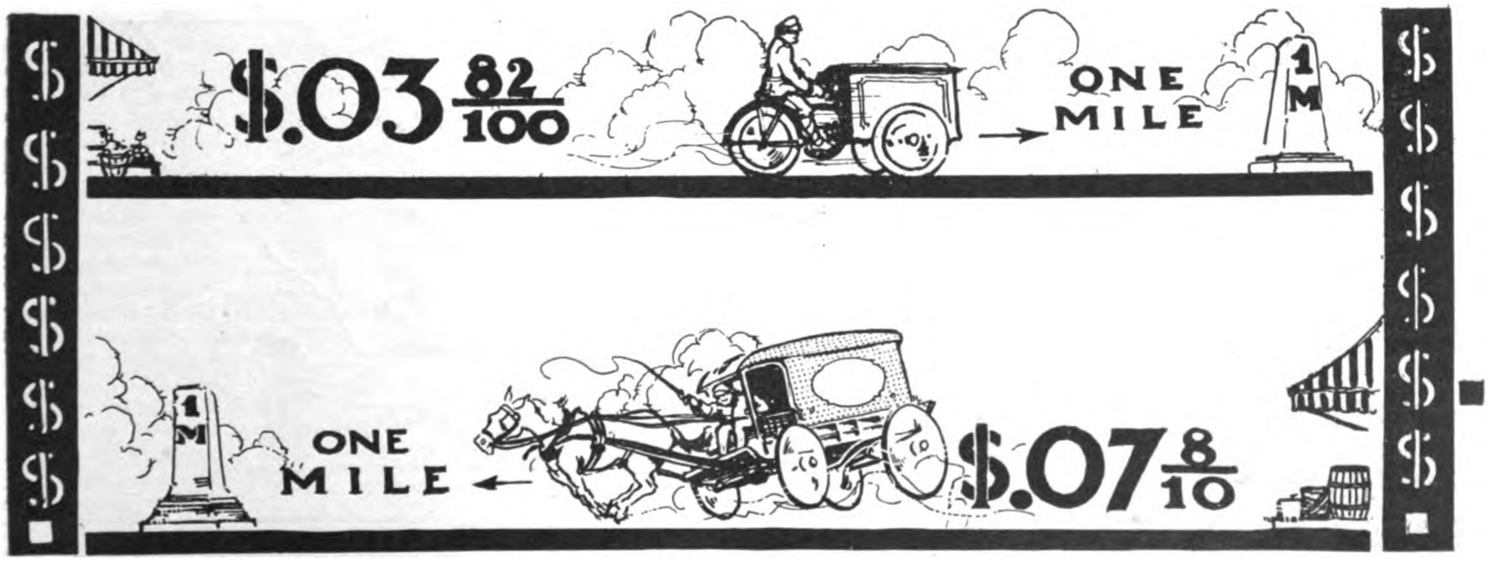
HEAVY RAINS BALK RIDERS.

INDIAN agencies have been placed in the following Mississippi towns for the coming season: Greenwood, Greenvillé, Kilmichael, Columbus, Vicksburg, Jackson, Hattiesburg and Gulfport. The road conditions are being improved slowly throughout the State and a good growth in the right direction for the motorcycle is vouched for by all of the dealers. They have had almost continual rains since Christmas which have made the roads unpassable for teams and the people who own automobiles have not had them out since before Christmas. All of this wet weather, however, is the forerunner of a good season in crops which indicates prosperity all through the State.

A FEMININE BOOSTER.

MRS. HERBERT G. PAUER is one of the most consistent boosters of motorcycle interests in Buffalo, N. Y. So enthusiastic is she over the outlook for the single-tracker that she believes a club of women riders will be formed in the Bison City at an early date.

ONE of the sites recently offered to the Rochester (N. Y.) M. C. for a clubhouse and race track was valued at $19,000. This and several other desirable properties were still under consideration by the club at latest reports.



Motorcycle van delivery costs $.03\frac{82}{100}$ *a mile; horse and wagon,* $.07\frac{8}{10}$ *a mile.*

The WORM will TURN

WELL, I've been pinched just once, and that time under circumstances that account largely for the particular delight I have since taken in putting one over on our friends of the P. D. (Should we add "Q"?) To start at the beginning takes us back to my first "buzzer." It was a single cylinder, 2¾ h. machine, of the vintage of 1905, and capable of a speed of between thirty-eight and forty miles an hour down hill. I kept the old bus in the basement of my home, and among other funny notions that came with my first machine, was the one that it was necessary to drain the old oil out of the motor-base every night before the machine was put away.

A Ten-Dollar Fine.

On the day in question I was performing this self-imposed duty by riding around the block with the pet-cock in the base about half open, in order to hurry the process, as I had had a long ride and was hungry. I was in the act of turning the corner on the first round when I came under the eagle eye of the law in the shape of two "cops" who were standing in the middle of the street leaning against their bikes. I was jogging along at about thirteen m. p. h. on the first round, and after passing their majesties I made the awful mistake of turning around to see how they liked the rear of my new machine. On the second round I paid no attention to them whatever, and evidently they felt neglected, because our arrival at the other end of the block was absolutely coincident and I was greeted with the time-worn question as to whether I "thought the city streets were built for a race-course." Upon admitting that I did not I was informed that I had "traveled at the rate of twelve miles an hour for a distance of three hundred feet," and that I "had better come up to the 'house' and tell the sergeant about it."

Wondering how I could have survived that terrific speed for such a distance, I peacefully trailed along to the station house, where I was relieved of ten perfectly good sheckels, and where I mentally vowed that the next time I would endeavor to make it considerably more interesting for everybody concerned. That happened seven years ago, and I have since been the happy possessor of six new machines, each of the latest model, and each a little faster than its predecessor. During that time I have never let an opportunity go by to get "value received" for that perfectly good ten dollar bill. I think I have succeeded fairly well, as the rest of my tale will show.

Evening the Score.

The first opportunity presented itself very shortly after the above incident took place. I was spending my summers in Greenwich, Conn., and more often than not Sunday would find me on my machine on the Post Road. That was in the days when every little third-rate country village was paying off its indebtedness by holding up nearly everything on rubber tires that came within their jurisdiction. There was one of the regulation speed traps between Greenwich and Stamford on the Boston Post Road, operated by a trio of country constables. Their scheme was to station three men about a quarter of a mile apart, the two extremes being equipped with flags and the man in the middle with a nice, husky rope. One end of this rope was attached to a stone wall and the other to a telegraph pole on the other side of the street. The idea was that when one of the lookouts spotted a car coming he would signal the man with the rope, who would take the time of the car for the measured distance, and if he found it to be faster than the village had prescribed he promptly pulled up the rope around the telegraph pole, and—good night, Mr. Automobilist, if he didn't stop promptly and shell out like a sport. I had ridden by there a good many times, and I can vouch for it that if a hundred cars passed there a day these old second-rate constables took in at least fifty, and sometimes as high as eighty, if they particularly needed the money. That surely was a tempting piece of road, and there were very few motorists that could resist it.

The Sleuths Foiled.

Well, I camped out there one beautiful Sunday afternoon and watched proceedings. For a car it was quite hopeless, but I doped it out that my machine and I could beat their game, and we proceeded to do so forthwith. But first you must understand the layout perfectly. There was, as I have already said, a rope attached tightly at one end to a stone wall, and the other end was wrapped loosely around a telegraph pole that stood in the gutter on the opposite side of the street. There was a gravel sidewalk in front of the houses at this point, and two of the houses had driveways up to the doors. After getting that stowed away in my mind I rambled through the trap going toward Stamford, at a nice slow walk, and when I was well out of sight I faced about and started back for Greenwich as if I had been sent for. There was a slight down-grade on the straight stretch just north of the trap, and by the time I hove in sight of the man with the flag I was tearing along at a rate of between forty-eight and fifty miles an hour.

I just caught a glimpse of the flag waving around as if the man behind it had a spasm and

"We doffed our caps with extravagant politeness."

then I saw the watcher with the rope pull up. He had an expression on his face as if he were throwing the switch on the electric chair at Sing Sing, but not wishing to force him into a case of premeditated murder I turned off both throttle and gas and jammed on the brake when within a hundred feet or so of the rope. My rear wheel did a Gaby glide through an angle of ninety degrees, and the old buzz waltzed up on the sidewalk, cut in around the telegraph pole and down the other side to the roadway again. If you ever hope to see a stunned rube you should have seen that near-murderer when I turned around in my saddle and waved him a fond farewell. Needless to say I did not grace that road with my presence again that season.

A Lesson in Politeness.

My next experience was of a rather different nature, but none the less amusing. The scene shifts to that notorious Isle of Doom for speedsters known to fame as Staten Island. I was on my way to Jersey in a Packard car with friends when one of the meanest and most generally disliked men of the force took us in for TWELVE miles an hour, just as we left the ferry at St. George. It seems it was his habit to take in the first car off the ferry on each trip, irrespective of the speed, so long as it was a fraction over the prescribed limit of eight miles an hour. In this case it was not so much the fact that we were arrested as the way he handled the whole matter. He did not seem to have enough decency to answer a question civilly, much as if he were displeased with the world in general and himself in particular.

The following week I decided to see if it would be possible to slip one over on him just for luck, so the following Sunday found me on the ferry from the Battery to St. George again. The boat was packed with autoists out for a good time; there were twenty-two in all and three motorcycles. Several of the owners (mostly fellows of about my own age), showed considerable interest in my mount and asked the usual line of questions. In that way the conversation became general, and I took the opportunity to relate my experience of the previous week, and to warn them against speeding before they were well out of the town.

Concerted Action.

Then a brilliant idea occurred to me (they do sometimes), and I suggested that we form in a procession just as close as we could run, and drive as slowly as the engines would go. Everybody fell in with the idea except two cars that were in a hurry to get to the ferry at the other end of the island, and away we went. Three motorcycles were in front and twenty cars of all descriptions strung out in single file in the rear, all moving at a uniform pace of less than three miles an hour. It made the saddest funeral procession you can well imagine. Our friend, the officer, was in the habit of standing just around the corner of the main square and landing on the first victim that hove in sight, and there we found him doing business at the same old stand. As each car passed in review every occupant removed his hat and made a profound bow. I went so far as to greet our friend by name and inquire as to the state of his health. Of all the witnesses to that procession there was but one that failed to see the humor of the situation, and he, needless to say, was the representative of the majesty of the law in brass buttons. I have not a doubt in the world that had he expressed in words the thoughts that showed on his face, I could have had him arrest himself for using vile language, but he was satisfied with taking it out in looking.

Some Fun in Jersey.

My next laugh in this line was staged in Jersey. It was out near Orange somewhere, on a perfectly beautiful country road that wound in and out along the banks of a canal or brook, and was a continual succession of twists and turns. This time two cops, mounted on motorcycles and in uniform, appeared. I was riding with my chum; we were both mounted on the latest model twin sevens, and really had little to fear from any country officers that started behind us, except that they knew the country better than we. Taking this fact into consideration we decided that we had better try some of the tricks of the trade rather than make a long stern chase of it. We therefore hit it up for all we were worth until we succeeded in getting out of sight around a bend in the road, and there we discovered an old unusued and grass-grown road leading off at right angles, which we promptly turned into. We got behind some thick bushes from which we could see the road and not be seen, dropped our machines and followed suit ourselves.

We were hardly out of sight when whur-r-r-r-r-r and away went the pursuit, down the road like a couple of greased streaks. The Lord only knows how far they "chased" us, because when we recovered sufficiently from laughing we pedaled up and "beat it" in the opposite direction.

A Man of Gratitude.

As in other callings, it undoubtedly takes all kinds to make a police department. During my seven years at the motorcycle game I have had some of the most congenial rides with members of the department, both on and off duty. As we will all gladly admit, most of the men of the New York Police Department are excellent fellows, but there are exceptions to all rules, as witness the following incident.

I was riding north from the city one afternoon last summer along the shore of the Hudson, and when just outside of Yonkers I spied an old wreck leaning against a fence with parts scattered around for a distance of ten or fifteen feet. At first glance I thought the rider had attempted to ride through the fence, but on inspection I concluded that it was nothing but a novice attempting to repair a puncture in the rear tire without the proper tools or experience. I have always made a practice of lending a helping hand, and this was to be no exception. I jumped off, looked over the mess and proceeded to fix things up.

Playing Good Samaritan.

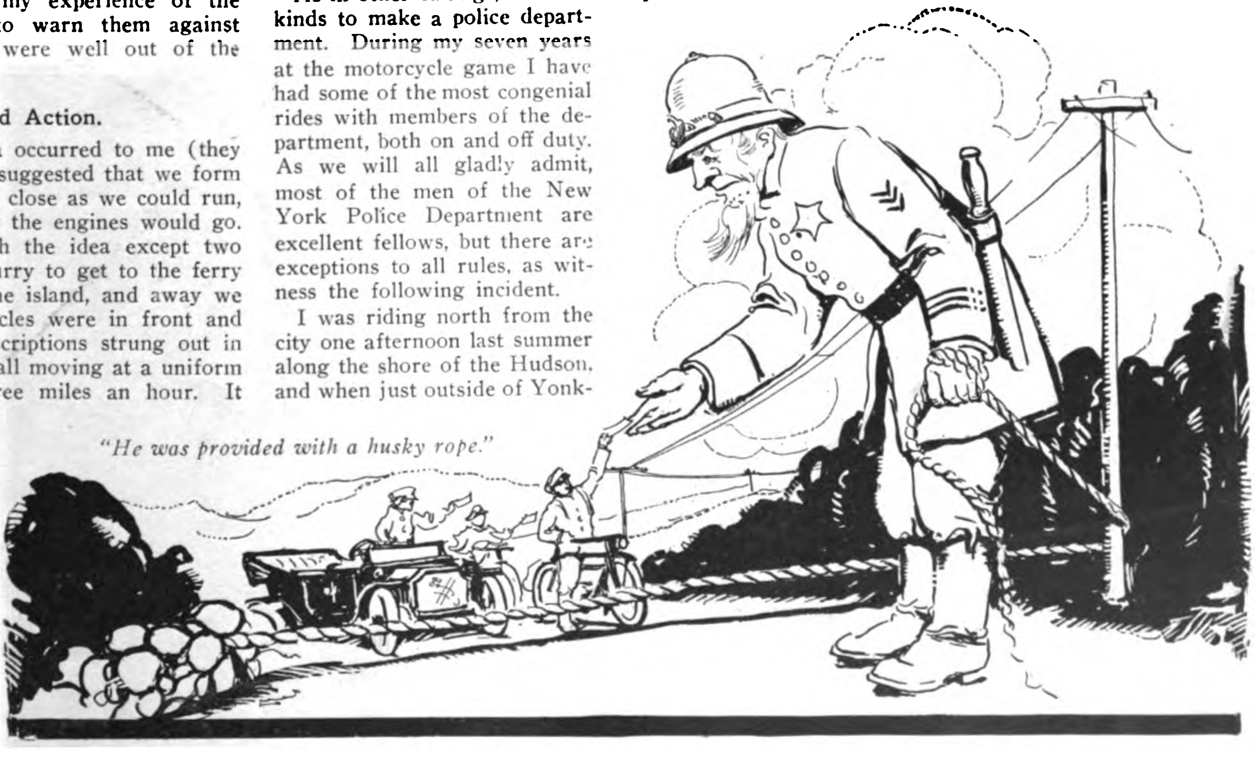
The trouble proved to be not a simple puncture, but a very nasty rim cut that took me something over three-quarters of an hour to repair.

I learned that my friend in need was an officer in plain clothes, and that his accident had happened while chasing a car. I actually could not help feeling sorry for his having to "chase cars" in that weather on the bunch of junk he dignified with the name of motorcycle. However, having finally finished my task I decided to ride a little way with him and see how my work stood up. His old rattle box chugged and puffed and wheezed and snorted for a mile or so, and then I decided I had had enough, and said so. I said "adois" and proceeded to forge ahead at possibly thirty an hour or so, and had gone somewhere in the neighborhood of a mile when I heard a noise like unto a cup race approaching from the rear, and in the midst of a large cloud of dust I beheld my friend of a few minutes back tearing up the road.

Naturally I slowed down to find out what he was trying to prove, and when he got within yelling distance I found out. "Hey, there," he shouted, "you're under arrest, what do you think this is, a race course?"

Getting a Surprise.

Well, to say that I was amused is putting it mildly, knowing that he had had a good chance to study the lines and model of my mount a short time before. The nerve of this cop certainly had not melted any while I was working over his old "crock." Just for



"He was provided with a husky rope."

that I decided to have a little amusement at his expense—not forgetting that ten-dollar fine, as well as the interest for seven years—so I let my good old boat out a notch or two, and every time he coaxed a mile out of his antiquated 'bus I would let mine have a little more. We had a beautiful time. At least I did. The road was nice and dry and dusty, and when I would look around to see if his ark had given up the ghost I couldn't find him more than half the time. I knew he was still with me by the noise. He put up a very game fight for about five miles, and must then have bethought himself what a long walk it would be going home—and quit. Here endeth that lesson.

On the Boston Post Road.

Somehow or other the speed laws of L——, on the Boston Post Road, and the way they are enforced, have always riled me considerably. Some time ago I was riding through that villa and saw coming in the opposite direction a new Pope-Hartford car with a perfect queen of a girl driving, and on the side, mounted on a perfectly good motorcycle, was a policeman. I decided that that would never do. It didn't take me two explosions to make up my mind, and I was off and at them as fast as my machine would hike, and that's some. The cop looked rather undecided for a moment, then turned to his "prisoner" and (I imagine) told her to wait. Then he turned his machine around, pedaled up and started after yours truly. This time I knew my road by heart, every bump and rut and turn, and I was game for as much as he wanted.

I guess he got it, because we kept it up for several miles (as far as Rye), and then, to avoid running into his partner that I knew was stationed ahead, I turned off on a side road and picked out a nice lonely spot, where my laughter would not disturb the inhabitants, filled up my pipe and wondered where the fairy of the car had gotten to by that time.

RIDERS ARE BACKWARD.

MAYOR SHOOK, of Lima, Ohio, has issued strict orders to the police department to arrest all motorcyclists who use the streets of that city without providing themselves with the city license which costs $2. So far only 34 out of a possible 150 riders in the city have taken out their licenses.

A REAL ENTHUSIAST.

DEAN RICHMOND, a member of the Batavia (N. Y.) M. C., donated $50 to the club at its last meeting to assist in furnishing proposed new clubrooms.

FLYER ON MOTORCYCLE.

M. THEO LILLIE, the Swedish aviator, who has been making some sensational flights in Florida, recently turned motorcyclist and reeled off some fast miles on the track in Moncrief Park.

PRINCE AFTER BIG MEET?

Track Builder Hints That on Return to Indianapolis He Will Make Bid for 1912 F. A. M. Session.

W. A. GIBSON, who is to manage the half-mile board track which is to be built in Indianapolis this month, has options on three sites and is waiting for the return of Jack Prince, who is to aid in selecting the best location. The selection will probably be made within a week, and the construction work is scheduled to start a few days later. There is a rumor afloat in Indianapolis that when Prince returns he is going to start a campaign to bring the F. A. M. meet to Indianapolis this summer, and the Hoosier motorcyclists are awaiting his return anxiously.

It is reported that Prince has many of the best riders in the country under contract to ride for him this summer, and that he can obtain as many of the lesser lights as he can use when the time comes. Prince's plan now is to have a big racing circuit include Chicago, Detroit, Indianapolis and Louisville, Ky. The first three cities are all certain to be members of the circuit, while Louisville is still in doubt. Prince is to build more steeply banked tracks at Indianapolis and Detroit than he has ever built before. Concrete, instead of wood, is to be used for the chief support

OUTLINE OF SHORT GRASS TOUR PLANS

Two Automobile Trucks, Special Racing Squad, Baseball Team and Brass Band Will Accompany Two Hundred Kansas Riders on Annual Trip Over Picturesque Route.

LATEST reports from Kansas are to the effect that plans have been practically completed for the mammoth tour of the Kansas Short Grass Club to be held during the coming summer, and that 162 applications have already been filed by riders for places in the caravan. Sixteen applications have come from Colorado, 20 from Nebraska and five from Iowa. The others are mostly from motorcyclists in the short grass district. It is announced that the Velie Truck Co., of Kansas City, Mo., will allow the use of a two-ton truck to carry paraphernalia on the tour and that the Overland Company will provide a two-ton converted truck for general service. One of the problems which confronted the Short Grass officials was that of transporting the tents, cooking outfits and other impedimenta, but the two heavy trucks will remove this difficulty.

The Julesburg (Col.) Commercial Club is planning to build a two-mile circular speedway on which a big meet will be staged while the Short Grass tourists are in the city. The Short Grass squad will have eight speedsters in readiness to compete at all meets that may be held along the route, which will add materially to the interest aroused. There will be one afternoon of racing on the four-mile speedway at Cheyenne, Wyo., and in Denver the Overland track will be used for a meet. In addition to the motorcycle speed squad the club will have two racing automobiles which will be entered wherever there are events for cars.

The pathfinding trip for the big tour will be made in May, and the applications will then be forwarded to those who have filed requests for them. When 200 riders have been recruited the list will be closed, as the club is unable to arrange accommodations for a greater number. Special attention will be given to cooking arrangements on the trip and a first-class chef will be assisted by a corps of experienced waiters in catering to the needs of the motorcyclists. The total cost of the outing per rider will be $35, including entry fees at race meets and expenses for the side trips so far planned. There will be eight divisions of riders, each under the direction of a competent captain and lieutenant, and the work of setting camp each day will be attended to by a detail made up from the ranks of the tourists.

The Old Towne Quartet, of the Star Lyceum Co., of Chicago, has been engaged to accompany the motorcyclists throughout the tour, and it is likely that a brass band will be another of the entertainment features. Arrangements have been made with the McQuary Tower Co., of Lawrence, Kans., for special uniforms to be worn by the tourists and a novel pennant will deck each machine. Half a dozen side-cars will make the trip and there will be at least 40 two-speed machines. The club will have its own baseball team and seven games, to be played at points along the route, have already been booked. All in all, the caravan that files out of Garden City next August for the annual Short Grass tour will represent the greatest undertaking of its kind that this country, and probably any other, has known. What's more the plans are still being developed.

PLAN LONG TANDEM TRIP

Detroit Motorcyclists and Their Wives Intend to Head for Pacific Coast Early in the Summer.

DETROIT, MICH.—Three Detroit motorcyclists and their wives are now planning trips which are intended to carry them to the Pacific coast, and one of the riders, Al Wellman, has practically completed arrangements for the long jaunt. Wellman and his wife count upon devoting two summers to the transcontinental tour. They propose to start from Detroit about July 10 next and riding to Toledo. From that point they will proceed to St. Louis, Kansas City, Denver and Yellowstone National Park, following the Northern Pacific Railroad to Helena, Mont., and to Mazula. At the latter point Wellman intends to put up for the winter of 1912 and work at his trade. As soon as the roads are open again in the spring of 1913 the tourists will continue their journey to the coast, aiming to arrive in time for the opening of the Panama-Pacific Exposition. In August, 1913, Wellman and his wife will start the return trip by a northerly route which he has mapped out with great care.

Reuben Winslow and wife and John Schnall and wife are the other couples who intend to travel to San Francisco by motorcycle. If they can decide upon a route that will be mutually satisfactory these tourists may remain together throughout the journey. Their plans are indefinite as yet.

RACERS ARE PLENTIFUL.

MANAGER BRAMLEY, of Luna Park, Cleveland, is receiving numerous applications from riders from all over the country to ride on the new four-lap saucer track to be built at his amusement park.

DETROIT WANTS A SAUCER

Jack Prince Visits Michigan City and Interests Dealers in Plans for Half-Mile Board Track.

DETROIT, MICH.—If present plans of Detroit motorcycle dealers and Jack Prince, the veteran track builder, materialize, the City of the Straits will soon have a half-mile speed bowl and high-class racing programs. Prince spent two days in Detroit recently and obtained options on several desirable sites for a track. Dealers of the city were so deeply interested in the project that they have taken steps to form a stock company to finance the saucer, and there is every indication that it will be erected. Prince has assured the Detroiters that he can interest outside capital if difficulty is experienced in raising sufficient funds among the promoters of the city. The track expert has decided that a site about 950 feet square will be required for the type of saucer he intends to build in this city, and that about 50,000 feet of lumber will go into its construction. It is the intention to have seating accommodations for 5,000 spectators and parking space in the center for additional thousands.

Prince has stated that he will return during the current month prepared to start the construction work, and it is expected that the local stock company will have been organized in the meantime.

WAPAKONETA WANTS MOTOR-COP.

A MOVEMENT has been started to have a policeman of Wapakoneta, Ohio, equipped with a motorcycle in order to better police the city during the afternoon and evening. An appropriation will be made for the extra man and machine in the near future.

A NOVEL TOUR

English Woman Motorcyclist Banks Heavily on Tea for Success of South African Trip.

ENGLISH newspapers are giving space to the announcement that a Miss Watson is about to undertake a long motorcycle journey in South Africa, from Cape Town to Kimberley, Johannesburg, Pretoria, Ladysmith, Pietermaritzburg and Durban. It is stated that she will strike the trail alone, despite the fact that she knows nothing of her machine and is unacquainted with the country through which she would have to pass. The proposed trip would foot up to about 2,500 miles.

With that utter absence of a sense of humor which joke-writers delight in charging against the British brethren, one English paper refers to the trip as follows: "Miss Watson will carry a light outfit, including a revolver, but as she is entirely ignorant of how to handle that weapon she concludes that it cannot be a very serious menace to herself or others. The only thing she will carry in the way of food is tea. If she finds as night approaches that she cannot reach a town, she will make a cup of tea and sleep on the veldt."

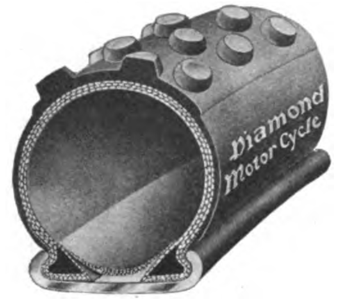
All of which sums up the intrepid young lady's preparations for a motorcycle trip across South Africa. Seems to be very simple, and if Volney Davis and other American coast-to-coasters will take a tip or two from Miss Watson they may soon be able to jog from Frisco to New York without carrying anything more than a few gumdrops.

THE Topeka (Kan.) Motorcycle Club is trying to interest the management of Garfield Park, one of the city's amusement places, in the erection of a three-lap board saucer.

Your New Machine Will Cost Less to Run On

Diamond
TIRES

The extra mileage they give makes them the most economical tires, and they are also the easiest riding tires. On account of their higher quality they cost the motorcycle manufacturer a little more but there is *no extra cost to you.*



Studded Tread Diamond Motorcycle Tire. Costs no more than Diamond Corrugated Tread.

Thirteen leading manufacturers are willing to give you Diamond Tires when you specify them. Tell your dealer to order Diamond Tires for your machine and you will get them. The fact that motorcycle manufacturers are willing to pay more money to equip their machines with Diamond Tires is proof of their superior merit.

Tire expense is the largest single item in the cost of running your machine; just as important when you get your machine as after you have had it a year. Don't overlook this point and run into a lot of grief with the wrong tires.

There is only one way to put tire expense on a minimum basis at the start—specify Diamond Tires. And if you're not getting a new machine this year, cut down your tire bills by buying Diamond Tires from your dealer.

Our illustrated catalogue tells you why Diamond Motorcycle Tires are the longest wearing, easiest riding motorcycle tires ever built. Send for it today.

THE DIAMOND RUBBER COMPANY

Akron, Ohio

Fifty-Four Diamond Service Stations do more than sell tires — they take care of Diamond Tire users

2,000 IN FOUR MONTHS.

If the circulation of Motorcycle Illustrated continues to increase at its present rate—2,000 *new* subscribers and newsstand buyers since December 15 last—well, our printer and paper makers seem to be pretty well satisfied with the prospect.

BRINGING THE FACTS HOME.

Not long ago a well-known automobile manufacturing firm hit upon the plan of sending out a field crew of demonstrators to tour several of the Eastern States and exhibit its products at first hand, thus setting the pace in a departure from stereotyped and indirect methods of advertising. Therein is couched an idea, possibly a bit in advance of present motorcycle trade conditions, but nevertheless an idea. It is quite reasonable to believe that a similar project applied to the power two-wheeler would give definite and highly satisfactory returns.

If the non-riding public persists in regarding the motorcycle as a noisy, ill-smelling, bone-shaking and complicated contraption it is not the part of generosity nor good business to allow it to continue hugging these fallacies. There is educational work to be done. The average non-rider, totally ignorant of the attributes of a modern motorcycle, would not go far out of his way to be enlightened, but if the cold, hard facts were brought home to him—left at his door, so to speak—he probably would give them thought.

The automobile company referred to plans to have its field demonstrators call upon all owners of its cars in each city visited. They will give advice, inspect the cars and make good any small defects. In short, the firm aims to convince its patrons that it has not forgotten them; that it is prepared to stand behind its products; that it is not afraid to face the music. The effect cannot fail to be far-reaching.

Applied to the motorcycle the idea would be carried still further. There are few people, even in a small town, who do not know something of the automobile, but concerning the single-tracker there is a surprising and lamentable dearth of information. In addition to appointing agents, giving pointers to riders with reference to the operation of their machines and suggesting remedies for any motor trouble which might have developed, the field demonstrator of the motorcycle could arrange for public exhibitions and accompany them with impromptu talks on the operation of the machine and its general adaptability.

No hard and fast system need be followed. When a wide-awake demonstrator arrived in any community he would find many avenues of activity open to him, but his aim would be at all times to prove to the skeptics that their ignorance of the motorcycle was costing them dollars and cents, as well as healthful recreation. Some traveling riders for motorcycle manufacturers are now working along these general lines, but the idea seems to be worthy of more systematic consideration than it is receiving.

RELIABILITY.

All the circulation records of Motorcycle Illustrated *may be examined by anyone at any time. Advertisers are invited to demonstrate to their own satisfaction the correctness of the circulation figures given above, and to refuse to pay their advertising bills if our figures are at all inaccurate.*

By the same token, readers are specially requested *to call our attention to any misstatements or misrepresentations in either the text or the advertising published in* Motorcycle Illustrated. *It is the policy of this publication to insist that the same regard for absolute truth and accuracy that characterizes our circulation statements must also distinguish the reports of our correspondents and the announcements of our advertisers. If a* single line *in this or any other issue of* Motorcycle Illustrated *lacks reliability, we shall appreciate being so advised.*

GAINING GROUND.

Following is an editorial paragraph recently printed in the Chicago *Examiner* which indicates that those who direct the policies of some of the country's leading newspapers are fast developing an unbiased attitude with reference to the motorcycle:

"Is there not too strong and active a disposition to find fault with the motorcyclist? Is it right to assume that because here and there a motorcyclist offends against the law the entire fraternity must be sweepingly and scathingly condemned? They have their laws and, generally speaking, they conform to them. They are compelled to carry city and state numbers and they comply with the regulations. After night they must carry both front and rear lights and, as a rule, they obey the command. They have a speed limit determined by law and in most instances they observe it. Why, then, should they be singled out for special rebuke and popular hatred? Under former regulations the motorcycles were often run with a measure of menace to the community and certainly with a good deal of exasperation for the quiet-loving householder. Under present rules much of the peril and all of the nuisance have been abated. Those who transgress the rules are punished, as is every other law-defying citizen. But the majority of motorcyclists keep within the law and are entitled to their rights and privileges."

It should be the aim of motorcyclists to deport themselves upon all occasions so that newspapers in every community may feel justified in adopting the broad viewpoint of the Chicago publication. One such paragraph as the above will do more to offset the unreasoning bias still existing in some quarters against the motorcycle than much activity along other lines.

The West Side M. C., of Maricopa, Cal., has established permanent quarters at the Lakeview Hotel.

With the Publisher

ADVERTISING COPY.

THE following is illustrative of the business policy of MOTORCYCLE ILLUSTRATED, relative to the acceptance of advertising copy regarding which there is the slightest question.

Under date of March 13 this paper received, with instructions to insert, copy which read as follows:

"Going to buy a motorcycle? Then write me and learn how to save $25 on the cost. I can tell you how to save from five to twenty-five dollars, no matter what make of machine you buy. When you have bought, you can send me $1 if you feel like it, to help pay for this ad."

Pending the insertion of this copy, MOTORCYCLE ILLUSTRATED wrote to the prospective advertiser insisting that, before this advertisement could be inserted, it must have full particulars as to the nature of his proposition. The would-be advertiser, evidently somewhat nettled, answered simply that he would do "exactly as stated in the advertisement." He added, "If you cannot accept the advertisement on these terms, I assure you that there are plenty of other mediums in the country who can."

Our reply to this was simply to invite him to use "the other mediums."

His proposition may be quite legitimate, but the peculiar phrasing of his copy and his disinclination to furnish a "bill of particulars," necessitated the rejection of his advertising.

NEW YORK RACING BILL.

THE simple omission of a comma made the McManus Anti-Motor-Racing Bill, recently introduced in the New York State Senate, apply to motorcycle racing. The bill, offered as an amendment to the Callan automobile law, would have prohibited motor vehicle racing on public tracks in the Empire State. There was an exception, however, phrased as follows: "This section shall not apply to the racing of motorcycles or to motor racing on private grounds to which the public are not admitted."

This sentence at first puzzled the chairman of the Legal Action Committee of the F. A. M., who decided, however, that in the absence of a comma after the word "motorcycles," the reference to motorcycle racing had the following meaning: "This section shall not apply to the racing of motorcycles . . . . on private grounds to which the public are not admitted." In other words, the prohibition would apply to motorcycle racing *in public*. The chairman consulted a lawyer experienced in motor vehicle legislation, and the latter fully agreed that this would be a court's interpretation of the sentence. Not only that, but at the hearing the introducer of the bill frankly admitted that it was his intention to put a stop to motorcycle racing.

Aside from the matter involving a question of doubt, the F. A. M. was represented at the hearing on the bill, also for the reason that it was considered good policy for the Federation to co-operate with the various automobile associations which were fighting the measure. The F. A. M. might have adopted a dog in the manger policy, arguing that the autoists would kill the measure unassisted by motorcyclists. However, the pursuit of such tactics would not be likely to create a very kindly feeling for the F. A. M. among the auto folks. Although Governor Dix may recall the legislature to reconsider some other matters, it is not likely that the McManus Racing Bill will be heard from again this year.

JOTTINGS.

AN entire week has gone by without any announcement of a new machine. What's the matter?

Still, of good ones there cannot be too many, nor yet too few of the other kind.

Dealers everywhere say they're unable to get enough of 1912 models of the reliable sort. Who said anything about over-production?

The factories that are literally "delivering the goods" these days are all storing away the stuff from which dividends are made.

Or, rather, factory extensions. Such is the confidence of the wise that planning bigger things for the future is considered better policy than realizing profits now.

Isn't that disposition significantly indicative of healthy trade conditions? Nineteen Twelve sees the art of building motorcycles blossoming into a genuine business, solidly established, sound and promising.

Our optimism may bring a smile to some lips. But each year we have seen our fondest expectations more than realized, and we are unable to discover any reason for not predicting a hundred per cent. business increase this year.

One of the best signs of the times is the evidence of a healthy improvement in retailing methods. Today's leading dealers are invariably also keen and representative business men, who have added to their practical knowledge at least some understanding of scientific salesmanship.

Dealers who are alive to their opportunities will not neglect to call upon the Dealers' Information Bureau for suggestions in the way of outlining local selling campaigns. The service is free.

Merle Sidmer, experienced in publicity work, is in charge of the bureau. His address is 23 East Ohio street, Indianapolis. He has the endorsement of the Motorcycle Manufacturers' Association, and is anxious to demonstrate the practical value of his services.

If concerted effort on the part of dealers be impracticable, then at least there remains for each individual selling motorcycles the opportunity to shine in local trade circles. The right kind of publicity is the real secret of nine out of ten instances of business pre-eminence.

Dealers, the public wants what you have to sell, but, as a rule, it does not know what you are selling, except that you keep a motorcycle store. By going about the task properly, you can create a demand for what you have, that which you aim to convert into cash, and show others how to transform it into healthful recreation or an aid to the effective transaction of business.

IMPROVING CLUB LAWN.

COLUMBUS, OHIO.—The Columbus Motorcycle Club at a recent meeting instructed the house committee to employ a professional gardener to beautify the lawns at the clubhouse, located on East Eighth avenue. The lawn is a large one, and it is the intention to use flowers and shrubbery to beautify the grounds.

NIGHT AND DAY RUN FOR DAYTON CLUB

Ohio Squad Will Hold Endurance Contest to Toledo and Return as Feature of Opening Program for Big Motorcycle Show Which Begins April 20—Route and Conditions.

ENTRIES close April 18 for the Day and Night Endurance Run, April 20-21, of the Dayton (O.) M. C. The run will be held in connection with the Dayton Club's Motorcycle Show, which opens Saturday the 20th and runs until the 27th instant. Entries are in charge of Secretary Charles Zetler, 405 Conover Building, Dayton. The rules under which the contest will be conducted follow:

All contestants must be members of the F. A. M. The right is reserved to reject any entry. Each contestant must show his F. A. M. card when checking in his machine at noon, April 20.

Classification.

Class A, private owners; class B, trade riders; class C, dealers' teams; class D, club teams; class E, factory teams; Dealers, club and factory teams shall consist of three riders each.

Conditions.

Each competitor in classes A and B will be given an initial credit of 1,000 points, and competitors in classes C, D and E will be given a total credit for the team of 3,000 points. All classes will be subject to the penalization hereinafter enumerated.

Awards.

In classes A and B gold medals will be awarded for perfect scores. Silver medals will be awarded for a score less than 1,000 points and over 900 points. In classes C, D and E embossed art bronze shields, 12 inches by 15 inches, will be awarded for perfect scores of 3,000 points.

Replacements.

Under penalty of disqualification no complete replacement of motor, carbureter, muffler, timer, tank or wheel will be permitted.

Penalties.

One point for each minute late not in excess of thirty minutes; two points for every minute late thereafter. More than thirty minutes ahead of the schedule anywhere, on or off the route, will mean disqualification.

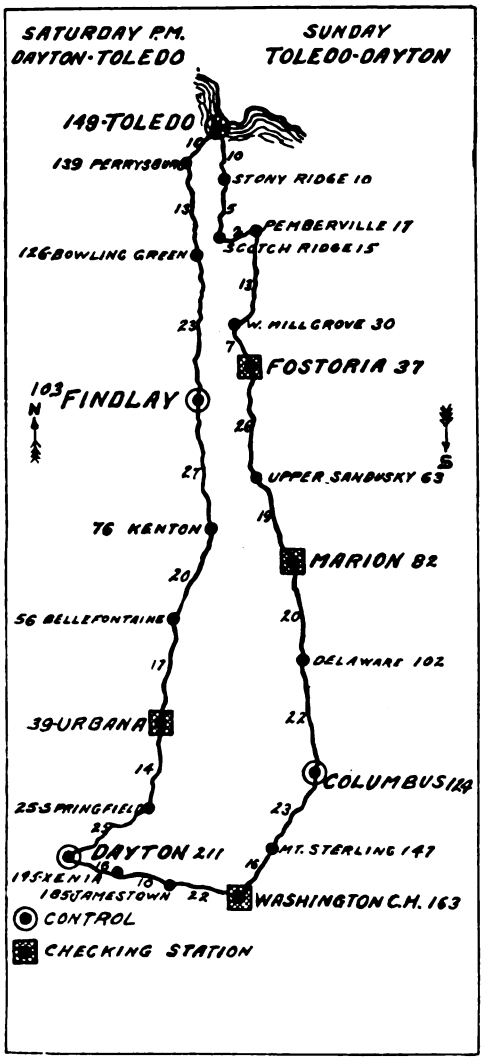
General Rules.

Do not run into any control closer than the block in which it is located until time to check in as called for on your running schedule. Contestants arriving at controls thirty minutes or less ahead of their schedule may wait within sight of control or use spare time to fill up with gasoline and oil. Machines will be held in the noon or night controls and contestants will not be allowed to touch same until time to start. Contestants may check at checking stations (not controls) thirty minutes ahead of their running schedule and depart immediately. Each contestant is warned not to run into any control or checking station more than thirty minutes ahead of schedule. Disqualification will result. The towing of machines or the carrying of either rider or machine on any part of the course will entail disqualification.

The run will be made rain or shine.

Start.

Contestants must report at the D. M. C. Motorcycle Show Building, Fourth and Main streets with their machines, on or before noon, April 20, in order that schedule and numbers may be delivered and machines inspected. The schedule will name the principal towns en route, with distances and time at which each competitor is due at controls and checking stations.



Dayton-Toledo Run.

The course will be marked with D. M. C. signs at each turn of the road, cross-roads and intersecting roads. As a further precaution the pilot car will use confetti to mark the route.

Contestants will be started in squads of two, at one minute intervals and in the order of their numbering. No allowance will be made for failure to start at time specified on the schedules.

The start of the contest will be made from in front of the D. M. C. Motorcycle Show Building, Fourth and Main streets, Dayton, Ohio, 1.00 p. m., Saturday, April 20.

Route.

The route for Saturday afternoon and night will be from Dayton to Toledo via Springfield, Urbana, Bellefontaine, Kenton, Findlay, Bowling Green, Perrysburg and Toledo, a total distance of 149 miles.

The run Sunday will be the return from Toledo to Dayton via Fostoria, Upper Sandusky, Marion, Delaware, Columbus, Washington C. H., Xenia and Dayton, a total distance of 211 miles.

Controls and Checking Stations.

The Saturday afternoon run will have a checking station at Urbana and a supper control at Findlay, with a night control at Toledo. The contestants will be due to arrive in Toledo between 10.15 and 10.45 Saturday night.

The Sunday run will have checking stations in the morning at Fostoria and Marion; noon control at Columbus; afternoon checking station at Washington C. H., finishing at Dayton Sunday evening between 5.30 and 6.00 o'clock.

The running schedules and arrivals at checking stations and controls will be based on an average speed of 20 miles per hour from Dayton to Findlay; 15 miles per hour from Findlay to Toledo and 20 miles per hour from Toledo to Dayton.

Western Union Time will be official. An allowance of three minutes will be made ahead or behind schedule at controls for the variance of watches.

BAIN SPEAKS UP.

GEORGE BAIN, a motorcycle enthusiast, of Calgary, Ont., takes exception to a recent statement in these columns to the effect that a rider who ventured out on a motorcycle with the mercury 46 degrees below zero in Calgary was frostbitten. Bain states that the temperature has not been down to 46 below in Calgary during the past winter, or in any winter within his recollection, and that for months past any hardy rider could have used a motorcycle in his district without great difficulty. "Calgary no doubt is a bit behind some other places in the matter of motorcycles," writes Bain, "but there is no excuse for abusing our climate more than the facts justify, and, incidentally, there is every indication of good business for the spring and summer in the motorcycle trade."

ST. CLOUD OFFICERS.

FOLLOWING are the officers of the newly organized St. Cloud (Minn.) M. C.: A. E. Bakeman, president; George Thielman, vice-president; Eugene Scharenbroich, secretary; Charles Harrison, treasurer; Herbert Gray, captain; Lee Peffer and Harry Sartell, lieutenants, Charles Saunders and Louis Olsen, directors.

NEW YORK ALDERMEN ACT.

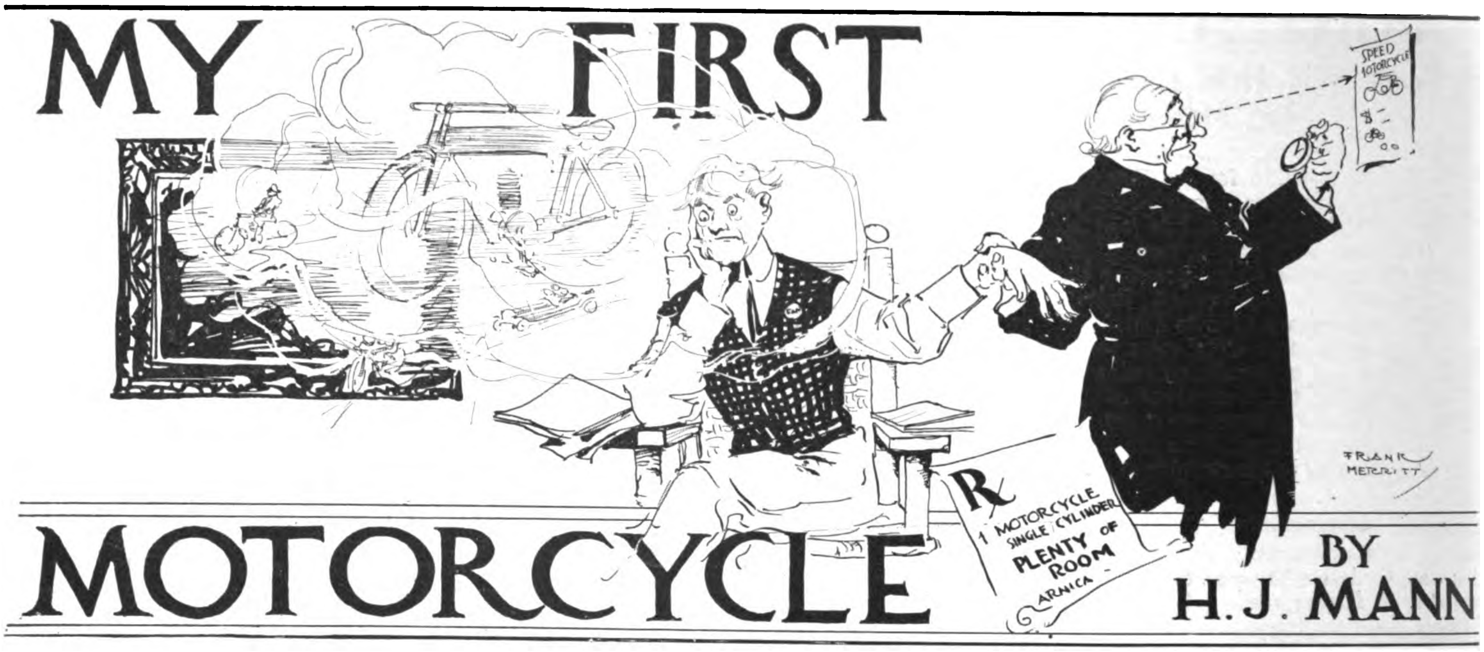
THE Board of Aldermen of the City of New York this week adopted an ordinance prohibiting the use of the muffler cutout within the city limits. The prohibition applies to all motor vehicles.

TEUBNER WILL BE THERE.

W. J. TEUBNER, the speed merchant, will attend the show in Dayton. Word was received by friends there that he would be in Dayton most of the week.

MY FIRST MOTORCYCLE

BY H. J. MANN



SPEED MOTORCYCLE
R 1 MOTORCYCLE SINGLE CYLINDER PLENTY OF ROOM ARNICA
FRANK MERRITT

IT was several years ago, in the heyday of the single-cylindered machine, that I first felt the motorcycle fever and took the portentous step which led up to the experiences I am about to chronicle. My chum, a Wall street cashier, was also interested in the single-tracker, and when he informed me one fine afternoon that he had located a bargain in the way of a machine I agreed to buy it with him on a partnership basis. Accordingly we went uptown in New York after business hours to inspect the mount. I must say that our introduction to the machine was not favorably impressive, but when one has the fever he is not likely to notice such things.

The owner of the motorcycle managed to get a few weak gasps out of it after pedaling himself into a condition bordering on collapse, and after judicious fondling of the carbureter he was rewarded by a volley of real chugs. The machine was a very old model, belt-driven, with grip spark control only. After explaining all the good points of his offering the owner suggested that we give it a trial. We did.

The First Try-Out.

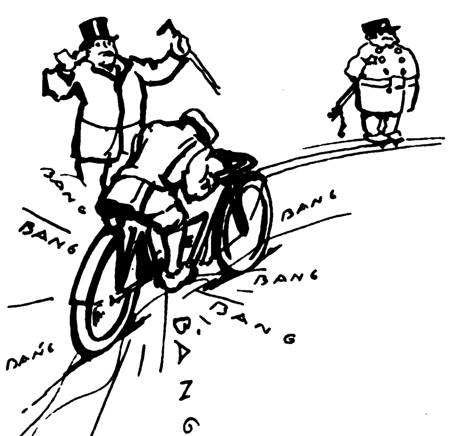
My friend climbed aboard, we gave him a push and a second later he was flying down the street, leaving a trail of smoke and explosions that suggested nothing so much as a bunch of firecrackers tied to the tail of the proverbial scared dog. From this it will be inferred that the machine was unmuffled, or practically so. However, the trial was satisfactory and we made the purchase. Then came the question of who should pilot our new possession home. I did not hanker for a ride down crowded Fifth avenue and was glad to let my friend do the honors, so without more ado he got under way.

I expected to find him at the house when I arrived, but in this I was disappointed. Nearly two hours later he came into sight, pushing the machine a few yards at a time and then resting it against the curb, as the mount was not fitted with a stand. I shall never forget the expression on his face as he wiped the perspiration from his brow and explained that he had been held up at nearly every corner on his way downtown by policemen who threatened to arrest him for speeding. He had been unable to throttle the old bus down to anything less than 12 miles an hour, with the faulty adjustment afforded, and it had finally become necessary to get off and push or wind up in court. Quite an auspicious debut!

Off for a Road Trip.

We talked nothing but motorcycle that evening and, it being Friday, we decided to make a trip together on the following day. A tandem attachment was purchased and fitted and on Saturday afternoon we took passage on a boat for Bridgeport, Conn., headed for a place called Newtown where my chum had summered a year or two before. He had explained that the scenery was beautiful and the roads beyond compare. Well, they may have been—but that's another story.

We arrived in Bridgeport about 5.30 p. m., rode the machine to a garage and then had supper. The weather was good and the night a starry one so we decided to ride on to Newtown without delay. It was a trip of about 18 miles. For about 8 miles all went well; then the stars snuffed out one by one and we found ourselves in inky darkness. Our machine was fitted with a common bicycle lamp and in order to prevent it from being jolted out every few yards we were forced to turn the wick so high that the lens sooted and we got very little light.



"Couldn't throttle her down."

Some of the "Fine" Roads.

About this time the roads began to get sandy and hilly and the going was hard. We changed places on the machine frequently as the man in the rear had to do so much pushing that he was soon exhausted. The sand in many places was over three inches deep, and to add to the excitement hordes of bloodthirsty mosquitoes surrounded us. It was about 11.30 when we finally passed a solitary farmhouse and I suggested that we should put up there for the night. My friend was eager to complete the trip, however, and we plugged onward.

A short time later we chugged head-on into a stone wall, but as we were barely moving no serious damage resulted. It developed that the road took a sharp turn at this point and that we had not made the turn. Simple enough, when you think it over. Well, we dragged the machine back to the road, burning our knuckles on the cylinder in the operation, and then decided to go back to the farmhouse above referred to and seek shelter for the night.

A Midnight Welcome.

Pushing the machine between us—we were too tired to attempt to ride it again—we made our way back to the house and knocked timidly on the door. In due time a gray-bearded farmer appeared in nightshirt and boots, with a double-barreled shot-gun in one hand and a lamp in the other. We explained our plight and offered to pay liberally for a room and bed.

"No, siree," said the rustic gentleman. "I ain't takin' in no strangers. You see I calculate to get married next Monday and my housekeeper here don't like it. She's a pesky critter, and if she had to make up an extra bed in the morning or sich-like she'd jist get plum ugly."

It was evident that our chances were slim, and in desperation I explained that we would be willing to put up in the barn. The farmer raised no objection to this arrangement and escorted us to the out-building with a lantern. We pushed the motorcycle—which by this time seemed to weigh 500 pounds—into the barn and climbed up into the hayloft.

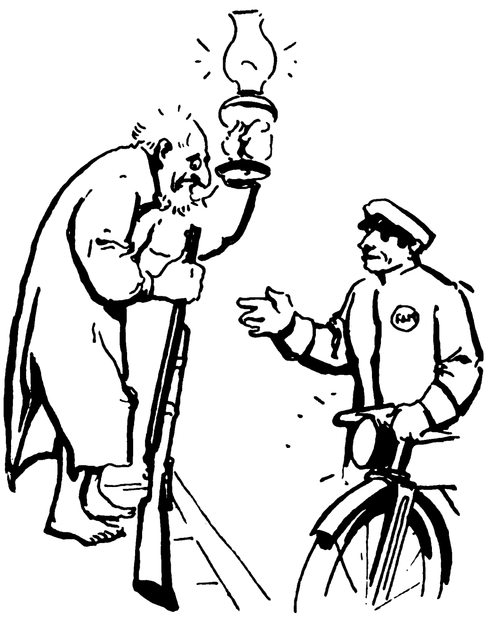
A Memorable Night.

We asked to have the lantern left with us but the farmer flatly refused. "No, siree!" he exclaimed, "I've got 20 tons of hay in this barn and I won't have no flighty New Yorkers comin' up here with their old gas carts and burnin' me out of house and home." That settled it, and we turned in without a light. The only sounds came from below where the horse was kicking about and the cows munching their cuds. It was kind of uncanny and we began to feel a bit uneasy. Almost anyone would under the conditions.

I was just about to drop off into a doze when a sound in the hay near us startled me. I grabbed my companion and shook him roughly, explaining that there must be a wild cat in the barn as I could detect two greenish eyes glaring at us from a beam. We each grabbed a shoe, the only weapons at hand, and waited for the worst. Nothing happened and the suspense brought out cold perspiration all over us.

Armed to the Teeth.

Finally, when we could stand the strain no longer, we climbed down, lighted our bicycle lamp, armed ourselves with a pitchfork and a hoe and began a search of the barn. We had taken only a few steps when we discovered a bull dog, mouth open and white teeth gleaming. Above us on a beam was a cat that had evidently figured in a chase with the dog. How we got back up the ladder is a mystery for we made frantic efforts to climb it two abreast, but we tumbled back into the loft in safety. Then sleep overcame us.



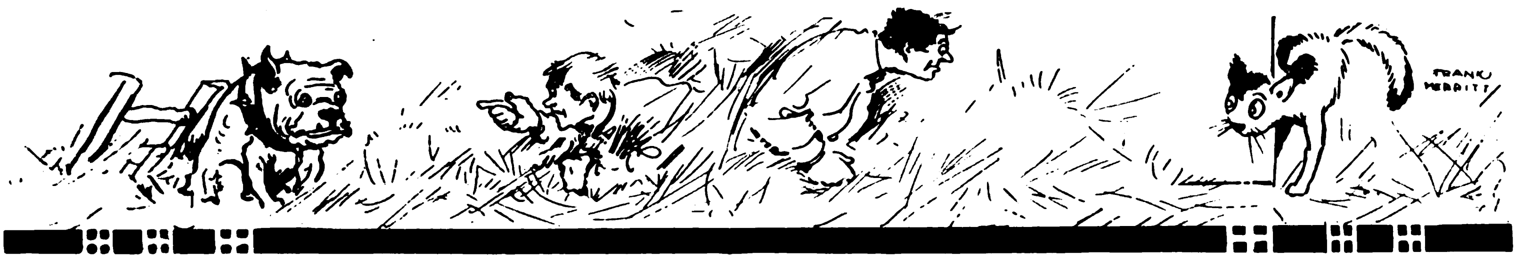
"I ain't takin' in no strangers."

The farmer called us at 5 a. m.—late for him, he explained—and escorted us into the house for a good breakfast. Later he stated that the dog in the barn was an old one and incapable of doing any real damage, but we retained our own impressions on that score. We settled for $1.50 apiece for the use of the barn and our breakfasts and then proceeded to Newtown.

Back in New York.

We enjoyed a fine dinner, strolled about the town for a time and then returned to Bridgeport, arriving without a serious mishap. We found we would have to empty our tank before taking the machine aboard the boat, but got around this rule by putting the precious gasoline in bottles which we hunted up for the purpose.

We had sufficient time for a short trip around Bridgeport and a good dinner, after which we went aboard the boat and turned in for a real night's sleep. When we arrived in New York on Monday morning we were as fit as fiddles, and all things considered, we decided that our outing had been a huge success. However, I never look at a motorcycle without thinking of our first antique bus and that pushing contest through the Connecticut sand, and above all the session with the strange bull dog and the imitation wild cat. I have made many trips since, but never go off now on long tandem outings into unknown country at night.



DEALERS FALLING INTO LINE

Manager Sidener, of Manufacturers' Publicity Bureau Now Has Helpful Campaign in Full Swing.

THE services of the National Motorcycle Dealers' Information Bureau, at 23 East Ohio street, Indianapolis, Ind., are being taken advantage of by many dealers throughout the country. Already 100 are reported to have asked for and received the first installment of "copy" and suggestions from Merle Sidener, manager of the bureau. While this material is going out, Mr. Sidener is calling attention to the advisability of co-operation on the part of the motorcycle dealers in each city.

"The motorcycling season is about to begin," says Mr. Sidener, "and the dealers could attract a lot of attention to their machines by uniting their forces and running one or two large advertisements in their home newspapers. These large advertisements should deal with motorcycles generally, and should tell the public some of the good things that can be said of all motorcycles. By uniting, the dealers could get a space large enough to attract attention and at the same time the cost of the advertisement could be thus divided. Each dealer would sign the advertisement, and the make of the machine handled by him should appear with his name. I believe it would bring fine results. Each dealer could then follow it with his own individual advertisements as often as he saw fit.

"I will be glad to prepare copy for such an advertisement for any group of dealers. It will cost them nothing, of course, for our service. All they need do is to write and say they would like to have it."

In the material already being sent to dealers who ask for it, is "copy" for small newspaper advertisements, sales-letters, follow-up letters, advertising suggestions and a chart showing the relation of such a system to their business.

Under the title of "Advertising That Pays" are the following suggestions:

"Advertising will pay you—if you are persistent.

"One ad., or one sales-letter, is pretty nearly a waste of time and money.

"The way to make advertising pay—and the only way—is to keep at it.

"The dealer who tells his story over and over again, day in and day out, will win.

"Decide definitely what you are going to do—and then *stick to it.* Find out what it will cost you to run two advertisements like those we are sending you—each week in your local newspapers. Or, even one ad. each week. Have a plan and then plug away at it. Give the plan a fair and thorough test. Decide that you will run the ads. for a period of 16, 24 or 36 weeks—and then RUN THEM THAT LONG. Don't let anything stop you.

"This applies also to your sales-letters—only there is a limit beyond which it is not well to go when dealing with one man as you do in a letter. But decide that you will send a series of at least four sales-letters to a list of likely purchasers. Then, no matter what happens, send the entire series. Go through with it, even if you don't get a single answer. You can't tell when or how the results will show up.

"We have prepared for you a plan which includes both sales-letters and newspaper advertisements. The best results will come of course if you will use both. But, either can be used alone. Above all things, though, remember that you've got to interest people—you've got to advertise in some way—if you expect them to buy motorcycles.

"As you will see, the newspaper ads. are prepared so that they will interest the public in THE MOTORCYCLE—rather than in any particular make.

"Excluding the larger cities like New York and Chicago, the cost of an ad. such as we have prepared will run, probably, from 75 cents up. It is not expensive—yet it will be seen and should get fine results if you have it printed regularly."

L. J. MUELLER has just returned from a trip through northern Ohio, where he has been placing agencies for the Indian.

MY CAREER AS A RACER

By FRANK HART

AFTER my return from Chicago I enjoyed only a short rest and then reported at Guttenberg for the races held there on June 4. Two events were put on, and I was lucky enough to win both. It may be well to state that throughout the season I used only one machine in races for the 61 cubic-inch class; this was No. 26, which carried me to victory through many hard-fought contests. In time I came to love this battle-scarred speed-box, and would have used it in the F. A. M. championships at Buffalo last July but for the fact that one of the boys drove it without oil in practice and burnt it out. I won the championships on No. 23.

On June 10 I went to New Haven, Conn., and participated in the climbing events at Shingle Hill. There were races for the 30.50, 55 and 61 cubic-inch classes. I won the first two events handily and, being first up in the 61 class I had to plough through a mass of spectators who refused to clear the way until I was within 10 feet of them.

Hard Luck in Milwaukee.

My next long trip was to Milwaukee, where I ran into the hardest kind of luck. The single-cylinder machines forwarded to me were not at their best, and later, while leading in a 61 class event, my carbureter flooded and caught fire. This forced me out of the running and the best I could do was land a second and a third out of the meet. By the way, this meet marked the retirement of one of the cleverest, gamest motorcycle racers I have ever seen—Fred Huyck. He won the big event of the day and told me later that he was going to quit the game.

At this meet I met Don Klark, another Indian speedster. He was to ride with me at Toledo the following day. Owing to poor railroad accommodations we had our own troubles in reaching Toledo, but finally arrived and made our way to the headquarters of the Indian agent. It being Sunday, the place was closed and we waited in the neighborhood until noon, when one of the mechanics appeared and explained that our machines were out at the track.

From Toledo to Detroit.

We arrived at the race course with plenty of time to tune up our mounts, and found it necessary to change to lower gears, as the machines were geared so high that they could not negotiate the sandy turns. I replaced the 14-tooth sprockets with 12-tooth ones, but even then we could not get proper speed. We did the best we could, however, and I carried off one second and three thirds. Discouraged, tired and hungry we left Toledo for Detroit, where we were to ride on July 4.

The machines we had used at Milwaukee had been shipped to Detroit, but when we arrived we could not locate them. As the next day was a holiday we figured that we would not be able to find our mounts in the general confusion, and it began to look as if we were to miss the races.

Making Close Connections.

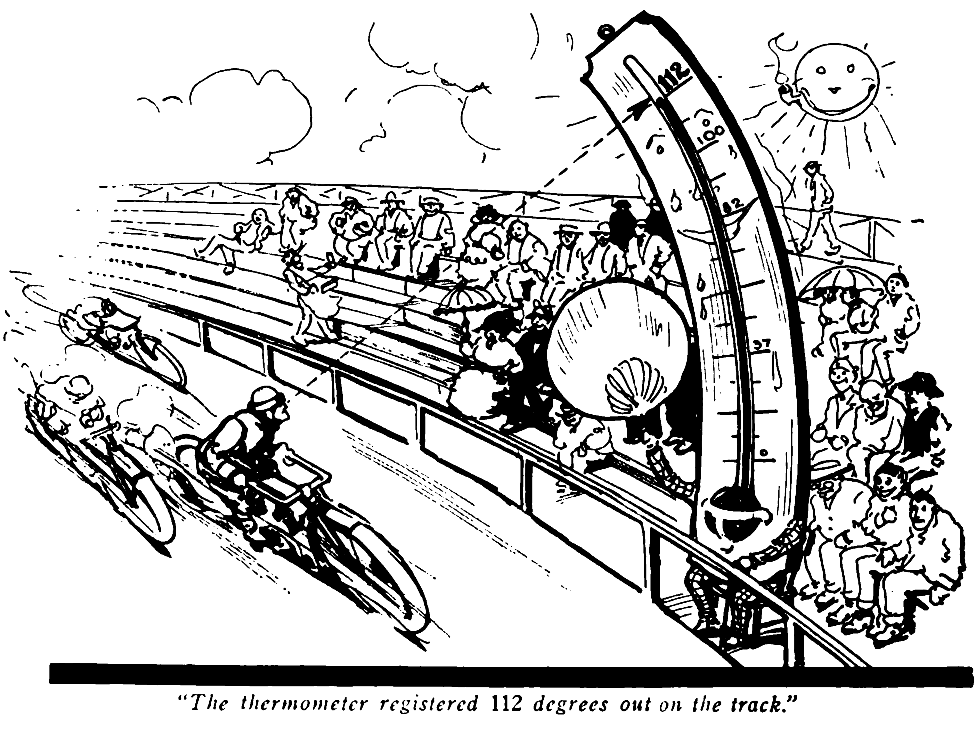
That night I slept very little, and early in the morning Klark called for me and we took up the search again. When we were about to give up in despair we located the machines in the Wells Fargo express office. Then we scouted around for a truckman and had the mounts hustled out to the track. I recall distinctly that the mercury was up to 112 degrees in the open on that afternoon. The novice race was on when we reached the track, and I just had time to overhaul my carbureter, in which the needle-valve was sticking, when we were called up for the 10-mile event in the 61 class.

I got second to Teubner in this race, Klark blowing a tire and going down for a sensational fall. He did not appear to be seriously hurt at the time, but a month later at the F. A. M. meet in Buffalo he announced that he could not ride because of injuries sustained in his Detroit spill. All of which goes to show that a racer never knows what sort of shape an accident is going to leave him in.

Clipping a Track Record.

The next event was a 5-mile race, which I won in 4:31, breaking the record for that particular track. Then came a half-hour race in which I covered 33 1-3 miles, with Teubner only a third of a mile behind me all the way. While in Detroit I received a letter from the factory asking me to go to Chicago for the opening of the new Riverview track, but as I had never ridden on a saucer I decided to pass up the chance. I was afraid that riding the boards would throw me out of the knack of skidding on dirt turns, and with the F. A. M. meet only a few weeks off I decided not to take any risks in that direction.

Then I returned to New York and arranged with my employer to take my vacation during the period of the Federation meet, the races being scheduled for July 14. Next I began to figure on which machine I would use in the big races. I knew No. 21 was the fastest mount the factory had at the time, but this was being ridden in England by De Rosier. Finally I decided to fall back on my favorite, No. 26.



"The thermometer registered 112 degrees out on the track."

At the Buffalo Meet.

On July 12 I left for Buffalo, a few of the boys going to the station to see me off. In the crowd was a popular metropolitan dealer, known to the riders as "Old Honest Tom." As our train pulled out he called to me: "Take care of yourself, Frank, and be sure to wear a head-guard. Don't forget it, boy." I didn't forget it, and for the first time I used a head covering in the F. A. M. races. Now that I think back over some of my contests I can see that I was very foolish to neglect wearing a head-guard, for these shields have saved more than one life on the tracks.

Shortly after arriving in Buffalo I found Balke, who wanted to know at once which machine I was going to ride in the races. I said I had decided to stick to old "26," but he argued that I should ride No. 23. We went to the Indian dealer's place and as we pulled No. 23 out of the case, Balke looked the machine over proudly, saying, "She's the baby," a phrase he had picked up from little Eddie Hasha.

Track in Poor Condition.

As No. 23 had just come from Chicago after the Riverview opening we decided to grind in the valves. We also changed the gear and fitted a pair of new racing tires. Then we boxed the machine again and ordered it sent out to the track. In the afternoon we went over to Fort Erie in a party and found the track in very bad shape. The sand and dust seemed to be a foot deep on the turns, and predictions were freely made that accidents would mark the races. A young fellow named Costello had already been hurt in practice. I think it's safe to say that I had never seen a track in worse condition. Later, however, some of the dirt was scraped from the center of the course.

In a short time our machines arrived, in charge of Gustafson and Spencer, and we tried them out. I made a mile in 1:05 on No. 26, and Balke went the distance in 1:10 on No. 23. That made Charley sore and he began to tear the machine apart. He worked over it for three hours and it was getting dark when we went back to the city. I'll wager that Balke didn't sleep much that night, for he was around at daylight, announcing that he wanted to get over to the track.

The Opening Events.

He had arrived at the conclusion that he could help matters by changing the rear sprocket on his machine, so he lost no time in changing from a 29-tooth to a 31-tooth sprocket. Then he went out for a trial and I rode with him on No. 26. He clipped off the mile in 59 seconds and I rode it in 1:02. After that Balke was so tickled with his "baby" that he didn't want anyone else to look at it.

However, he agreed to let me ride it and I turned over No. 26 to Willis. The first race was at five miles for stripped stock machines. I led up to the third mile, when I broke a valve and was glad to finish third. Next came the 10-mile championship. I used No. 23 and ran away from the field until the eighth mile, when my motor began to skip. I took off the filler cap and blew into the tank, and this seemed to help. I could keep up this stunt on the stretches, but had to stop it on the turns, and then my speed fell off. I finished second, much to my disappointment.

One-Mile Championship.

After this race came one for 30.50 machines. I entered it with one of the company's new four-valve singles and won. The mile championship was next on the program. I knew this race was going to be a tough one, for we had only one circuit to make and the machine that got the best start would probably win. We had a rolling start, which suited me, because No. 23 was a long stroke machine and required some time to pick up. As we lined up, my pulse must have been turning off about 180 beats a minute; the excitement was intense.

Crack! went the pistol and we were off. At the last instant I decided to hang back a bit and come up to the starting line under full power. This I did, and before we reached the first turn I was leading. I won the race in 56⅕ seconds. That closed the first day's racing. I had won my trial heats, two firsts, a second and a third in the finals, and I was in a happy frame of mind as I went back to the hotel.

Events of the Second Day.

Still I was a bit nervous when I thought of the big hour championship race that was scheduled for the next day. With it went the Bosch trophy and the Standard Welding Cup, and I was mighty anxious to win it. At this stage of the game I was three points in the lead for the Bosch cup. I had a good night's sleep, turned out early and went over to the track to tune up No. 23. Still I was uncertain as to which machine I should use in the hour race, for previous racing dope led to the conclusion that no regular racing machine could be expected to hold out through an hour grind at top speed.

One of the machines sent to Buffalo was No. 28. This had not shown any great speed, although it was a duplicate of No. 21, one of the fastest, but I finally decided that I would have a good chance to win with it. I figured that if DeRosier could ride 100 miles in 78 minutes on a machine like No. 28, I ought to be able to cover 60 miles in 60 minutes with it. Accordingly I entered the hour event on No. 28 with the amateur championship hanging on the outcome.

(To be concluded.)

SOME PERTINENT QUESTIONS.

EDITOR MOTORCYCLE ILLUSTRATED:

In your talk, "The Right Sort of Agent," in MOTORCYCLE ILLUSTRATED of March 21 you used one heading "On Diplomacy." Allow me a few lines of comment upon it.

Would you think of going to a jewelry store, where you had bought your watch, and using the firm's shop or work-bench? What would your tailor say if you went into his workshop and wanted to press your own clothes? Butchers, as a rule, charge more for sliced bacon than when it is sold in a chunk; would you buy it in a chunk and then ask the proprietor to lend you his knife to slice it with?

We have been running just such a shop as you speak of, letting our customers come in and help themselves as they see fit, and the only tools we ever missed were some stolen by colored boys when they came in to borrow a pump.

We have put on an extra man in our shop and therefore are able to give quick service and at the same time it must be the best. Incidentally we have decided to cut out the help-yourself plan; we can't stop one patron and let the others go; that would be worse than ever, so we have to stop it all. Maybe we are doing wrong, but I am sure that if your friend "The Dealer" continues in business he will have to do the same sooner or later.

Although we have the only motorcycle shop in a city of 30,000 people we try to give our customers a square deal at all times.

We would be glad to have you reconsider this and put yourself in the dealer's place.

RUFUS C. DEARDORFF,
Manager Muskogee Cycle Company.

SEEKS TOUR COMPANION.

WILLIAM CHRISTOPHERSON, of Racine, Wis., is planning a motorcycle trip to New York for the coming summer and will be glad to hear from another rider of his district who is contemplating a similar trip.

A ONE-ARMED ENTHUSIAST.

ALTHOUGH deprived entirely of the use of his right arm Ernest Sonnenberg, of Gaylord, Kan., is one of the most consistent motorcyclists of his district and a firm believer in the health-giving advantages of the motor two-wheeler. Sonnenberg now mounts a 1912 Emblem and writes enthusiastically of the ease with which he has mastered the machine. He states that he has made long trips, climbed hills and ploughed through sand without ever being seriously handicapped. The Emblem used by this rider is a stock model aside from the controls, all of which are fitted on the left handlebar, as will be noted in the photograph. The Emblem is handled in Gaylord and vicinity by Stephenson & Campbell.

MEMORIAL DAY RUN.

CAPTAIN STEVENS, of the New Jersey M. C., Newark, N. J., has about completed road plans for the club's big endurance run which is scheduled for Memorial Day. It is understood that the riders will strike westward to Trenton, then across the State to Atlantic City and up along the shore roads on the homestretch. There is a promising show of entries.

DAYTON BANQUET.

THE Dayton Bicycle Club, of Dayton, held a banquet, March 16, to commemorate St. Patrick's Day. An elaborate menu was printed on green paper. T. E. Tucker, president of the club, spoke briefly and Toastmaster Bosler recited the poem "Rory O'More." Judge R. W. Baggott spoke on "St. Patrick." The early history of the club, compiled by Bert Wiatt and H. J. Chancellor, was given, and there were other social features.

MOTORCYCLE PARADE.

MEMBERS of the Miami (Fla.) M. C. and riders from neighboring towns held a parade on Saturday, March 23, which proved highly successful. The procession was made up in two divisions, the club riders in one and the visitors in the other. They rode through the principal streets of the city to the Royal Palm Hotel, where a photograph of the squad was taken.

PLAINFIELD PENNANTS.

THE Plainfield (N. J.) M. C. has adopted navy blue pennants with yellow letters for the use of members on road trips, to be held during the coming summer.

QUEEN CITY HUSTLERS.

MORE than fifty riders are now listed with the Queen City M. C., of Cincinnati, Ohio, and steps are being taken to have the squad affiliated with the F. A. M. on a 100 per cent. basis. Although organized but recently, the club is in a flourishing condition and there are indications that it will be one of the most active squads in its district throughout the coming summer. Quarters have been arranged for in the assembly hall of the Hub Café and a permanent home will be provided in the near future if the club continues its present rate of growth.

WISCONSIN CLUB ELECTS.

P. D. ROSCHE is the newly elected president of the Wisconsin Motorcycle Club, of Milwaukee, Wis., and his associates for the coming term are as follows: A. G. Parsons, vice-president; W. Rohn, treasurer, and G. Schedler, secretary. The first of a series of races under the club auspices will be held in June at the State Fair course.

CLUB SUFFERS FIRE LOSS.

RECENTLY a fire nearly destroyed the Collonade building in Toledo, in which are located the quarters of the Toledo Motorcycle Club, and considerable damage was done to the club's furnishings by smoke and water. As a result the squad has been forced to suspend its meetings, but the building is being repaired and the regular weekly meetings will soon be resumed. The club's first run of the season will probably be held May 29-31 to Indianapolis, where the motorcyclists plan to witness the big international automobile race on Memorial Day.

WILLIAM N. SHANNON, of Atlantic City, N. J., has been appointed by State Commissioner Reed, of Camden, as local commissioner for Atlantic county.

METROPOLITAN CLUB PLANS

Riders of New York Organization Will Avoid Contests and Go in for Social Outings.

AT a recent meeting of the Metropolitan M. C., of New York City, G. P. Jenkins was elected president, E. L. Parris, vice-president, and A. P. Lane, captain. For the present the office of secretary is open, and its duties are being attended to by Captain Lane. President Jenkins has named two committees as follows: Road, A. Kreuder and E. L. Parris; membership, A. P. Lane and R. G. Taylor.

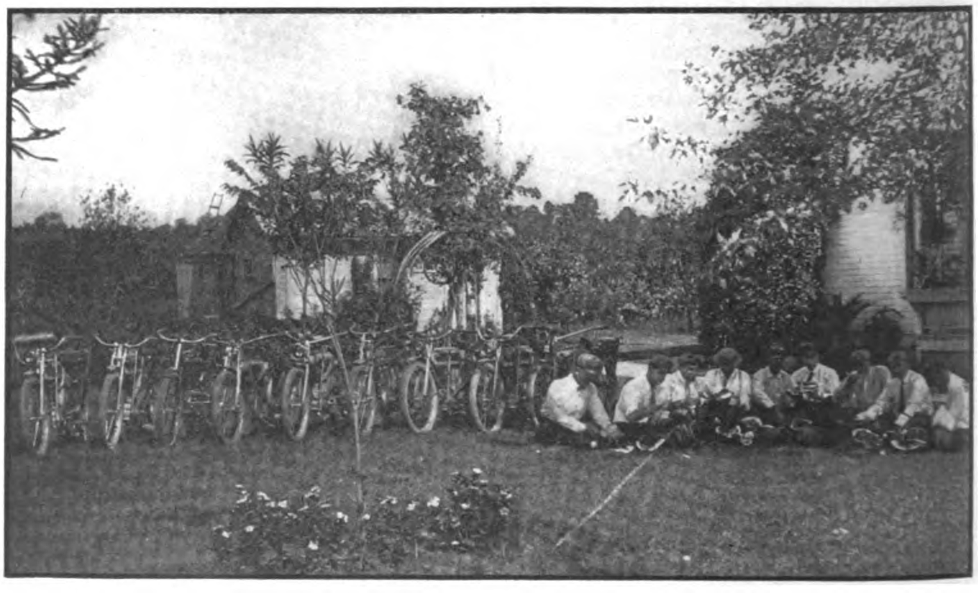
The club has decided upon a riding uniform of coat and hip leggings of khaki, and a bandana handkerchief will be worn about the neck as a distinguishing mark and incidentally as a protection against dust. It is announced that the club will not go in for road races or meets, and that all its outings will be arranged on a basis of sociability and good fellowship. The Metropolitan squad has come out decisively against the use of the muffler cut-out at any time. The quarters of the club are at 256 West 55th street.

POUGHKEEPSIE BANQUET.

SUCCESS crowned the efforts of the committee in charge of the third annual banquet of the Poughkeepsie (N. Y.) M. C. which was held on April 1, and a large number of visitors participated in an unusually interesting program. The club will hold its first official club run to Blue Stores on Sunday, April 7, and a chicken dinner will be served at the turning point.

NEVIUS IS SECRETARY.

AT the last meeting of the Central Jersey M. C., of Trenton, James Nevius was elected secretary to succeed George B. Yard, who resigned. Earle Chamberlain has been chosen as treasurer and Ernest Henk as assistant publicity agent.



A MARIETTA OUTING.

PLANS have been completed for the opening of the Marietta (Ohio) M. C. which will be held on May 30 when the club members will ride to Zanesville to witness the 100-mile race scheduled for that city. The Marietta club expects to have several seasoned riders entered in the Zanesville contest.

The accompanying photograph shows the Marietta squad enjoying a watermelon feast at the home of Mayor G. R. Yoeman, of Evergreen, Ohio, during one of the outings held late last summer. Mayor Yoeman is an enthusiastic motorcyclist. The Marietta boys spent the day at his place and rode back to the city in the evening, after promising to pay another visit.

Touring

TO AMAGANSETT.

B. F. BRYANT.—From Whitehall street ferry (New York side), go up Broadway to junction with Park Row; go north on Park Row to Bowery, then to Cooper Square, and at that point north on Fourth avenue to 34th street; turn left on 34th street and go to Fifth avenue, then go north on Fifth avenue to 57th street. There turn right and go to Queensboro bridge; cross and go to Jackson avenue, Long Island City. Cross Jackson avenue and continue out Thompson avenue to Hoffman Boulevard, on which continue to Richmond Hill. From the latter place go to Jamaica and take the Merrick road through Springfield, Valley Stream, Lynbrook, Rockville Center, Baldwins, Freeport, Seaford, Massepequa, Amityville, Babylon, West Islip, Bayshore, Islip, East Islip, Great River, Oakdale (dangerous crossings), Sayville, Blue Point, Patchogue, East Patchogue, Bellport, Brook Haven, South Haven, Moriches, Center Moriches, East Moriches, Eastport, Speonk (Remsenburg), Westhampton, Quogue, East Quogue, Good Ground, Canoe Place, Southampton, Water Mills and Bridgehampton. From Bridgehampton the road to Amagansett is poor, the route being via Easthampton.

DECATUR TO LOS ANGELES.

CLIFFORD T. REESER.—From Decatur go to Maroa and then to Bloomington; then to Danvers, Lilly, Mackinaw and Peoria. From Peoria go on through Farmington, Middle Grove, Maquon, Gilson, Knoxville, Galesburg, Henderson, Alpha and New Windsor to Milan and Rock Island, where cross the river to Davenport (Iowa). From Davenport go through Walcott, Stockton, Durant, Wilton Junction, Moscow, Atalissa, West Liberty, Iowa City, Tiffin, Oxford, Conroy, Marengo, Ladora, Victor, Carnforth, Brooklyn, Grinnell, Kellog, Newton, Colfax, Mitchellville, Altoona, to Des Moines. From Des Moines go through Waukee, Ortonville, Adel, Dale City, Guthrie Center, North Branch, Exira, Lorah, Atlantic, Walna, Avoca, Minden, Neola, Underwood, Weston and Council Bluffs to Omaha.

From Omaha go next to Millard, then through Louisville, Waverley, Havelock, Lincoln (Neb.), Princeton, Cortland, Pickerell, Beatrice, Blue Springs, Wymore, Okato Station, Everts, Huron, Lancaster, Atchison, Lovemont, Leavenworth, Lansing, Kansas City (Kan.), and cross the Kansas river to Kansas City (Mo.) From the latter city go on to Waldo, then through Martin City, Olathe, Gardner, Edgerton, Wellsville, Ottowa, Homewood, Agricola, Waverly, Emporia, Saffordville, Cottonwood Falls, Elmdale, Clements, Florence, Peabody, Walton, Newton, Halstead and Hutchison to Nickerson, Sterling and Lyons. From Lyons go on through Great Bend, Dundee, Larned, Kingley, Offerly, Spearville, Dodge City, Cimarron, Pierceville, Garden City, Holcombe Station, Deerfield, Lakin, Kendall, Syracuse, Hillwood, Granada, Lamar, to Las Animas.

From Las Animas (Col.) go next to La Junta; then to Timpas and through the Santa Fé trail to Cedar groves. From the latter place continue over the trail to the Monument, past Blooms ranch, Tyrone station, Earl station and Hoehne to Elmoro and Trinidad. From Trinidad go through the Raton Pass to Raton (N. M.). From Raton continue on to Maxwell's ranch and Springer. From the latter place go to Nolan, Wagon Mound, Watrous, Onava station, Azul, Arriba and Las Vegas. Go next to Romero, Tecolote, Bernal, San José, Rowe, Glorieta, through Apache canyon, to Canyon City and on to Santa Fé.

From Santa Fé go to Albuquerque via La Bajada, Algodones, Bernalillo and Sandia (Indian pueblo). From Albuquerque go over the bad lands to Mazeta, then to El Rito, Laguna, Cubero, La Vega, McCarty station, and along sandy roads to El Rancho del Punta de Malapais. Ride toward the Twin Peaks, and through the woods to Nation's ranch; then on past Laguna Salina de Zuñia, to Coyote Creek, passing the "Trail to Sunset" signposts. Continue on to Springerville; then to Cooley's ranch via Wahl Knoll and over Little Boghole creek. From Cooley's ranch go through Black Canyon to White River (Indian station), then to Fort Apache, past Kelley's butte, through the pass in the Natanes Mountains to Rice (Indian station). Go on to Globe and from there through the pass in the Apache mountains to Livingston and Roosevelt. From Roosevelt take the Two Bar Ridge Pass following Salt River to Frazier's; and continue along the canyon to Goldfield.

From Goldfield go to Mesa, Tempe and Phoenix (Ariz.). From Phoenix go to Cold Water, Buckeye, Palo Verde, Winter's Well; past the Harqua Hala Mountains, through Harrisburg and Salome to Vicksburg. From the latter place go on through the Palomas Mountain pass to Quartzite, and finally to Ehrenburg. From Ehrenburg go on past Patterson's road house, Ford's well, over the Chuckwalla Valley, to Mecca. (Easy road to follow.) From Mecca go to Thermal, Coachella, Indio, Palm Springs, Banning and Beaumont. (Follow signs of Southern Cal. A. C. west of Banning.) From Beaumont follow on to Redlands then to San Bernardino. Go next to Colton and Riverside; then to Bloomington, Rialto, Etiwanda, Cuckamonga, Upland, Ontario, Pomona, past the San José hills through Puente, Bassett, Elmonte, Savannah, San Gabriel (mission), and into Pasadena. Go over the Huntingdon Drive to Los Angeles.

From Los Angeles to San Francisco go via Ventura, Santa Barbara, Santa Inez, San Luis Obispo, Paso Robles, Jolon, Soledad (over the Camino Real), Monterey, Gilroy, Santa Cruz and San Francisco. It is best to get maps for this entire route, the "Trail to Sunset," from the American Automobile Association, 437 Fifth avenue, New York. The price is $1. For outfit, carry a canteen for water, an extra day's rations; first aid kit, several spare inner tubes and full repair outfit. Carry a good revolver and wear good shoes and leather leggins. An extra 1 or 2-gallon can for gasoline should be taken as well as blanket, etc. As there is plenty of sand en route (in New Mexico and Arizona) use rough treaded tires and fill up with gasoline as often as possible. Fuel is not available everywhere, but is obtained in most of the larger places. Make inquiries at all stopping places and keep the spare gasoline can full.

SEWALL (IOWA) TO STEUBENVILLE (OHIO).

VANCE LIGGETT.—You had better go to Des Moines in order to get the best roads through Iowa, Illinois, Indiana and Ohio. Follow the C., M. & St. P. road to Seymour and go to Harvard; cross to Aetna (country road), then go to Corydon, Bentonsville, Cambria, Humeston (following line of C., B. & Q.). Intermediate points between here and Des Moines are: Chariton, Oakley, Milo, Indianola, Summerset Jc., and Carlisle. From Des Moines, go to Altoona, then through Colfax, Newton, Grinnell, Ladora, Marengo, Tiffin, Iowa City, Moscow, Durant, Davenport, Moline (Ill.), Briar Bluff, Geneseo, Mineral, Wayanet, Princeton, Bureau, Putman, Heary, Sparland, Chillocothe, Mossville, and Peoria. From Peoria go to East Peoria, Groveland, Mackinaw, Lilly, Danvers, Bloomington, Gibson City, Paxton, Hoopeston, Talbot (Ind.), Boswell, Oxford, Otterbain, Montemorenci, and Lafayette.

From Lafayette go to Middlefork, then to Burlington and Kokomo. From Kokomo go to Sycamore and Marion. Go next to Petroleum, then through Domestic, Mercer (Ohio), Mendon, and Spencer to Lima. From Lima go to Adda, then through Forest, Upper Sandusky, Oceola, Bucyrus, Galion, Mansfield, Mifflin, Reedsburg, Wooster, Massillon, Canton, Carrollton, Amsterdam, and Richmond to Steubenville.

ATLANTIC CITY TO ALLENTOWN.

WM. A. HANDIN.—From Atlantic City go to Pleasantville, then to Absecon, Germania, Egg Harbor City, Hammonton; from the latter place go to Atsion, Indian Mills, Medford, Lumberton, Mount Holly and Burlington. From Burlington go to Columbus; then to Bordentown, White Horse and Trenton. From the latter city go to Pennington, Woodsville, Ringoes, Copper Hill, Flemington, White House, Clinton, Perryville, Bloomsburg, and Phillipsburg. Cross the Delaware River to Easton and go to Bethlehem (Pa.), then on to Allentown.

An alternate route returning is as follows: Allentown, Central Valley, Coopersburg, Quakertown, Sellersville, Line Lexington, Lansdadale, Spring House, Ambler Chestnut Hill and Philadelphia. Cross the Delaware River from Philadelphia to Camden (N. J.) and go to Magnolia; then through Kirkwood, Berlin, Atco, Ancora Hammonton, Elwood, Egg Harbor City, Germania, Absecon, Pleasantville and Atlantic City. Distances out route, Atlantic City to Trenton, 91 miles; Trenton to Delaware, 51.6 miles; Phillipsburg to Allentown, 21 miles. Return route: Allentown to Philadelphia, 54 miles; Philadelphia to Atlantic City, 62 miles. Total distance, out trip, 163.6 miles; return trip, 116 miles.

PROPOSED AMENDMENTS

Two of Those to Be Offered at Next F. A. M. Assembly Aim to Systematize Work of State Commissioners.

IN conformity with the provisions of the constitution and by-laws of the Federation of American Motorcyclists, notice is hereby given that, in behalf of MOTORCYCLE ILLUSTRATED, the following constitutional amendments will be introduced at the 1912 National Assembly:

Amend Article V., Sections 2 and 3, referring to the duties of district vice-presidents and State commissioners, by adding the following section: "It shall be the duty of each State commissioner to report monthly, as nearly as possible on the fifteenth day of each month: Any information he may have obtained regarding touring conditions in his State; the passage or contemplation of the passage of any local, county or State legislation affecting motorcyclists; the organization of new clubs and any other information that may assist the district vice-president or the national committees in their work. Such reports shall be submitted as aforesaid by each State commissioner to the vice-president of the district in which the former's State is situated.

"At reasonable intervals, or at once in the event of its being imperative, each vice-president shall, from the information contained in the monthly reports of his State commissioners, tabulate and mail to the chairman of each national committee all the information that may be of value to each of said committees. A copy of each report prepared by a district vice-president for a national committee chairman shall also be sent to the national secretary-treasurer and the president of the F. A. M.

"It shall be the privilege and the duty of the president to insist upon the resignation of any district vice-president or State commissioner who fails to comply with the provisions herein contained."

STEWART ON THE JUMP.

STATE COMMISSIONER I. W. STEWART, of Minnesota, has been doing some rapid-fire campaigning in his territory of late, and as a result a number of new clubs are in process of formation. The State official announces that he is collecting information bearing on motorcycle conditions in practically every town, and that club boomers will have to show results or give mighty good reasons for their inactivity. He invites club organizers to communicate with him in order that arrangements may be made for a conference, and explains that he is prepared to assist in any such movement on short notice. Commissioner Stewart was instrumental in bringing about the organization of the new club in St. Cloud, Minn.

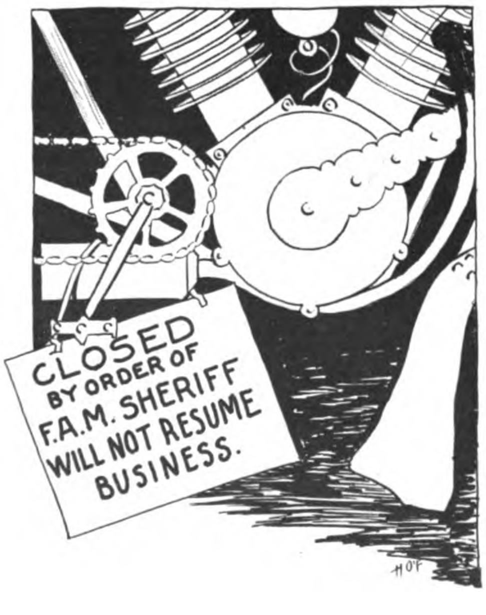
HAVE DIRT TRACK, TOO.

PLANS for the new board saucer at Cleveland, Ohio, provide for a promenade five feet wide around the top of the grandstand, so that there need be no confusion in obtaining seats. Entrance to the arena will be by an 18-foot cement tunnel, and ample repair and checking facilities will be afforded under the grandstand.

Having learned that some of the speedsters are not inclined to favor a board track for the F. A. M. championship races at the annual assembly the Cleveland Club calls attention to the fact that a good one-mile dirt track is located only 12 miles from the city on the line of the Erie railroad. This annoucement is made to forestall any sentiment which might be developed against Cleveland as a contender for the next national meet of the F. A. M.

MORE CLUB BOOMERS.

CHAIRMAN ESTABROOK, of the F. A. M. membership committee has added to his list of club workers the following enthusiasts: G. F. Hodgman, 14 School street, Concord, N. H.; C. D. Bremer, 538 Muskego avenue, Milwaukee, Wis.; E. S. Henderson, 153 Thatcher street, Hornell, N. Y.; John Wolf, Lock Box 754, Sparta, Wis.; J. Lem Titworth, Wolfe City, Texas; Wm. H. Houts, Anaheim, Calif.; Louis H. Burkhardt, West Palen Beach, Fla.; Capital City Wheelmen, Sacramento, Calif. Local motorcyclists and prospective riders are requested to communicate with the above named boosters to the end, that the sport may be advanced through speedy organization, and local motorcycling conditions improved.



CLOSED BY ORDER OF F.A.M. SHERIFF WILL NOT RESUME BUSINESS.

NO TIME TO LOSE

President Hamilton Gives Notice That Bids for F. A. M. Meet Must Be Filed Before April 25.

FOLLOWING is a self-explanatory letter from President G. H. Hamilton, of the F. A. M., relative to preliminary plans for choosing the city in which the next national assembly of the Federation will be held. It calls attention to the necessity for prompt action by club officials in cities which intend to bid for the big meeting, and is here given in full:

"According to the constitution and by-laws of the F. A. M., not more than ninety, nor less than sixty days' notice of the annual meeting must be given in the motorcycle papers, and in order to comply with these provisions it is necessary that all cities desiring to bid for the 1912 F. A. M. meet should be notified relative to the time that applications shall be received.

"This notice is to the effect that all applications for the 1912 meet to be acted upon by the Board of Directors of the F. A. M. must be filed with the president prior to April 25, 1912.

"In making applications it is requested that the best available dates for the meet be given, also a complete program of the entertainment to be offered, together with the names of the hotels and the rates of each."

AN "O. K." FROM CLEVELAND.

THAT the Cleveland, Ohio, motorcyclists are leaving no stone unturned to bring the next convention of the F. A. M. to their city is indicated by a telegram received a few days ago from officials of the Cleveland Chamber of Commerce. It tells its own story.

"The convention board of the Cleveland Chamber of Commerce wishes to second most heartily the invitation of the motorcycle club, and hopes that the Federation of American Motorcyclists will next convene in Cleveland in July, 1912."

LIST GROWS STEADILY.

AMONG clubs that have been listed with the F. A. M. of late are the following: Washington (D. C.) Motorcycle Club, G. C. Billard, secretary, 736 14th street, N. W.; St. Cloud (Minn.) M. C., E. E. Scharenbroich, secretary, 617 Third avenue, S.; Columbus (Ga.) M. C., J. B. McCullom, secretary, 13th street and First avenue; Motor Club of Modesto, Modesto, Cal., J. J. O'Keefe, secretary, care of fire headquarters.

SPECIAL sweaters and pennants are to be obtained by the Fremont (Ohio) M. C. and the squad promises to make a fine appearance on its summer runs.

With the Clubs

SECOND ANNUAL BANQUET

Many Guests Participate in Fine Program Arranged by the Utica Club—Novel Souvenirs.

THE Utica Motorcycle Club, of Utica, N. Y., held its second annual banquet on Thursday evening, March 21 at the St. James Hotel. Covers were laid for about sixty-five diners, and it proved to be one of the most elaborate and enjoyable affairs ever held by the organization. At 8:30 the assemblage filed into the banquet hall and each guest was provided with a souvenir of the occasion which consisted of a miniature club pennant, in colors, to be worn on the lapel of the coat. The hall was attractively decorated with pennants of the club, and the tables with candelabra bearing candles of the club colors. The first thing that greeted the eye of the motorcyclist as he was seated was the menu which was gotten up very attractively in book form, with the club emblem in colors on the front cover and the F. A. M. insignia on the back cover. The first inside page was headed with an appropriate motorcycle picture and this was followed by a list of the officers. The inside pages had a special border with the intials U. M. C., which surrounded the menu and toasts. On the last page were the words of some of the popular songs of the day, which were introduced throughout the program.

About 11 o'clock when the menu had been disposed of President Homer G. Bulkley, acting as toastmaster, delivered a short address and introduced as guest of honor Mayor Baker, of Utica, who responded to the toast "As Our Mayor Sees Us." Ex-president Frank F. Dutton, of the Utica Motorcycle Club, responded to the toast, "Birth of the U. M. C.," and then followed: "Our New Club Rooms," by George E. Girban; "From a Dealer's Viewpoint," by Jos. F. Coupe; "The Girl in the Side-Car," by Forest W. Chase; "Some Facts About the F. A. M.," by Arthur F. Ferriss; "Club Runs," by Burton P. Easton; "Social Life of the U.M.C.," by Otto L. Endres, and "Future of the U.M.C.," by Dayton Roth. Harold F. Turner, who was in the city in the interests of the Monarch Motorcycle, was called upon and spoke entertainingly on motorcycle camping tours.

MOTORCYCLE FILLS THE BILL.

AGENT WILLIAMS, of the Armour Packing Company, located in Freeport, Ill., has been provided with a motorcycle by the firm in order that he may cover the small towns within a radius of fifty miles of Freeport without the delays incident to railroad travel.

CHICAGO CLUB REORGANIZED.

HAVING reorganized with sixteen active members the Empire Motorcycle Club of Chicago has purchased the furnishings of the Wolfram Athletic Club and taken over the fine cottage at 1919 George street, formerly occupied by the athletic organization. The quarters embrace reading and lounging rooms for the riders, and a pool room for members who care to stay indoors. The large, well-lighted basement has been fitted as a garage and repair shop, where riders may tune up their machines. Motorcyclists who wish to obtain information relative to joining the club may communicate with C. F. Olson, secretary, 1919 George street. The club will affiliate with the F. A. M. at an early date.

OPENING RUN AT BOSTON.

ANNOUNCEMENT is made that the Boston (Mass.) M. C. will hold its first official run on April 19, Patriots' Day. They will probably ride to Worcester where a good dinner can be had, and then to Lester Hill, about eight miles out of Worcester, where hill-climbing events of an informal nature will be held. The club extends an invitation to all unattached riders of the city to participate in the outing. Special emphasis is placed upon the statement that the run will be a "slow" one, intended for pleasure and not record-smashing. Information may be obtained from F. M. Wyman, secretary, 141 Massachusetts avenue, or Dr. R. L. Colson, president, 673 Washington street.

PRACTICAL BOOMING.

PRACTICAL work for the advancement of the motorcycle and its interests is being done by the Will County M. C., of Joliet, Ill., which recently distributed a large number of circular letters outlining the rules of the road and asking for their observance. The regulations referred to are those which every road-user should know and obey, but which are too often neglected. The club is waging a broad campaign and is being encouraged in its work by the newspapers in its district, according to a recent report of Secretary H. F. Stoll.

THE ROCKFORD SQUAD.

ONE of the latest additions to the club ranks is the Rockford M. C., of Rockford, Ill., which was organized recently with a charter list of 40 riders. Officers have been elected for the opening term as follows: Fred W. Sullivan, president; Rubin A. Croon, first vice-president; Erick Erickson, second vice-president; Fay Young, captain; William Swanson, first lieutenant; David Erickson, second lieutenant; Clarence Carratt, secretary-treasurer; Elmer Friels, assistant secretary-treasurer.

PATERSONIANS ENTERTAIN

Visitors from Neighboring Cities Praised Officials of North Jersey Club for Fine Social Program.

THE North Jersey Motorcycle Club, of Paterson, held an entertainment and smoker, Wednesday evening, March 20, for the purpose of getting the motorcyclists of the city together for the coming season, and also to promote a feeling of good fellowship. The affair proved a success in every respect. Speeches made by several of the members indicate that the club will be very active this season. John Terhune, president of the Hackensack Club, was the guest of honor. He was accompanied by a delegation from Bergen county.

The program was varied and very interesting. The music for the evening was furnished by Professor A. A. Croft's symphony orchestra. Other features on the program were banjo selections, E. E. Horton; Hebrew impersonations, I. J. Kaufman; club swinging, Frank Milnes, and a recitation, H. Finn. Dr. C. Reyner, F. A. M. commissioner for Paterson, gave a short talk on the club and its work. After the entertainment refreshments and cigars were served. The committee in charge of the arrangements was made up as follows: Dr. C. Reyner, chairman; Charles Shaw, Rover Dickson, Harry Bock and F. Alexander.

DES MOINES OFFICERS.

WHEN the Des Moines (Iowa) Motorcycle Club held its annual meeting for election of officers March 25, the following staff was chosen: President, Harry Teegan; vice-president, C. A. Hoppes; secretary, Fred Stitsell; treasurer, Louis Schiebel; captain, Frank Foss, and lieutenant, Gus Anderson. It was decided last fall to suspend the club dues from December 1 until March 1 and at the last session the payments were started again.

Several important runs have been planned for the coming summer. One of these will be to Atlantic, Iowa, where the club will be met by the clubs from Council Bluffs and Omaha. Another run will be held to Marshalltown, where the club will be met by the squad from Cedar Rapids. No plans have as yet been made for speed contests, though several will be held as soon as the roads permit. Des Moines is lacking in track facilities suitable for motorcycle races, only a fair half-mile track being available.

SUCCESS attended the "ladies' night" entertainment given recently by the Riverside (Cal.) M. C., and it is likely that a number of similar programs will be arranged during the summer.

③

ON these pages and the following page will be found descriptions and illustr tions of just a few of the luggage carrier designs submitted since t announcement of this prize contest. An average of six a day are being receive and among them are several at least of great practical value. Already th competition has proven successful far in excess of the expectations of the pu lishers of MOTORCYCLE ILLUSTRATED. From present indications, as many one hundred designs will be turned over to the judges when the contest clos June first, and it will be no easy matter to determine the winners.

Those who have submitted the designs described in this issue will note th the specifications have been generalized, and in some cases the sketches redraw However, the *original* manuscripts will be turned over to the judges, and the decisions will be based entirely upon the mechanical accuracy and the commerci utility of the respective designs. In other words, those will be considered be which incorporate in the cleverest propositions the desirable elements of com pactness, comfortable capacity, accessibility, strength against vibration, neatne in appearance, ease of operating the machine with carrier attached, value of t carrier as an article of economical manufacture, etc. Not one, but all of the tests will be applied by the judges. The drawings need not be artistic, but t specifications should be accurate and complete in all details.

No claim is made that the designs published in this issue of MOTORC ILLUSTRATED are the best thus far submitted. On the contrary, many excell suggestions have been held over for our April 18 issue. Practically every o thus far submitted deserves publicity, and will get it before the closing date the contest.

1.—Rear carrier of interwoven metal strips with flared top. Held in posit by eye in bar fitting over expanding bolt of seat post and by stays to axle on b sides. Has straps to hold parcels on top. May be lined with canvas or not i desired by user. Contributed by L. A. Osborne, Columbia Station, Ohio.

2.—Rear carrier with top and side doors fitted with shelving. Attached

r stays and wheel axle by braces; five braces to stays and two to axle. Con-
uted by P. Lindemann, New York.

3.—Tank carrier with U-braces over top tube and tank. Position claimed
eing easier on rear tire. Device readily detachable. Lid on top of each box.
terial of sheet metal or reinforced fibre. Contributed by Ralph Bates, Day-
, Ohio.

4.—Rear carrier with folding shelves and partitioned box on top. Used for
rying tools, tubes, etc., in box and two 5-gallon cans on shelves. Attached to
r stays and axle ends. Provision for Presto tank at rear of box. Contributed
Freeman L. Hess, Chicago, Ill.

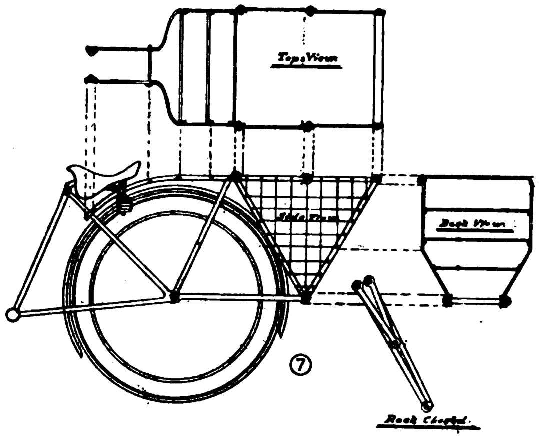
5.—Rear carrier with pannier boxes and top tray, all spring supported.
stened to rear stays at A and to braces from axles. Braces have hooks on
h side over which fit guideways on pannier boxes. Bolts and nuts B and C
ach boxes to top platform. Latter can be used for passenger carrying by re-
ving boxes and tray and putting on cushion. Side doors give access to boxes.
ntributed by C. J. Schlipploch, Chicago, Ill.

6.—Rear carrier of galvanized iron with strip metal framing. Bottom
ached to rear stays and axle ends. Cover fitted to box. Width of carrier not
exceed 12 inches; rear extends 6 to 8 inches beyond mudguard. Height in
nt, 4 inches. Frame strips to be 1 inch by ⅛ iron and braces 1 inch by 3/16
¼ inch. Contributed by R. C. Newmann, Chicago, Ill.

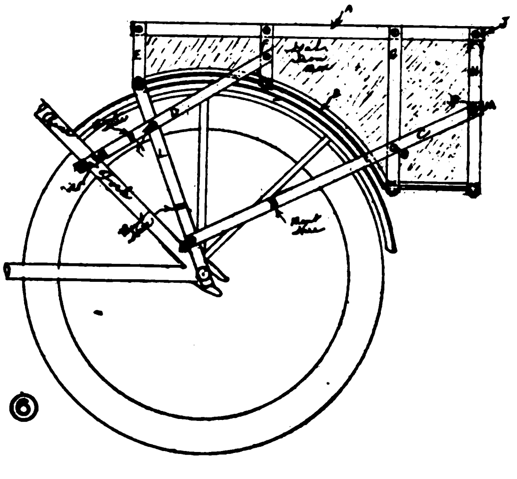
7.—Rear carrier of folding type fitted back of rear wheel. Braces and fram-
g of 1 inch strap-iron with strong cord side lacings or canvas sides as desired.
ck folds as shown. Attaches to rear stay and axle ends. Contributed by
lward Pommer, Minneapolis, Minn.

8.—Rear carrier fitting to axle ends and by braces to rear stays, with arched
braces for pannier boxes. Doors on top and provision for tray on top if side
ors are used. Contributed by N. S. McEwen, Port Deposit, Md.

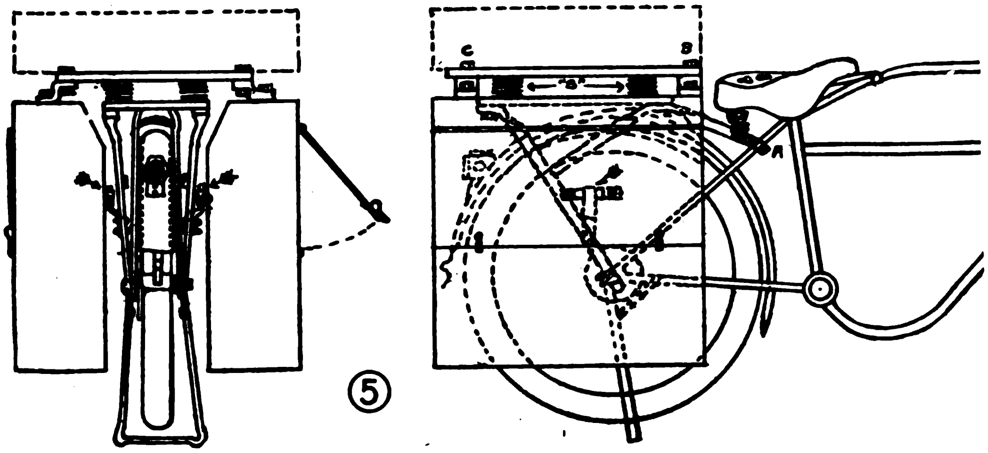
9.—Trailer device with pivot on brackets attached to rear stays and axle.



⑦



⑥



⑤

Pivot has threaded end for cap and ring on trailer arm turns on pivot. Trailer has cranked axle giving low centre of gravity. Adaptable to any machine and detachable by unscrewing cap and lifting ring off. Contributed by Chas. Graef, New York, N. Y.

10.—Rear carrier with side doors and top tray, attached by braces to rear stays and by a hook fitting over loop brace from axle. Doors open out and down. Adjustable legs, held in place by pins for supporting device when detached. Front legs act as stand for machine when carrier is attached. These legs are released by pulling chain which withdraws pin for each leg, spring lowering the leg when released. Door fastened by spring latches and key locks. Tray has open top or canvas cover as desired. Contributed by Ora V. Brown, Dale, Indiana.

11.—Rear carrier of strip construction with folding shelves. Load carried on top by strapping. Used in R. F. D. work. Contributed by Leo D. Worden, Fayetteville, N. Y.

12.—Rear carrier of sheet metal, attached by braces to rear stays. No axle connections. Contributed by R. M. Charlton, St. Eleuthere, P. Q.

13.—Front carrier of folding type. Advantages claimed: Adaptability to various shapes (box, basket, etc.); can be seen while riding; less vibration than rear position; goods are not damaged; steering is steadier than rear position carrier; quick dismounting possible without striking the load; readily adaptable to any machine. Contributed by Alfred T. Mason, Pittsfield, Mass.

F. A. M. UNIFORM.

A. B. COFFMAN, by whom the suggestion was made to the Board of Directors that the F. A. M. adopt an official uniform, and Director Sauer will in the course of a few days report to President Hamilton their recommendations in the premises. The indications are that they will favor a uniform of a distinctive style and color, and then leave it to the clothing manufacturers to supply the demand to the best of their ability. Further, in order that the manufactured article may do the Federation justice, it is probable that a certain standard of quality will be insisted upon. It is doubtful whether the organization will attempt to fix prices, as the probabilities are that, in order to effectively advertise his entire line, each manufacturer will strain a point to offer particularly good value in his F. A. M. uniforms.

BURRELL FRAMED A LAW.

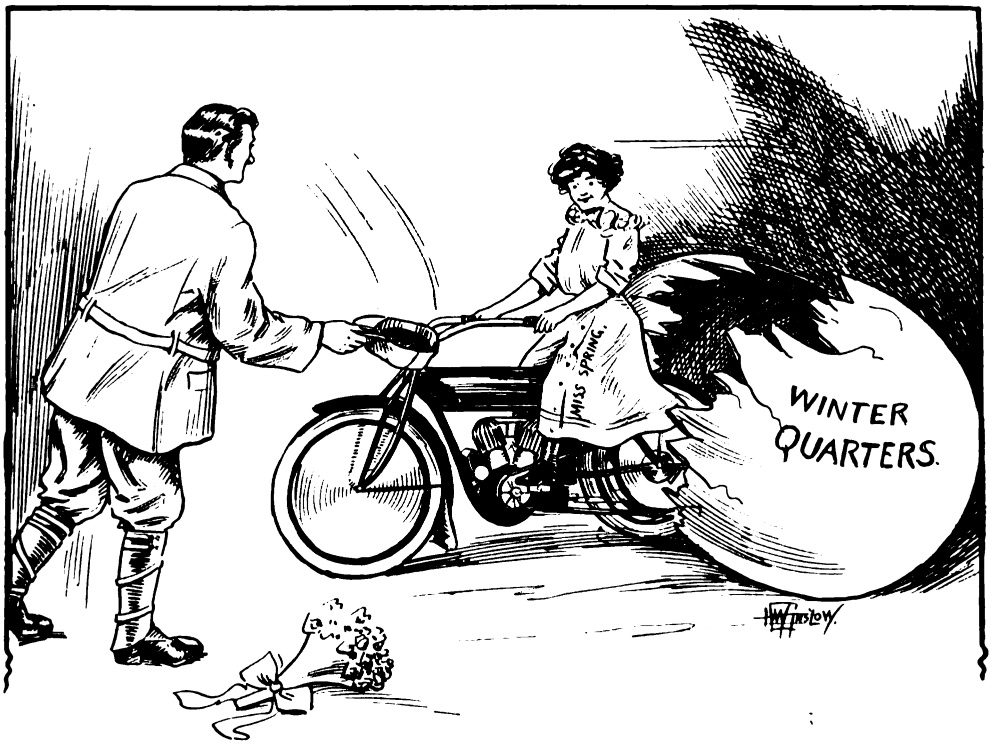
FINDING that his State was without a law to curb users of the cut-out on motorcycles, Guy Burrell, an enthusiast of Jackson, Miss., recently drew up a measure which went through the legislature and was signed by the Governor. Mr. Burrell went before the Judiciary Committee and explained the necessity for such a regulation, and has since been liberally commended for his decisive action. The new law provides that persons who use the "muffler cut-out on any motorcycle, automobile or other gasoline-propelled vehicle within the corporate limits of any municipality, within 200 yards of any place of worship during services therein, within 200 yards of public schools during school hours, or when passing, meeting or overtaking teams on the public highway," shall be guilty of a misdemeanor and subject to a fine.

REED PLANS A TRIP.

WILLIAM T. REED, State F. A. M. commissioner for New Jersey, will visit Vice-president C. W. La Salle, of the Atlantic district, early in the coming summer, making the trip from Camden to Rochester on his motorcycle.

FORMERLY A MOTORCYCLIST.

EARL SANDT, the young Erie (Pa.) aviator, who recently attracted attention by flying over Lake Erie in a Curtiss biplane and then losing his machine, and almost his life, on the return trip, became acquainted with gasoline motors and their possibilities as a motorcyclist. Sandt rode one of the first Indians to arrive in his section of the State, and established a reputation for endurance work as well as speed. He remained an enthusiastic motorcyclist until aeroplanes became comparatively common and then joined the ranks of the fliers.



ANDERSON TAKES EXCEPTION

To Charge That Toronto Club Had "Double-Crossed" The F. A. M. in Organizing a Separate Canadian Association.

THROUGH Thomas I. Anderson, provisional secretary, the newly organized Canadian Motorcycle Union has written to President Hamilton of the F. A. M. a letter taking exception to a paragraph recently published in one of the American motorcycle trade journals, to the effect that the Canadians, in organizing their own association, had "double-crossed" the Federation of American Motorcyclists. Mr. Anderson calls attention to the proposition made by the Board of Directors of the F. A. M. during a meeting held in January in the office of Director Sauer. At that time the directorate of the Federation submitted to the Canadian clubs, through Mr. Anderson, the following proposition:

"F. A. M. will grant sanctions in Canada to affiliated clubs only.

"F. A. M. will grant a general permission to American F. A. M. riders to compete at meets conducted by affiliated clubs in Canada, and by no other organization.

"Canadian riders who are not F. A. M. members shall not compete at F. A. M. meets in Canada.

"Canadian F. A. M. riders shall not compete, under penalty of suspension, at meets conducted by unaffiliated clubs.

"Board tracks may be excepted from these provisions."

Mr. Anderson, in his letter to President Hamilton, then goes on to say:

"You probably remember what I said about an exclusive affiliation being the only way the F. A. M. could give us the protection we wanted, and as your constitution would not allow that, our only way out of the difficulty was to take Dr. Thornley's advice and form a Canadian Association, you gentlemen all saying that this would be agreeable to you.

"The Toronto, Hamilton and London clubs frequently visit each other and you can easily see why we did not want any one club to affiliate with your Federation until they fully understood the situation; if one club had affiliated, their members could not compete at another's meets without being liable to suspension.

"The Canadian clubs entertain the best of feelings toward the F. A. M., but, of course, we cannot expect you to alter your constitution to oblige us—hence the Canadian Association—and judging by the considerate treatment I received in New York, the F. A. M. certainly wishes to do the square thing by us."

REGISTERED SHOPS.

DURING the week ending March 29 certificates of registration were forwarded to six F. A. M. repair shops as follows: Lemon City Motor Co., Lemon City, Fla.; Jack Horner, 33 Somerset street, Plainfield, N. J.; S. E. Purdum, 210 East Washington street, Macomb, Ill.; John L. Koontz, Front street, Marshfield, Ore.; Louis F. Bradburn, 45 Chapel street, Canandaigua, N. Y.; reissue, Dunedin Auto Co., Edinburgh, Scotland.

AN OKLAHOMA WORKER.

E. G. MILLER, of Tulsa, Okla., is working like a Trojan to organize the motorcyclists of his district into an F. A. M. club. He is also a leader in the Good Roads movement, which is slowly gaining ground throughout the State.

AN F. A. M. sanction has been granted for a meet to be held in Detroit, Mich., on May 19, under the auspices of the Detroit Motorcycle Dealers' Club.

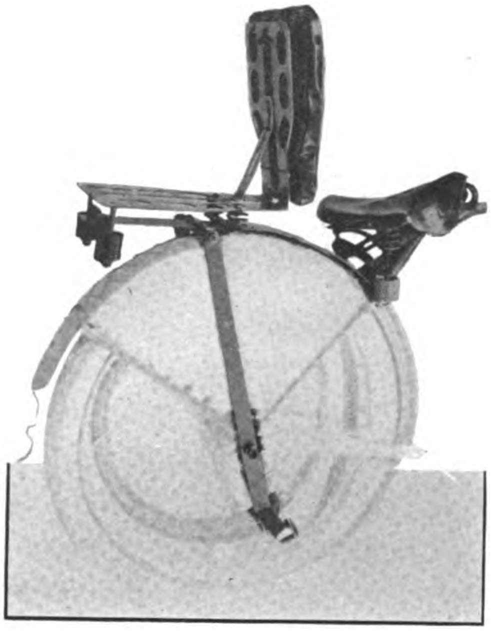
Manufacturers

ATTRACTIVE NEW SIDE-CAR

Cedar Rapids Company Will Make Two Passenger Types and a Sturdy Delivery Van.

PREPARATIONS have been completed by the Cedar Rapids Welding and Brazing Company, of Cedar Rapids, Ia., for placing upon the market an attractive side-car, which will be listed at $75 with highly finished wood body, upholstered in leather and finished to match any motorcycle, and at $60 with reed body and any standard finish. The new side-car is flexible, rocker joints being used where the chair frame attaches to the machine, and two large adjustable coil springs hold the motorcycle erect while in a straight path, but allow it to lean in its natural position when rounding a turn. This serves to relieve the strain on the motorcycle by equalizing the weight of the side-car and machine. The same springs also relieve the motorcycle of any shock which might be transmitted when the side-car strikes an obstruction.

The side-car frame is of heavy steel tubing, securely welded, and extends entirely around the body. The springs are of vanadium steel, the rear one being a scroll elliptic and the front spring a plain scroll, thus affording an extremely easy-riding car. Twenty-six or 28-inch wheels are used with 2¼-inch Diamond or United States tires. The weight of the side-car, equipped with wooden body, is 71 pounds, and with reed body 64 pounds. It may be attached or detached from the motorcycle in one minute, as the clamps remain on the machine proper. The company announces that it will also produce a sturdy and capacious delivery van.



The 1912 Fox Seat.

RUSH AT ECLIPSE PLANT.

ELMIRA, N. Y.—General Manager Ralph D. Webster, of the Eclipse Machine Company, of this city, gave out the information a few days ago that 40,000 free-engine pulleys will probably be manufactured by his firm this year. So many orders have already been received that it will be possible to keep the factory working on the pulleys alone for several months. A contract has been entered into whereby the company supplies one manufacturer with fifty a day. Motors whose combined power will equal 195 h. p. have been installed in the factory.

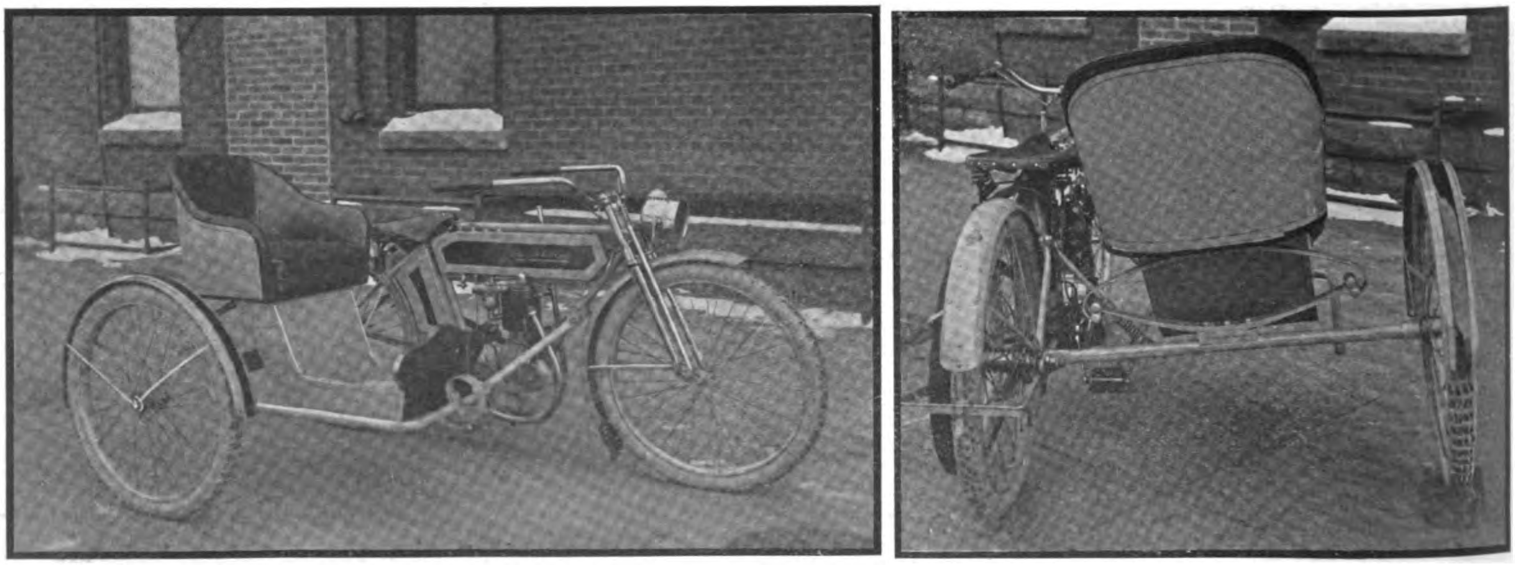
IMPROVED FOX SEAT

Ingenious Combination Device Shows Several New Comfort-Giving Features in 1912 Model.

IN March, 1911, the Fox Manufacturing Company, of Seattle, Wash., commenced deliveries of their simple and ingeniously devised "Fox Seat," and a few weeks ago they started deliveries of an improved model, built on the same principle as their first product, but refined in design and simplified in its adjustments. The device consists of a combination tandem seat, luggage rack and back-rest, so constructed that it is instantly convertible to one or more of the purposes it is calculated to serve.

In construction, the seat proper consists of twin steel plates, hinged at their forward ends, permitting the upper plate to be raised or lowered at will. These plates are mounted on three sets of springs, besides being springs in themselves. The lower plate, which in reality is a seat "table," is set on coil springs at both its front and rear ends, and the coil springs in turn are mounted on a flat steel spring, curved to the arc of the rear wheel and clamped to the frame of the machine. The rear end of this flat spring forms the equivalent of a spring-board and may be adjusted to various degrees of tension.

The twin steel plates are perforated to increase their elasticity, reduce weight and provide strap holds. The plate centers are slotted to provide a recess for the action of the back-rest prop. This prop, in the new model, is hinged to the lower plate and acted upon by a flat curved spring, fixed to the top plate, which automatically snaps it into adjustment for the back-rest when the upper plate is elevated. Under pressure, the back-rest yields to five



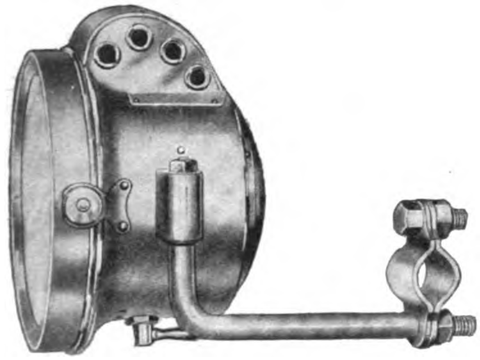
Side and Rear View of Cedar Rapids Welding and Brazing Company's New Side-Car.

distinct spring actions, besides the cushion surface; the spring in the prop, the spring in the lower plate, the front and rear coil springs and the flat main spring.

Mr. Fox, the inventor, added the final touch for comfort, by providing a laced leather casing for the cushion, which is made to carry an inner tube. An aperture in the center of the cushion accommodates the valve of the tube, where it is easily accessible for inflating by the hand pump. In case of a blowout it is merely necessary to unlace the cushion and put the tube in the tire. During 1911 the company confined their field of action to the Pacific coast and adjacent States, and had difficulty keeping abreast of orders. This season finds them with greatly increased capacity and agencies east to the Atlantic Seaboard. The Fox Seat is already patented and more patents are pending, both United States and foreign.

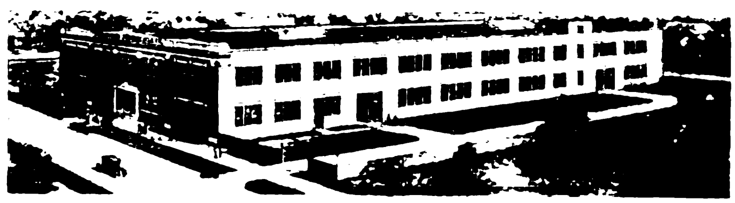
COMPACT MOTORCYCLE LAMP.

INCLUDED in the extensive lamp line of the B. & L. Auto Lamp Co., of 507-09 West 35th street, New York City, is an unusually attractive offering for the motorcycle. This lamp is produced in two styles, No. 22, with back prop and a 5¼-inch front, and No. 23, with side props and a 6¼-inch front. These models list at $4.50 and $5, respectively. The lamp is made throughout of extra heavy brass and nickel plated. It has a one-piece body, short coupled, and is fitted with a genuine mangin mirror. The generator provided with this outfit has a fine nickel finish and is made of heavy gauge brass with casting fittings.



NEW HENDERSON PLANT.

ACCORDING to present plans, the Henderson Motorcycle Company, of Detroit, Mich., will occupy its new factory building about June 1, and will then be prepared to turn out twenty-five machines daily. The factory is located on Cass avenue, near the plant of the Cadillac Motor Car Company, and has a total floor space of 21,000 square feet. The building is so situated that the company may add to it at any time, and from present indications it will not be long before such action is necessary. The company has recently placed agencies with the Newby Bros. Motorcycle Company, of Kansas City, for Jackson county, Mo.; the Jefferson Automobile Company, of St. Louis, for St. Louis county, Mo.; Elmer M. Moll, of Champaign, for Champaign county, Ill., and Killington & Dieckhoff, of Decatur, for Macon county, Ill.

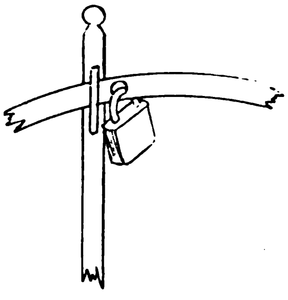


COMPACT PURDY PUMP.

ONE of the most attractive features in the line of specialties being offered for 1912 by Purdy Bros., of 529 West Garfield boulevard, Chicago, is a large foot pump, fifteen inches long and made of heavy seamless brass tubing, nickel plated. The pump is fitted with clamps so that it may easily be fastened to the front or rear fork of any motorcycle, the operation of attaching it or detaching it requiring only a second's time and a turn of a thumb screw. The hose leads from a vertical outlet in an upright position, thus avoiding the common trouble of rapid wear at the base. The hose is held in place by a spring clamp To facilitate clamping the pump to the machine the foot piece folds up against the tube.

SIMPLE CLUTCH LOCK.

MAURICE HENRIOT, of 62 Brooklyn avenue, Brooklyn, N. Y., has hit upon a simple and effective method of safeguarding a clutch-equipped motorcycle against thieves and preventing its unauthorized use when left in a garage. He has drilled a hole five-sixteenths of an inch in diameter in the quadrant on which the clutch bar slides, and through this hole the grip of an ordinary snap lock is passed as shown in the illustration. The hole is drilled close to the clutch bar when the latter is disengaged and when the lock is inserted it is impossible to pull the bar back and engage the engine. The value of this device will be recognized at once by riders who have been bothered by having their machines tampered with.



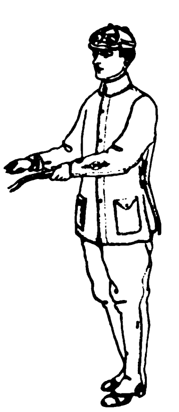
MIAMI CAPITAL INCREASED.

PAPERS have been filed with the Secretary of State of Ohio increasing the authorized capital of the Miami Cycle & Manufacturing Company, of Middletown, Ohio, from $700,000 to $1,100,000. The increased capital is all preferred stock and consists of 4,000 shares at a par value of $100 each. It is known as cumulative stock and will be divided into three series as follows: $235,500 to be redeemable after November 6, 1917, at $110; $64,500 to be redeemable after September 19, 1912, at par, and the remainder, or $100,000, to be redeemable after November 7, 1922, at par. The new capital will be used to increase the capacity of the plant at Middletown.

"MECO" SALES RECORDS.

HAMMONDSPORT, N. Y.—The sales of the Motorcycle Equipment Company tell which way the wind blows, whether a big year or a small year. In February of this year this company's sales were 54 per cent. over 1911, and the first fifteen days of March showed a few dollars more than thirty-one days of March in 1911, or a 100 per cent. increase.

ANNOUNCEMENT is made by the manufacturers that the well-known Koveraul motorcycle garment can now be bought for $9, a complete suit, consisting of coat and trousers. These suits are made from Nathan's Never Leak Cloth, a material that is impervious to water. The Koveraul garment is made to entirely cover the business clothes and is put on and off in a jiffy. No leggins are necessary. Though comfortable and serviceable in the extreme the garment is very stylishly cut. Further particulars may be had from the manufacturers, Nathan Novelty Manufacturing Company, 84A Reade street, New York, or from your dealer, who keeps them.



GOODYEAR BASEBALL TEAM.

THE employees of the Canadian plant of the Goodyear Tire and Rubber Goods Company, located at Bowmanville, Ontario, have organized a baseball club to play in the Lake Shore Circuit. Several stars from Toronto and Akron, Ohio, are included on the team, and a good season is anticipated. Following are the officers: Honorary president, A. N. McMillan; honorary vice-president, L. A. W. Tole; president, J. J. Moriarty; vice-president, Geo. H. James; secretary-treasurer, C. H. Anderson; manager, Ben Wood.

THE BLUE STREAK SQUAD.

BULLETINS received by the Goodyear Tire & Rubber Company from the Lon Angeles Motordrome show that Wolters, Ward, Albright, Peck, Hasha, the two Samuelsons and others who have been showing to good effect of late have been riding Goodyear Blue Streak tires in all their races.

BATON ROUGE, La., has been very slow in picking up the motorcycle, but at the present time there are about fifteen machines in the city and several new mounts have made their appearance so far this year.

EQUIPPING FINE PLANT FOR NEW TRIUMPH

Detroit Firm Is Installing Machinery and Laying in Stock in Large Factory Building and Hustling Executive and Sales Organization Is Complete—Men Behind the Enterprise.

Muir B. Duffield, Secretary.

Robert M. Brownson, President and Manager.

Harold Van Deusen, Sales Department.

SINCE the announcement of the organization of the Triumph Manufacturing Company, of Detroit, made in the last issue of MOTORCYCLE ILLUSTRATED, rapid strides have been made in installing machinery and equipment in the company's new plant preparatory to the commencement of active manufacturing operations. Orders have already been placed for material, and the plant is fast assuming an air of bustling activity.

Robert M. Brownson, manager of the Triumph, has exercised the greatest care in surrounding himself with an organization of old timers in the new factory, men who have had years of experience in the manufacture of motorcycles, and every piece of machinery is of the latest design, especially adapted for motorcycle work. He says that when the Triumph motorcycle is presented to the public for its approval it will, in every respect, be worthy of its name.

The plan of the Triumph factory has been laid out to secure the greatest efficiency in production. The plant occupies a five-story and basement building on East Woodbridge street, a block and a half off Woodward avenue, right in the heart of Detroit's downtown business district. It is admirably adapted for the manufacture of motorcycles. The first floor will be devoted to the machining of frame lugs, flywheel castings, frame and fork building, filing and strapping. The second floor contains the executive offices, the accounting and engineering departments and the finished stock room. The third floor is the general machine room. The fourth floor is devoted to the motor assembly, motor testing, tool and machine room. On the fifth floor will be located the nickel-plating and enameling and final assembly departments.

By this arrangement all material starts to go through the factory on the ground floor and works itself up until completed on the fifth floor. The plant is operated by electric power, with separate electric motors installed on each floor.

No formal outline of the new machine has been given as yet, but it is announced that one of the features it will embody is the spring seat-post, formerly used on Greyhound motorcycles, the Triumph folks having bought this device from the Greyhound company.

The officers of the company are: Robert M. Brownson, president and general manager; Muir B. Duffield, secretary, and George W. Sherman, treasurer and sales manager. Both Messrs. Brownson and Sherman are well known to the trade as men of experience in motorcycle manufacturing. Mr. Duffield is a member of one of Detroit's oldest and most prominent families. He is a son of Bethune Duffield, Esq., and is one of the most popular of that city's younger business men.

Mr. Duffield has been greatly interested in the motorcycle industry for a long time. He has traveled extensively and has seen the rapid growth of the industry of late years. About a year ago he joined the forces of the Flanders Manufacturing Company, at Pontiac, in order to get an insight into the manufacture of motorcycles, and when the Triumph Manufacturing Company was recently formed he quickly grasped the opportunity of making a large investment in its capital stock and becoming actively identified with its management.

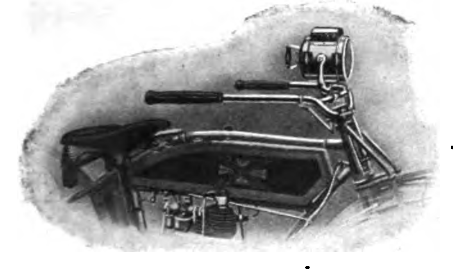
Harold Van Deusen, who is well known to the trade by reason of his untiring efforts to please dealers doing business with the different manufacturers with whom he has been connected, has followed Sales Manager Sherman from the Flanders Manufacturing Company to the new Triumph company, and will assist in the vigorous sales campaign which is about to be launched by the Triumph. Mr. Van Deusen has the detail work of a sales department at his finger's end, having had charge of that class of work for the Aurora Automatic Machinery Company for three years and the Flanders Manufacturing Company from the time they started up to the present date.

LINING UP NEW ERA ORDERS.

JES CAMPBELL, of the New Era staff, who recently returned to the factory after a business trip, reports that substantial orders have been placed for New Era machines by the following dealers: Boyd Motor Co., of Boston, Mass.; A. H. Patterson, of Brooklyn, N. Y.; Auto-Motor-Cycle Co., of Philadelphia, Pa.; T. C. Donahue, of Pittsburgh, Pa.; A. F. Ferriss, of Utica, N. Y.; W. D. Andrews, of Buffalo, N. Y.; The Casino Cycle and Supply Co., of Cleveland, Ohio, and The Sorenson Co., of Peekskill, N. Y. Arrangements have been made with the following dealers to act as distributors for the New Era machines in their respective districts: Palmer Motor Sales Co., Jacksonville, Fla., for the State; New Era Motor Co., Denver, Col., for Colorado, Wyoming, Utah, Montana, Idaho and New Mexico; Ecomon Economy Cycle and Supply Co., of Detroit, for Michigan; C. E. Armstrong, Seattle, Wash., for Washington. Mr. Armstrong was a daily visitor at the New Era booth during the New York Show, and upon his return to Seattle he placed an order for fifty machines to be delivered at the Seattle store and twenty-five for the Portland branch.

PATHFINDER LAMP

STURDILY built, pleasing in appearance and embodying several exclusive features, the Pathfinder lamp for motorcycles, manufactured by Bennett & Morse, 149 N. Fourth street, Columbus, Ohio, is a worthy addition to the list of necessary adjuncts to the single-tracker. The brackets are designed along attractive lines and so arranged that the lamp has a double swivel action, allowing the light to be thrown from side to side, and even to the rear, as well as straight ahead. A neat handle at the back of the lamp permits of utilizing the swivel action. The lamp body is of heavy gauge brass in one piece, the front door is fitted with 5½-inch removable glass, the rear door is hinged and the lens is of optical glass, carefully ground. All parts of the lamp and brackets are heavily nickeled. The outfit, including generator, is listed at $10.



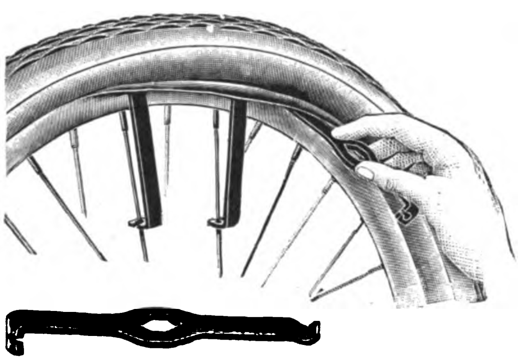
GOTHAM IN NEW QUARTERS.

FORMERLY at 116th street, near St. Nicholas avenue, New York, the Gotham Motor Company has now removed to its new quarters at 92-98 St. Nicholas avenue, where Charles Ackerman is in charge. The new establishment, where Yale machines are handled, is very commodious and ample space is devoted to the repair department below the main showroom. The Yale territory, for which this firm is headquarters, embraces New Rochelle and White Plains, in addition to that of Kings, Queens and New York counties.

THE twin machine, judging from the orders now placed with Cleveland dealers, will predominate in the Sixth City, with the two-speed as a top-notcher.

HANDY TIRE IRON.

A HANDY tool for motorcyclists is now being offered by the Simplex Machine Works, of Sixth avenue and 45th street, Brooklyn, N. Y., in the form of a tire-iron which reduces to the minimum the difficulty of removing a casing. After the working end of the iron is slipped under the bead of the tire the tool is pressed downward and a notch cut in an elbow on its lower end is hooked around one of the spokes. This holds the iron and the tire edge in position and leaves the operator free to work with both hands when inserting the second iron and completing the removal of the casting. As will be noted in the accompanying illustration the device is extremely simple, and that it will make an appeal to all experienced riders goes without saying.



THIRTY ORDERS FILLED.

IN Houston, Texas, A. W. Burgess, who handles the Indian machines, has sold about thirty machines so far this year and has placed standing orders for the season for shipments each week. He has formed an Indian Club, and races and other road events are being planned. Mr. Burgess has built himself a fine new store and expects to move in soon. The store is fully equipped for taking care of the motorcycle business in every respect.

THE COVENTRY CHAIN.

COVENTRY chains, made at Coventry, England, and for which the Sarco Engineering Co., of 116 Broad street, New York, is sole American agent, are made in a variety of sizes for the transmission of power from a motorcycle magneto up to the side chains of a ten-ton truck. The motorcycle chain, 26-G, is adaptable for sprockets of the proper pitch, etc., and has the following characteristics: Pitch, ⅝ inch; inside width, ¼ inch; roller diameter, 0.4 inch; breaking load, 2,800 pounds. Like all of the single roller chains of this make, the bushings are drilled from the solid bar and the rollers are of special composition, all treated to the proper temper. A feature of the construction is in the tapered end of each side plate throughout, this effecting an increase of 20 per cent. in strength over round-end construction. The uniformity of tempering throughout is noticeable in the side plates, also. The coupling bolt has a specially-shaped head fitting into a corresponding hole in one side plate, and the bolt is thus prevented from revolving and coming away. The breaking load gives an ample factor of safety for use on even the highest powered machines.

HAMBLEN & Huerlander, of Tuckahoe, have the agency for Yale in Tuckahoe and Mount Vernon, and the Yonkers Motorcycle Co., of 47 Warburton avenue, Yonkers, N. Y., have the Yale agency for Yonkers and Tarrytown.

THORS FOR QUICK DELIVERIES.

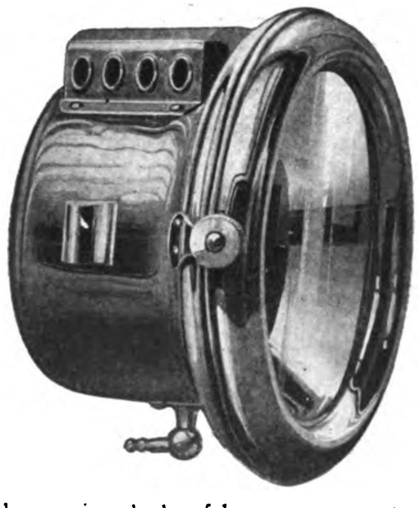
THE Casino Cycle & Supply Company, Excelsior and Thor boosters, in Cleveland, Ohio, has just closed a deal with the Motorcycle Package Delivery Company for twelve Thors, six delivered and six to be supplied in thirty days. The delivery company already has contracts with many of the large stores for special delivery work and plans to have, in a short time, at least thirty motorcycles in service.

SHOMO IN THE SOUTH.

F. D. SHOMO, traveling representative for the Hendee Manufacturing Company, accompanied by Mrs. Shomo, is now in southern territory, where he has been remarkably successful in lining up dealers and gathering orders for the Wigwam product. His present trip will carry him through Arkansas, Mississippi, Louisiana, Texas and Oklahoma.

DOUBLE-REFLECTOR LAMP.

BEING fitted with a double reflector, an exclusive feature in motorcycle lighting outfits, the Lunar lamp, manufactured by the Indiana Lamp Co., of Connersville, Ind., is capable of projecting an unusually bright, searching light for a great distance, and this property, combined with sturdy construction and a generally pleasing appearance, is finding a broad market for it. Lunar lamps are made with one-piece body of heavy gauge material, and all fitted parts are interchangeable and easily removed for cleaning purposes. Particular care has been exercised in designing the lamp to guard against the possibility of rattling and jarring loose of parts by vibration. In other words, it is built for long, as well as efficient, service. The Lunar lamp has a 5-inch mangin mirror and its extreme depth is six inches. Brackets are supplied to fit the lamp to any standard machine. Requests for literature and general information will receive prompt attention from the Indiana company.



WILHELM COMPANY MOVES.

F. J. WILHELM & CO., Toledo agents for the Thor and Haverford machines, are moving their business from Michigan street to a new store on Erie street, where they will have much larger quarters.

THE Atwood Automobile Co. has taken the Toledo agency for the Henderson motorcycle, and is making an effective display at its headquarters.

QUESTIONS & ANSWERS

THE FASTEST MILE.

M. B. MORRIS, JR.—The highest rate of speed ever achieved by a human being under official timing was attained by Bob Burman in a special Blitzen Benz racing car of 200 h., when he drove a mile in 25⅖ seconds on the beach at Daytona, Fla. In this trial Burman traveled at the rate of 141 73/100 miles per hour, but the test covered only one mile.

Glenn Curtiss is credited with covering a straightaway mile on a special motorcycle of his own construction in 26⅖ seconds, but this time was never officially accepted. All motorcycle records, official or otherwise, are eclipsed by Burman's performance.

It is extremely difficult to effect a speed comparison between the aeroplane, automobile and motorcycle. Aeroplanes, having a motor speed of 50 miles an hour, have at times sailed with a high wind and thus attained a speed of 100 miles an hour or more, but it is hardly reasonable to regard such a performance in the light of a record. Allowing full leeway in this direction, however, it is not believed that Burman's speed at Daytona has ever been equaled in an air trial.

LIGHTER PISTONS.

ANXIOUS.—Balancing this type of motor is, as far as possible to do so, generally done thus: Determine the values of the reciprocating and rotating portions of both connecting-rods, and locate a counter-weight to balance the rotating parts at a radius equal to that of the crank on each flywheel. Add sufficient weight to counterbalance the reciprocating parts. The flywheels are generally drilled opposite (across the axis of each flywheel) instead of adding weights, which amounts to the same thing. The pistons must be of equal weight.

To find the value of the rotating and reciprocating parts of a connecting-rod, support the piston end of the rod on a knife edge at a point opposite the axis of the wrist-pin; let the other end of the rod rest on a knife-edge carried from the hook of a spring balance. Keep the rod horizontal as nearly as possible, and the weight given on the spring balance will be the value (in pounds or fractions) to allow for the rotating part. The total weight of the rod, minus this rotating value, will give the reciprocating value. Probably you will find the present state of balance very little affected by the lighter pistons.

Balancing may be classed as standing and running. A motor is in standing balance only when the reciprocating and rotating parts balance each other, as on some four, six or eight cylinder constructions, and on the two cylinder opposed motor. It is in running balance when the firing strokes occur at similar intervals in some cylinders as the idle strokes in other cylinders, but the reciprocating and rotating parts do not necessarily balance each other respectively. There are a number of other conditions which involve running balance, such as taking up the reaction due to the explosion of the charge in the cylinder, and the tendency of the motor to rock to and fro. This latter in a four-cylinder motor is practically overcome by firing the cylinders out of numerical order, as in the order 1-2-4-3 or 1-3-4-2. Accurate balancing involves calculations in higher mathematics, and when performed results in very curious motor constructions. Useful methods of balancing single and twin motors were treated in a series of articles beginning April 6, 1911, in MOTORCYCLE ILLUSTRATED.

TO IMPROVE COMPRESSION.

JAKE BERINGER.—The compression could be raised by fitting the plate to the piston head, but in so doing no sharp edges should be left as these will grow incandescent and pre-ignite the charges. It would perhaps be better to have the plate electrically welded on, if the construction of the piston will permit of this, and if the facilities are available. Otherwise tap the piston head and fasten by screws, taking care that the screws or bolts are either flush with the surface of the plate or rounded off if they project. Riveting will also be effective. As to the nature of the plate, cast or wrought iron would probably be the better. Such a job is, of course, more or less of a makeshift and will probably give only fairly satisfactory results. Have you written to the makers on this point?

VALVES—LUBRICATION.

B. B. B.—Under conditions of overlubrication, an automatic inlet valve occasionally "sticks" closed, interfering with the operation of the motor. The strength of the spring may alter from time to time, when the valve will be sluggish in closing and a portion of the charge may be forced back into the inlet pipe. This form is, however, very simple in construction, and under ordinary conditions very efficient. The mechanical valve is positive, and is kept open by its cam during the full period of admission, when the gas has ample time to enter. Both types suffer from "gumming," and that neither is free from ailment any old riders can tell you. In the *Motorcycle Manual* the chapter on valves will convince you of this.

You do not state the make of motor you use, and we can only give a general answer as to the suitability of the oil in question. Oil is occasionally used to assist in cooling the motor in hot weather, but of course at the risk of over-lubrication. The brand mentioned in medium weight should be suitable for your weather conditions. Write the makers of the machine you ride on this question, and abide by their advice; they know best whether any certain oil will work properly in their motors.

SMOOTH RUNNING.

G. E. RAY.—The two-cylinder machine will naturally be the smoother in running, as there are two power strokes for every two revolutions as compared with one for the same number for a single cylinder machine. As to the question of the greatest speed of a motor, this is held by a single water-cooled de Dion (French), the piston speed being 3,916 feet per minute. The highest speed for a motorcycle is held by a twin-cylinder machine. See the 1912 *Motorcycle Manual*, just issued, for records, etc.

TOURING LICENSES.

W. C. GILMORE.—With an Illinois license you will be exempt as a non-resident rider in New York, Pennsylvania (10 days), Maryland (two periods of 7 days each), Virginia (two periods of 7 days each), District of Columbia (10 days). There is a hearing now going on in New Jersey regarding reciprocation with other States, and it is probable that this reciprocation will become part of the automobile (and motorcycle) law. At present a $1 fee is charged for non-residents in New Jersey for a 10-day privilege. The *Motorcycle Manual* is published by us, and is priced at 25 cents per copy, prepaid.

MAKERS OF MOTOSACOCHE.

ANDREW ROSEN.—The machine referred to is the Motosacoche, made by H. & A. Dufaux, of Geneva, Switzerland.

SPEEDY ROAD TRIP.

JULIUS ELFTMAN and Ellwood Hollinshead, of Rock Falls, Ill., announce that they recently made a road trip of 38 miles in 47 minutes on a Sunday outing. The roads were in fair condition, but even with this advantage the riders feel that their record is a bit out of the ordinary.

OAKLAND CLUB GROWING.

THE Oakland (Cal.) Motorcycle Club is taking in new members at every meeting, and the squad is on a strong social and financial basis. The club's pool rooms are very attractive and many motorcycle enthusiasts can be found in them during the day, as well as in the evening.

INTERNATIONAL HIGHWAY

Plans Practically Completed for Continuous Route from Quebec, Canada, to Miami, Fla., Along Seaboard.

BALTIMORE, MD.—The International highway, extending from Quebec, Canada, to Miami, Fla., which for so many years has been desired by the thousands of tourists who annually make their pilgrimages to and fro, is to become a fact. Already assurances have been received from the several States which this highway will traverse, that the work of building will begin this spring and before the close of the year the great road which will wind its way along the Atlantic Seaboard, will be complete.

That this work of connecting all of the principal cities of the Atlantic Coast, with a splendid boulevard to be carried through, is due largely to the united efforts of the Quebec-Miami International Highway Association, which was formed in Richmond, Va., last October. This association had its conception in Baltimore when Howard D. Hadley visited this city and held a conference with the officers of the Greater Baltimore Committee, and the Automobile Club of Maryland before going to Richmond to attend the meeting of the National Good Roads Association. Mr. Hadley, at the conference, spoke of what a splendid thing it would be to connect up the Atlantic Coast States and form an International Highway. He told of the many advantages of such a road and said that he was sure that if the people of the United States would do their share, the Canadians could be counted upon.

TOURING CLUB ELECTS.

AT a recent meeting of the Motorcycle Touring Club of New York, Inc., Jerome Shaw was elected vice-president and some of the other officers were retained as for 1911. Mr. Shaw suggested that a financial secretary be named to assist the treasurer, and Harold A. King was elected to the office. John Cox and Edward McClintock were candidates for the office of captain, which, on a vote, went to Cox. Joe Buckingham, Edward McClintock and M. MacAnerney were the candidates for lieutenant, McClintock winning out on a ballot, although only one vote in the lead of Buckingham. The latter and MacAnerney were named for second lieutenant and Joe captured the office.

The club will hold its next meeting on April 15 at the establishment of T. J. Sixsmith, when plans will be completed for the first spring run to be held on April 28, to Lake Mahopac. Those in attendance at the last meeting were Oscar Brandt, Marshall MacAnerney, John Cox, Jefferson Rogers, Basil Broadhurst, Harold King, James Edwards, M. Wientraub, Edward McClintock, Jerome Shaw, William Beach, Robert Buttlar and Frank Hart. Hart acted as secretary.

BUILDING EMBLEM FLYERS.

L. S. TAYLOR, formerly connected with the American Machine Company, of Columbus, Ohio, and more recently connected with the Emblem factory at Angola, N. Y., was a visitor in Columbus recently when he announced that he was at work on several racing machines which he expects to use during the coming season.

MONEY FOR PRIZES

Chairman Thornley Anxious to Get Rid of $158.95 Which He Holds in Trust for Eleven Riders.

MOTORCYCLE ILLUSTRATED is in receipt of the following letter from Chairman Thornley, relative to the disposition of certain prize money which he has on hand:

Several years ago there was so much trouble about the collecting of prizes and so many well-founded claims of fraud on the part of promoters who appeared to be in league with merchants in the matter of getting rake-offs, that I established a prize fund for the benefit of the riders so that they would be quite sure they would get what was promised them on the entry blanks and programs. The scheme worked out as follows:

If after a promoter had published an entry blank giving the cash value of the prizes, the rider wasn't satisfied that the prize was of the same value as stated on the entry blank he could insist that the money be sent to me, where it would be credited to his prize account in this office.

While this scheme may have encouraged some of the riders to pot hunt, it struck at the root of a very crying evil, and in some localities put a stop to the promoters deceiving the riders by promising them prizes of value far in excess of the actual articles delivered.

I have handled a great deal of money for the riders. They have been allowed to buy prizes with this money wherever they chose. All I asked was that the bill be sent to me, and by return mail the check would be sent to the dealer without any question. Now I want to clean up my accounts for the year, and begin anew for the coming season. I hold for the following men the amounts opposite their names: J. U. Constant, $85; Walter Goerke, $2.67; Wm. Kreiger, $5; W. J. Teubner, $29.25; Wm. Major, $5; C. H. Thompson, Jr., $5; Epstein, $2; Thomas Rice, $2; Frank Hart, 3 cents; H. Klebes, $3; H. W. G. Cox, $20—total, $158.95.

I also hold here for delivery and subject to demand of the owners, three bronze medals, one won by J. Fredericks and two won by George Haas.

These men must one and all immediately buy prizes with this money, sending me the bills for whatever they want, whereupon it will be paid at once. If by the 15th of this month there are any names left on this list who haven't bought their prizes, I shall proceed to buy prizes for them and forward the same to them at once. In the case of Frank Hart, who has only three cents, I don't know what I can send him, unless it be a handsome steel engraving of George Washington on a postage stamp. J. P. THORNLEY,
Chairman Competition Committee.

CLEVELAND BUYS MACHINES.

THE city of Cleveland has just placed an order with L. J. Mueller, local Indian representative, for four single-cylinder Indian machines. The Lister Motorcycle Company was also awarded an order for three single-cylinder Harley-Davidson machines. More machines will be added from time to time. These motorcycles will be used in connection with the work of the building inspectors. It is estimated that the use of motorcycles in this department will do away entirely with the old horse and buggy system.

GOODRICH TOURS

Elaborate System Is Followed in Selecting Routes for Posting With the Company's Markers.

RAYMOND BECK, formerly of the touring department of the Automobile Club of America, is now in charge of the Touring Bureau of the B. F. Goodrich Company, and since taking up this work he has made rapid progress along the broad lines which are being followed by the company. Years of experience in outlining tours have admirably fitted Mr. Beck to direct such a project, and his first-hand knowledge of many of the leading tour routes of the country stands him in good stead. A remarkably complete set of maps and road descriptions is at his disposal.

In selecting a route to be posted it is the desire to choose the most traveled roads, with the best touring connections for side trips, so that the markings will benefit the greatest possible number of tourists. When the route has been decided upon maps covering the entire region are obtained and wherever possible government typographical sheets are referred to. State and county officials, Chambers of Commerce, automobile clubs and many individual motorists lend their aid, and if it is found eventually that there is no satisfactory survey of the proposed route the Goodrich bureau prepares one. All in all, the bureau is one of the most potent agencies for the advancement of touring in the United States and it is as popular with motorcyclists as with car owners.

NEW ORLEANS BULLETIN.

REPORTS from New Orleans state that all the dealers are busy, and it has been rumored that one of the large factories will place a branch in the city, but as yet this cannot be verified. New Orleans has some fine roads that have just been finished and prospects are good for a road directly north out of the city to the northern end of the State, passing through all of the principal towns. The Henderson machine has made its initial appearance in the city and is creating quite a little interest. The Sauer Bicycle Co., that handles the Flanders, reports a number of sales; The Ferrin Machine Co., that handles the Thor, has one of the new "White hopes" in the city which is drawing a lot of attention from the advocates of the single-cylinder machines, and M. Zilberman, who handles the Indian machines, is complaining that he cannot get them fast enough and has placed machines with people who have never looked with much favor on the motorcycle previous to this year.

GALVESTON INDUCEMENTS.

GALVESTON (Tex.) dealers are pleased with the business outlook and report more sales and good prospects than ever before. One reason for this is the fine beach which they have both for racing and pleasure riding and this, together with a fine new Hotel, The Galvez, and the excellent bathing and meals to be had, makes it a pleasure to take a spin out to the beach after the business of the day.

IT is announced that the efforts of the Evansville (Ind.) M. C. will be concentrated in a few weeks upon the improvement of roads in its vicinity. It is admitted that highways in the Evansville district are now among the worst in the State.

Commercial Department.

DAVIS SAVED THE DAY.

WHEN it was necessary that important legal papers be taken from Louisville, Ky., to Nelson county within a short space of time, with the mercury at 12 degrees below zero and no trains running in that direction, R. L. Davis, the pioneer motorcyclist of Louisville, jumped on his mount and "delivered the goods." The route led through deep snow and over numerous small ponds covered with ice, but he made the forty miles in 1 hour 45 minutes.

HARD ON THE SPEEDERS.

RECENTLY published statistics of the New York police department show that of the charges made by motorcycle officers against speeders 96 per cent. resulted in convictions. From June 1 to the close of the year 3,710 summonses were issued for violators of the traffic rules and the convictions footed up to 3,552. The fines amounted to $17,816.

QUICK DELIVERY IN DES MOINES.

WITH F. R. Jenkins as president, and J. P. Everett as manager, a new motorcycle delivery system has just been started in Des Moines, Iowa. Parcels and messages are carried speedily to all parts of the city. The prices for deliveries range from 10 to 25 cents, according to the distance covered.

NO TRAIN FOR HIM.

ONTARIO, CAL., can boast of a motorcyclist who is a real enthusiast. When L. Rabe and his wife and children wanted to make a trip to Fresno, some distance away, Rabe sent his family on the train and rode his motorcycle to his destination.

UNITED STATES Farm Inspector Walter F. Davis, of Austin, Tex., recently obtained a motorcycle to enable him to cover his district and call on the farmers at least once a month.

FOR EMERGENCY CALLS.

OFFICIALS of Lexington, Ky., are considering purchasing several motorcycles for the use of officers who are called upon to patrol outlying districts and answer emergency calls.

EIGHTY-FIVE motorcycles are being used by the various departments of Chicago's city government.

ABOUT twenty-five members of the Galveston (Tex.) M. C. recently made a run to Houston, where they were entertained.

CONCERTED ACTION.

DES MOINES, IOWA.—A great deal of interest has been taken here in the announcement that the East Des Moines Commercial League will work with the farmers living between this city and the town of Ankeny, about fourteen miles away, for the improvement of the road between the two places so that Des Moines will have a good road entering it on the East. It has been noted that the roads throughout the State are in good condition until the city limits of Des Moines are reached. This city is on the line of the "River to River" road across Iowa, and good roads to and from it are a necessity.

WANT F. A. M. LITERATURE.

"MOBILE, Ala., is picking up fast," writes a traveling enthusiast, "and a more gentlemanly set of riders one seldom sees. They are active and boost for the local dealers of the machines they ride. A club is being formed at the present time and it would be a good idea for the F. A. M. secretary to send literature to this city and help along in every way possible. It may be sent to O. Overton, 519 Dauphin street."

MOTORCYCLE IN SOCIETY.

THAT the motorcycle is gaining steadily in popularity among feminine devotees of motoring is proved by the announcement that a number of young society women of Chicago have purchased single-trackers for the coming season.

MOTORCYCLES are now being used by the post office authorities of Youngstown, Ohio, for distributing special delivery letters and it is reported that the machines are doing excellent work.

RURAL mail carrier O. W. Bosman, of Urbana, Ohio, is one of the latest recruits to the ranks of R. F. D workers who depend upon the motorcycle for prompt delivery of their mail.

EVANSVILLE, Ind., motorcyclists have summed up their working policy in the motto: "Once a rider, always a rider." In other words, they feel it is only necessary to make a recruit and the fascination of the sport will do the rest.

GEORGIA RACE PRIZES.

THE directors of the Augusta (Ga.) Club met on March 23 and decided upon a program for the race meet to be held on April 26. There will be seven events, six for amateurs and one for professionals. The value of the prizes offered in the amateur events will total over $300. In the professional race, which will be for ten miles, $50 in cash is offered as first prize, $25 as second and $5 as third. This will bring the total value of the prizes close to $400. A cup of handsome design, valued at $50, forms a most attractive prize in the ten-mile stock race, which will be the principal amateur event of the day.

Much publicity is being given the meet through the Augusta newspapers, and the club is in receipt of many inquiries from prospective competitors. From present indications this will be one of the most important racing programs ever held in the South.

PITY THE POOR BURGLAR.

BETWEEN motorcycles and telephones there is no longer any joy in life for the burglar. Recently a hurry call was received at the Denver (Col.) police headquarters at 2 a. m. An officer vaulted into his saddle and arrived at a residence in a distant part of the city in time to nab a burglar as he was climbing out of a window. The whole operation required just six minutes.

IMPRESSED 'PHONE MEN.

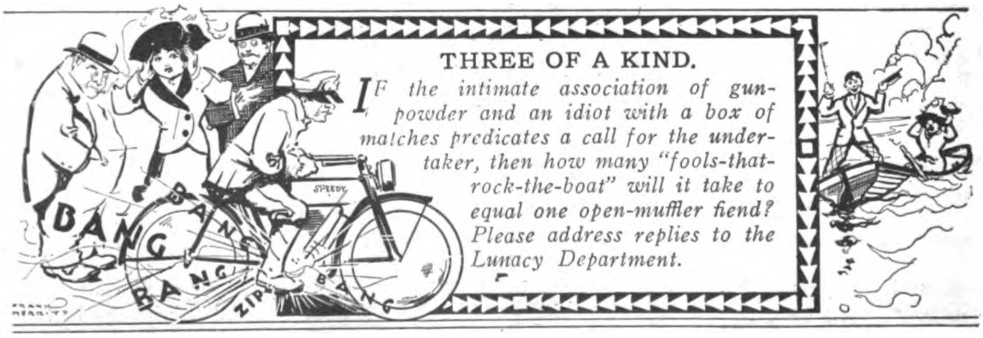
JENKINS & CO., of Des Moines, Iowa, had a motorcycle exhibit at the three-day convention of the Iowa telephone men in this city recently. The exhibit was composed entirely of Indian machines.

OBJECT TO NOISE.

RESIDENTS in the Vailsburg section of Newark, N. J., are preparing to wage a fight against the erection of the new Motordrome proposed by the Eastern Motor Racing Association on the grounds that they will be seriously annoyed by the noise of the motors. The track promoters are convinced, however, that they will be able to show that the annoyance along these lines will be negligible.

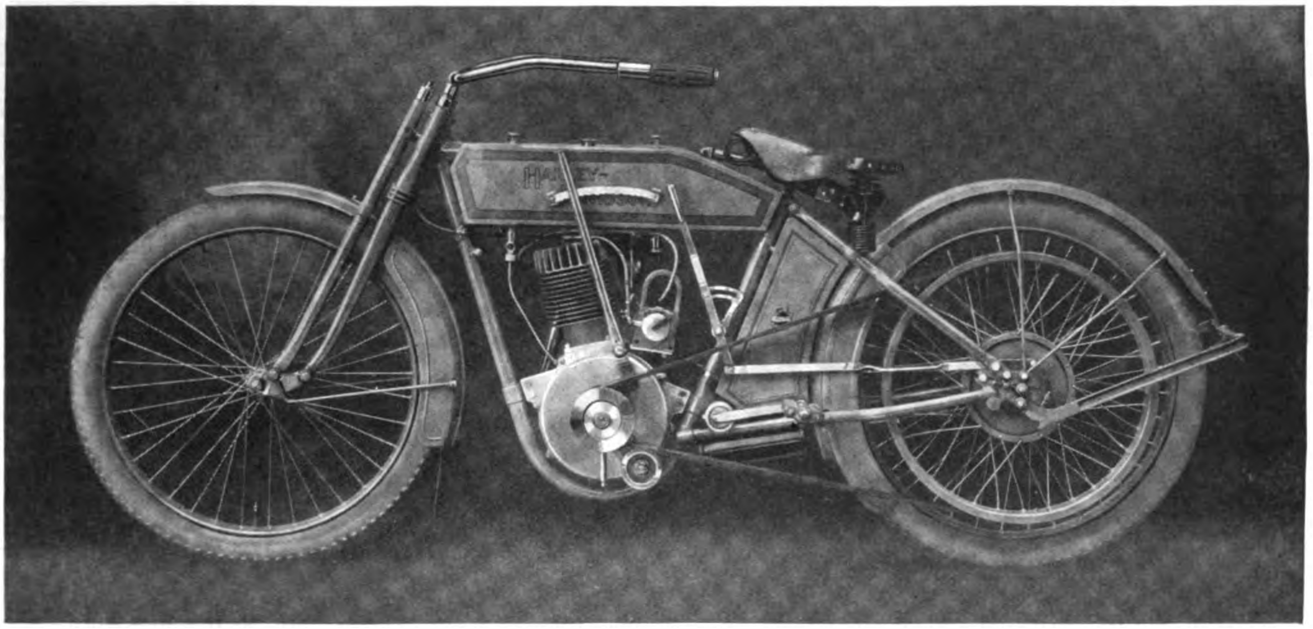
FIVE motorcycle enthusiasts of Oshkosh, Wis., recently made a trip to St. Paul, Minn., despite the fact that some of the snow drifts on the roads were several feet deep.

MOTORCYCLISTS of Atchison, Kan., will assist in the Good Roads movement.



THREE OF A KIND.

IF the intimate association of gunpowder and an idiot with a box of matches predicates a call for the undertaker, then how many "fools-that-rock-the-boat" will it take to equal one open-muffler fiend? Please address replies to the Lunacy Department.



86 Harley-Davidsons sold in 71 consecutive days

That's the story of the almost instantaneous success of H. L. Peters, our Buffalo dealer, who has had the Harley-Davidson agency less than a year

Big business like this would be impossible if the Harley-Davidson was not built right and if the factory organization back of it was not "there with the goods"

Harley-Davidson Motor Company

194 C Street Milwaukee, Wisconsin

Dealers Department

PITTSBURGH'S BUSY EXCHANGE.

PITTSBURGH, PA.—The Motorcycle Exchange, of this city, is now permanently located in its new home at 5606 Penn avenue, East End. This is now the largest agency in Pittsburgh. The storeroom floor space is 40 x 110 feet, and the shop is half that size. The storage rooms in the basement hold 300 machines. A small supply warehouse, situated in the rear of the main building, contains a goodly supply of gasoline and oils. Up to date this agency has put out over three hundred new and used machines for 1912, and there is at all times a selection of approximately 200 machines to choose from. A. G. Schmidt, manager, and H. McK. Payne, proprietors of this exchange, are the agents for Allegheny County of the Indian, which is the only machine handled by them. They are authorized to appoint sub-agencies, which are well distributed throughout the county. This agency has been the leading home of the Indian in this district for the past three years and has been more than successful in its effort to increase the demand for motorcycles. Much of the enthusiasm shown in this city can well be attributed to the zeal with which these young men work. This year the demand was greater than ever, and it was found necessary to order supplies by the carload, something which has never before been practiced in this city.

The Department of Public Safety, of Pittsburgh, shows confidence in the Indian by supplying the motorcycle police squad with new 1912 sevens. The Indian has been used by the police in this city for the past two years.

INDIANS ON DISPLAY.

THERE was a large attendance throughout the four days of the Louisville (Ky.) automobile show, held March 6-9, and the single display of motorcycles attracted no end of attention. The only firm exhibiting the single-trackers was the Sutcliffe Company, which showed a full line of the new Indian models. Frank B. Marshall, the well-known speedster of Terre Haute, Ind., was in charge of the display and he succeeded in rounding up many orders.

POHL IN TOLEDO STORE.

H. G. POHL, formerly with the Pierce Cycle Company, of Buffalo, has accepted a position in the Toledo (Ohio) store of the Consolidated Mfg. Company as assistant to Manager H. D. Capron. Pohl will give special attention to the sales and testing departments.

WESTERN NEW YORK AGENCY.

ONE of the most complete motorcycle establishments in New York State is that presided over by H. L. Peters, in Niagara Falls, from which Harley-Davidson machines are distributed for Western New York. Mr. Peters and his son, O. H. Peters, appear in the photograph, the latter being in charge of the sales department. A. H. Peters, who does not figure in the picture, has charge of the repair department. The firm's repair shop has an excellent equipment of machinery, including electrically driven lathes, drill press, grinders, brazer, air blower, etc., making it possible for Mr. Peters to turn out any machine part should he fail to have it in stock when needed. This rarely happens, however, as a recent inventory of parts in stock totaled over $1,400. It is one of Mr. Peters' boasts that he never tolerates the use of a monkey-wrench on any machine, open-end wrenches being used exclusively.

LOCKSMITH • ELECTRICIAN
MOTORS
330
330

Mr. Peters reports that he has placed upward of eighty machines since the first of the year and that his 1911 sales will probably be doubled before the close of the present season. He invites touring riders to drop in at his headquarters even though they may not be in need of his services.

MACHINE BARGAINS.

THE Green Purchasing Agency, 1589 Broadway, New York City, is doing a good business in both slightly used automobiles and motorcycles. The large stock embraces practically every kind of automobile and motorcycle, which are well displayed in their extensive floor space. They offer to send the enquirer a description and price list of their various attractive offers.

SHATTOCK TURNED SLEUTH.

DETROIT, MICH.—Robert Shattock, Detroit agent for Emblem machines, proved himself a bit of a sleuth recently when he found that his safe had been robbed of about $500. When Shattock arrived at his place of business one morning he found the door of the safe unlocked, but gave this no serious thought until he discovered that the cash drawer was empty. At once he turned to a certain employee and questioned him closely. The latter explained that he had found the door open when he arrived, but his answers did not satisfy Shattock, who continued the "sweating" process until the employee confessed that he had taken the money. It was found hidden in a woodshed in the rear of the store.

FIRST IN THE STATE.

THAT the Motorcycle & Supply Co., of Little Rock, Ark., the first firm of its kind in the State, fills a long-felt want, is being proved by a rush of orders and heavy demands upon its repair department. The company was formed only a short time ago and the business transacted to date has far exceeded the expectations of the proprietors. In addition to handling the Flanders machine the firm carries a line of accessories and slightly used motorcycles and operates a well-equipped shop. Homer Adkins and W. F. Moorhead are at the head of the company.

PURDUM NEEDS ASSISTANT.

S. E. Purdum, of Macomb, Ill., has sold a half interest in the motorcycle department of his business to Ray Kline, who is well known to riders throughout his district. Purdum is still sole owner of the novelty and repair departments of the establishments, but the motorcycle trade developed so rapidly that he found it advisable to take a partner.

NEW BUFFALO FIRM.

PAPERS of incorporation were filed recently by the Excelsior Sales Co., of Buffalo, N. Y., which is capitalized at $10,000, to deal in Excelsior motorcycles and Flanders automobiles. William F. Hanavan is general manager of the company which has opened quarters at 730 Main street.

BARR ON BUSINESS TRIP.

FRED J. BARR, of Davenport, Ia., distributor of Flying Merkel machines in seventeen counties in Iowa and Illinois, returned recently after a visit to the big factory of the Miami Cycle and Manufacturing Company, at Middletown, Ohio.

HOW LANG STARTED.

C. H. LANG, Harley-Davidson agent in Chicago and one of the most active motorcycle boomers in the Middle West, was a manufacturer of tools for piano tuners in 1904. His vocation was so confining that he turned to a power two-wheeler as a means of healthy recreation, obtaining one of the first three machines turned out by Will Harley and the Davidson brothers, who at that time did not dream of the massive plant which is supplying the company's 1912 output. Lang tells the story of his first machine with pardonable pride.

BAKERSFIELD SALES.

CARL WILKES, proprietor of the Pioneer Gun Store in Bakersfield, Cal., announces that he has sold thirteen Indian machines since February 15 and that he could have increased this number if the motorcycles were in stock to satisfy immediate demands of prospective riders.

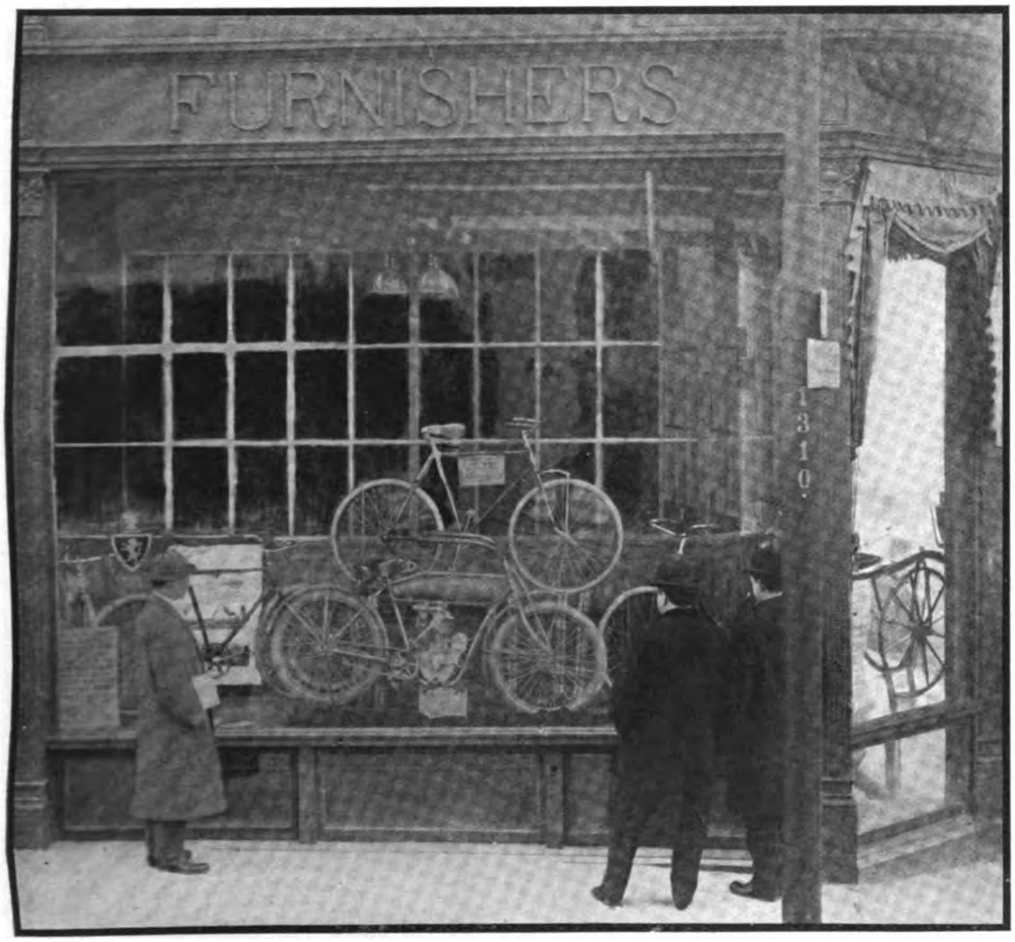
BROWNING BROTHERS, of Ogden, Utah, have signed up for a quantity of Emblem motorcycles. They will handle the retail end in Ogden and will appoint sub-agents in various parts of the State.

HEARTY WELCOME FOR A. B.

A. B. COFFMAN, of the Consolidated Manufacturing Company, was given a cordial welcome by the motorcyclists of Savannah, Ga., when he paid his annual visit to that city recently. After conferring with his local representative, L. R. Oakman, Mr. Coffman called upon other agents in a social way and was the guest of the dealers in general on a day's outing. He congratulated the Savannah boosters upon the results they have obtained and exhorted them to keep up the good fight. Mr.. Coffman was deeply impressed with the progress that has been made throughout Georgia during the last year.

HANDY STOPPING PLACE.

ARTHUR LA ROE, Indian agent in Perth Amboy, N. J., has opened an establishment in Smith street, near the Staten Island ferry terminal. His place is the only one in the city devoted exclusively to motorcycle supplies, and being located on the main avenue of motoring traffic between Staten Island, west Jersey points and the shore resorts, it should prove quite handy for touring knights of the single-tracker.



AN "EVOLUTION" EXHIBITION.

THE Pope Manufacturing Company, of Hartford, Conn., recently hit upon the idea of arranging an "evolution" exhibit in the show windows of the Stackpole, Moore, Tryon Company, in Hartford, with a view to showing the progress that has been made in the production of motorcycles and bicycles, and the display attracted much attention. One of the machines shown was of the "hobby-horse" type, dating back to 1818, and the contrast between this and the up-to-date models provoked many a smile. The display included one of the latest Columbia chainless bicycles, equipped with every comfort-giving device, a Columbia chain bicycle, representing the highest type of that make; a woman's bike and several roadsters. Needless to say, the new model of the Pope Motorcycle occupied a prominent position in the exhibit.

OHIO TRADE BULLETINS.

THE Harley-Davidsons won two out of three games in the Columbus Motorcycle Bowling League series at the contests held March 18. Their opponents were the Indians, who won the middle game. The scores were: Indians—767, 910, 851; Harley-Davidsons—853, 810, 852. The Flying Merkels won three games from the Excelsiors by the following scores: Excelsiors—659, 801, 682; Flying Merkels—848, 836 and 804.

W. H. Snyder, manager of the American Machine Company, of Columbus, returned recently from a trip to the Emblem factory at Angola, N. Y., where he went to hurry up deliveries.

The George T. Stream Company, of 78 West Main street, Newark, has taken the agency for the Indian.

A. D. Farrow, of 271 East Jefferson street, Nelsonville, has taken the local agency for the Harley-Davidson for 1912.

The city auditor has received a shipment of 1912 motorcycle tags, and all motorcyclists are expected to call at his office and pay the license fee of $2. Police Chief Vermillion has issued orders for the arrest of all riders who fail to obtain the 1912 tag.

In connection with the automobile show given by the Wedge Garage at Zanesville recently, a number of motorcycles were exhibited. Williams & Co. exhibited several Indians and Flanders, and Pope machines also were shown.

Z. L. Bedford, of Lima, has taken the local agency for the Harley-Davidson.

Walker Bros., 105 Court street and 205 North Main street, Bowling Green, have taken the agency for the Indian.

EMBLEM AGENCIES.

SOME of the new Emblem agencies placed recently are: Taylor Bros., Oklahoma City, Okla.; A. F. Mueller, Evansville, Ind.; Moultrie & Maginni, Yonkers, N. Y.; J. C. Stafford, Fort Wayne, Ind.; Clinton E. Carpenter, Grand Rapids, Mich.; W. A. Doubleday Company, Syracuse, N. Y.; E. E. Fenn, Bloomington, Ill.; Smith & Wolfe, Denver, Col.; H. J. Kingsbury, Kalamazoo, Mich., and William Lintner, South Bend, Ind., in addition to many smaller towns.

NEW YALE AGENCY.

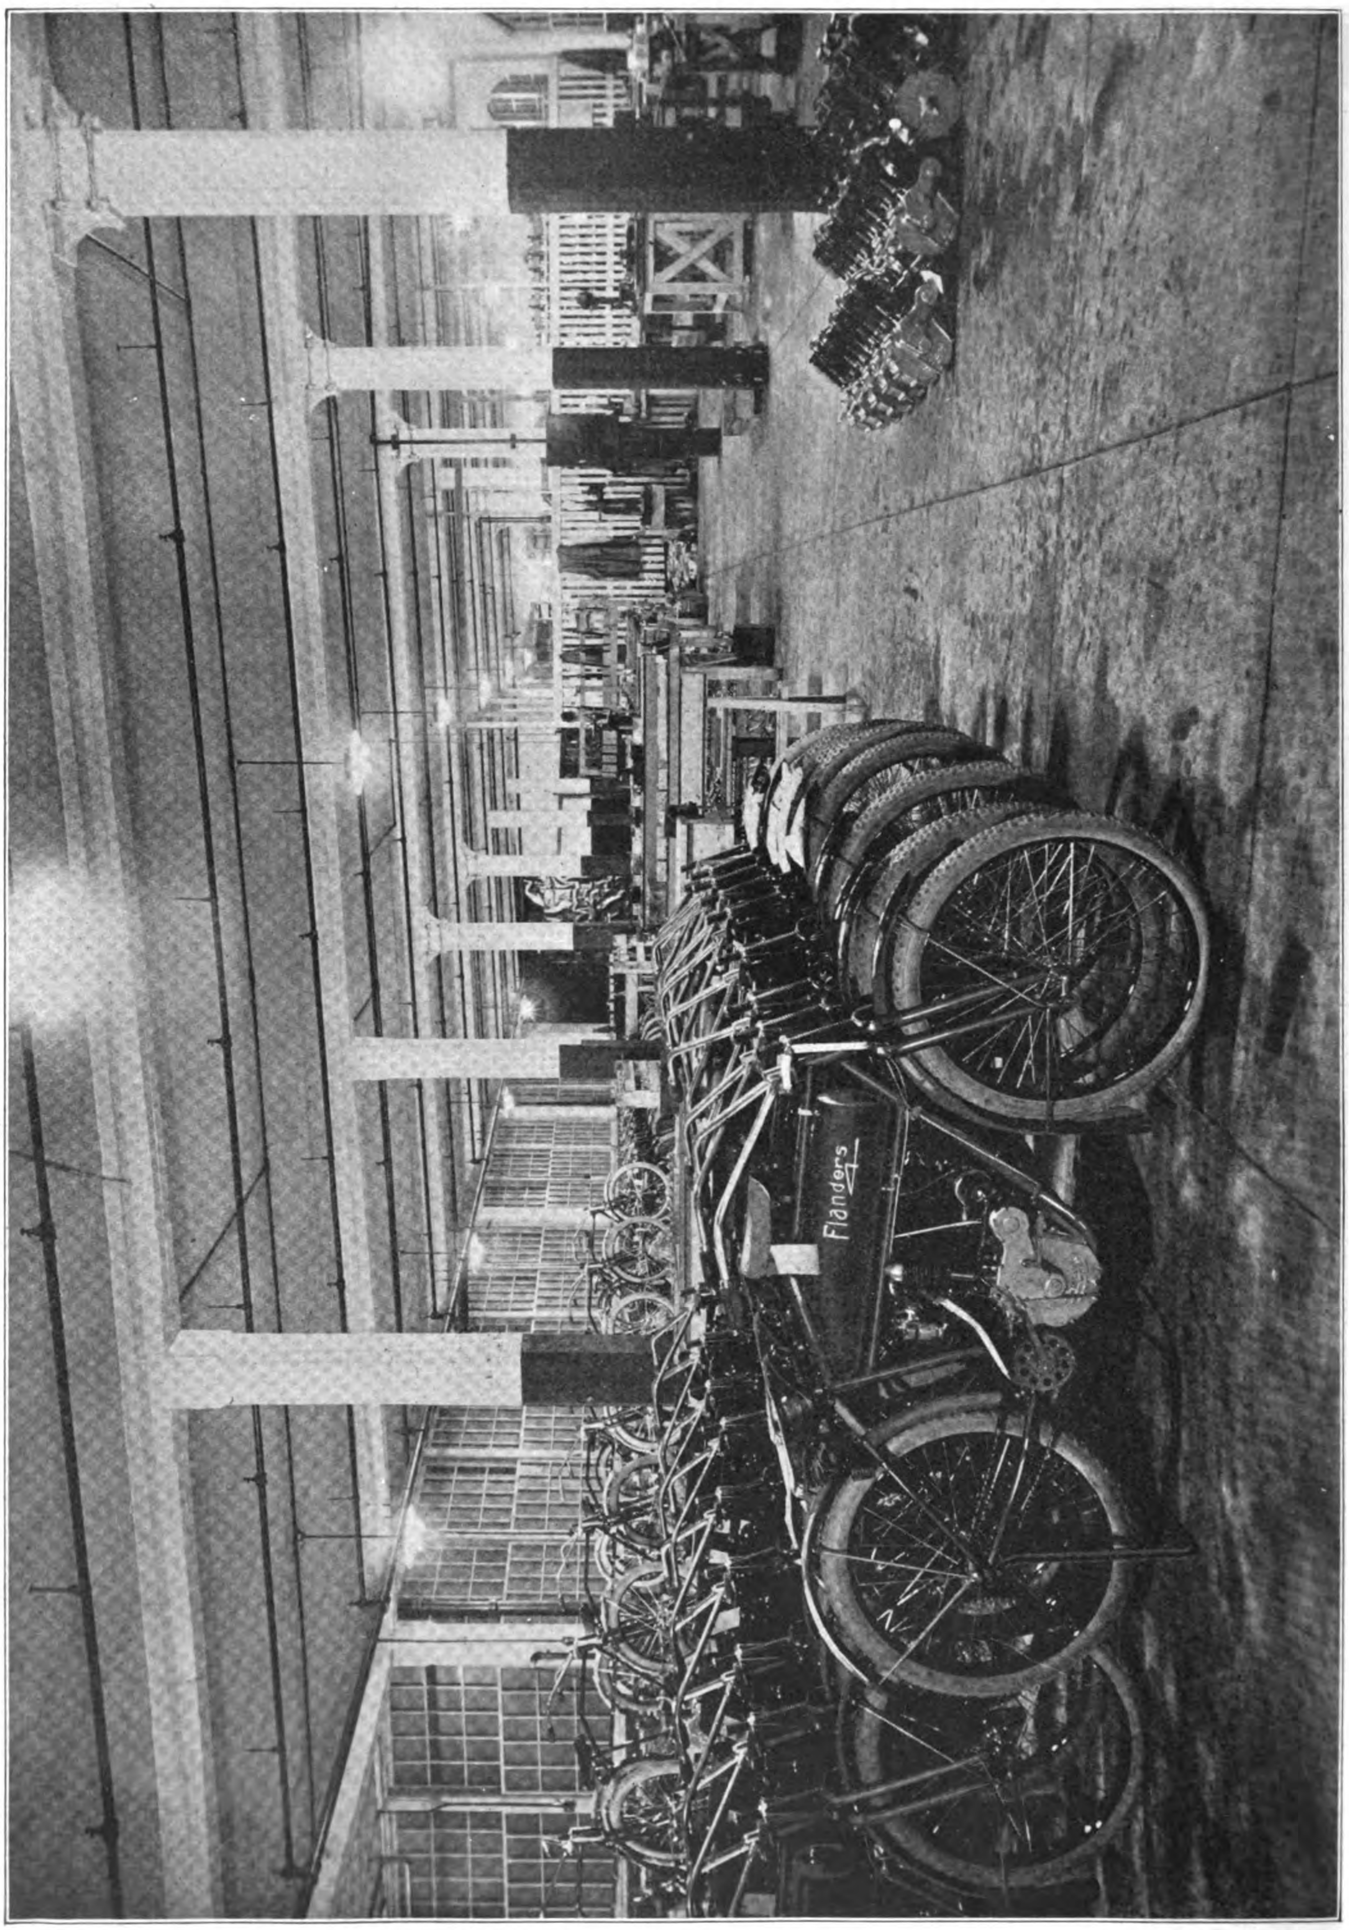
RAY BROTHERS, of 308 W. Jefferson street, Louisville, Ky., have taken the agency for the Yale machines. They have been active workers for the development of the motorcycle field in Louisville and vicinity for some time past and have built up a promising business.

HARRISBURG AGENCY.

HEAGY BROS., located at 1204 North Third street, Harrisburg, Pa., handle a full line of sporting goods in addition to selling Harley-Davidson motorcycles. Although only about a year in the field they have built up a promising business.

PIERCE and Flanders machines are being sold in Detroit, Mich., for 1912 by L. A. Stetcher, of 1281 Michigan avenue. Stetcher has had 12 years' experience in the motorcycle and bicycle business.

RACE fans in Coshocton, Ohio, are practically assured of motorcycle speed events in connection with an aviation meet which is being planned for July 4-5.



CORNER IN FINISHING ROOM—FLANDERS' CHELSEA PLANT

ON THE OPPOSITE PAGE is a photograph of a small corner in the factory in which

THIS IS IN OUR CHELSEA PLANT, which covers [illegible] acres, represents an investment of more than one million dollars, and which is devoted exclusively to the manufacture of motorcycles and steel balls.

YOU SEE WE MAKE every part of the Flanders "4", including even the balls.

OUR PONTIAC PLANT covers 19¼ acres, and represents an investment of one and one-quarter millions. Here we make parts of the motorcycle—forgings, castings and gears—and also make the famous Flanders Electric.

PERHAPS YOU'VE HEARD the ridiculous story, "Flanders intends to abandon motorcycles!" If so, just consider for a moment the tremendous investment we have in it—and answer yourself.

THE WISH IS FATHER TO THE THOUGHT in the minds of those who tell such foolish tales. On the contrary—

WALTER E. FLANDERS himself will devote the major part of his personal time to the Flanders Manufacturing Company—his favorite child, the one named after himself.

HIS GUARANTEE GOES with every motorcycle—and you know what that means.

$175. WITH FREE ENGINE PULLEY AND MAGNETO.

MORE LATER.

FLANDERS MANUFACTURING COMPANY

PONTIAC and CHELSEA, MICH.

BIG INDIANAPOLIS SHOW UNDER CANVAS

Motorcycles Figured Prominently in Million-Dollar Exhibition of Motor Vehicles Which Was Held Under Huge Tent Covering Sections of Three Streets in the Indiana Capitol.

INDIANAPOLIS, IND.—Housed under an $11,000 canvas covering in the Vermont street section of the million-dollar automobile show which opened here Saturday, March 23, and which continued until Saturday, March 30, the Indianapolis motorcycle dealers held their first combined motorcycle exhibit. The automobile show, in conjunction with which the accessories and motorcycle dealers were shown, was also the first to be held in Indianapolis, and no account of the lack of a large enough coliseum, the exhibit was held in the streets on three sides of University Park. The smooth asphalt, covered by green carpet, made an excellent floor. The decorations under the big canvas were uniform. Festoons of laurel and incandescent lights, stretching from the top of the canvas down to the sides, and American flags hanging from each center pole, formed the chief decorations.

The G. H. Westing Company, agents for the Indian, with a thirty-foot frontage, had the largest motorcycle display. A long showcase, filled with accessories, formed the centerpiece of the Indian booth. On top of the showcase rested another case containing over thirty silver trophy cups won by E. G. Baker, of Indianapolis. Benches were arranged on both sides of the cases, with large Indian blankets thrown over them. Five brand new Indian machines of different models were artistically arranged upon stands. The T. T. and two-speed models attracted more than usual attention. In charge of this exhibit were: G. H. Westing, F. W. Hassler, R. H. Sturm, C. R. Foley, E. P. Whitmer, C. R. Sheets and D. E. Dunn. Mr. Dunn, who is a special Chicago representative of the Hendee Company, went down to Indianapolis especially to help out at the show.

The George Detch Wheel Company's stand, showing makes of Pierce, Pope and Reading-Standard motorcycles, was in the charge of A. G. Detch, E. R. Lawson and C. H. Pohler. Detch exhibited the first 1912 7 h. model Reading-Standard to reach this city, with the new foot brake control. In the center of the Detch display space was a table covered with accessories and engine parts. The motorcycles were mounted on decorated stands.

The first Emblem and Iver-Johnson motorcycles to reach Indianapolis were exhibited by John Thompson. Besides Mr. Thompson, Roy Price was on deck at the display.

Another Indianapolis newcomer who showed under the canvas was F. D. McCord, of the Motorcycle Sales Company, agent for the Flanders. McCord exhibited five Flanders "4" motorcycles. P. C. Bowen, of Detroit, a special Flanders agent, was chief aid of McCord at the show, and succeeded in closing a number of dealers' contracts for different parts of Indiana. James Ruby, G. W. Boycort and E. E. Jones were aids at the Flanders booth.

The Gus Habich Company, represented by Alex Byerly and Frank Wolf, had an attractive display of white Thors and the latest Excelsior models. One of Joe Wolter's racing machines was on exhibition and attracted unusual attention.

John E. Merz, handling the Flying Merkel, had a booth decked up in yellow, to match the color of the "flyers." On a table in the center there was plenty of Merkel literature and some accessories. Assisting Merz was F. P. Lee, R. Frost and E. Pollard. Lee is from St. Joe, Mo., and is special agent for the Merkel people.

The Harley-Davidson exhibit, in charge of Harry Dipple and Harry Steward, was composed of three machines, two of which were singles. Dipple had the honor of selling the first machine of the show.

All of the dealers report that business was very good. Up to Thursday each of the dealers reported the sale of a machine or two, while every one stated that he had at least three or four "sure prospects" in view. On the whole, the dealers claim that the show is one of the best things that has ever been staged in Indianapolis and it is referred to as a pronounced success.

INDIANS FOR PACEMAKING.

INDIAN motorcycles will be used during the coming season, as in the past, for pacemaking purposes on the Newark (N. J.) Velodrome Bicycle Track, as Manager Chapman has placed an order for four new machines for this purpose. Mr. Chapman has been actively connected with bicycle racing longer and more successfully than any other man in the business, and has experimented with every description of motorcycle for pacemaking, with the result that for several years he has used Indians exclusively for this purpose.

Pacing bicycle races imposes much more severe conditions than is generally imagined. The main requirement is absolute reliability, for the failure of a pacemaking machine in an important race means not only the marring of the event, but the disappointment of crowds of interested spectators, and as a business proposition the management can take no risks of such a mishap.

Heretofore the largest machines used by Mr. Chapman have been 5 h. twins, but this year he will install 7 h. machines as his new outfit, and these as usual will be in charge of Charles Turville, the veteran pacing expert.

EARLY trips planned by the South Bend (Ind.) M. C. will take the riders to St. Joe, Mich., and to Kalamazoo, each run totaling about 80 miles.

A SERIES of races will be held in Milwaukee in June under the auspices of the Wisconsin Motorcycle Club.

"His Hair and Moustache Were Sandy."

A Leap Year Inquiry: "Young Man, Is There a Minister, Judge or Justice of the Peace in This County?"

MATCH RACE IN LOUISVILLE.

FRANK MARSHALL, of speed fame, has clinched an agreement with Irwin Baker, of Indianapolis, for a match race to be held on the Douglas mile dirt track in Louisville, Ky., some time in the near future. Marshall says the track is fast and that he intends to use it for a 100-mile record trial later in the season.

JULY 4TH MEET AT CORTLAND.

THE Cortland (N. Y.) M. C. will hold a race meet on July 4 at which New York State Commissioner Robert Morton will act as referee.

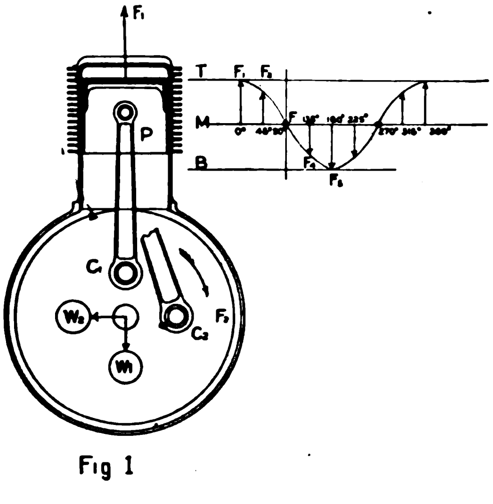


Fig 1

THE BALANCE PROBLEM

Mechanical Engineer Discusses Advantages of 90-Degree Twin from This Important Viewpoint.

FOLLOWING is an interesting dissertation on the problem of balancing motorcycle engines, with special reference to the results obtained from the use of the 90 degree twin as fitted on M.M. doubles, produced by the American Motor Co., of Brockton, Mass.

The article is prepared by L. E. French, who has given much time to the study of balance conditions in gas engines. By referring to the accompanying diagrams the reader will obtain a clear conception of the points made by Mr. French. He writes as follows:

"The vibration in an engine is caused by unbalanced forces. It takes force to start and force to stop the piston. These forces act in one direction only and that is along the line F-1, W-1 in Figure 1. The force varies in different parts of the stroke from a maximum at the start, to zero at the middle, and a maximum at the bottom. This variation is shown by the diagram in Figure 1. It is impossible to balance the force F in a single cylinder machine by a revolving weight W, because the force F always acts in one direction, while the force W acts in all directions, as it revolves about the center. At the position of the crank C-1, the weight W-1 balances the force F-1, but at the position C-2 weight W-2 acts at right angles, which shakes the motor sidewise instead of vertically.

"In Figure 2, we have another cylinder, placed at right angles to the first one. When the crank is at C-1, the weight W-1 balances the first piston P-1, while at the position C-2, the weight W-2 balances the second piston P-2. The two pistons can both be balanced by one revolving weight, where a single piston cannot. This is true only when the cylinders are placed at 90 degrees, because in this position one piston is at the top of the stroke, while the other is in the middle of the stroke."

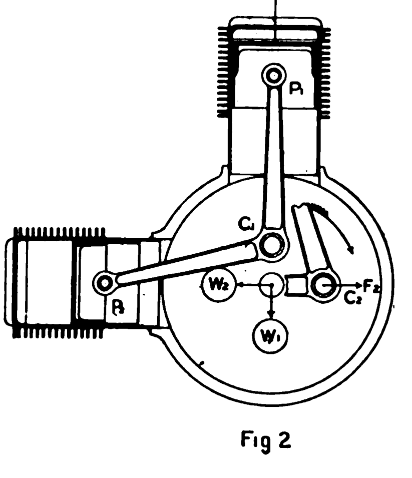

Fig 2

COAST DEALERS CLAMOR FOR NEW MODELS

Shipments Are Tardy and Agents Assert That Inability to Make Prompt Deliveries is Cutting Into Their Business Seriously—Trade Notes of San Francisco and Vicinity.

OAKLAND, CAL.—W. P. Williams, the hustling motorcycle dealer of Oakland, in a recent interview lamented the inability of manufacturers to cope with the remarkable demand for new models on the Pacific coast, and stated that failure to receive shipments promptly has kept practically all the agents of the State on the anxious seat for weeks past.

"This has been one of the finest winters I have ever known for the motorcycle trade on the coast," said Mr. Williams, "and there is no good reason why I should not have been selling motorcycles practically every day since the first of November, 1911. We have had but few rainy days, and times appear to be good, so that the ranks of motorcycle enthusiasts have grown beyond all expectations. In my opinion the motorcycle manufacturers err in advertising in the fall that they are making material changes in their models, and then failing to make prompt spring deliveries. One cannot blame the purchaser for demanding the new models and holding off until he can be supplied with them, but this imposes a great hardship upon the dealer.

"The automobile manufacturers are already talking of their 1913 deliveries," continued Mr. Williams, "and as yet we have not received our first 1912 machines. No doubt the folks at the factories are putting forth every effort to help us out of our dilemma, but it would seem that the time has arrived for the inauguration of a delivery system which will insure the shipment of motorcycles at a time when the riders want them. The prospective purchaser who is compelled to wait weeks, and even months, for a new machine will, in some cases, become disgruntled and decide that he doesn't want to make a purchase."

BEN BRESEE, agent for Harley-Davidson machines in Fresno, is one of the most active dealers in the State. He reports having sold seventy-four Harleys to date, and states that he is just getting warmed up for his sales campaign. Fresno offers an unusually attractive field for motorcycles.

CARLOAD OF INDIANS.

THE San Francisco branch of the Hendee Manufacturing Company recently received a carload of the new models—forty-one machines in all—and they are going rapidly. It is worthy of note that quite a few of the mounts are equipped with the new Goodyear 3-inch tires. These are the first machines to reach San Francisco carrying the new size of tires.

R-S DEMONSTRATOR ARRIVES.

JOHN T. BILL & CO., of San Francisco, have received their Reading-Standard 7 twin demonstrator, and it has attracted considerable attention on its tryouts. A shipment of the 1912 R.-S. machines is expected by the firm at an early date.

SHOW IS POSTPONED.

ANNOUNCEMENT is made that the motorcycle show proposed by the San Francisco M. C. has been indefinitely postponed owing to the inability of the dealers to obtain new models for display purposes. Promoters of the show are keenly disappointed, but it is asserted that they have not given up the idea of having an exhibition when conditions are more favorable.

FREED INCREASES STAFF.

OWING to unprecedented business A. Freed, Pacific coast distributor for Thor machines, has been obliged to add to his sales and repair shop forces, and there are indications that he will soon be called upon to make extensions in his establishment.

HAVE JOINED FORCES.

PUTZMAN & CASTNER is the firm name on a new sign at 1625 Market street, San Francisco, where a rushing business is being done in enameling motorcycles, bicycles, rims, mudguards and automobile parts. Mr. Putzman was formerly a member of the firm of Putzman & Hoffman in Alameda, and Mr. Castner was for many years associated with C. C. Hopkins, Indian agent in San Francisco, as a repair expert. Charles Henrikson, one of the most experienced enamelers on the coast, is in charge of the new shop.

WILL LEAVE SACRAMENTO.

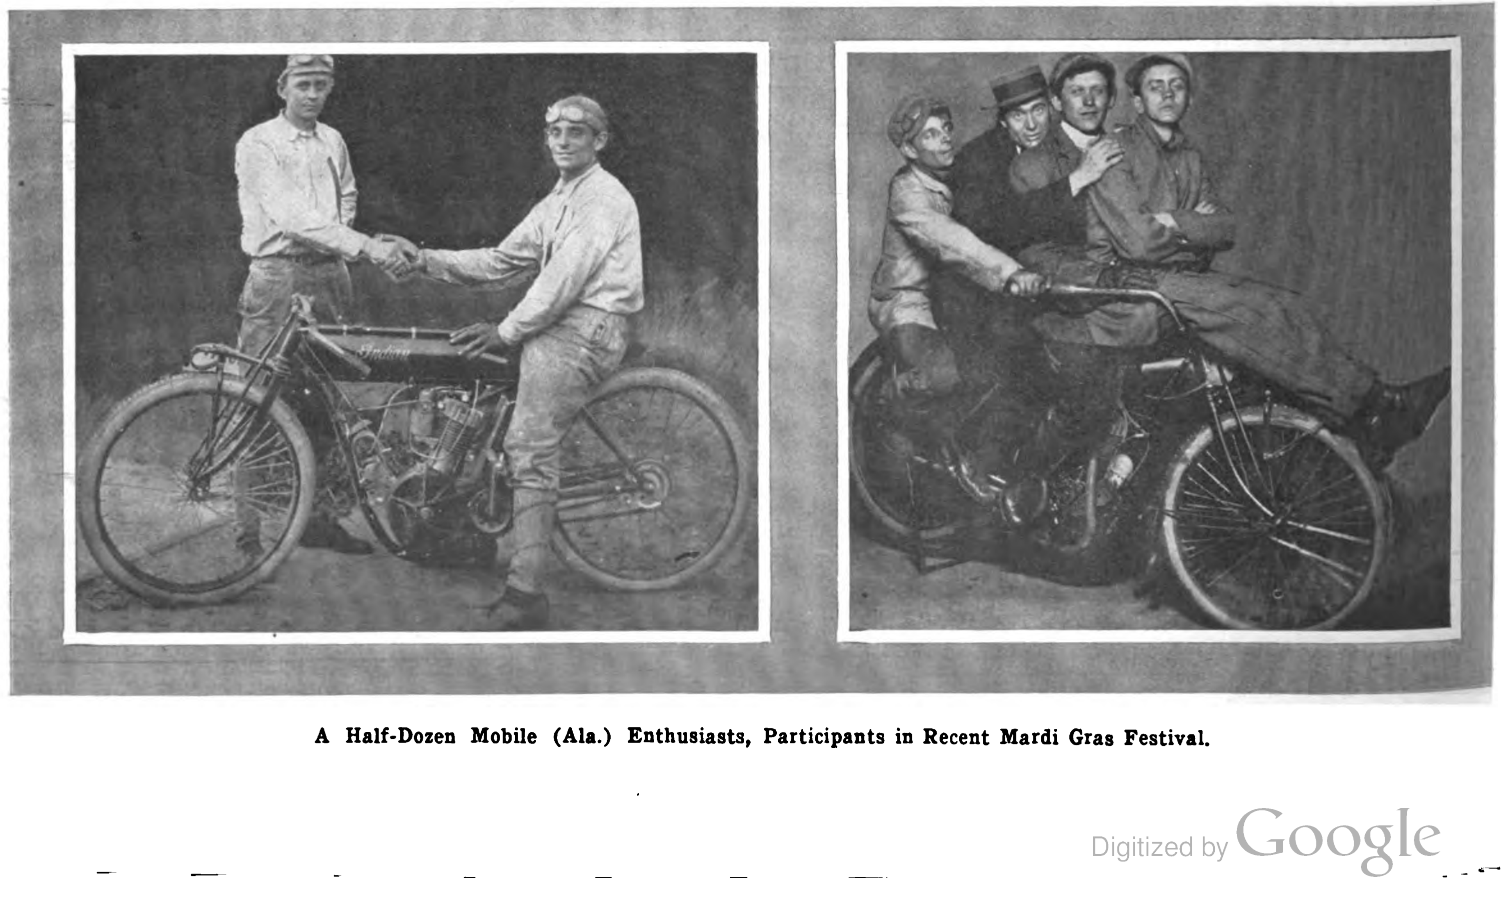
F. M. JONES announces that he will move his wholesale motorcycle and bicycle business from Sacramento to Oakland, and make this his distributing point. He has the agency for the Flying Merkel machines.

HANDLING TWO LINES.

GEORGE F. FAULKNER is one of Oakland's busiest agents this year. He is carrying the Harley-Davidson and Pope lines and finding plenty of orders for both. Of late he has improved his repair shop and added to his general facilities for handling orders promptly. The Faulkner shop is in charge of Lewis Ike, who for several years was associated with C. F. Salomonson.

ADDS THE YALE LINE.

C. F. SALOMONSON, a consistent worker for the upbuilding of the motorcycle trade in Oakland and vicinity, has taken the Yale agency for 1912 and will handle it in conjunction with the Reading-Standard agency.



A Half-Dozen Mobile (Ala.) Enthusiasts, Participants in Recent Mardi Gras Festival.

DEMONSTRATING THE THOR.

J. AUNNE, proprietor of a well-equipped establishment in Oakland, has received his Thor demonstrator and is giving it frequent tryouts for the benefit of prospective buyers. Aunne also reports unusual activity in his repair shop.

NEW OAKLAND STORE.

J. KRANE has opened a new motorcycle store in Oakland and taken the agency for the Emblem machines. In addition to his motorcycle line Krane intends to carry an assortment of bicycles and supplies.

HAS FLANDERS AGENCY.

W. H. HARRISON, of Sacramento, has taken the agency for Flanders machines and reports lively business. He has been a dealer in Sacramento for many years and is carrying an extensive line of bicycles and supplies in addition to the motorcycles.

IN NEW QUARTERS.

BANTA & DURST have moved into new quarters in Sacramento, where they are finding a big demand for Yale motorcycles. They have made arrangements to handle a heavy repair trade.

MAY SELL MOTORCYCLES.

WRIGHT & VAN BUSKIRK, who have been very successful dealers in bicycles in Lodi, are contemplating entering the motorcycle field, and it is stated that they intend taking up the agency for a leading motor single-tracker.

SALESROOM ENLARGED.

WAUCHOPE BROTHERS, who are boosting Excelsior sales in Lodi, have just completed extensive improvements in their salesroom and additional facilities for handling repair work have also been arranged.

RACES AT FRESNO.

THE Chambille Cyclery Company, of Chico, which is doing a record business this year with the Thor, reports that during the summer there will be some excellent racing pulled off at Fresno. The motorcycle club at that point is already making plans for the meets. The Chambille Cyclery has a fine repair shop in connection with the salesroom.

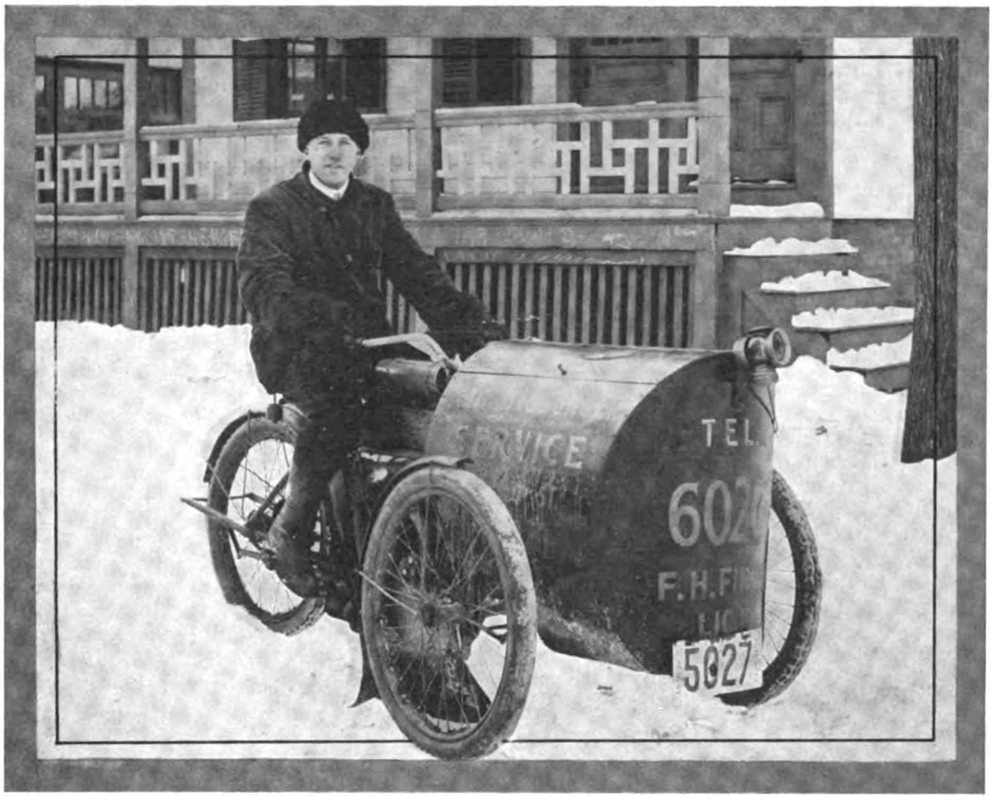
JOBBING TRADE LIVELY.

THE Kimball-Upson Company, of San Jose, is the distributors in northern California for Pope motorcycles, and is handling the heaviest trade this year that the firm has ever known. This energetic company carries a large line of tires and accessories and caters to a large jobbing trade.

W. F. Bracker, the Excelsior agent of San Jose, has just enlarged his shop, and is carrying a large and complete stock of accessories and tires.

LINQUEST TO HAVE BRANCH.

A. L. LINQUEST, who for years has been in the bicycle business at Chico, has relinquished his bicycle trade and taken up motorcycles. Mr. Linquest will handle the Thor for this territory. He will also open a branch at Marysville, where he intends to put in a number of Thor machines and a line of accessories.



TEUBNER ON THE ROAD.

W. J. TEUBNER, known to race followers as "Billy," has gone on the road in the interests of the Indian, and will travel the States of Ohio, West Virginia and Kentucky. This will explain the statement recently made that Teubner had abandoned racing, and his many friends will undoubtedly be glad to welcome him in the business field.

BY way of proving that their city is a lively motorcycle center, club workers of Columbus, Ohio, state that they will have nearly 1,000 riders in line before the summer is over.

MOTORCYCLE races will be among the amusement features at a centennial celebration to be held in Findley, Ohio, in the near future.

A STURDY OUTFIT.

THE accompanying photograph shows an Indian twin that is being used in package delivery service by F. H. Firman, of Springfield, Mass. It has not been out of service a single day throughout the past winter and has successfully competed with automobile and wagon delivery systems in handling all goods of moderate weights. It is also worthy of note that Firman commands a better rate than others in his field because of the fact that he specializes on rush orders. The van used is one of the old style Indian attachments and is soon to be replaced by one of greater capacity.

SOME'HORSEPOWER!

A NEWSPAPER announcement which is being copied over a wide area states that the officials of South Bend, Ind., have made arrangements for the purchase of a "75-horsepower motorcycle" to be used in checking speeders. Roughly speaking, this machine ought to be quite some little speed box, but there are reasons for believing that it will be minus about 70 of the aforesaid horsepowers when it arrives in South Bend. All of which will be just as well for the officer who mounts it and the general tranquillity of the neighborhood.

SQUAW RIDES MOTORCYCLE.

MINNIE SKEY EAGLE, a full-blooded Pawnee Indian squaw, is undoubtedly the first woman of her race to pilot a motorcycle. She uses a single-tracker on the government reservation at Geronimo, Okla., having been attracted to the mount by a machine which was ridden to the reservation by George H. Chase, a well-known Oklahoma motorcyclist.

WORCESTER WHIST PARTY.

AN unusually successfully whist party was given by the Worcester (Mass.) Motorcycle Club on March 25, at which twenty-one tables were in play. Seventeen attractive souvenirs were awarded to the players making the highest scores, and the program throughout proved most enjoyable. When the cards were laid aside the floor was cleared for dancin. The club's plans have been completed for a run to Concord and Lexington on Patriots' Day, April 19. The outing is open to all riders of the district and will mark the opening of the riding season for the Worcester squad.

MERCHANTS ARE AWAKE.

IN Dallas, Texas, motorcycles are now being used for deliveries by drug stores, clothing houses, meat markets, the police department and the electric and gas companies, all of whom report satisfaction and this is verified by the fact that new machines are being constantly sold to business houses as well as to riders for pleasure only.

WATERLOO, Ia., now has about 350 motorcyclists, and it is believed the ranks will be increased by nearly 200 riders before the close of the present season.

MARCH GROWTH OF F. A. M.

NATIONAL SECRETARY GIBSON reports the following increases in F. A. M. membership for March by districts: New England, affiliated, 48, unaffiliated, 8, renewals, 13; Atlantic, affiliated, 132, unaffiliated, 37, renewals 74; Peninsular, affiliated, 26, unaffiliated, 9, renewals, 8; Lake, affiliated, 99, unaffiliated, 34, renewals, 47; Gulf, affiliated, 24, unaffiliated, 5, renewals, 10; Central, affiliated, 54, unaffiliated, 14, renewals, 9; Southwestern, affiliated, 78, unaffiliated, 19, renewals, 12; Pacific, affiliated, 30, unaffiliated, 4, renewals, 5; Canadian, affiliated, 3, unaffiliated, 1, renewals, 4.

The new members have been listed by States as follows: Massachusetts, 48; Connecticut, 6; Rhode Island, 2; New York, 66; Pennsylvania, 55; New Jersey, 27; Maryland, 6; District of Columbia, 13; West Virginia, 1; Alabama, 5; North Carolina, 2; Tennessee, 4; Georgia, 14; Mississippi, 1; Florida, 9; Ohio, 38; Illinois, 28; Missouri, 2; Indiana, 30; Michigan, 32; Wisconsin, 3; Kentucky, 2; Louisiana, 1; Texas, 25; Arkansas, 1; Nebraska, 5; Iowa, 6; Kansas, 41; Minnesota, 14; South Dakota, 1; North Dakota, 1; California, 94; Colorado, 2; Washington, 27; Montana, 1; Idaho, 1; Nevada, 1; Oregon, 5; Canada, 4; total, 625.

BROOME COUNTY BANQUET.

MEMBERS of the Broome County M. C., of Binghamton, N. Y., held their annual banquet and election of officers on March 21. Cups will be awarded the riders who attend the most meetings during 1912.

DAYTONIANS TALKED SHOW

Mingled Business with Pleasure at Smoker by Planning for Coming Motorcycle Display.

NEARLY one hundred motorcycle riders, of Dayton, Ohio, attended the smoker and luncheon of the Dayton Motorcycle Club in the sun parlor of the Algonquin Hotel on March 27, at which the newly-elected officers of the club were installed. The evening's business was laid over for the next meeting, except as regarded matters pertaining to the week's show which the boys are planning for the week of April 20. This matter was discussed at length, and details of the arrangements were talked over. Manager Charles Zetler reported that the club members had been much encouraged by the manner in which manufacturers were coming to the front in the matter of space for exhibition purposes. He stated also that he had received word from several trade publications stating that they expected to have representatives at the show.

Manager Zetler stated that the show was assuming fine proportions, and he expects that thousands of people will inspect the machines. The show is to be exclusively for motorcycles. A great deal of publicity is being given the show in Dayton, and from the manner in which the club members are taking up the work of preparation the exhibition promises to be a hummer.

WITH THE CLUB BOOMERS.

CONVINCING proof of the growing popularity of the F. A. M. and the sport of motorcycling may be found in the following large list of new club organizers who have taken up the work of forming clubs in their several localities during the past week. Chairman Estabrook has listed them as follows: R. Walker, 132 Manor road, West Brighton, Staten Island, N. Y.; Wm. J. Rehrig, 47 East Main street, Somerville, Mass.; Hans F. Neil, 208 Taylor street, Findlay, Ohio; C. C. Vaughn, Brunswick, Ga.; M. A. Kilpatrick, Stamford, Tex.; Herbert L. Fisher, Beardsley, Minn.; William Maresh, 212-214 Washington street, Iowa City, Ia.; L. W. Conly, Herkimer, N. Y.; Edwin A. Hall, 76 Main street, Dansville, N. Y.; Samuel A. Hamm, 2520 North Broad street, Philadelphia, Pa.; Garwood Storer, Bedford, Ind.; Wm. Demler, 18 Kennedy street, Bradford, Pa.; Stuart Tracy, care of Graves, Cox & Co., Lexington, Ky.; Burwell Richards, Box 994, Gulfport, Miss.

LATE ARRIVALS.

IN March twelve new clubs affiliated with the F. A. M., the newest acquisitions being as follows: Plainfield (N. J.) Motorcycle Club, W. De W. Miller, secretary, 33 Somerset street, 17 members, 100 per cent.; Lemoore (Cal.) Motorcycle Club, C. R. Fox, secretary, care of Clifford Cyclery, 14 members; Muskegon (Mich.) Motorcycle Club, F. A. Meeker, secretary, Heights street, 20 members, 100 per cent.; re-issue, Queen City Motorcycle Club, Cincinnati, Ohio, Clarence Rossiter, secretary, 2272 Adams avenue.

One time, 3 cents a word; twice, 2 cents a word each insertion.

MOTORCYCLE MART

Agents' cards, 5 cents a word; twice or more, 3 cents a word per issue.

WANTED—100 motorcycle cylinders. Put a new one on your machine and get more speed and power. Sell me your old one and the piston for half price. Write quickly and tell me what you have. Wallace Stewart, 475 Cedar street, St. Paul, Minn.

AGENTS ONLY—I have an article that every motorcycle rider will buy. It gives the engine more power and speed and makes it last longer. Write today if you are an agent. Wallace Stewart, 475 Cedar street, St. Paul, Minn.

FOR SALE—Marathon—1911 model; 6 h. p., twin, two speed, sliding gear, shaft drive, free engine, $200. Run less than 100 miles. Want to buy auto. P. H. Chase, 393 Halsey street, Newark, N. J.

FOR SALE—M. M. 1911 magneto twin, 28-inch wheels. Also side-car, 323 Washington avenue, Brooklyn, N. Y.

FOR SALE—Indian tricar attachment, good as new, $50. For particulars, address R. B. Clark, Fayerweather street, Cambridge, Mass.

FOR SALE—1911 7 h. p. Flying Merkel with speedometer and extra tire to quick buyer for $185. Will make a mile a minute. Suite D, 1400 West 27th street, Cleveland, Ohio.

FOR SALE—One 1910 Curtiss motorcycle, good as new, $80. One new side-car attachment $30. H. Kaskel, Spencerville, Ohio.

FOR SALE—Brand new 3-lead Splitdorf motorcycle coil, $3. C. A. Wolfe, 1538 State street, Schenectady, N. Y.

EXPERIENCED MOTORCYCLE and supply salesman going to California would like a line of specialties and good medium-priced machine to represent there. References. Address "Specialty," MOTORCYCLE ILLUSTRATED.

FOR SALE—Yale motorcycle—4 h. p. 1911 model in perfect condition. $110 takes it if sold at once; must sell. Address John M. Borem, 805 N. Sexton street, Rushville, Ind.

FIRST CERTIFIED CHECK for $25 takes a complete 10 h. p. Cadillac single cylinder engine, completely overhauled, new rings and bearings, complete with transmission, carbureter, coil, oiler, crank, pump, radiator, gasoline tank, 3 chains, in fine running order. Dick Burdy, Decatur, Ind.

GOING TO SWEDEN—Would like to introduce a good and cheap motorcycle. Well acquainted in sporting stores. Address C. P., c/o MOTORCYCLE ILLUSTRATED.

FOR SALE—7 h. p. Indian two-speed and free engine clutch, 1911 model, run less than 1,000 miles; guaranteed perfect; write for particulars. Clarence Lacksore, Hayfield, Iowa.

FOR SALE—1911 Indian De Luxe, 7 h. p., two-speed, clutch foot controller; starts on stand; 1911 carbureter, $200. Jack Horner, Plainfield, N. J.

GAS ENERGY

An interesting, illustrated, practical and indispensable monthly magazine for those who make, use or sell gas or gasoline engines. 50c. per year. Sample copy, 10c.

GAS ENERGY COMPANY
24 Murray Street. New York

MODERN ELECTRICS

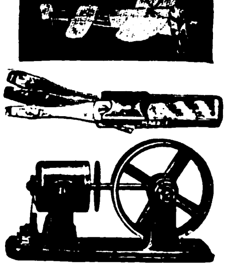
"THE ELECTRICAL MAGAZINE FOR EVERYBODY"

For the Novice, the Amateur, the Experimenter and the Student.

THE brightest and most interesting "plain English" electrical monthly magazine published nearly five years old. 112 to 144 pages monthly New departments on aeronautics and "with the inventor."

THE AUTHORITY ON WIRELESS

THE magazine to read if you want to keep up to date on wireless and progress in electricity. With one year's subscription to Modern Electrics for a limited time only we are making the following:—



THREE OFFERS

1 BLERIOT MODEL MONOPLANE —GUARANTEED TO FLY. FREE.

2 MARBLE'S POCKET SCREW DRIVER and Prest-O-lite Key. Three sizes of blades locked in nickel plated handle which closes up like a knife. Closed 3 1-2 in. Open 5 1-2 in. Just out and it's a dandy. FREE.

3 DOUBLE MAGNETIC REVERSIBLE ENGINE WITH SPEED CONTACT LEVER 1000 to 2500 revolutions per minute. FREE.

SEND $1.50 TO-DAY in cash, stamps, or M. O. and get MODERN ELECTRICS for one year and your choice of the above offers postpaid ABSOLUTELY FREE.

Money refunded immediately if not pleased in every way.

HANDLEBARS, NOT NOODLES.

PERSONS fond of macaroni might think, at first look, that the accompanying picture shows a heaping plate of their favorite food. But look again. It is not macaroni and it is not spaghetti; neither is it a pile of noodles.

"Them's handlebars," some one shouts.

The guess is correct. The photograph shows a heap of handlebars in one of the stock rooms of the Harley-Davidson Motor Company at Milwaukee. The apparently tangled mass contains more than 4,000 handlebars destined for use in guiding Harley-Davidson motorcycles this season. At one time there were 5,000 handlebars in that particular stack in the stock room, but the past few weeks have necessitated heavy inroads on the stock.

TO MARKET NEW MACHINE

Canadian Company Will Enter Motorcycle Field and Produce Attractive Line of Single-Trackers.

CANADA can at last boast of prospects for a strongly-organized and well-established motorcycle industry, the Canada Cycle and Motor Company of Toronto, manufacturers of automobiles and bicycles, having decided to enter the motor-wheel producing field.

A handsome new addition to the company's manufactory, which will give four and one-half acres of floor space for the wheel departments of the concern, is in the process of erection, and the installation of equipment for the turning out of 1,500 motorcycles yearly is contemplated. The output of the firm will be confined to lightweight machines for the present, but the factory will be in full operation before 1913. The new models, which will be named the "Russell" in honor of the company's president, will include both light and heavy machines of single and twin-cylinder design, the power of the different brands ranging from 1¾ h. for the gentlemen's style, to 7 h. for the "heavies."

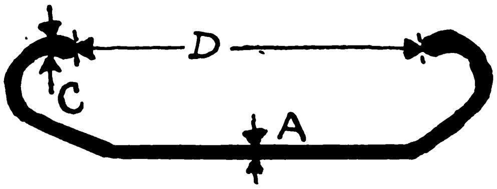
Twelve traveling salesmen will look after the marketing of the product in Canada.

RACE MEET SERIES.

ANNOUNCEMENT has been made that the North Shore M. C., of Chicago, will conduct a series of three race meets on Memorial Day and the Saturday and Sunday following. The races will be held on the Hawthorne mile track and an effort will be made to obtain one of the F. A. M. championship events as a feature of the holiday card.

TIRE CLASSES.

FOLLOWING the contour of the standard automobile rim, motorcycle tire rims have been standardized by the Clincher Tire Association, there having been three classes determined upon. These are, respectively: the "A-A," for 1¾ and 2-inch tires; the "B-B," for 2¼ and 2½-inch tires, and the "C-C," for 2¾ and 3-inch tires. The tire-seat diameter will be twice the cross-section of the larger of the two sections that fit on the different rims, subtracted from the tire diameter. Thus, the tire seat diameter of the 28 x 2¾ or 3-inch size will be 22 inches or 2 x 3 subtracted from 28 inches. The other dimensions are given in the table.



Size.	Distance between clinches (D).	Stock at clinches (C).	Stock at rim body (A).
"A-A"	1.12	⅛	1/16
"B-B"	1.42	⅛	5/64
"C-C"	1.76	⅛	3/32

The thickness of the rim at other points than those mentioned is left to the option of the rim manufacturer.

(For the letters (A), (C) and (D) see the cut accompanying.)

This information is based on data furnished by the Standard Welding Co., of Cleveland.

THE new saucer at Luna Park, Cleveland, is to be ready by the middle of May.

DOUBLES IN DEMAND

Toronto Dealers Sell Many Twin-Cylinder Machines in City, and Send Singles to the Country.

THE cities of the United States are not the only ones which are enjoying a season of motorcycle activity, judging by the reports of the dealers of Toronto, Canada.

"Last summer about 500 motorcycles were in use in this city," said Herb Kipp, of Toronto, the Hendee representative in Canada, in telling of prospects for the coming season, "there are now about 800 machines, and before the leaves fall again, there should be at least 1,100 riders—or twice as many as in 1911."

The great demand in the Canadian center seems to be for twins, although single-cylinder mounts are quite popular in the rural districts adjacent to the city. One Toronto dealer estimates that fully 90 per cent. of the city buyers are taking twin-lunged machines, while the prospective country riders want singles. "The latter will want twins when they buy their next machines," he declared. Country shipments include only about 30 per cent two-cylinder machines.

In spite of difficulties, the leading agents of the city are reporting big sales. The coal strike in England has shut off shipments of motorcycles from the old land, so that the dealers in English mounts have been hard hit. It has been impossible for them to secure machines, and just at the time when deliveries have been promised. One or two agents for American products have also found difficulty in getting a sufficient number of motorcycles to keep up with the demand.

During the first three months of 1912, the Indian agencies at Toronto have disposed of no less than fifty machines to the local market, while that many more have been sent to the country towns of the province. Percy A. McBride, the Excelsior dealer, has booked orders for twenty machines, and has sold four side-cars. He has twenty more side-cars on order, and expects to sell every one this spring.

M. Amoss, the Flanders and Rudge Whitworth agent, has also done a big business. He has sold twenty of the Michigan machines, four Rudges and five side-cars. This includes deliveries to sub-agents. Walter Andrews, who handles the Pierce and Indian, has already sold more machines than he disposed of all last summer. S. Licence, Harley-Davidson, is far ahead of last season's sales, while Joe Bourne, who retails the Flying Merkel, sold five more machines during the first three months of this year than in the corresponding period of 1911.

The T. Eaton Company, Reading-Standard agents, has done a tidy business, aided by an extensive advertising campaign. W. Dunne, Thor representative, has been handicapped by late factory deliveries, but has secured his share of business.

L. B. LYMAN, of Akron, Ohio, has been appointed direct factory representative for the motorcycle tire department of the Diamond Rubber Company.

Manufactured by

BENNETT & MORSE
COLUMBUS OHIO

A Motorcycle is no Better Than its Motor

Perry E. Mack designed and perfected the **WAVERLEY** motor and then designed the

P. E. M. Motorcycle

to be as good as the motor. The leading points of superiority in the **WAVERLEY** motor are:

OVERHEAD VALVES, located directly in the cylinder head, giving maximum efficiency and assuring perfect cooling. They cost more to build but are worth the money. Other manufacturers use them only in special motors built for racing purposes. We use them in all Waverley motors.

VANADIUM STEEL connecting rods, crank shafts, piston pins and other important parts.

IMPORTED BALL BEARINGS—Another feature generally limited to special motors, but standard equipment in the Waverley.

EXTRA HEAVY FLYWHEELS, perfectly balanced to overcome vibration and insure steady running at low speed, making the P. E. M. the greatest hill climber on the market.

The Proof of Quality

The real proof of quality is accomplishment and the Waverley motor has already made good.

Ralph Sporleder with a regular stock Waverley motor won a ten-mile race at Milwaukee, Wis., July 1st, last, in 9 min. 46⅘ seconds, making intermediate miles in 56 seconds.

Another Waverley motor shipped to Dublin, Ireland, won the 100-mile race of the Dublin Motorcycle Union, defeating 13 other machines of prominent American and European makes.

The SUPERIORITY of the WAVERLEY MOTOR is real and fully explained in our catalogue, which will be freely mailed upon request.

If you want a machine for your own use write for catalogue and special terms to buyers in open territory.

If you are a live dealer and want a machine that will stand strictly up to the guarantee, write for terms and open territory.

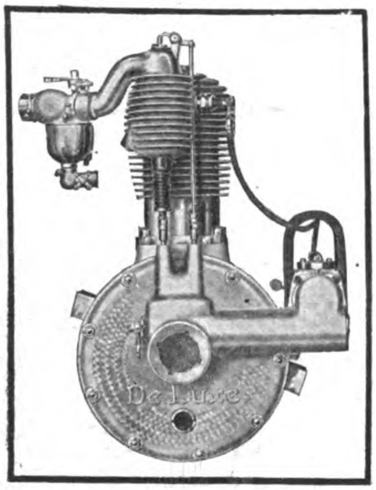
A REVOLUTION
IN MOTORCYCLE MOTOR DESIGN



In bringing out our DE LUXE line of motorcycle motors, we have introduced a large number of improvements, and offer these motors as the most advanced now before the trade.

NOTEWORTHY IMPROVEMENTS.

- One-piece crank shaft.
- One-part crank case with cover.
- Improved cam and magneto drive.
- Oil tight motor.
- Large Valves.
- Simplified design throughout.
- Reduced number of parts.
- Silent Motor.
- Large ball bearings mounted in steel lined pockets.
- Equipped with Bosch Magneto.

These improvements in design, together with the high grade materials used in construction, the modern methods of manufacturing applied, and the remarkable performance of these motors in road tests mark a revolution in motorcycle motor building.

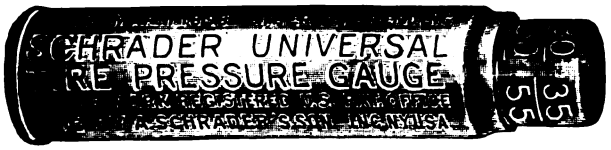
Have You Had Trouble With Your Tires?

A very large percentage of all punctures and blow-outs occur from improper tire inflation.

WOULD YOU PAY $1.00 TO OVERCOME

delays, difficulties and expense resulting from these misfortunes?

Schrader Universal Tire Pressure Gauge



(Made under patent dated March 1, 1898.)

Accurately registers at all times the exact air pressure in tires.

Simply hold gauge to tire valve for a second and recording sleeve will indicate air pressure and remain fixed until pushed back into place by the finger.

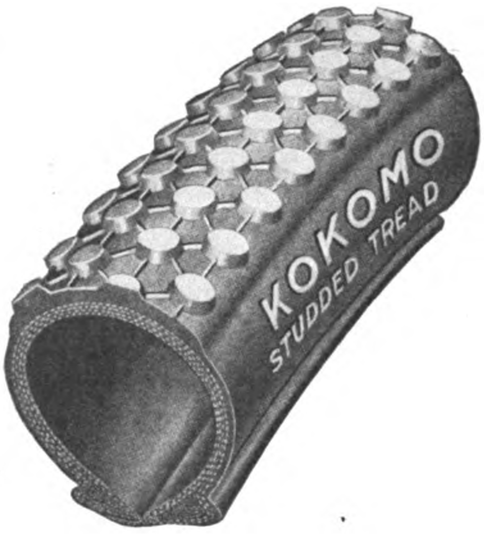
Carried easily in vest or change pocket, being only 2½" long. So simply constructed as to almost never become out of order, and if it does go wrong it will immediately tell by the action of the indicating sleeve that it needs repairs. Leather case comes with it.

PRICE $1.00 EACH

Guaranteed Simple and Absolutely Accurate

Can be obtained from all tire manufacturers, jobbers and dealers, or

A. SCHRADER'S SON, Inc.
28-30-32 Rose Street NEW YORK CITY



The materials entering into the construction of a tire are important factors, but something more than the best materials is necessary to produce the desired results—that something is the knowledge of rubber and how to handle it from its crude state to the finished article.

Kokomo Tires

SIXTEEN YEARS OF EXPERIENCE is back of every Kokomo Tire, and experience counts for more in the manufacture of rubber tires than in any other industry.

It is this experience that eliminates the guesswork and places our product beyond the experimental state.

Kokomo Motorcycle Inner Tubes command the largest sales because of their uniform quality.

Supplied in both Butt-End and Endless.

KOKOMO
RUBBER COMPANY

KOKOMO, IND.

Fifty-two Milos An Hour Uphill!

Going Some, What?

That's O. C. Godfrey's time at the Mount Anglaust Hill Climb at Collommiers, France. A leading English Motorcycle journal states: "The ascent of O. C. Godfrey was the most terrific sight of all. Geared 4⅛ to 1 with 21-in. wheels, his machine absolutely annihilated the gradient at the speed of an express train. To many he appeared a red streak whizzing through the air." Of course

He Used "The Coventry" Chain

"The Coventry" Chains are lighter in proportion to their breaking load than any other chain on the market today, domestic or foreign. They weigh from 6.25 oz. to the foot, and can stand a strain of over 3,600 lbs. Compare these figures with the claims of other manufacturers.

HEITGER MOTORCYCLE CARBURETERS

Made especially for motorcycles in a factory devoted to this product alone, with capacity of 1,000 per week

Read what this rider says about the HEITGER, this is an unsolicited testimonial, we have hundreds of such.

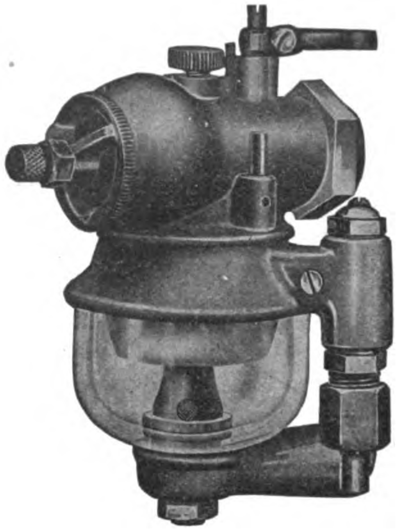
New York, February 20, 1912.

Heitger Carbureter Co.,
Indianapolis, Ind.

Gentlemen: I notice in the February 8 issue Motorcycle Illustrated, in your advertisement, that I had traveled 2,200 miles on my sturdy Emblem, in all kinds of weather, etc., from 4 below to 102 above without the slightest trouble.

I may now add an epilogue to that, I have covered more than 12,000 miles to date without the slightest trouble and without renewing a single part. I would rather pay more for a HEITGER and feel assured of never having trouble than experiment with others.

"F. L. Valiant."



Model H—¾", Net $9.50.
Model G-D, Net $10.00.
Either Glass or Metal Bowl.

There are over 25,000 of them in use, in all parts of the country, on all makes of machines. They will give the minimum and maximum speeds your machine is capabable of, as slow as five miles and up to the limit; never fail to INCREASE the speed of ANY machine. With motor in good condition we guarantee 75 miles per gallon, road riding. Thousands of riders are getting up to 100 miles per gallon; have economy records up to 200 miles per gallon. The glass bowl enables one to eliminate doubt as to gasoline level, dirt, etc.

HEITGER CARBURETER CO.

1129 Bleecker St.
Indianapolis, Ind.

Insist On Standard Pedals

Our products for the Cycle Trade include:

Emergency Axles, Sager Motorcycle Toe Clips, Diamond E Spokes, Bridgeport and Standard Pedals, Sager and Standard Toe Clips.

No other pedals give that "turkish carpet" feeling to the feet. The deep rubber corrugations in the big cushions keep the feet where they are put—they eliminate jars, bumps and other disagreeable features when negotiating rough roads.

With one eye to *durability* and the other to *comfort* we have succeeded in producing the ideal motorcycle pedal.

Write for our catalog. Standard quality plus Standard output mean big business for you, Mr. Dealer.

The Highest Compliment You Can Pay a Motorcycle Is to Say "It's Like the 'R-S'"

Manufacturers everywhere lay claim to superior merit in their machines because they incorporate one or two of the ***many exclusive*** features contained in the R-S. There is no machine on the market to-day that approaches the R-S for multiplicity of comfort-insuring devices; for hill-climbing power; for speed and all-around ***efficient durability.***

Whether you are interested in motorcycles for profit or pleasure, the R-S will more than fulfill your expectations. Here are a few of the R-S exclusive features:

Foot-rests, double brakes, double oiling system, R-S shock absorbing spring seat post, adjustable to weight of rider, and many other points which have brought the R-S into the coveted position of the "First Motorcycle In the Land." A powerful long stroke motor with imported ball bearings, mechanical intake valves and integral cams and gears. Our line comprises a Single Cylinder 4 h. p. flat belt drive, and a 7 h.p. Twin direct chain drive, undergeared transmission. All models have free engine clutches.

INTERNAL EXPANDING BAND

NEW DEPARTURE

COASTER BRAKE FOR MOTORCYCLES

The same type of device as the emergency brake in automobiles for quickly retarding speed or stopping instantly.

You can depend upon it all the time and every time.

It is absolutely impossible for the brake to lock, wind or bind.

The new transfer spring has stopped all of the "picking up" of the pedals.

It is all steel.

The wearing parts are specially treated to withstand hard service.

The parts on which the severe strain comes are made as strong as it is possible for any metal to be.

In fact, this brake is ideal and gives the rider everything that he wants for controlling his machine under all circumstances.

THE NEW DEPARTURE MFG. CO.

CLUTCH CONTROLLED FROM THE HANDLEBAR

SPECIFICATIONS

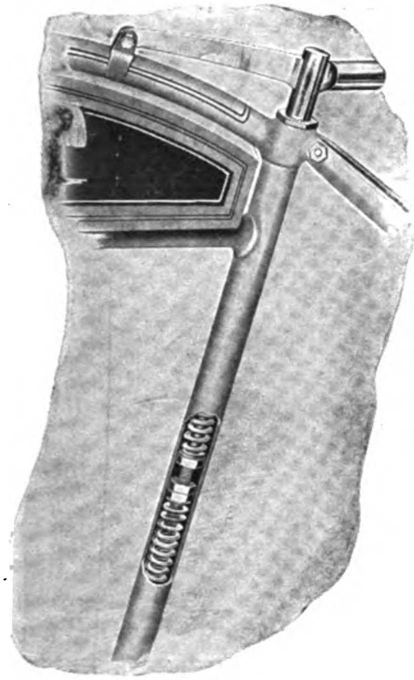
1. Motor, 5 H. P.; cylinder capacity, 498 cubic centimetres; 57 mm., bore; 52½ mm., stroke.
2. Ignition by high-tension, armored magneto with distributor fixed thereon, with which it forms a whole, entirely tight. It is entirely protected against water, dust and mud. The armored magneto first appeared in this country on the F. N.
3. Highly efficient automatic carbureter.
4. Separate gasoline filter.
5. Transmission by bevel pinions (ratio 1—5.4).
6. Improved elastic fork, with counter check spring.
7. One lever for controlling carbureter, fitted on right hand side of handlebar.
8. Height of frame, 20 inches.
9. Wheels, 26 x 2½ inches.
10. Wheel base, 56 inches.
11. Lubrication by pump inside the tank; simple, safe and effective.
12. Free engine by multiple disc clutch, running in oil.
13. Declutching device is controlled by Bowden wire from handlebar—the only machine in the world having this feature.
14. Plugs, short in length, fitted with ebonite, eliminating the possibility of electric discharges when the rider touches the plugs with his knees.
15. Foot rests are regular equipment.

ALSO TWO-SPEED GEARS

AMERICAN F. N. CO.

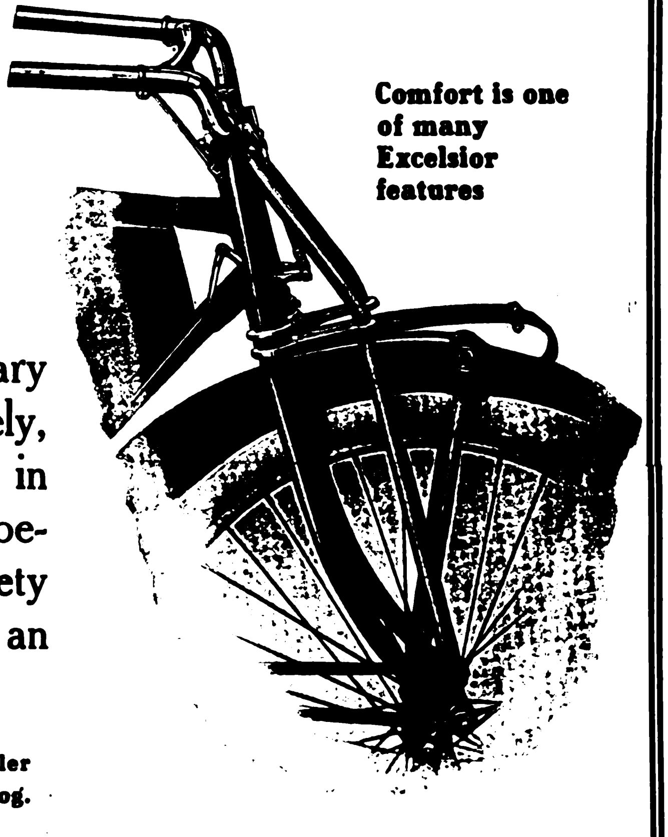
Newtonville Station, Boston, Mass.

All Roads Are Smooth To The Excelsior Rider



THE rider of an Excelsior Auto-Cycle never cares what sort of road he travels — the Kumfort Kushion seat post and perfected cradle spring fork make the roughest road a boulevard. The Kumfort Kushion seat post is simple, silent and durable — reduces wear on the tires and on the machine — makes every moment on the Excelsior one of comfort and pleasure.

The perfected cradle spring fork is another Excelsior comfort feature — built to absorb all bumps and jars. The action of the wheel in passing over an obstruction is backwards as well as upwards and the shock of the blow is transmitted directly to the spring — not to you. Besides — the Excelsior fork has a safety link between the main and auxiliary forks which allows the fork to move freely, but positively holds the auxiliary fork in position under all conditions. This is beyond question the most valuable safety device ever put on a motorcycle, and is an exclusive Excelsior feature.



Comfort is one of many Excelsior features

There are more points of Excelsior individuality. Let your dealer tell you about them — or write for our free illustrated catalog.

Has ridden the Powerful
M-M Twin 12,000 Miles
and fails to see its equal at Chicago Show

AMERICAN MOTOR COMPANY, Ironwood, Mich.
Brockton, Mass. February 18, 1912.

Gentlemen:—
I have ridden an M-M Twin I bought of you in 1910 about *12,000 miles,* in five different States and wish to say same has given me very good service. It has *plenty of speed and power* enough to go anywhere. I have never found a road condition on the hills or in the sand where I did not have plenty of power. It is very *easy riding* and *free from vibration.* I expect to get a new machine for next season, and if I do it will be another M-M Twin, as after carefully looking over *all* the prominent makes at the Chicago Show, *I failed to see its equal.*

Yours very truly,
WALTER A, LOBB.

Shoots the hills like a rocket

and purrs silently along the level at any clip.

The M-M 8 H.P. Twin can also whirl a side-car or tandem attachment around as if it were not there. The ***long stroke 90 degree angle*** motor is the secret of its success. The instant the throttle grip is turned, she's right there on the jump with both cylinders, each delivering over 4 h. p. by brake test.

Two weak points on all other twins are: First—Vibration, due to 45-degree angle design. Second—Small, weak construction at the crank-pin bearing.

On the M-M the first is overcome by the 90-degree angle of cylinders, making it possible to balance it perfectly, and stop all motor vibration. The second common fault is overcome by the very large ***ball bearings*** at the crank-pin, the most vital point on a two-cylinder motor.

That this wonderful model is being appreciated by riders and agents is shown by the tremendous influx of twin orders, especially repeat orders. We have extended our assembling room into a large addition and every department is working overtime in order to make prompt shipments. Get your order in right away if you want early delivery.

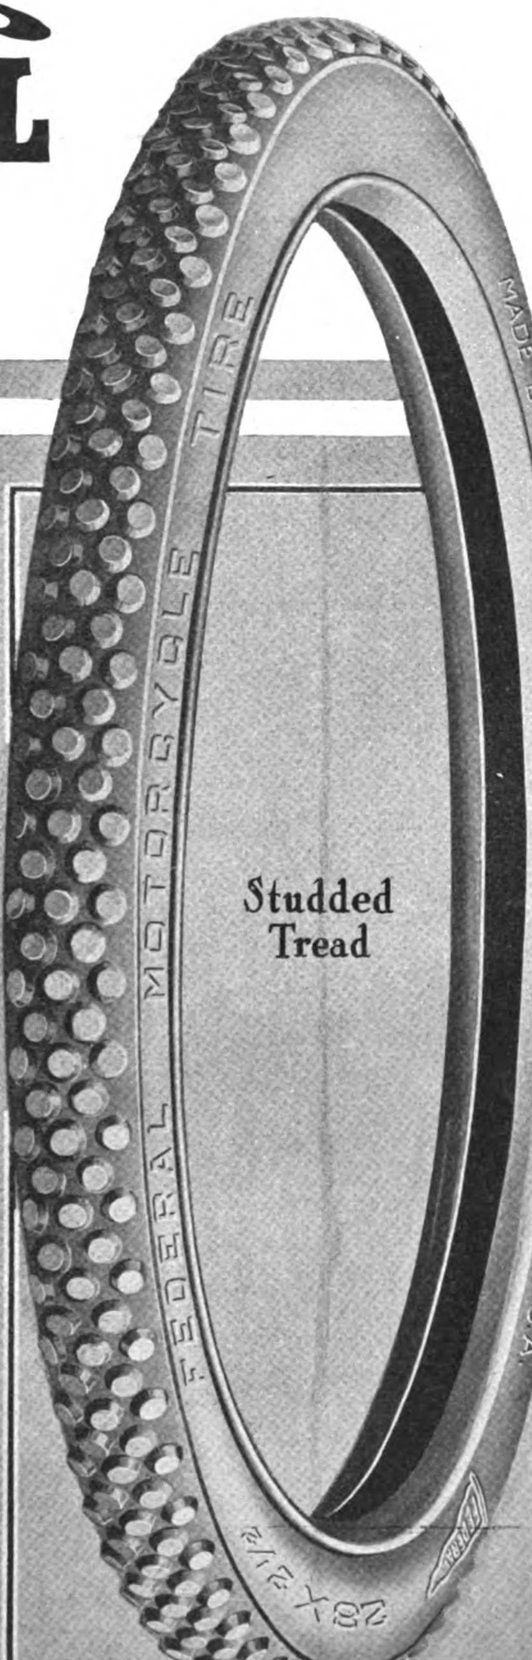
FEDERAL TIRES



FEDERAL MOTORCYCLE TIRE
MADE BY THE FEDERAL RUBBER MFG. CO. MILWAUKEE WIS. U.S.A.
28X2½

Studded
Tread

FEDERAL Motorcycle Tires are the tires that endure and cut tire costs to the minimum. The extra mileage that you can get out of Federal Tires makes it possible for you to considerably reduce your up-keep expense.

High Quality—reliability—dependability and endurance are built into Federal Tires at the start and they deliver the greatest tire service. They are comfortable, safe and speedy.

Federal Motorcycle Tires may be had in either Corrugated or Studded Tread in all sizes and in single and double clinch types.

Federal Tires are supplied through leading dealers everywhere. An interesting tire book mailed to all who write.

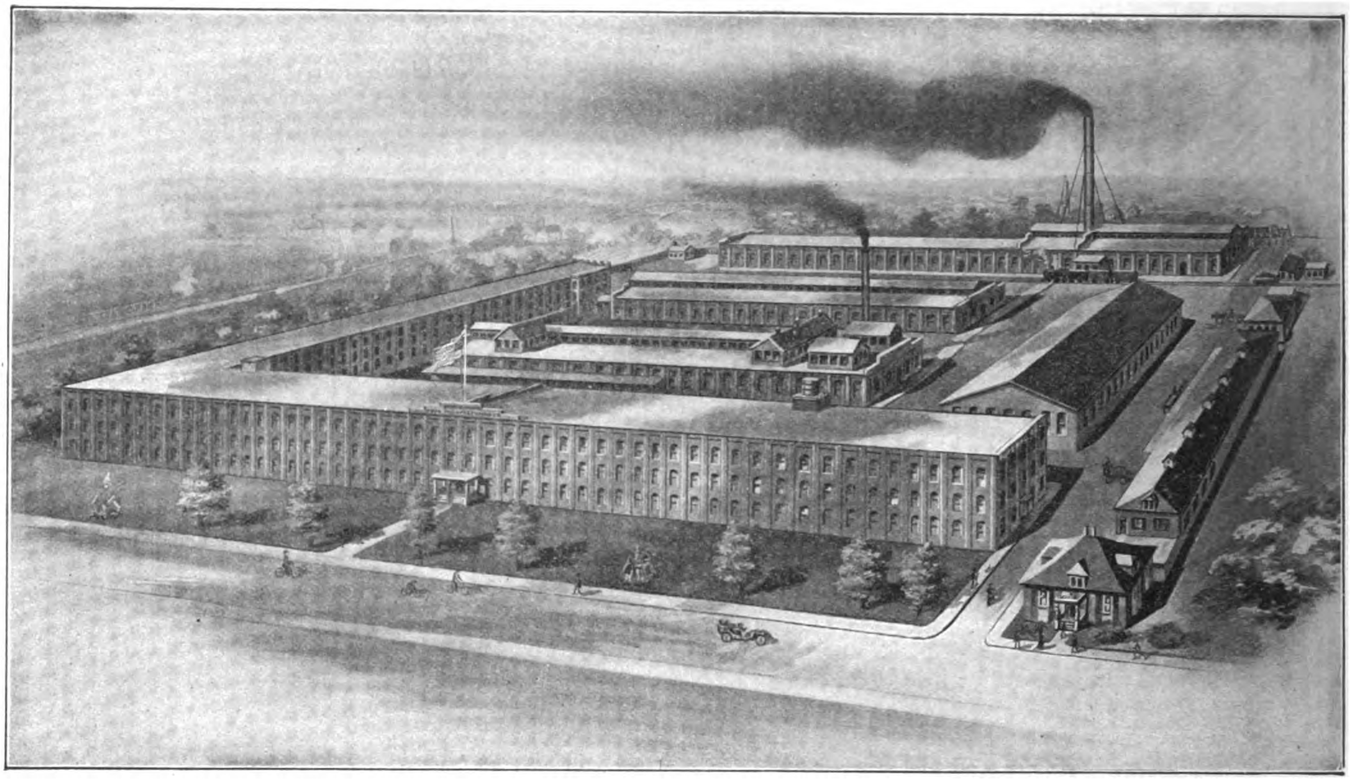
POPE MOTORCYCLES

WITH IMPORTED MAGNETO $165 **LIGHT -:- SILENT -:- RELIABLE**



WHERE POPE MOTORCYCLES ARE MADE. OUR PLANT AT WESTFIELD, MASS.

Couldn't Be Built Better Under Any Circumstances

Extensive manufacturing activities and the systematic application of intensive methods of production have made it possible to keep the cost of Pope Motorcycles down to the very lowest level. Were it not for the unequalled equipment of our great bicycle plant at Westfield, Mass., and the extensive resources of our magnificent automobile factories at Hartford, Conn., which enable us to make all our purchases on an enormous scale, the appeal of Quality and the appeal of Price as exemplified in the Pope Motorcycle would not be possible. Into its production has gone the experience gained by 35 years of successful bicycle, automobile and motorcycle manufacturing. Quality of material, accuracy of workmanship, beauty of design and refinement of finish mark the Pope Motorcycle as they mark all Pope products.

TO DEALERS

The Pope Motorcycle has made a wonderful selling record. Everywhere it has shown dealers the way to **Big Business** and **Quick Profits.** It has no competitor in the same class with it. Let us book you **now** for a big, broad motorcycle business. There are great opportunities for Pope dealers in unassigned territory.

Who Knows

MECO

The wise Motorcyclists, of course. The ones who know what they want and where to get it at the right price. They do not have to equip their machines with inferior supplies because we stock over $\frac{1}{3}$ more articles than any other house, giving them a larger line to choose from.

They know that our prices are the lowest because we sell only first-grade goods at prices as low or lower than others ask for inferior articles. We dare not sell anything but the best that is made, because you can, at our expense, return any article which is not entirely satisfactory and we will refund the purchase price.

Over half the Motorcyclists know that MECO means they will not have to wait even 24 hours for a shipment. Others may have the inclination to make immediate shipments but it requires a big $20,000 stock like ours to be able to do it.

If you want to know what satisfactory buying is like, write for our free catalog today and get started right.

A. J. MUSSELMAN THREATENS PATENT SUITS

Claims That Patents He Controls As Result of Purchase of the Armac Motor Company Are "Basic and Vital"—A Description of the Patents.

CHICAGO, APRIL 16.—A. J. Musselman announces that through the purchase of the Armac Motor Company he has obtained control of four patents which he claims to be basic and vital in connection with the motorcycle industry, and that it is his intention to insist upon their being recognized, in default of which, he says, action will be instituted against alleged infringers. Although the intrinsic value of these patents may be considered by motorcycle manufacturers to be open to question, the fact remains that Musselman's statement is decidly interesting. He says:

"Some time ago I obtained control of the Armac Motor Company of Chicago by purchase. The Armac Company will be reorganized in the near future and probably will take on a new name. At the present time its facilities are very fine for turning out a limited number of machines; something over 2,000 per year. It is expected to increase facilities for the output, besides making a number of specialties in connection with the motorcycle.

"In buying this concern, I came into control of some basic and vital patents in connection with the motorcycle industry and it is my intention to institute action against all infringers of these patents. One patent is No. 867,207, dated September 24, 1907, regarding flywheel construction for gas engines. This particular patent is the basic one and the claims set forth are being infringed by everyone today building a motorcycle using two disc flywheels with the connecting rod between.

"Another important patent is No. 946,758, under date of January 18, 1910. This patent particularly covers frames, built with upper tube and tank as one piece, connected at the head and seat post as several of the leading makers now build their machines.

"Another patent is No. 844,363, under date of February 19, 1907, which is a pulley-rim where the pulley-rim and arm connecting it to the rear wheel are one piece.

"The fourth patent of value is No. 895,576, under date of August 11, 1908. This is an inlet valve for gasoline motors and covers all the construction where the valve seat is part of the intake pipe.

"All of these patents are valuable. At the time they were applied for, the motorcycle industry was very small and no one could anticipate the value they have acquired by the growth of the business. It is my intention to go after these infringers immediately; first by giving notice and giving all the fair-minded manufacturers a chance to talk business on an equitable basis."

The first of these patents, No. 844,363, granted February 19, 1907, to Edwin W. Keller, of Chicago, as assignor to the Armac Motor Company, is for a pulley-rim for motorcycles in which the rim and the lugs by which it is attached to the wheel are formed in one piece. The parts are as follows: 1, the continuous piece of sheet steel of which the pulley is formed; 2, the lugs for fastening the pulley to the wheel rim; 3, the bottom of the pulley-rim; 4 and 5, the walls. The pulley is to be made by stamping from a single piece of sheet steel and then rolled into shape. Although shown as a V-pulley, the specification states that "it will be obvious that changes can be made either in the shape of the rim or the number of lugs without deviating from the spirit of my invention, which is to construct a pulley-rim for motorcycles in which the lug and the rim are formed integral." A similar statement is added as to the method of manufacture, involving rolling, casting, etc. The patent, as will be seen below, provides for any shape of pulley-rim of the above integral construction, as per paragraph 3 of the brief.

"1. A pulley-rim for motorcycles consisting of a single continuous piece of sheet-steel, its cross-sections presenting a V-shape, there being a plurality of supporting lugs extending from one of the side walls of the said V and formed integral therewith, for the purpose set forth, substantially as described.

"2. A pulley-rim for motorcycles consisting of the pulley-rim 3 formed of a continuous piece of metal consisting of sheet-steel having walls 4 and 5 and a plurality of supporting lugs 2 formed integral with the rim for the purpose set forth, substantially as described.

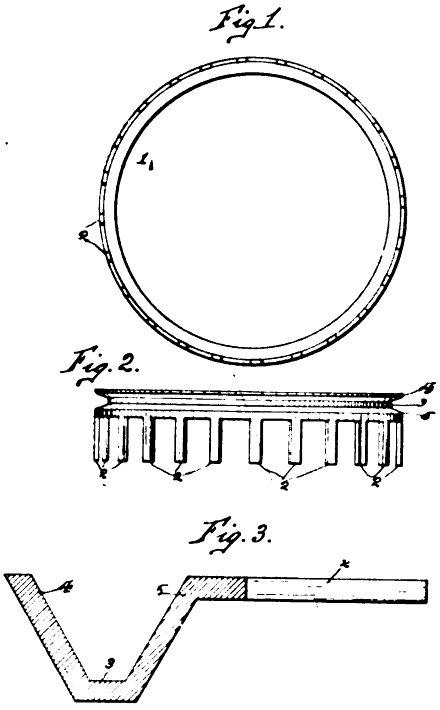
"3. A pulley for motorcycles consisting of a pulley-rim 3 formed of a continuous piece of metal having walls 4 and 5 and a plurality of supporting lugs 2 formed integral with the rim, for the purpose set forth, substantially as described."

The next patent, No. 867,207, granted September 24, 1907, to Archibald J. McCollum, of Chicago, and assigned as before, relates to the class of gas engines in which the flywheel is part of the crank, and is designed to provide a construction which will permit of a material addition to the bearing surface of the journal bearings. The class of engines mentioned includes those for motorcycles and industrial service. The method of gaining the addition to the bearing surfaces involves the employment of flywheel discs of special construction, as well as further special construction, but, as will be seen below, employs what is apparently an existing means on which to base the improvement, i. e., the flywheel discs. 2 is one of the discs in section, and 3 its rim. A hub or boss 4 is located at a suitable distance from the center of the disc 2. In this hub fits the crank-pin 6 of the connecting rod 7, the boss or hub having a tapered socket 5 counterbored to permit this being done. A bushing 14 of bronze is fitted over pin 6 and the nut 15 holds the latter in place.

The hub 8 at the center of the disc has a projection equal in width to the width of the rim 3 of the disc. It is bored and countersunk (at 11) to fit a spindle 9 integral with a shaft 10, on the outer end 13 of which is carried the engine pulley. Over parts 8 and 10 is fitted a tubular collar 12. The surface of 12 and 14 give the increase of bearing surface, which the specifications say "cannot be obtained except by this method."

The brief is as follows:

"1. A flywheel, said wheel being constructed of two disks each of which has an annular rib at its periphery, an outwardly extending boss located on each of said disks, a rod mounted in each of said hubs whose external diameters are coincident with the external



Pulley Patent.

diameters of the hubs, each rod having means for securing and holding it in position, and a steel sleeve fitted over each rod and the exterior surface of the adjacent hub, for the purpose set forth, substantially as described.

"2. A flywheel, said wheel being constructed of two disks, each of which has an annular rib at its periphery, an outwardly extending boss located on each of said disks, there being a taper socket in said bosses, an outwardly extending hub at the center of each of said disks, a rod mounted in each of said hubs, whose external diameters are coincident with the external diameters of the hubs, each rod having means for securing and holding it in position, and a steel sleeve fitted over each rod and the exterior surface of the adjacent hub, there being threads cut upon the ends of the said rods, for the purpose set forth, substantially as described.

"3. A flywheel, said wheel being constructed of two disks, each of which has an annular rib at its periphery, an outwardly extending boss located on each side of said disks, there being a taper socket in said bosses, an outwardly extending hub at the center of each of said disks, a rod mounted in each of said hubs whose external diameters are coincident with the external diameters of the hubs, each rod having means for securing and holding it in position, a steel sleeve fitted over each rod and the exterior surface of the adjacent hub, there being threads cut upon the ends of said rods, and a connecting rod mounted in said taper socket, for the purpose set forth, substantially as described.

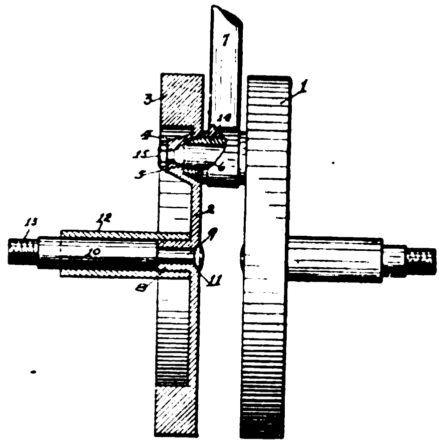
"4. A flywheel, said wheel being constructed of two disks each of which has an annular rib at its periphery, an outwardly extending boss located on each of said disks, there being a taper socket in said bosses, a rod mounted in each of said hubs whose external diameters are coincident with the external diameters of the hubs, the inner end of each rod being riveted, securing the rod rigidly to the disk, for the purpose set forth, substantially as described."

The third patent, No. 946,758, granted January 18, 1910, to Edwin W. Keller and assigned as before, relates to a frame for motorcycles in which is incorporated the familiar loop tube forming the seat post, lower tube and an exhaust pipe, and a tank construction which forms the upper member of the frame. The tank upper member is divided into compartments for oil and fuel and the front and rear heads formed integral with the connecting devices to the steering head and seat post respectively. The filling apertures and fuel outlet are integral with the tank according to the specifications and drawing. The connection of the rear forks to the loop member is through a device which incorporates a crank hanger and a seat "for any desired purpose."

In the drawing, 1 is the gasoline tank, 2 the seat post tube, 3 the steering head, 4 the lower tube, 5 the rear forks and 6 the rear stays. The crank hanger is shown at 7 and the "seat" at *7a*. The exhaust is taken in at 8, passes through the loop and makes its exit at 9. Gasoline and oil filler caps are respectively 10 and 16; 11 is a cock in the fuel outlet 13. The partition in the tank is 15. The chief point of the invention is the tank forming the upper member of the frame and thus doing away with the separate tank ordinarily used.

The brief is:

"1. In a motorcycle frame, the combination of a substantially U-shaped tubular frame member of integral construction, one arm constituting a forward bar and the other a seat post bar, an enlarged tubular member constituting the upper bar of the frame and projecting between the forward and seat post bars, means at the respective ends of the enlarged frame for connecting the latter directly to the upper ends of the forward and seat post bars, the enlarged tubular member constituting a receptacle adapted to contain gasolene or the like and having an inlet opening in its upper surface and an outlet tip in its lower surface adapted to supply a motor, a pipe communicating with the forward tubular bar and connected thereto for receiving the exhaust of the motor, and an auxiliary pipe communicating with the seat post bar for permitting the escape of the exhaust.



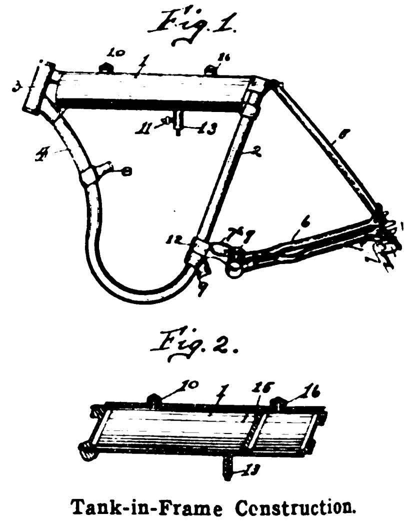
Fly-Wheel Design.

"2. In a motorcycle frame, the combination of a substantially U-shaped tubular frame member of integral construction, one arm constituting a forward bar and the other a seat post bar, an enlarged tubular member constituting the upper bar of the frame and projecting between the forward and seat post bars, means at the respective ends of the enlarged frame for connecting the latter directly to the upper ends of the forward and seat post bars, the enlarged tubular member forming a receptacle adapted to contain fuel for a motor and having an inlet opening in its upper surface and an outlet opening in its lower surface adapted to supply the motor, an inlet connection on the forward tubular bar constructed and arranged to receive the exhaust of the motor, an outlet connection on the seat post bar adjacent to the lower end of the latter and exposed downwardly for permitting the escape of the exhaust, rear stays projecting downwardly and rearwardly from the upper end of the seat post bars, rear forks having means at their rear ends for connection with the said stays, the forks terminating in a crank hanger at their forward ends, a member extending between the crank hanger and rear post seat and connecting with the latter at a point above the exhaust outlet, and the said member having a seat on the upper surface thereof."

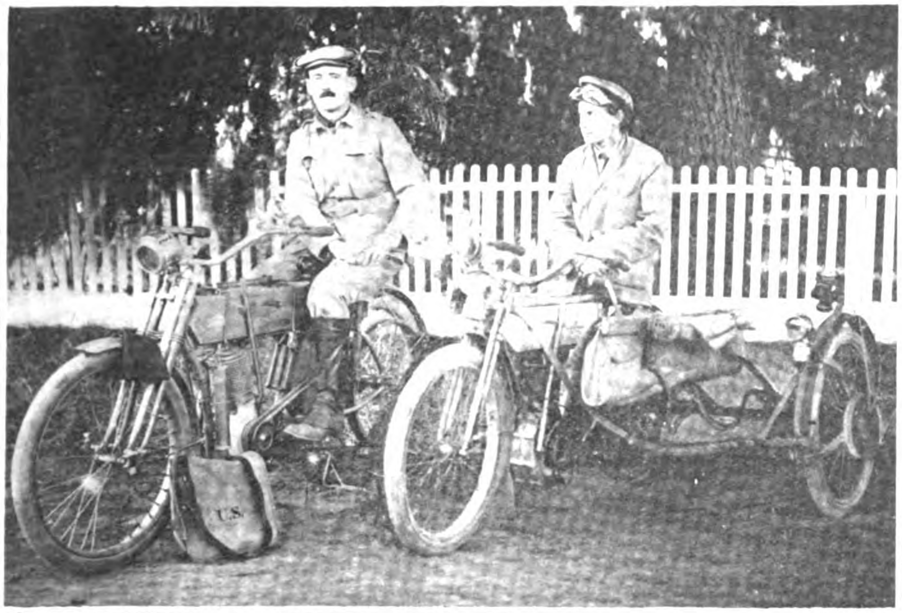
The fourth patent, number 895,576, issued to Archibald J. McCullom, August 11, 1908, and assigned to the Armac Motor Company, relates to the construction of an automatic inlet valve. The valve stem is reduced in diameter at its upper end and a washer fits over this part. The dome is made with a well in which is formed the valve guide, and the spring works well between the well and the guide. The dome has a horizontal portion for attaching direct to the carbureter, and screws into the motor. A lock-nut keeps the dome in position.

MEASURE GOES TO FEDERAL.

THE appointment of Charles Measure as manager of the carriage and motor truck tire department of the Federal Rubber Manufacturing Company, of Milwaukee, will be of interest to the vehicle rubber trade. Mr. Measure was connected with Morgan & Wright for eleven years, first as salesman in New England, and then as manager of their auto tire department from 1903 to 1906, leaving that position to accept the management of the Goodyear branch in New York City. After serving for five years in the latter capacity, he was transferred to Akron as manager of the solid tire department of that company, resigning on March 1st to join the Federal Company. It is expected that under the aggressive management of Mr. Measure, Federal carriage and motor truck tires will rapidly take rank as one of the most satisfactory and popular brands on the market.



Tank-in-Frame Construction.



RIDING UNDER DIFFICULTIES

Loss of a Leg Does Not Deter California Enthusiast from Making Long Jaunts in the Saddle.

UNUSUAL interest attaches to the accompanying pictures, showing two motorcyclists of Alameda, Cal., because of the remarkable fine photographic effects obtained by H. Conboy, the rider on the left, who operated his camera through an ordinary bulb and a long rubber hose device. The hose may be distinguished in the foreground of each picture. The young man on the right has had his left leg amputated at the hip and is compelled to use the out-rigger attachment, or sidecar frame, to avoid balancing troubles. The rider's right leg is carried in splints to strengthen it at the knee, and as the member remains rigid at all times it has been necessary to lengthen the pedal crank to afford the required reach. The pedal is extended about four inches beyond its normal position and serves as a brace, this being the only means the rider has for maintaining his place in the saddle.

The long canvas bag seen on the sidecar attachment carries the rider's crutches, and in an emergency may be used for tools and other fairly heavy articles. On the outside of the third wheel will be noted a 50-pound disc of lead which is intended to hold the side attachment to the road. The lever near the saddle on the left side of the machine is used to throw up the stand when the rider is ready to get under way. These enthusiasts have made some long trips over the country in the vicinity of San Jose and are among the most consistent riders of their district.

OPENING RUN TO FINDLAY.

MEMBERS of the Toledo (Ohio) M. C. held their first club run of the season on April 14, starting from their quarters in the Collonade building at 10 a. m. They made a trip to Findlay and return and found the going fairly good. On Friday night, April 19, the club held its regular meeting and a buffet lunch was served after the business session.

COSHOCTON SPEED EVENTS.

MOTORCYCLISTS of Coshocton, Ohio, are planning to hold speed events on the brick road to Canal Lewisville, over the Seven-Mile Drive and the nine-mile loop around the Keene Hill, and on the fair grounds track. It is the intention to have a motorcycle event of some kind every Sunday during the summer.

TORONTO SETS THE PACE

Canadian Metropolis Is Enjoying Side-Car Boom and Over One Hundred "Chairs" Have Already Been Sold.

TORONTO, Canada, has become the foremost side-car city on this continent, upwards of one hundred of the passenger carriers having been sold in the Dominion metropolis since the season opened. The three-wheeled motorcycle outfits are to be seen shooting in and out in all directions, so that they have already begun to be a common sight upon the city's streets.

Early shipments of side-cars from the Old Country and New England were disposed of in no time by the local agencies, and a number of riders have been forced to wait for second deliveries. The British manufacturers have been greatly delayed on account of the coal strike, but consignments are under way now. Besides supplying the local demand, the Toronto dealers have been besieged with orders from distant points, M. E. Amoss, the local Flanders' representative, having sent three cars as far away as Edmonton, Alberta, a distance of 2,000 miles. The Humphrey Bicycle and Motor Company has also made a delivery of six cars to Buffalo.

The leading dealers report side-car sales for this spring, as follows: M. E. Amos, Flanders agent, has disposed of fourteen "baskets," five of which were sold wholesale. He has ordered four more. Percy McBride, Excelsior dealer, has sold nine. Six of these have been the Majestic line, and the remainder, the product of the Mills-Fulford Company, England. Twelve more carriers are on the way. Walter Andrews, Pierce and Indian, has found purchasers for four cars and has six more coming. One of these cars went to a Dr. Ferguson, a prominent local practitioner, who invested in a four-cylinder mount at the same time.

Herb. Kipp, Indian distributor, has sold fourteen side-cars this year and has thirty more on order at the British factories. Herb Greenwood, the Triumph agent, has disposed of a dozen baskets and has as many more coming. Steve License, Harley-Davidson, has found four purchasers while the T. Eaton Company, Reading-Standard agents, have marketed a number. The Humphrey Bicycle and Motor Company, Flying Merkel branch, has sold twenty-four "chairs" as follows: Ten to outside purchasers, six to the local retail trade and eight to the local wholesale trade.

CLOUD COUNTY OUTINGS.

AT the last meeting of the Cloud County M. C., of Concordia, Kan., the members outlined plans for a social run to Waconda Springs to be held on Memorial Day. The riders will leave Concordia at 9 a. m. Those who feel so inclined will be allowed to race back from Waconda Springs and several prizes will be offered for winners in the different classes. The distance is about 52 miles. On July 4 the club will hold a race meet, probably at Concordia, and on Labor Day a run will be made to Superior, Neb.

This tour is the successor of the 2,000-mile Coffman-Musselman tour. One of the M. M. A. cups intended for the Coffman-Musselman tour will be offered instead for the five-mile national amateur championship. It will be a challenge trophy to be competed for each year until won three times by the same rider, when it becomes his property. It will be of solid silver and have a value of $250.

THE 1912 F·A·M

GRANTING that the F. A. M. meet this year will be held in either Cleveland or Columbus, tentative plans were made at a joint F. A. M.-M. M. A. committee meeting in the Hotel Statler in Buffalo last Wednesday for what will be known as the 1912 F. A. M. National Tour to the convention city. The tour will be divided into four sections—the North-Eastern, North-Western, South-Eastern and South-Western, respectively—and the points for the mobilization of riders will be Albany, Chicago, Baltimore and Indianapolis. Each section will be in charge of a tour-master, who will be assisted by lieutenants. There will be no entrance fee, all F. A. M. members being eligible. The tour will be a pleasure proposition pure and simple, and the rules, of which there will be only such as are absolutely necessary, are to contain no hard-and-fast restrictions. Racing, and the use of the cut-out in settled communities will be prohibited. Entrants will be expected simply to check out each morning, and to check in only at the finishing point. A handsome and distinctive gold medal will be awarded to each survivor. There will be no trade teams, but trade riders may enter as individuals.

The four sections of the tour will be so arranged that each section will reach a point about 100 miles away from the convention town Tuesday evening. Over-night stops will be made at these places, and short runs Wednesday morning will bring all four sections to the end of the tour shortly after noon Wednesday. This arrangement will do away with the different riders straggling in singly and in pairs at all hours of the night. Instead, it is planned to make an impressing demonstration by having several hundred tourists ride through the convention city in the middle of the day in view of tens of thousands of spectators.

Owing to the geographical location of Cleveland and Columbus, the North-Eastern section of the tour will be the longest, but at the same time over the best roads. From Al-

NATIONAL TOUR

bany the North-Eastern tour-master will start his following on a Sunday morning. Tourists living in lower New York State, upper New Jersey and Pennsylvania, Massachusetts, Connecticut and the other New England States will leave their respective towns in time to reach Albany Saturday evening. They will be privileged to travel to Albany either over the road or by rail or boat, and they will first check out from Albany Sunday morning. From Albany they will motor across the State to Buffalo, whence they will travel by boat to Cleveland, and thus on to Columbus, should the latter city be chosen by the F. A. M. directors. In the event of Cleveland getting the meet, the Eastern section will reach that city early Wednesday morning and, in all probability, ride out fifty miles to meet one of the Western sections as they approach the city.

The starting point for the South-Eastern section will be Baltimore, at which point it is planned to gather tourists from Washington and other Southern cities, and as far north as Philadelphia. This section will ride Westward by way of Hagerstown and Uniontown and strike the national pike south of Pittsburgh.

The North-Western section, starting from Chicago, will include riders living in Wisconsin, northern Illinois, Iowa, etc., and traversing roads which practically parallel the New York Central Railroad, pick up tourists from northern Indiana and Ohio, also from Detroit and other southern Michigan towns.

At Indianapolis the South-Western tour-master will gather riders from points in middle and southern Indiana, upper Kentucky and as far west as St. Louis. This section will be augmented en route by riders living in southern Ohio.

Further details of the National Tour will be announced from time to time by the joint committee in charge, namely, President Hamilton and Director Sauer, for the F. A. M., and President Coffman and Messrs. Davidson and Merkel, for the Motorcycle Manufacturers' Association.

This tour is the successor to the Coffman-Musselman 2,000-mile tour, which has been abandoned by the M. M. A. The $250 silver cup which was to have been awarded to the winner of the 2,000-mile tour will be made a challenge trophy for the F. A. M. five-mile championship.

COLUMBUS THROTTLE IS OPEN

Riders in Buckeye Capital Are Working at Top Speed on Plans to Land the Next F. A. M. Convention.

AT the last meeting of the Columbus (Ohio) Motorcycle Club the campaign which is being waged to land the next F. A. M. meet was discussed at length and additional plans were laid for interesting the Federation officials in the inducements offered by the motorcyclists of the city. The fact that Cleveland is now a contender for the convention has only served to spur the Columbus boys on to new efforts, and they assert that their competitors will have to "go some" to beat them to the goal. The committeemen recently appointed by the Columbus club are working at top speed, and the city authorities as well as the commercial organizations of Columbus are laboring with them.

"The Buckeye capital not only has many miles of fine streets," writes a Columbus booster, "but first-class roads lead from the city in all directions. Our motorcycle dealers have spacious, up-to-the-minute establishments, our hotel accommodations are excellent and when it comes to interest it may be said that the citizens of Columbus make up one big squad of motorcycle fans. They are friends of the single-tracker and do not hesitate to show it.

"The competition committee of the F. A. M. may rest assured that if the big assembly is brought to Columbus the championship races each day will be witnessed by as enthusiastic a throng of fans as ever gathered at a track. We have a fine course and riders will not be compelled to plough through ruts and sand as they did in some of the races at the last national meet on the Fort Erie track. We feel that we can stand with any city in the country when it comes to offering inducements for the convention, and if we do not land it it will not be because we have failed to make the most of our opportunities."

CALIFORNIA MEETS

Official Returns from Stockton and Newman Indicate That Fans Had Interesting Programs.

REFEREE CHARLES FULLER GATES, F. A. M. competition representative on the Pacific coast, has just received official returns from the race meets held at Stockton, Cal., on March 23, and at Newman on March 31. The Stockton summaries follow:

Ten miles, amateurs, 61 cubic-inch class—E. A. Holdridge, Indian, first; C. T. Simpson, Indian, second; S. S. Sisson, Merkel 6, third; time, 11:28.

Five miles, amateurs, single cylinder class—W. L. Saxby, of Modesto, Indian, first; L. E. Kern, of Stockton, Indian, second; E. A. Holdridge, Indian, third; time, 5:59.

Ten miles, open handicap—E. A. Holdridge, Indian, first; C. T. Simpson, Indian, second; W. L. Saxby, Indian, third; time, 5:53.

March 24.—Five miles, single cylinder machines—G. Schuman, Indian, first; W. L. Saxby, Indian, second; L. E. Kern, Indian, third; time, 5:53.

Ten miles for twins—E. A. Holdridge, Indian, first; G. Schuman, Indian, second; S. S. Sisson, Merkel, third; time, 11:57.

Ten miles, open handicap—H. Smallfield, Indian, first; R. Orr, Indian, second; G. Schuman, Indian, third; time, 11:46.

Following are the returns from the Newman races held on March 31:

Five miles, amateurs, single cylinder machines—R. Peck, Indian, first; F. Fout, Indian, second; E. C. Lavenson, Harley-Davidson, third; time, 7:57.

Five miles, amateurs, twin machines—Howard Gordon, Indian, first; A. Tanback, Indian, second; time, 7:12⅖.

Ten miles, amateurs, single cylinder machines—C. Edwards, Yale, first; S. Saxby, Indian, second; O. Johnson, Excelsior, third; time, 15:15.

Five miles, amateurs, twin machines.

5 miles against time—E. A. Holdridge, Indian; time, 7:05⅖.

Australian pursuit race for four miles—E. A. Holdridge, Indian, first; O. Johnson, Excelsior, second; C. Edwards, Yale, third; time, 4:41⅖.

TWO new motorcycle policemen have been added to the department in Richmond, Va., and others are promised.

HASHA CLIPS MORE RECORDS

In Sensational Dash on Playa Del Rey Saucer Little Texan Lowers All Marks up to Ten Miles.

RIDING against time on the Playa del Rey saucer in California on Sunday, April 7, Eddie Hasha clipped records right and left and gave one of the most sensational performances of his career. In his first mile time trial he covered the distance in 38 seconds flat; his second trial over the mile route was made in 37⅘, and the third in 38⅖. Hasha then rode two miles in the remarkably fast time of 1:18⅖ and continued to lower the marks at each mile of his 10-mile whirl; three miles, 1:59; four miles, 2:39⅗; five miles, 3:20⅘; six miles, 4:01⅗; seven miles, 4:42⅗; eight miles, 5:24; nine miles, 6:05; ten miles, 6:45⅘. When Hasha's Indian was measured it showed a piston displacement of 60.93, giving him a fair margin inside the 61 cubic-inch limit placed by the F. A. M.

CONCOURSE DINNER.

EIGHTY members and guests of the Concourse M. C., of New York City, including wives, sisters and "best girls" of the riders, were present at the fourth annual dinner of the club which was held at the Hotel Gerard on April 11, and a highly interesting program was given. J. J. McNally acted as toastmaster and nearly every one present was called upon to "say something." An unusually fine menu capped the success of the affair.

THE West Palm Beach (Fla.) police department is now equipped with a big twin Indian which is intended primarily for use by the chief.

TWENTY-FIVE motorcyclists recently organized the Bluegrass Motorcycle Club at Louisville, Ky.

M. E. Beck and Mrs. Beck, of Los Angeles, Tandem-Riding on Harley-Davidson Twin.

SECONDS CLEVELAND BID

Chamber of Commerce in the Sixth City Supports Motorcyclists in Letter to F. A. M. Officials.

BY way of furthering the campaign of the Cleveland Motorcycle Club for the next F. A. M. convention the Cleveland Chamber of Commerce has forwarded copies of a circular letter to President Hamilton and the Federation directors, setting forth the city's advantages as a convention center and seconding the club in its bid for the big meeting. The letter reads as follows:

"Representing, through the Cleveland Chamber of Commerce, the business and civic interests of our city, we desire to second most cordially the invitation of the Cleveland Motorcycle Club, and to express the hope that Cleveland may have the honor and pleasure of entertaining the members of the Federation of American Motorcyclists in Cleveland in July, 1912.

"Fifty per cent. of the population of the United States and Canada lies within a radius of five hundred miles of Cleveland, and the city is but a night's journey from the Atlantic coast and the Mississippi. Seven great railroad systems, with numerous branches, enter Cleveland, and steamship lines connect the 'Sixth City' with every port on the Great Lakes. It is not necessary to elaborate upon Cleveland's hotel accommodations. Delegates can be assured of first-class accommodations at reasonable rates. Cleveland's hotels are well equipped, and are within easy walking distance of the five large auditoriums used for convention purposes. It is our opinion that one or more of these auditoriums will meet all the requirements.

"Cleveland offers unsurpassed opportunities for recreation. The public park system of the city includes 1,800 acres of beautiful parks and 35 miles of boulevards, as well as 50 acres of inland lakes and ponds. Opera, comedy and vaudeville are offered at twelve playhouses, including the Hippodrome, second only in size to that mammoth playhouse in New York City bearing the same name. We believe that Cleveland's broad streets and splendid roadways, its easy accessibility from the surrounding territory through the splendid network of brick pavements which converge in Cleveland from every point in Cuyahoga County and elsewhere will particularly appeal to the F. A. M. delegates.

"We believe that Cleveland offers such unusual advantages in municipal characteristics and central location as to insure the most successful convention, from the point of attendance and entertainment, that the Federation has ever held. Cleveland is jealous of its reputation for hospitality, and we believe that the convention delegates would find both pleasure and advantage in a visit to our 'Sixth City' next July."

SUNDAY NIGHT RACING

Will Be a Feature of Schedule for Indianapolis Saucer for Which Prince Has Completed Plans.

INDIANAPOLIS is to have Sunday night racing. Actual construction on the new board track is scheduled to begin in a few days on a site in Broad Ripple Park. The date of the opening of the track has been set for May 25. There will be racing Saturday afternoon and night on that date and on Sunday night. Jack Prince, who has some of the best riders under contract to ride for him, has assured the Hoosiers that most of the speedy boys who participate in the opening meet at Chicago on May 18, will be in line for the opening of the Indianapolis meet on the 25th. The second Indianapolis meet is scheduled for May 29-30, the night before and the night of the big 500-mile automobile race at the Motor Speedway, when the city will be thronged with motor-mad visitors. At the second meet, if not at the first, Prince predicts that motorcycle records will be broken.

The track will be a half-miler, 25 feet wide, with a ten-foot running board at the bottom. There will be seating accommodations for 20,000 people. Underneath the track will be a concrete subway leading to the inside parking space. There will be 150 arc lights around the big saucer, and the promoters expect to draw large crowds with their night programs.

TAKEN IN CLEVELAND

To the left—One of the city's many fine boulevards

To the right—A group of motor enthusiasts crossing the Lake

FAVORED BY CLIMATE.

IN connection with the fact that the Pacific Coast tracks hold practically all the official records, Referee C. F. Gates says: "The track known as the Stadium, like the mile pie-pan at Playa del Rey, is very fast, but our climate has much to do with making speed records, as has been noticed for years in all classes of sport. Bicycle records followed those made by horses, and then the automobile began running faster here than anywhere else. Next came the motorcycle records and a few days ago Hamilton made almost unbelievable speed between Sacramento and Stockton in an aeroplane."

THREE MACHINES ADDED.

THE strength of the Toronto police department motorcycle squad has been increased from three to six men, the machines used being the English Triumph of 3½ horsepower.

FOUR MEETS FOR CANTON

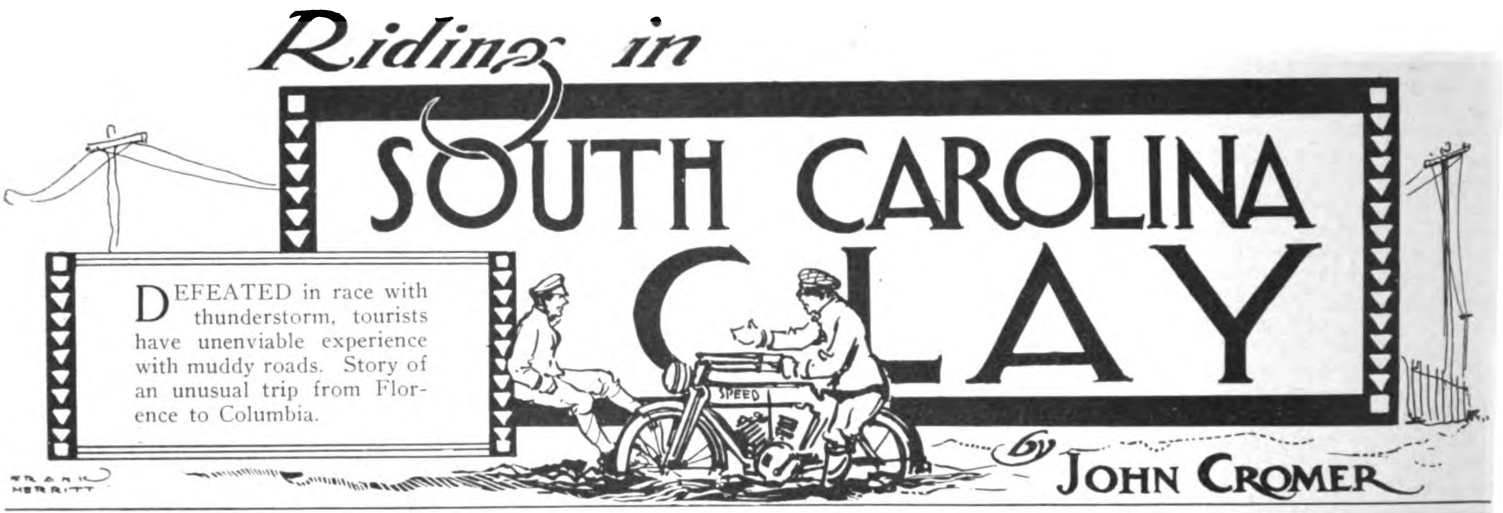
Motorcyclists in Ohio City Will Give Fine Programs on Memorial Day, Labor Day and Two Other Dates.

OFFICIALS of the Canton (Ohio) Motorcycle Club are taking active steps to secure the Stark County fair grounds on four dates this summer to hold race meetings. The matter will be submitted to the Agricultural Society, the governing organization. During the 1911 season the club's two race meets were features of the sporting world hereabouts, the programs drawing enormous crowds and the riders from Canton, Akron, Cleveland, Alliance and Massilon making splendid showings.

Officials of the Canton Motorcycle Club will attempt to secure the track for Memorial Day, Labor Day, and two other dates that will not conflict with the meets in Cleveland, the club of that city being the only one that can furnish strong opposition. Canton's organization has nearly 70 riders. Last Sunday many of the enthusiasts took spins around the city, but no organized tour was made. The club meets the first and third Tuesday of every month. The officers are Wm. Roushong, president; Enos Snyder, vice-president; Harry George, secretary, and Henry Taubensee, treasurer.

WRITE TO GRESHAM.

CHAIRMAN THORNLEY, of the F. A. M. competition committee, has furnished W. D. Gresham, of Birmingham, Ala., who is state referee, with the documents of his office and in the future all applications for race sanctions in Alabama should be sent to him. His address is P. O. Box 99, Birmingham, Ala. Mr. Gresham would like to hear from clubs and riders throughout the State, as he wishes to appoint referees for the different cities where they expect to have races.



Riding in SOUTH CAROLINA CLAY

DEFEATED in race with thunderstorm, tourists have unenviable experience with muddy roads. Story of an unusual trip from Florence to Columbia.

by JOHN CROMER

WHEN the officials of the State Association of R. F. D. carriers in South Carolina met in Florence on July 4, 1911, to outline plans for the annual convention, T. E. Wicker, then president of the body, suggested that I make the trip to Florence with him by motorcycle and, having just purchased a new 4 h. Wagner I agreed to go. For some time past I have been an ardent lover of the sport, and besides I was anxious for an opportunity to demonstrate the sturdiness and reliability of my mount. Accordingly we set out on July 2, early in the afternoon, with the intention of making the run from Newberry, our home town, to Columbia, before nightfall. We carried only a few spare parts and repair articles, having forwarded our grips by rail, and were thus enabled to set out a good clip, unencumbered by luggage.

The summer had been unusually dry and about the last thing we expected was rain, despite the fact that a few fleecy clouds were visible as we started our journey. The roads were in fine condition and we looked forward to an excellent trip. However, after covering only four miles the inlet valve on Wicker's machine broke and we had to stop for repairs. While we were thus engaged a very dark cloud came up behind us and thunder began to roll.

Racing the Storm.

It was evident that we were in for a lively chase if our machines were to outrun the storm, and we lost no time in getting under way. We felt that if we could get in front of the cloud we could beat the storm to Columbia, but these hopes were shattered when raindrops began to patter in the road after we had traveled about a mile. We had lost the race and must make the best of the situation. Our troubles arrived suddenly and in bunches. Soon water flooded the roads and poured out from the fields, and only those who have traversed the red clay highways of South Carolina after a rain can realize what we had to put up with.

We reasoned, however, that the storm might be only local, and that we probably would pass through its belt in a short time. In this we were disappointed. We were able to ride only about one quarter of the time, making most of our headway by pushing, and in a short time we were on the verge of collapse. We took many spills in the mud and at times had to pry the clay from our wheels so that they could force their way through the forks. The situation was a desperate one and no mistake.

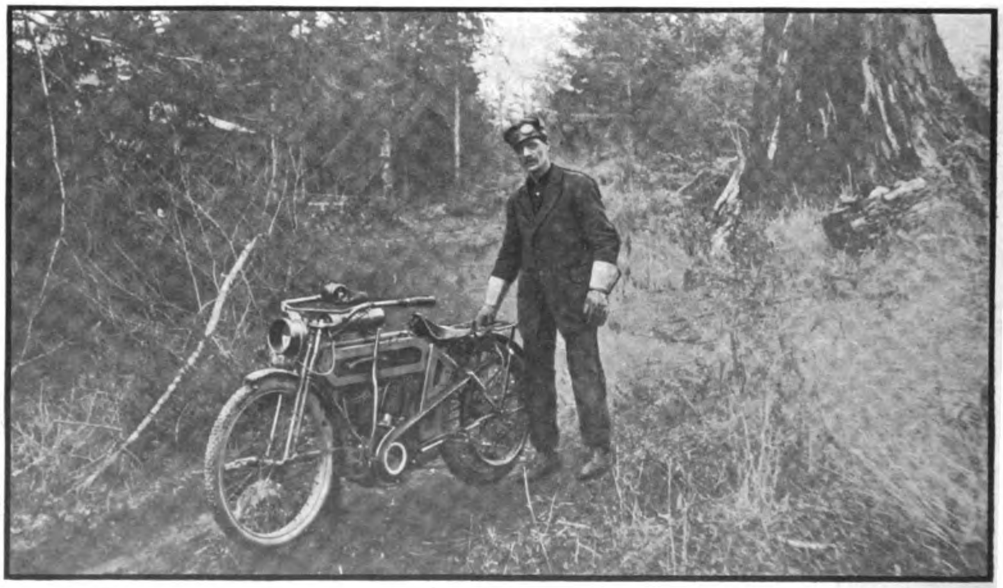
Mired on Isolated Road.

After we had proceeded in this fashion for several miles we were in despair and thought of turning back. The roads appeared to be growing worse, if such a thing could be possible, and by using a telephone in a small village we learned that the storm had kept its course directly in front of us for eighteen miles. Still there was just about as much mud behind us as in front of us, and we pressed on. We had given up all hope of reaching Columbia that aftérnoon, but after progressing another mile or two we found a stretch of fairly good gravel road and decided that we could make Lexington before darkness came down upon us, and made traveling difficult if not dangerous.

This was another false hope, for we soon ran into the clay roads again, and what's more we were in a strange district where houses were mighty scarce. We had traveled several miles without seeing a living soul. After consulting our cyclometers we decided that we were about eleven miles from Lexington—provided we were still on the right road—and to cover eleven miles, or even half the distance, before nightfall was out of the question. Darkness was now fast approaching and we were without lamps. In fact, we did not even have a match.

Friends by the Wayside.

As we looked out over the bleak, rain-soaked country and thought of spending the night in the open, cold shivers began to creep over us. Katydids and whip-poor-wills seemed to be the only living things in the neighborhood beside ourselves. We did not have a crumb of food nor a dry garment, not even a drop of "snake-bite medicine," and to add to the general enjoyment of the situation hordes of mosquitoes settled around us and made preparations for a merry evening. At this critical juncture I heard a faint squawk of a domestic fowl and jumped at the conclusion that there must be a house not far away.



ALL the way from Oregon comes the accompanying photograph and a letter from Charles H. B. Smith, who writes as follows:

"We were just on the border of the forest and the lane shown in the picture is in reality nothing but an old logging road, so you may know it was not intended for motorcycle riding. About half a mile from this point is a bad grade, and I used to pilot my Excelsior machine over it with comparative ease, while five or six other machines from the town, two miles away, failed to make the climb."

Scraping our wheels free of mud once more we pushed on to the summit of a hill not far distant and there found a house. We explained our plight and begged permission to sleep in the barn, not feeling that we were in condition to enter anyone's home. However, these hospitable people took us into the house, gave us their best room, plenty to eat and even dry clothing. Seldom is such kindness met with and rarely has there been greater need of it. We could not find words to express our gratitude.

On the Trail Again.

On turning out in the morning we found that the roads had dried considerably and the going was fairly good. We straightened our pedals and cranks, gave our motors a hasty inspection and started again. In a short time we reached Lexington and then passed on to Columbia, the roads improving as we continued on our way. From Columbia we rode to Camden, arriving there at 1 p. m., and after having dinner we set out on the last leg of the journey.

We were now enjoying the trip to the utmost and our harrowing experience of the previous day was almost forgotten. After passing through Bishopville we found a long stretch of sand-clay roadway and let our engines out to the limit. We romped through Darlington at a fast clip and did not need to stop for inquiries concerning the roads. This district is thickly settled and most prosperous, as was indicated by the fertile farm lands and improvements along the way.

In Florence at Last.

When we arrived in Florence the sun was just passing over the western horizon and we were met by friends who gave us a cordial greeting. On the following day a number of motorcycles from the surrounding country pulled into Florence and we found plenty of riders who were interested in the story of our trip. The return journey was made without the slightest trouble. I was not called upon to make a single adjustment or repair, and Wicker had equally good luck.

BREAKING NEW TRAILS.

THE motorcycle fever has even invaded the wilder portions of the Province of Ontario, Canada. Copper Cliff and Port Arthur, located in "New Ontario," both possess a number of riders, although in each case the navigable roads only extend a comparatively short distance from the limits of the corporation.

IDEAL JAUNTS IN WEST VIRGINIA

Smooth Roads That Wind Over the Mountains in Picturesque Regions Afford a Motorcyclist's Paradise--Story of Pleasant Trip.

By THOMAS J. HAYWOOD.

ONE would naturally think that here among the West Virginia hills good roads would be difficult to find, but such is not the case, as I can testify. I venture to assert that some parts of these roads are unsurpassed by any roads in the world, not even excepting those of Great Britain. I know whereof I speak, for I have had the pleasure of riding over both. 'Tis true, I have seen roads that are straighter and wider, and roads that are more level, but none that are smoother. A motorcycle ride over a straight and level road becomes monotonous, but one over a winding, ever-changing, mountain road, through the beautiful woods is the acme of pleasure. I am going to describe such a ride that my friend, C. L. Davis, and myself have often enjoyed.

Leaving Piedmont, a little town that nestles, as its name indicates, at the foot of the mountain, at 5 p. m. we wind in and out over a nice stretch of road, some five miles in length, between Piedmont and Keyser, along which are some rather dangerous turns, and one must be on his guard continually for fear of running against something, an automobile, for instance. Arriving at Keyser we turn due south and start up Knobley mountain, three miles to the summit. A little twist of the wrist and lo! our trusty steed responds to the touch and we are away as if borne on the wings of the wind. We go up, and up, now winding around some point, now deep in the recesses of the grand old woods, then out into the bright sunshine, and as we ride higher and higher our spirits rise proportionately. All business worries, cares and anxieties fade away, and we now experience that exhilaration that only the motorcyclist knows.

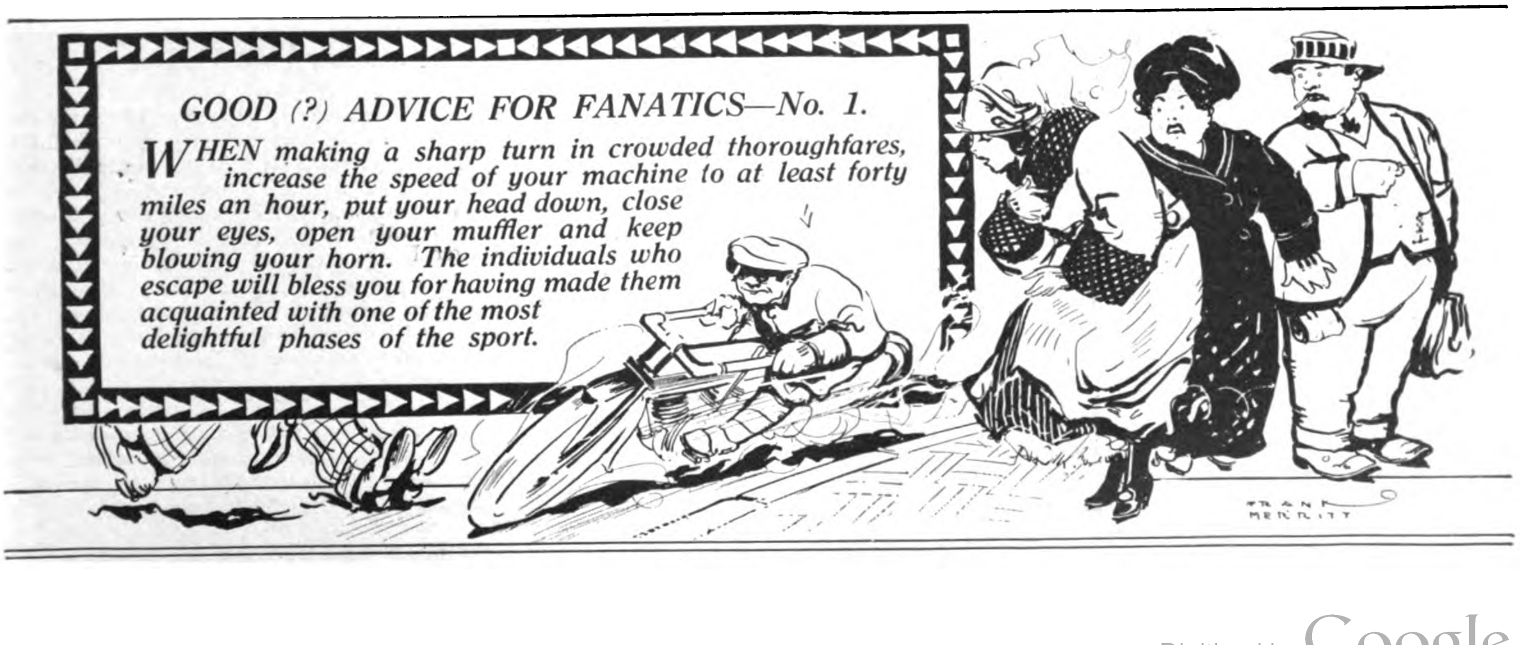
Arriving at the summit of the mountain we dismount to enjoy the magnificent view which spreads before us. And what a view! We stand enraptured—speechless. We look away down into the valley and note the town of Keyser, and can see the beautiful Potomac river winding its way onward to the ocean like a silver thread. Raising our eyes and looking westward we behold a scene that baffles description. Range after range of mountains unfold themselves before us in a panoramic view like the billows of a mighty ocean until lost in the distance. This scene, viewed in autumn, is heightened indescribably by the gorgeous tints of the leaves, and when the sun is sinking behind these western hills it is a sight never to be forgotten. It is with reluctance that we turn to go. We now mount our steeds again and cross the plateau, then down the other side of the mountain. Here again we experience that thrill of gliding through the air that is rivaled only by the "bird" man.

Coming into the farming district, we stop at some farm house to get a drink of water or milk; buttermilk if we wish. We have a chat with the farmer, who at one time looked askance at the motorist, but who now, through the exercise of his proverbial good sense, treats him more leniently. He realizes and recognizes that the man with the motorcycle has, if he keeps himself within reason, as much right to the road as has the man with the hoe. We now spin merrily on for many miles over almost perfect roads. Arriving at a small place called Ree's Mill, we replenish our tanks with gasoline and then, turning our faces homeward, take another route back.

The sun having gone down below the western hills the sweet silence of the early evening is upon us and all nature seems sinking in the arms of the tired day. The solitude becomes almost sublime. A little later night settles down upon us. We stop to trim and light our lamps. Once more we are in the saddle, and now for home, where we arrive, surely the better, physically, mentally and morally and ready to do justice to the evening meal. My trips are taken on a Pierce.

POSTMASTER SHAFFER, of Youngstown, Ohio, has appointed two motorcycle letter carriers to take the place of five bicycle boys in delivering special delivery letters in the Ohio city.

A NUMBER of road races are being planned by the Albany (N. Y.) M. C., which is one of the most active members of the F. A. M.



GOOD (?) ADVICE FOR FANATICS—No. 1.

WHEN making a sharp turn in crowded thoroughfares, increase the speed of your machine to at least forty miles an hour, put your head down, close your eyes, open your muffler and keep blowing your horn. The individuals who escape will bless you for having made them acquainted with one of the most delightful phases of the sport.

MY CAREER AS A RACER

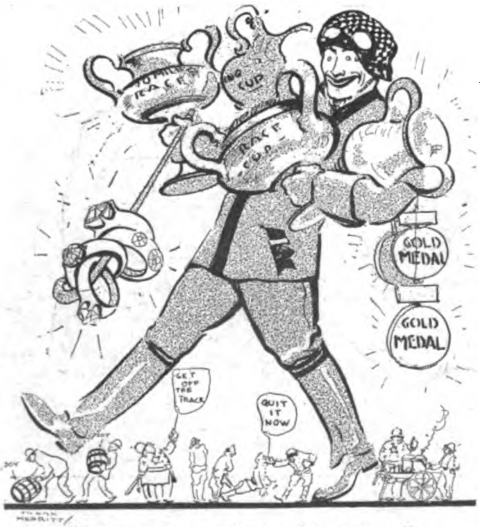
By FRANK HART

WHEN all was in readiness for the amateur championship event in the F. A. M. meet on the Fort Erie track I had No. 28 filled with gasoline and oil until the tanks overflowed, saw that my tires were well inflated and then gave the entire machine a final inspection. I was well prepared for the long grind. There were about twelve entries, among them several singles whose riders were taking a chance in the belief that a big twin could not stand up throughout the hour race. What a surprise they were given!

At the crack of the gun I jumped to the front and was not passed until the fortieth mile, when I stopped for oil. This cost me 32 seconds and then I was on my way again. In the forty-second mile Bill Teubner was forced to quit with a blow-out in one of his tires, and a short time later I narrowly escaped being retired under hair-raising conditions. I was close behind Boyd Anderson at about the fiftieth mile when he went down on a turn. He scrambled to his feet as I came upon him and my left handlebar side-wiped his as I flew past. It was the closest kind of a shave.

First Under the Flag.

Harvey Barnard, who was just behind me, struck Anderson's machine and was hurled twenty feet through the air, but escaped serious injury. Knowing that there had been a scrimmage behind me I put on power and cut out a terrific pace to lose the others. I think the watches showed that I covered the next five miles in 4:26. Then I slowed down to save my tires, as they were the only things that gave me any cause for worry now. From the fifty-fifth mile to the sixtieth, which I covered in the hour, I rode along as if I had been touring and finally saw the checkered flag go out before me as I came down the stretch. I had won the championship and captured the Bosch cup, a handsome trophy standing twenty inches high.



"I Won Every Race That Day."

The last event of the day was an unknown distance race. In this I used Hasha's machine, a regular stock model but with open ports, and after covering four miles I saw the checkered flag and knew that I had won this event also. I had won every race held that day, including all my heats, and my total winnings for the two days of racing were as follows: Two solid gold championship medals, one solid silver championship medal, four diamond rings, one watch fob, the Bosch cup, the Standard Welding cup, a point cup and the Brake Manufacturers' cup. The total value of my prizes was about $1,000.

A Well-Earned Vacation.

What gave me most satisfaction after the races was the discovery that my mother had been in the grandstand throughout the program. She had made the trip from New York City without my knowledge, and lost no time in congratulating me when I left the track after the last race. When the prizes had been turned over to me I gave one of the gold championship medals to Balke to show my appreciation of his kindness in allowing me to use his headguard. The other trophies I shipped back to New York.

From Buffalo I went over into Pennsylvania to recuperate for a few days, for I needed a rest. I was a bit unstrung from the severe nervous strain to which I had been subjected, and did not feel inclined to race for a while. I returned to New York City on July 22 and did not ride again until I went to Worcester, Mass., on August 12 to compete in the Dead Horse hill climb.

Close Call at Worcester.

At this climb I had what I consider a very narrow escape from death. After climbing the hill at top speed and making the fastest time of the day for both automobiles and motorcycles, I shut off my engine, but suddenly discovered that I had no brake. There was a sharp descent down the other side of the hill with a bad turn, and for a moment I thought my time had come. With my usual luck, however, I ran the machine up on a bank and fell off backward, escaping with slight injuries.

My next trip was to Detroit where I won the three main events of the day, 5-mile, 10-mile and 25-mile races. The latter I rode in 22 minutes. At this meet I won a shotgun, but as the law had just been passed in New York State prohibiting the carrying of firearms, I exchanged the gun for a valise which had been won by Bill Teubner. Teubner lived in Pennsylvania and often went hunting so the gun came in very handy for him.

Fast Work at Toledo.

On September 15 I left for Toledo, Ohio, arriving there just in time to get out to the track for the first event. At this meet Bill Teubner and I rode the greatest race of our lives. We mounted singles and at the start Bill got away a second ahead of me and held this slight lead for six miles. I do not believe our relative positions changed six inches throughout that terrific whirl. We were riding the turns wide open and as close to the inner rail as we could, but try as I would I could not gain the few inches he had over me. In the eighth mile I figured that Teubner led me by only one inch, and I thought of a scheme whereby I could pull away a bit. As we came down the stretch side by side we would cut in at the pole as closely as possible and then swing out at the other end of the turn, and I doped it out that if I could swing wide at the beginning of the turn and cut in at the end I would have an advantage.

I tried this wrinkle in the ninth mile, but when Bill saw me riding wide going into the turn he smelt a rat. As I cut in behind him while he was finishing the turn he made a desperate effort to hold his position near the rail and down he went. I was forced to ride over his rear wheel, but did not fall and so won the race. This victory brought me a $100 diamond ring. I won three out of four events at this meet, being forced out of the fourth when my chain broke.

At Columbus Meet.

My next track work was at Columbus. I arrived there with Don Klark, Boyd Anderson and Bill Shomo, the latter being well known as an Indian traveling man and a good sport. Klark had so many friends in the city that it was after 3 a. m. when we got to bed, and it goes without saying that we were in no condition to ride in a 100-mile race the following day. However, we were out at the track at an early hour. The meet was well-managed, one of the best in this respect I have ever participated in. Every one knew just what to do and how to do it and there were no tedious waits. If a rider was not on the line when the starter called for him he was left behind. As a result everything went off in fine style.

The referee was so strict that he gave me what I considered a shabby deal in one race, but no doubt he felt that he was acting within his rights. At the start of a 10-mile event my pusher stepped over the foul line to avoid being struck by a rider and was slow in getting off, and for this I was disqualified. That wasn't the worst part of it, however. I was allowed to ride the whole race, taking all kinds of risks, when the officials knew that I was to be disqualified at the finish. I felt that it would have been only fair to flag me as soon as possible and explain the situation, instead of letting me ride my head off and then disqualifying me after I had won. There should be an F. A. M. ruling to govern such situations. I rode the 10 miles in 8:40.

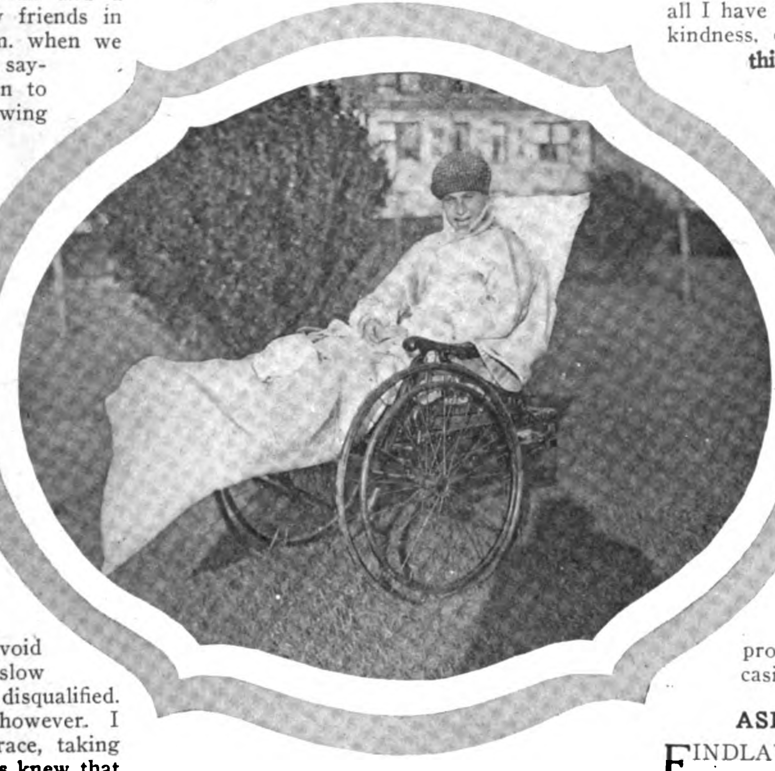
Forced Out of 100-Mile Race.

In the big 100-mile race I rode No. 26, but in the fiftieth mile the continuous vibration broke the gas pipe away from the tank and as I could not get another one I was forced to quit. Evans, on a 7 h. belt Emblem, won the event after riding a very consistent race. That night I surely was tired and I lost no time in getting aboard a train for New York City. The following day at 3 a. m. I reported at the office of my firm and felt quite a stranger in the place after my long trip.

The next meet in which I was to participate was scheduled for Guttenberg, N. J., on October 15, but rain caused a postponement of the races. They were held on October 29. In the meantime I had heard that Jake DeRosier was to be on hand with one of the new Excelsior racing machines, and I wrote to the factory asking for a faster machine than No. 26, which I had been riding. The Hendee folks wired me that they would send down No. 23 and that I could turn pro if I cared to, in order to ride against the redoubtable Jake.

How the Accident Occurred.

I have since been very sorry that I did not enter the pro ranks and go against DeRosier, for if I had it is not likely that I would have been hurt. When the professional race was called I turned my machine over to Ferdie Mercier, whom I knew to be a good, nervy rider of wide experience, and told him to go in and win. I explained that I would stand on the turn at the point where he should begin to cut in, and that this probably would help him. Accordingly I went down to the turn as the professionals started and took up my position close to the outer edge of the track.



Hart in Grounds at St. Luke's Hospital.

As the pack came sputtering down the stretch two Indians were in the lead with DeRosier a good third. I was watching for Mercier to swing out when near me, but instead he cut in quite a distance from me. I was giving all my attention to Ferdie when suddenly I heard someone shout "Look out!" I turned and jumped, but was too late. Jake's machine had caught my right leg just above the ankle, breaking it in five places. I was rushed to a nearby hospital and later removed to St. Luke's hospital in New York City. When the doctors told me that the foot would have to be amputated to avoid blood poisoning I raised serious objections and said I would take a chance on the poisoning. This proved to be the wisest course after all, for the breaks are now knitting nicely. I have discarded the plaster cast and am able to get around fairly well with crutches.

Anxious to Ride Again.

Thus endeth the story of my career as a motorcycle racer—at least my relatives and friends insist that this ends it, but I am not so certain. The doctors say that I will be able to ride again some time in May, and I sincerely hope their predictions will be borne out. I love the sport and have never lost interest in it, although I have been discouraged at times. If things go satisfactorily I certainly hope to ride again and feel the thrill that only the racing man can know when he sees the checkered flag before him and realizes that he is leading the boys over the tape. As most folks are interested in the monetary side of things it may be interesting to note that my winnings for 1911 totaled about $4,700.

While I was confined to St. Luke's hospital hundreds of friends in all walks of life called upon me and I was treated with the utmost consideration. The folks at the Indian factory have been very generous in their treatment of me since I was injured, and all in all I have had good reasons for believing that kindness, even in these busy days, is something more than an empty name.

UNIVERSITY CLUB.

ANOTHER motorcycle squad has been organized in a State university. This time it's the University of Maryland Club at Baltimore. Other clubs have been formed at the University of Illinois, at Champaign, and Ohio State University, at Columbus.

WISCONSIN STAFF.

AT the last meeting of the Wisconsin M. C., of Milwaukee, the following officers were elected: P. D. Rosche, president; A. G. Parsons, vice-president; George Schedler, secretary, and W. Rohn, treasurer. The object of the club is to promote motorcycle races and occasional runs.

ASK CITIZENS TO HELP.

FINDLAY, Ohio, motorcyclists have asked co-operation of the public in enforcing the speed ordinances. At a recent meeting the club issued a request to the public that the club be informed whenever a member was exceeding the speed limit.

NELMS WON A CUP.

FRANK NELMS won the trophy cup of the Tampa, (Fla.) M. C., by racing from that city to Sutherland and return against W. J. Stewart. He made the forty-two and one-half miles in fifty-three minutes.

UTAH MOTOR CLUB.

TRAVELING parties to make trips in various parts of Utah will probably be formed as a result of the organization of the Utah Motor Club at Salt Lake City.

KAW VALLEY SQUAD.

ONE hundred motorcyclists have organized the Kaw Valley M. C., at Kansas City, Mo., to assist in the good roads movement in the West.

NO SPEEDERS WANTED.

SPEEDING motorcyclists who are members of the San Jose (Cal.) M. C. will be fined by the club as well as the city, according to the recent action of the club.

BAY RIDGE PLANS.

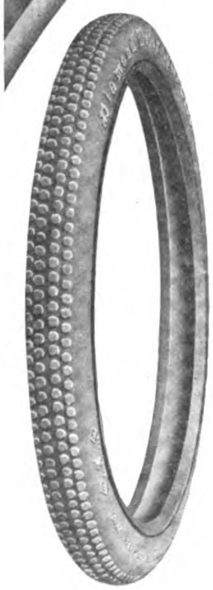
SEVERAL new members were taken into the Bay Ridge M. C., of Brooklyn, N. Y., at the last meeting, and the boys are fast getting into trim for summer outings. They count upon making runs to New Jersey and Connecticut points in the near future.

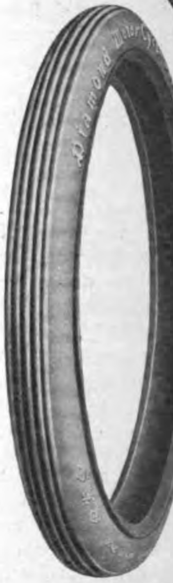
Fulfils Every Requirement

Diamond

Motorcycle Tires

Fulfill Every Requirement
of the
Discriminating Rider





Your tires determine to a great extent the degree of pleasure you get from motorcycling.

Tire trouble and expense dampen the interest of the most enthusiastic motorcyclist.

The time to select your tires is before you buy your machine.

Diamond Motorcycle tires are built by experts—the same experts that build Diamond Automobile tires.

They make it possible for us to offer you a tire that features in the highest degree every quality that adds to the pleasure and comfort of motorcycling, and reduces tire cost to a minimum.

A TOURING NUMBER.

WITH a view to producing a spring issue that will be distinctive for something more than the number of its advertising pages, MOTORCYCLE ILLUSTRATED, under date of May 16, will publish a Motorcycle Touring Number, the first of its kind ever issued. Not less than one hundred tours, prepared at the expenditure of much time, effort and money, will feature this issue. Each tour—and they will run from one hundred to one thousand miles—will be carefully worked out from a *motorcycle* point of view, and specially prepared for this issue. In each instance there will be accurately drawn maps, accompanied by text matter indicating the principal towns and cities en route, and giving other practical information concerning road conditions, license requirements, hotel facilities and points of interest. .

Every tourable State in the Union is now being mapped out and in such a way that it will be possible for readers of this issue to plan vacation trips from almost any town and of almost any distance from a hundred mile circuit in any particular locality to a journey, East or West, North or South, across an entire State or, for that matter, the entire continent.

For example, there will be a series of touring circuits, each one of which will be built upon a principal cross country route as a base line. The piecing together of the different sections of any of these trunk lines will give the rider through routes from New York to Boston and thus into the White Mountains of New Hampshire and the pine forests of Maine; from the metropolis southward to Baltimore and Washington down to Richmond, Old Point Comfort and even unto the extremities of Florida; from New York to Albany, Buffalo and Chicago, then from Chicago westward as far as the Pacific coast.

There will be provided a wealth of intensely practical information, not only for the hardy tourist who laughs at distances but for the beginner for whom one hundred or one hundred and fifty miles is the touring limit. The great majority who demand short distance trips will find in the May 16th Spring Touring Number of MOTORCYCLE ILLUSTRATED a delightful array of tours such as will meet all their requirements, each one accurately mapped out and interestingly illustrated and described.

The publishers of MOTORCYCLE ILLUSTRATED will print at least thirteen thousand and possibly fourteen thousand copies of this Spring Touring Number. In all probability, however, the demand will be so great that, in order to insure the receipt of a copy, those who are not regular subscribers are advised to place their orders in advance, either with their newsdealers or by remitting ten cents direct to this office. Please note that the price for this particularly valuable number has not been advanced, and there is no gainsaying that buyers of the Spring Touring Number of MOTORCYCLE ILLUSTRATED at the nominal price of ten cents a copy, will receive ten times the value they have ever obtained through the purchase of a single issue heretofore of any motorcycle journal.

Incidently the benefits of the extra value of this number will be shared by those whose advertising announcements appear in this issue, both because of its unprecedented circulation and also for the reason that every recipient of a copy will keep it for constant reference and also show it to many of his friends.

RELIABILITY.

ALL the circulation records of MOTORCYCLE ILLUSTRATED *may be examined by anyone at any time. Advertisers are invited to demonstrate to their own satisfaction the correctness of the circulation figures given above, and to refuse to pay their advertising bills if our figures are at all inaccurate.*

By the same token, readers are specially requested to call our attention to any misstatements or misrepresentations in either the text or the advertising published in MOTORCYCLE ILLUSTRATED. *It is the policy of this publication to insist that the same regard for absolute truth and accuracy that characterizes our circulation statements must also distinguish the reports of our correspondents and the announcements of our advertisers. If a* single line *in this or any other issue of* MOTORCYCLE ILLUSTRATED *lacks reliability, we shall appreciate being so advised.*

FRANCHISE TERM.

THERE has been some criticism of the action of the F. A. M. Board of Directors in limiting to one year the period for which exclusive board track franchises are to run. But the Federation Directorate would have been properly exorcised had it made the fatal mistake of authorizing franchises in perpetuity. As a matter of fact, it is not in position to do so legally. Any agreement entered into by an F. A. M. official, under existing conditions, is subject to the approval of the National Assembly, and it is an established practice that no such body can in any way determine the acts of any of its successors. The F. A. M. directors therefore very prudently decided to limit franchises to a one-year period, with the important concession that preference in the matter of renewals should be given to franchise-holders who had faithfully lived up to the terms of their agreements. Renewals of the original agreement are to be entered into from year to year as long as the Federation is satisfied what exclusive track franchises are beneficial to the sport. No fair-minded promoter can object to this arrangement, which effectually safeguards his interest as long as he is endeavoring to properly co-operate in upholding the principles upon which the F. A. M. is founded. The F. A. M. could not do more for track-builders without compromising itself.

SEVERE TEST IN STORE FOR JERSEY RIDERS

Twice-Around-the-Clock Endurance Run of Newark Club Will Carry Contestants Over Long and Arduous Route on Memorial Day—Notes of Riders and Agents.

RIDERS who compete in the 24-hour endurance run of the New Jersey M. C., of Newark, which is scheduled for Memorial Day, will find the route considerably more trying than that followed on May 30, 1911, when the club held the first night-and-day motorcycle road contest in this country. Out of 40 starters last year about 20 romped home with clean scores, and the club officials have decided that the endurance qualities of the Jerseyites justify a more strenuous program. As a result the route for the coming run will be longer, and the contestant who succeeds in keeping his score intact will earn his medal.

The route has been officially announced as follows: From Newark to Elizabeth, to Rahway, Perth Amboy, Keyport, Freehold, Hightstown and to Trenton. Swinging at the latter city the riders will travel northward through Princeton, Belle Mead, Somerville, Clinton and Washington to Phillipsburg, the half-way mark. Thence the route will continue through Belvidere, Hackettstown, Newton and Sussex to Port Jervis. Turning westward at this point the riders will enter New York State to Goshen and Newburgh, from which point they will swing southward again through Tuxedo, Suffern, Signac, over Cuchmaul Hill to Caldwell and thence to Newark and the finishing mark.

The riders will make their start from in front of the club headquarters at 6:30 p. m. on May 29, and will trail in from their long hike early in the evening of the following day. When the night-riding idea was first broached last year it met with considerable opposition on the ground that a big squad of riders humming over country roads after nightfall would be sure to encounter trouble. However, mishaps were no more numerous on the night section of the run than on the day stretch, and no trouble really worthy of the name was met with at any time. Special arrangements were made by the Newarkers in connection with headlights and tail-lamps.

SALES CLIMBING.

NEWARK dealers report that the business transacted during January, February and March of this year shows a 100 per cent increase over that for the corresponding period in 1911, and some of the more optimistic boomers in the city argue that the total sales of the agents should total nearly $100,000 for the year.

Walter Goerke, who recently entered the Newark field as agent for the Indian had at latest reports disposed of thirty machines; this is about the number of Indians sold during the whole season of 1911 in Newark. Bush & MacDougall, handling Thor and Excelsior machines, state that they have orders for twenty-six of the new models, and Frank Cornish has lined up eighteen Yale buyers. Herman Jaehle, who claims the distinction of operating the largest motorcycle garage in the State, has placed about a dozen Merkels, and does not hesitate to say that he expects his total business to run about $25,000 for 1912. Krebs, selling the Flanders and Pierce products; Meyer, with the Reading Standard; Kluczek, handling the Harley-Davidson, and the Bohsen firm, which is boosting the Excelsior trade in the Oranges, all submit highly encouraging reports and state that Newark is on the eve of a motorcycle boom which will cause dealers in surrounding territory to sit up and gasp.

GOOD NEWS FROM GOERKE

WALTER GOERKE, who was forced out of the racing game by his accident on the Long Island Motor Parkway in the spring of 1911, and who is now located in Newark as the Indian agent, recently underwent a supplementary operation which may give him the full use of his injured leg. The leg, which was broken in several places, failed to knit properly and up to the present time Walter has been walking with difficulty, aided by a cane. The last operation was performed at a private hospital in Brooklyn, and the former rider's leg has since been in a brace. Should the new treatment prove as successful as the surgeons predict Goerke will be "as good as new" before the summer is half over.

GUNN NAMED AS REFEREE.

JOSEPH H. GUNN, well known in Newark as a writer on sporting topics, has been chosen by the New Jersey M. C. as referee for its 24-hour endurance run to be held on Memorial Day. Gunn has been connected with the New Jersey club for three years, and is well up on motorcycle affairs.

PASCAL TO HAVE OPERATION.

ROY PASCAL, at one time prominent in the ranks of Newark speedsters, will soon undergo an operation on his left arm which was injured in a motorcycle race at Olympic Park in 1910. The motor nerve of the arm was injured in a fall and the member has since been partially paralyzed. Pascal is now in the middle West traveling for the Reading Standard factory.

SHOW PLANS FOR 1913.

NEWARK dealers are taking time by the forelock and discussing plans for a motorcycle show to be held early in 1913. They did not exhibit their machines at the recent automobile show in Newark because they felt that the space set aside for them was not suitable for a good display, and later a proposition was considered for an exclusive spring motorcycle show to be held at the Electric Park Hall. The project was taken up too late, however, and the agents are now determined to make the most of their opportunities next year.

D. A. NELSON, of Plainfield, was the first rider to obtain an entry blank for the New Jersey club's twice-around-the-club run slated for May 30.

REORGANIZATION IN DALLAS.

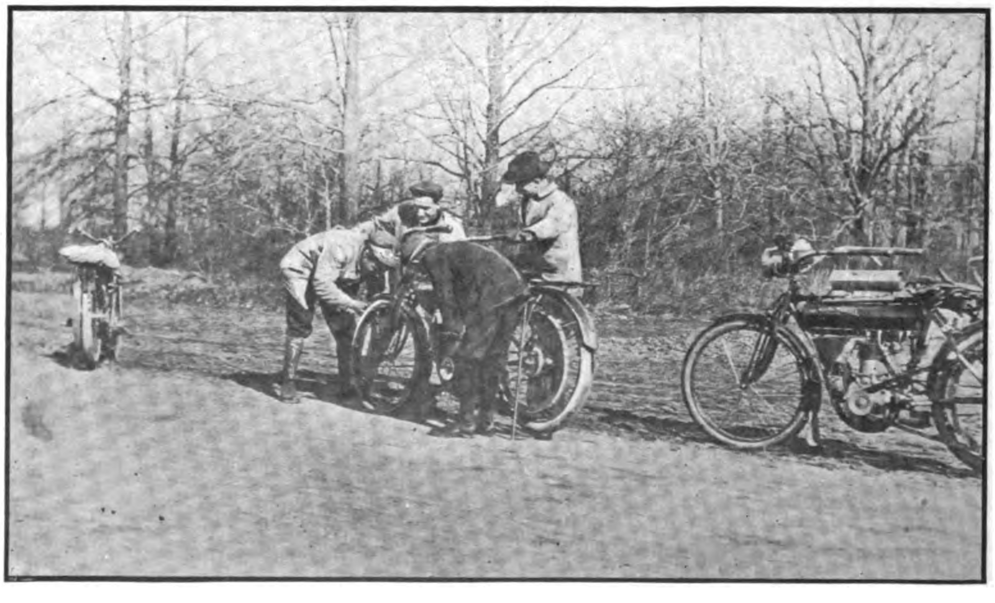
THE Lone Star Motorcycle Club of Dallas, Tex., will soon be reorganized. Several of the most active members have left the city, but a few of the old leaders, including President Geo. Huter and Vice-president Ed. Meissner, are still on the list of "live ones" and are anxious to get things going again.

LIMA COPS AFTER SPEEDERS.

THE city government of Lima, Ohio, has declared war on both motorcycle and automabile speeders and on one day recently thirteen of them were taken in by the police. The motorcyclists were given small fines for exceeding the speed limit.

TYLER SAVES THE DAY.

A. P. TYLER, of Boise, Idaho, has the honor of rescuing his State from the "never was" class, by taking out the first and only certificate of registration in the State. Thus it is that his shop is in a class by itself—and a pretty classy shop it is at that. It is No. 606 on the registered list. Other dealers now promise to profit by Tyler's good example.



First Blow-Out on Initial Run of Imperial M. C., of Brooklyn.

THE PIERCE IN SEATTLE.

TWO Pierce four machines are now in use by the police of Seattle, Wash., and J. E. Bunker, Pierce representative in the Washington city reports that the officials plan to equip their force with nine of the Pierce mounts.

NEW INDIANAPOLIS CLUB.

THE Hoereth Cycle Club is the latest motorcycle organization in Indianapolis, Ind. The club was formed last week, and it is to be a department of the Hoereth Athletic Club. D. Pressley has been chosen president, and the other officers are: Otto Sacks, vice-president; Floyd Hassler secretary, and Harry Cubel, treasurer. The club is conducting a thirty-day membership campaign with a bicycle, loving cup and season membership card as the trophies. The first run will be held May 12, and a smoker will be held on May 9. Weekly meetings are to be held on Thursday.

LOOKING DOWN THE STRETCH.

APRIL 26, Augusta, Ga.—Augusta Motorcycle Club; spring race meet.

April 26, Savannah, Ga.—Savannah Motorcycle Club; endurance run over the Grand Prize course.

May 5, Peoria, Ill.—Motorcycle race meet; mile dirt track.

May 5, Brooklyn, N. Y.—Invincible Motorcycle Club; single and double century runs; 100-mile course, Patchogue and return; 200-mile course, Southampton and return.

May 12, Newark, N. J.—Opening meet at Newark Motordrome, Electric Park.

May 19, Detroit, Mich.—Detroit Motorcycle Dealers' Club race meet; mile dirt track.

May 30, Lancaster, Pa.—Lancaster Motorcycle Club race meet.

May 30, Joliet, Ill.—Will County Motorcycle Club, 100-mile race; Ingalls Park.

May 30, Washington, D. C.—National Capital Motorcycle Club's race meet at Bennings.

May 30, Detroit, Mich.—Race meet under auspices of Motorcycle Club of Detroit Wheelmen on State Fair grounds track.

July 4, Detroit, Mich.—Race meet under auspices of Motorcycle Club of Detroit Wheelmen on one-mile State Fair track.

July 4, Cortland, N. Y.—Cortland Motorcycle Club race meet; half-mile dirt track.

August 6-9, Detroit, Mich.—Cycle Parts and Accessories Association annual summer convention.

August 17, Pratt, Kan.—Start of 15-day tour of Short Grass Motorcycle Club.

September 2, Detroit, Mich.—Race meet under auspices of Motorcycle Club of Detroit Wheelmen on State Fair grounds track.

THE Camden (N. J.) M. C. has elected the following officers for the coming year: W. R. Smith, president; W. A. Harris, vice-president; R. C. Smith, secretary, and W. T. Reed, treasurer.

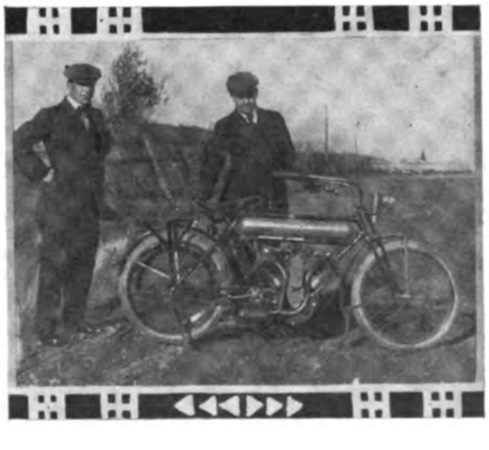
BUSY SUMMER AHEAD

Augusta Club Aims to Bring Every Rider in the City into Its Ranks—Many Events Planned.

SCHEMES for sport and amusement during the spring and summer months were discussed at a well-attended meeting of the Augusta (Ga.) Motorcycle Club on April 9. Various suggestions for club runs and road contests, fish fries and barbecues and many different forms of amusement were received and considered with lively interest. No dates were fixed, but every member left the meeting feeling that there are big times ahead for the motorcyclists in Augusta this season.

It was voted at the meeting to reopen the charter of the club for sixty days, during which time new members will be received for one-fourth of the regular initiation fee. A vigorous campaign for new members will be conducted and efforts will be made to bring the membership of the club up to 200, which will include practically every motorcyclist in the city.

The affair of immediate importance now engaging the attention of the club is the race meet which will be held on the Georgia-Carolina Fair Grounds track April 26. With a profit of over $100 from the sale of program advertising to help pay expenses the club is counting on making a big financial success of the meet.



"FINE chance for a live dealer," writes A. N. MacMillan, whose photograph appears herewith. He is the only rider in Sydney, Nova Scotia, a promising town in Canada.

ONE FORM OF AMUSEMENT.

SOMEBODY with unusually malicious intent—also with a key to the clubrooms of the Boston M. C.—entered the headquarters of the squad recently and slashed the cover of the pool table with a knife, broke several pool cues and damaged furniture. The boys are without a clue to the miscreant, but should they run across the clandestine visitor there will be prompt action. At the last regular meeting, which was well attended, W. M. Binney, J. R. Madden, H. F. Fisher, Harry Horn and H. R. Wheeler were admitted to membership.

PHILLY CLUB REORGANIZED.

THE Philadelphia Motorcycle Club has been reorganized with a membership of twelve, and temporary quarters have been taken at 5015 Aspen street. The club is affiliated with the F. A. M., for which Louis J. Spingler is the local commissioner. The officers of the club are: President, T. Foulds; vice-president, William Reidman; secretary, S. Gosnay; treasurer, William Weideman; captain, Louis J. Spingler.

SUCCESSFUL SPRING RUN.

DESPITE the fact that no prizes were offered by the Savannah (Ga.) M. C. for its run held on Easter Sunday there was a creditable turnout of the riders and the outing proved satisfactory. A trip was made to Belfast, Ga., where a baseball game and impromptu races helped to fill out an enjoyable program. Final arrangements are now pending for the club's Memorial Day run which will probably be over a 150-mile course.

"EXPERIENCE" MEETINGS.

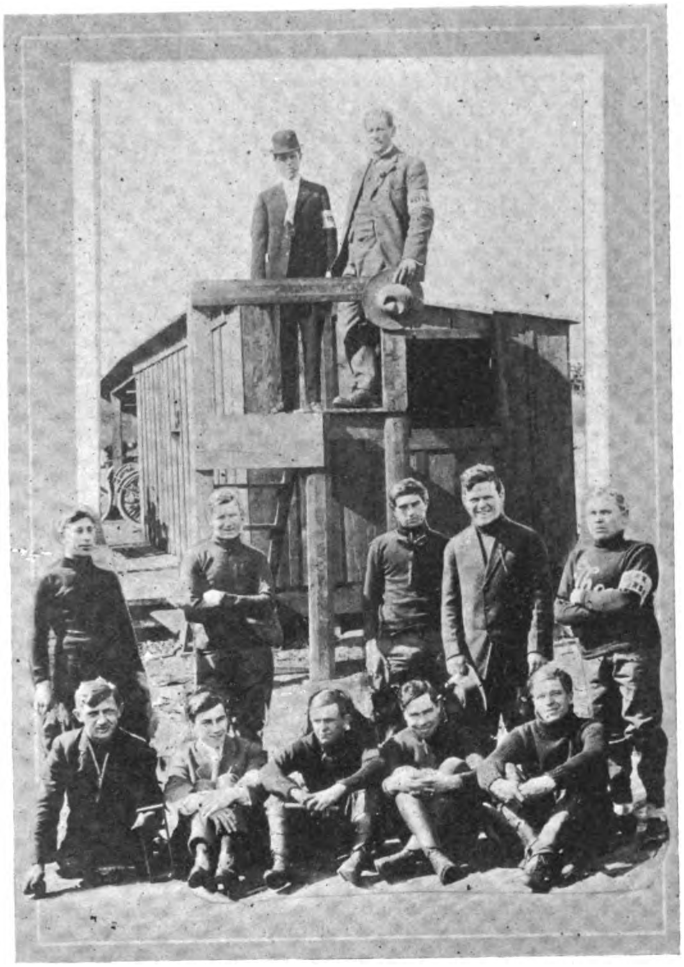
ONE of the latest wrinkles for stimulating club interest is a series of "experience" meetings. Several prominent squads have held them of late with marked success. The idea is to have the boys gather at the clubrooms and engage in practical discussions concerning their methods of overcoming road and machine difficulties. In this semi-social way much valuable information is dispensed.

SUNDAY OUTINGS.

A SERIES of Sunday runs is being arranged by the Topeka (Kan.) M. C. It is the intention of the club officials to make trips ranging from 50 to 200 miles every Sunday and holiday when the weather will permit of riding, and the outings will be featured by dinners, baseball games and swimming parties.

LOS ANGELES SQUAD OF REFEREES AND RIDERS.

ONE of the innovations insisted upon by Referee Charles Fuller Gates during the recent meets on the Los Angeles motordrome was a special stand for the referee from which he could watch the riders without interference during their entire circuit of the saucer. One of the accompanying photographs shows Referee Gates (to the right) occupying this stand with L. R. Miller, of Denver, State F. A. M. referee for Colorado. The other picture shows a group of the riders who recently made motorcycle history on the Los Angeles track. Those standing, from left to right, are: William Samuelson, Ray Seymour, Johnnie Albright, Charles Balke and Clerk of the Course Earhart, formerly well known as an amateur star. Those sitting from left to right are: Al. Le Roy, the legless rider of Los Angeles, who uses a side car; M. J. Graves, Eddie Hasha, Al. Ward and S. I. Humiston.



F. A. M. IN MANILA.

THE advent of the Luzon M. C., of Manila, P. I., as an F. A. M. club, opens up the question of Federation policy in its insular districts.

TO ATTEND CHURCH SERVICE.

REV. ARTHUR HORROCK, Pastor of the Brecksville (Ohio) M. E. Church, is an ardent motorcyclist. He makes weekly trips between Cleveland and Brecksville on his machine, and is well acquainted with members of the Cleveland Motorcycle Club. Last year he extended an invitation to club members to attend services at his church at Brecksville on Easter Sunday. About thirty members accepted, riding their machines to the village. This year the pastor extended a similar invitation. It was planned to take an even larger number of motorcycle enthusiasts to church, but the weather interfered. About twenty members gathered at club headquarters, but the rain kept coming down and it was finally decided to call the trip off. The boys will attend at a later date.

THE young men connected with the Elyea-Austell Co., of Atlanta, Ga., are interesting their friends in the organization of a club.

O. A. Meyer (Merkel), Savannah Press Motorcycle Reporter.

SAVANNAH RIDERS WERE GAME

On Eventful Run to Belfast They Ploughed Through Record - Breaking Stretches of Bad Roads.

SAVANNAH, GA.—Despite threatening weather twenty members of the Savannah M. C. went out on the Club's Easter Sunday run to Belfast. The roads were bad, the efforts of three riders being required at times to lift a machine out of the worst ruts. The course led out Bull street to the Ogeechee road which is straightaway for fourteen miles. This stretch caused the riders no trouble, but at the Ogeechee river the heavy going began. Road conditions were so bad that one of the riders turned back at this point. A causeway has been built over this section of muddy land and at more than one point the riders feared their machines were going to disappear altogether. The causeway is about a quarter of a mile long and the squad spent more than an hour crossing it. At times a dozen machines were laid over beside the "road" to permit of pedal, chain and tire repairs. Beyond the causeway there is a gravel roadway for two miles and the remainder of the run to Belfast was made without incident.

Many people in the little village of Belfast turned out to greet the Savannah riders and they were cheered for their pluck in traveling roads that no automobile driver has ever dared to tackle. After a good dinner the boys returned by a new route. They encountered another causeway, but it was made up of deep white sand instead of mud and water. At this point there was much skidding. Mell and Heidt went over into a creek and Mercer, Dowling and Meyer had a mix-up on a turn, but there were no serious results. On the return it was found that the following had perfect scores: George A. Mercer, Jr., Indian; George Mell, Excelsior; J. W. Heidt, Jr., Excelsior; Tom McFarland, Merkel; John Balmer, Harley-Davidson, and Octavus A. Meyer, Merkel.

NEW HUDSON CLIPS RECORDS.

THAT all unique motorcycle records do not by any means fall to American riders is proved by the recent performance of George Patterson, Jr., who broke the 12 and 24-hour road records for Australia on a 3-speed New Hudson machine. Patterson is touring the British colonies in the interest of the New Hudson Company. In the 12-hour test he covered 312 miles, and for 24 hours his mileage was 547. The best previous showing for the latter time schedule was 510 miles, made on a 3½ h. 500 c.c. racing machine. The New Hudson representative rode a machine of 2¾ h., rated at 292 c.c., and with 70 by 76 mm. bore and stroke. Patterson is also showing some remarkable hill-climbing performances on his Australian trip.

VOGEL'S LONG JAUNT.

E. L. VOGEL, of Sumter, S. C., passed through Augusta on March 9 on his return from a motorcycle trip to Atlanta. He is riding an Excelsior single. The distance from Sumter to Atlanta by the route followed is 335 miles. Vogel made the trip in two days, stopping overnight in Augusta. He says he rode along in a leisurely manner, experienced no mechanical troubles and found the roads good all along the route. In the 171 miles from Atlanta to Augusta he says he was not compelled to dismount from his machine a single time on account of the condition of the road.

"WE GOTCHA, STEVE."

STEVE LICENCE, the Harley-Davidson dealer at Toronto, Canada, went for a ride the other day on a new model through the streets of his home town. So silently did he ride, so the story goes, that he came upon a "gang" of sparrows by surprise, riding over one bird. By way of proof, Licence displayed a sparrow's head and tail as the remains of the victim.

PILING UP ORDERS.

THE Lister Motorcycle Company has completed improvements in its establishment and is now ready to meet the spring business. The firm recently received a large consignment of Harleys. Up to date, they have taken orders for 183 machines of the 1912 models. They also distribute the Flying Merkel for Cleveland and vicinity.

Savannah Boys in Flooded Belfast, After Muddy Journey.

WILLIAM STREIFF, trans-continentalist, who has recently completed a 5,000-mile European tour.

DOES RILEY HOLD RECORD?

J. M. RILEY, R. F. D. carrier No. 3 at Hartford, Ala., is convinced that he holds the lead among rural mail men for mileage covered on a motorcycle in the performance of his duties. Riley has been riding Yale machines for the last five years and has covered 39,000 miles, not including pleasure runs on Sundays and afternoons. Since taking to the motorcycle Riley experiences no difficulty in completing his route in the morning and has the remainder of the day to devote to other interests. Riley states that he will be glad to hear from any other R. F. D. carrier who has a lead on him as to miles covered on an R. F. D. route.

FITTING DELIVERY ATTACHMENTS

CLEVELAND dealers are doing an extensive business along the line of fitting up machines with boxes for delivery purposes, as the small commercial houses realize the advantages gained by having a quick motorcycle delivery department.

J. M. Riley.

A CLERGYMAN, the Rev. J. D. Morrow, is honorary president of the Toronto Motorcycle Club.

Spring Activities of Cleveland Riders and Dealers

ANNUAL HILL-CLIMB.

THE Cleveland M. C. is completing arrangements to hold its annual hill-climb on Decoration Day. At this event electrical timing will be used. The course as yet is undecided upon, but in all probability Snake Hill, along the Canal Road of Cleveland, will be used. The entry fee has been put at 50 cents, and the event is open to all amateur and trade riders. Medals will be awarded.

SCOUTING FOR MEMBERS.

A MEMBERSHIP campaign is being waged by the Cleveland M. C., and every member has been furnished with twelve application blanks. The membership is expected to reach 250 before June 1.

FIGURES TELL THE TALE.

ACCORDING to the registered numbers recently issued to the building inspectors of Cleveland, there are 1,256 motorcycles in the city of Cleveland, and this does not include the estimated 600 in the suburbs that are not required to have a city license. The number of registered machines is expected to pass the 2,000 mark as soon as the weather opens up, judging from the number of orders received by dealers.

BOOMING McCONNELL.

CLEVELAND motorcyclists are boosting President R. S. McConnell for referee and commissioner for Northern Ohio. "Mac" is a hard worker for the F. A. M., and a favorite with the boys.

ON THE RIGHT TRACK.

THE Cleveland M. C. expects to be a 100 per cent. club very soon, as practically all the riders now in the club are F. A. M. members and no new members are taken in unless they make application at the same time to join the F. A. M.

SEVEN AT A CLIP.

THE Yale Cycle & Supply Company, of Cleveland, has received an order for seven 4 h. Yales for the city of Painesville, to be delivered at once.

ANOTHER CARLOAD.

L. J. MUELLER has just received another carload of Indians. He disposed of the last carload in exactly nine days and more than half the new carload, mostly twins, has been sold.

NAMING SUB-AGENTS.

KUMLER BROS., enterprising Flanders distributors in Cleveland, are placing sub-agencies throughout the city. Herman Bros., of 2210 W. 25th Street, will cover the South and West Sides.

DEMAND FOR EXCELSIORS.

MANAGER ZUCKER, of the Casino Cycle & Supply Company, when in Chicago recently, was assured of receiving Excelsiors at the rate of one to three machines a day. He reports the factory rushed to the limit. He has been handicapped somewhat on deliveries.

OPENING DATES.

THE opening dates of the Luna Park Motordrome have been decided upon as May 15, 16 and 17. A good programme is to be announced later.

COFFMAN DROPPED IN.

A. B. COFFMAN, the Toledo-Yale enthusiast, was in Cleveland last week conferring with the Yale distributors, the Yale Cycle & Supply Company.

VALIANT A VISITOR.

FRANK LIBBY VALIANT, the recently appointed advertising agent and assistant sales manager for the Miami people, was in Cleveland last week looking over the local field.

MORE CONVENTION PLANS.

MESSRS. MERRELL AND SLOCUM, assistant manager and publicity agent for the Luna Park Motordrome in Cleveland, attended a special meeting of the Cleveland M. C. called by President McConnell, and the matter of entertaining the F. A. M. visitors with a blow-out at the Park was taken up. There will be "doings" if Cleveland lands the big meeting. An inspection of the rubber plants at Akron will be included in the fine program to be submitted to President Hamilton by the convention committee.

ROADS IN GOOD SHAPE.

A NUMBER of enthusiasts of the Lorain (Ohio) M. C. held a pleasure trip to Cleveland recently. They reported the roads in fine condition for the spring of the year.

'PHONE FOLKS ARE PLEASED.

THE Cleveland Bell Telephone Company is considering the purchase of a lot of new machines. They now use Harley-Davidsons of the 1910 model. These machines have a total average mileage of about 30,000 miles each The management is considering the purchase of new machines or the general overhauling of the old ones. They are well satisfied with the service given.

NEWSPAPERS IN LINE.

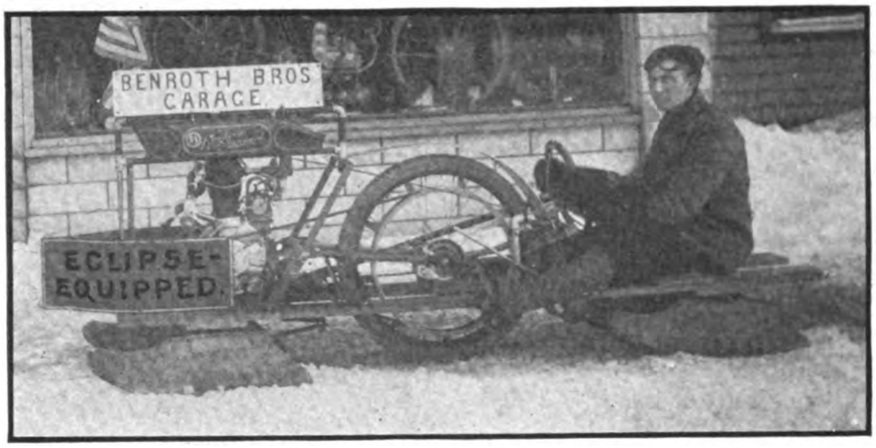
THE Cleveland newspapers, at least three of the four published, are running a motorcycle column once a week and boosting the economical single-tracker and the dealers are doing quite a lot of advertising.

TRYING OUT A HARLEY.

A HARLEY-DAVIDSON machine recently purchased from the Lister Motorcycle Company will be used by the Cleveland Electric Illuminating Company in the "trouble" department. It is expected that more machines will be purchased if the trial one proves satisfactory. Statistics are being taken as to the expense compared with the horse and wagon system.

BINGHAMTON CUPS.

TWO silver cups are to be awarded to the season champion riders in a series of race meets scheduled for the coming summer at Binghamton, N. Y. The Binghamton club has been picking up rapidly in membership of late, and its outlook for the summer is exceedingly bright, say the officials.



AN OHIO OUTFIT.

THE accompanying photograph shows a motor-bob built by the mechanics of Benroth Brothers' garage in Bluffton, Ohio, and used with success during the last two months. It is fitted with a 4 h. Reading Standard motor and Eclipse free-engine pulley. The outfit is speedy and has carried the driver and a passenger over the snow at a 35-mile an hour clip. The photograph shows Mr. Kimmel at the wheel.

WASHINGTON RACE MEET

National Capital M. C. with One Hundred Active Members Will Open Racing Season Auspiciously.

THE National Capital Motorcycle Club, of Washington, D. C., has arranged to hold a race meeting at the Bennings mile track on Memorial Day, and a tentative program has been arranged as follows: First race, three mile novice, private owner, stock 30.50 class; second race, five miles (club members only), private owner, stock 30.50 class; third race, ten miles, open, stock 30.50 class; fourth race, ten miles, stock 61 class; fifth race, fifteen miles, open, 61 class; sixth race, for automobiles, ten miles, open; 40 horsepower and under; seventh race, for automobiles, fifteen miles, open; all machines.

The National Capital M. C., since its organization several months ago, has prospered and now has a membership of 100. It is strongly backed financially, and no feature has been overlooked to make the coming race meet a success. Papers of incorporation will be filed in a short time and an issue of stock to finance the coming race meet has been 100 per cent. oversubscribed. The management will issue 10,000 elaborate programs and advertise the affair extensively in the newspapers, on the street cars, etc. The committee in charge of the meet consists of President F. D. Yowell, vice-president E. M. Dodson, T. O. Wansleben, Charles H. Gross, J. S. Berryman, Samuel McPherson, W. E. Anderson, John Guntow, S. B. Eaton, H. B. Cohen, George W. Beall, Harry Foulds, A. G. Schmidt, T. N. Mudd, Jr., and Paul A. Draper.

SIX motorcyclists of Phoenix, Ariz., recently made a motorcycle trip to Castle Hot Springs and return.

OE THOMPSON, of Franklin, Ind., recently returned from a motorcycle trip to Florida.

HILL-CLIMB TO OPEN SEASON

Toronto Club's Program Also Includes a Run to Hamilton and Several Purely Social Events.

SEVENTY-FIVE members of the Toronto M. C. attended the last regular meeting of that organization, when further plans and preparations were entered into for the coming season. The first event of the year will be a hill-climb at York Mills, five miles from the city, on May 11 (rain date May 18), which will be worked out on formulae and time, the competitors using any gear. A social run of 100 miles to Hamilton and return, will be held on May 24, the idea being to provide something fairly easy for the first ride, in order to encourage the many new riders and side-car enthusiasts. It is also proposed to hold a theater party and Dutch luncheon in the near future.

Vice-president W. G. Self officially presented a vice-president's cup to the club for competition among all members in tours, endurance runs, hill-climbs and races during the coming season.

A communication from the Cleveland (Ohio) M. C., asking for the endorsement of the Toronto club for the holding of the F. A. M. national meet in that city this summer, was read and filed. An invitation from the Detroit M. C. to the local racers to take part in a race meet to be held at Detroit on May 19 was also received.

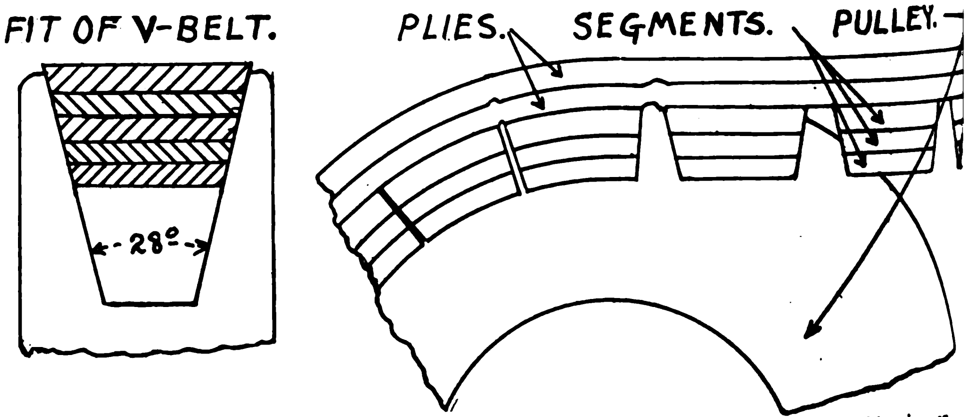
Prominent visitors at the meeting included L. B. Lyman, of Akron, Ohio, factory representative of the Diamond Rubber Company, and G. L. Mitchell, manager of the Canadian factory branch of that company. In a short address, Mr. Lyman commented upon the apparently peaceful condition of affairs prevailing within the club. Seven new members were obligated at the meeting.

CLUB ORGANIZERS.

AMONG new club organizers are the following: Kessler & Miller, Rochester, Ind.; A. M. Reynolds, 406 Smith street, Schenectady, N. Y.; A. J. Hall, 3741 W. 25th street, Cleveland, Ohio; J. W. Warnken, 711 46th street, Milwaukee, Wis.; Will Last, 209 River street, Holland, Mich.

TREATS FOR COLUMBUS FANS.

COLUMBUS, OHIO.—The Columbus Motorcycle Club is going to make the season of 1912 a banner year in motorcycle racing in the Buckeye capital. Arrangements are being made for four big race meets to be held, one in June, one in July, one in August and one in September. Each of the meets will be on Sunday on the track of the Columbus Driving Park Association. The first meeting may be held early in June, when a number of short events will be staged. It is proposed to hold several long-distance races at the meets in August and September. Options have been taken on the track for the dates desired, and the committee on arrangements is now at work. This committee consists of G. H. Bangham, chairman; L. P. Birkenbach, W. H. Snyder, P. I. Haynes, C. W. Barr, P. A. Vogel and A. C. Edwards.



FIT OF V-BELT.

WITH the excellence of construction of most motorcycle parts nowadays, it should be unusual to see V-belts running high in the groove of the pulley or with a distorted upper side. Unfortunately, conditions such as these are too frequent, and are in the main due to misalignment of the rear wheel pulley as regards that on the motor shaft. In other, but exceptional, cases, the pulleys used are improper in the angle between the sides, and this may have been due to deformation by a fall, or carelessness in machining.

A glance at the drawing will give the proper fit of a V-belt, one of the compound type being shown in both cross section and side view on the pulley, one of whose faces has been removed. The correct angle of 28 degs. between the sides is indicated and the action of the segments as they curve on the pulley is clearly shown. It will be noticed that the upper ply fits slightly above the pulley side edges; on a two-ply with single segment belt it will be nearly or entirely flush. The clearance between the pulley and bottom is likewise indicated. If the belt strikes the bottom, the running will be jerky and the strain such that the belt will soon part. If the top of the belt is arched, too small a pulley is indicated, and the "bottoming" just mentioned shows that the pulley is too large.

Commercial Department.

TESTING MOTORCYCLE SYSTEM.

THE local Board of Park Commissioners in Louisville, Ky., has decided to buy an Indian machine, and an order for one has been given to the Sutcliffe Company, local agents for the Hendee product. The machine, which will be used by park guards on the Grand Boulevard and through Iroquois Park, will be a 7 h. 1912 model, and some delay will ensue before delivery, because the machine must be especially enameled in brown, with green striping, these colors being designated by the Park Board. A thorough try-out will be given the machine, and if it proves entirely satisfactory for park work, immediate steps will be taken to equip the rest of the guards with motorcycles.

FINES SWELL CITY COFFERS.

DURING the past twelve months seventeen motorcycle officers in Chicago made 6,000 arrests and turned $150,000 into the municipal coffers in fines. The Windy City now has 140 motorcycles in use by men employed in the various municipal departments, and there are indications that this number will be materially increased before the summer is over. Recently one of the city's motorcycle officers answered a "burglar call" with such speed that the man of the house mistook him for a pal of the intruder and attacked him. Needless to say the minion of the law made his identity clear and "landed" the intruder, much to the latter's surprise.

PROMPT WORK BY POLICE.

A FEW days ago the Toledo (Ohio) police department received a message to the effect that neighbors had seen a stranger enter a certain house under suspicious conditions. Two motorcycle officers reached the house in time to discover the unauthorized visitor hidden in a closet. He was arrested as a burglar and sentenced to three months in the county jail.

R. F. D. CARRIERS IN TEXAS.

WILLIAMSON COUNTY, Texas, claims the distinction of having the swiftest and best-paid force of R. F. D. carriers in the service. It has 42 carriers, nearly all of them mounted on motorcycles. The Harley-Davidson agent in Georgetown has sold 23 machines to R. F. D. workers during the last two seasons, and it is reported that the single-trackers are admirably suited for the service, even over unsatisfactory roads.

SEVEN building inspectors have been provided with motorcycles by the City Council of Cleveland, Ohio.

THREE rural mail carriers at Urbana, Ohio, have adopted the motorcycle to deliver mail on their routes.

BUSINESS TRIPS ON WAGNER.

MOTORCYCLES are being rapidly adopted by traveling salesmen through Kansas, Colorado and Oklahoma. These men say they can cover their territories in a trifle over half the time required by rail, and at less expense. It is much healthier than traveling by rail since it places the rider out in the fresh air, just where a salesman should go for recreation. The accompanying picture shows B. W. Harmonson, a wholesale groceryman of Norton, Kan., who makes an average of 1,000 miles per month on his 1911 model free-wheel Wagner, and says that the motorcycle is the only way to travel easy and enjoy it.

IN THE NICK OF TIME.

EDWARD SCULL, an enthusiastic motorcycle rider of Jacksonville, Fla., had the misfortune of having his new 1912 Indian stolen from him about three weeks ago, but thanks to the cunning of one of the local constables his machine was located in the nick of time. The thief had taken the machine apart and placed it in a large box ready for shipment, and was off in search of a team. Upon his return the officer placed the machine and would-be owner in the wagon and brought them to Jacksonville. The justice of the peace in whose district the thief was captured gave him a preliminary trial and deemed the evidence sufficient to bind him over to the higher court, where it is more than probable he will get his just deserts. Mr. Scull is now a strong booster for the local guardians of the law.

EIGHT motorcycle policemen at Newark, N. J., are to be the nucleus of a motorcycle police squad in that city.

TWO more motorcycle policemen have been added to the police force of Racine, Wis.

IN ARMY SERVICE.

UNCLE SAM is gradually adding the motorcycle to all the government departments. The latest recruit is in the War Department. Color Sergeant von Lang, of the 11th Cavalry at Fort Oglethorpe, Ga., has a motorcycle and is riding rings around his brother officers on the field.

STURDY MILLER TIRES.

MOTORCYCLE tires of unusual sturdiness with either non-skid block or corrugated tread, inner tubes and tire repair specialties are among the products of Charles E. Miller at the Anderson Rubber Works, in Anderson, Ind. The firm is now giving special attention to its "Block Tread" tire which embodies Sea Island cotton fabric of the same weight and quality that is used in high grade automobile tires. Three plies of the heavy fabric extend from bead to bead, and two plies run up the side of the tire above the bead about an inch; these plies also extend around the point of the bead and up on the inside so that there are five plies of cloth at the beads to prevent splitting and rim-cutting. The Miller corrugated tire embodies the same high class material and workmanship as the non-skid tire, but is of lighter weight. The firm gives special attention to vulcanizing outfits.

Charles E. Miller.

THE Des Moines (Iowa) police department is now in possession of two motorcycles for use by the park and street squads.

PRIZ

MOT
LUGGA

IN the March 7 issue of MOTORCYCLE ILLUSTRATED this paper announced a Luggage Carrier Contest, and offered prizes of $25 and $15, respectively, for the best and second best designs for a perfectly efficient commercial luggage carrier.

Since the publication of that issue, designs have been submitted at the rate of fifteen or twenty a week. Thirteen suggestions were published in the April 4th issue of this paper. Twelve are presented herewith, and as many more drawing are in the hands of the engraver, and will be reproduced in the May 2 issue. As the contest dces not close until June 1, there is still plenty of opportunity for ingenious riders to win one of the prizes. The conditions under which the contest is being conducted are as follows:

1. All are eligible and each contestant may submit as many designs as he chooses.

2. The idea submitted must embody a luggage carrier suitable for attachment to a motorcycle and adapted for conveniently carrying a number of small parcels of moderate weight.

3. Sketches must accompany descriptions, but these drawings need not be either artistic or absolutely accurate. A rough sketch will do, but the description should be complete, with all the details carefully noted. Prizes will be awarded according to the *practical value* of the *ideas* presented, and not the symmetry
the drawings.

4. The prize winners will be determine
by a committee of three disintereste
persons.

5. Three Dollars will be paid durin
March and April, and Two Dollars du
ing May for *every* suggestion consider
deserving of publicity through the co
umns of this paper.

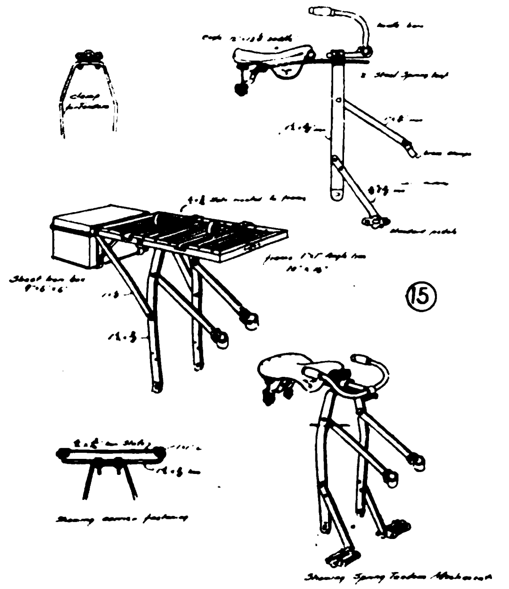
6. In the event of a tie for first, secon
or both prizes—a very improbable resu
—the prizes will be equally divided.

7. Competitors are requested to a
dress all their communications as fo
lows: "Luggage Carrier Contest, Moto
CYCLE ILLUSTRATED, 51 Chambers stre
New York City."

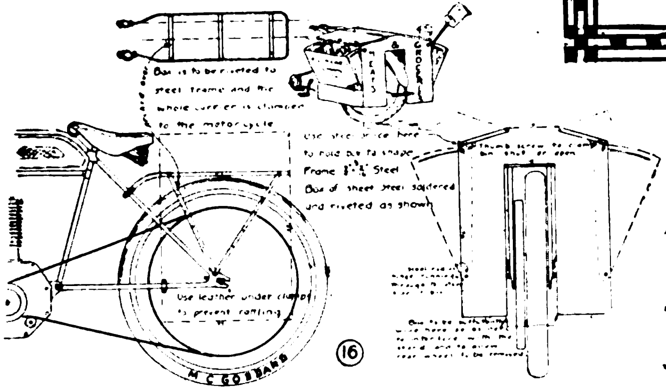
The designs reproduced on these tw
pages, and the page following, may
briefly described as follows:

14. Combination luggage carrier a
tandem attachment, rigged on a sto
tandem attachment frame. The arrang
ment enables quick removal or replac
ment of either the "light delivery" or pa
senger rigs or the substitution of o
for the other, by removing nuts A and
and bolts C C. Approximate cost, le
the V-clamp shown, is $1.25. Contribut
by H. E. Winslow, Providence, R. I.

15. Combination luggage carrier a
tandem attachment, with 1 in. x 1 i
angle iron frame, and ½ in. x 3-16 i



⑮



Box is to be riveted to steel frame and the whole carrier is clamped to the motorcycle
MEATS & GROCER
Use steel brace here to hold box to shape
Frame 1"×¼" Steel
Box of sheet steel soldered and riveted as shown
Thumb screw to clamp box shut or open
Use leather under clamp to prevent rolling

ap iron riveted on. Rear box of 9 in. 6 in. x 6 in. sheet iron, made water-ght, used generally to carry spare tin carbide and inner tube. Spring taken om one used on a motor car, and ad-stable in length to carry any passen-r's weight. Contributed by G. Harold nase, Dorchester, Mass.

16. Parcel carrier, attached to mud-uard with frame of ¾ in. x 3-16 in. eel, fastening by rivets. Braces at-ched to frame of motorcycle by the me bolts that hold the mudguard sup-ort. Side-sway prevented by connection horizontal frame of machine as shown. arcel box of 36 gauge sheet steel (B. d S.), soldered and riveted at joints. as bin doors, providing room for bulky ackages by clamping open doors. Ar-angement gives low center of gravity and asy removal of rear wheel. Capacity, 50 lbs. and weight empty, about 35 lbs. ontributed by Murray C. Goddard, nionville (Lake Co.), Ohio.

17. Rear carrier with tubular framing nd wire-work panels. Stays of solid ods, from axle to upper rear sides; ad-ustment by nuts to tighten up according o load. Wheel revolves in a 6 in. well, nd mudguard here forms bottom to car-ier. Cover has spring lock, and hinges t front. Weight empty 13 lbs., and has a apacity of about 7 cubic feet. Con-ributed by J. G. Hogg, Toronto, Canada.

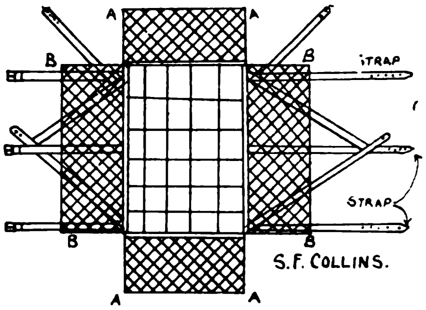
18. Side pannier and rear box carrier, for light delivery, such as druggist's service, letters, etc. Boxes of willow reed, in duplicate on each side, held by braces as shown. Contributed by Thomas O. Wansleben, Washington, D. C.

19. Carrier of folding type, of wire netting. End and sides hinge on body and fold, ends first and sides last. Point A then fits hole at B, end straps holding in position. Contributed by S. F. Collins, New Straitsville, Ohio.

20. Rear carrier of steel construction used by poultry farmer for transportation of fowls and dairy products. Cage double-decked with doors on one side, trays carried from base of cage. Capacity, 25 fowls, packed. Weight fitted, 25 lbs. Contributed by Leroy F. Hiss, West Pullman, Ill.

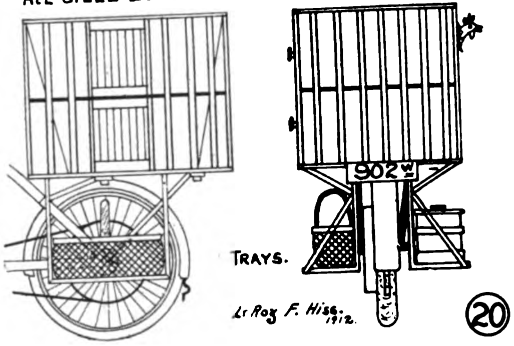
21. Rear carrier of sheet steel with rear doors when used for small packages. Top removable for use with larger packages. Box fastened to carrier by four bolts, making it readily removable. Contributed by W. E. Palen, Atlanta, Ga.

22. Rear carrier for groceries and small packages. Frame attached below saddle and to stand hinges, and has bottom braces, supporting box bottom. Frame covered with heavy hail screen and oil-cloth lined. Cover can be used as basket. Contributed by Fred Andregg, Hoxie, Kan.

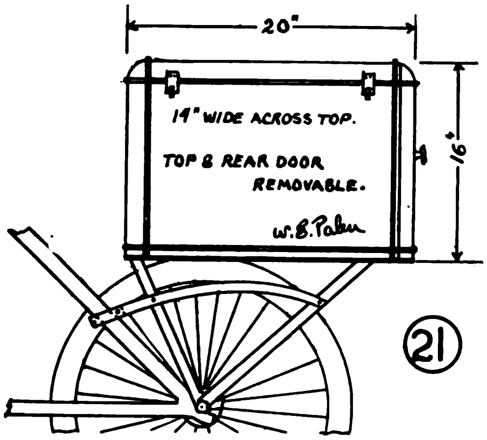


⑲

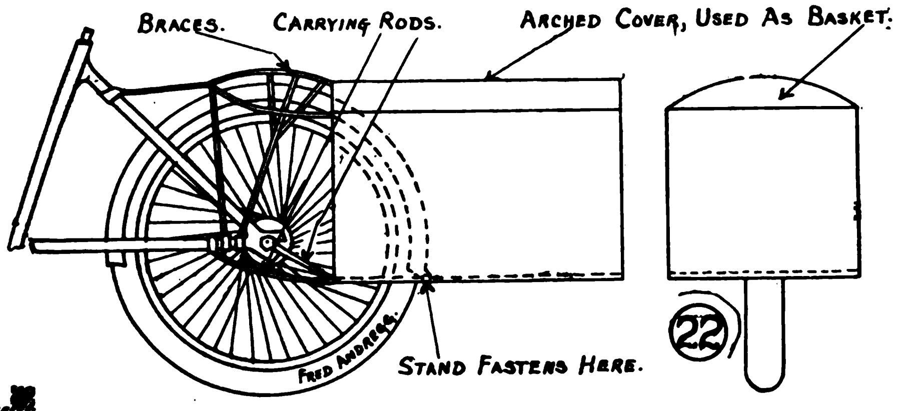
ALL STEEL DOUBLE-DECK POULTRY CRATE.



⑳



㉑

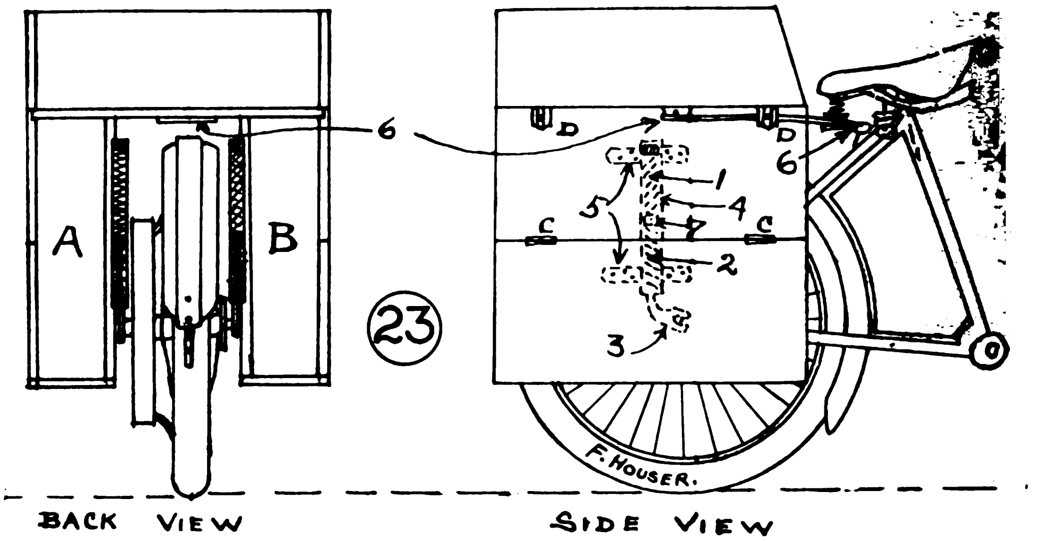


㉒

23. Rear carrier of wood construction with reinforced corners, supported between springs 1 and 2. Springs 1 carry load and 2 care for recoil. Fasten to axle by rods 3 and, and between the springs at 7. Spring-containing tube shown at 4, attached to carrier by straps 5. Another attachment shown at 6, having a hinge clamp to allow of motion on springs and prevent side-sway. Sides A and B are 6 ins. wide, with outwardly-opening doors hinged at C. Contributed by Frank Houser, Palmyra, Wis.

24. Front carrier of slat-work, with wood slats riveted to straps and attaching to handlebars. Cross roll detachable by buttons as per small sketch. Adaptable for square or irregular packages, or for cylindrical or round parcels when short roll is detached. Contributed by Walter Holmberg, Duluth, Minn.

25. Rear luggage carrier of strap and sheet iron. Base of carrier made of 1/8 in. x 1¾ in. strap iron, supports and fasteners of 1/8 in. x ¾ in. steel. Top which forms sides and ends made of 1-16 in. sheet iron. When closed can be used to store rain-coat, etc.; when half-open, used for small bundles, and when fully open for large bundles or a bushel basket. Contributed by Bob M. Allan, Detroit, Mich.



THE executive board of the Des Moines Motorcycle Club filed articles of incorporation recently with the secretary of State.

POOR ROADS IN VANCOUVER

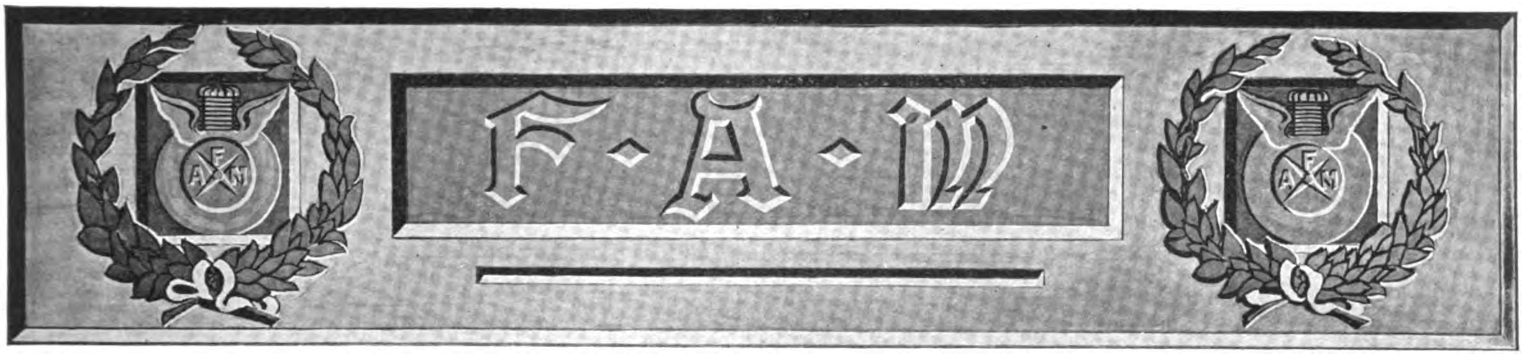
Opening Run of Club Was Postponed Because Course Was Impassable—American Machines Popular.

OWING to continued rains the Vancouver (B. C.) Motorcycle Club was obliged to call off its first endurance run of the season, and it is not likely that further efforts will be made to hold road events until the weather is definitely settled. Some of the roads over which the riders were to travel are almost impassable for pedestrians at this time and an attempt to navigate them on motorcycles would have been foolhardy. The club will hold a hill-climb in about a month and many of the riders are worried because there are no indications that the new model machines will be on hand in time for the event. Some orders for machines placed last November have not yet been filled.

The Exhibition Society recently conferred with the club with a view to having motorcycle races at the annual fair in August and three motorcycle events will be held each evening. Late reports from Vancouver are to the effect that American machines are now being used almost exclusively in the city. Last season brought out a number of English makes, but so far this year no British types have appeared in the streets. It is argued that the double gas and air control on English machines render them unsuitable for use in a hilly country of poor roads like British Columbia. These controls require most careful manipulation in climbing hills and in rough going a little excess air stalls the motor and often leaves the rider in a serious predicament. "It is small wonder," writes a Vancouver enthusiast, "that the riders of our city sell their English mounts quickly and buy American models. The latter are infinitely better suited to our rough and hilly roads."

WEBSTER IS PRESIDENT.

AT a recent meeting of the Columbus M. C., Dr. P. C. Sarver, who had been president of the organization for the past year, resigned his position and he was succeeded by Charles Webster, who has been acting as vice-president. Albert Waldschmidt, electrician at the local barracks, was elected vice-president to fill out Mr. Webster's unexpired term. Arrangements have been made by the club for the first run to be held Sunday April 28 to Bellefontaine, Ohio, and back.



WHAT'S THE MATTER, DEALERS?

"DEALERS, repairers and F. A. M. officers in twelve States and the District of Columbia evidently are not aware that the F. A. M. is making good its promise and issuing a list of registered shops," writes Chairman Estabrook, of the membership committee, "for not one shop has been listed from the States in question. This indicates a woeful lack of interest and a deplorable lethargy on the part of trade men. Certainly all the dealers in the country were given fair notice that the F. A. M. had this list in preparation and still shop proprietors in these districts have disregarded an opportunity to reap the benefits of publicity by having their names included. It may seem strange, but the list shows no shop representatives from Arizona, Arkansas, Delaware, Louisiana, Mississippi, Nevada, New Mexico, North Dakota, Oklahoma, Vermont, West Virginia, Wyoming and the District of Columbia.

RECRUITING STATIONS.

FORTY proprietors of repair shops obtained certificates of registration for the F. A. M. during the month of March, bringing the total up to 608. Recruiting stations for the F. A. M. have been installed with the following newly-registered shops during the past ten days: Wilkins & Grove, 12 West High street, Springfield, Ohio; Stockton Motorcycle & Supply Company, 439 East Weber avenue, Stockton, Cal.; Yale Cyclery, 914½ 10th street, Modesto, Cal.; Roy L. Smith, Logan, Kan.; C. J. Hendrickson, 161 West Front street, Red Bank, N. J.; G. W. Smith, 43 American avenue, Long Beach, Cal.; O. Ray Stanfield, 501 North Buckeye street, Kokomo, Ind.; Stevens Cycle Company, 113 State street, Madison, Wis.; Charles J. Durheim, 51 Western street, Muskegon, Mich.; Wood & Brussel, 99 South Third street, Muskegon, Mich.; N. P. Hansen, 22 South Terrace, Muskegon, Mich.; A. P. Tyler, 919 Grove street, Boise, Idaho; John L. Miller, 1115 Delaware street, Paulsboro, N. J.; W. B. Schaeffer & Co., 27 East Second street, Dayton, Ohio.

ON THE REGISTERED LIST.

AMONG the latest shops to take out F. A. M. certificates of registration are the following: Motor Sales Company, 401 Market street, Sandusky, Ohio; Samuel F. Saylor, 700 N. 10th street, Reading, Pa.; Vincennes Motor and Bicycle Supply Company, corner Seventh and Broadway streets, Vincennes, Ind.; Michel Hirschberg, 28 E. Fifth avenue, Gary, Ind.; Laurence Conly, Main street, Herkimer, N. Y.; Wright & Meisenholder, Parkston, S. Dak.; Samuel A. Flamm, 2520 N. Broad street, Philadelphia, Pa.

HOWELL WOULD REVISE LAW

Secretary of State in Washington Favors Several Important Changes in Motorcycle License Statute.

I. M. HOWELL, Secretary of State in Washington, is of the opinion that the motor laws of his State should be revised He argues, for instance, that the tax on motorcycles should be payable on January 1 of each year, and that there should be proportionate quarterly payments to cover machines bought throughout the year. He contends that motorcycles should carry license numbers in front as well as in the rear, but is of the opinion that owners of machines should not be compelled to carry four-inch numbers because this regulation necessitates the use of a cumbersome tag. Secretary Howell declares that all number plates should be obtained from the State and that the color of the tags should be changed each year so that a single glance will enable officials to determine whether a rider is carrying a proper license. At present it is necessary for an officer to examine a registration book before he is able to decide whether a motorcyclist is delinquent.

For the past two years Secretary Howell has tried to save the numbers under 1,000 for motorcycles so that the license plates need not be too large, but he has been hampered in this by the automobilists who desire to keep their original numbers when taking out new licenses. However, he is now filling out all the old numbers under 1,000 with new motorcycle registrations. Statistics for 1912 to date indicate that there is plenty of activity in the motorcycle field and it is believed that the number of riders in the State will be doubled during the summer.

MAPPING GEORGIA ROADS.

AN interesting visitor to the quarters of the Augusta (Ga.) Motorcycle Club recently was Ernest Daine, of Rockford, Ill., who is making road maps of Georgia for the Scarborough Map Company, of Indianapolis, Ind. Daine started out of Albany, Ga., on January 25. On his single cylinder Harley-Davidson he has ridden some 4,000 miles of Georgia roads, covering all of the southeastern portion of the State.

His experiences have been many and varied. Good roads, bad roads and no roads at all have been his lot. He says that the people of the sections of the State through which he has passed all seem awake to the value of good highways, and that extensive road improvements are being carried on. The roads between Augusta and Savannah he states are in good condition. He is much pleased with the splendid roads around Augusta and says that his run over the highways leading into Augusta was the best day's riding he had.

LAMP WINNERS FOR MARCH.

FOURTEEN clubs entered the F. A. M. membership contest for March and the four standing highest, as given below, will receive handsome Old Sol lamps donated as prizes by the Hawthorne Mfg. Co., of Bridgeport, Conn. The Modesto (Cal.) M. C. brought 34 new members into the F. A. M. ranks during the month, and as a result is entitled to two of the lamps; the Attleboro (Mass.) M. C. was a good second, bringing in 29 members and winning one lamp, and the Muskegon (Mich.) M. C. affiliated 20 members and carried off one of the prizes. As was previously announced Chairman Estabrook, of the membership committee, will award four lamps each month until the first lot of twenty-five given by the Hawthorne company is disposed of. In the fall another contest will be inaugurated for which the Bridgeport firm will donate twenty-five more lamps. The clubs winning lamps in these contests will use them as trophies for some sort of a club event.

SIX MORE F. A. M. SQUADS.

NEW F. A. M. club arrivals have been listed as follows: Harley-Davidson Motorcycle Club, Philadelphia, Pa., F. R. Shenh, secretary, 2204 N. Broad street, 19 members; Attleboro (Mass.) Motorcycle Club, C. H. Obrist, secretary, 22 Fourth street, 31 members, 100 per cent.; Herkimer (N. Y.) Motorcycle Club, T. E. Kelley, secretary, 215 Dewey avenue, 22 members, 100 per cent.; Valejo (Cal.) Motorcycle Club, D. R. Rutherford, secretary, Box 382, 14 members; Whittier (Cal.) Motorcycle Club, Horace B. Miller, secretary, Rivera, Cal., 13 members; Bay Ridge Motorcycle Club, Brooklyn, N. Y., R. G. Hann, secretary, 859 61st street, 17 members.

WASHINGTON RACES.

THERE was a creditable turnout of members of the National Capital M. C., of Washington, D. C., for the postponed run to Great Falls, which was held on Sunday, April 14. The riders were in two divisions, the first, for single-cylinder machines, being led by Captain George W. Beall, and the second, for twin-cylinder mounts, led by First Lieutenant Samuel McPherson. The first squad pulled away from the clubhouse at 9 a. m., and the other division left half an hour later.

At the last regular meeting of the club final arrangements were made for the race meet to be held at the Bennings track on Memorial Day. Entry blanks may be obtained on application to Treasurer H. B. Cohen, 1812 Ninth street, N. W.

BALTIMORE motorcyclists are arranging to enter the Decoration Day races planned by the National Capital Motorcycle Club.

MOTOR TROUBLE CHART

ENGINE TROUBLE

Assuming that the engine has been running well until the trouble develops.

> **NOTE**
>
> **Troubles which perhaps might only cause misfiring in a twin or four cylinder motorcycle may result in the complete stalling of a single; therefore, the user of this chart, in trouble with a single cylinder, should turn first to ignition and carbureter troubles.**

- Engine stalled
  - Compression normal
    - No spark when contact is made
    - Strong spark (is gasoline tap open?)
  - No compression
    - Externally shown causes
    - Internal causes
  - Pulley or sprocket will not revolve; caused by Overheated engine (see external cause above).
    - Also Crank shaft or connecting rod bearing seized.
    - Crank shaft bent or broken.
    - Timing gear jammed or broken.
    - Connecting rod bent or broken.
    - Connecting rod adrift.
    - Piston seized. Flywheel jammed.
- Engine misfiring or very difficult to start
  - Ignition trouble
    - Magneto ignition
    - Battery ignition
  - Carbureter trouble
    - Fuel supply (tank and pipe line)
    - Carbureter difficulties
- Loss of power, though no misfiring.
  - Muffler or pipe obstructed.
  - Weak valve springs.
  - Leaky inlet valve pipe.
  - Mechanical trouble
    - Externally apparent
    - Internally apparent
  - Lubricating failures.
  - Leaking valves.
  - Weak batteries.
  - Valve timing wrong.
  - Worn cams or push rods.
  - Ignition adjustment disturbed or set wrongly.
  - Carbureter adjustment disturbed or set wrongly.
  - Compression lost internally through worn piston rings, etc., or externally by leakage at plug, petcock or valve cap.

gneto ignition
- Armature shaft not revolving.
- Cable to switch short-circuited.
- Contact points burned, pitted or separated by dirt.
- Loss of magnetism in field magnets.
- Insulation in wiring broken down.
- Contact screw slipped out of adjustment.
- Contact spring broken.

ttery ignition
- Weak battery.
- Defective coil.
- Spark plug or wiring.

rburetion
- Carbureter flooded
  - Float mechanism stuck.
  - Dirt under float-valve.
  - Float-valve leaking.
  - Float punctured or clogged.
- Apparently normal fuel level in float chamber
  - Throttle valve disconnected.
  - Air valve stuck or spring weakened.
  - Air vent passage blocked.
  - Spray nozzle blocked.
  - Adjustment level, nozzle and air valve.
- No fuel in float chamber
  - Tank empty or tank vent blocked.
  - Gasoline tap shut off.
  - Feed pipe broken or blocked.
  - Float mechanism stuck.

ning of spark
- Circuit breaker shifted.
- Timing gears slipped.
- Magneto gear shifted.

lves not lifting.

igine overheated
- Lubrication failure
  - Run out of oil.
  - Oil feed pipe blocked.
  - Oil frozen (in very cold weather).
- Engine overheated from other causes.

ming pinion loose, or timing gear stripped.

ible to switch short circuited; examine for faulty insulation, etc.
ark plug fouled or broken.
igh tension wire disconnected.
ug points set too far apart.
ntact-breaker points pitted or dirty.
ss of magnetism in the field magnets.
eak battery.

rong battery
- Spark plug fouled or broken.
- Spark plug points too far apart.
- Wire to plug shorted or disconnected.
- Wire from battery connection or timer to coil broken or disconnected.
- Vibrator stuck, burned or dirty.
- Tension on vibrator wrongly adjusted.
- Coil condenser damaged.
- Insulation in coil damaged.
- Circuit breaker worn, dirty or points burned.
- Circuit breaker spring weakened.

ink nearly empty.
ir vent stopped up.
iel tap partly closed.
iel pipe blocked up.
'ater in gasoline.

ixture too rich
- Float valve leaky.
- Fuel adjustment loose.
- Air valve clogged.

ixture too weak
- Above causes, also
  - Fuel adjustment partly closed,
  - Air valve spring weakened or broken,
  - Air vent to float chamber blocked,
  - Dirt or water in float chamber,
  - Intake pipe leaky.

'alve stem or spring broken.
'alve stem bent or gummed.
'alve spring weak.
'alve clearance wrong.
luffler or exhaust pipe blocked.

ylinder and valves carbonized.
'iston rings gummed or broken.
'iston ring slots in line.
'iston head or cylinder wall cracked.
'iston rings and cylinder walls scored.

HOW TO USE THE CHART

An example—Suppose your engine stops. Try its compression. If you find that normal, also assuring yourself that spark is strong and properly timed, then the chances are you have carbureter trouble. Ascertain the cause and remove it.

The principle of this Chart is that of systematically eliminating possible causes until the real trouble is learned.

With the Clubs

LANTERN PARADE A SUCCESS

One Hundred Motorcyclists Participated in Novel Pageant in Savannah and Later Enjoyed Fine Supper.

SAVANNAH, GA.—With about 100 handsomely decorated machines in line the Savannah M. C. made a huge success of a lantern parade held recently, over 5,000 spectators being lined up in the streets to see the riders pass. The route included all the principal streets of the city, and totaled about 37 miles. The color scheme throughout the decorations of the machines was black and yellow, the official colors of the Savannah club. After being led over the line of parade by three motorcycle officers the club riders and guests enjoyed a supper and a social program. The photograph shows the boys ready to begin operations at the festive board. It is explained, by the way, that the keg in the foreground contains only "near-beer," as Savannah has, to all intents and purposes, been a prohibition city for several years past. However, the boys admit that the beverage served on this occasion was quite "near."

During the supper the boys were addressed by President Otto Kolb, of the Club; Captain Clark, O. A. Meyer, motorcycle editor of the Savannah *Press* and others. The next social program of the club will be held about May 1, and 100 covers will be laid for the club riders and their friends.

THE Rochester (N. Y.) M. C. is supporting the Cleveland motorcyclists in their contest for the next F. A. M. meet.

CLUB WORKERS AT SHOW.

THROUGH the courtesy of the automobile dealers of the city the Louisville (Ky.) Motorcycle Club occupied a booth at the recent automobile show, at which the club members welcomed visiting riders and worked for the general advancement of the sport. They were supplied with attractive folders telling of the club's aims, the varied advantages of the motorcycle and the F. A. M.

NEW TRAYMORE QUARTERS.

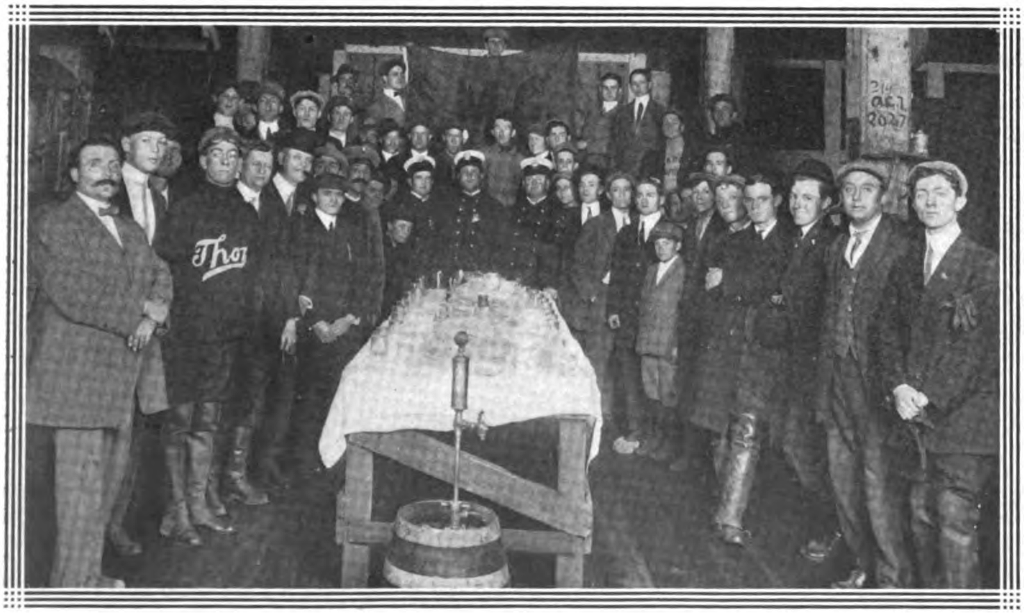
THE Traymore M. C., of Philadelphia, Pa., recently met in its new quarters at 623 West Girard avenue and discussed plans for runs to be held early in the summer. The rooms are well fitted and the riders spend much time in them. A. J. Schickling now heads the squad as president, and his associates are H. Gerlach, vice-president; William German, recording secretary; Clem Kieffer, treasurer, and Henry Warker, secretary.

LEMOORE RIDERS ORGANIZE.

THE Lemoore (Cal.) M. C., with twenty members, is preparing to affiliate with the F. A. M. The squad organized recently with the following officers: R. E. Morris, president; William Tingley, vice-president; Charles R. Fox, secretary-treasurer; Gordon Lewis, captain; Victor Smith, first lieutenant; Clarence Morris, second lieutenant.

OLD DOMINION MEET.

A RACE meet was held recently on the State Fair Grounds at Richmond, Va., under the auspices of the Old Dominion M. C.

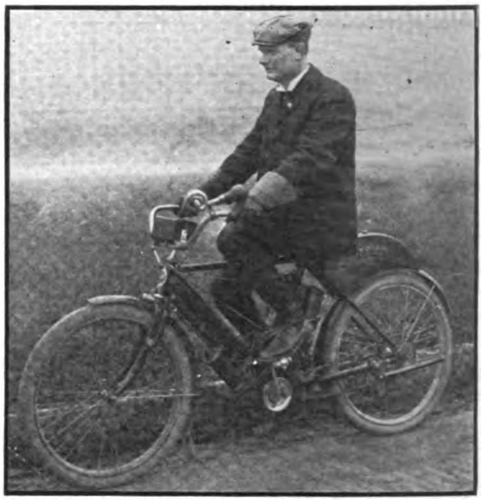


Banquet Recently Enjoyed by Savannah Club Members and Friends.

HUGHES RESTS ON LAURELS

Louisville Worker Declines Re-Election to Club Presidency but Announces That He Is Still in the Ring.

AFTER having acted as the father of organized motorcycling in Louisville, Ky., E. M. Hughes, one of the best-known motoring enthusiasts in his district, declined re-election to the presidency of the Louisville club at a recent meeting, and in future he will not be quite so active in the affairs of the organization. He wants it distinctly understood that he has not "deserted the ship"—Hughes is anything but a deserter—but he explains that from now on he will be content to figure less prominently in the operations of the Louisville squad. It was Hughes who induced F. I. Willis to visit Louisville and assist in the organization of the local club, and he has played no small part in the development of the field throughout his territory. While he remains an enthusiastic motorcyclist Hughes does not now confine himself to the single-tracker and among his possessions are a motorboat and an automobile.



Mr. Hughes states that he began his motorcycle career as soon as he could find a motor-driven two-wheeler to ride, and for years past he has been active in races, hill-climbs and endurance runs. The accompanying photograph shows the Louisville boomer astride a 1908 Indian, a machine of which he was very fond, but which has been superseded in his affections by later models.

FRED THORPE, sub-agent for the Indian and Reading motorcycles in Philadelphia, formerly at 2126 Market street, has removed to more commodious premises at 1810 Market street.

UTICA RUN ON MAY 5

Riders Are Anxious to Meet Syracuse Squad on Run to South Bay and Hope for Fair Roads.

AT a regular meeting of the Utica (N. Y.) M. C., held at the clubrooms on April 4 it was decided that the first run of the season will be held on Sunday, May 5. It was difficult, at latest reports, to make definite plans for the run, as it is now known whether the roads will be in condition, but it is expected that the club will, at least, be able to make the run to South Bay. The riders have taken this matter up with the Syracuse M. C., and the Utica boys are hoping that the Syracuse riders will be able to meet them there. South Bay is situated on Oneida Lake, about halfway between Utica and Syracuse, and the State road between these cities will probably be the first one to get into ridable condition.

The Utica club is also in correspondence with the clubs in Rochester, Batavia, Cortland, Elmira and other nearby towns, with a view to planning for some combination runs later in the season. Several members of the Utica squad are making arrangements to attend the Elmira races on Memorial Day and also the F. A. M. convention this summer. At the last meeting, John J. Weiler resigned as secretary-treasurer of the club on account of the pressure of other work, and the vacancy thus caused was filled by the election of George E. Girvan. Any communications addressed to 58 St. Vincent street will reach him. Five new applications for membership were received and a social session with refreshments was enjoyed after the meeting.

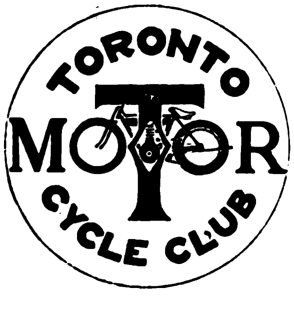
LEXINGTON RIDERS ORGANIZE.

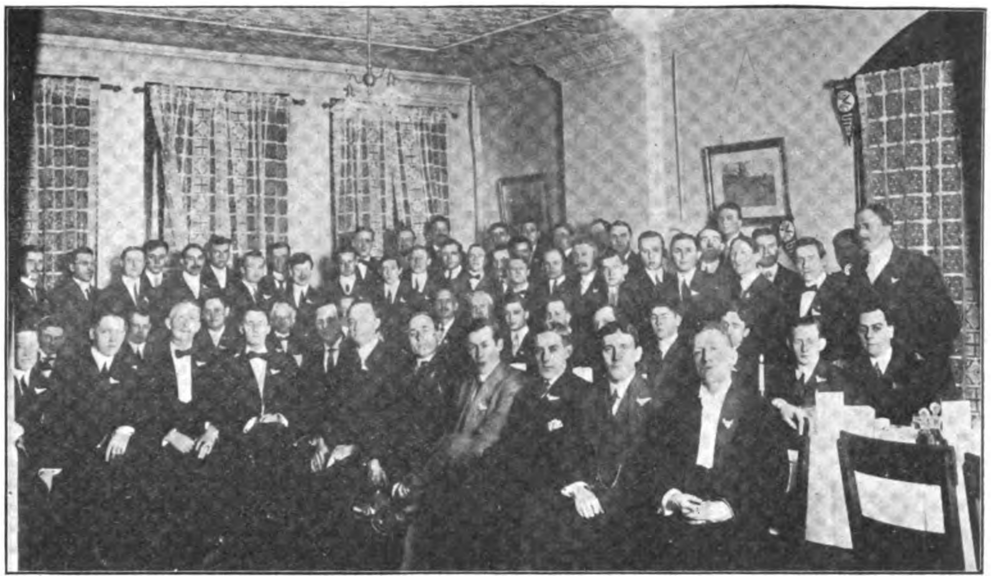
LEXINGTON (Ky.) motorcyclists have organized under the name of the Blue Grass M. C., and at a meeting held recently in the establishment of C. D. Calloway & Co., the following officers were elected: Curry Tunis, president; Stuart Tracy, vice-president; H. W. Moores, secretary and treasurer. The committee on by-laws is Stuart Tracy, Rice Walker and Oscar Lyne.

The club begins its career with twenty-five members, including the following: Messrs. Elwood Akers, R. H. Hebron, C. B. Stewart, Oscar Lyne, Chester Reese, Chester Dwyer, Richard Shryock, Raymond Randolph, Curry Tunis, C. D. Calloway, George Morgan, Rice Walker, C. K. Moores, H. W. Moores, Stuart Tracy, Walter Hillenmeyer, Elbert Jones, Robert Garrard, R. D. Norwood, James Herr, Pete Garrard, Stanley Nelson, Jack Tunis, Monroe Smith and Whitney Dunlap.

TORONTO EMBLEM.

RECENTLY the Toronto (Ont.) M. C. adopted the crest shown in the accompanying illustration and it is now being used wherever possible by the organization. While distinctive in make-up the symbol is of such a character as to permit of its being quite generally used on stationery, etc., and it is likely that some of the riders will have it reproduced on special plates to be carried on their machines during the coming season.





Taken at Recent Banquet of Utica Club. Photo Sent by H. G. Buckley.

CLUBS ON JOINT RUNS

Baltimore Squads Enjoy Sunday Outings Over Picturesque Routes Despite Bad Weather.

BALTIMORE, MD.—Motorcycling in this section is on the boom and on Sundays, despite the unfavorable weather, owners of machines can be seen spinning around the country. On Easter Sunday the members of the Maryland M. C., Indian M. C. and the Touring Club of Maryland held a joint run. They went down to North Point, led by Capt. Matt Gault, who was out for the first time since last fall. When the city was reached the enthusiasm was so great that the riders started off for Laurel, but before they could get back home a severe storm came up and they were drenched. However, the new enclosed magnetos made it possible for the boys to go along smoothly in the rain and the only inconvenience they suffered was an involuntary bath.

On Sunday, April 14, the clubs held another joint run. The plan had been to go to Ridgeville for dinner, but the threatening weather put a crimp in the plans and as a result short spins were taken through the beautiful Green Spring Valley and to Laurel. The roads were found in good shape, despite the rains, and the boys held a few impromptu speed contests on the fine stretches. Four of the local riders went out of town on their machines the Saturday before Easter and came back on Sunday. They were David W. Bridges, Samuel Congdon, Will Black and Clarence Crook. They went up to Hanover, Pa., and had a fine trip going and coming. They got back home just in time to escape a storm.

The Maryland M. C. is planning to hold a road contest on Decoration Day owing to the inability to hold track races in this city. The club has decided to offer gold and silver medals to the riders who attended the most Sunday runs, beginning April 14 and ending on December 31. A ladies' night will be held at the clubrooms in the near future.

The Indian M. C., the newest organization, is growing rapidly. Harry S. Fisher has been chosen as official photographer for the club. At the last meeting William Wood, Maryland F. A. M. Commissioner, addressed the boys on the rights of motorcycles on the highways. He also took a whack at the open muffler fiend and useless scorching on the pikes. Capt. Fisher, of the Indian M. C., is again taking an active interest in motorcycling and a few days ago joined the Maryland M. C. Nelson Johnson, the Terrible Swede, will also get into harness again after a layoff of a long time. A new speed king has cropped up in the form of Roger Wilkens, who has been passing everything on the road lately. He is out for all kinds of honors and intends to participate in all the races and contests pulled off in this section.

GOING TO INDIANAPOLIS.

ABOUT twenty members of the Lima (Ohio) Motorcycle Club have made arrangements to attend the automobile races at Indianapolis on Decoration Day, making the cross-country trip on their motorcycles. Many of them have already obtained their tickets for admission to the speedway. This will be the first cross-country trip of the club members this season, although many others are planned.

The club has fine quarters in the Pabst block on West High street, and is in a flourishing condition. It started with a membership of thirty, which is now more than doubled, with applications rolling in from this city and neighboring towns.

H.-D. CLUB IN FULL SWING.

HARLEY-DAVIDSON riders of Philadelphia, Pa., recently formed the Harley-Davidson M. C., with forty members. The officers of the club are: President, H. B. Sellers; vice-president, Elwood C. Rorer; secretary, F. Ralph Shenk; treasurer, Howard Kolp; captain, Alexander Klein, agent for the company; first lieutenant, William Jaggards; second lieutenant, Vincent Buhl. A benefit was given the week beginning February 19, in the Grand Opera House, when "The Third Degree" was successfully performed. The funds realized will be devoted to the furnishing of the new clubhouse, which will be opened soon at 1308 Cumberland street. A supper will be given to the members on the occasion of the opening.

CENTRAL JERSEY SQUAD.

FORTY-EIGHT riders are now listed with the Central Jersey M. C., of Trenton, and the club boomers believe this number will be increased to seventy-five before the summer is half over.

Touring

TO JACKSONVILLE, FLA.

GEORGE A. TAYLOR.—Go over to Atlantic City and from there go to Philadelphia via Absecon, Hammonton, Berlin, Overbrook, and Camden. From Philadelphia go to Baltimore via Chester, Wilmington (Del.), Newark, Elkton, Perryville, Havre de Grace, Belair, and Towson. From Baltimore go to Washington (D. C.) via Laurel. From Washington go to Richmond (Va.) via Fairfax, Manassas, Culpeper, Orange, Gordonsville, Louisa and Solomons.

From Richmond go on to Petersburg, Emporia, Henderson (N. C.), and Raleigh. From Raleigh go to Haywood, Sanford, Lakeview, Southern Pines, Pinehurst, Jackson Springs, Rockingham, Cheraw, Camden, Blaney and Columbia (S. C.). From the latter city go to Lexington, Leesville, Aiken, Langley and Augusta (Ga.). From Augusta go next to McBean, then to Waynesboro, Millen, Rocky Ford, Eden and Savannah. From Savannah go to Ricebron, then to Darien, Brunswick, Sterling, Owens Ferry, Kings Ferry, Callahan, and Jacksonville. The total distance is 1,231 miles. Intermediate distances are: Atlantic City to Philadelphia, 62.1 miles; Philadelphia to Baltimore, 108.4 miles; Baltimore to Washington, 44 miles; Washington to Richmond, 179.6 miles; Richmond to Henderson, 145.9 miles; Henderson to Raleigh 44.8 miles; Raleigh to Pinehurst, 81.7 miles; Pinehurst to Cheraw, 57.6 miles; Cheraw to Camden, 85.4 miles. From Camden to Columbia is 32.7 miles, and from Columbia to Augusta, 75.2 miles. The distance between Augusta and Savannah and Savannah and Jacksonville are, respectively, 132.6 miles and 176.5 miles. Road conditions fair to good on the average, but there may be rains in Florida at the period you mention. Allowing 100 miles per day the trip would take 12 days to two weeks. Thus the first day would be from Atlantic City to Philadelphia and possibly through to Baltimore. The second day's trip would be from Baltimore to Washington; the third day's to Richmond, etc.

If the reciprocation clause in the New Jersey automobile laws is passed (it is being considered now), you will be exempt as a non-resident rider there, and in Pennsylvania (10 days), Delaware, Maryland (two periods of 7 days each), Virginia, District of Columbia (the same as Maryland), North Carolina (only while passing through), Georgia (30 days), and Florida (30 days). There are local provisions in South Carolina. Address the clerk of court in the various counties you propose passing through (Marlboro, Chesterfield, Darlington, Lee, Kershaw, Richland, Lexington, Aiken). We think that you would have no trouble making the trip with the two-speed gear and tandem attachment.

A. A. ARMSTRONG, of Moran, Kan., is counting on delivering his mail over a twenty-six-mile route in three hours by riding a motorcycle.

NIGHT RIDING IN VOGUE

Good Roads Invite Motorcyclists to Make Tours by Moonlight, and Many Clubs Plan Such Outings.

"REPORTS show that during the last five years over 50,000 miles of new roads have been constructed throughout the country," said S. A. Falor, manager of the motorcycle tire department of the Goodyear Tire and Rubber Co., in a recent interview, "and it is certain that these improvements are working wonders for the advancement of the motorcycle. Towns heretofore almost inaccessible to the single-tracker now have bustling clubs, and it is becoming more evident daily that every new section of roadway raises a crop of enthusiastic motorcyclists.

"At present," continued Mr. Falor, "I don't believe the motorcyclist derives as much enjoyment from his machine as he should. He should go out into the country, take week-end trips and educate himself by getting into close touch with the territory about him. Above all things he should come to regard his mount as a vehicle of pleasure and healthful recreation—not as a speed-box with which to imitate a streak of lightning through the streets of a city. We must expect to find many motorcycles in the cities, but the essence of motorcycling enjoyment is reserved for the rider who seeks country roads and the paths that wind 'far from the madding crowd.'"

Mr. Falor has received a letter from England calling attention to the growth of night riding in the British Isles. It is stated that the outings sometimes last a week, the tourists riding from about 10 o'clock in the evening until six in the morning, when they turn in and sleep until 2 or 3 o'clock in the afternoon. The next six or seven hours are devoted to sightseeing, and the riders then take to the road again. In this way they avoid traffic troubles and other annoyances incident to daylight riding, see the country from a new viewpoint and still have all the time required for sleep. Several clubs in this country have completed plans for moonlight runs

ROAD CONDITIONS.

D. H. McDOWELL.—See the answer to Charles B. Hall in this issue for route from New York to Erie, Pa. This is the route taken for the 1911 F. A. M. Eastern Tour to Buffalo. Road conditions are: New York to Poughkeepsie, good macadam for the most part; Poughkeepsie to Albany, mostly good macadam and dirt; Albany to Little Falls, dirt and macadam, some poor stretches as near St. Johnsville; Little Falls to Syracuse, good roads for the most part, likely to be under partial construction; Syracuse to Rochester, good surfaces, but numerous canal bridges; Rochester to Buffalo, practically all macadam and good. From Buffalo to Erie, the earlier parts of the route are clay, the remainder being good gravel.

TO FOWLER, COL.

JOHN H. MARK.—Your main route will begin at Minneapolis and go through Owatonna, Albert Lea, Northwood, Mason City, Iowa Falls, Marshalltown, Newton. Follow the A. A. A. "Trail to Sunset" route from Newton to Des Moines, Omaha, Atchison, Leavenworth, Kansas City, Hutchison, Dodge City, Syracuse, Hollys (Col.), and La Junta. (See answer to Clifford Reeser, this issue.) From La Junta, Fowler is on the route to Pueblo. Write the American Automobile Association, 437 Fifth avenue, New York, or any of its branches, for maps covering this territory. Road conditions good from Minneapolis to Kansas City, variable the rest of the way. It would be a good plan to provide extra oil for the Colorado and Kansas portion of the trip. The 3½ h. mount should do it. For alternatives to the oil you now use, take any of the oils recommended by the larger oil makers, like Mobiloil B, etc.

A rear hub variable gear device can be obtained from the Armstrong Three-Speed Gear Works, Ricknield street, Birmingham, England, or from the Rex Motor Manufacturing Co., Coventry, England. The wheel must be reconstructed to fit the hub. For prices, etc., address the above. A motor shaft two-speed gear is the N. S. U. made by the Sun Motor & Supply Co., West 76th street, New York. The price is $45. This type of gear is, like all motor shaft devices, free from shock delivered to the road wheels, which is not the case when the device is in the hub.

ROUTE TO INDIANAPOLIS.

F. C. IRISH.—Your route from Westfield will carry you first to Cleveland through Erie, Girard, Conneaut (O.), Ashtabula, Geneva, Painesville, Mentor and Euclid. The distance is about 132 miles. From Cleveland go next to Columbus, 170.9 miles, through Elyria, Oberlin, Kipton, Wakeman, Norwalk, Monroeville, Bellevue, Republic, Bucyrus, Marion, Delaware and Columbus. From Columbus to Indianapolis the distance is 176.4 miles and the route Columbus, Alton, Lafayette, Somerford, Springfield, Dayton, New Lebanon, Eaton, Richmond, Centerville, Germantown, Dublin, Lewisville, Knightstown, Greenfield, Cumberland and Indianapolis. The total distance is 479.3 miles. Get a Pennsylvania license from the State Highway Department, Harrisburg, Pa., which will cost you $2. This will allow you to ride in most of the cities and towns of Ohio without fees as a non-resident rider, and also all over Indiana. You will be obliged to procure such a license, as New York riders being unlicensed, there is no proof that an unlicensed rider is from New York, and you can be held in each State for violation of the motor vehicle laws and fined heavily. Therefore, get a license as above.

WITH a view to advancing the movement now being waged against the open muffler the Modesta (Cal.) M. C. states that it will in future impose a fine upon every member who uses his machine cut-out within the city limits.

AVOIDING NEW YORK TRAFFIC.

CONDITIONS of traffic in New York City below 59th street, during business hours, are such that even an experienced motorcyclist might hesitate to undertake a trip through the metropolis with his single-tracker, and for the benefit of riders who are confronted with this problem the accompanying map has been prepared.

By following the routes indicated on the map a motorcyclist passing through the city en route to or from New Jersey and Connecticut would avoid the congestion of lower Broadway and find first-class roads. The route via Hackensack and Paterson has only one ferry against three by the other route, and is the most desirable one if that is the direction required.

On Sundays and after business hours the route from South Ferry northward through the city may be taken with satisfaction. Follow the Richmond road through Staten Island to St. George; cross the bay by the municipal ferry and then proceed up Broadway to 23d street (Madison Square). The route is then on Fifth avenue to 59th street (Central Park), and thence westward to Broadway or Riverside Drive for the remainder of the run through the city.

NEW YORK TO WASHINGTON.

LEROY H. OSBORN.—We give herewith the most traveled route between New York and Washington. Leave New York and go over to Jersey City; then out to Newark and over to Elizabeth. From the latter place go to Rahway, Iselin (bad railroad crossing), Menlo Park, Metuchen, New Brunswick, Dayton, Hightstown, Windsor, Edinburg and Trenton. From Trenton the route to Philadelphia go through Langhorne, La Trappe, Bustleton, and Ogontz. Total distance, New York to Philadelphia, 99.5 miles; roads good.

From Philadelphia go to Baltimore via Darby, Village Green, Chelsea, Wilmington (Del.), Newark, Elkton, Perryville (ferry), Havre de Grace, Churchville, Belair and Towson. Distance Philadelphia to Baltimore, 108.4 miles; mostly good roads, some poor dirt stretches in Maryland. From Baltimore go to Washington via Relay, Laurel, Blagdensburg. Distance, 44 miles; roads good, but a five-mile poor section from Laurel on. Total distance, New York to Washington, about 252 miles.

CUMBERLAND TO GREENVILLE.

E. G. B.—Follow the old Baltimore-Cumberland pike to Hagerstown via Hancock, Indian Springs and Clear Spring. From Hagerstown go over to Gettysburg via Waynesboro, Rouzerville, and Fairfield; this is a toll route. From Gettysburg go to Philadelphia via New Oxford, Abbottstown, York, Wrightsville, Columbia, Lancaster, Strasburg, Coatesville, Downington, Devon, Bryn Mawr, Ardmore (toll gates), and into Philadelphia. From Philadelphia go to New York via Ogontz, Bustleton, Langhorne, Trenton (N. J.), Princeton, Monmouth Junction, New Brunswick, Metuchen, Elizabeth, Newark, Jersey City and to New York by ferry. From New York to Erie (Pa.) via Albany and Buffalo, see the answer to Charles V. Hall in this issue and follow the route given from New York to Cleveland. From Cleveland go to Elyria, then through Oberlin, Norwalk, Monroeville, Bellevue, Republic, Bucyrus, Marion and Delaware to Columbus. From Columbus go on through Alton, Lafayette, Springfield, Donnelsville, Vandalia, Englewood, Arlington, Lewisburgh, and keep the National road to Gettysburg (O.). From this place go direct to Greenville, about 10 miles away.

ST. LOUIS TO KANSAS CITY.

HUGO A. SCHAENKY.—The distance from St. Louis to Kansas City, Mo., is 310.5 miles and the roads are generally fair. Macadam surface from St. Louis to near St. Charles, and again between Oak Grove and Kansas City. Remainder of roads dirt and clay varying from poor to fine. Intinerary: St. Louis, Wellston, St. Charles, Cottlesville, Wentzville, Forestell, Wright, Warrenton, Jonesburg, High Hill, New Florence, Montgomery, Wellsville, Martinsburg, Mexico, Thompson Station, Clark, Renick, Higbee, Yates, Armstrong, Glasgow, Slater, Marshall, Mount Leonard, Blackburn, Corder, Higginsville, Mayview, Oddessa, Oak Grove, Independence, Centropolis and Kansas City.

PHILADELPHIA TO KEENE, N. H.

B. TRUSCOTT.—Your route from Philadelphia to Keene via Boston will be as follows: Philadelphia to Trenton, N. J., 35 miles. Route, Philadelphia, Ogontz, Fox Chase, Bustleton, Langhorne, Oxford Valley, Trenton. Trenton to New Brunswick, 29.2 miles. Route, Trenton, Lawrenceville, Princeton, Kingston, Monmouth Junction, Dayton and New Brunswick. New Brunswick to New York, 35.3 miles. Route, Metuchen, Iselin (dangerous crossing), Elizabeth, Newark, Jersey City and New York City. From New York go next to New Haven, Conn., 73.6 miles. Route, New York, Bronx Park, Pelham Bay Park, New Rochelle, Larchmont, Momaroneck, Rye, Port Chester, Greenwich, Conn., Cos Cob, Mianus, Stamford, Noroton, Darien, Norwalk, Westport, Southport, Bridgeport, Stratford, Milford, Savia Rock, New Haven. From New Haven go next to New London, 53.1 miles. Route, Branford, Guilford, Madison, Clinton, Westbrook, Saybrook, Lyme, East Lyme and New London.

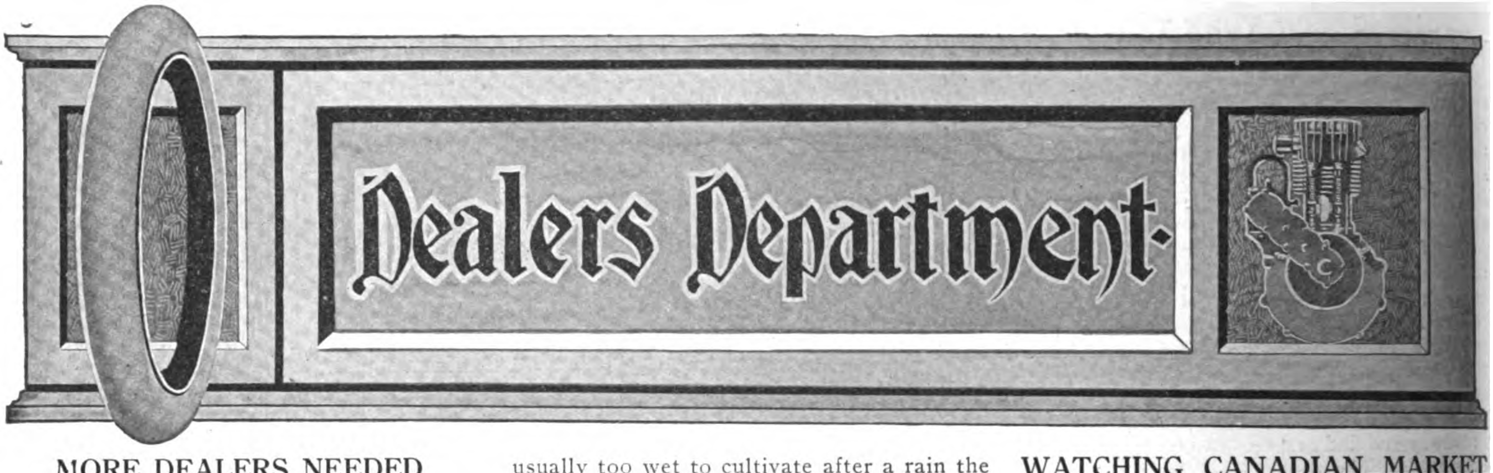
From New London go to Providence, R. I., 72.7 miles, as follows: New London, Mystic, Stonington, Westerly, Charleston (R. I.), Wakefield, Narragansett Pier, Saunderstown, Hamilton, East Greenwich, Apponaug and Providence. From Providence go to Boston, 45 miles, via Pawtucket, North Attleboro, Wrentham, Walpole, Norwood and Dedham. From Boston go to Fitchburg, 46 miles. Route, Boston, Watertown, Waltham, Weston, Sudbury, Stow, Bolton, North Lancaster, Leominster and Fitchburg. From Fitchburg go to Keene, N. H., 41.7 miles, via Ashby, Rindge, West Rindge, East Jaffrey, Jaffrey, Marlboro and Keene. Total distance, 431.6 miles.

Under the motor vehicle laws to date you can ride in New York, Massachusetts (10 days), Connecticut, Rhode Island (10 days), and New Hampshire (10 days), provided you carry a New Jersey license and will be exempted from paying fees as a non-resident for the periods mentioned.

Licenses for riding in Great Britain are obtainable from the County Council of the particular county in which the rider desires to register. Liverpool is a county seat, hence a license can be procured there, for example. Latest reports on fees, etc., have not as yet reached us, but we will publish them as soon as received. The minimum age is 18 years. An American-made motorcycle brought back to the United States is not dutiable. If the machine is of European make, but purchased here, get a receipt to that effect from the agent, and have the receipt certified by a notary. This should exempt the machine from duty.

TRIUMPH BOSCH EQUIPPED.

TRIUMPH motorcycles, to be produced by the newly-organized Triumph Manufacturing Company, of Detroit, Mich., will be fitted with the enclosed type of Bosch magneto, thus insuring riders of the new mounts maximum dependability in the ignition system and freedom from all the troubles ordinarily caused by dust and moisture getting into the ignition device. The makers of the Triumph state that they will fit Bosch magnetos exclusively.



Dealers Department

MORE DEALERS NEEDED

Much Missionary Work Remains to Be Done in South Carolina—Progress in Road Improvements.

SUMTER, S. C.—With the coming of spring and the good weather that prevails in most Southern districts at this time the hum of motors is again becoming familiar, and the riders are turning out in large numbers. The unusually severe winter has delayed the opening of the riding season throughout this territory, but now that the roads are open again the boys are making the most of them. As the sap rises in the trees the hankering for a breath of fresh air and a spin into the country grips the motorcyclists and, as our Southern negro so feelingly remarks, "they jes' nachally tune up and start to skitter aroun'."

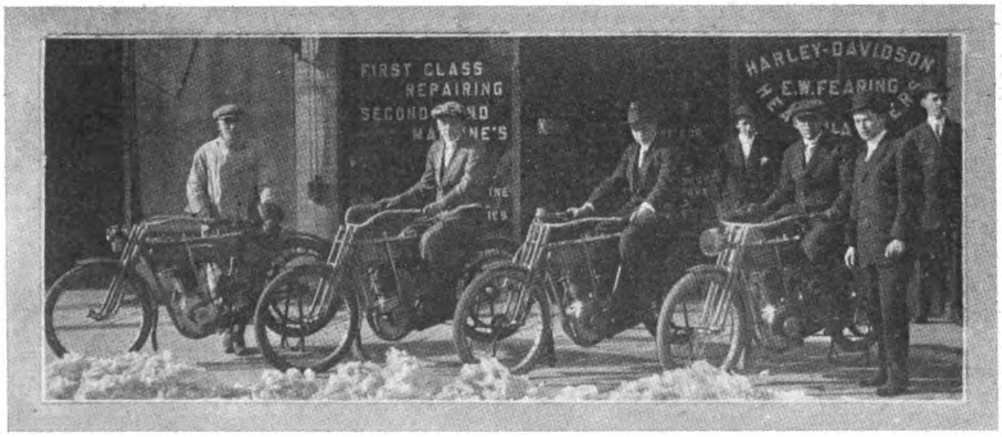
This section of the country needs more agencies and they are coming—slowly but surely. Dealers are doing much missionary work, and the prejudice which formerly existed against the motorcycle is on the wane. With more lively agents and improved roads we feel that the South will soon offer just such a field for the single-tracker as has been developed in the West.

In Sumter and Anderson counties the County Supervisors have agreed to furnish any reliable farmer with a road drag, and the farmer is paid to drag the roads of his district after each rain. As the lands are usually too wet to cultivate after a rain the farmer finds time to take up this road work, and incidentally he makes a dollar or two. This is one of the most fruitful plans so far adopted by the Good Roads boomers, and there are indications that it will have far-reaching results.

Richland county, S. C., now boasts of a live motorcycle club which was organized in Columbia recently with the following officers: K. W. Hollingsworth, president; W. B. Stanley, vice-president; B. R. Lloyd, secretary; Dr. F. C. Hoefer, treasurer; M. C. Spears, captain; R. H. Boardman, first lieutenant; C. W. Cochrane, second lieutenant. These officers, with F. C. Jarrett and H. Pederson, constitute the board of directors. State F. A. M. Commissioner L. I. Strauss has conferred with Secretary Lloyd relative to the affiliation of the club, and it is stated that it will soon enter the ranks. Commissioner Strauss is now in touch with many workers throughout his district, but is anxious to hear from others in order that the present rate of progress may be maintained.

NEW JENKINS GARAGE.

WORK has been started on the new motorcycle garage and showroom of Jenkins & Co., handlers of the Indian and Excelsior machines in Des Moines, Iowa. The new building will not be ready for occupancy until about June 1. The Des Moines Motorcycle Club will have its new clubrooms over the Jenkins garage.



SUB-AGENCY FOR FEARING.

EARLY season demands for motorcycles by Chicago suburbanites resulted in C. H. Lang, Chicago representative of the Harley-Davidson Motor Company, assigning to E. W. Fearing, 147 Lake street, Oak Park, Ill., the responsibility of handling that machine in six important suburbs to the west and north of Chicago. Mr. Fearing will look after the interests of the Harley-Davidson company in Austin, Oak Park, River Forest, Forest Park, Maywood and Melrose Park. He is already pushed for immediate deliveries.

WATCHING CANADIAN MARKET

American Motorcycle Manufacturers Plan Special Arrangements for Catering to the Lively Dominion Trade.

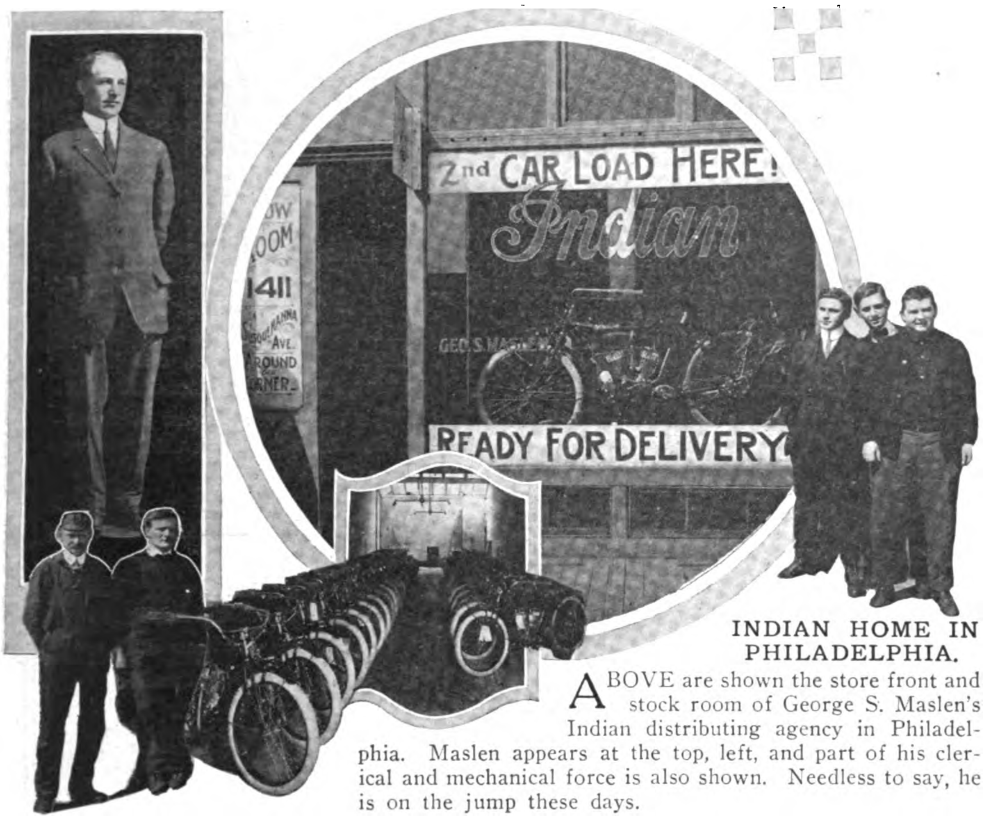
SEVERAL American motorcycle manufacturers are said to be seeking direct connection with the Canadian trade, which, at the present moment, holds every prospect of being a great field for development. The F. N. Company, of Boston, makers of the American F. N. four-cylinder machine, are making arrangements to establish a factory branch at Toronto in order to take care of Canadian business, while a report that the Greyhound Motor Company, of Buffalo, is preparing to remove its entire plant to Canadian soil, is persistent.

The Canada Cycle and Motor Company, the well-established motor-car and bicycle producers, located at Toronto, are, meanwhile, proceeding with preparations for the installation of a complete motorcycle plant where the "Russell" motorcycle will be produced. J. W. Gibson, department manager of this company, is responsible for the statement that a Knight sliding-sleeve valve system of motor, for which the company holds the Canadian rights, will be tried out for the new machine, failing which, an original poppet-valve system will be utilized.

FIRST IN POUGHKEEPSIE.

EDWARD RYAN, Excelsior agent in Poughkeepsie, N. Y., appears in the accompanying photograph with the first of the new Excelsior machines to arrive in his city. Ryan had taken orders for thirty-five of the new models at last reports, and has his eye on the 100 mark for the season. His territory includes Dutchess, Ulster and Columbia counties in the Hudson River valley.

The Auto Cycle Union of Great Britain numbered 5,319 members on April 1.



INDIAN HOME IN PHILADELPHIA.

ABOVE are shown the store front and stock room of George S. Maslen's Indian distributing agency in Philadelphia. Maslen appears at the top, left, and part of his clerical and mechanical force is also shown. Needless to say, he is on the jump these days.

LOUISVILLE TRADE NOTES.

KLINE Bros., 912 South Third street, handling the Harley-Davidson machines, report a heavy demand for 1912 models, and state that they have already delivered more than twenty machines.

C. W. Fischer, local agent for the Thor, located at 403 East Broadway, has sold more motorcycles so far this year than up to June of last year.

The Sutcliffe Company, agent for the Indian, has averaged five machines a week for the past two months.

R. L. Davis, 911 West Broadway, has just received his 1912 model, twin-cylinder R. S., and is so proud of the fact that he is walking around puffed up like a pouter pigeon. He has already delivered his full quota of R.-S., Pierce and Pope singles.

Through an error your Louisville correspondent, in a recent issue, stated that R. J. Buxe was elected captain of tours at the annual election of officers of the Louisville M. C., held March 4. P. J. Kuhn was really elected to the office, with Mr. Buxe as his assistant.

C. W. Fischer, agent for the Thor in Louisville, has lately received a big two-cylinder, 7 h., white Thor. Its size, together with its unusual color, has caused much attention to be drawn to it.

THE TEXAS OUTLOOK.

THE situation regarding motorcycles in Texas, for business as well as pleasure, is growing better every day, now that the weather is getting settled and the roads are beginning to dry up. The dealers in all of the towns are looking forward to fine business and most of them have sold all the machines they have been able to get and are after the factories for immediate deliveries.

WITH COLUMBUS DEALERS.

C. E. BARR, of the Barr Motorcycle Company, Columbus (Ohio), agent for the Indian, will receive his second carload of Indians early in May. He has already disposed of the first carload. The Barr company has enlarged its salesrooms on East Gay street by taking in an adjoining room, which doubles the floor space. The concern now has a room 40 by 70 feet, with a large basement which is used as a repair shop. The concern has added another man to the repair department in the person of Glover Freedman, formerly with the Flanders factory.

P. I. Haynes & Co., central Ohio distributors for the Harley-Davidson, received their first chain-drive Harley last week and since that time they have taken five orders for that model. Mr. Haynes has sold one side-car and has ordered several more.

The American Machine Company, 338 North High street, agent for the Emblem, has received a side-car which it is demonstrating.

THE Tiffin Vulcanizing Works of 31 Court street, Tiffin, Ohio, has taken the local agency for the Flanders motorcycle.

LIMA DEALERS INTERESTED.

SIXTY members compose the reorganized Lima (Ohio) M. C., and there are indications that this number will be increased to 100 before May 1. The dealers of the city are actively interested in boosting the rejuvenated club and attractive quarters have been taken in a central location. The officers are: E. E. Edmiston, president; Wm. Hawkins, first vice-president; Frank Eberle, second vice-president; W. M. Thomas, secretary; T. E. Johnston, treasurer; W. D. Rumsey, road captain; C. Eberle, lieutenant. The club officials are planning to hold a series of runs in the early summer.

CINCINNATI AGENCY.

A. J. STRUBE will handle the Minneapolis line in Cincinnati during this season under the name of Minneapolis Motorcycle Sales Company, 3145 Reading road, where he will be glad to see all prospects. Strube is one of the city's full-fledged boosters.

GOOD YEAR
TIRES.
Mr. Frank Marshall
GOODYEAR BLUE
STREAK TIRES
OHIO.

MODEL WINDOW DISPLAY.

LOUISVILLE, KY.—One of the most effective window displays of the early spring was gotten up by the Louisville branch of the Goodyear Tire & Rubber Company, located at 423 West Walnut street. Framed by a number of Goodyear Blue Streak tires were eleven cups belonging to Frank Marshall, who won them on Blue Streaks. Marshall, with his wife, moved to Louisville recently from Terre Haute, Ind, having accepted the position of manager of the motorcycle department for the Sutcliffe Company, agents for the Indian. On the way to Louisville the car containing their furniture and household goods was broken into, and over thirty of Marshall's cups were stolen. Steps have been taken to collect the value of the cups from the railroad company, but no amount of money can compensate for the loss of Marshall's hard-won prizes.

Tripled His Income With a Motorcycle

A boy carrying "special delivery" letters had been earning $36 a month in the Chicago postoffice.

He bought a motorcycle and his earnings jumped to $65 a month.

In the third month he earned $100.

If swift, safe and sure transportation is needed in your business the motorcycle will do for you what it did for the Chicago boy.

Let us show you how and why. Come in—or write for details.

Under our easy payment plan, your motorcycle will practically pay for itself while being used.

(Dealer's Name, Address and make of Motorcycle)

RUSH FOR NEW MODELS.

SAVANNAH, GA.—At last the 1912 machines have arrived in this city and dealers and riders are in high fettle. In many cases the new models are sold before they are uncrated, and in more than one instance an agent placed a machine in his show window only to have a rider hustle in and plank down his cash for it half an hour later. The motorcyclists of the city have waited so anxiously for the arrival of the 1912 machines that they are determined to make up for lost time, and from present indications it will not be long before the agents are compelled to turn in more hurry orders to the factories.

IN LARGER QUARTERS.

THE motorcycle sub-agency conducted by Louis J. Spingler, formerly located at 16 North Fifty-second street, Philadelphia, Pa., has been moved to larger quarters at 2003 Market street. S. Gosnay has been taken into partnership, and the business will hereafter be conducted under the name of Spingler & Gosnay. The firm has sub-agencies for the Thor and Excelsior machines through the southern and western sections of the city.

REICHERT GOES TO MILWAUKEE.

W. REICHERT, for some time past on the staff of the Hendee Mfg. Company in Chicago, has left the Wigwam to take a position with the Wisconsin Motorcycle Company of Milwaukee. He will assume charge of the city sales department for the latter firm. Mr. Reichert has been connected with the sales department in the Hendee branch for the past two years, and has made many friends among the motorcyclists of his district.

SHOWING RESULTS

Many Dealers Are Using Special Advertisements Prepared by the Manufacturers' Publicity Bureau.

A MOTORCYCLE dealer at Elmira, N. Y., was the first to send to the National Motorcycle Dealers' Information Bureau at Indianapolis marked copies of local newspapers containing the advertisements prepared for dealers by the bureau. This dealer is a live one and he wanted copy for two more of the ads. By this time he has the new ads and is probably ready to ask for more.

Copy for four of these motorcycle ads is sent to any dealer who asks for it, and as soon as a dealer shows he is using the copy in his home newspapers, he can have new ads. He "pays" for these ads by showing that he is using them. That's the only cost there is in the whole service. He sends marked copies of the newspapers in which he is printing the ads, and new ads are immediately sent to him. Two new ads are now going out to dealers, and others are being prepared.

These advertisements are only a part of the sales system outlined in the material prepared by Merele Sidener, manager of the bureau. By addressing him at 23 East Ohio street, Indianapolis, any motorcycle dealer will receive the entire service of the bureau free. Included in the service is a series of sales letters, a series of follow-up letters, a chart of the system, suggestions, advice and a full explanation of the plan. Two samples of the advertising copy sent out by the Bureau are shown herewith.

STAUBER-LEITNER BRANCH.

THE Stauber-Leitner Company, Harley-Davidson agent at 3911 Lincoln avenue, Chicago, has opened a new branch store at Evanston and Montrose boulevards, where they will distribute the Harley-Davidson, Henderson and Flanders machines. The firm will also carry a full line of motorcycle accessories, and will be prepared to cater to all the wants of riders on the North Side.

F. H. LEMON, an Indian rider of Toronto, Ont., has developed into one of the city's most enthusiastic side-carists, and the accompanying photograph shows him on a road jaunt with his two sons.

Motorcycle Gives 1 Man Power of 3

H. R. Rupp, time-keeper for the A. S. Bentley & Sons Co., Toledo builders, used a horse and buggy and reached each job but once a day.

His employers bought a motorcycle. He then "got there" twice each day.

He now covers 75 to 80 miles daily and does the work of three men.

More work—lower cost! And a motorcycle will do the same for you.

Let us show you how and why. Come in—or write for details.

Under our easy payment plan, your motorcycle will practically pay for itself while being used.

(Dealer's Name, Address and make of Motorcycle)

IMPROVING YALE AGENCY.

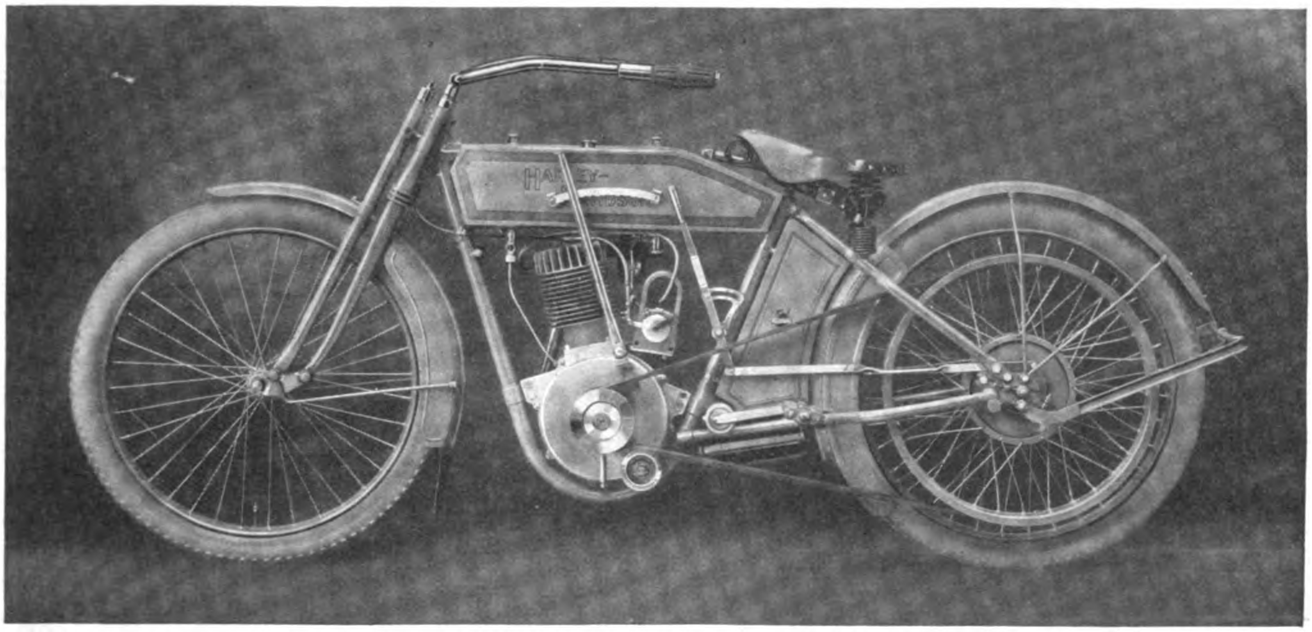
ALTERATIONS are being made in the Philadelphia (Pa.) agency of The Consolidated Manufacturing Company, conducted by George W. Reinbold, at No. 2419 North Broad street. The store has now a length of ninety-five feet, and a width of eighteen feet. New cutting and grinding machines, a drill press and special tools for all grades of repair work have been installed. Mr. Reinbold is a prime mover in the new Yale Motorcycle Club which is being organized. The club has a promised membership of forty, all Yale riders. The organizers have yet to decide on a suitable location for clubrooms.

BRECKKE ON GLASGOW STAFF.

G. H. BRECKKE, formerly on the repair staff of F. M. Spinning in Seattle, Wash., has joined the force of W. P. Glasgow in Tacoma and will have charge of the repair shop in the Glasgow establishment, which is headquarters for Harley-Davidson machines. Breckke is one of the best known repair men in his district.

ATTRACTIVE BOSCH PRIZES.

AS usual the Bosch Magneto Company is offering tempting prizes for winners who use Bosch equipment in the 500-mile International Sweepstakes race scheduled for Memorial Day on the Indianapolis speedway. The driver of the winning car, if it is Bosch-equipped, will receive $500; $300 will go to the driver of the second car, under similar conditions, and the pilot of the car in third position will get $200, if it carries a Bosch magneto. The Bosch company is also offering cash prizes for winners in the Santa Monica races to be held at Los Angeles, Cal.



THE Public Service Gas Company of Camden, New Jersey, purchased seven Harley-Davidsons a year ago to replace seven motorcycles of another make which had not given satisfaction.

Our Camden dealer has just received an order from them for four more Harley-Davidsons.

The Public Service Gas Company says that the Harley-Davidson motorcycles have more than met the exacting demands of their work in every way. In fact they claim that the Harley-Davidsons are PERFECT.

That's putting it rather strong, but they are naturally enthusiastic after their experience with the other motorcycles, which was costly at best.

You can't get Harley-Davidson SERVICE unless you get HARLEY-DAVIDSONS.

Harley-Davidson Motor Company

200 C Street Milwaukee, Wisconsin

Manufacturers

"ZIM" IS GOING AHEAD.

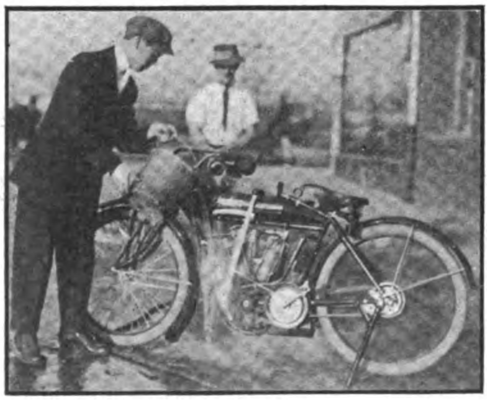
P. E. ZIMMERMAN, advertising manager and credit man for the Hagstrom Bros. Mfg. Co., of Lindsborg, Kan., has recently been appointed general manager of that concern. "Zim" is local commissioner of the F. A. M., and will be captain of a division in the big 1,200-mile tour of the Kansas Short Grass Motorcycle Club in August.

DIXON STICK GRAPHITE.

THE Joseph Dixon Crucible Company, of Jersey City, N. J., is now marketing a new chain graphite, suitable for lubricating the chains of all motor vehicles. It is put up in a stick, encased in a neat cardboard carton, and weighing about one pound. The new product embodies the same material used in the Dixon Bicycle Stick Graphite with which riders of the push-pedal mounts are familiar. The form in which the lubricant is supplied is extremely handy and economical.

SEVERE MAGNETO TEST.

ONE of the severest tests to which a magneto was ever subjected was recently applied to a Bosch machine of the enclosed type by C. C. Hopkins, manager of the Indian branch in San Francisco, Cal. Mr. Hopkins had one of his assistants pour a bucket of water over the magneto while the Indian motor to which it was fitted was operating at high speed and there was not the slightest sign of a hitch in the ignition system. As a preliminary test the motor was started while the magneto was receiving a thorough drenching from a garden hose, and when this did not provoke the Bosch product to irregular running the pails were resorted to. The complete success of the test leaves no room for doubt as to the waterproof qualities of the new Bosch machine and its dependability in this as in all other respects will strike home with the experienced motorcyclist. It will be noted in the photograph that no spokes appear in the rear wheel; this is the camera's proof that the motor was running at high speed while it was undergoing the cataract test.



COVENTRY MIRRORS.

UNUSUALLY attractive plate-glass mirrors, fitted with a sturdy chain for hanging and bearing the inscription "The Coventry Chains," are now being distributed to manufacturers and dealers in the American field by the Sarco Engineering Co., of 112 Broad street, New York City, distributors in this country for the well-known Coventry chains of English manufacture. The mirrors are seven inches long by five inches wide and are calculated to prove useful as well as ornamental in any shop or office. Manufacturers and dealers are invited to make application for them and incidentally learn the interesting story of the Coventry chains.

NEAT AND COMPREHENSIVE.

UNUSUALLY artistic from a typographical as well as a decorative viewpoint, the new catalog of the Flanders Mfg. Company, now ready for distribution, is an offering of which the Michigan company may well be proud. It appears in a white embossed cover, and the suggestion of neatness thus obtained at first glance is admirably carried throughout the booklet. Attractive illustrations give glimpses of the company's big factories, bring out salient features in the Flanders 4 and show the adaptability of the machine to the various phases of business life. The catalogs are being distributed in the metropolitan district by the Sun Motor & Supply Co., Flanders agents, at 206 West 76th street, New York City.

BOSCH PASSES MILLION MARK.

THOSE who seek to estimate the extent of production and the popularity of the internal combustion motor in its various capacities will no doubt be interested to know that the one millionth Bosch magneto has been completed and installed. The carefully kept records of the Bosch Magneto Company in New York, show that on March 15, the one millionth magneto was completed, while the demand is increasing to an extent that requires continual additions to the factory sites.

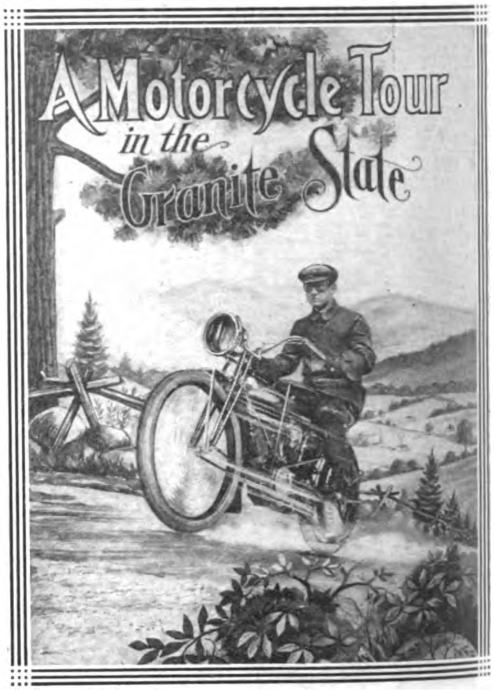
This is surprising when one notes that it was only in 1888 that the first Bosch magneto came upon the open market, and two years later that they were being adopted to an appreciable extent.

FORTY-TWO IN TWO DAYS.

MANAGER ADCOCK, of the Wm. Metzger Company, in Detroit, Mich., sold 42 Indians in two days last week and the average number of sales per day is put at 10 or 12. Indians have been sold to the Wayne County Road Commissioners (2), Deputy Sheriff's Department (2), Bell Telephone Company (2), Detroit City Gas Company (4), the Building Commission, the Board of Water Commissioners and to Summerfield & Hecht and Owen & Co., the largest furniture houses in the city, for the use of their collectors.

TOURING THE "GRANITE STATE."

UNDER the title "A Motorcycle Tour in the Granite State," the American Motor Company, of Brockton, Mass., is publishing a booklet which should prove highly interesting to riders in general and particularly those who contemplate piloting their single-trackers through New Hampshire. The narrative—written in a semi-humorous vein—is from the pen of George B. Graves, of Boston, who, with a companion, made a four-day trip through the "Granite State" last summer. The booklet will have 36 pages, 4½ by 6 inches, and the text will be illustrated with no less than 40 photographs.



While the whole story of the outing is a tribute to the dependability of M. M. machines, the product of the American company, this feature has not been exploited in the preparation of the booklet, which is intended to advance the interests of motorcycling in general. The accompanying photograph shows the cover design which will be printed in colors.

NEW SPLITDORF PRODUCT.

ONE of the latest additions to the well-known line of Splitdorf ignition devices for the motorist is the "Splitdorflite," an electric lighting generator which is designed primarily for use in automobiles and motorboats.

AN EVEN HUNDRED

AN even hundred Flying Merkels have been sold by Agent Wandersee in Detroit so far this season, 50 of which were disposed of during one week. The Highland Park and Ecorse police will use the "yellow streaks."

NEW RIM STANDARD NOT APPROVED

Motorcycle Manufacturers at Buffalo Meeting Decide Against Classes Recently Suggested—Demand for a Composite Rim.

FOLLOWING a thorough discussion of rim designs by the Motorcycle Manufacturers' Association at its meeting in Buffalo on April 10, it was decided that the motorcycle rim standard recently adopted at Cleveland by the Automobile Clincher Tire Association would not satisfactorily meet present requirements of the power two-wheeler and there was a unanimous vote of the manufacturers against its acceptance. As a result engineers representing the different motorcycle manufacturers were authorized to confer with the tire and rim men in Cleveland as soon as possible with a view to approving a rim which will be acceptable to the builders of motorcycles, and incidentally to riders.

The Automobile Clincher Tire Association decided upon three motorcycle rim classes: "A-A," for 1¾ and 2-inch tires; "B-B," for 2¼ and 2½-inch tires and "C-C," for tires measuring 2¾ and 3 inches. The motorcycle manufacturers are satisfied with the "A-A" class, intended for racing machines, but they argue that in another class there should be a composite rim capable of taking either a 2½ or a 2¾-inch tire, these sizes now being in most common use. Under the Clincher Tire Association's arrangement these two sizes would not be fitted on the same class of rim.

President A. B. Coffman, of the Consolidated Manufacturing Company, presided over the meeting, and Secretary J. R. Cox, of the Pope Manufacturing Company, was at his post. The other members present when the session was opened in the parlors of the Hotel Statler were as follows: Edward Buffum, of the Hendee Manufacturing Company; Arthur Davidson, of the Harley-Davidson Motor Company; J. F. Merkel, of the Miami Cycle and Manufacturing Company; E. J. Knight, of the Aurora Automatic Machinery Co.; A. B. Coburn, of the Pierce Cycle Company; C. W. Mason, of the New Era Auto Cycle Company; W. G. Schack, of the Emblem Manufacturing Company, and W. T. Marsh, of the American Motor Company.

A highly encouraging report was submitted by the M. M. A. committee which is working with a committee representing the F. A. M. on arrangements for the national tour to the 1912 convention of the Federation. Excellent progress has been made with the preliminary plans and little more can be done now until the F. A. M. directors announce their choice of the convention city.

With a view to obtaining lower freight rates on motorcycle shipments the Traffic Committee of the M. M. A. has filed a petition with the Interstate Commerce Commission asking for more reasonable tariffs on carload shipments of machines in the territory east of the Mississippi. It is the intention to take the same action later with reference to other sections of the country.

It was reported that the M. M. A. has forwarded copies of a set of resolutions to the mayors of nearly all the large cities throughout the country condemning the use of the muffler cut-out and requesting that every effort be made to discourage its employment.

An application for membership, received from the newly organized Triumph Manufacturing Company, of Detroit, was referred to the membership committee. The next meeting of the mancfacturers will be held in Toledo, Ohio, at the Hotel Secor, on June 5.

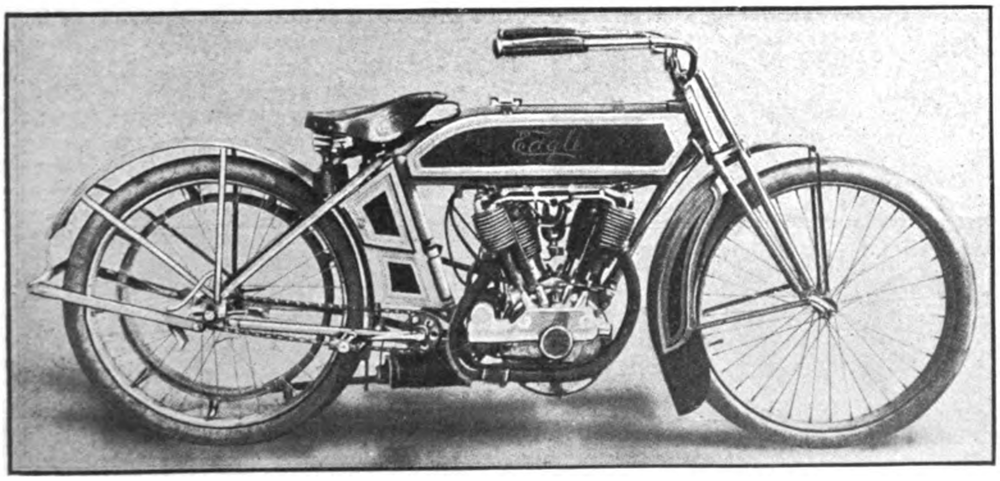
TOLEDO, Ohio, April 17.—President A. B. Coffman, of the Motorcycle Manufacturers' Association, announces that the conference between factory engineers, representing the members of the M. M. A. and the Automobile Clincher Tire Association, relative to the proposed new motorcycle rim standard will be held at the Hotel Hollenden in Cleveland, on April 23, at 10 a. m. He urges a full attendance of the motorcycle representatives.

NEW EAGLE TWIN

Chicago Company Will Market High-Powered Machine Which Embodies Several Novel Features.

WHAT will undoubtedly prove a highly popular addition to the output of the Eagle Manufacturing Company, of Chicago, is a new twin model, rated at 9 h. and calculated to meet all the speed and endurance requirements of the most exacting motorcyclist. The engine is a Spacke product and is credited with generating considerably more power than the Eagle folks claim for it. The company has subjected it to unusually severe tests over winter roads of late and is convinced that it will surprise even the experienced rider. In general outline the new twin follows the makeup of the company's single-cylinder model, having the motor built into the frame on the keystone plan and with the top bar dropped to afford a low, comfortable saddle position. The trussed leaf spring fork is retained and the grey finish with black panels remains standard.

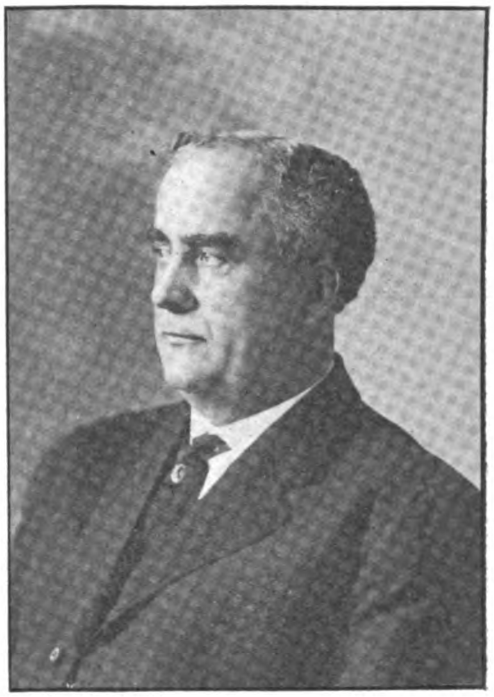
The new twin is lubricated by two systems, a sight feed for ordinary service and a hand pump for speed work and emergencies. Each system has its own tank, an unusual arrangement, and one which is not without its good points. As the sight feed will be used generally the hand-pump tank will serve as an emergency reservoir, thus obviating the danger of oil shortage on the road. The machine is fitted with an Eclipse free-engine pulley and a Spartan V belt 1½ inches wide, the transmission system being made especially for the Eagle because of the unusually large-sized belt. The throttle control is in the right grip and a lever on the left side of the machine controls the clutch. The new twin lists at $275.



The New Twin Eagle, With 9 h. Spacke Motor and Chain Drive.

A MINNEAPOLIS BOOSTER.

BELOW is a photograph of W. B. Brown, of Waterloo, Ia., who is State representative for the Minneapolis Motorcycle Company. He is a very enthusiastic motorcycle salesman,



and is ably assisted by his son, R. B. Brown, who makes his headquarters at Des Moines. Together they have placed 150 Minneapolis machines in Iowa. Mr. Brown says that he has just started and before he gets through he will make the State of Iowa thoroughly familiar with the merits of the two-speed machine.

MOTORCYCLISTS at Augusta, Georgia, are planning a race meet for April 26 and have obtained an F. A. M. sanction. Columbus and Savannah riders have been asked to enter the races.

THE FLANDERS "BIG FOUR"

FLANDERS HEADS.

(Reading from left to right)

WALTER E. FLANDERS,
President.

E. LE ROY PELLETIER,
Advertising Manager.

JOHN YOKE,
Sales Manager.

DON E. McCORD,
Vice-President and General Manager.

HAVING long been regarded as one of the most thoroughly posted and consistent workers in the automobile and motorcycle fields, Walter E. Flanders, who appears in an accompanying photograph surrounded by department heads of his company, has contributed as interesting a chapter to the history of motor vehicle production in this country as any man of his time. While still connected with the Studebaker Corporation Mr. Flanders has so arranged matters that he will spend much of his time at the Flanders plants in Pontiac and Chelsea, Mich., and he has allowed it to be known that the motorcycle now being marketed under his name is one of his pet projects. It is largely through his efforts that the E-M-F factories of the Studebaker Corporation have risen to the prominent position they now occupy in the automobile field, and he asserts that history is due to repeat itself in the Flanders Mfg. Company.

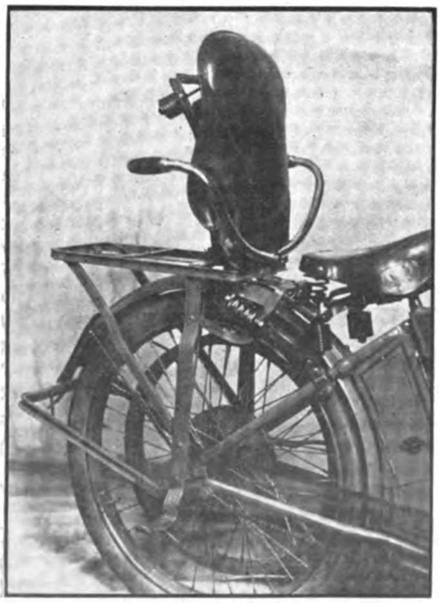
Don C. McCord, vice-president and general manager of the Flanders company, claims Indianapolis as his home city. He is a close student of automobile and motorcycle affairs and a firm believer in the future of the power two-wheeler, so that his efforts in behalf of the Flanders product are of the whole-souled, enthusiastic kind that give results.

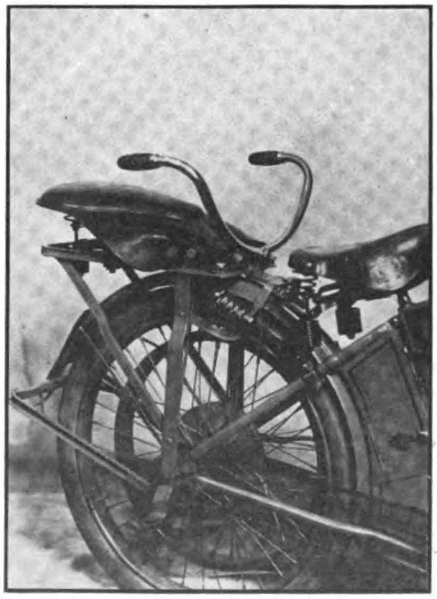
The advertising department of the Flanders Mfg. Company, is in the able hands of E. LeRoy Pelletier, whose activities in advertising and publicity cover a wide sphere, ranging from promoting publicity for national expositions to advertising the products of the Flanders company. Mr. Pelletier is well known as the advertising manager of the old E-M-F company, now the Studebaker Corporation, with which he is still connected. However, he devotes most of his time to exploiting the Flanders.

John Yoke, manager of the sales department for the Flanders company, is a high-speed booster who hails from Indianapolis. Since taking over the Flanders sales department he has shown results which fully justify his appointment to this responsible position and he promises to keep right on showing them.

TRIO ATTACHMENT.

DESIGNED as a combination luggage-carrier, tandem seat and back-rest, the Trio motorcycle attachment, manufactured by the Trio Equipment Company, of 2162 West 29th street, Cleveland, Ohio, is meeting with favor among experienced riders as well as newcomers in the field. The attachment is supplied with clamps for fitting to any standard make of machine and may be applied or removed in a few minutes. The removal of four nuts permits of taking off the entire device. The spring action is in six compound springs which allow plenty of up and down play, and consequently afford maximum comfort. The saddle is made along improved lines and is on a par with the general excellence of the fitment. O. W. and R. C. Blackman and Wilbur Freuchtel are the men behind the Trio company, which is already well supplied with orders for its product. Full information concerning the attachment may be obtained on application to the company at the above address.





TRIO ATTACHMENT.

The illustrations show how saddle may be used both as a tandem seat and a back rest.

TO REMOVE BELT PULLEY.

G. N. WICKENS, of Rozel, Pawnee county, Kansas, outlines the following method for removing a belt pulley without scratching the plating: "Most pulleys screw on with a right-hand thread and are intended to become tighter on the shaft with use," writes Wickens. "It is therefore necessary to hold the piston until the belt pulley can be unscrewed in the same direction in which it moves when in service. Close the exhaust valve and turn the pulley until the motor is under full compression; then take a small wedge-shaped piece of hard wood, insert it between the rims of the pulley and give it a sharp blow. The pulley will now unscrew easily. To replace the pulley reverse the position of the wedge and tap it until the pulley is tight. Take care to replace the lock-nut."

MOTORCYCLES FOR "CALL MEN."

THE Detroit fire department has purchased four Emblems from Robert Shattock for the use of the "call" men. They also have bought a Wagner from the Economy Cycle Company. The firemen who will use the machines are those who live at home and are subject to call from their station in case of fire.

Does Your Motorcycle Clutch Slip?

It does. If not, you have it screwed in tight and are not using it. It works beautifully for a short time after you put glycerine or Neat's-Foot Oil or Castor Oil upon it. But how long can you run before the operation must be repeated?

Motorcycle clutches are necessarily so small that they must give one hundred per cent. efficiency all the time if they are to do the tremendous amount of work required of them. When glycerine or Neat's-Foot Oil or Castor Oil is used upon a motorcycle clutch it can give this efficiency only for a short time, for the friction surfaces soon glaze over. There is only one known clutch dressing that overcomes this difficulty and that is

Bull Dog Clutch Dressing

It shows by actual test an efficiency over fifty per cent. greater than glycerine, Castor Oil or Neat's-Foot Oil and as to lasting qualities — when a clutch has been treated with Bull Dog Clutch Dressing it needs no attention for a very long time.

QUESTIONS & ANSWERS

NEW YORK TO DETROIT.

CHARLES B. HALL.—We give a route to Detroit herewith, naming only the important places. New York (Columbus Circle) is the starting point; go from there to Yonkers, then to Dobbs Ferry, Tarrytown, Ossining, Peekskill, Garrison, Cold Spring, Fishkill village, Poughkeepsie, Hyde Park, Rhinebeck, Red Hook, Hudson, Kinderhook, Schodack Center, Rensselaer and Anbany. From Albany go next to Schenectady, then to Amsterdam, Fonda, Little Falls, Herkimer, Utica, New Hartford, Oneida, Chittenango, Fayetteville and Syracuse. From Syracuse go on through Camillus, Weedsport, Clyde, Lyons, Palmyra and Fairport to Rochester. From Rochester go next to Scottsville, Caledonia, Batavia, Corfu, Clarence and Bowmansville to Buffalo.

From Buffalo go to Athol Springs, then to Evans, Silver Creek, Fredonia, Westfield, Northeast (Pa.), Wesleyville and Erie. From Erie go to Girard, then to Conneaut (O.), Ashtabula, Painesville, Mentor and Cleveland. From Cleveland go on through Dover, Elyria, Henrietta, Florence, Norwalk, Monroeville, Bellevue, Clyde, Fremont, Woodville, Stony Ridge and Toledo. From the latter city go on to Monroe, then to Trenton, Wyandotte and Ford City to Detroit.

2.—Too large a jet opening will often cause a mysterious knock, but a setting of the spark too far in advance for ordinary running will also cause a knock. Usually, knocking from the latter cause is regular and sharp, while knocking from bearing looseness is more of a clank. Noises due to too large a carbureter jet-opening do not occur at all speeds of the motor. Retarding the spark or reducing the size of the jet opening will determine whether the causes mentioned are the real ones. Judge the color of the exhaust (at or near the exhaust outlet) according to the speed of the motor; if the speed is low the color should be dark-blue verging on violet to get the proper mixture. As the speed rises, the color will become paler, due to the additional air coming through the auxiliary air valve, but the exhaust should never lose its bluish tint. See the *Motorcycle Manual*, just published, for more detailed information on this and allied subjects.

AIR-DRYING ENAMEL.

JOHN H. WHITNER.—Almost any of the larger supply houses can furnish you with "air-drying" enamel, which would be suitable for your purposes. For operating with such an enamel proceed as follows: Remove all old enamel by scraping or burning, then clean with fine emery cloth and fine pumice and water on clean rags. After cleaning, handle with clean rags, not touching the frame with the bare hands. The various parts (pedals, etc.) must, of course, have been removed previous to starting the operation, and all screw-threads covered with string and holes plugged up. Apply one thin coat all over, using a flat camel's-hair brush, and working in one direction only, keeping an even surface. Dry the frame in another room free from dust, setting the frame upside down while drying so that any lint or dirt will fall on the underside and not be visible when the machine is righted again. In about 12 hours, after the first coat is dry, rub down with fine glass-paper free from dust and apply the second coat, rubbing down as before. Let this dry and then put on the third coat. It will take about 24 hours before the third coat can be worked on again. Surface the third coat with the finest sifted pumice, rubbing it on the wetted surface of the enamel gently, wiping the surface clean and examining it from time to time during this operation. When the whole shows a smooth and dull surface rub over with rottenstone on a flannel moistened with olive or like oil, using light strokes. After a polished surface appears wash off all traces of rottenstone and oil. Finish with dry rottenstone on an old silk umbrella cover, and give a final rub over with the silk only. The resulting finish will be surprisingly fine if the directions are followed, and while these may seem tedious, the end will justify the means.

For mufflers write some supply house, such as the Motorcycle Equipment Company, Hammondsport, N. Y., etc. See our advertising columns.

TOURING IN EUROPE.

A. H. COOLEDGE.—We suggest your joining the A. C. U. or the Touring Club de France. The latter can be joined in New York City by application to the Automobile Club of America, West 54th street, near Broadway. From either of these associations you will be able to obtain tryptiques or papers which will enable you to pass the customs of the various countries mentioned below. The tryptiques are issued on payment of a sum sufficient to cover the usual deposit on motorcycles at the customs houses, and only a small fee is charged for their issuance. The countries which recognize the tryptiques are: Belgium, France, Italy, part of Switzerland, Holland, Great Britain, Germany and Austria. Apply to the secretary of the association you propose to join for information on Denmark, etc. Procure a passport from the United States State Department, and carry it with you at all times. We recently published stories by Joseph Esler and others on European touring, and the information in these is very valuable for those contemplating seeing Europe in that fashion.

THE ENGLISH DOUGLAS.

S. GUSTASON.—The lightweight motorcycle mentioned was the Douglas, made by the Douglas Brothers, Kingswood, Bristol, England. It has a 2¾ h. opposed air-cooled motor, the bore and stroke being 2.36 inches each. The motor drives to a countershaft by chain and from the latter to the rear wheel by V-belt. The price in England of the regular model without free engine is $200; it would probably cost $305 here in this country, as it can be only obtained by importing. The machine weighing in the neighborhood of 126 pounds, it would carry a man of your weight in most places that the single you mentioned would and could be used for travel at a fair average speed, if fitted with a free engine or two-speed gear. The manufacturers make a first class article combining the free engine and gear at an additional cost. The Douglas is not a mail-order mount by a long shot, being one of the higher-priced articles on the British market. We know of no machine made here on the same principle, and there is at present no Douglas agent in the United States. Neither have we a record of any friction-drive motorcycle.

PASSENGER ATTACHMENTS.

N. Y. SUBSCRIBER.—Communicate with George P. Jenkins, 256 West 55th street, New York, or see our advertising columns. A fore-car attachment would be suitable, but unless you can pick up a second-hand one, you will probably have to have one made to order. There is no regular attachment for the machine you mention, either as a side-car of a fore-car. Naturally, the former type of attachment puts more of a strain on the motorcycle than the latter, but a good mount should be able to stand those strains.

CLUB PENNANTS.

PAUL H. QUACKENBUSH.—You will probably have to have your club pennants made to order. Communicate with any of the larger sporting goods houses, as the New York Sporting Goods Company, 12 Warren street, New York; A. G. Spalding & Brothers, Nassau street, New York, etc.

TWO-STROKE MOTORS.

TWO-STROKE.—The Schickel is the only two-stroke at present on the American market, the other machine you mention not now being manufactured. The Scott, two-cylinder and the Levis single-cylinder are the chief English representatives of this type.

MOTOSACOCHE ENGINES.

EDITOR MOTORCYCLE ILLUSTRATED:

We noticed an inquiry in your April 4 issue from Andrew Rosen concerning Motosacoche outfits. We have six of these Motosacoche engine attachments and would be glad to communicate with Mr. Rosen if he will send us his address.

GREAT WESTERN MFG. CO.,
Laporte, Ind.

FINDING LENGTH OF CHAIN

Diamond Company's Experts Have Designed Instrument to Simplify Otherwise Intricate Calculation.

IN a chain drive, the usual method of determining the chain length when the pitch, P, the center distance, D, and the number of teeth, N and n, on the two sprockets are known, is as follows:

(1) Find the pitch radii, R and r, of the two sprockets by reference to the tables of sprocket dimensions.

(2) Find the angle d from the formula

$$\text{Sin d} = \frac{\text{R-r}}{\text{D}}$$

$$\text{(3) Chain length} = \frac{\text{PN } (90^\circ + \text{d})}{180} + \frac{\text{PN } (90^\circ - \text{d})}{180} + \text{2D cos d}$$

Where this operation has to be repeated many times a day, the time consumed is considerable. We illustrate herewith (Fig. 1) an instrument designed and used by the Diamond Chain & Mfg. Co., Indianapolis, Ind., by which chain lengths can be quickly determined by making three simple adjustments.

The instrument in its simplest and cheapest form is shown in Fig. 2, where the parts are made of paper. The fixed scale C is laid off in half-inch divisions, each representing a distance equal to the pitch of the chain. On the movable scale E, each half-inch division represents a distance equal to two pitches—one for the upper half of the chain, and one for the lower half. The circles on the sectors A and B are the pitch circles of 1 in. pitch sprockets drawn half size. Points on the spirals are found by stepping off ½ in. chords on each of the pitch circles beginning at the horizontal radius to the left of G and to the right of F. Through all points one step removed from the horizontal radius, a curve is drawn and marked No. 2. Through all points two steps removed, a curve is drawn and marked No. 4, and so on. The number of any spiral represents the number of chain links from the point where it crosses a given circle to the corresponding point on the lower half of the circle.

As an example in the use of the instrument, let the distance between the sprocket centers be 15 in., the pitch ¾ in., and the number of teeth on the large and small sprockets, 72 and 36, respectively. Divide the center distance by the pitch. The result is 20, which is the center distance in terms of the pitch. Set the sector A at this figure on the scale C.

Now find the pitch circles on A and B corresponding to 36 and 72 teeth, respectively. Place the straight-edge E approximately tangent to these two pitch circles, and, noting the points where the spirals cross these pitch circles, shift the straight-edge E so that it covers all but one of these points. See that the zero point on the scale coincides with the point not covered on the left hand dial, and that the point not covered on the right hand dial just touches the straight-edge.

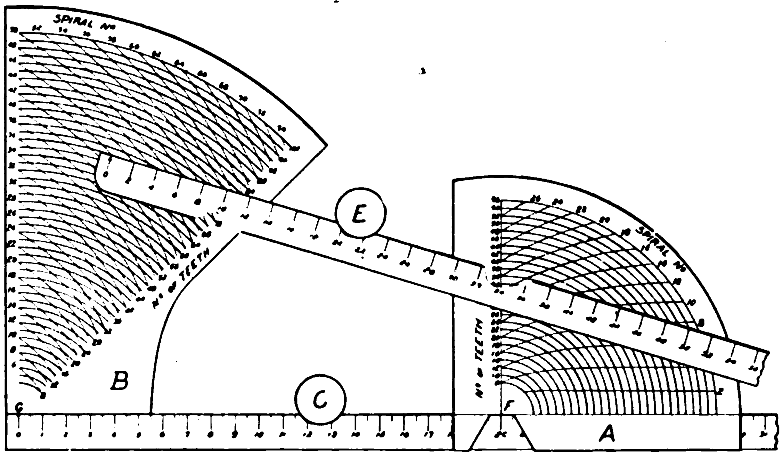

Figure 2.

In other words, place the straight-edge in the position that the center line of the chain would occupy in passing from one sprocket to the other.

Take the straight-edge reading, 38, which is twice the number of links in the span of free chain. The number marked on the spiral passing through the zero point is 44. The number marked on the spiral passing through the right hand reading is 14. The sum of these three numbers is 96, which is the chain length in terms of the pitch. 96 x ¾ in. = 72 in., which is the chain length in inches.

As the length of a roller chain must in general be a multiple of twice the pitch, the reading on the straight-edge E must be an even number. If then the spiral does not pass exactly through one of the even numbered scale divisions, the next higher even number must be used. If an offset connecting link is used, this number must be odd. If the chain is of the "block" type, the reading may be either even or odd, since the chain length can be any multiple of the pitch.

In the steel instrument shown in Fig. 1, the adjustments are greatly facilitated. The right hand sector is quickly clamped in position by a thumb screw, H; the zero point of the straight-edge is brought to the proper pitch circle by the slide, J, which is graduated on the left for roller chains and on the right for block and twin roller chains. The link-work at K allows the straight-edge to swing about its zero point, while the latter is open to view.

If it is desired to determine a center distance, such that there will be no "slack" in the chain, shift the right hand sector A until one of the regular divisions of the straight-edge is on a spiral. Then take the center distance reading and multiply by the pitch. To determine this distance by calculation would be a long and laborious task.

To find the length of a belt a special set of sectors must be used. Set the dial plate A to the exact center distance. Set the zero point of the straight-edge on the pulley circle whose diameter is marked on the dial plate itself. Place the straight-edge exactly tangent to the two pulley circles, and take the *exact* scale reading from one point of contact to the other. If either point of contact is not on one of the spirals, take the number of the spiral that *would* pass through the point, if it were drawn. This can be readily estimated by the eye. If the given center distance or pulley diameters are not found on the instrument, determine the belt length for half the center distance, and half the pulley diameters, and then multiply the result by two.

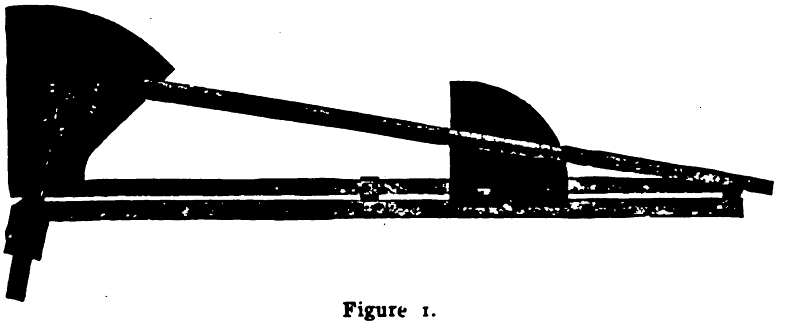

Figure 1.

GAVE CONSISTENT SERVICE.

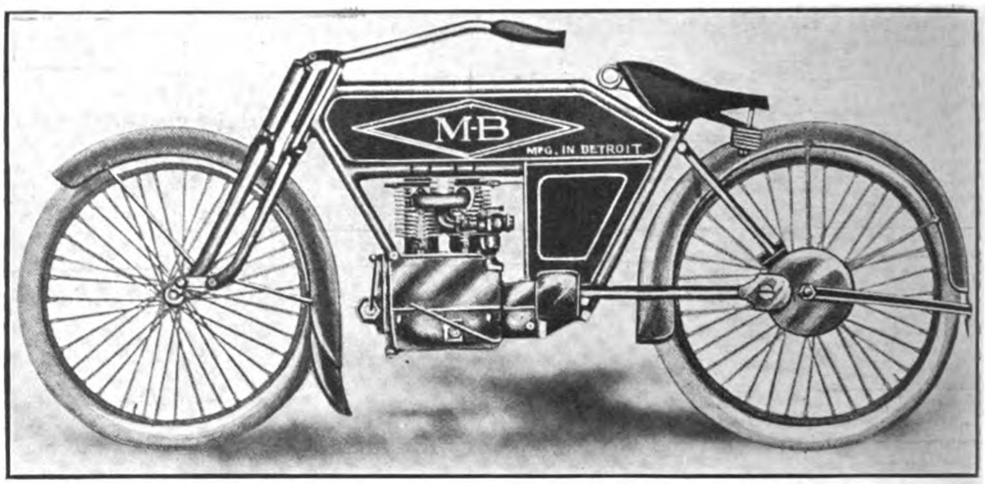
IT is worthy of note that William Streiff, the N. S. U. tourist, who made a 5,000-mile trip through Europe last summer in company with Joe Esler, had his machine fitted with a Jones speedometer and depended upon this instrument when compiling his data regarding time and distances. Referring to his long tour, in a letter to the Jones Speedometer Co., Streiff states that he found the instrument very accurate and of such sturdy construction that it admirably withstood the rough usage of the foreign trip.

MAGNETO SERVICE STATIONS.

WHAT is termed a service system in many of the large cities has been started by the C. F. Splitdorf Co., makers of the Splitdorf ignition systems, whereby users of the Splitdorf products will be able to secure the assistance of skilled workmen from the Splitdorf laboratories, and where a complete stock of repair and spare parts for Splitdorf magnetos may be secured together with the advantages of a well-equipped repair shop in charge of mechanics and electricians especially trained for this work. The cities thus equipped so far are New York, Chicago, San Francisco, Detroit, Boston, Los Angeles, Kansas City.

NOVEL FEATURES IN M-B.

New Detroit Product Will Have First Vertical Twin Motor Fitted on American-Built Machine.



UNDER most favorable circumstances the newly - organized Morse - Beauregard Manufacturing Co., 311 Majestic building, Detroit, is launching the latest arrival in American motorcycle ranks, a sturdy machine embodying several unique features which will be known as the M-B. The most distinctive point in construction will be a two-cylinder vertical motor, of the four-cycle type, the only one of its kind being fitted on an American-built machine. The M-B is built without pedals and is started by means of a hand crank. Power transmission is through a multiple disc clutch and enclosed shaft and gears; chain drive is offered as an option. Mechanical valves are fitted, operated by double camshafts; splash oiling in the crankcase with gravity feed is the lubricating system, and the Bosch magneto and Schebler double-adjustment carbureter are standard equipment.

The multiple disc clutch, carrying ten steel discs running in oil, is housed in a rear extension of the crankcase and is controlled by a right foot pedal. The latter is interconnected with the rear hub brake band. The jackshaft in the clutch housing has spur gears for transmitting the drive to the propeller shaft, and then to the rear wheel through enclosed bevel gears at the driving hub. The drive has imported ball bearings throughout. Gasoline and oil are carried in a unit copper tank, mounted in the upper frame truss; the frame lines follow the keystone plan, the motor having four-point suspension, at front and rear and from both cylinder heads. The machine has 56-inch wheelbase, 28 x 2¼-inch Nobby tread tires, Mesinger saddle, double-grip control, a roomy pressed-steel tool box and hinged stand. Only one model will be offered for the present, listing at $250.

The new company, capitalized at $60,000, is headed by William Morse as president; Lewellyn Woodhull, vice-president; Frank E. Whipple, secretary-treasurer, and William Beauregard, general manager.

MOTORCYCLE VS. HORSE.

NOT long ago E. LeRoy Pelletier, advertising manager of the Flanders Manufacturing Company, offered $25 for the best letter from a rural mail carrier stating why the motorcycle has an advantage over the horse for the distribution of mail in country districts, and in a few days he was deluged with communications. Among the points brought out in the prize-winning letter were the following:

"Five to six cents pays for gasoline and oil for one trip over the route; a horse costs 80 cents a day, not counting trouble and wasted time.

"I finish my route in half a day with the motorcycle, and in the extra time have earned more than enough to pay for the machine.

"The tedious six to eight hours of buggy riding is reduced to three hours of pleasure riding.

"Sand and poor roads rarely bother me; there is always a path suitable for the single tread of the motorcycle.

"My horse had to be driven carefully to avoid strains, but my motorcycle never gets tired.

"The amount I invested in a motorcycle is much less than the outlay for a horse and buggy, and the cost of tires and repairs has been lower than that for keeping a horse properly shod and in condition.

"Some people argue that the motorcycle will get out of order; that argument might have gone three or four years ago, but not now. What's more, you will not get up in the morning and find your machine dead, as I found one of my horses."

One time, 3 cents a word; twice, 2 cents a word each insertion.

MOTORCYCLE MART

Agents' cards, 5 cents a word; twice or more, 3 cents a word per issue.

FOR SALE.—Four-cylinder, two-speed Pierce; entire machine in first class order; tires nearly new; photo. Owner has chronic appendicitis, $225. Dr. W. A. Atkins, Rogersville, Mo.

BRAND NEW 1912 Pierce 4 cylinder 7 h. p.; carmine finish. Sacrifice for $260. H. C. Wing, Greenfield, Mass.

FOR SALE—Marathon—1911 model; 6 h. p., twin, two speed, sliding gear, shaft drive, free engine, $200. Run less than 100 miles. Want to buy auto. P. H. Chase, 393 Halsey street, Newark, N. J.

FOR SALE—M. M. 1911 magneto twin, 28-inch wheels. Also side-car, 323 Washington avenue, Brooklyn, N. Y.

WILL TRADE printing outfit, graphaphone with 40 records, camping outfit, wireless telegraph, two bicycles, parts of aeroplane, 35 books, and set of tools for a first-class motorcycle in running order. Hartzman, 1123 13th avenue, Moline, Ill.

FOR SALE—One 1910 Curtiss motorcycle, good as new, $80. One new side-car attachment $30. H. Kaskel, Spencerville, Ohio.

FOR SALE—Brand new 3-lead Splitdorf motorcycle coil, $3. C. A. Wolfe, 1538 State street, Schenectady, N. Y.

J. E. Merz in Front of His Store; Two of His Employees, and His Merkel Exhibit at the Indianapolis Show.

DEMONSTRATING THE R.-S.

THE Randall Manufacturing Company, of Baltimore, distributors for Maryland of the Pope and Reading-Standard machines, is endeavoring to establish an agency for the R.-S. on the eastern shore of the State. James M. Hepbron, representing the firm, went to Chestertown recently, going from here to Betterton by boat and the rest of the distance on his machine. He interested A. W. Newman in the agency proposition and expects to sign up with him. From Chestertown Hepbron toured up to Wilmington, Del., where he spent Sunday as the guest of A. S. Turner, of the Ford Auto Company. Then he rode back to Chestertown, gave some demonstrations and returned to Baltimore.

USE A HALF DOLLAR.

H. O. HILDRETH, of Columbus, Ohio, calls attention to the fact that a broken oil glass in a crankcase may be satisfactorily replaced by a half dollar until another glass can be procured. Friend Hildreth does not state, however, where the half dollar may be obtained in an emergency. He has found that one of the silver pieces will make a tight fit in a Merkel, Yale or Indian crankcase.

FUERSTEIN A COMER.

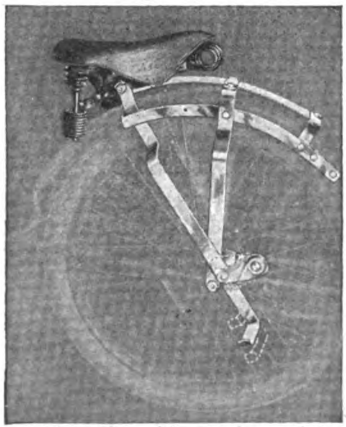
ONE of the promising racing motorcyclists in the South is Billy Fuerstein, "The pride of Norfolk, Va." He holds the championship of the State of Virginia, and has won several of the big events in Baltimore, Md. Fuerstein is a stockily built lad, and has the stamina of a future national champion. He rides an Indian and is a firm believer in Goodyear Blue Streak tires.

THE Muskegon, Mich., M. C. recently voted to affiliate with the Federation of American Motorcyclists.

ENID, Okla., motorcyclists who recently organized a club and affiliated with the F. A. M., are planning race meets and endurance runs for the coming summer.

SIMPLEX SPECIALTIES.

ONE of the most attractive features in the neat catalog which is being distributed for 1912 by the Angsten-Koch Company, of 360 W. Garfield boulevard, Chicago, is the firm's improved tandem attachment which combines an effective appearance with sturdy construction and comfort-giving qualities. Special attention is directed to the flat elliptic spring employed in the attachment. One end of this spring is fastened under the forward saddle and the central support, a strong U-shaped member, extends from the axle of the rear wheel in such a way that a desirable "springboard" tension is obtained for the rear saddle. The U-shaped part, which supports the spring, is adjustable to the weight of the rider. Four adjustments are provided and by merely changing the position of the U-shaped backward or forward the tension of the spring is varied. Two shock absorbers are employed which check the rebound of the flat spring, eliminate rattle and noise when the tandem is not carrying a passenger and reduce wear on the parts.



Considering the thoroughness of the springing device an unusually low saddle position is afforded. The tandem saddle is locked by means of a steel block riveted to the spring, which prevents tilting or side-play. The attachment may be fitted to any standard motorcycle without changing the position of the front saddle or interfering with the action of the stand. The footrests and saddle in the tandem actuate as one, thus eliminating the annoyance incident to continued bending of the knees.

A sturdy luggage-carrier, which may be used as a tandem attachment, all-steel lamp brackets, manifold air valves and axle and stand extensions are also manufactured by the Angsten-Koch firm under the Simplex trademark, and a line of standard motorcycle saddles also is carried.

CARRYING SUPPLY LINE.

THE Bolton Auto Company, of Saginaw, Mich., distributors for the Studebaker Corporation and Hudson Motor Car Company for Northern Michigan, have considerably increased their floor space and added a new department to their business by the wholesaling of general motoring accessories. They are carrying a full and complete line of supplies and have eight traveling men covering all the towns and villages in northern Michigan.

MINNEAPOLIS AGENCIES.

C. B. KNUDSEN, sales manager for the Minneapolis Motorcycle Company, has been on an extended trip through Illinois, Ohio and Indiana, appointing agents, and has met with very flattering results, having recently closed with E. W. Meredith, who handles the Alco cars for southern Illinois; also the Minneapolis Motorcycle Sales Company, A. J. Strube and Arthur Boriskey, 3145 Reading road, Cincinnati; W. H. Wall, 218 East Main street, Springfield, Ohio; Spinger & Gosnay, 2003 Market street, Philadelphia.

GOODYEAR BRANCH IN PORTLAND.

THE address of The Goodyear Tire and Rubber Company at Portland, Me., is now 646 Congress street. I. W. Penniman, late at the company's branch at Boston, has been appointed local manager.

End All Your Belt Troubles With

THE

Thermo-Belt

Will Not Stretch, Shrink, Harden, Crack, Nor Friction-burn

Thermo-Belt is our celebrated *"Wetprufe"* belt faced on the inner surface with a specially prepared heat resisting fabric that protects the belt from friction heat if allowed to slip. Only the choicest parts of selected hides are used—these are rendered absolutely waterproof by our special process which gives a pliable belt which cannot be affected by water, grit or climatic changes.

A Severe Test

A *"Wetprufe"* belt, after a run of more than 9,000 miles on a tire-testing motorcycle under the worst possible conditions, when examined was found to be in perfect condition. Accurate measurements showed that it had not stretched a fraction of an inch.

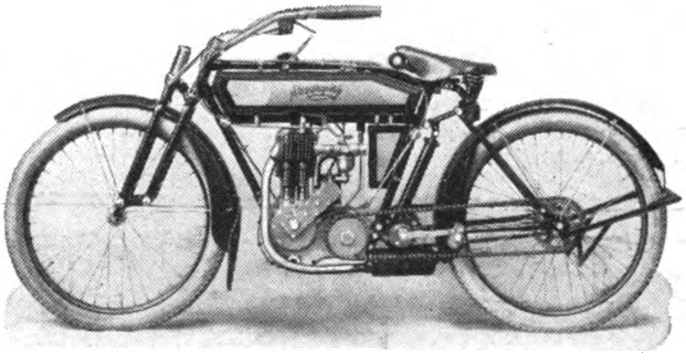
"RIDE ONE AND SEE"

THE MINNEAPOLIS BIG 5 MOTORCYCLE

Is The Machine You Want



AN AUTOMOBILE ON TWO WHEELS.

Read the following letter and write us quick

Abilene, Tex., September 22, 1911.

Minneapolis Motorcycle Co.,
Minneapolis, Minn.

Dear Sirs:—The machine that you sent has been in constant use since received and is running fine. Party is well pleased and says he would not take $300 for it if he couldn't get another. It is without doubt the best machine in this country and takes all of the hills around here without any gas, something these twin ——— can't do.

Yours truly, L. C. Hoffman, Agent.

Imported Single-Jet B & B Motorcycle Carbureter

Fits Any Machine—Entirely Controlled from Handle-Bar

The B & B carbureter affords simplicity, efficiency and ease of control at all times. With a B & B you needn't bend down and take your hands from the bars in order to adjust your mixture. Instead, adjustment of the flow of gas and air to fit changing speeds is possible without the rider changing his upright position. Price is low, and material and workmanship the finest.

MESINGER MEANS MERIT

Mesinger Saddles are offered by the leading motorcycle manufacturers as regular equipment, because they know that no other saddle can do full justice to their machines.

WHY?

Because no existing conditions can cause MESINGER SADDLES to lose their shape—they are hand-padded with curled hair.

Because—All MESINGER SADDLES have front springs, which are absolutely indispensable for rough road riding.

Because our tops are stretched when formed, not afterward.

BECAUSE THE TOPS AND SPRING PARTS ARE GUARANTEED FOR ONE YEAR.

Any dealer will give you a demonstration.

MOTTO: "Ask the Rider and Watch Him Riding."

HEITGER MOTORCYCLE CARBURETERS

Made especially for motorcycles in a factory devoted to this product alone, with capacity of 1,000 per week

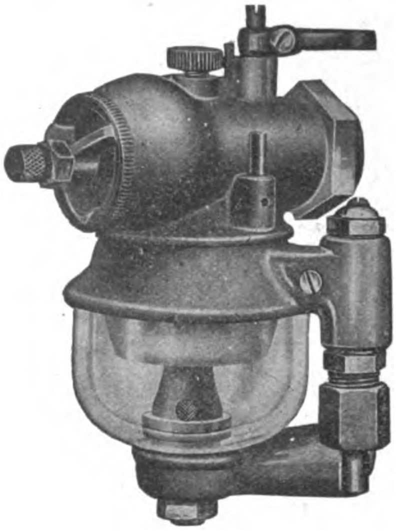
Read what this rider says about the HEITGER, this is an unsolicited testimonial, we have hundreds of such.

New York, February 20, 1912.
Heitger Carbureter Co.,
Indianapolis, Ind.

Gentlemen: I notice in the February 8 issue Motorcycle Illustrated, in your advertisement, that I had traveled 2,200 miles on my sturdy Emblem, in all kinds of weather, etc., from 4 below to 102 above without the slightest trouble.

I may now add an epilogue to that, I have covered more than 12,000 miles to date without the slightest trouble and without renewing a single part. I would rather pay more for a HEITGER and feel assured of never having trouble than experiment with others.

"F. L. Valiant."



Model H—¾". Net $9.50.
Model G-D. Net $10.00.
Either Glass or Metal Bowl.

There are over 25,000 of them in use, in all parts of the country, on all makes of machines. They will give the minimum and maximum speeds your machine is capabable of, as slow as five miles and up to the limit; never fail to INCREASE the speed of ANY machine. With motor in good condition we guarantee 75 miles per gallon, road riding. Thousands of riders are getting up to 100 miles per gallon; have economy records up to 200 miles per gallon. The glass bowl enables one to eliminate doubt as to gasoline level, dirt, etc.

HEITGER CARBURETER CO.

1129 Bleecker St.
Indianapolis, Ind.

Insist On Standard Pedals

Our products for the Cycle Trade include:

Emergency Axles, Sager Motorcycle Toe Clips, Diamond E Spokes, Bridgeport and Standard Pedals, Sager and Standard Toe Clips.

No other pedals give that "turkish carpet" feeling to the feet. The deep rubber corrugations in the big cushions keep the feet where they are put—they eliminate jars, bumps and other disagreeable features when negotiating rough roads.

With one eye to *durability* and the other to *comfort* we have succeeded in producing the ideal motorcycle pedal.

Write for our catalog. Standard quality plus Standard output mean big business for you, Mr. Dealer.

A REVOLUTION IN MOTORCYCLE MOTOR DESIGN

In bringing out our DE LUXE line of motorcycle motors, we have introduced a large number of improvements, and offer these motors as the most advanced now before the trade.

NOTEWORTHY IMPROVEMENTS.

One-piece crank shaft.
One-part crank case with cover.
Improved cam and magneto drive.
Oil tight motor.
Large Valves.
Simplified design throughout.
Reduced number of parts.
Silent Motor.
Large ball bearings mounted in steel lined pockets.
Equipped with Bosch Magneto.

These improvements in design, together with the high grade materials used in construction, the modern methods of manufacturing applied, and the remarkable performance of these motors in road tests mark a revolution in motorcycle motor building.

FOUR SIZES
Four H.P. Single Cylinder. Five H.P. Single Cylinder.
Seven H.P. Twin Cylinder. Nine H. P. Twin Special.

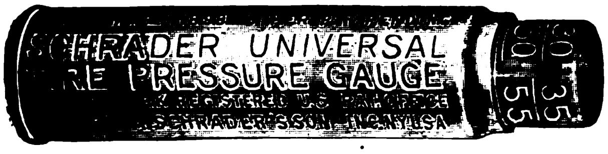
Have You Had Trouble With Your Tires?

A very large percentage of all punctures and blow-outs occur from improper tire inflation.

WOULD YOU PAY $1.00 TO OVERCOME

delays, difficulties and expense resulting from these misfortunes?

Schrader Universal Tire Pressure Gauge



(Made under patent dated March 1, 1898.)

Accurately registers at all times the exact air pressure in tires.

Simply hold gauge to tire valve for a second and recording sleeve will indicate air pressure and remain fixed until pushed back into place by the finger.

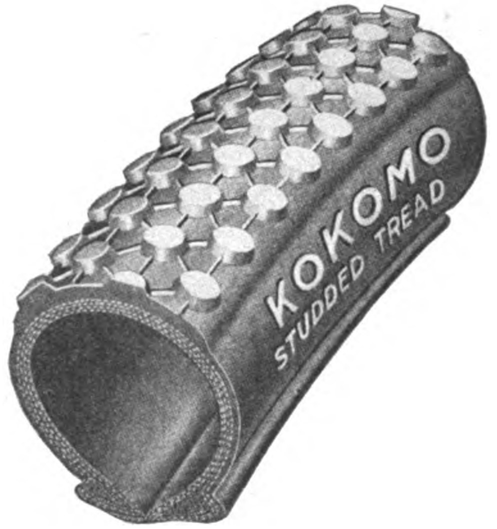
Carried easily in vest or change pocket, being only 2½" long. So simply constructed as to almost never become out of order, and if it does go wrong it will immediately tell by the action of the indicating sleeve that it needs repairs. Leather case comes with it.

PRICE $1.00 EACH

Guaranteed Simple and Absolutely Accurate

Can be obtained from all tire manufacturers, jobbers and dealers, or

A. SCHRADER'S SON, Inc.
28-30-32 Rose Street NEW YORK CITY



The materials entering into the construction of a tire are important factors, but something more than the best materials is necessary to produce the desired results—that something is the knowledge of rubber and how to handle it from its crude state to the finished article.

KOKOMO TIRES

SIXTEEN YEARS OF EXPERIENCE is back of every Kokomo Tire, and experience counts for more in the manufacture of rubber tires than in any other industry.

It is this experience that eliminates the guesswork and places our product beyond the experimental state.

Kokomo Motorcycle Inner Tubes command the largest sales because of their uniform quality.

Supplied in both Butt-End and Endless.

"The Coventry" Chains Link Strength with Speed and Lightness

They cost more to make than any other chain. Why?

Because a higher grade of steel is used; because three thousand operations are needed for every five foot chain; because of the scientific combination of maximum strength and minimum weight.

"The Coventry" Chains are "non-stretchers."

Our catalog explains further.

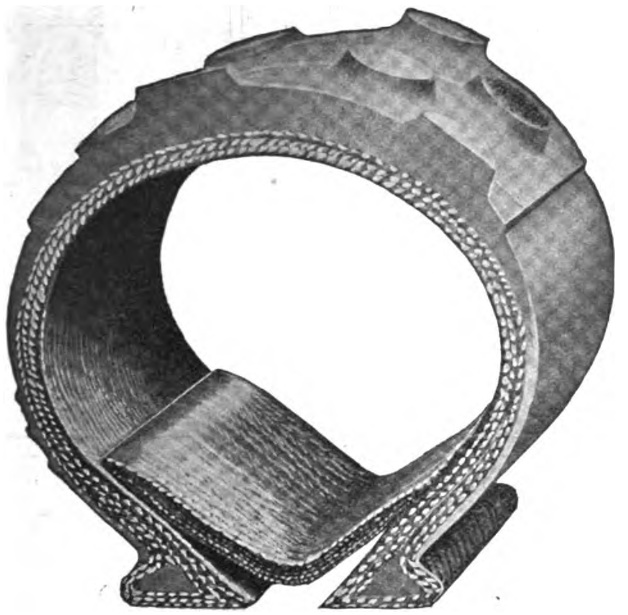
SAFETY

RELIABILITY



One Tread One Quality *The Best*

CONTINENTAL-ERIE

It's the specialist that wins nowadays.

We have made an exhaustive study of motorcycle tire requirements.

We have learned that an unusual design of tread does not mean more mileage to the user.

So we decided upon the studded tread—and the studded tread only. We learned that the studded—if made right—can withstand the most severe treatment, and outlast any other tread on the market.

So we made it right. We **specialized** on the quality of long staple cotton—we **specialized** on the perfect fit of the beads to the rim—we **specialized** on the several distinct plies which enter into the construction of the laminated tube, seamless throughout. Result:

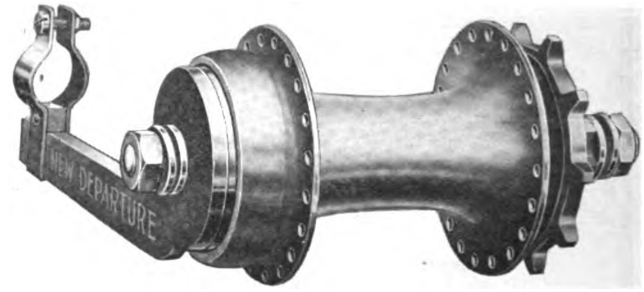
Motorcycle Specialties

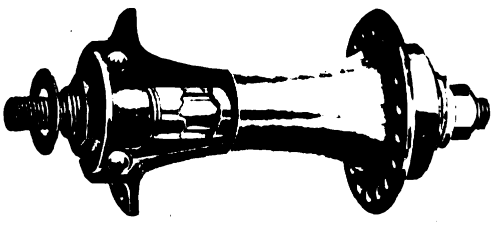
INTERNAL EXPANDING BAND COASTER BRAKE

The internal expanding band type, employing exactly the same principle as the emergency brake in the automobile. It operates against the forward movement of the wheel, hence, cannot lock, wind or bind. Riders prefer it because of its superior efficiency, reliability and strength. It is built for service beyond extreme requirements of riding. The 1912 model is absolutely the last word in a coasting and braking device for motorcycles of modern type.



"KNOCK-OUT" AXLE HUBS FOR FRONT WHEELS

The ideal front hub, constructed entirely of specially treated steel and gives maximum strength and wear. The axle is in a sheath and can be removed instantly without disturbing the adjustment or removing any other part of the hub. It runs on eighteen ¼-inch steel balls and is highly finished throughout. Motorcycle dealers and repairers should stock this hub. It has behind it the New Departure guarantee.



SUPERIOR BALL BEARINGS

New Departure ball bearings are an American product of guaranteed merit and offer advantages over the foreign-made bearings in price and other considerations. This bearing is made in standard sizes and can be used to replace any single row bearing of standard bore, diameter and width. Automobile garages and motorcycle repair depots should stock this bearing and save money.

EXCELSIOR AUTO-CYCLE

38 World's Records

Triumph of Excelsior Speed and Reliability

The Excelsior records are not the work of any single man. They ***all*** win on Excelsiors. ***This time*** it is "Martie" Graves and Don Johns who made them bite their dust.

Nor are Excelsior records made by freak racing machines that would not run on the road. The motor design of ***all*** Excelsior racers is exactly the same as that of the ***stock machines*** which Excelsior dealers are showing everywhere.

These very same machines stood the terrible strain of constant racing ***since last July without being overhauled.***

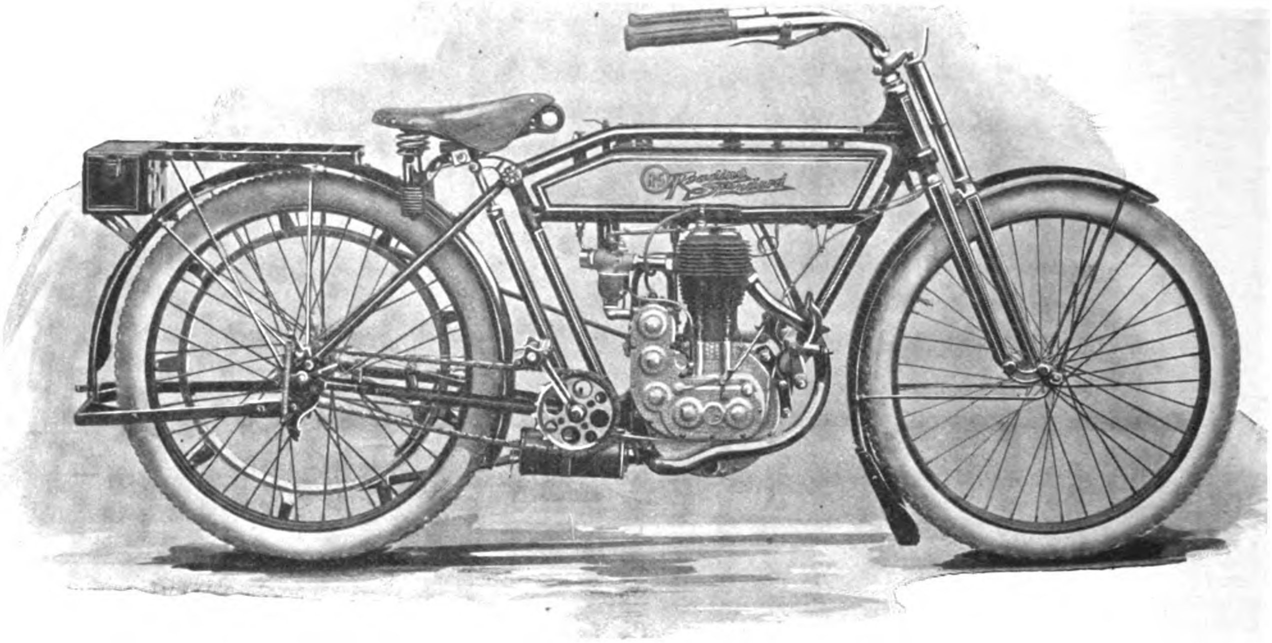
For pleasure and service, just as for racing, riders are flocking to the Excelsior standard.

Let an Excelsior dealer give you a demonstration, or write us for our new catalog.

Read the records on page 24.

Excelsior Motor Mfg. & Supply Co.

2201-2259 Union Street, Chicago



ASK any manufacturer which motorcycle, (next to his own, ***of course***), he considers as being the best from the standpoint of durability, comfort, reliability and all the other "ilities". Nine out of ten will say, unhesitatingly, "Why,

The R-S

of course."

There you are! Think it over. If the general consensus of manufacturers' opinions is that, eliminating ***their*** machine, the R-S ***would be*** the leader, isn't it logical to say that the R-S ***is*** the leader of them all?

The R-S first introduced mechanically operated valves on the motorcycle. They insure positive action. The charge taken into the cylinder never varies and is only changed by operating the carbureter throttle. We were the first to adopt this feature. You can't find a motorcycle today without it. So it is with other features of the R-S. ***But some are exclusive—they're covered by basic patents.*** Our catalog explains.

Mar. 14th, 1912.

Empire Tire Co.,
#1305 Michigan Ave.,
Chicago, Ill.

ATTENTION: Mr. McKay

As Staff Photographer of the Harley-Davidson Motor Company I was given an assignment about January first to cover Georgia and Florida by motorcycle.

I took with me a regular stock single cylinder machine which I had equipped with Empire tires. My reason for selecting Empires was that I rode them all last season and never even had a puncture in some four thousand miles of riding

My trip this time was over 2250 miles on Georgia and Florida roads and again I neither had a puncture or blow-out. In fact, never even had to put a pump to my tires. When a rider has such success as this he certainly has no kick coming, and those who have, certainly do not ride Empires . My machine gave entire satisfaction, it not being even necessary for me to remove a spark plug for cleaning, and to look at it today one would think the tires and machine had not been run more than 200 miles.

With best wishes for the continued success of Empires, I am

Yours very truly,

L. Rosenkrans

Staff Photographer

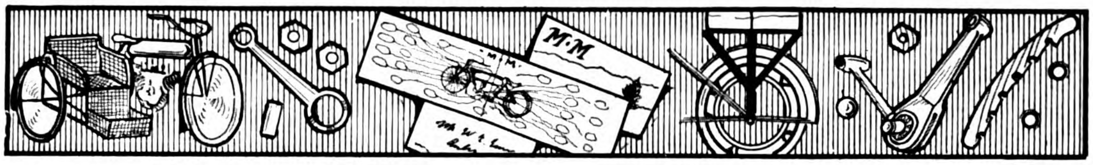
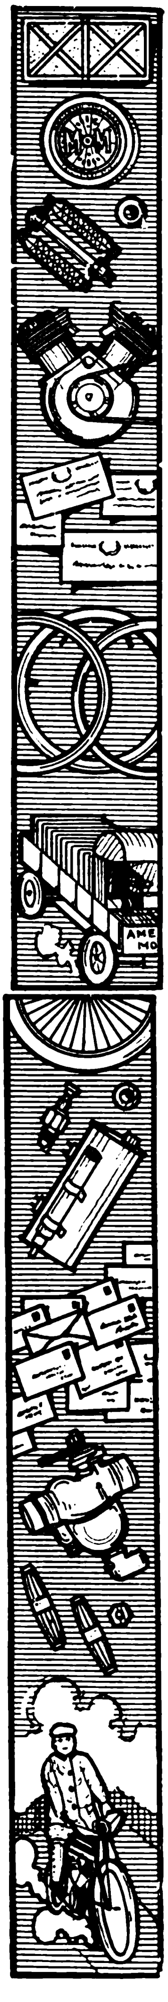
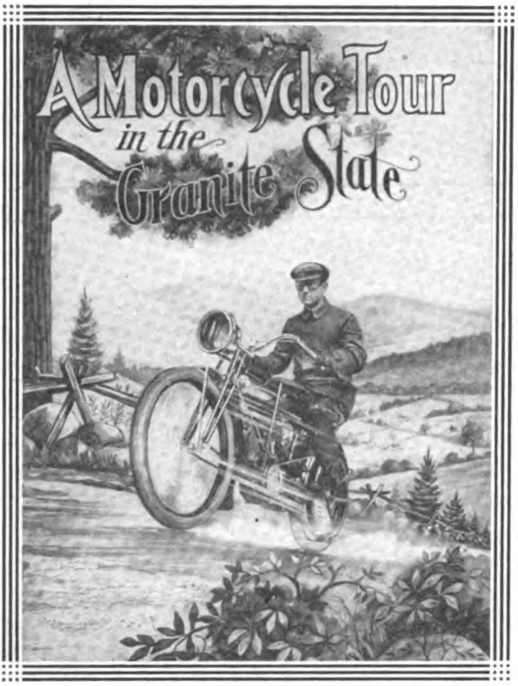
WEAR LONGEST







A Motorcycle Tour in the Granite State

SEND FOR THIS BOOKLET

A FASCINATING and amusing story telling of the adventures of the author, George B. Graves, and his companion while on a Spring motorcycle tour through New Hampshire. The thoughts and feelings experienced by the two riders will strike a responsive note in the heart of every true motorcyclist. Mr. Graves has been noted for many years for his pleasing style as a writer on bicycling, motorcycling, and outdoor sports.

The booklet is handsomely printed on dull finish Sepia Coated Book, with an attractive cover in colors. The text is illustrated with over forty pictures, mostly halftone reproductions from actual photos taken on the trip.

FREE ON REQUEST

TWIN TALK

The durability of a twin cylinder motorcycle depends largely on the design of the ***crank pin bearing.*** This is one of the most vital points in all twins, and one of the weakest points in most of them. Realizing this, we have taken the bull by the horns, and designing one for the M-M twin that will outwear from two to five of any other make. A glance at the cut will show you why. Look at the large rollers and ample width and diameter—friction cut down to a minimum. Plenty of wearing surface, and plenty of good solid stock around it—that's the secret.

Another vital point on a twin motorcycle is the *brake.* On account of the extra power, speed and weight of the machine the brake should be large and powerful. We are pleased to announce that the M-M twin is now fitted with the New Departure *Band Brake*—the latest and best product of the oldest coaster brake makers in the world. It has a flat, one inch band, Raybestos lined, contracting over a large drum, the same as on an automobile, all enclosed to protect from dust. Unlike the V-shaped bands, this brake never sticks nor freezes.

THE BROOKS B170; particularly low built, and—you sit IN it rather than ON it.

HENDERSON MOTOR CYCLE

4-Cylinders *7 H. P.* *Free Engine*

$325

Comfort and easy running that no "Single" or "Twin" can give.

We equip the Henderson Motorcycle with a four-cylinder motor because it delivers continuous power—does not set up vibration—can be throttled down to five miles an hour, and still have plenty of pulling power—and accelerate instantly.

In the way the Henderson starts and is controlled, the ease with which it rides, in the comfort and pleasure of the rider—the Henderson resembles an automobile.

It starts with a crank and has a free engine.

The spark has a range of 60 degrees, as compared with the 20-degree range of the ordinary motorcycle.

The seat is hung between the wheels, instead of above the rear wheel; and road shocks are further reduced by the 65 inch wheelbase.

The rider's feet rest in a comfortable, natural position on an inclined foot-board; the legs forward of the engine and away from its heat.

Let us send you the catalog describing the Henderson in detail.

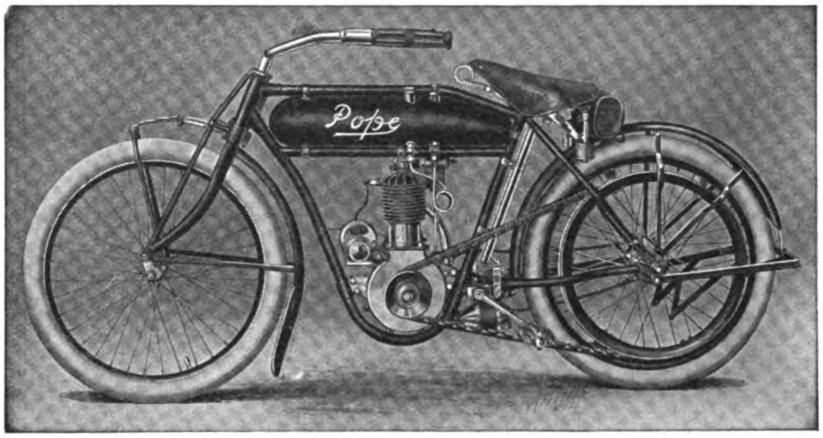
REAP THE REWARDS OF OUR NATIONAL ADVERTISING

DEALERS EVERYWHERE WANTED TO INTERVIEW PROSPECTS

POPE DEALERS EVERYWHERE ARE REAPING THE REWARD OF A VERY SUCCESSFUL ADVERTISING CAMPAIGN. Some of our motorcycle ads. have no doubt attracted your attention. They are appearing in a large number of popular magazines and papers which reach interested people all over the United States.

EVERY DAY WE RECEIVE QUANTITIES OF REPLIES from various parts of the country and abroad showing the great interest everywhere in Pope Motor Cycles, and the widespread demand for a light, reliable, moderate-priced machine of Pope quality.



THESE INQUIRIES ARE REFERRED TO OUR LOCAL DEALERS whenever possible, but if we do not happen to have a dealer in any particular territory, the business has to be handled direct. We want dealers to take care of all this, however. Here then is a great chance for dealers to take on a money making motorcycle.

IF YOU ARE LOCATED IN A TOWN WHERE THERE IS NO POPE DEALER, we could very likely put you in touch with some live prospects immediately, and furnish you with additional names from time to time as inquiries are received. If we can make sales direct, think how much easier it would be for a dealer on the spot to multiply sales. Knowing the disadvantage of selling at a distance, we desire to complete our dealers' arrangements as soon as possible.

WHILE WE ALREADY HAVE A LONG LIST OF SUCCESSFUL DEALERS IN PRACTICALLY EVERY STATE in the Union, our policy of localization affords many more desirable openings for the sale of Pope Motor Cycles.

WE WANT TO HEAR FROM YOU, MR. DEALER, WHEREVER YOU ARE LOCATED. DON'T NEGLECT THIS OPPORTUNITY. ACT QUICKLY SO AS TO GET THE FULL BENEFIT OF ALL INQUIRIES.

Eclipse Free Engine Pulley may be readily attached to Pope Motorcycles as Special Equipment

CLUTCH CONTROLLED FROM THE HANDLEBAR

SPECIFICATIONS

1. Motor, 5 H. P.; cylinder capacity, 498 cubic centimetres; 57 mm., bore; 52½ mm., stroke.
2. Ignition by high-tension, armored magneto with distributor fixed thereon, with which it forms a whole, entirely tight. It is entirely protected against water, dust and mud. The armored magneto first appeared in this country on the F. N.
3. Highly efficient automatic carbureter.
4. Separate gasoline filter.
5. Transmission by bevel pinions (ratio 1—5.4).
6. Improved elastic fork, with counter check spring.
7. One lever for controlling carbureter, fitted on right hand side of handlebar.
8. Height of frame, 20 inches.
9. Wheels, 26 x 2½ inches.
10. Wheel base, 56 inches.
11. Lubrication by pump inside the tank; simple, safe and effective.
12. Free engine by multiple disc clutch, running in oil.
13. Declutching device is controlled by Bowden wire from handlebar—the only machine in the world having this feature.
14. Plugs, short in length, fitted with ebonite, eliminating the possibility of electric discharges when the rider touches the plugs with his knees.
15. Foot rests are regular equipment.

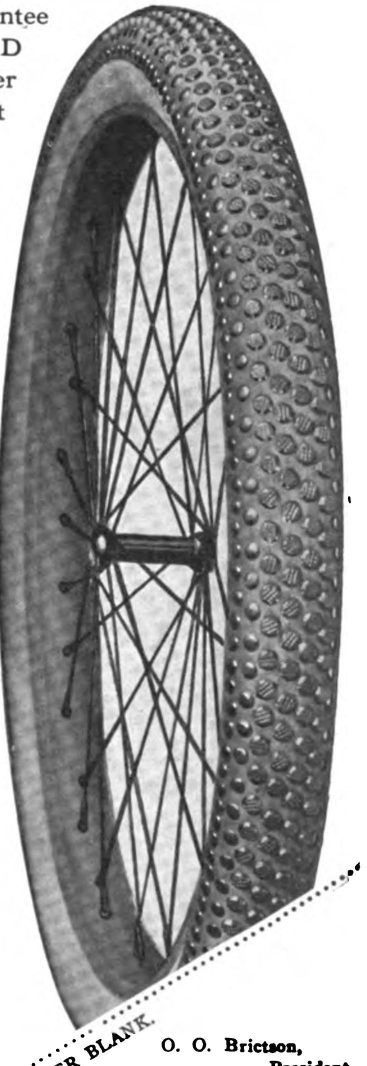
TIRE PROTECTION WITH A GUARANTEE

No longer is it necessary for motorcyclists to worry about PUNCTURES, BLOW-OUTS, GLASS CUTS, SKIDDING and unnecessary tire expense, which heretofore has MARRED the pleasure of all motoring—" BRICTSON " DETACHABLE TREADS will eliminate all this.

10,000 Mile Guarantee

SEND FOR COPY OF SAME



Yes, we will give you a 10,000 mile written guarantee with every "BRICTSON" MOTORCYCLE TREAD on a daily mileage basis of twenty-five miles per day. Can you get this kind of a guarantee on your rubber tires? Figure this guarantee out and you will see that it covers a period of 400 days.

Design and Construction

Made of select, specially prepared chrome tanned leather, soft and pliable, which gives with the "BRICTSON" the full benefit of the pneumatic tire. Studded on the surface with small neat-looking steel studs, designed to give perfect traction as well as a perfect "non-skid." There are layers of the best tire fabric between the layers of leather, which add strength and keep the tread from stretching. In addition to all these important features, the "BRICTSON" is lined perfectly smooth on the inside so there are no rivets or studs in contact with the rubber casing, making it impossible for the tread to injure the casing in any way.

The "BRICTSON" is the only scientifically constructed tread in that it CANNOT slip or slide on the rubber casing in ANY direction, owing to the patented, scientific method of fastening. It is held in position on the rubber casing by equal tension from all points of the circle, and for this reason may be adjusted to PERFECTLY fit the casing over which it is applied, which CANNOT be accomplished with any other method of fastening, and also envelops the entire casing, excluding sand, stones, mud, or even water from coming in contact with the rubber casing.

The "BRICTSON" is the ONLY TREAD THAT HAS PERFECT TENSION ADJUSTMENT FROM ALL POINTS OF THE CIRCLE, which other tread manufacturers have tried to imitate with metal contrivances that only detract from the appearance of the tread, add weight, and destroy the pneumatic feature, but still do not accomplish the desired result.

The "Brictson" Exclusive Patented Way of Fastening

The "BRICTSON" has no HOOPS, HOOKS, BUCKLES, SPRINGS, or any other unnecessary metal contrivances to add weight, break or eat into the rubber casing; neither is it cemented, laced, vulcanized, riveted or fastened to the rubber casing in any way—NATURAL INFLATION OF THE TIRE DOES THE TRICK—Simply clamped between the head of casing and rim—strictly Quick Detachable.

PRICES: One-half the price of a rubber casing and guaranteed three times as long. Compare the following prices:

26 x 2¼	$5.50	28 x 2¼	$6.50	28 x 2¾	$7.50
26 x 2½	6.00	28 x 2½	7.00	29 x 3	8.00

Other sizes on application.

Ask Your Dealer for "Brictson" Detachable Treads

Ask the best dealer in your town to show you the famous "BRICTSON" Guaranteed Detachable Tread. If for any reason he cannot supply you, fill out the attached ORDER BLANK, pin your check to same, mail it, and I will ship you the treads on TEN DAYS' FREE TRIAL, and if you don't find them perfectly satisfactory within 10 days from receipt of treads, return them and I will cheerfully refund your money. Clothes That Make The Man—Comfortable

You may have a dandy machine, just the thing for even, comfortable riding. But that comfort goes for naught if you wear an uncomfortable and ill-fitting suit.

The illustration shows our jaunty, serviceable Norfolk cut coat. It can be made to YOUR INDIVIDUAL measurement in the latest style, in the following materials: English Roseberry, English Whipcord, Fustian, Petrels and Khaki.

Strength in every fibre—quality in every thread

"Aurora Brand" Clothing is a by-word for durability, style, fit and comfort.

Dealers—get busy. This is the time for the Spring outfitting and you can get a good slice of our big business if you write us NOW.

Samples and full garments will be sent to dealers if desired.

Lunar MOTORCYCLE LAMPS

The Strongest and Most Penetrating Lamp on the Market

The name "LUNAR" on a Motorcycle Lamp carries with it a guarantee for highest quality possible—quality in both material and the workmanship put into the constructive details that go to make up the whole. **"LUNAR" Motorcycle Lamps** are equipped with a ground glass **MANGIN MIRROR** which throws an extremely bright ray of light ahead while Inside Reflector **DIVERGES RAYS,** lighting both sides of road.

"LUNAR" Motorcycle Lamps are made of heavy gauge material throughout with **one piece** body. All parts are interchangeable and easily removed for cleaning purposes. Extra heavy glass front; constructive principles eliminate absolutely all rattle and vibration.

TURN NIGHT INTO DAY

SPECIFICATIONS—Diameter of MANGIN MIRROR, 5 inches; Diameter of Flange, 8 inches; Extreme Length, 6 inches. Brackets adjustable to fit any motorcycle. Nickel finish will be furnished regularly. Other standard finishes at no extra cost.

Price, Complete with Brackets, $7.50

RIDERS—Insist upon "LUNAR QUALITY" Motorcycle Lamps. No machine complete without one, no tour is completely enjoyable without a "LUNAR."
DEALERS—Send for full information. Write factory direct.

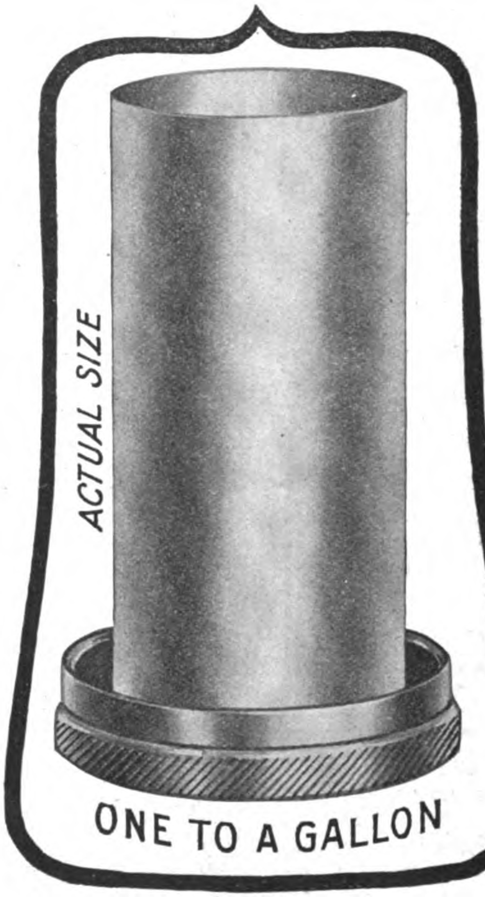
MOTORCYCLE TALKS

Lubrication. No. 4

(NOTE: This is the fourth instalment in the series of talks now appearing in the motorcycle papers dealing with those practical features that you should look for in the machine that you require for everyday service.)

Riders of the past decade have learned well their lesson in lubrication. Their experience has taught them that too much attention cannot be given to the oiling system. Those who know, advise new riders not to guess at the quantity of oil used but to over-oil and be sure that the engine is getting sufficient lubrication.

The Schickel OILING SYSTEM



Directions for Mechanical Systems

The oil tank holds two quarts of oil. It would be advisable to use a funnel in pouring the oil into the reservoir through the small filler hole. Use the special hand pump fitted to the side of the tank to get the oil from the reservoir into the crank case. Look through the glass window into the crank case and be sure the oil level shows half a glass. Run the engine carefully and adjust the stroke of the pump so as to pump approximately the same quantity of oil into the crank case that the engine consumes in operation. To adjust this pump use the special wrench provided with each tool kit. It will be necessary to loosen up the set screw before you can adjust the stroke of the pump. You will learn after some experience the correct adjustment (stroke of the pump) for average conditions. When the engine is worked hard use hand pump at the side of the tank in addition to the regular system. Before starting on a long trip make sure that all connections at tank, pump and crank case are tight. (Additional information concerning gravity systems on request.)

Directions for The Schickel System

To each gallon of gasoline empty one measure of oil into the tank.

The Schickel oiling system is perfect. It is absolutely accurate and reliable. It is simple and the most economical in consumption of oil.

It is absolutely accurate and reliable because the oil is fed to the engine in exact proportion to the work done. There are no oil leads to break off or clog up. You do not have to remember about stop cocks to turn on or off.

It is simple because there are no gears, mechanical or hand pumps, sight feeds, oil leads, check valves or stop cocks.

It is economical because it can run sixty-five or seventy miles on only one measure of oil.

United States Tires have been selected as exclusive 1913 equipment for Indian Motorcycles.

The Hendee Manufacturing Company of Springfield, Mass., has contracted with us to supply *all* the tires that go on next year's big output of Indian Motorcycles.

When a firm of the standing of this one decides to use one brand of tires *exclusively* in equipping a motorcycle as popular as the Indian, it is a pretty good indication that the tires selected possess *every quality a motorcycle tire should have.*

If *you* are buying motorcycle tires it might be well for you to think this over.

RIM AGREEMENT

Reached at a Conference in Cleveland Between Motorcycle Manufacturers and Rim and Tire Makers.

REPRESENTATIVES of the Motorcycle Manufacturers' Association, rim manufacturers and tire manufacturers met at the Hotel Hollenden in Cleveland on April 23 to agree on specifications of standard motorcycle rims, the CC type being the one under discussion in particular. This rim, which is adapted to 2¾ and 3-inch tires, was formerly 1.76 inches between the clinches, but at the conference the following details of construction were determined upon: Distance between the clinches, 1.65 inches; stock at the clinches to be 14 gauge, the same as at the base; the CC type rim, as well as the others, to have the base "bellied" instead of flat. Types AA and BB to remain unchanged, except as above noted. The Standard Welding Company, of Cleveland, stated through their representatives that the manufacture of these rims would be taken up by them when the demand became sufficient.

The Motorcycle Manufacturers' Association was represented by Messrs. Henderson (Henderson Motorcycle Co.), Hendee (Hendee Manufacturing Co.), Alcorn (Consolidated Manufacturing Co.), Harley (Harley-Davidson Motor Co.), Kinsman (Pope Manufacturing Co.), and Ottway (Aurora Automatic Machinery Co. The rim makers were represented by Messrs. Guthrie, Sessions and Manternach (Standard Welding Co.), Carkhuff, Tremp and Mott (Firestone Tire and Rubber Co.), and Wagonhorst (United Rim Co.). Messrs. Wait, Butler, McMahon and Stokes were present for the U. S. Tire Co., Harris and Parsons for the Diamond, and Frisby for the Empire tire house. Richfield and Hall, of Goodyear, with Morris (Republic), Smith (Federal), and Carkhuff (Firestone) complete the list.

SUGGESTIONS BY GIBSON

AT the outset of the 1912 touring season your secretary-treasurer desires to call attention to various matters of interest to you.

Don't forget to arrange your 1912 vacation so as to attend our annual assembly, the place and time of which is soon to be decided upon. As last summer, we will have a temporary office at the official hotel in the Convention City, which will be equipped to allow us to properly conduct all F. A. M. business. We shall be there at least two days before the assembly convenes, and any touring member can have his luggage expressed, prepaid, to himself, c/o G. B. Gibson, secretary-treasurer F. A. M. On arriving at the official hotel your luggage can be quickly obtained from the attendant at our rooms.

We have just gotten out our 1912 F. A. M. novelty circular, and as we have added a few articles, we wish to call attention to them, as follows: Solid gold F. A. M. pins, $3; special F. A. M. Founders pins, for members holding cards numbered from 1 to 237, inclusive, $1; F. A. M. pennants, yellow emblem and F. A. M. letters on a blue field, 75 cents; F. A. M. arm band, small yellow emblem on a blue field, 25 cents These articles are in addition to our original assortment, with which all older F. A. M. members are familiar.

To F. A. M. local commissioners, we wish to state that we have had printed some official stationery for you, and we shall be glad to send you a supply of letterheads and envelopes on request.

G. B. Gibson, secretary F. A. M.

COLUMBUS BOWL ASSURED

Work Will Be Started at Once on Board Track in Buckeye Capital—Opening Early in June.

COLUMBUS, OHIO.—Unless all signs fail, Columbus will have a half-mile board track by the middle of June which will be the equal of any board track in the United States. The plans for the track have been about completed and a company styled the Columbus Motordrome Company has been chartered with a capital of $20,000 to erect the track. The incorporators of the company are mostly motorcycle dealers in the Buckeye capital. They are William H. Snyder, George H. Bangham, Philip A. Vogle, Charles E. Webster, Charles E. Barr and Arthur C. Edwards.

A site has been selected near an interurban street car line and a steam road, upon which it is proposed to build the track. The work will be started at once.

Local dealers feel that the building of the board track practically assures the Buckeye capital of the honor of entertaining the next convention of the F. A. M., which will be held in July. The local dealers' committee has sent assurances to the F. A. M. officials that Columbus will have a board track by the time of the meeting.

STARS IN TULERIES MEET

Hasha, Graves, Schwartz and Other Fast Boys Thrill Big Denver Crowd in Sunday Program.

DENVER, Col., April 29.—Honors were evenly distributed in yesterday's races at Tuileries Park, where the best program so far this season was run off before 3,000 motorcycle enthusiasts. L. E. Bowen led by winning two events, and Hasha, Graves, Schwartz and Beck each captured one race. The meet was marked by close and exciting finishes. In the first professional event for Class B riders, Schwartz, King and Fleckenstein rode abreast for the last mile and finished in the order named a very few inches apart.

Hasha and Graves had an exciting battle in the five-mile event for Class A riders. Hasha took the pole at the start and got off in front. Graves overtook him in two miles but held the advantage only a lap, when Hasha again passed him. It was nip and tuck in the last lap with Graves the winner. Graves was unable to compete in the final open event of the meet. Hasha was an easy winner in this event, lapping all the riders once and some of them twice before the last mile.

Summaries: Two-mile amateur, single stock, 30.50 class—B. T. Shepherd (Merkel); H. Beck (Merkel); R. Barclay (Harley-Davidson). Time, 2:39⅖.

Three-mile professional, 61.00 class—B. L. Bowen (Merkel); A. Patterson (Merkel); Mack Cox (Merkel). Time, 2:19⅘.

Three-mile professional, 61.00 class—B. E. Schwartz (Indian); F. King (Indian); L. Fleckenstein (Indian). Time, 2:18.

Five-mile professional, 61.00 class B—L. Bowen (Merkel); E. Schwartz (Indian); L. Fleckenstein (Indian). Time, 3:49⅕.

Seven-mile open professional, 61.00 class A—Ed. Hasha (Indian); E. Armstrong (Excelsior); E. Schwartz (Indian). Time, 4.50⅖.

WANT AMERICAN STARS

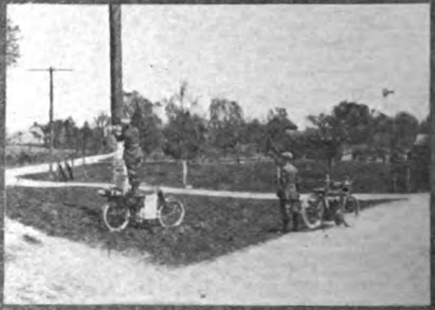
OWING to the impetus given racing affairs in the Dominion through the organization of the Canadian Motorcyclists' Association, some of the best-known American speedsters are preparing to enter races over the border. The Montreal club is now getting in touch with professionals in the States, and other Dominion squads count upon drawing from the ranks of American stars for early meets.

SIXTEEN RIDERS FINISH DAYTON GRIND

Severe Endurance Run to Toledo and Return Over All Kinds of Roads Eliminated Only Five Contestants—Perfect Team Score for New Era Riders—Sanford Lost No Points Despite Spectacular Plunge Into Canal.

DAYTON, Ohio, April 22.—Covered with dust and showing signs of exhaustion from the hardships of their trip, the riders in the Dayton-Toledo motorcycle endurance run returned to Dayton at six o'clock Sunday night. Promptly at the time scheduled for the first relay of contestants to arrive, the first rider, S. J. Chubbuck, turned into Main street, and through a double line of thousands of Dayton's cheering citizens, reached the goal in one of the most spectacular and exciting finishes that could be imagined. He was closely followed by H. G. Pohl, the second to reach Timer Kinloch, who had established himself at a table in the street in front of the motor show which opened at the moment the run started the previous day.

Pathfinder in the Rain.



Pulling Up Road Signs.

Following Pohl, the next rider was W. McMillen, who had difficulty in reaching the checker's table, for on the arrival of the first two riders the crowd knew no restraint, and, ignoring the corps of traffic officers placed by Chief Allaback to preserve order and clear the way for the riders, the crowd swarmed into the street. Massed around the arrivals they shook hands with them, and it was some time before the wide street could be cleared for the other riders, who were now rolling in a minute apart, to reach the busy Mr. Kinloch and his register.

Mud Nearly Hub Deep.

A Stop for Fuel.

The above photographs, in order, represent: 1. New Era pathfinder. 2. A checking station. 3. A fine stretch. 4. Ahead of schedule near Columbus. 5. At Fostoria.

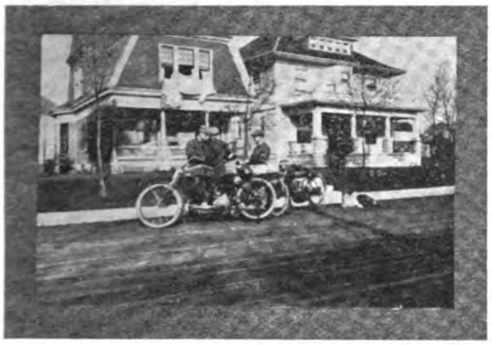
Coming on Sunday, when the usual weekend of spring pedestrians is largest, the finish of the motorcycle endurance run drew the largest crowd that has gathered to witness any public event in the Gem City in months. With nearly 500 riders of motorcycles in Dayton, interest in the two-wheeled motors is unusually great, but the run attracted larger crowds than was anticipated by even the most enthusiastic motorcyclist.

It was difficult at the start to determine who were the perfect score men, and this was not known positively until the following day, when the reports by mail from points along the route began to come in. These reports brought joy to Dayton, for the team from the New Era shops in this city was the only one which rode back to Dayton with a perfect score. This team is composed of J. F. Jacobs, Jesse Campbell and Edward Rischel. Campbell and Rischel had been over the tour before, they having been on the pathfinders' junket from Dayton to Toledo a few days previously to pick the roads and post signs for the other riders. In the scores all of the other teams had one or more men who fell below the schedule, and so disqualified their teams. Twenty-one riders started on the run, but of this number only sixteen made Dayton on schedule time on the return.

On account of being overtaxed in getting out new machines, the Merkel folks did not enter a factory team in the run, but three members of the plant staff, who use their own machines, went in as trade riders. These contestants were Roy Toms, 6 h. 1911 belt machine; William Bewley, similarly mounted, and Ford Sanford, with a 4 h. belt single, 1911 model. This trio scored perfectly, as did V. A. Steger, a private owner, of Dayton, who mounted a 6 h. 1912 belt Merkel. Roscoe Miller, another Daytonian, Merkel-mounted, finished with 995 points.

That the run was not a path of roses for the contestants was learned when the men rolled into the Gem City a few hours before dark Sunday night. This, of course, was known in advance by the path-finding crew, but they encouraged the entrants as much as possible. When the scouts returned with information that the roads in many places were bad, and that the trip from a standpoint of distance and difficulties would be a crucial test of both the stability of the machines and the endurance of the riders, it was thought advisable by the managers to "keep mum," and as a consequence there was no dropping out of the riders at the eleventh hour.

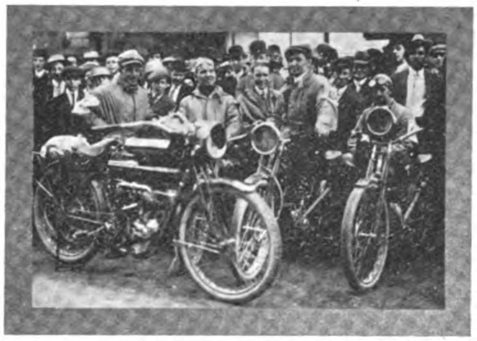
Mishaps were numerous, but no one was seriously injured. Many spills were taken in the 373 miles of hard riding, but it was only the disabling of machines that stopped three of the four who did not "show," and one lost out because his foresight in the oil line was not as good as his qualities of endurance. He was E. R. Durkee, who got into the city limits of Dayton, running, as he put it, for several miles on "lawn mower oil" borrowed en route. He also lost his way, and a half dozen blocks from the last control, from which he could have walked and pushed his machine, he failed to run in.



Pathfinders at Campbell's Home.

J. F. Sanford had probably the most exciting experience of all the riders. He met with an accident which smashed his lamp, but stuck to the saddle and rode on in the dark over strange roads. Near Toledo, where a sharp angle in the road was near the approach to a canal bridge, Sanford did not know of the bend until a light from the machine of a rider close at his rear showed him the danger too late. He made a spectacular dive head first into the canal basin in six feet of icy water. The experience dampened only his clothes and not his ardor, and as his machine did not follow him into the canal he remounted and lost no points through the mishap.

G. W. Schneider lost out through tire trouble, and I. C. Howich had an accident near Van Buren, O. W. E. Stokes only got as far as Springfield and there he lodged. An accident to his machine in that city knocked all of the spokes out of his rear wheel, and he shipped it back to Dayton and came in on a comfortable day coach. Several of the other boys had spills, but beyond getting their clothes torn no damage resulted. The fastest speed made during the trip was put up by the perfect-score team on New Era machines. This was on a level stretch, the best road in the entire 373 miles, when the trio made 45 miles an hour between Bowling Green, O., and Toledo, O., in the dark. The scores of finishers were as follows:



The Merkel Squad.

W. J. Teubner	Indian team	1,000
I. O. Horwich		Out
E. G. Baher		1,000
S. J. Chubbuck	Yale team	1,000
H. G. Pohl		991
W. McMillan		1,000
Harry Hearn, Yale		998
Joe Richards, Harley-Davidson		999
Roy Toms, Flying Merkel		1,000
Wm. Bewley, Flying Merkel		1,000
J. F. Sanford, Flying Merkel		1,000
E. R. Durkee, Pierce		Out
Jesse Campbell	New Era team	1,000
I. F. Jacobs		1,000
Edw. Rischel		1,000
C. F. Wiher, Indian		968
G. W. Schneider, Indian		Out
W. E. Stokes, Thor		Out
V. A. Steger, Merkel		1,000
R. Miller, Merkel		995
H. D. Woolley, Indian		Did not start
C. Friedman, Indian		Did not start
J. Otto Tresemer, Indian		Out

POPULAR AMONG FARMERS.

THE motorcycle is becoming so popular with the men on the farms that by many it is regarded as a sort of gasoline horse. Its use is so extensive in going from farm to town and in taking country jaunts that "hitching up the old mare" has given place to the "twist of the wrist" on the single tracker.

According to some statistics recently compiled, it was found that one out of every eight farmers in northern Indiana owned a motorcycle, that a good percentage of tillers of the soil in Illinois and Wisconsin rode the two-wheeler, and that it was popular in nearly every farming community in the country.

OFFICIAL reports say the number of motorcycles in the State of Pennsylvania is about 2,500.

Referee Kirby and Route Mappers.

BALTIMORE CLUBS ACTIVE

Regular Sunday Trips Are Being Made and Plans for Night Runs Have Met with Favor.

BALTIMORE, MD., April 22.—Motorcyclists in this city are now having the time of their lives. With fair weather for the past several weeks they have been making things hum on the road every Sunday. All the clubs have been holding regular runs and the only thing that has been interfering with them is the deep mud encountered in some sections. Even with this they have got by successfully. On April 21 the Indian and Maryland clubs went to Westminster and had a fine dinner. The Big Six of the Indians, not satisfied with this short run, left the bunch at Westminster and went off to Frederick, covering twice the distance of the other boys.

A run once a week at night will be held hereafter so as to afford the boys who are tied up in offices all day an opportunity to get out on the road in a squad. This innovation will tend to popularize motorcycling more than the regular Sunday runs.

The members of the Chesapeake M. C. went up to Ridgeville on Sunday, April 21, and partook of a fine Maryland dinner before turning their faces toward home. Captain Fischer led a good crowd.

Talk is again rife in this city of a board track. George Kreamer, the track builder, came down last week and had a talk with Howard French. Kreamer realizes that no sites for a three-lap saucer can be obtained and wants to put up a quarter-mile track. He is working hard to do this but what the outcome will be no one seems to know.

VALVE TIMING.

JAKE BERINGER.—The exhaust cam in the case which the timing diagram demonstrates is cut with a short, steep "approach" or front face over which the roller glides before rising and rolling on the face or "edge" of the cam. This arrangement is designed to give a rapid opening and closing of the valve with, of course, the length of face sufficient to keep the valve open during the proper period. Measuring the whole of the cam surface in degrees, we have: 17½ degrees approach + 79 degrees open, + 11 degrees closing = 107½ degrees total, remembering that the cam is mounted on the half-time shaft and consequently revolves at half the speed of the motor. That is, while the crank passes through 90 degrees the cam passes through 45 degrees, etc. The cam which you used has a gentler approach and closure, hence you cannot get the timing according to the diagram mentioned. The timing is for a 3½-4 h. single of about 3¼ by 3½ or 3⅗ inch stroke. Cam profiles differ with different motors and consequently only general directions, with a typical example like the one just mentioned, are given.

ROUTE IN THE BRONX.

CONSTANT READER. — Cross 130th street bridge, turn into Southern Boulevard and continue to Willis avenue. Turn left and go up Willis avenue to 149th street and Third avenue. Continue along Melrose avenue, which is a continuation of Willis avenue, to East 163d street. Turn right and go to Washington avenue. Washington avenue begins at 156th street at junction with Third avenue. The route given includes asphalt surfaces, except at the bridge and cross streets.

MINNEAPOLIS OFFICERS.

OVER seventy-five members of the Minneapolis (Minn.) M. C. attended the second meeting of the club this year at which officers were elected and road runs for the year were discussed. The annual "chicken dinner run" to some outside lake resort will be held soon after Decoration Day, and a subcommittee, headed by A. R. Horn, agent for the Yale motorcycle in Minneapolis, is arranging the affair. It is planned by the club to hold a run every Sunday, favorable weather permitting, to some nearby town where the members can take dinner and get back to the city late in the afternoon.

Preceding the meeting the officers for the year were elected as follows: President, William Barnaby; vice-president, William Edwards; secretary and treasurer, Ray Porter; motorcycle captain, Guy Webb.

GOING INTO FAST COMPANY.

D. L. TULLIS, of Kenton, Ohio, known as a motorcycle speedster, is preparing to enter some big races this summer. He intends to go into fast company and ride in some of the biggest races to be held in this part of the country. Tullis has had an opportunity of entering several races already, and may enter the big races to be pulled off at Detroit May 19. Among other important motor meets, which he expects to enter within the next few weeks are the ones to be held at Evansville and Vincennes, Ind.

HEPBRON A TRUE SPORT.

BALTIMORE, MD.—The management of a local theater had its nerve taken last week by James M. Hepbron, of the Motorcycle Touring Club of Maryland. Hepbron saw a motorcycle act at the theater and challenged the performer. In return he was told by the artist that he would give him $100 if he duplicated his act, which consisted of riding around within a small bowl on the stage. Hepbron accepted but the management got cold feet and declined to permit him to go on, although Hepbron had signed papers releasing the theater from all blame if he should meet with an accident.

BIG BOSCH ORDER.

RETAINING the opinion they held for 1912 regarding the superiority of the magneto as ignition equipment for their motorcycles the builders of the Indian have decided that all their machines for 1913 will be Bosch-equipped. The Bosch enclosed type of magneto, now being fitted on the Hendee products, will be retained and as a result the Bosch company has just received from the Springfield Wigwam the largest single order ever placed in this country for motorcycle magnetos.

TRENTON SALES.

JOHN SYKES, JR., agent for Indian machines in Trenton, N. J., has sold 73 machines so far and he reports that the outlook is unusually bright for continued sales. On a recent Saturday he disposed of seven twins and one second-hand machine, a banner sales performance for the city. At latest reports his sales of supplies figured up to three times the total reached in this department during 1911. Many residents on the outskirts of Trenton are buying motorcycles and using them for daily trips to and from their places of business.

MORE RECORDS FALL

Marty Graves and Don Johns Set New Professional and Amateur Marks on Playa del Rey Bowl.

LOS ANGELES, CAL.—All professional motorcycle records from two to 25 miles were lowered by Marty Graves, star of the recently organized Angel City M. C., at the Playa del Rey motordrome on April 18, and the same afternoon Don Johns lowered his own amateur records from one to 14 miles. Engine trouble forced him to discontinue the record trial at this point. A heavy wind was sweeping over the motordrome when Graves went out to try for the records which were hung up by little Eddie Hasha at the Stadium a few weeks ago, and the conditions did not appear to be the best possible for record-crimping. His Excelsior racer was a bit slow in getting away and this accounts for his failure to lower the one-mile mark. On the second mile, however he struck his pace and he was clocked at 1:19⅖ for the two-mile route. His first mile was turned off in 39⅗.

Don Johns.

From the second mile to the twenty-fifth there was not a break in Graves' sensational whirl. He spun to the 3-mile mark in 1:58⅘ and his other times were as follows: Four miles, 2:38⅘; five miles, 3:18⅘; six miles, 3:58⅘; seven miles, 4:38⅘; eight miles, 5:18⅘; nine miles, 5:58⅖; ten miles, 6:38⅗; eleven miles, 7:18⅗; twelve miles, 7:58⅖; thirteen miles, 8:38; fourteen miles, 9:17⅕; fifteen miles, 9:56⅘; sixteen miles, 10:36⅘; seventeen miles, 11:17; eighteen miles, 11:56⅗; nineteen miles, 12:36⅗; twenty miles, 13:16; twenty-one miles, 13:56; twenty-two miles, 14:36⅖; twenty-three miles, 15:16⅕; twenty-four miles, 15:56⅕; twenty-five miles, 16:35⅘.

But for the fact that his motor gave him trouble in the fourteenth mile Don Johns would undoubtedly have set new marks all for the entire 25-mile route. As it was he covered 14 miles in 9:26, setting a new amateur record. His times were as follows: One mile, 39⅖; two miles, 1:20; three miles. 2:01⅖; four miles, 2:41⅖; five miles, 3:22; six miles, 4:32; seven miles, 4:43⅗; eight miles, 5:24⅕; nine miles, 6:04⅘; ten miles, 6:45; eleven miles, 7:25⅗; twelve miles, 8:06; thirteen miles, 8:46; fourteen miles, 9:26. Johns rode his Indian flyer.

TRACK WORK POSTPONED.

INDIANAPOLIS motorcycle fans are disappointed over the latest statement of Jack Prince, to the effect that work on the Indianapolis board track is to be postponed for perhaps a month. Prince had hopes of having the track under construction before May 1, but his plans have not worked out as smoothly as he expected. However, he consoles the Indianapolis motorcycle fans with the statement that he will certainly build the track this summer. At present Prince is in Chicago arranging for the opening of the track there at Riverview. As soon as he gets things well started in Chicago he plans to return to finish his work at Indianapolis.

SELECTION OF DELEGATES.

SECRETARY GIBSON, of the F. A. M., is forwarding circular letters to affiliated clubs throughout the country calling attention to the sections of the Federation by-laws which refer to the selection of delegates for the coming national convention. Each club will be allowed one delegate for every twenty-five members or major part thereof. For instance, if a club has thirty-five riders it will still have one delegate, but if it has thirty-eight members, and not more than sixty-two, it will be represented by two delegates. The secretary's letter and accompanying sections of the by-laws give full information.

DENVER MEET POSTPONED.

DENVER, COLO., April 22.—Snow and rain on Friday, Saturday and Sunday caused the postponement of a promising race program which was to have been held on Sunday afternoon. Hasha, Humiston and Albright have arrived in this city from the coast and it is stated that Graves, Seymour, Ward and Balke will soon be here. Great things are expected when these stars meet on the Tuileries saucer.

BALTIMORE BANS SPEEDERS.

BALTIMORE, MD.—Speeding on the boulevards and pikes in and around this city by motorcyclists will be broken up if a crusade just started by the police is successful. Three riders were caught in a trap on Sunday, April 21, and they had to pay fines for violating the law. Motorcycle policemen have been stationed on the roads and the riders have been given plenty of warning. William Wood, State F. A. M. Commissioner, is opposed to scorching and he has delivered several lectures against it.

HOLDING WEEKLY RUNS.

MEMBERS of the Central Jersey M. C., of Trenton, N. J., have entered upon a series of weekly runs to neighboring points of interest and the boys are turning out in large numbers. Steps have been taken by the club to appoint an official repair man who will accompany the riders on their outings and look after any mechanical troubles that may be developed. It is believed that this system will reduce road discomforts to the minimum and it has scored a hit with the riders.

INDIANA CLUB PLANS.

THE Indiana Motorcycle Club of Indianapolis is planning a busy season. Harry Graff, president of the club, has not completed his plans as yet, but he states that the club will have something doing every week this summer. A club dance is to be held at an early date. The first run will be held within the next thirty days.

BREWER, ON AN INDIAN, WINS BIDWELL CUP

Chairman Thornley, F. L. Vanderpool (on Machine) and Others.

From Left to Right: Brewer, Constant and Vanderpool.

LEADING John Constant by little more than 50 yards and getting the most out of every jump of his 2¾ Indian, John W. Brewer, of New York City, whirled across the finish line to victory in the Bidwell Trophy race on the Long Island Motor Parkway, on Sunday, April 21. F. L. Vanderpool, also riding a 2¾ Indian, was a good third. But for the fact that Constant was obliged to make a brief stop to adjust his commutator he would undoubtedly have fought it out tooth and nail with Brewer at the tape. As it was, he did no loafing on his little 2¼ Indian, and it was roughly estimated that Brewer was forced to an average of nearly 48 miles an hour over the 17-mile route.

Sixteen riders started and all but five finished. The only accident involved James G. Bernough, an Excelsior rider from Bridgeport, Conn. He rode into a turn at high speed and went over a bank. Bernough escaped injury, but his machine was considerably damaged. The early hour of starting and the long run to the course kept many metropolitan riders from being on the scene, but about 100 enthusiasts were present when Chairman Thornley, of the F. A. M. competition committee, sent the first contestants away at 8:38:30.

The riders finished in the following order: J. W. Brewer, 2¾ Indian; John U. Constant, 2¼ Indian; F. D. Vanderpool, 2¾ Indian; John Doefler, 4 Merkel; Benjamin P. Scarborough, 7 Indian; J. Fredericks, 6 Merkel; William Annis, 7 Indian; Michael Costello, 6 Merkel; Salvatore Granete, 7 Indian; Arthur Fisher, 6 Yale; Al Cocchi, 2½ Indian; C. E. Pheason, 5 Indian. No official times were taken at the finish.

J. W. Brewer (Indian), the Winner.

MITCHELL WON.

BIRMINGHAM, ALA.—Arthur Mitchell won the 25-mile race at the aviation-automobile meet in 25 minutes and 26½ seconds. Mitchell rode a 7 Indian and led his nearest competitor, Gayle Joyce, who was riding a 5 Indian, by a quarter of a mile. Joyce took the lead at the start and held it for two miles. Then Mitchell forged ahead and was an easy winner, though Joyce trailed him closely for 10 miles.

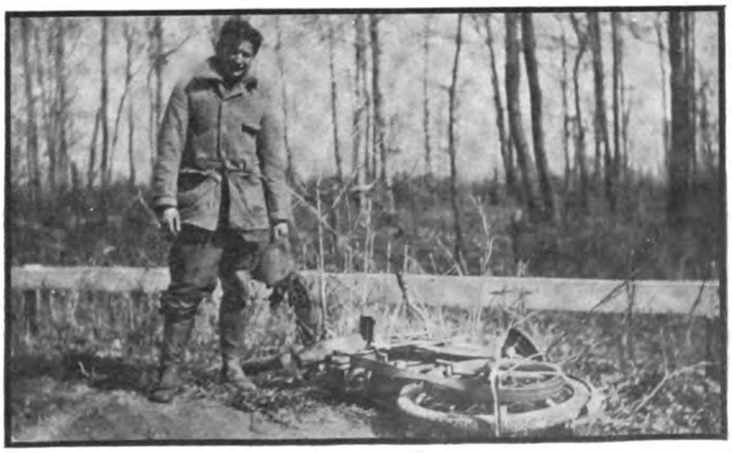
SIGNING UP RIDERS.

THE dealers of Toronto have been busily engaged during the past few weeks in signing up new trade riders, while other business changes have also taken place, so that the local motorcycling community has had considerable material for discussion.

Harold Cole, the 17-year-old Canadian title holder, who was promised for the Flying Merkel staff, has finally signed up with Percy A. McBride, the Excelsior distrubutor, and will ride the Chicago machine this season. Joe Golden, of bicycle fame, has joined the Indian staff of trade riders, while Ernie McIntosh, formerly an Excelsior rider, has become a Reading-Standard racer, having joined the T. Eaton Company, of Toronto, agents for that make.

Percy A. McBride, who already handles the Excelsior, the English Bradbury, and Motosacoche, an old-timer in the bicycle game, has secured a Flying Merkel agency, while W. B. Christie is opening an agency for the English B. S. A. machine. The Lion Sporting Goods Company, Yonge street, has gone into the second-hand motorcycle business.

From Left to Right: J. Doefler, Jas. Fredericks and J. G. Bernough.



Bernough Has Just Jumped the Road.

RACE MEET.

MOTORCYCLISTS of Clarksburg, W. Va., are making arrangements to hold a race meet at the new fair grounds on July 4. A committee is working on a program of events and entries are being reseived.

COMPLETE PARTS CATALOG.

ONE of the most helpful and comprehensive catalogs of motorcycle parts to appear for the present season has just been published by the American Motor Company, of Brockton, Mass., manufacturers of M. M. motorcycles. Complete diagrams of parts for each of the company's models are shown with carefully arranged price lists, and the work of locating information concerning even the smallest fitting has been greatly simplified. The task of preparing the catalog has been an arduous one but the result is something out of the ordinary for a booklet of this character.

EMBLEM CLUB IN PHILLY.

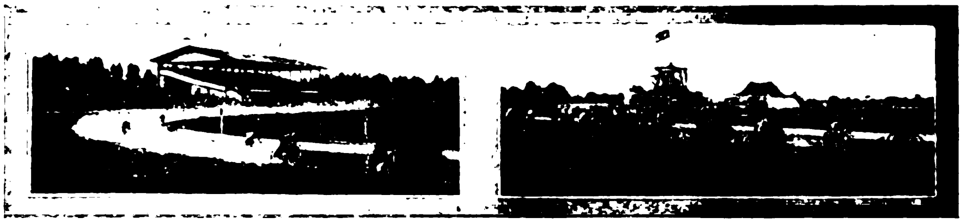
FIFTEEN members make up the charter list of the newly organized Emblem M. C., of Philadelphia, Pa. The club will hold its first run on May 5 to Reading. Quarters have been taken at 2400 N. 33rd street, directly opposite Fairmount Park where the Emblem members can enjoy every form of outdoor sport and motor over some of the finest drives in the country.

ENTERTAINED DEALERS.

JOHN KINNEY, of the John Kinney Supply Company, at Indianapolis, recently gave a dinner for the Indianapolis motorcycle and bicycle dealers. About twenty-five men turned out for the luncheon. The dealers met for the purpose of setting fixed prices to be charged for supplies. It was decided at the meeting to hold sessions every sixty days with a banquet twice a year.

CHANGE CLUB NAME.

THE Hoereth Cycle Club at Indianapolis, a new organization, has changed its name to the National Athletic Club and is merged with the old Hoereth A. C. The first run of the club will be held May 12.



Speedsters in Action On Columbus (Ohio) Track.

HOME ON BOARDWALK

Atlantic City Squad Will Open Permanent Quarters Fronting on Famous Thoroughfare—New Officers.

AT the annual meeting of the Atlantic City (N. J.) Motorcycle Club the following officers were elected: William N. E. Shannon, president; Walter F. French, vice-president; George I. Haines, secrtary; Charles A. Van Doren, treasurer; Bert Smith, captain; George I. Haines, first lieutenant, and J. E. Stokes, second lieutenant. At this meeting Albert C. Stephany, the retiring president, was given a vote of thanks for his untiring work in behalf of the organization during his term. President-elect Shannon is also F. A. M. commissioner in the Atlantic City district.

Steps have been taken by the club to bring about the rection of a permanent clubhouse, on or very near the famous boardwalk, so that it may be a handy rendezvous for visiting motorcyclists. It is likely that the new home will be built during the summer.

TUNING UP.

W. W. OURS, Indian agent in Clarksburg, Va., who has never been defeated on a track event in his State, is getting his big Indian in trim for hard work. A number of promis- riders have been developed of late and they are hot on Ours' trail. As a result fans in Clarksburg and vicinity are looking forward to some interesting contests. Ours has placed 12 new Indians so far.

TIRE-REPAIR COMPOUND.

"RUBBER-MEND," a plastic compound intended for use as a cement in all forms of tire repairing, is an attractive offering for the motorcyclist which is now being marketed by the Liberty Rubber Company, of Orange, N. J. The compound may be applied with the hands and if allowed to stand until it is thoroughly dry it becomes fully "cured" by the action of the atmosphere. It may be used effectively for repairing any rubber surface and will stand a great degree of heat. The use of "Rubber-Mend" practically does away with the necessity for vulcanizing inner tubes. It is put up in two sizes, selling at $1 and 35 cents. That the new compound meets a long-standing need of tire users is evident from the rapidity with which orders have piled up on the company.

VISITORS THRONG BIG DAYTON SHOW

Highly Attractive Displays Feature Exclusive Motorcycle Exhibition Under Auspices of the Dayton M. C.

DAYTON, Ohio, April 22.—The motorcycle show is the big thing in Dayton this week. It opened under most auspicious conditions on Saturday afternoon when the crack of a pistol in the hands of City Safety Director A. Mays Dodds sent the endurance riders of the Dayton club off on their long grind. As soon as the last rider had disappeared from sight the large crowd turned its attention to the show, and throughout the afternoon and evening the show building was thronged.

Every standard make of motorcycle was shown by the dealers, and all the exhibits were tastefully arranged. It is estimated that no less than 1,500 people inspected the machines on Saturday, and on Monday this number was almost doubled. The entire first floor of the building was given up to the motorcycle show, and on the second floor the Flower and Fruit Mission, a charitable organization of Dayton, had lectures and exhibits. These proved almost as strong drawing cards as the show itself. A dancing floor in the basement of the building was a popular gathering place for the younger people, and with orchestras and other special features the show was about the most novel and interesting event staged in Dayton in many a day. The boys of the Dayton M. C., under whose auspices the show was given, realized a neat sum from the affair, which will go toward the erection of a permanent clubhouse. At present they are holding their meetings in the Algonquin Hotel.

ARRESTING SPEEDERS.

THE police department of Columbus, Ohio, recently started crusade against motorcycle speeding, and as a result three arrests were made by the motorcycle coppers Sunday, April 21.

FOOD INSPECTOR THORKELSON, of Racine, Wis., has a motorcycle to facilitate his inspections in that city during the summer.

ARRANGEMENTS have been completed for a race meet to be held on the Fair Grounds track on May 12, under the auspices of the Indiana Racing Association. Many entries are in.

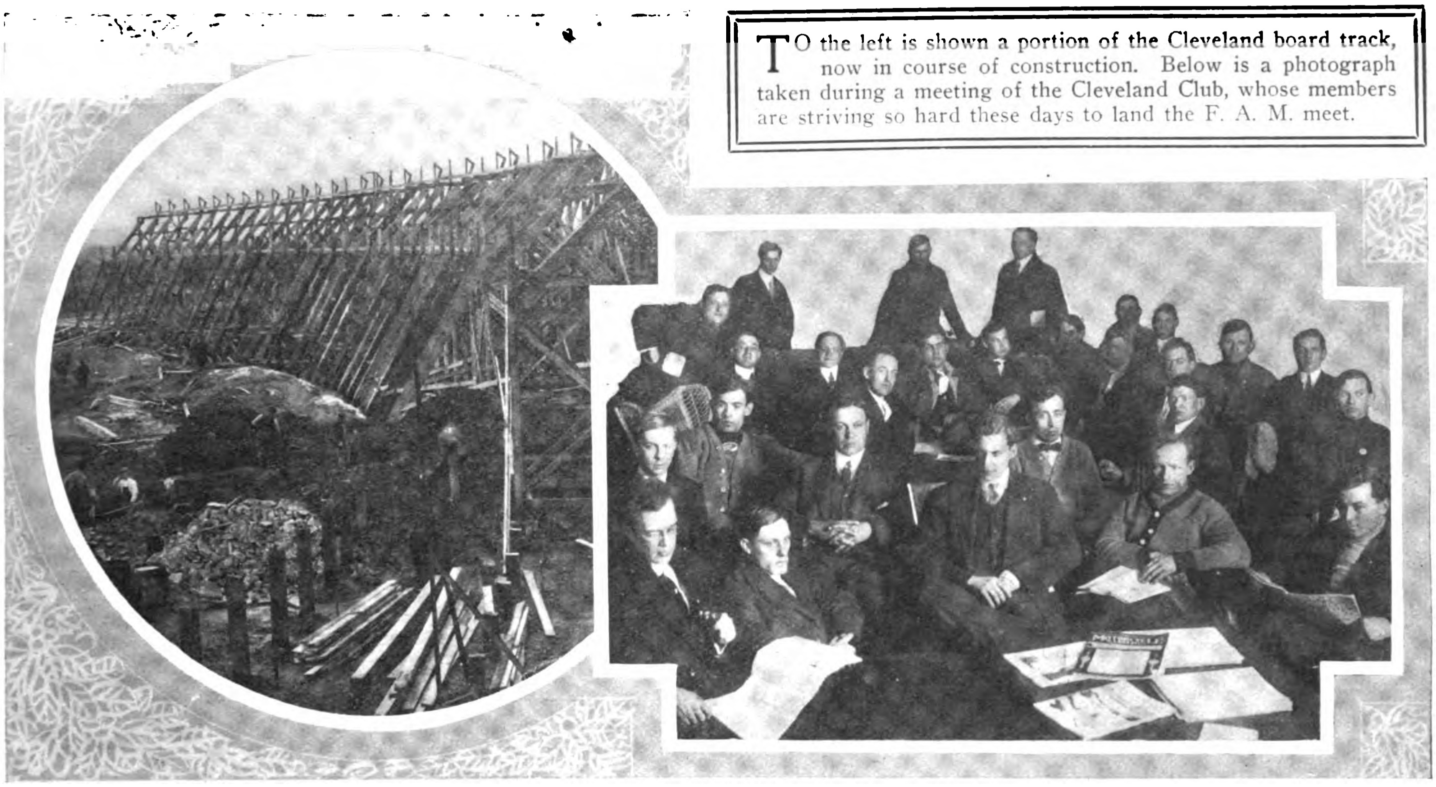
Three "Generations" of the Wheel, photographed in Dell Rapids, S. Dak.

FRANK A. HOUFF, president of the Terre Haute (Ind.) Motorcycle Club, has been appointed referee for all race meets in that city during the summer.

THE Shortgrass Motorcycle Club, of Pratt, Kan., has so far signed up 172 riders to make the district tour through the Western States this summer.

HARRY TEEGAN has been elected president of the Des Moines (Iowa) Motorcycle Club, which was recently organized.

RACES will be held by the Mansfield (Ohio) M. C. at the Fair Grounds, May 18.



TO the left is shown a portion of the Cleveland board track, now in course of construction. Below is a photograph taken during a meeting of the Cleveland Club, whose members are striving so hard these days to land the F. A. M. meet.

BAKERSFIELDERS TOO FAST FOR COYOTES

California Motorcyclists Took the Trail of Speedy Prairie Wolves and Rode Them to Death; at Least, So the Story Runs—Double-Century Reliability Trial and Sunday Outings.

BAKERSFIELD, Cal.—With a view to improving the attendance on club runs, the officials of the Bakersfield M. C. have entered upon a system by which every rider who attends such an outing receives an honor ribbon. The member holding the largest number of ribbons at the end of the year will be awarded a handsome loving cup. Recently the club held a "Poppy Run." The California poppy is now out in full bloom, and the foothills for miles around are a mass of floral gold. The club rode to the foot of White Wolf grade, some 30 miles from Bakersfield and at the foot of the Sierras. When the riders reached the turning point their names were taken, and later they received ribbons inscribed as follows: "Bakersfield Motorcycle Club—Poppy Run; White Wolf." The run series opened on February 25, the date of the club's annual picnic.

While Eastern riders were ploughing through snow and slush and devising motor sleds a month or two back, Bakersfield motorcyclists were holding regular Sunday runs and making every minute count. In an effort to find some of the winter which was bothering folks in other sections of the country these riders climbed into the mountains with their two-speeded machines, and even reached the snow lines. An hour or two later they would jog back into Bakersfield and forget that there is such a thing as snow. No lack of variety here.

On Sunday, April 28, the Bakersfield club held a 212-mile reliability contest under F. A. M. sanction. The route was as follows: Bakersfield to Wasco, via Rio Bravo; Wasco to Famosa, to Delano, to Tulare, via Pixley; Tulare to Visalia, through the orange belt and Eaxter to Lindsay; Lindsay to Porterville; thence to Delano via Ducor and Terra Bella; from Delano via North Road to Famosa, through McFarland and thence to Bakersfield via Oil Center. This carried the riders over some of the best and worst roads in the State. In some places the alkali roads were rutted to a depth of 18 inches because of the heavy teaming over them. Through the Porterville country the roads were excellent. This section of the route winds through lemon orchards and alfalfa fields for 30 or 40 miles and is as smooth and hard as a city pavement.

R. S. McConnell, President of the Cleveland Club.

There is no complaint against touring through the alfalfa country, but the Bakersfield riders do object to the methods employed by some of the alfalfa constables. Recently two riders were making about 12 miles per hour—they were unable to go faster owing to mechanical troubles—when a constable stepped out, covered them with a shotgun and announced that they were under arrest. A short time later they were in the village lock-up. The constable found the judge, court opened suddenly, and the alleged offenders were fined $5 each. However, the constable had used some pretty strong language while making his arrests and the club is going to have him "hauled over the coals" for using indecent language on a public highway. The riders promise to even matters if it takes them a year.

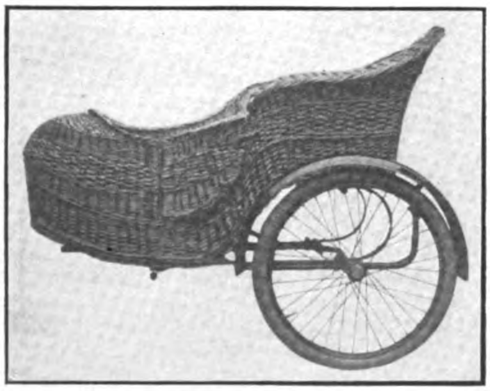
How's this for a new phase of motorcycling? One Sunday recently a squad of Bakersfield riders were returning from Wasco when they started up a pair of coyotes, the fastest things on four legs. Without hesitation the motorcyclists went after them across country, through sage brush, over wallows and squirrel holes and burrows. At intervals a pair of legs would fly into the air and one of the pursuers would go down, but those who were able to keep their seats never slackened the pace. For 10 miles over all kinds of going the squad chased the coyotes until one of the fugitives turned up his toes and gasped his last. The other was caught alive by Captain Dunne, of the club, but being too far gone to show fight, he was slung across the tank of a machine and taken to a nearby canal for a ducking. The little jaunt proved too much for him, however, and he also gave up the ghost. This story may go down hard with Eastern riders, but it's true.

The Bakersfield club is anxious to exchange pennants with other clubs throughout the country and will welcome such propositions.

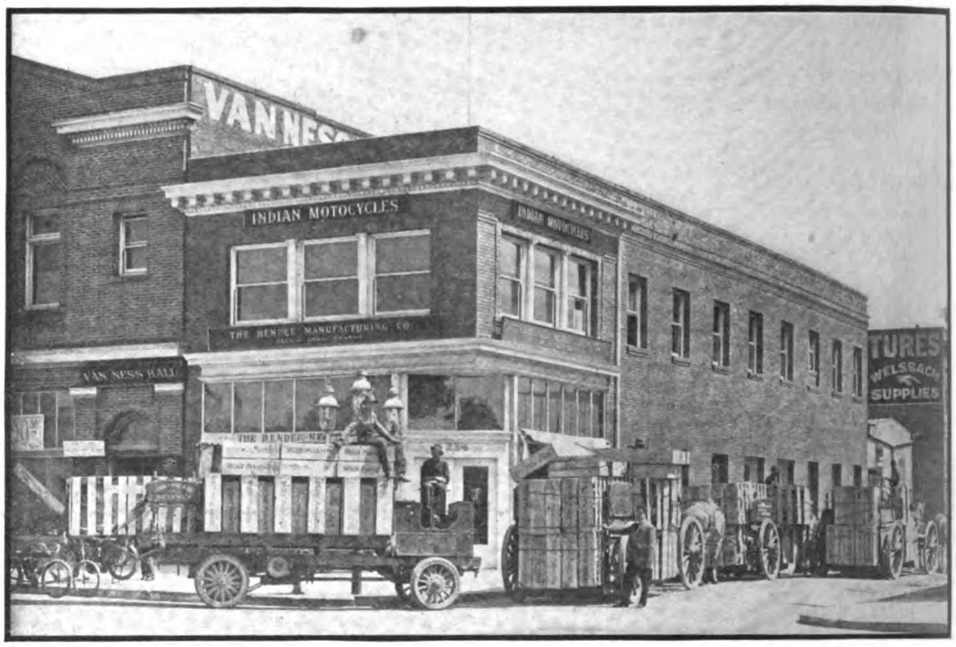
A NEAT SIDE CAR.

DESIGNED along the popular English torpedo lines, with a body of wickerwork and a chassis which embodies several unusual features, a new side-car devised and now being marketed by James S. R. Baxter, of New York City, is attracting attention. For the present Mr. Baxter is making his headquarters at the motorcycle establishment of F. B. Widmayer, 2304 Broadway, from which point he is prepared to give demonstrations of his passenger attachment. He has already placed several of the "baskets."

The chassis of the Baxter car is built of seamless steel tubing, with double truss frame construction. One of the special features is an improved mudguard which is so fitted that it is exceptionally rigid. This lack of vibration eliminates rattling of the mudguard fittings and works for longevity of the part. The guard is fastened by two quick-detachable screws which permit of easy adjustment. The wheel may be had in either the 26 or 28-inch size, with 2¼-inch tire. By means of two tension springs at the hub, in addition to the regular C spring, road shocks are almost entirely absorbed. The wheel may be attached to any make of side-car. By the addition of an extra piece of tubing beneath the body a suit-case or other piece of luggage may be carried in the rear.



The Baxter basket weighs only 60 pounds, and is one of the lightest attachments of its kind in the market. The designer intends to produce three models; one at $50, which is to be minus the double-truss feature in the frame, but embodying the tension spring and the torpedo-shaped body; another at $75, and the third at $80, the two latter embracing all the features mentioned above.



"SPEAKING of carloads," writes C. C. Hopkins, of the San Francisco branch of the Hendee Manufacturing Company, "here is the tenth we have received this year, and it was the largest single shipment ever made to the West. There were 93 Indian machines, valued at $22,745. From present indications this lot will not last long."

THE PILOT AUTOCYCLE, A NEW ONE.

Made by the Oberwegner Motor Co., of Toledo, Ohio

THE Oberwegner Motor Company, of Toledo, Ohio, announces two new models of the Pilot autocycle, single cylinder types only, magneto or battery, belt driven, with free engine device, and 4 h. p. motor.

One of the new features is the color scheme, which has been worked out very cleverly. The frame, motor base, mud guards, rims, etc., are of a beautiful shade of blue, while the tank is enameled a bright red, with the name "Pilot" brought out in bold white letters, making a very striking contrast.

The motor has roller bearings on the main shafts while the connecting rods are equipped with bronze bearings. The bore is 3.25 and the stroke 3.60, with 29.86 cubic-inch displacement. On the magneto models the Bosch is used, and is located in front of the motor. The machine is equipped with a very neat and compact mechanical oiler, which is adjustable and dependable at all speeds. It also has an emergency oiler of the drip system type, operated from the saddle. The mechanical oiler is so constructed that it is oil tight and will not leak. The spring fork is of exclusive design, a truss brace made of the best Vanadium steel. One particular feature of this fork is that it has ball bearings at eight points, and is of the cylinder-piston type.

Controls are by means of Bowden wire, operating through a wound wire cable inside the handle bars. The tanks are made of the best of material. The magneto model holds two gallons of gasoline, and the battery model 1¾ gallons. Both hold two quarts of oil.

The belt tensioner is remarkable in that it allows the rider to take up six inches of stretch in the belt without any adjustment, and without a particle of strain on the main motor bearing. A two-inch flat belt is used. The wheel base is 55⅛ inches, and the wheels 28 inches. Goodyear or United States tires are optional. Every motor is equipped with a direct cutout. Troxel saddles, without front coil springs are used, giving a saddle position of only 29 inches.

The reason the trade has not heard of this machine before is the fact that the Oberwegner Motor Company wanted to be in a position to make deliveries the day its announcement was made. The company already has 250 Pilot autocycles on the factory floor, and is now turning out thirty a day. Orders will be filled the same day they are received.

A few dealers were notified that this machine was coming, and a number of agencies have been closed. The Motorcycle Sales and Supply Company, of Chicago, Ill., has placed an order for ten machines, and these have been shipped. Mr. Miller, of that company, while at the factory stated that six of these machines had been sold simply from the specifications and from the picture. The Pilot autocycle will be illustrated in the next issue of this paper.

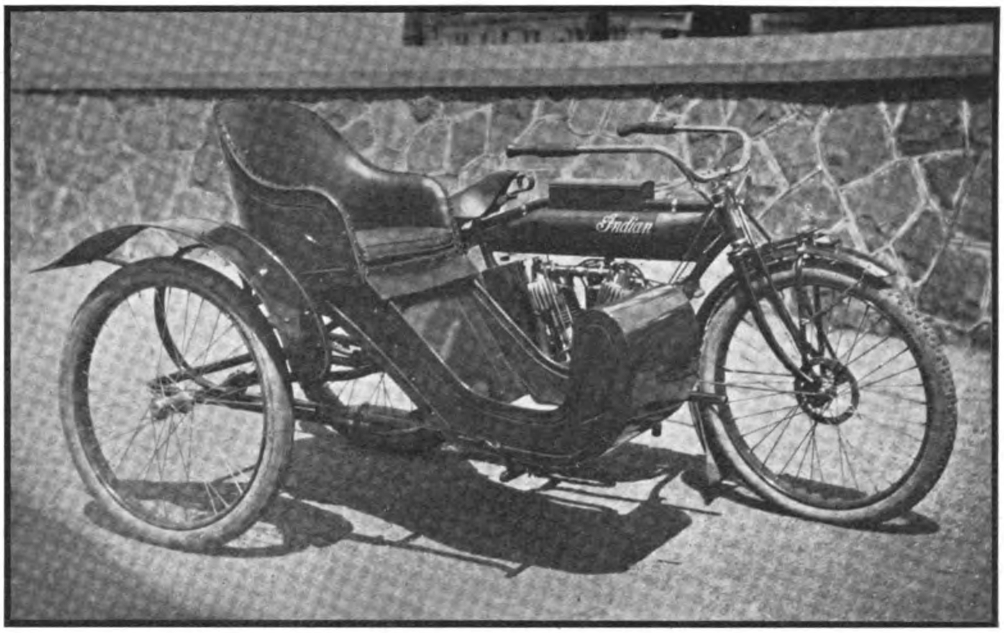
IN PATERSON, N. J.

ON Sunday, April 28, the North Jersey club, of Paterson, held its first run of the season. The destination was West Point via Haverstraw, and return via Central Valley and Tuxedo. The ride from Haverstraw on to West Point was of particular interest. At West Point a stiff climb was made to Fort Putnam, from which place the riders obtained a magnificent panoramic view of the Hudson river from Anthony's Nose to Newburgh, a distance of about 15 miles.

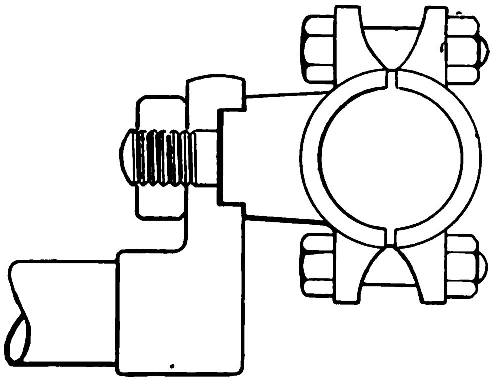
Next Sunday the club will hold a run to Princeton and return. The total distance is 115 miles, and is over level macadam roads.

SIMPLEX SIDE CAR

Newly Designed Attachment Shows Sturdy Construction and Embodies Comfort-Giving Features.



COMFORT for the passenger and the ability to get there and back, day after day, are two features which are necessities in side-car construction, and to this end the Simplex Machine Works, of 45th street and Sixth avenue, Brooklyn, N. Y., have brought out the "Simplex" side-car, here illustrated. It might be added that the operation of the outfit by the rider of the motorcycle should also be rendered as easy as possible, and this, in the case of the side-car in question, is provided for by having the axle offset, so that the rear wheel and car wheel are both in line. Another provision that is unique is in the fitting of a detachable wheel spindle, so that in case of accident, the rider can replace the damaged part with a spare spindle on the road, without recourse to large wrenches or a blow-torch. The side-car is attached by means of three lock-joint couplings, which enable it to be removed or replaced by unscrewing three nuts. The clamps which fit over the motorcycle frame are made with extension pieces terminating in threaded ends, and the eyes on the side-car couplings fit over the blank section of these extensions, thus carrying a greater part of the load thereon, as in the second illustration. Fittings are provided for any machine, and the makers state that the car can be attached to any motorcycle. All the couplings and connections are made of special heavy drop-forgings.



Front Connection Showing Unique Type of Lock Joint.

The body is built on automobile lines by experienced body builders. It is of all-steel construction, with Pantasote upholstery. Suspension is by double "C" springs. The generous amount of leg-room and the protection afforded from wind by the dash is quite noticeable. Under the cushion is fitted a small toolbox, and provision is made on the frame at the rear for a large luggage-carrier. The mudguard is suspended from the body. Any standard make of 2½-inch tire and either 26 or 28-inch wheel is included in the equipment. The side-car complete is priced at $75.

CONSTANT STATES HIS CASE.

EDITOR MOTORCYCLE ILLUSTRATED:

I note in the story of the Bidwell Trophy race, appearing in the last issue of the *Bicycling World*, a reference to the effect that there was something "suspicious" about my entry in same. This is such an unfair insinuation that I cannot refrain from stating my case. If those responsible for the article in question had taken the trouble to investigate conditions they would have found that they were greatly in error.

In the first place, machine No. 123, referred to in the article, is of 2¼ h., not 3½; again, No. 123 was nowhere near the Motor Parkway on the day of the race. The machine I rode out to the course was a 3½ I had borrowed for the event, but finding that it did not have the speed expected I exchanged with another rider and rode his 2¼ machine, the number of which I believe is 3564. Here's another point: Brewer did not pass me until about a mile from the finish, so that there was no "strange" action on my part in overtaking a 2¾ machine with a 2¼, as the article suggests. Such a statement is absurd.

Mr. Pitman asked me to take the machine I had ridden off the course, which I did. And I have no recollection of his requesting an opportunity to examine it. It remained where he could have inspected it until long after the finish and after the majority of the riders had started back. The machine I rode was a Jersey machine, owned by a Jersey rider and I did not even stop to take off the Jersey license tag. With reference to the insinuation that I have not been seen in my old haunts since the race I need only state that it is always possible to find me at 422 Gates avenue, Brooklyn. I have nothing to dodge.

One more point: A party directly connected with the preparation of the article in question told me that if I had remained quiet I could have entered No. 123 as a 1¾ machine. This was when I asked him to dope out a handicap for a 2¼ machine. The article I refer to contradicts itself repeatedly, and probably should be passed up without further thought on my part, but its manifest unfairness moved me to "speak my piece."

JOHN U. CONSTANT.

TORONTO THEATRE PARTY.

A HIGHLY successful theatre party was held on Wednesday evening, 2pril 24, last, by the Toronto M. C., over one hundred members attending. A performance at a local vaudeville house was witnessed, and it so happened that Charlie Ahearn's motorcycle and bicycle act was one of the numbers. The freak machines used in this act were labeled with large placards, taking off different members of the club. After the performance the riders, accompanied by every actor in the show, who were the invited guests of the club, repaired to a nearby restaurant for a Dutch supper. The evening wound up with several speeches.

NEW members are rapidly being listed with the Indian Motorcycle Club, of Baltimore, Md., which now numbers nearly 150 enthusiastic riders.

SAVANNAH DOINGS.

SAVANNAH, GA., April 27.—Although there was no endurance run here, as scheduled for April 26, the boys decided to go to Augusta and take part in the events there. The local riders made good. Young Buckner, with his Harley-Davidson, which he has ridden over 20,000 miles, won one of the events, and rode well in others. Those who remained in Savannah arranged an informal reliability run. Thirty-seven machines took part in the run, which was to the Ogeechee river bridge, where luncheon was followed by a baseball game, which ended in a tie score.

The date of the club's annual supper has been changed to June, and instead of 100 plates, there will be 250.

OSHKOSH ENDURANCE RUN.

THE Oshkosh club held its second annual banquet last Friday evening. An entertainment included music, recitations, a little boxing, etc. All the riders of the city were invited to attend; about forty were present. Twelve names were added to the membership list. At the next meeting plans will be made for a 100-mile endurance run around Lake Winnebago. The president of the club wishes to announce that all visiting motorcyclists are welcome at the club rooms at 144 Main street, which will be found open all day Sunday.

MOTORCYCLE races will be listed among the special speed features at the coming Cotton Carnival, to be held in Galveston, Tex.

LOOKING DOWN the STRETCH

May 5, Peoria, Ill.—Motorcycle race meet; mile dirt track.

May 5, Brooklyn, N. Y.—Invincible Motorcycle Club; single and double century runs; 100-mile course, Patchogue and return; 200-mile course, Southampton and return. No post-entry fee will be charged.

May 10, 11, Columbus, Ga.—Race meet on half-mile track by Columbus M. C.

May 12, Worcester, Mass.—First endurance run of Worcester M. C., to Concord, N. H., 175 miles.

May 15, Chicago—Opening meet at Riverview motordrome.

May 19, Detroit, Mich.—Race meet by dealers' club.

May 23, 24, 25, Vauconver, B. C.—Three-days' trip around Vancouver Island, by Vancouver M. C.

May 24, London, Ont.—Race meet by London M. C.

May 24, Toronto, Ont.—Race meet.

May 26—Race meet by Decatur (Ill.) M. C.

May 29, 30, Newark, N. J.—24-hour run by New Jersey M. C.

May 30, Zanesville, O.—100-mile race on half-mile track by Zanesville M. C.

May 30, Joliet, Ill.—100-mile race on mile track by Will County M. C.

May 30, Marion, Ia.—Race meet by Cedar Rapids M. C.

May 30, Elmira, N. Y.—Race meet by Elmira M. C.

May 30, Washington, D. C.—Race meet at Bennings mile track by National Capital M. C.

May 30, Lancaster, Pa.—Race meet by Lancaster M. C.

May 30, Los Angeles, Cal.—Annual endurance run of Los Angeles M. C.

May 30, Detroit, Mich.—Race meet by Motorcycle Club of Detroit Wheelmen, on mile track.

May 30, 31, June 1, 2, Chicago—Four-day race meet of North Shore M. C. at Hawthorne track.

June 5, Toledo, O.—Motorcycle Manufacturers' Association meeting at Hotel Secor.

June 28, July 1, Isle of Man—Junior and Senior Tourist Trophy races.

June 29, Rochester, N. Y.—Race meet by Rochester M. C.

July 1, Hamilton, Ont.—Canadian championship meet by Canadian Motorcyclists' Association.

July 4, Cortland, N. Y.—Race meet by Cortland M. C.

July 4, Detroit, Mich.—Race meet by Motorcycle Club of Detroit Wheelmen, on mile track.

July 4, Elmira, N. Y.—Race meet by Elmira M. C.

August 6-9, Detroit, Mich.—Cycle Parts and Accessories Association annual summer convention.

August 17, Pratt, Kan.—Start of 15-day tour of Short Grass Motorcycle Club.

September 2, Detroit, Mich.—Race meet under auspices of Motorcycle Club of Detroit Wheelmen on State Fair grounds track.

MORE LAMP PRIZES.

CHAIRMAN ESTABROOK, of the F. A. M. Membership Committee, announces that four Old Sol lamps, donated by the Hawthorne Mfg. Co., of Bridgeport, Conn., will be awarded in connection with the national tours to the convention city in July. One lamp will go to the club in each division which carries the largest number of riders over the tour to the scene of the big assembly. Another Old Sol lamp, also the gift of the Hawthorne company, will be awarded to the club entering the largest number of riders in the Central District tour which is to be held under the auspices of the Kansas Short Grass Club in August.

GOING AFTER SIDE-CAR RECORD.

TO ascertain how far a machine with side-car can be driven in twenty-four hours will be the object of K. Conklin and I. W. Barnard, of New York City, on Saturday, May 4. Using a 7 h. Indian and side-car, they will leave the Bidwell-Conklin Co.'s headquarters, 2142 Broadway, at 6 p. m., and ride to Southampton, L. I., returning to Brooklyn at 4 a. m. Sunday to take part in the run of the Invincible Motorcycle Club, to Southampton and return. Conklin is one of the firm of the Bidwell-Conklin Co., and Barnard is connected with F. A. Baker & Co.

REGISTERED REPAIR SHOPS.

NEWLY registered F. A. M. repair shops: Groise Brothers Auto Co., 525 High street, Holyoke, Mass.; A. J. Hall Hardware, Cycle & Auto Works, 3732 W. 25th street, Cleveland, Ohio; Sol Lazarus, 216 E. 59th street, New York, N. Y.; C. B. Tunte, 204 Fourth street, Lorain, Ohio; G. S. Maslen, 2206 N. Broad street, Philadelphia, Pa.; Fred J. Barr, 216 Third street, Davenport, Iowa; Maddox Brothers, 75 S. Main street, Linton, Ind.; Hellerman Garage, Marin and Maine streets, Vallego, Cal.

NEW F. A. M. CLUBS.

LATE arrivals in the ranks of F. A. M. clubs are the following: Jersey M. C., Bloomingdale, N. J.; H. J. Hough, secretary, Oak Ridge, N. J.; 100 per cent. Hoquain M. C., Hoquain, Wash.; W. B. Ogden, Jr., secretary; 17 members. Homestead (Pa.) M. C.; G. J. Meyers, secretary; 19 members.

TORONTO RACING RULES

Among New Regulations Is One to Prohibit Use of High-Powered Machines on Small Tracks.

TORONTO, Can.—The Toronto Motorcycle Club racing committee has decided upon a system for the holding of all race-meets during the coming summer. A number of able officials have been appointed for the entire season and several important regulations have been decided upon with a view to minimizing the danger to track competitors. These precautions are peculiar in character but are suited to local requirements. Under no circumstances will a powerful 7 h. machine be permitted to start at a club meet on a half-mile track, although special ported single-cylinder racers may be used. Twin-cylinder machines without ports, up to 55 cubic inch cylinder capacity, may be raced, while a machine of any size may be started on a one-mile track. All racers must hold cards in the Canadian Motorcyclists' Association, and a regular entry fee of 25c. (post entries 50c.) has been fixed for the year. All members of the club will be required to pay the regular admission fee at every track meet.

The regular officials selected will have charge of their departments for the entire season, but they may appoint assistants. The appointees include: Official judge, Herb Marshall; official starter, Walter Stone; entry clerk, Garrett Frankland; assistant entry clerk and measurer, Phil Young; measurers, C. E. Burke and Don Sutherland; official director and chairman, Jack Scott; official announcer, W. M. Gladish.

A MEXICAN ENTHUSIAST.

THAT the motorcycle is capable of drawing its friends from all walks and stations of life was demonstrated once more when Carlos Madero, brother of the president of the Mexican Republic and a student at St. John's Military Academy in Delafield, Wis., visited the Harley-Davidson plant in Milwaukee recently. He was allowed to mount one of the Harley machines and make a short run, after which he advanced the opinion that his brother would be wise to introduce the two-wheeler into his operations in Mexico. Young Madero had been in the Harley-Davidson factory less than an hour when announced himself a full-fledged motorcycle fan, and one of his ambitions now is to own a machine.

HARLEY-DAVIDSON

COFFEYVILLE IN LINE.

THREE Indian motorcycles are now owned by the city of Coffeyville, Kan. One is assigned to the police department, one to the water and light department, and one to the plumbing inspector. The police machine, a special twin cylinder, has been in use a month, and in this time has proved very advantageous to the night force. Before the adoption of the machine by the police department, the snatching of pocketbooks from women in the residence district was an almost nightly occurrence, but since the machine was obtained no cases have been reported. The machine is equipped with a tandem attachment.

SINK MAKES A CHANGE.

JOHN SINK, well known as a speedster throughout Indiana, recently severed his connections with the G. A. Beard Company, in Evansville, to join the sales force at the Korb-Stewart motorcycle establishment.

SERIES OF SUNDAY TRIPS

THE South Scranton (Pa.) M. C. has entered upon a series of Sunday outings to neighboring cities, and the first run, held recently, brought out a full attendance of the riders.

FROM A TEXAS AGENT.

B. C. COLE, agent for Harley-Davidson machines in Sonora, Texas, and vicinity, forwards the accompanying photograph with a view to giving Northern motorcyclists an idea of the country in western Texas. Cole has placed three of the new Harley models and has a number of prospects lined up, although his headquarters is in a town of only 500 inhabitants, 75 miles from a railroad. Cole had plans laid for a trip into Mexico, but owing to the present disturbance over the border he has decided to make a journey to Denver instead. He may also ride down into California.

STUBBORN FARMERS.

DAYTON, OHIO.—The only real difficulty encountered by the boys on the Dayton-Toledo endurance run came from a very insignificant cause. This was the stubbornness of the average farmer using the road with a buggy or wagon to turn out to allow the riders to pass. The farmer, they say, maintains an aversion to the two wheelers and shows his feeling by sitting stolidly in his seat when he hears a "honk" or any one of the numerous other motorcycle signals, seldom moving far enough off the road to permit of safe passage of the machine.

MISSOURI PAC
26030

CAR-CHECKING BY MOTORCYCLE.

J. HUBER LIPE, a car checker in the railroad yards at Pana, Ill., has found a new business field for the motorcycle. He rides a Yale and uses it on his checking trips along the tracks. The railroad yards are two miles apart and there is a mine switch half a mile off the main line so that Lipe's work necessitates at least a four-mile trip daily. He rides his machine in all kinds of weather and reports that it saves him about two hours' time on each round. The photograph shows him at work in one of the yards.

PITTSBURGH RACE MEET

Motorcyclists Join with Newspaper Officials in Plans for Big Program at Schenley Oval.

PITTSBURGH, PA.—Plans are being developed for a big race meet to be given in this city on June 1 under the joint management of the Harley-Davidson Motorcycle Club and the Pittsburgh Press. Arrangements have been made to hold the speed events on the Schenley Oval course. In addition to a handsome loving cup to be awarded on a point basis there will be numerous other prizes, many of them donated by the motorcycle dealers of the city. Races have been listed as follows: 10 miles, stock machines, private owners; 25 miles, full equipment; 10 miles, open, racing machines; 15 miles, stock machines; 5 miles, open, racing machines; 10 miles, Allegheny County championship, racing machines. All the races are for singles.

The Schenley Oval track is a half-miler, slightly banked, and the track officials have given their assurance that the course will be in the best possible condition for the coming meet. The committee in charge of general arrangements for the program is as follows: W. R. Harris, J. C. Natcher, Charles Seitz, T. C. Donahue, R. K. Merrill, S. W. Depuy, S. E. Hamilton and Harry Neff. Dr. McCready will act as referee.

RESCIND LICENSE ORDINANCE.

MOTORCYCLISTS in Cortland, N. Y., are rejoicing over the action of the City Council which recently rescinded the ordinance requiring riders of the single-trackers to take out a license and pay a tax. The motorcyclists of the city have agreed to assist in the enforcement of speed regulations and they are working hand in hand with the authorities.

WHITE MADE A MISTAKE

Louisville Motorcyclist Won Race Against Police Officials in Auto, but Landed in Court.

LOUISVILLE, KY.—Glen White, a motorcyclist of this city, acquired a new 7 h. chain-driven Merkel recently, and naturally he just had to ride it. The very next day after buying it he went out for a jaunt, and on the way home, as he was jogging along leisurely, a big Olds Autocrat containing two men passed him, the men smiling at him as they whirled by. No motorcyclist, of course, could stand that. White opened his throttle and went by like a bullet, soon leaving the automobile far to the rear. It was still in sight, however, when he reached his home and dismounted, and he was standing on the street with his machine when the car drove up and stopped. One of the men got out, walked over to where White was standing, and began to admire his motorcycle.

"You've got a fine machine there," said the man.

White nodded his assent.

"She can travel some, too," continued the stranger.

White warmed up. "You bet she can," he exclaimed. "She was going some just now. I kind o' put one over on you, didn't I?"

"Reckon you did," was the answer. "But you were going 42 miles an hour, and that is a little too fast, so I'll have to put you under arrest."

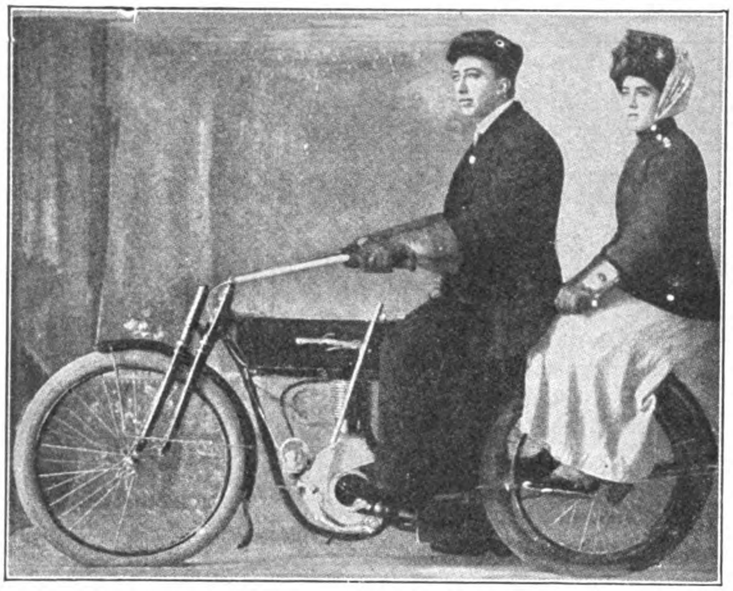
The speaker was an officer in plain clothes, riding in a police machine, and White was fined $15 in the City Court.

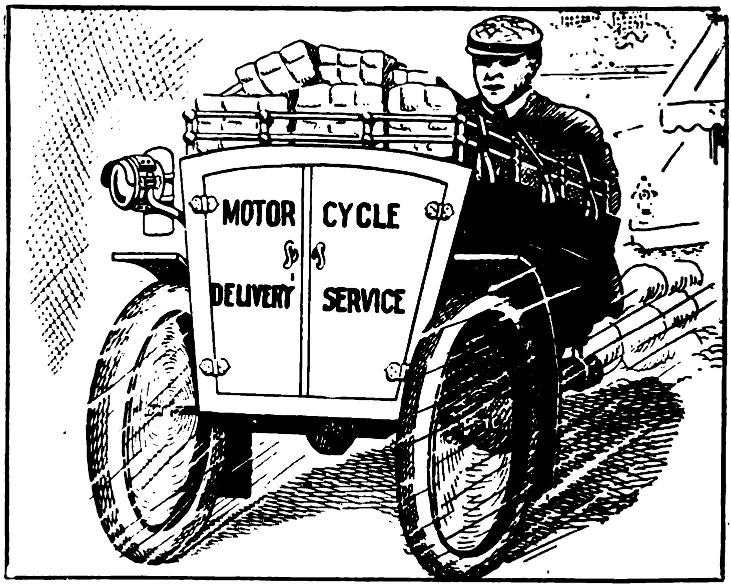
White says that the police played him an unsportsmanlike trick, as they raced him all the way in and could not beat him. Probably if they had won they wouldn't have been sore, he argues, and wouldn't have arrested him.

Best for Pleasure **Best for Business**

Diamond

Motorcycle Tires





When a fellow with a tandem plans an afternoon's recreation, he wants a tire that is strong enough to easily stand the terrific strain—and at the same time one that is extremely resilient so that riding will be a moving luxury. For this kind of service we make a special 29" x 3" tire. It will add to the pleasure of your trip.

Diamond
Motor Cycle

The Utmost in Motorcycle Tires
Our Special 29 in. x 3 in.

A man will use a motorcycle for business only when it is as reliable and economical as a horse and wagon. This is where our special 29" x 3" tire fits in well. It stands the heavy and rough use incident to delivery service. This oversized tire will free you from tire troubles and will give long service under these severe conditions.

Studded Tread

The Diamond 29 x 3 Motorcycle Tire fits the 28 x 2½ rim, is specially built for tandem riding, package delivery machines, heavy riders, side cars and commercial delivery machines. For ordinary purposes the extra mileage it gives more than makes up for the slight additional cost.

It is built up of four plies of fabric with an additional ply in the tread known as the breaker strip. The tread is thicker and wears longer and the anti-skidding studs are bigger and more efficient. Combines all the strength of an automobile tire with the extra resiliency required in a motorcycle tire.

Our regular motorcycle tires are made with both studded and corrugated treads—as shown by cuts on left and right—they are built by men who understand what is needed in a motorcycle tire. The tremendous demand for Diamond tires is due to the fact that they feature in the highest degree Mileage, Resiliency and Speed.

Send for Our Attractive Booklet on Motorcycle Tires

The Diamond Rubber Company, Akron, Ohio

Our Service Stations in 54 Cities do more than sell tires—they take care of Diamond Users

Corrugated Tread

EDITORIAL

Motorcycle Illustrated is published every other Thursday at 51 Chambers Street, New York.
Home Subscriptions, $1.00; Foreign Subscriptions, $2.00; Single Copies, 10 Cents.
Entered as second class matter July 6, 1908, at the Postoffice at New York, N. Y., under act of Congress, March 3, 1879.

THE SIDE-CAR.

YE publisher and editor is afflicted these days with an incurable case of side-caritis, and he is prepared to solemnly swear that it is one of the most delightful complaints in the entire category of human sensations. Long familiar with the pleasure of long and short trips aboard the four-wheeler, as well as those of "solo" driving astride singles, twins and four-cylindered motorcycles, the writer was not at all keen even to try out three wheels. The extra attachment seemed to possess too many hybrid characteristics to "look right." But in the end a side-car was added to his motor "stable," and, from present indications, it will ever hereafter occupy an honored place there.

Side-car riding is distinctive. To the average bystander the three-wheeler may look freakish, although the expressions in thousands of the faces of those we have passed appeared to disclose nothing more or less than a feeling of envy. A well-sprung side-car, attached to a machine capable of "pulling" the additional weight without undue strain is every bit as luxurious and comfortable, even though not quite so pretentious as the average automobile.

All the standard twins and the average single of four or more horsepower is capable of hauling double the weight of a single rider, and an attachment and passenger may be added without the slightest trepidation. Try it. The expense is comparatively trifling, and in a few weeks a good side-car will more than repay the purchaser for his original outlay.

JERSEY LICENSE PROBLEM.

A RATHER odd state of affairs exists relative to the passage recently of an amendment to the New Jersey motor vehicle law. This amendment allows a fifteen-day touring privilege, in New Jersey, to owners of motor vehicles whose machines bear the license numbers of other States which recognize New Jersey licenses. The new law is intended to apply to motorcycles as well as automobiles. But the question arises: How shall New York motorcyclists avail themselves of this privilege? Under the New York law owners of the two-wheeler are not required to take out a license.

The chairman of the National Committee on Legal Action of the F. A. M. has laid the matter before New Jersey State Commissioner of Motor Vehicles, J. B. R. Smith, who holds that New York motorcyclists, in order to secure the Jersey touring privilege, must take out a Jersey license, or at least the license of some other State which grants reciprocal privilege to New Jersey motorists. Mr. Smith has promised, however, to consult with the State attorney general concerning the F. A. M. Legal Action chairman's suggestion that New York riders be recognized provided they paint on the rear mud-guard of their machines the initials "N. Y.," to designate that they are New Yorkers, and, therefore, entitled to tour in New Jersey without a New Jersey license. Until Mr. Smith announces his decision, it were well for New York riders not to ride in New Jersey without a license, not necessarily a New Jersey license, but, in any event, the license of some licensing State, preferably, Connecticut, Massachusetts or Pennsylvania.

There is no question as to the intent of the law-makers who voted for the amendment above referred to. It was their purpose to include all motorcyclists residing in States having reciprocal motor relations with New Jersey. But by wording the law to provide for recognition only of owners of machines carrying outside State registration numbers, they unwittingly shut out New York motorcycle riders. At least, that is the present situation, as explained by the New Jersey official who has the matter in charge.

ADVERTISING—I.

SUCCESSFUL advertisers never worry about their competitors; or, rather, they don't confess it in print.

They boom their own products to the very best of their abilities, intelligently follow up inquiries, and give energetic and enthusiastic support to their salesmen and dealers.

They appeal to the higher sensibilities of the ultimate consumer, and to the highest class of business capability in the trade.

To such advertisers the publishers of MOTORCYCLE ILLUSTRATED *are prepared to guarantee results. The advertising of the other sort is not being solicited by this publication.*

A VALUABLE NUMBER.

NOT less than thirteen, and, in all probability, nearly fourteen thousand copies will be the circulation of the May 16th Spring-Touring Number of MOTORCYCLE ILLUSTRATED. As its title indicates, this issue will be featured by more touring information of practical value than has ever before been published in any ten numbers of a motorcycle journal. From coast to coast, and from the Lakes to the Gulf, the entire country will be mapped out for motorcycle tours of from 50 to 1,000 miles in circuit. Approximately one hundred and fifty trips, including every State in the Union, will be illustrated and described, and it is safe to say that no recipient of the Spring-Touring Number of MOTORCYCLE ILLUSTRATED will discard his copy until it actually falls apart from constant use.

The high editorial quality of this number—date of issue Thursday, May 16—will insure its appealing strongly to an unprecedentedly large number of dealers and riders, and its big circulation and its great reference value will combine to make it extremely valuable to advertisers. Forms close Monday, May 13.

WITH clubs all over the country showing mid-summer enthusiasm before the season is fairly open, it does not require an optimist to predict big things in the motorcycle field for 1912.

A VACATION IN *the* SADDLE

By ARTHUR J. ROCHOW

NOW that the vacation season is drawing near once more I am of the opinion that the story of a motorcycle tour made during the summer of 1911 will prove interesting to my brothers of the single-tracker, and accordingly I have turned author to the extent of preparing the following article. My companion on the trip in question was Lou Tetley, of Red Bank, N. J., as genial a traveling companion as ever I met, and when all was in readiness for the start I chugged down through Staten Island to Perth Amboy and found Lou waiting for me. It was from this point that our outing really started. The weather was ideal, although there had been heavy rains a day or two previous, and we got under way in high good humor.

We traveled northward through Rahway and Elizabeth, hoping to make Newburg, N. Y., in time for supper, but bad roads near Elizabeth delayed us and where a section of the State road was closed for repairs we were forced to make a long detour. There was much skidding and slipping in the Jersey clay, but we came through without a serious mishap, making fairly good time from Elizabeth to Newark. The rough going had loosened our luggage and after a brief stop for readjustments and a light meal we settled down to real touring conditions.

The Initial Spill.

The country around Newark was rather interesting, being made up of low rolling hills, but we could not give the scenery much attention because of the necessity for keeping a close watch on the road. At this stage of the journey Lou took his first spill. As we approached a trolley line I saw that the tracks were bordered by deep black mud and went through very cautiously, but poor old Tet went down. When he arose he was anything but a pretty picture, but his perennial good nature came to the surface and he was soon in the saddle again. While passing through the city of Newark Lou bumped a truck to avoid running down a woman and child, but his machine escaped with only a smashed lamp.

Newark was soon left behind and then followed more mud-larking. However, we didn't grumble. It felt mighty good to be out in the open, astride a willing motor, with a trusty companion at one's elbow and a good cigar between one's teeth. Mud or no mud we were glad to be alive. From Newark we headed for Passaic and then proceeded over a good asphalt street to Paterson. We were tearing off about 55 miles an hour when I learned that there is some truth in the old adage "the more haste the less speed." With a bang my rear tire blew out and when I finally managed to stop the tube was wound around the rear stays of my machine and a dozen spokes had been yanked out.

Bang! Goes Another Tire.

We put in a spare tube, made hasty repairs and went on to Paterson. Further repairs were made at the establishment of Agent Steele, who gave us all the assistance possible, and without loss of time we again took to the trail. We had just crossed the line into New York State, when I had another blow-out in my rear tire. That set me to thinking, and I made a careful investigation. I had used a double-clinch tire on a single-clinch rim, and in my haste to make the change I had not properly clinched the shoe. That accounted for the second blowout. This time I exercised more care and in a short time we were off through Spring Valley.

On the Way to Paterson.

At this stage we encountered a few hills and finally rode into the Ramapo Valley, making good time. The scenery along these roads was beautiful and the setting sun produced some highly artistic effects. Suffern was reached without further trouble and there we put up for the night.

Paying a Social Call.

We had some difficulty in making our wants understood at the hotel, for the German waiters could not catch our English, but a brand new moon and a pair of good cigars cheered us after supper and we strolled around to Slavin's bicycle shop and rehearsed the history of the two-wheeler from the old high-saddle mount to the motorcycle. Then we turned in for the night. We started early the next morning after a good breakfast, and continued through the picturesque Ramapo Valley.

The roads wound in and out between wooded hills, past magnificent estates, through quaint little towns and through farming country, and occasionally we met farmers and their families on their way to church, for this was Sunday. Riding side by side and chatting over plans for the day, breathing in the good pure air from the hills, and feeling like a pair of Nature's real noblemen, we chugged onward, convinced that life could give us nothing better. We were living every minute, and couldn't help pitying the folks who had not yet learned our secret.

Crossing the Hudson.

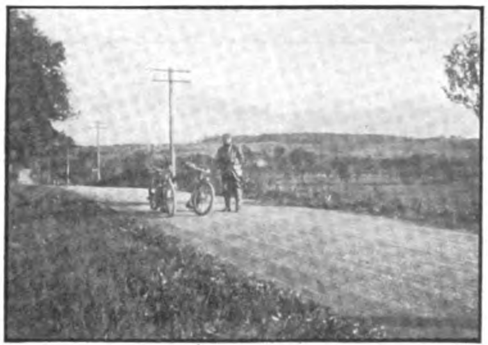
As we neared Newburg, Lou's motor gave a peaceful sigh and quit. He had run out of gasoline and I rode into the town for a supply. Then we crossed the Hudson River, obtaining fine views of Mt. Beacon and the Highlands of the Hudson as we passed over. Leaving Fishkill over fine roads and passing many beautiful estates we settled to a pace of about 30 miles an hour, up and down hill, and we certainly pushed the ground behind us. We passed through Wappinger's Falls and into Poughkeepsie over some rough roads, where my stand came down and before I could stop to refasten it a stone caught it and pulled it loose. Some copper wire effected a repair and on we went.

Leaving Poughkeepsie we rode on through Hyde Park, catching occasional glimpses of the Hudson with the Catskills for a background, and the whole scenic effect was very impressive. In due time we reached Rhinebeck, where we decided to have dinner. Did you ever come in out of the crisp air of late summer into a big comfy room with a glowing open fireplace? If you know the sensation such a delightful transposition produces you can imagine with what enthusiasm we greeted the proprietor. And that wasn't all. Mine host proved to be an Elk, and he gave Lou the "high sign" in a manner that warmed my companion's heart.

Off on the Trail Again.

After disposing of a fine chicken dinner we pulled our chairs up to the fireplace and chatted over our cigars until it was time to get into the saddle again. Passing over some poor roads we reached Red Hook and then struck a good road. This didn't help much, however, for we soon ran into a driving rain which forced us to don our raincoats. We were tempted to stop at Hudson, but the place did not look inviting and besides we were anxious to get through the comparatively uninteresting ride to Albany. It seemed to rain harder than ever after we left Hudson, and Lou's machine finally developed a short-circuit, which some hot oil from the motorbase remedied in short order. By this time we were soaked to the skin and we lost no time in getting on.

A short time later Lou's gas-chewing motor again attracted attention and we found that his tank was dry. Luckily this discovery came in front of a farmhouse and with the aid of a borrowed pan and a newspaper cone we transferred some gas from my tank to Lou's. We had no sooner started again than my engine began to pop along on one cylinder. Then I discovered that in putting the brush back into the carbon-holder after a previous examination, I had not pushed it all the way in, and when I screwed the holder into the magneto the carbon had dropped to the bottom of the magneto. Fine, eh?



"Up York State."

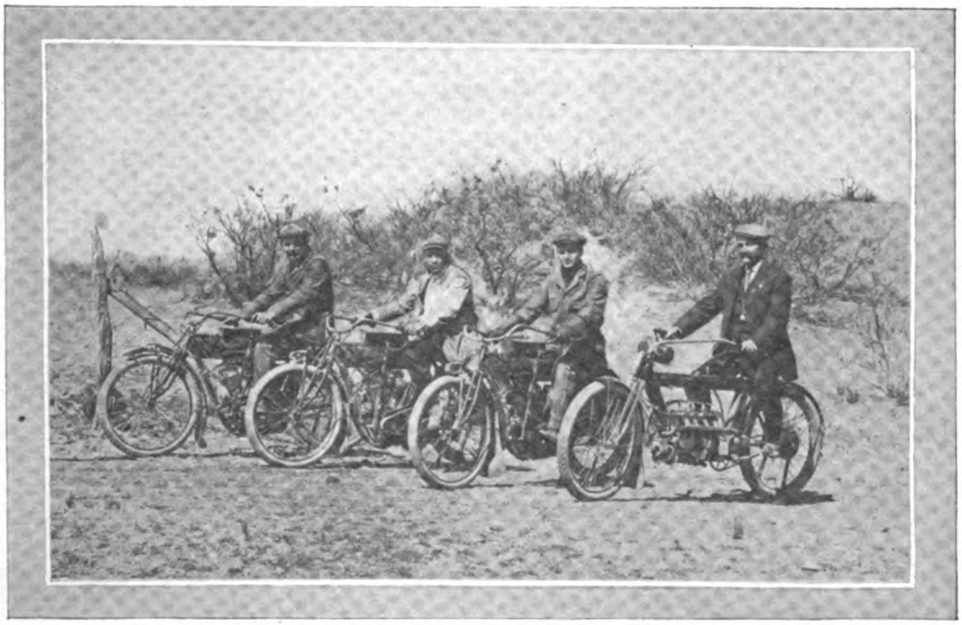
More Tedious Repairs.

Feeling pretty blue for the time being I pushed the machine into a nearby barn and then started the work of taking off all the timing gears and removing the end of the magneto to get at the carbon. It was slow work and mighty tedious, but it had to be done, and we went about it as cheerfully as possible. It was not very long before we were headed for Albany again, the rain still pouring down as if it were being dumped out of a bucket.

When we arrived in Albany, "Pop" Andrews' place was indeed a welcome sight. After warming up a bit we carried our luggage to our rooms where a hot bath and dry clothes put us in good humor once more. Still the rain came down, and the outlook for the next day was anything but promising. However, we strolled around to a restaurant and demolished a fine planked steak, after which the world seemed a better place to live in. Jehosephat! what an edge motorcycling puts on a fellow's appetite, and when a chap has a good husky appetite to begin with, the swathe he can cut in a meal is wonderful to see. We made the most of our opportunities.

(To be continued.)

Cow Furnished the Spice of this Arizona Adventure



THAT motorcyclists in Arizona sometimes have their outings spiced with adventures which do not fall to the lot of eastern riders is indicated by the following storiette which is unfolded by W. R. Adams, one of the best-known motorcyclists in Jerome and vicinity.

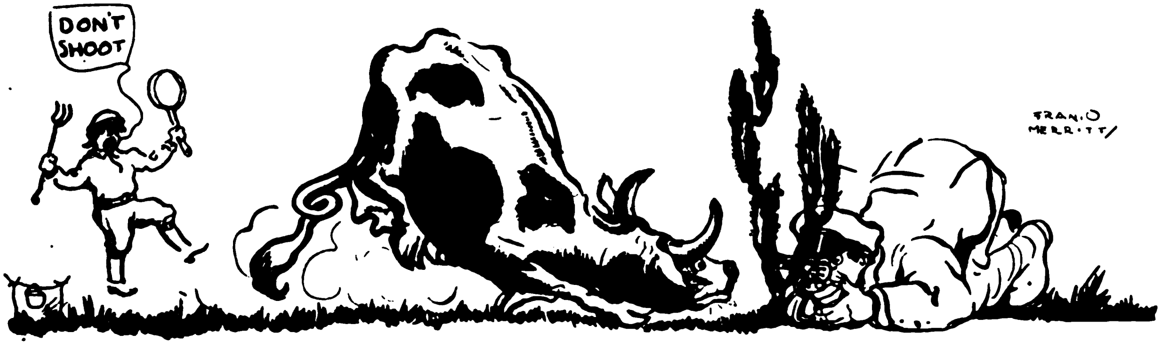
"Not long ago four of us, Dr. L. A. Hawkins, Guy H. Bailey, Myron Hawkins and myself, met at the doctor's place and decided to take a run into the country. Accordingly we filled our pockets with lunch, strapped a cooking outfit on one of the machines and pulled out of Jerome in high spirits. We made a run to Copper Canyon with no trouble worthy of the name and there pitched our little camp. We found a stream and while Guy was repairing his exhaust pipe which had been flattened by a rock, the others brought the cooking utensils into action. At this stage of the game we ran into trouble.

"While hunting for wood I stirred up an old range cow that was lying in a clump of brush near our camping place and without wasting any time she made a run for me. She evidently meant business, so I jumped behind a good-sized bush and got my gun out. At this critical moment Doc Hawkins called out and advised me not to shoot until the situation became desperate. I waited. And the cow waited. Every time one of us moved that cantankerous old ranger lowered her head and started for us, and when we stopped, she did, too. There we were, held up like a lot of Sunday school picknickers, with nothing to do but await developments. We did not wish to harm the cow, if she could learn to behave herself, so we continued to wait as patiently as possible.

"We couldn't get away from the spot because if we had jumped for our machines and attempted to start, the cow would have charged us, and probably wrecked a motorcycle or two before we could beat her off or shoot her. There was nothing to do but stand our ground, and we did. After about half an hour of this the cow walked around us in a circle, eyeing us malignantly all the time and then slowly made off down a trail. Needless to say, we remained posing like living pictures until she was well on her way. We were not exactly afraid of the old critter, but we knew she could be remarkably mussy if so inclined and we feared that our machines would get the worst end of the scrimmage if a general rumpus was started. It must be remembered that there is all the difference in the world between a range cow and your eastern moolies. We knew this and were well satisfied when the incident closed without fireworks.

"When the cow had disappeared we cooked our lunch, consisting of pork and beans, potato chips, steaks, coffee and sliced pineapple, and made the most of a fine meal. The steaks were broiled on a flat piece of rock, which had been washed and heated in the fire, and that they made mighty good eating seemed to be the consensus of opinion.

Only two of the riders in the accompanying photograph figured in the range cow episode. They are Myron Hawkins, at the left, and Mr. Adams third from the left. The other riders in the picture are Ray Miller, second from the left, and T. C. Stone on the right. A club is promised for Jerome.

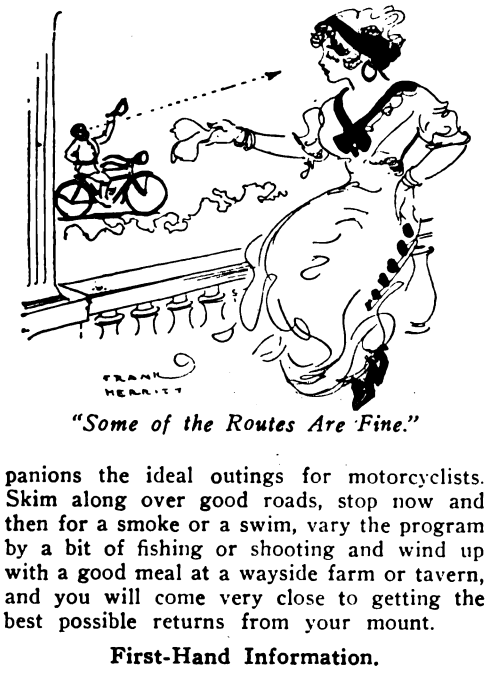


SIDE TRIPS AROUND NEW YORK

By LIVINGSTON FOUNTAIN

CONCERNING the following it might be well to say that although I have been a rider of the single-tracker for the last seven years I have yet to go out on a "club run." Such outings are enjoyable beyond a doubt, and they have figured prominently in the general upbuilding of the sport, but I have always been satisfied to jog along with one or two chums, and have confined myself almost entirely to short runs within a radius of 150 miles of New York City. I have made a few long jaunts to "parts unknown"; but of them, more later. There are many half-day, day and day-and-a-half rides in the territory I refer to, and all hold out inducements for the observant motorcyclist. Some of the routes are fine, some good and some not so good, but nearly always they are interesting.

Personally, I consider these half-day and over-night runs with one or two boon companions the ideal outings for motorcyclists. Skim along over good roads, stop now and then for a smoke or a swim, vary the program by a bit of fishing or shooting and wind up with a good meal at a wayside farm or tavern, and you will come very close to getting the best possible returns from your mount.



"Some of the Routes Are Fine."

First-Hand Information.

Knowing from experience how disagreeable it is to count upon certain results from a trip and then fail to obtain them through lack of reliable touring information, I have jotted down some points relative to the best runs I have made with my chum of late, and trust they will prove of value for riders in the metropolitan district. No doubt there are hundreds of motorcyclists who would like to start out these fine spring days and feel moderately certain that they were not going to have their trip spoiled by miles of bad roads and a lack of interesting features along the route. Say what we will, there is very little enjoyment in riding off over unknown highways to "nowhere in particular."

One of the finest short runs (half-day rides, as I have called them), which does not necessitate crossing several ferries, is a circuit of about 65 miles northward out of New York City. Leaving the city via Broadway we ride to and through Yonkers (closed mufflers and rigid speed regulations), and still following Broadway and the Hudson River we proceed to a point just south of Tarrytown. Here we turn to the right on an excellent macadam road marked "Elmsford and White Plains," and ride on through the woods.

For an All-Day Trip.

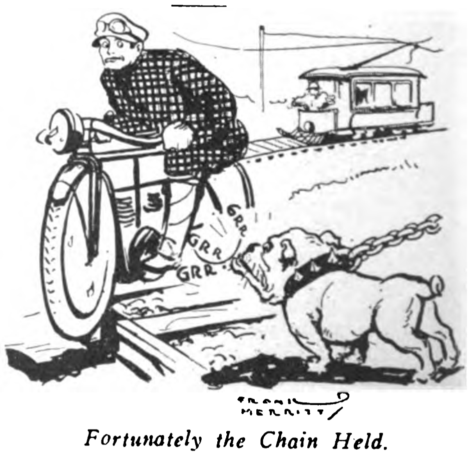
Follow this road to Elmsford straight ahead up-hill to White Plains, turning left on the main street to Mamaroneck avenue. Continue on this line to the point where the trolley tracks turn to the left. Then leave the tracks and keep straight ahead over a route which will bring you back to the city over fine roads, through Larchmont or New Rochelle, via Horton and Lincoln avenues. This will allow you to avoid all but the best sections of the Boston Post road.

If you care to extend this trip into an all-day outing over good roads take the *left* turn at Elmsford and continue up the sawmill river road (paved with macadam) to Mt. Kisco. At this point Mine Host Buzzie's lunch wagon offers good food, or if you are inclined to be more "fussy" there is a hotel just across the railroad tracks which gives satisfactory service at reasonable rates. When you are ready to return you may turn to the left at the tracks and proceed to Briarcliff, or to the right up-hill on the road to Lake Mahopac. This Lake Mahopac road is one of my favorite routes, being a fine sample of State Highway, and extending along the banks of three or four of our largest reservoirs.

Facilities for Fishing.

Going north from Mt. Kisco a short distance the rider will find a sign "To Bedford Station." *Do not* take this road, but turn to the left over about a mile and a half of poor dirt road, then to the left again at the reservoir. At the long steel bridge take the turn to the right and follow this macadam road all the way to Lake Mahopac, turning to the right at the lake in order to reach the Thompson House, where refreshments, boats, fishing tackle and bathing suits may be obtained. Mahopac is a little more than fifty miles from New York City, and the round trip will total between 100 and 110 miles, practically all of it over excellent roads. The same route may be followed on the return trip, or it may be varied a little by branching off at Yorktown Heights to the right, to Peekskill and then down along the Hudson River.

Should you decide to proceed farther than Lake Mahopac or put up there over night and continue in the morning, there is an excellent extension which may be arranged, still to the northward. The rider may follow the road which passes the Thompson House and continue on to Ridgefield, Danbury and Waterbury. Our usual extension from Lake Mahopac is over the roads to Danbury where we stop at the Hotel Green, and on the following day we return via Bedford, New Castle Corners and either Portchester or White Plains. This makes a total of about 150 miles, and is just about as fine a trip as a rider would care to take out of New York City. This trip may be varied in many ways according to the weather and the time at the rider's disposal, and as long as the State roads are followed there will be little or no room for complaint.



Fortunately the Chain Held.

"The Port of Missing Men."

Still another trip that I have always found enjoyable is to a point about 65 miles from New York City and little known to metropolitan motorcyclists. The destination in this case is "The Port of Missing Men" on top of Titicus Mountain. From New Castle Corners (a short distance south of Mt. Kisco) turn right on the State road marked "To Bedford" and follow it to Ridgefield. Numerous road signs will then point the way to "The Port of Missing Men," five miles beyond. This last five miles is all up-hill, but the road is perfect and once at the top the rider feels amply repaid by the always cool breezes, the excellence of the service obtainable and the altogether unusual setting of the place. The return may be made by reversing any of the foregoing routes.

An Outing in New Jersey.

Here is an outline for a most enjoyable day or day-and-a-half trip over into New Jersey: Leave New York via the Weehawken ferry and proceed to Montclair, 19.1 miles, and in this way you will avoid a disagreeable ride over the famous "Plank Road" and through the city of Newark. From Montclair follow Bloomfield avenue through a number of small towns to Caldwell. Pass through Caldwell to Denville (straight road all the way), and at Denville, where you will find the intersection of the road to New Brunswick, there is the Denville Inn. Here an extremely polite darkey will attend to the needs of the inner man with anything from a roast beef sandwich to a canvas-back duck, and from a glass of water to a quart of Mumm's extra dry.

Should you wish to return from this point take the left road to New Brunswick and turn left again to Madison, Summit, Springfield and to either Newark or Montclair.

A Jaunt into the Hills.

If you decide to continue onward from Denville take the right branch (opposite that leading to New Brunswick) and proceed up and down steep hills and over some poor roads to Green Pond. Green Pond will prove a surprise to those who have not previously visited it. It is a lake, probably nine miles in length, and situated on top of a mountain in one of the most picturesque sections of New Jersey. The round trip from New York City (returning via New Foundland and Arcola) is less than 100 miles, but as far as the lake itself is concerned the visitor will imagine himself in the heart of the Maine woods. There are two hotels on the shores of the lake and the settlement is made up mainly of campers in cabins and cottages. The return trip via Arcola and Hackensack is over a State road and nearly all downhill.

A Trip into Jersey.

Still another excellent ride in an entirely different direction from those already given is one which takes the rider over some fine roads in New Jersey, and the finest road I know of in the State of New York. Crossing the Hudson at Fort Lee, turn to the right and follow the main road up Fort Lee Hill. At the top take the left fork up and down hill, over the Jersey Meadows and across the Hackensack River bridge into Hackensack. Turn to the right on the main street to Passaic street; then turn left and follow this road to Arcola. It might be worth while to mention here that for the happy owners of machines supposed to possess speed, or in the event of a disagreement between riders as to whose machine can get there first, I know of no better opportunity for a test than that offered by the absolutely perfect stretch of four miles of macadam leading into Arcola. The road is ideal for a short spurt. It is perfectly straight, almost dustless and there are no cross roads. What's more, I have yet to see any signs (either in blue uniforms and brass buttons, or the usual warning set up by the Village Councilmen) to regulate the speedsters to "Four(ty) Miles per Hour"; the "ty" usually being the work of the village cut-up.

A Jaunt Along the Hudson.

After settling all disputes as to speed, and perhaps stopping for a few moments to talk it over on the bridge by the water-wheel, *do not* cross the bridge but take road bearing to the right along the Saddle River to Suffern. Should the rider's time be limited, a very pleasant return route will be found by turning to the right in Suffern and riding 14 miles to Nyack, where there is a choice of returning to the city, either on the Jersey shore of the Hudson, or taking the ferry (if it happens to be running) to Tarrytown, and so down the east bank. This circuit of Hackensack, Suffern, Nyack and return will foot up to about 70 miles. If it is the desire to continue north from Suffern, turn to the left and follow the tracks of the "Weary" R. R. on a good State road, seven miles to Tuxedo. Discretion may be found the better part of valor in passing through Tuxedo in spite of the tempting road, the Tuxedo police being supplied with a very efficient brand of two-wheeler.

Avoiding the majesty of the law—usually located near the railroad station—continue on over the same road to Goshen, 60 miles from New York. From Goshen the return may be made via Newburgh and the east shore of the river, or one may continue for an overnight run to Middletown and Port Jarvis, or through Middletown to Kingstown, N. Y. This will carry the rider 55 miles further and leave him 130 miles from New York City. Should the rider choose the return by way of Newburgh and the ferry, it will be found a simple matter to connect this trip with that already given, including Peekskill, Tarrytown and home, or Peekskill, Lake Mahopac and Danbury.

The Hand of Fellowship.

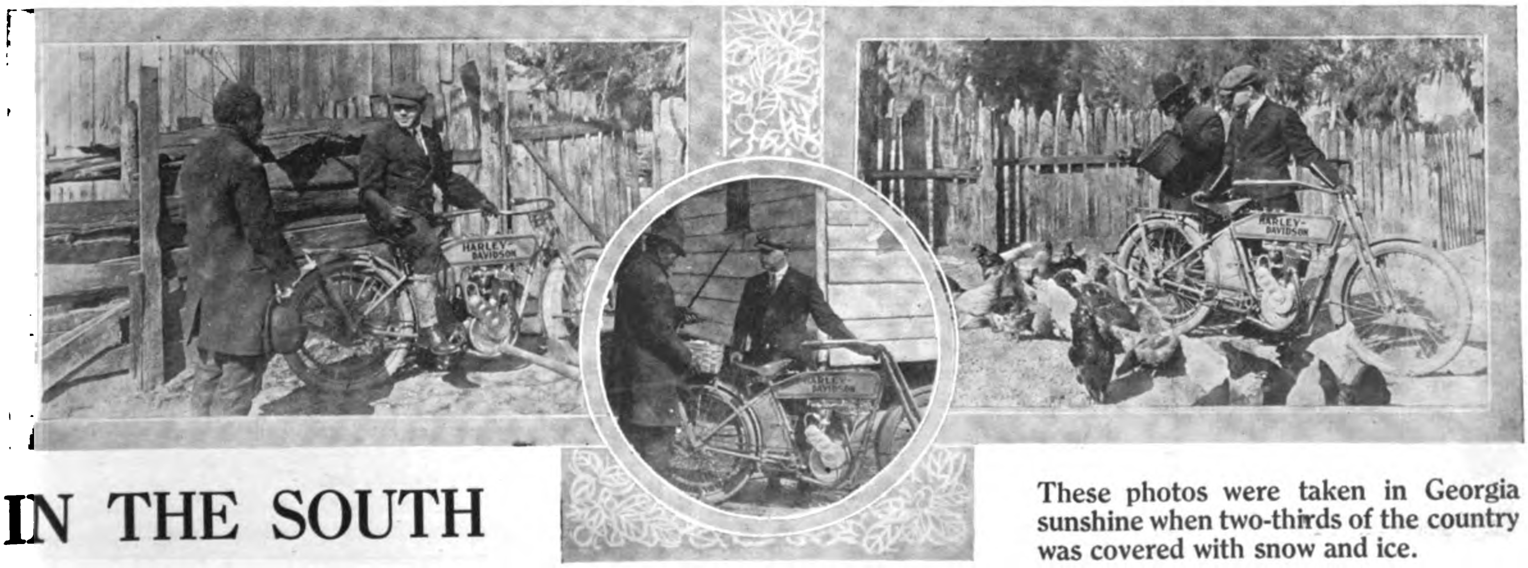
Speaking of Tuxedo reminds me of a rather unusual incident I experienced in that locality. My chum and I were returning from a two-day trip to Middletown and were about five miles north of Tuxedo, rolling along at about 35 miles an hour, when I imagined I saw something shining in the road. I could not make out what it was, but felt it was some part of a machine. I mentioned it to my chum, but we were in a hurry and did not stop to investigate. Upon arriving within sight of Tuxedo we met a brother motorcyclist, afoot, searching along the road diligently for something that did not seem to materialize.

We stopped, and upon asking the cause of his search learned that he had traveled the road we had come over about an hour previously, and had lost "somewhere between here and Goshen, the lock-nut from the valve dome of his forward cylinder." It dawned upon me that probably the object I had seen in the road some five miles back was the missing lock-nut. I was not particularly strong for the extra 10 mile ride, but finally agreed to go back and see if I could again find the missing part. I found it with very little trouble and returned it to the owner amid declarations of his everlasting gratitude, accompanied by his card and the information that he was a brother-in-law of the police captain in Tuxedo. He requested that in the event of my ever becoming entangled in the speed I should "call on him." If the necessity arises I surely will.

WISCONSIN STAFF.

AT the last meeting of the Wisconsin M. C., of Milwaukee, the following officers were elected: P. D. Rosche, president; A. G. Parsons, vice-president; George Schedler, secretary, and W. Rohn, treasurer. The object of the club is to promote motorcycle races and occasional runs.

KANSAS CITY, Mo., has its first motorcycle police officers. Four pioneers constitute the squad.



IN THE SOUTH

These photos were taken in Georgia sunshine when two-thirds of the country was covered with snow and ice.

The IDEAL MOTORCYCLE SHOP

By GEORGE M. JOHNSON

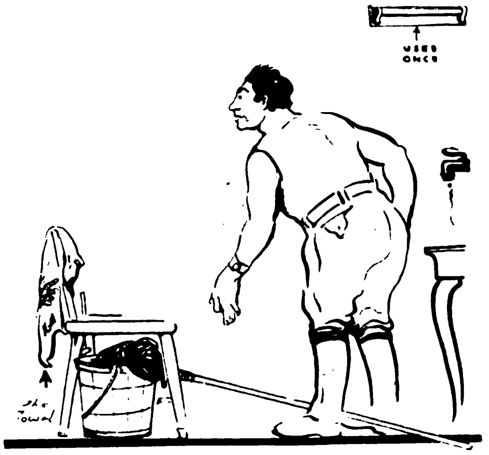
ABSOLUTE perfection is a thing remarkably hard to obtain. Perhaps it is well that this is so; there is all the more inducement to effort. Emerson once said: "Hitch your wagon to a star." By that the famous Bostonian probably meant that one should never be satisfied with taking a mere chorus girl out to supper while there was a leading lady in the company. In other words, aim high, whether you are a stage door Johnny or local agent for the "best ever." If you sell motorcycles, try to have your shop the best in the city.

The dealer cannot over-estimate the importance of the relations which exist between himself and customers or possible customers. Every live business man believes in advertising—he's a back number if he does not—and here is a variety of advertising that is more permanent and less expensive than space in a newspaper. It is certainly worth while to be liked by most of the riders in town, and every dealer should make it a point to gain all the friends that fair and courteous treatment of customers can possibly bring him.

The Personal Element.

The personal element enters into the selling of motorcycles much more, I believe, than many dealers realize. Let us consider a possible case. Suppose some dealer has sold a certain rider a machine. Within two years or so the latter may be in a position to trade that one in towards a new mount. Perhaps by then there may be another make represented in town by a rival of the first agent, a machine which on account of price or new features appeals to the prospective buyer more than the motorcycle he has been riding. Now, if he is not satisfied with the way agent No. 1 has treated him, he will not hesitate to desert to the other. But if No. 1 has always been accommodating in every possible way, has done all in his power to make his patrons feel satisfied, there enters the personal element above referred to. The buyer will not feel quite like deserting a friend, and therefore may do business with him again, when otherwise he most surely would not.

I wonder if the Ideal Motorcycle Shop really exists. Perhaps it does, but if it is to gain the full measure of success, it must be run on the principles already hinted at. The Ideal Shop should be constructed and run with the aim of not only getting customers and trade, but of keeping them, and to that end, money spent for the convenience of riders is well spent. Let me point out some of the features of this place—imaginary, of course—which I have in mind.

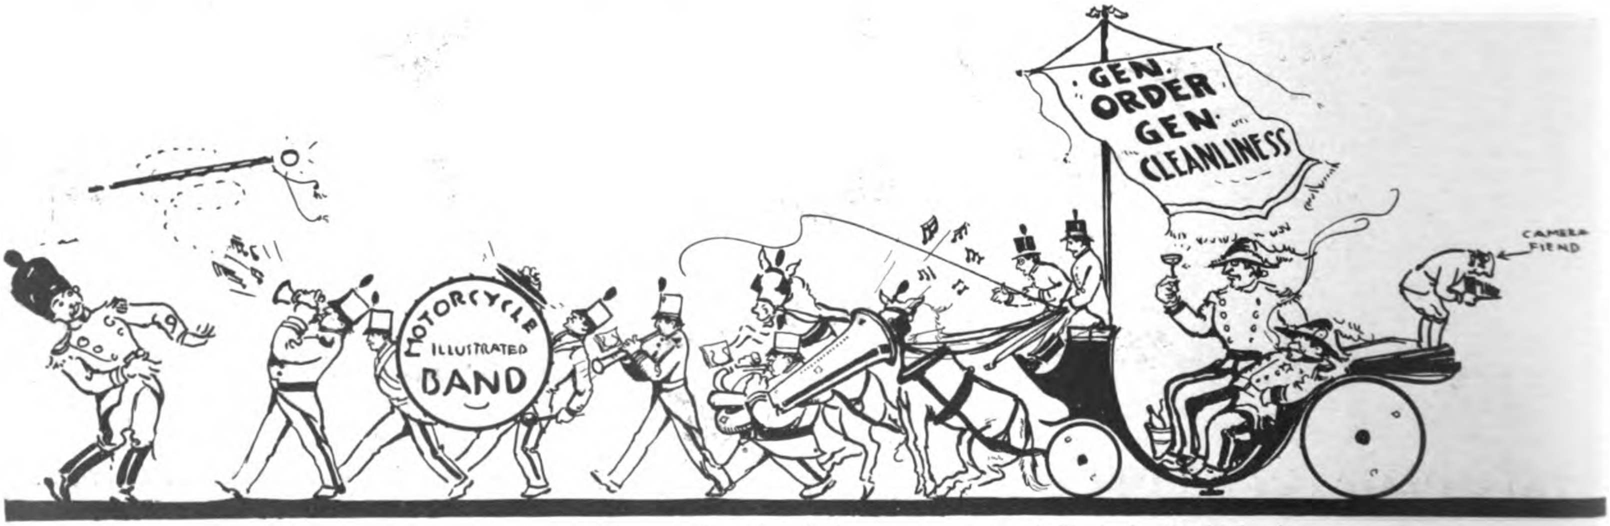


First of all, there should be a runway up from the gutter out in front. If I am running my machine into the shop for any reason, I do not like to lift her two hundred pounds of solid weight up on the curb, nor do I care to hit the curb with a bang in hope of jouncing "the old boat" over the obstacle. Once while touring I ran across a shop which made a hit with me in this particular, at least. There was a well constructed cement walk in front, and when that walk was laid the workmen cut out a neat little inclined plane up which motorcycles could be run as easily as anyone could desire. This is a small matter, you may say, but the small things, multiplied together, amount to a lot in the long run.

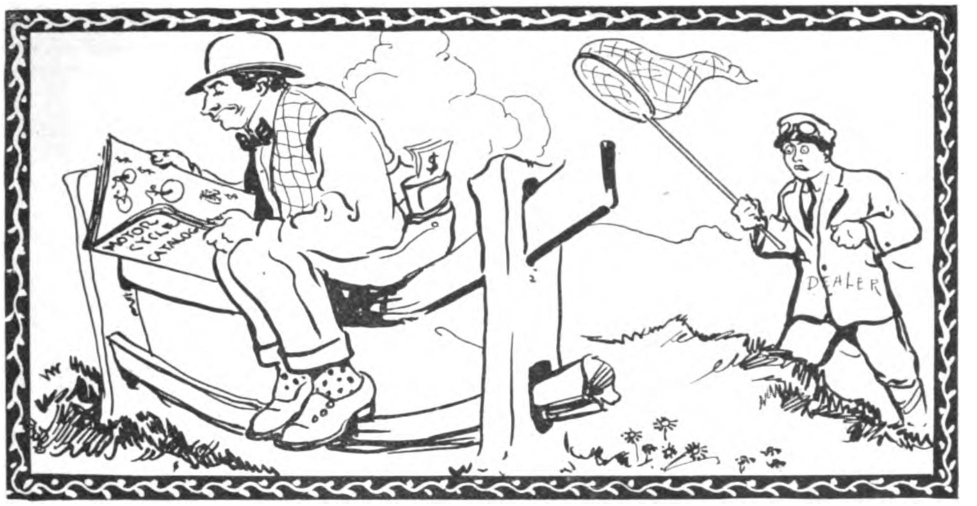
Then the wash room and toilet facilities. The average motorcycle shop is sadly deficient in this respect. You may find a sink in some far corner of the establishment, a sink black and grimy with the combined deposit of road dirt and machine grease. Then you glance around for a towel! Let us draw the curtain of charity over that towel. You know just how that little rag of cotton looks without my telling you. One would even hesitate to use it on his hands, not to mention trying it on his face. This Ideal Shop about which I am raving would have a clean sink with a can of one of those preparations which will remove grease without the use of hot water, and it would have a big roller towel—clean every day. It does not cost much to have a roller towel laundered, and a clean one every day is far better than a clean one every week, or every month.

That Traditional Towel.

Of course, no gentleman would abuse the towel privilege. I have known some men who seem to misunderstand the purposes of a roller towel. They think it is to remove the dirt, to serve as a scourer; and therefore wet their



Where "General Order" and "General Cleanliness" Occupy the Posts of Honor in the Procession,



Learning the Art of Catching the "Man on the Fence."

hands with soap water and proceed to wipe off the whole pleasing mass on the long-suffering towel. The next comer may do the same, though carefully selecting a clean place on the towel. Soon there are no more clean places to be found. If many who used the washroom were inclined to do in this way, it might be a good scheme to tack up a card close beside the towel, giving instructions for its use, just as they do in the case of fire-escapes in the rooms of up-to-date hotels.

Any motorcycle dealer will get some trade from tourists, and there is coming to be more and more of this trade, enough to be worth going after. They need oil, gasolene, occasional little jobs of repairing, and frequently like to leave the machine at some shop while they go to a hotel or restaurant for a meal. At such times a good wash is very desirable, and the tourist would be agreeably surprised to find a shop well equipped for that purpose. I have been there myself, and know how it is. I have washed my hands and face at a filthy sink, and then have used a pocket handkerchief for a towel because of a natural hesitation at employing the filthy rag that hung on a nail by the sink. And do you suppose that the tourist who found the Ideal Shop would keep it dark?

Passing the Good Word.

"Going through Smithville?" one would say to another. "Then stop at Blank's. That place is all right; it's the Ideal Shop."

Isn't that the kind of advertising that pays?

And then the toilet room! That is usually the absolute limit. If I were trying to run an Ideal Shop, I should have the toilet clean, and I'd have it generally understood among my customers that I expected them to help keep it so. I'd give out the impression that I kept a big blue horse pistol ready to use on the person who abused his privileges. The toilet is the very last place where one should tolerate any filth; good sense, good sanitation, and good business all demand that it be as spotless as the proverbial snow-white lamb.

And speaking of cleanliness, many shops sin in this respect in other places than the two or three already mentioned. The floor is usually swept every day or so, to be sure, but only the most accessible portions of it. Back under the lathe and benches is left a region of space unexplored by the investigating broom. I like to see an establishment clean everywhere—floor, walls, ceiling, *everywhere.* I want to feel that it is clean even in the places I cannot see. This makes a good impression on all who come into the place, and is therefore worth while from the business standpoint.

Cleanliness That Pays.

Americans have an evil reputation in some foreign countries because of the spitting habit. I fancy Satan has some particularly fiendish punishment devised for the man who expectorates on the floor of a building. Nothing would drive customers away more surely than a floor made filthy in this disgusting way. Since people must spit, provide a spittoon, and keep it clean. That is not a pleasant task, but as the farmer remarked about getting his heifer out of a mud hole, "It's got to be did." If I were running this Ideal Shop, I'd have a sign—perhaps more than one—announcing in letters loud enough to be heard: DON'T SPIT ON THE FLOOR. Some persons are so far down the scale as to chew tobacco. My opinion of tobacco chewing and tobacco spitting is not printable; asbestos paper would be required—and remember, Mister Motorcycle Dealer, tobacco juice on the floor won't help sell machines.

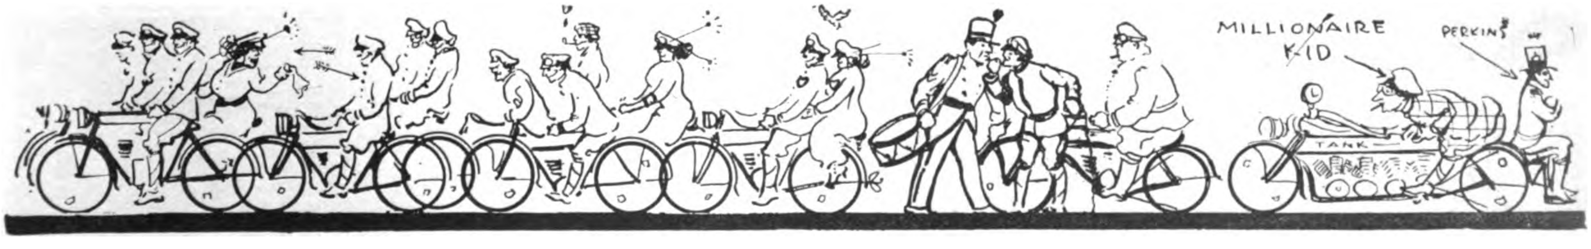
"Order and Cleanliness Pay."

Next to General Cleanliness comes General Order. Both of these generals are good fighting men, and they will help out wonderfully in the sales battle. No one likes to see a shop where all the tools are in a state of chaos; where the proprietor can never find just what he wants, though he knows it's somewhere about for he remembers seeing it three days before; where everything is run on the hit or miss schedule. The hit or miss schedule scores more misses than hits by a large majority. Isn't it possible that prospective buyers may judge the motorcycle by the establishment in which it is displayed? By all means give the machine a chance. Some buyers may have made up their minds as to what they want, and will buy anywhere, no matter how the shop looks, but to catch the "man on the fence," the chap that is just "looking around," with a vague notion that he might possibly buy a machine, all these things are going to count. The Ideal Shop stands a better chance of landing that variety of custom than all the others put together.

A Room for Tinkerers.

In a previous article I hinted at the fact that I sometimes like to use the workship to do a little of my own tinkering. I know that most dealers don't like to have people around in the way, and this Ideal Shop would, if possible, have a small room just for the use of the tinkers. It would be supplied with some tools, and on the wall would be a sign —notice that there are a good many of these signs; they are less trouble than constant oral explanation—briefly stating that the tools were there for the use of customers, and expressing a hope that said customers would be as careful of them as of their own property. A dealer need not encourage riders to do their tinkering on his premises, but I do not think it is good business policy absolutely to forbid it.

And there is one other clean thing that I should demand about my Ideal Shop—and that is, clean language. If necessary I'd have another sign, one to let the loud-mouthed, vulgar chap know that his vocal pyrotechnics were not appreciated in one place at least. There is more business behind that. Profanity and shady stories never sold any machines. I don't mean that one need be rude in "calling down" a person who had sinned in this respect, but the "atmosphere" of the place should be clean all the way through. This article has taken up really but one side of that matter of the personal relations between dealer and buyer. It has tried to emphasize the point that riders will appreciate certain things, and the fact that the dealer who wakes up to this will not lose by it.



Riders Fall in from Everywhere. An Appeal to a Man's Self-Respect Is Always Worth Trying.

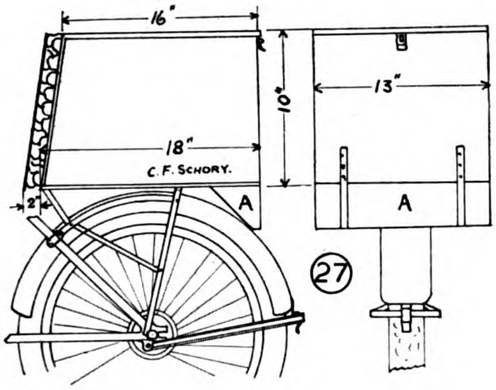
PRIZE

MOTO

LUGGAG



(27)

FIFTEEN more commercial luggage carrier designs are illustrated and described in this issue, making the total number, to date, forty. Twenty others have been submitted at this writing, and fifteen of these will appear in the May 16 issue of MOTORCYCLE ILLUSTRATED. The contest, announced in the March 7 issue of this paper, closes June 1. Illustrations and descriptions of most of the new designs submitted will be published May 16, May 30 and the final instalment June 13. Announcement of the prize awards will be made in the June 27 issue. No designs, however, will be accepted after June 1.

In the March 7 issue of MOTORCYCLE ILLUSTRATED this paper announced a Luggage Carrier Contest, and offered prizes of $25 and $15, respectively, for the best and second best designs for efficient commercial luggage carriers.

Since the publication of that issue, designs have been submitted at the rate of fifteen or twenty a week. Although the contest closes June 1, there is still plenty of opportunity for ingenious riders to win one of the prizes. The conditions under which the contest is being conducted are as follows:

1. All are eligible and each contestant may submit as many designs as he chooses.

2. The idea submitted must embody a luggage carrier suitable for attachment to a motorcycle and adapted for conveniently carrying a number of small parcels of moderate weight.

3. Sketches must accompany descriptions, but these drawings need not be either artistic or absolutely accurate. A rough sketch will do, but the description should be complete, with all the details carefully noted. Prizes will be awarded according to the *practical value* of the *ideas* presented, and not the symmetry of the drawings.

4. The prize winners will be determined by a committee of three disinterested persons.

5. Two Dollars will be paid during Ma for *every* suggestion considered deserving of publicity through the columns of this paper. Every suggestion will be submitted to the judges.

6. In the event of a tie for first, second or both prizes—a very improbable result—the prizes will be equally divided.

7. Competitors are requested to address all their communications as follows: "Luggage Carrier Contest, MOTORCYCLE ILLUSTRATED, 51 Chambers street, New York City."

The designs reproduced on these two pages, and the page following, may be briefly described as follows:

26. Side-car carrier with side and end springing. Box has arched top and cycle

mudguard fitted to side-wheel. Side semi-elliptical springs and shock absorbing device at front, F, attached to plate, G, as shown. Removable joints as shown at D. Inset shows plan of frame with attaching joints A, B, C. Contributed by Harry Rhoads, Akron, Ohio.

27. Rear carrier with back-rest and tail-tank for oil or gasoline. Has lid with lock at rear. Dimensions as shown. Tail-tank attached by straps on rear face of box. Contributed by C. F. Schory, Fort Wayne, Ind.

28. Rear carrier to be attached to regular luggage carrier furnished with motorcycle. Carrier made of strap-iron or wire, shown at D, method of attaching at top, C; brace to motorcycle axle, A, is riveted to carrier. A stand-latch is fitted to A at B. Contributed by Carl Kienzle, Tyrone, Pa.

29, 30, 31. Rear carrier for R. F. D. work, or the like, having three compartments, 5 x 16 x 20 inches each. Compartments are independent of each other and frame is of 1⅛ x ⅛-inch flat stock with round head screws or bolts for attaching. Rear, part-side and complete side views shown. Contributed by Irwin Mercer, Weston, Ohio.

32. Rear carrier of pannier type with baskets 12 x 24 x 24 inches, wire-work or strap construction fitted with lids. Framework of steel and attachments as shown. Used chiefly for small packages. Contributed by H. J. Maffio, Globe, Ariz.

33. Rear luggage carrier consisting of three sections or boxes of sheet-iron with supports of 1 x 1¼ inch strap iron. Middle box has door on top and carries stand latch as shown. Side boxes bolted on and readily removable. Method of attachment prevents removing side boxes when cover of center box is locked. Contributed by Clarence R. Chickering, Philadelphia, Pa.

34. Carrier consisting of sliding and stationary members for packages. Sliding members are shown at A, stationary tubing at B and iron straps at C. Rings to fasten straps are at D, and E E are set screws to keep members A and B in their proper relation. Contributed by Chas. A. Vanders, Philadelphia, Pa.

35. Adjustable rear carrier with box proper made adjustable as to width to fit on a non-adjustable base. A shows a section of the box; braces at the bottom are pierced with holes which fit over pins P on base B. Lid C is fitted with holes similarly and is made in two parts to enable it to fit any width of A. Assembly of box consists of two sections of A, one lid C and the base B. Attaches to motorcycle by braces to rear stays and to axle ends. Contributed by Leo H. Drahmann, Perham, Minn.

37. Rear carrier with end box and detachable side pockets, the latter extensible and detachable. Pockets have bellows ends. Supports four in number as shown. Framing and rear box of steel, pockets of leather. Straps on pockets to adjust bellows ends. Contributed by E. M. Dunwant.

38. Rear carrier of unique folding construction. Folds when not in use and displays advertising on sides in either folded or operative position. Hinges at joints as shown. Flaps A and B are inside the respective sides when folded, but flaps A fold over each other when carrier is open, and flaps B (at the rear) fold similarly. Fixtures D hold flaps in place when carrier is open. C forms rear mudguard and base of carrier. Process of unfolding (shown in dash lines) and front view in position (full lines) in center drawing. Contributed by Alan H. Sawyer, Millers Falls, Mass.

Route to Be Covered by Participants in New Jersey Club's Decoration Day 24-Hour Run.

ANOTHER motorcycle elopement took place recently at Redwood City, Cal., when Will Joseph and Jean Brook were married by Justice of the Peace H. W. Lampkin.

THE motorcycle police squad at Salt Lake City has been increased to five members. The results from the first two machines were so marked that the squad was increased.

A MOTORCYCLE tour of Eastern States is to be made this summer by Mr. and Mrs. J. T. Rousch, of Terre Haute, Ind.

The police department in Clarksburg, Va., has just added a new Indian 7 to its equipment.

A hill climb will be held at Shoshone Falls, Idaho, by the Twin Falls M. C. on Decoration Day. Other contests are being planned.

F-A-M

PLEA FROM THE SOUTHWEST.

EDITOR MOTORCYCLE ILLUSTRATED:

It is noted that the extreme North again gets the F. A. M. convention, both the cities under consideration by the Federation directors being so situated that it will be practically impossible for motorcyclists in the Southwest, in the Southeastern States and on the Pacific coast to attend. This will make several years in succession during which riders in these localities have been barred from participating by the great distances they would be obliged to cover. The motorcycle riders in the Southwest and Southeast districts are hungry for an opportunity to participate in F. A. M. affairs and to enter runs and races, but it seems that if their hopes are to be gratified they will have to arrange their own program.

As affairs stand now, the riders in the districts referred to are called upon to pay their initiation fees, dues and charges for F. A. M. race sanctions, and I believe it is only fair to say that they get nothing in return. Unless something is done to remedy these conditions the time will come when motorcyclists of Texas and other Southwestern and Southeastern States will form their own State federations and pull off their own runs and meets. They could hardly be blamed for taking such action.

It is announced that the Southwestern touring division to the next F. A. M. meet will start from Indianapolis, a city which is 700 to 1,000 miles from the real Southwest, as will be seen by reference to a map. Almost the same conditions prevail with reference to the Southeastern territory, whose riders are expected to congregate at Baltimore for the run to the convention city. This letter is not written with a view to making unreasonable criticisms, but merely for the purpose of calling attention to a situation which is anything but satisfactory; for the purpose of starting a movement which will result in getting recognition for isolated States and communities.

Take Texas, for instance. This State is larger than all the New England States combined, with a population of 6,000,000 people, almost enough for an independent republic. There are many motorcyclists in this State, and how many of them belong to the F. A. M.? Comparatively few. Still I venture to say that nine out of every ten riders would be willing to enter the fold if they could see that they were going to receive consideration. It is certain that nearly all of them would join a State federation as soon as they learned that they would have their own endurance runs, meets, etc., held near enough so that they could attend without great inconvenience. There certainly are ways to arouse interest locally in each State, and it would seem that the time has arrived when the F. A. M. should see the light and take the necessary steps to promote the welfare of the riders at large, irrespective of State lines.

Would it not be possible to have State F. A. M. conventions, giving their riders endurance runs, race meets, etc.? Could not these riders assembled at the State conventions elect their representatives to the National Assembly of the F. A. M.? Or, in other words, would not the F. A. M. be of more real benefit to motorcyclists if the organization were managed along the lines of our State and national government, modified to suit conditions, of course, but still aiming to give fair and impartial representation? I trust that something will be done and done promptly to the end that riders already within the ranks may be kept there, and that new ones may find some worthy reason for joining the national body.

H. A. SIMPSON.

Dallas, Texas.

OFFER BOARD TRACK

Columbus Campaigners Are Prepared to Build Saucer in Order to Land F. A. M. Convention.

THAT the Columbus M. C. is prepared to take any action within reason to clinch its claim to the next convention of the F. A. M. is indicated by the following telegram, copies of which have been received by President Hamilton and the Federation directors:

"Will you favor Columbus for F. A. M. meet if we build half-mile board track. Wire answer; our expense.

"COLUMBUS MOTORCYCLE CLUB."

It is not likely that any of the F. A. M. directors have felt justified in making a definite reply to this inquiry, in view of the neck-and-neck race between Columbus and Cleveland for the meet honors, but the fact remains that a board track will go a long way toward bringing the big assembly to the former city. It is now being argued in some quarters that Cleveland is too large a city to permit of the convention being held there under most favorable conditions and that, on the other hand, Columbus is just about the right size. Because of this there has been a trend of sentiment toward Columbus of late and with a board track to offset the one now being erected in Cleveland, the Columbusites will have an excellent chance of winning out.

TYLER SAVES THE DAY.

A. P. TYLER, of Boise, Idaho, has the honor of rescuing his State from the "never was" class, by taking out the first and only certificate of registration in the State. Thus it is that his shop is in a class all by itself—and a pretty classy shop it is at that. It is No. 606 on the registered list.

SHOP LIST IS READY.

SECRETARY GIBSON is now mailing to all members the neat little booklet containing a list of all registered F. A. M. shops in good standing up to No. 615, which certificate is held by Samuel A. Flamm, 2520 North Broad street, Philadelphia. J. A. Olinger, Enid, Okla., has just registered his shop, it being No. 618, and the only F. A. M. shop in the State.

Additional shops have been registered of late as follows: F. C. Scott, 55 East Market street, Tiffin, Ohio; S. L. Crosby Co., 126 Exchange street, Bangor, Me.; J. D. Fletcher & Co., Elyria, Ohio; Beloit Cycle Co., 107 West Grand avenue, Beloit, Wis; Elyea-Austell Co., 35 North Pryor street, Atlanta, Ga.

FINE ASSEMBLY HALLS.

SHOULD the next convention of the F. A. M. go to Cleveland it is probable that the delegates will convene in the auditorium of the new building erected by the Brotherhood of Locomotive Engineers, one of the finest in the city. One of the features of this auditorium is a large pipe organ. The huge meeting chamber has seating accommodations for over 1,000 persons. Adjoining the Engineers' building is Chamber of Commerce Hall, which has a seating capacity of 1,000. Both assembly halls are on the ground floor.

NEW F. A. M. CLUBS.

AMONG clubs that have rallied to the F. A. M. banner of late are the following: Pleasantville (N. Y.) M. C., H. D. Mack, secretary, 100 per cent.; Angel City M. C., of Los Angeles, James Leonett, secretary, 100 per cent.; Fort Recovery (Ohio) M. C., J. A. Dahlinghaus, secretary, 20 members; Brockton (Mass.) M. C., L. W. Ludden, secretary, 50 members; Indian M. C., Newark (Ohio), Taylor Kussmaul, secretary, 100 per cent.

COFFEYVILLE CLUB FORMED.

THE motorcyclists of Coffeyville, Kan., have organized a club with thirty charter members. Harry Jordan, the leading druggist of the city, is the president, and Fred Scothorn, a newspaper man and correspondent for MOTORCYCLE ILLUSTRATED, is the secretary. The charter will close April 30. Application will be made to affiliate with the F. A. M. as soon as the charter is closed. The club intends to conduct tours and races.

NO WONDER HE'S JOLLY.

HOLLIS JOLLY, of 259 Louie street, Dayton, Ohio, is the proud holder of F. A. M. membership card number 14,000. He received it on April 16, and announces that it would require a pretty heavy bonus to make him exchange it for another.

With the Clubs

LOUISVILLE CLUB BOOMING

New Officers Have Outlined a Schedule of Hill-Climbs, Endurance Runs and Sunday Outings.

LOUISVILLE, KY.—With the first of March the Louisville Motorcycle Club entered on the third and most auspicious year of its life. After having practically the same set of officers during the first two years of its career, it was decided that a chance should be given to the new blood in the club, and an entire new staff of officers was elected at the annual election held in March. All the new officers are enthusiastic riders and are taking great interest in improving the club. Since the accession of the new president, C. R. Gilmore, the club has more than doubled its membership, and new members are constantly being added.

A number of runs, hill-climbs and other events are being planned for the summer. About thirty-five members of the local club expect to make a run on their machines to Indianapolis on May 30 to be present at the 500-mile auto race at the Speedway. They will leave here the day before the race and return the day after, making a three-day trip of it. A club run will also be made to the city securing the F. A. M. convention this year. A three-day endurance run, to be held some time in July, and short club runs every Sunday of from 100 to 200 miles, complete the list of club events planned for the season so far.

NEW HOME UNDER WAY.

THE Des Moines (Iowa) M. C. recently filed articles of incorporation. Work has been started on the club's new home and it is expected that the quarters will be ready for occupancy about June 1.

MARVIN AMONG VICTIMS.

DETAILS of the *Titanic* catastrophe struck home to metropolitan motorcyclists with new poignancy when it became known that D. W. Marvin, of New York City, a member of the Motorcycle Touring Club of New York, Inc., was among the victims. Marvin was well known and popular among the riders who frequent the uptown motorcycle establishments, and his tragic death came as a blow. He had recently been married, and was returning from a honeymoon in Europe on the ill-fated *Titanic*.

OFFERING INDUCEMENTS

Angel City Club Halves Its Initiation Fee in Campaign to Increase Its Membership.

LOS ANGELES, CAL.—At the last business meeting of the Angel City M. C. the initiation fee was reduced from $10 to $5, this amount including F. A. M. dues for one year. The reduced rate will be in effect for three months from April 18, and it is expected that scores of riders will take advantage of it, and place their names on the club list. The organization now has comfortable quarters at 1010 South Olive street, but it is believed that the membership will reach a point within a few months which will justify the erection of a permanent clubhouse. Among the new members taken in during the last month are two hustling Los Angeles dealers, Charles W. Risden, Indian representative, and Guy Winnor, agent for the Minneapolis machines.

On Sunday, April 18, the club made a run to San Juan Capistrano, about 70 miles south of Los Angeles. The roads were in good condition, and the outing proved a complete success. Plans are also being laid for a number of moonlight runs to be held between Los Angeles and the beaches. The riders will find excellent roads on these trips, and the beach cities afford many amusements.

The club is doing everything possible to discourage the use of the muffler cut-out and to assist in the enforcement of the city traffic regulations. It is announced that the organization will be glad to exchange club pennants with other clubs throughout the country.

A MEMBERSHIP RACE.

MOTORCYCLISTS of Lockport, N. Y., recently organized two teams, the "Purples" and "Golds," and by conducting a membership campaign increased the membership from 28 to 87 in three months.

PLANNING NEW HOME

Savannah Club Expects to Occupy Permanent Quarters in a Month—Talk of Big Road Race.

AT a recent meeting of the Savannah (Ga.) Motorcycle Club, S. N. Harris, Indian agent in Savannah, suggested that plans be taken up for a road race to Statesboro, a distance of 60 miles, and return. There was a discussion with reference to holding such an event on July 4, and it is likely that the plan will go through. Mr. Harris offered to donate one of the loving cups to be awarded to winners. At present the roads between Savannah and Statesboro are impassable, several bridges having been washed away, but it is expected that the course will be in fair condition inside of a month. The bridges are now being rebuilt.

A committee made up of W. S. Mell, H. B. Powell, I. L. Potts and O. A. Meyer, has been appointed to look into plans for the erection of a permanent clubhouse over the water at the end of the Ogeechee bridge, and there are indications that a new home will be ready for the club not long after June 1.

At the last meeting of the club it was decided that the supper which had been planned for April should be postponed until the annual meeting in June. Several candidates for office are already in the field, and the election promises to be unusually interesting. W. S. Mell, who carried off the prize for having the most attractive float in the lantern parade recently held by the club, has received his prize, a handsome loving cup donated by President Otto Kolb.

GOODYEARS IN HOUSTON.

MOTORCYCLISTS of Houston, Tex., recently gathered in front of the Houston headquarters of the Goodyear Tire & Rubber Co., while a photographer worked his camera. The result is the accompanying picture. Lon Rounsaville, the Goodyear manager in Houston, is an enthusiastic motorcyclist and he reports that a large number of the boys are following his example and using Goodyear tires. He also states that the eight motorcycle policemen of the city use Goodyears.

L. J. MUELLER, Indian agent in Cleveland, has just received his fourth carload of machines.

ROAD BOOMERS MEET

Representatives From Twelve Iowa Counties Pledge Money for Maintaining River-to-River Road.

DES MOINES, IOWA.—The River-to-River Road Association met April 15 at Grinnell, and a permanent organization was formed. E. H. Spaulding, of Grinnell, was elected president; O. H. Carpenter, of Iowa City, vice-president; Bert N. Mills, of Des Moines, secretary, and Ed. Delahoyd, of Exira, treasurer. Joe L. Long, of Des Moines,; O. H. Carpenter, of Iowa City, and C. M. Beem, of Marengo, were appointed on a committee to draft a constitution and by-laws.

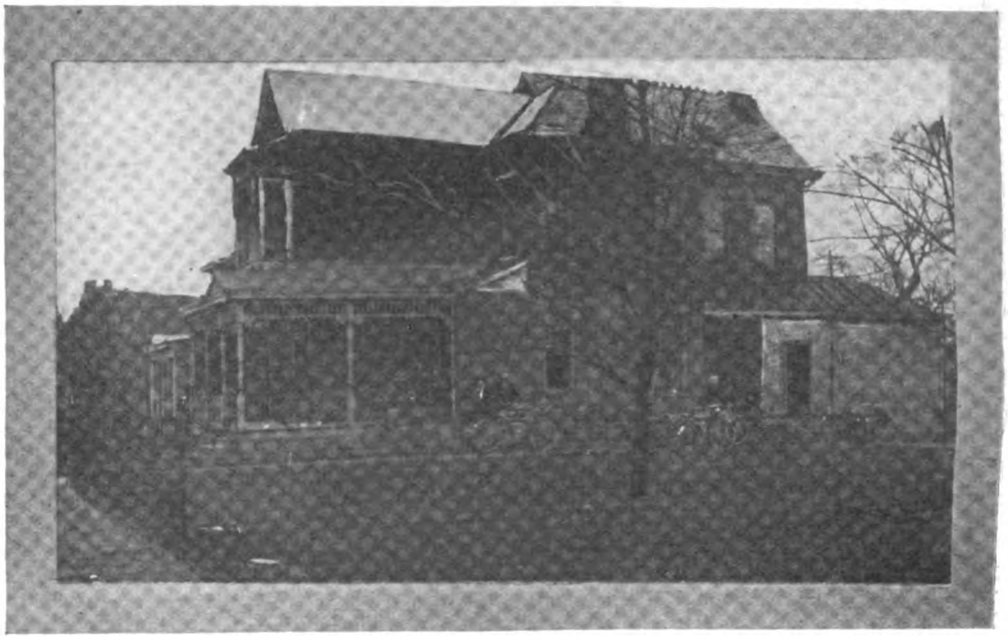
The object of the meeting was the forming of an organization for maintaining the road and keeping it in repair. Twelve counties through which the road passes each pledged $100 for its maintenance. This money is to be used on the work this year.

A splendid banquet was served at which E. B. Brandt, president of the Grinnell Commercial Club, was toastmaster. Mayor J. H. Patton delivered the address of welcome. John A. Foster, of Guthrie Center, responded on behalf of the guests. Joe Long, of Des Moines, editor of *The Road Maker,* and E. E. Johnson, of Iowa City, gave interesting talks. Lafayette Young, Jr., of the Des Moines *Capital,* told the men to look upon the River-to-River road and all other good roads as investments and not as improvements.

Governor B. F. Carroll, of Iowa, gave the final speech of the evening. He stated that the "River-to-River" road has received more favorable comment over the United States than anything else Iowa has accomplished in the three years that the road has been in existence.

MOTORCYCLISTS ASSISTED.

IN connection with the Saengerfest recently arranged by the Germania Club, of Jacksonville, Fla., for the entertainment of visiting Germans of the South Atlantic League of German Societies a monster street parade was conducted, including 200 automobiles which were divided into squads and marshalled by riders of the Jacksonville Motorcycle Club. The motorcyclists accompanied the four-wheelers throughout the entire line of march and were congratulated upon the manner in which they handled their machines. Owing to their systematic efforts there was no traffic confusion and the big pageant passed off without a single unpleasant feature.



Spacious Home of the Columbus Motorcycle Club.

AIMING AT 200 MARK.

AT a recent meeting of the Cleveland M. C. fifteen new applications for membership and the same number for F. A. M. applications were received. This was in connection with the campaign for new members recently put into effect with the view of increasing the total membership to 200 before June 1.

PORTER HILL EVENTS.

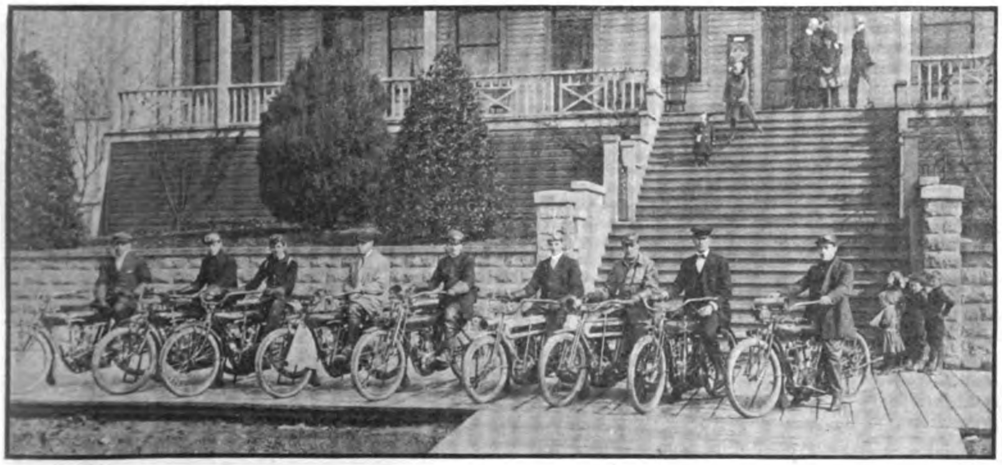
A HILL-CLIMB scheduled for May 30 by the Cleveland M. C., with electrical timing apparatus, is creating enthusiasm among local riders. Porter Hill will be the scene of the climb.

PASSES FOR CLUB RIDERS.

THE management of Luna Park has arranged with the Cleveland M. C. for furnishing passes to the club members for the new motordrome. These will be given only to members who have paid six months' dues in advance.

ANDRESS SUCCEEDS SHERIDAN.

O. ANDRESS was elected to fill vacancy left by the resignation of P. H. Sheridan as publicity man for the local newspapers for the Cleveland M. C. at a recent meeting.



Vancouver Riders in Front of Hotel at Capilano Canyon.

LUNA PARK ACCOMMODATIONS.

A CLUBHOUSE and room for garaging of machines will be installed by the management of Luna Park for the accommodation of riders who wish to visit the motordrome. Checking and a watchman over the machines will insure the riders against theft or tinkering with machines. The Newburgh Athletic Club will also be open to the local motorcyclists who visit the park.

FOR "RUSH" NEWS.

THE Cleveland *Press* will install five motorcycles in the reporters' department to cover rush news, fires, accidents, etc. This newspaper is the second one in Cleveland to thus adopt the motorcycle.

C. M. C. TO HAVE PIN.

THE Cleveland M. C. is considering adopting a pin emblem of the club. Suggestions and samples will be exhibited by various dealers at an early meeting.

TORONTO CLUB INCORPORATES.

THE Toronto Motorcycle Club has become a regularly organized company with charter under the incorporation laws of the Province of Ontario. The club is now legally authorized to carry on a business of motorcycle racing and entertainment and to build and maintain board tracks, a club house, etc. The affairs of the club were placed in the hands of a board of five provisional directors who, in turn, elected the officers of the club to a similar capacity in the company. The name of the club has also been registered. According to the charter, the only restrictions placed on the club are the prohibition of the sale of spirituous liquors on the club premises and gambling.

GUARDING MANHATTAN BRIDGE.

NEW YORK riders, jot this down in your notebooks: Two motorcycle policemen have been stationed on the Manhattan bridge, one at each end, to discourage speeding, and an arrest will follow every infraction of the traffic regulations.

A MONTANA ENTHUSIAST.

NOTWITHSTANDING the mountains and unusual climatic conditions in Montana the motorcycle is crowding the horse hard in that State. Eli Winesburg, "the cowboy agent," who represents the Harley-Davidson Motor Company in Park City, Mont., gets more fun out of his belt twin than out of any horse he has ever owned. During the past winter he rode his machine in preference to a horse, wearing on his motorcycle everything, except his spurs, that he found useful in cow-punching. Visitors in Park City from the effete East gazed with wonder upon Eli and his costume, but that didn't bother Eli.

HARLEY-DAVIDSON

TANK RIDING IN SAVANNAH.

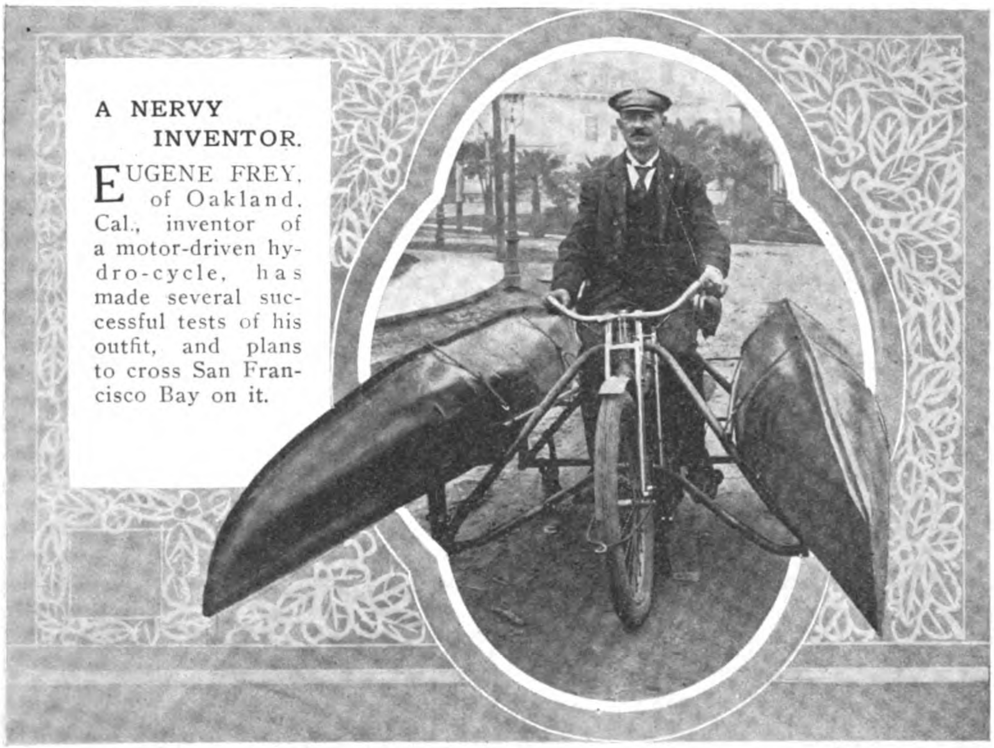
H. JURAM, of Savannah, Ga., an employee of the Central Georgia Railroad, is one of the most enthusiastic motorcyclists of his city, and Mrs. Juram, who appears on the tank in the accompanying photograph, is an equally consistent devotee of the single-tracker. No ban has been placed upon tank-riding in Savannah as yet, and Mr. and Mrs. Juram make regular trips without using a tandem attachment.

MOORHOUSE CLIPS RECORDS.

A. J. MOORHOUSE, riding an Indian twin, went after records on the Brooklands track in England on April 18 and succeeded in crimping several of the best British marks. He rode 150 miles in two hours, 1[illegible] minutes and 18 seconds; 200 miles in three hours, one minute and 54 seconds, and 250 miles in three hours, 55 minutes and 30 seconds. On the hour basis Moorhouse reeled off his mileage as follows: Two hours—150 miles, 1,020 yards; three hours—197 miles, 1,271 yards; four hours—250 miles, 1,045 yards; five hours—277 miles, 950 yards. The performance of Moorhouse was one of the most remarkable seen on English soil in a long time.

SOUTH SCRANTON RACES.

THE South Scranton (Pa.) M. C. is arranging to hold races in conjunction with the Scranton Automobile Club this summer.



A NERVY INVENTOR.

EUGENE FREY, of Oakland, Cal., inventor of a motor-driven hydro-cycle, has made several successful tests of his outfit, and plans to cross San Francisco Bay on it.

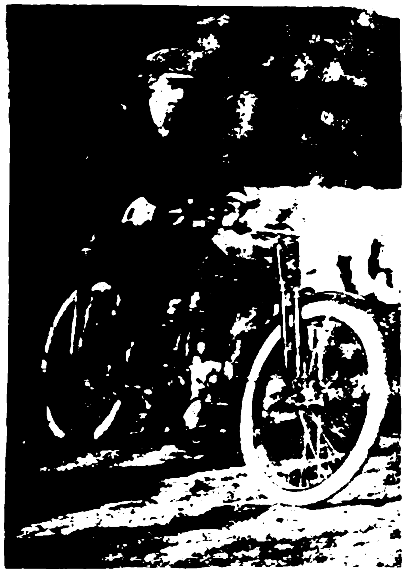
TWO POPE RIDERS.

THE accompanying photographs show riders who are making the most of their Pope machines at widely separated points. Alan H. Sawyer, of Millers Falls, Mass., appearing in picture No. 1, used his motorcycle almost daily throughout the past winter and climbed all the hills in his vicinity without using ropes or chains on his rear wheel. Picture No. 2 shows Fred Barnard, of Los Angeles, Cal., who uses a double saddle-bag carrier in transporting packages. It will be noted that the boxes in the rear bag are piled higher than the rider's head.

A MOTORCYCLE club of twenty-five members has been formed in Green Bay, Wis. Wisconsin, by the way, is showing big results in the formation of clubs in practically every town worthy of the designation.

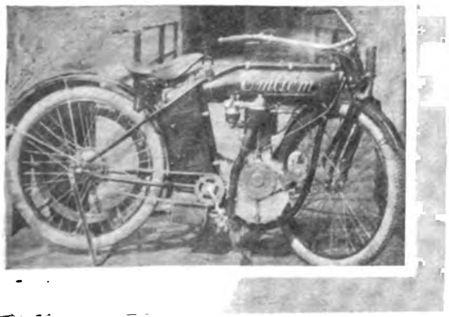
SPAROUGH CLAIMS A RECORD.

S. J. SPAROUGH, of Chicago, has written an interesting letter to the Harley-Davidson Motor Company, in which he states that he is in possession of a 1903 Harley which has run 83,000 miles, and which is still in daily use. He is of the opinion that his machine is one of the first Harley-Davidsons manufactured. Sparough bought the machine in 1907, after it had covered 51,000 miles, according to the records of its former owners, and he has since ridden it 32,000 miles. The mount is fitted with a 3¼ h. motor, and the owner states that it still carries the original main bearings.



INTERESTING PHOTOS.

IN the upper photograph appears Rudolph Karl, demonstrator for S. A. Flamm, Emblem agent in Philadelphia, Pa. The lower picture shows an Emblem machine with which Mr. Flamm struck a big touring car recently.



ABANDONS AEROPLANE.

GEORGE R. LYNCH, formerly an aviator, has dropped flying to ride the two-wheeler. He says he likes spinning down the thoroughfares better than he did making spiral glides and dips in mid-air.

ANTIGO IS AWAKE.

ANTIGO, Wis., is to have its first motorcycle policeman soon, according to recent action of the City Council.

Removing a "Snag" from a Road Near Savannah.

STATEMENT BY REFEREE.

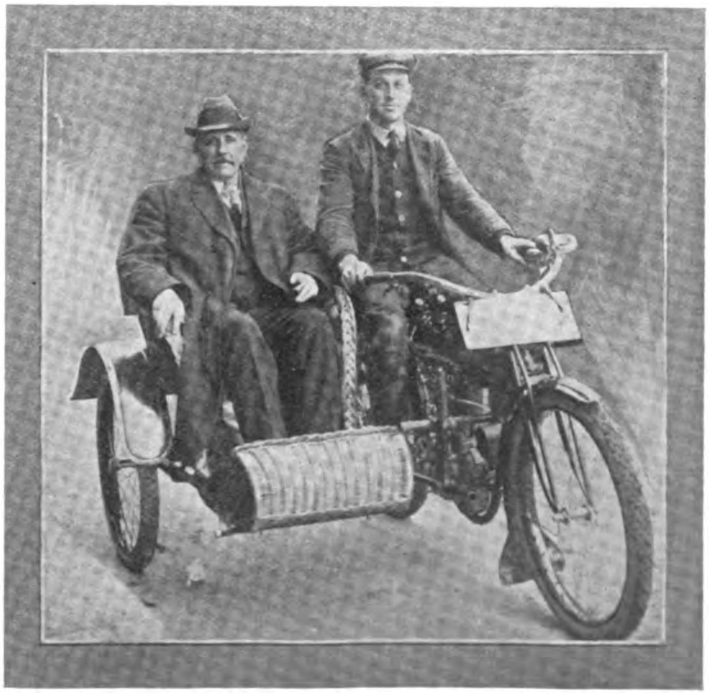
SIX pages of an explanatory letter from Referee Charles Fuller Gates, of Los Angeles, anent the racing squabble which recently marked the close of the motordrome in that city, simmer down to the statements that most accounts of the trouble have been unwarrantably colored, and that the racers still in Los Angeles are on most amicable terms with the referee. The F. A. M. representative maintains that the only serious disagreements involving the motordrome had their birth in trade circles, and that they were not precipitated by his methods of disciplining the riders.

WANT AIR FEATURE.

FRESNO, Cal., motorcyclists who are planning a tournament have invited Aviator Hamilton to fly from a neighboring city and alight on the track in front of the grand stand before the races.

NEVER GRUMBLES.

UNUSUALLY consistent service has been obtained from the outfit appearing in the accompanying photograph which shows a 4 h. chain-drive, Merkel machine hooked up with a Majestic side-car. Plenty of power is obtained to negotiate poor roads and ordinary hills, and the 4 h. motor never grumbles over its load, according to K. B. Young, who appears on the machine. Mr. Young has charge of the bicycle department of W. S. Aaron, in Altoona, Pa. W. K. Aurant, eastern representative of the Miami company, occupies the side-car.



QUICK WORK BY PULS.

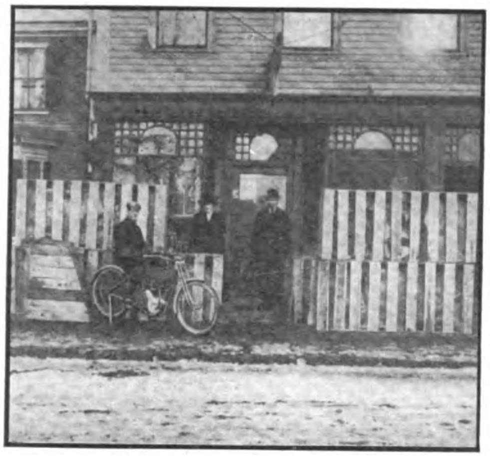
WHEN 9-year-old Raymond Craig, of Milwaukee, Wis., was run down by a truck recently while playing near his home, George Puls, of the Harley-Davidson staff, carried the lad to a hospital on his motorcycle and probably saved his life. Doctors agreed that the boy could not have survived but for the prompt attention which was made possible by the motorcycle.

A CLEVELAND BOOSTER.

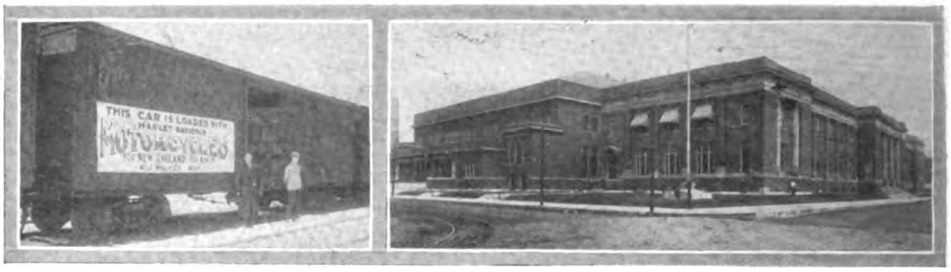
H. R. NOYES, of Buffalo, N. Y., recently made a visit to the Binghamton, N. Y., Motorcycle Club, urging its members to support Cleveland, Ohio, for the F. A. M. meet.

LARRY HAS NEW MOUNT.

BRIDGEPORT, Conn., residents are congratulating the local police department. It has given "Larry" Lacy, a popular policeman, a new motorcycle.



W. J. Walker's Store in Danvers.



HOW THE RUSH WAS MET

Big Municipal Building Held Reserve Supply of Harley-Davidson Machines Pending Opening of Season.

FINDING it out of the question to store its accumulated stock of 1912 machines in its own buildings, pending the opening of the present selling season, the Harley-Davidson Motor Company hired the Auditorium in Milwaukee, a $500,000 structure owned by the city, and filled it with the new model Harleys. When orders began to pour in and the daily output of the big factory could not meet the demands for immediate shipments the stock of machines in the Auditorium was drawn upon, and as a result Harley-Davidson purchasers were given prompt attention. The company succeeded in storing 346 machines in the municipal building before the orders piled up so that further accumulation of stock was impossible.

The Auditorium is an absolutely fireproof structure, and this point weighed most heavily with the Harley-Davidson company in its selection of the building as a storing chamber. The idea of having a structure of this character hired by a motorcycle company was distinctly new for Milwaukee, perhaps for the country, and the Harley-Davidson folks have been congratulated upon their foresight and business sagacity.

One of the recent shipments from the Harley-Davidson factory embraced seventy machines—a full carload—consigned to W. J. Walker, the Harley agent in Danvers, Mass. A shipment of this size marks an epoch in the development of the motorcycle field in New England, for the carload referred to is the first to arrive in that district from the West.

Following a trip through New England some time ago by Sales Manager Walter Davidson, the company made preparations to give this territory more thorough consideration than it has received in the past, and the wisdom of this move is already manifest in unprecedented activity by the firm's agents.

The National Capitol M. C., of Washington, D. C., will hold a race meet on May 30.

TELLING THE BOWDEN STORY.

BOWDEN wire systems for motorcycle service are well illustrated and described in a comprehensive catalog which is now being distributed to manufacturers and dealers by Bowden Wire, Limited, 37-41 Pratt street, Camden Town, London, Eng. Practical instructions are given for operating as well as fitting the Bowden products, for which the J. S. Bretz Company, 250 West Fifty-fourth street, New York, is American representative, and the book is one which should prove of permanent value. The Bowden mechanism is shown with all kinds of control levers for the power two-wheeler, including those designed for single, double and triple action, and providing for a corresponding number of cables. The latter is one of the most compact devices possible for the transmission of power to three points from a single base.

In addition there are shown brake, clutch and valve-lifting levers of various types, foot levers, band-brake fitments for side-car service, carbureter adjusting attachments, which do not necessitate alterations in the mixing instrument, magneto controls, Bowden twist grips, air inlet attachments and the Bowden two-speed gear actuated by lever and Bowden wire from the handlebar, or by a foot device.

Other sections in the catalog are devoted to Bowden fittings for automobiles and motorboats.

BRYANT ON STANDARD STAFF.

R. S. BRYANT, formerly connected with the Bryant Rim Company, of Columbus, Ohio, has been appointed consulting engineer for the Standard Welding Company, of Cleveland. Mr. Bryant's long experience in the designing and manufacture of automobile rims has fitted him admirably to assist in carrying out the Standard company's policy of making constant improvements in its product, and he is looked upon as a valuable addition to the staff.

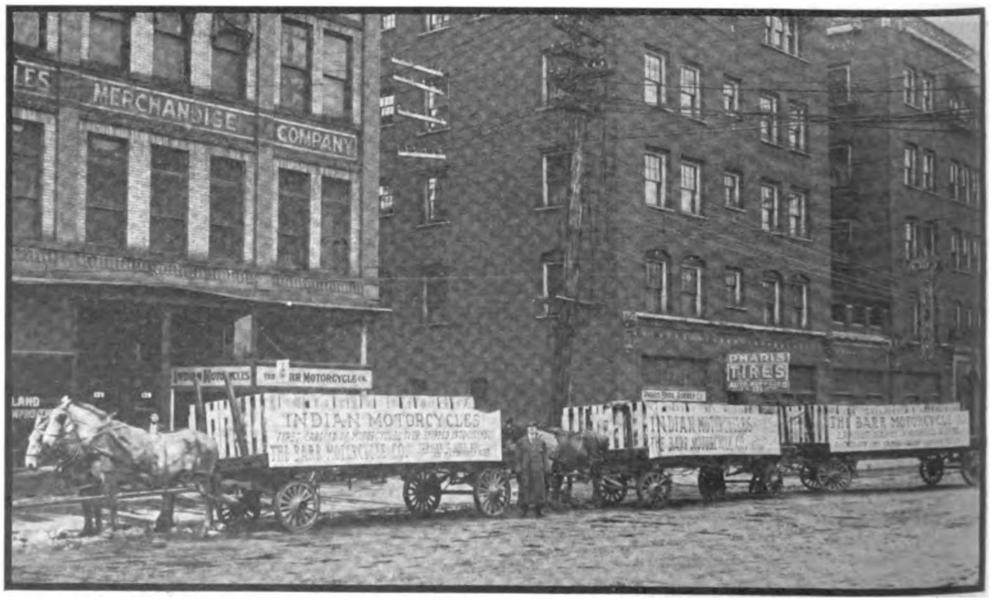
NEW R.-S. CATALOG.

DESIGNED to preach the motorcycle gospel on a broad scale as well as to point out the particular advantages of the R.-S. product, the new catalog being distributed by the Reading Standard Company, of Reading, Pa., is a booklet calculated to create a favorable impression wherever it is seen. Its opening pages are given up to an exposition of the pleasures derived from the single-tracker and to a series of rapid-fire arguments against the present-day tendency to overlook the inducements held out by the open country.

One of the features of the catalog is a large folding chart which brings out every salient point in the make-up of the R.-S., and permits of a grasp of the machine's construction which should go far toward bringing a prospective buyer into the ranks. One of the illustrations shows a machine with the company's new "Sylvan Green" finish, a color which has come into immediate popularity. The catalog will be mailed promptly on application.

"PONCHO" FOR MOTORCYCLISTS.

ONE of the features in an attractive line of raincoats carried by the Climatic Raincoat Co., of 102-04 Fifth avenue, New York City, is the Poncho, an "all-proof" garment which admirably meets the requirements of the motorcyclist. The Poncho is made to slip over the head and is buttoned in front at the neck. It is guaranteed to be waterproof and greaseproof and may be cleaned with benzine and ironed like any other garment.



Second Carload of 1912 Indians for the Barr Motorcycle Company, of Columbus. The Third Is to Be Delivered This Month.

HIGH WINDS AT DENVER

Storm Damaged Big Bowl But No Change In Race Schedule Was Necessary—Armstrong a Winner.

DENVER, COL.—High winds carried away the roof of the grandstand at the Tuileries Motordrome on April 13, and the gale was of such strength that it lifted stretches of the track from the stone foundations at times. As the track settled again it developed several "bumps" which necessitated repairs.

There was a creditable attendance at the meet held on April 11, when races were run off with the following results:

First heat for Class B riders at 3 miles—Schwartz, Indian, first; King, Indian, second; time, 2:19.

Two-mile race for amateurs on singles—Hurlbut, Indian, first; Shepherd, Merkel, second; time, 2:36.

Second heat for Class B at 3 miles—Patterson, Merkel, first; Cox, Merkel, second; time, 2:31.

Five-mile exhibition—Boyd, Indian; time, 4:30.

Final for Class B, 5 miles—Schwartz, Indian, first; King, Indian, second; Cox, Merkel, third; time, 3:50 2-5.

Five-mile open, professionals, 61 cu. ins. class—Armstrong, Excelsior, first; Schwartz, Indian, second; King, Indian, third; time, 3:50 1-5.

TO VISIT NEW YORK.

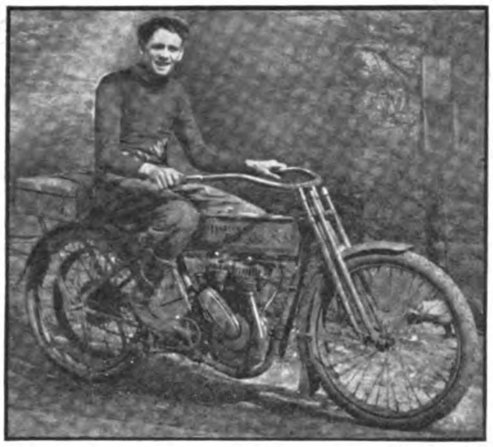
A COMPARATIVELY large number of Toronto tourists are contemplating a trip to New York City as a part of their season's program. Several parties are being made up, one of which will start in August and the larger one in September. This jaunt is beginning to be a popular one with the Canadians, on account of the splendid condition of the roads in New York State. Charlie Neilson, who mounts an Indian charger, is considering a fourth trip to the metropolis, while a number of English riders are also planning to cover the route. When this bunch of Triumph and Rudge-Whitworth machines ride into town, the New York enthusiasts will surely have something to talk about. M. F. Amoss, who intends to accompany the September party, will pilot a Rudge and side-car, but the remainder of the party will ride "solo."

SOLVED THE PROBLEM.

C. E. LONG, a motorcyclist of Philadelphia, Pa., has designed a special side-car chassis for his machine which permits of his invalid wife accompanying him on short trips. Until the motorcycle attachment was devised recently Mrs. Long had not made a trip out of doors since 1905, when she was injured. It goes without saying that she is now enthusiastic over the adaptability of the "little brother to the automobile."

TIRE MAN BUYS MOUNT.

T. C. JONES, of Louisville, Ky., traveling agent for the Goodyear Tire and Rubber Company in western Kentucky and southern Indiana, recently purchased a 7 h. chain-driven Merkel on which he intends to cover his territory in the future. By using a motorcycle instead of the trains, Mr. Jones figures that he can make better time and reach more towns with less difficulty.



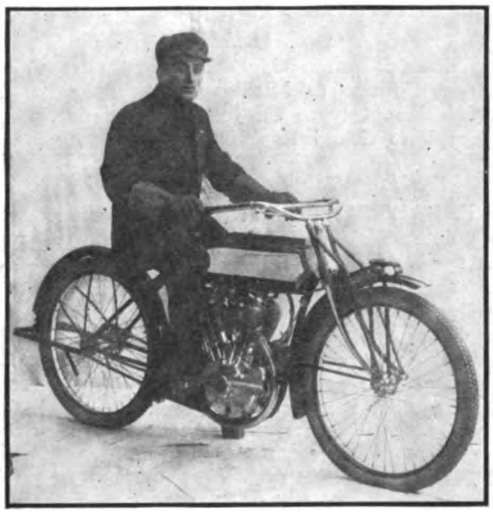
ALVEY ANDERSON, who is now covering Alabama, getting road map data for the Scarborough Company, of Indianapolis.

NEW POLICE MACHINES.

THE police of Dayton, Ohio, are using motorcycles to good advantage in running down criminals. For the emergency calls that flood a busy police station no means of getting quickly to a spot is as advantageous as the motorcycle, they say. It is always ready, has the speed and also the power to reach a spot without causing undue excitement or scaring away the quarry. Two new Merkels have been purchased by the department to augment the present lot of machines. They are on exhibition in the motorcycle show and are attracting unusual attention because of the fact that they are to be ridden by minions of the law.

PROMISING NEW MACHINE.

FOR some time past Joe DeSalvo, well known in racing circles, has been making exhaustive road tests of one of the new machines produced by the Excelsior Cycle Co., of Chicago, and his reports entirely satisfy the builders. The accompanying photograph shows DeSalvo on one of the new mounts which is fitted with a 9 h. Spacke motor. He has covered more than 1,000 miles on this machine without experiencing road trouble. DeSalvo has made arrangements to try out several of the Spacke motors on the Indianapolis Speedway at an early date with a view to determining just how far they can push old Father Time when given a chance. As yet the Excelsior folks have not decided upon a name for their new mount.



MEMORIAL DAY PROGRAM

Seven Classy Events Will Make Up Elmira Card for Which Attractive Prizes Are to be Offered.

SEVEN events will make up the program for the Memorial Day race meet to be given by the Elmira (N. Y.) Motorcycle Club, and there is promise of high-class racing for the fans. The card will open with a novice event; three miles for singles, and the other races have been arranged as follows: Open 10-mile race; five-mile event for private owners, 10-mile open race, five-mile open, 10 miles for private owners and an hour race, open.

The race committee has decided to purchase two side-cars, suitable for attaching to any standard machine. One of these attachments will go to the rider scoring the greatest number of points in the meet, and the other will be awarded to the member of the local club who succeeds in disposing of the greatest number of tickets for the affair. Prizes aggregating more than $450 will be given to winners, and these inducements have interested some of the best known speedsters in the East. Riders in Buffalo, Cortland, Ithaca, Rochester and Williamsport have been invited to participate.

At a recent meeting of the club LeRoy Morris was elected captain, to succeed Waldo Allen, who has taken a position with the Pierce Cycle Company at Buffalo.

TEN CARLOADS OF INDIANS.

TEN carloads of 1912 Indians have so far been received by the Pacific coast branch of the Hendee Manufacturing Company, in San Francisco, and in addition about a carload of machines in single shipments have been received. The branch has so far sold more than 700 Indians and 600 have been delivered. It is stated that if the Hendee company had been able to meet all the demands from its coast branch nearly 900 machines would already have been delivered.

BIRMINGHAM MEET.

AT a race meet held in Birmingham, Ala., on April 19, Leslie Watson won the five-mile event for private owners in 5:55. He mounted an Indian. Joyce, also piloting an Indian, captured the five-mile open race in 4:30, with Mitchell second, the latter riding a Flying Merkel. Joyce also led the field home in the ten-mile open race, with Mitchell again in second place.

PLANNING PARADES.

MUSKEGON, Mich., has some aggressive riders who are making plans to get every motorcyclist in the city to join the club. Arrangements are also being made for parades of motorcyclists through the main streets of the city to advertise the club.

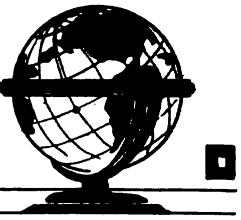
BARRETT AS REFEREE.

F. MADISON BARRETT has been appointed official F. A. M. referee for the Augusta (Ga.) Motorcycle Club's race meet on the Georgia-Carolina Fair Grounds, Memorial Day.

BUSINESS AND PLEASURE.

MORE than 150 new motorcycles have been sold in Racine, Wis., during the last two months, and it is stated that at least 50 of the machines will serve as both business and pleasure vehicles.

Touring



NIAGARA FALLS TO 'FRISCO.

J. W. SOUTHWICK.—From Niagara Falls go to Buffalo, then to Erie (Pa.) via Athol Springs, Evans, Silver Creek, Fredonia, Westfield, Northeast, and Wesleyville. From Erie go to Cleveland (O.) via Girard, Conneaut, Ashtabula, Painesville and Mentor. Go next to Toledo via Elyria, Florence, Norwalk, Bellevue, Clyde, Fremont, Woodville and Stony Ridge. From Toledo go to South Bend (Ind.) via Caraghar, Swanton, Delta, Wauseon, Archbold, Bryan, Butler, Kendallville, Ligonier, Goshen, Osceola and Mishawaka.

From South Bend go next to Chicago via New Carlisle, Rolling Prairie, Michigan City, Chesterton, Hobart, Highland, Hammond and South Chicago. From Chicago go next to Davenport (Iowa) via Geneva, De Kalb, Rochelle, Dixon, Sterling, Galt, Lydon, Erie, Hillsdale, East Moline and Moline. From Davenport go next to Des Moines and Omaha, for which route see the answer to Clifford T. Reeser in April 4 issue, page 41. From Omaha follow Reeser's route to La Junta (Colo.).

At this point you have a choice of routes to San Francisco. You can follow the route through New Mexico, Arizona and California, reaching San Francisco via Los Angeles, etc. This is the route in the answer to Reeser above mentioned. The other route is via Denver, Cheyenne (Wyo.), Rawlins, Granger, Ogden (Utah), Montello (Nev.), Ely, Carson City, Stockton (Cal.) and San Francisco. For maps, etc., write the American Automobile Association, 437 Fifth avenue, New York, N. Y. A Pennsylvania license will be good in Indiana, Illinois, Iowa, Kansas, Michigan, Minnesota, Nebraska, Missouri, Wisconsin and Utah. Local ordinances in Arizona, California, Colorado, Ohio, New Mexico, Ohio (some cities, etc.; rest non-residents exempt). No laws in Nevada concerning motorcycles. By all means fit the tail light you suggest. See the 1912 MOTORCYCLE MANUAL.

UNADILLA (N. Y.) TO SUPERIOR (WIS.).

O. H. CROOKER.—From Unadilla go to Bainbridge, Afton, Ninevah, Harpersville, Belden, Sanataria Springs and Binghamton. From Binghamton go next to Endicott and Appalachin then through Owego, Smithboro, Waverly, Lowman and Wellsburg to Elmira. From Elmira, go on successively through Corning, Painted Post, Addison, Cameron, Canisteo, Hornell, Almond, Alfred Station, Andover, Wellsville, Bolivar, Olean Salamanca, Red House, and Randolph, to Jamestown. From the latter place go on through Greenhurst, Bemus Point, Dewittville, Point Chautauqua, Hartfield, Mayville, Westfield, Northeast (Pa.), and into Erie. From Erie go to Chicago via Cleveland, Toledo and South Bend (Ind.), for directions for which see answer to John Werner (February 22 issue), second paragraph, page 43. From Chicago, go to Garfield Park, Oak Park, Addison, Ontarioville, Elgin, Marengo, Garden Prairie, Belvidere, Cherry Valley, Rockford, Roscoe, Beloit, Janesville, Evansville, Oregon and Madison (Wis.). From Madison, go next to Sauk City, Prairie du Sac, Baraboo, Abbmans, Reedsburg, Lavalle, Wonewoc, Elroy, Kendalls, Ontario, Cashton, Portland, St. Joseph, La Crosse, Onalaska, Holman, Galesville, Frenchville, Ettrick, Whitehall, Brackett and Eau Claire. From Eau Claire go next to Menominee, then to Knapp, Wilson, Baldwin, Hammond, Hudson, Akeland, and St. Paul.

From St. Paul go to White Bear, then to Hugo, Forest Lake, Chisago City, Lindstrom, Sunrise, Harris, Rush City, Rock Creek, Hinckley, Sandstone, Rutledge, Willow River, Sturgeon Lake, Moose Lake, Barnum, Mahtowa, Carleton and Duluth. Cross over to Superior from Duluth.

CHICAGO TO GRAND RAPIDS.

CHICAGO SUBSCRIBER.—Go from Chicago to South Chicago, then to Hammond, Hobart, McCool, Chesterton, Otis Station, Michigan City, Rolling Prairie, Buchanan, St. Joseph, Benton Harbor, Watervliet, to South Haven. From South Haven go next to Saugatuck, then to Holland, Zeeland, Vreeland, Jenison and Grand Rapids. Road conditions: Chicago to Michigan City, gravel and stone roads in good condition; Michigan City to St. Joseph, good in general but some sand stretches reported near Buchanan; St. Joseph to Grand Rapids, fair to poor roads along the lake, but rain St. Joseph to Holland helps improve these poor stretches. Holland to Grand Rapids, good natural roads. Distances: Chicago to Michigan City, 69.3 miles; Michigan City to Buchanan, 43 miles; Buchanan to St. Joseph, 21.8 miles; St. Joseph to Holland, 64.3 miles; Holland to Grand Rapids, 30.8 miles. Total distance, 229.2 miles. Make it three days; first day, Chicago to Michigan City; second day, Michigan City to St. Joseph; third day, St. Joseph to Grand Rapids.

ROUTE TO COLUMBUS.

C. E. PARKER.—The F. A. M. convention date will be announced later; it will be about the 15th of July, 1912. The route mentioned follows the old National Turnpike to Wheeling, W. Va., thence to Zanesville through many toll-gates. From Zanesville Columbus is reached through Reynoldsville 128 miles out from Wheeling. A hilly route throughout, but the roads from Wheeling on are good.

EASTERN PARKWAY TO MERRICK ROAD.

R. H. BUNNEY.—We have no record of any other company than the one mentioned in your letter. The route from Eastern Parkway and Bedford avenue, Brooklyn, to the Merrick Road is as follows: Eastern Parkway out to Bushwick avenue, then along Bushwick by Evergreen cemetery to junction with Highland boulevard. Along the boulevard to Ridge Reservoir, turning off and entering on Jamaica avenue to Shaw Parkway. Turn left on this parkway and continue to junction with Forest Park Turnpike on which run to Hoffman boulevard. At intersection turn right on Hoffman boulevard and continue on to Hillside avenue (Jamaica). Continue on Hillside avenue to Merrick Road.

PORT DEPOSIT TO NASHVILLE.

N. S. McEWEN.—Go down the Susquehanna shore to Perryville, cross to Havre de Grace and continue on through Bel Air and Towson to Baltimore. Go next to Washington via Relay, Laurel and Blagdensburg. From Washington go to Richmond via Alexandria, Fairfax, Centerville, Manassas, Calverton, Remington, Culpeper, Locustdale Orange, Gordonsville, Trevillians, Louisa, Cuckoo, Goodall and Solomons. From Richmond go to Henderson (N. C.), via Manchester, Petersburg, Loco, Jarratt, Emporia, Roanoke Rapids (N. C.), Kings Crossroads, Littleton, Vaughan, Macon and Warrenton. From Henderson go next to Durham via Oxford, Stem, Knapp of Reeds and Bridgetown. From Durham go next to Chapel Hill, Saxapahaw, Graham, Burlington, Gibsonville, Whitsett Crossroads and Greensboro. Greensboro to Charlotte is the next leg of the trip; the route is Jamestown, High Point, Lexington, Spencer, Salisbury, China Grove, Landis, Kanapolis, Concord, Newell and Charlotte. From Charlotte go to Greenville (S. C.) via Sloane's Ferry, Belmont, McAdenville, Lowell, Gastonia, Bessemer City, Grover, Blacksburg (S. C.), Gaffney, Converse, Spartansburg, Duncan and Greer.

From Greenville go next to Atlanta via Oak Grove, Piedmont, Anderson, Fair Play, Lavonia, Bowersville, Canon, Royston, Franklin Springs, Pocataligo, Commerce, Jefferson, Winder, Lawrenceville, Snellville, Stone Mountain, Clarkson, Decatur and Atlanta. Go next to Chattanooga (Tenn.), via Marietta, Kenesaw, Cartersville, Rome, Summerville, Lafayette. From Chattanooga go to Nashville through Rankins Ferry, Jasper, Fackler, Scottsboro, Larksville, Woodville, Gurley, Huntsville, Fayetteville, Shelbyville, Murfreesboro, and finally Nashville. Roads, fair to good for the most part; doubtful on last legs of trip.

"MAC" IS POPULAR.

PRESIDENT R. S. McCONNELL, of the Cleveland (Ohio) M. C., is one of the most active and popular motorcyclists in his district and an official who never tires of boosting. "Mac," as he is known to his friends, is an energetic worker in the interest of the F. A. M., and the Cleveland riders are advancing him for appointment to the office of referee for northern Ohio. McConnell has signified his willingness to accept the position.

AN ordinance recently passed by the City Council in Cleveland, Ohio, prohibits tank and handlebar riding on motorcycles.

RACING MACHINES DUE.

NEW racing machines to be used on the Luna Park Motordrome in Cleveland, Ohio, are due to arrive at the track in a few days, and as soon as possible the riders will be given try-outs. Those who make the best showings will be assigned to the mounts, and it is understood that competition in connection with the trials will be keen. It is announced that an emergency hospital, with two trained nurses in attendance, will be maintained throughout the season at the new motordrome. Every precaution is being taken to guard against accidents, but should any occur the management will be prepared to give prompt attention.

TO ECLIPSE USERS.

WE desire to warn our customers against the use of glycerine, clutch dressing or any so-called "dope" or preparation on our various types of clutches. All that is needed is light oil on the discs and heavy grease on the bearings. The Eclipse clutch being composed entirely of steel plates, is made to slip as much as the rider desires, and because of ample powered springs needs no special compounds for the purpose of securing efficiency of driving.

The Eclipse Machine Co.

LUNA PARK CLUBHOUSE.

A NEW clubhouse, for the use of Cleveland motorcyclists and visiting riders, is being built at Luna Park in connection with the board saucer. The motordrome management is doing everything possible to provide suitable accommodations for the riders and the clubhouse will be carefully fitted throughout.

DURING March, 1912, British motors used 7,352,246 gallons of imported gasoline. Most of it came from this country, and the majority of the remainder from Russia. Figures as to how much was consumed by motorcyclists are unfortunately not obtainable.

ROUTE IS MAPPED FOR 500-MILE RUN

Three-Day Endurance Grind of the Los Angeles Club Will Carry Contestants Over Rough and Sandy Mountain Roads

LOS ANGELES, CAL.—The committee in charge of the seventh annual endurance run of the Los Angeles M. C., made up of Messrs. Holland, Martin and Buford, returned a few days ago from a pathfinding trip over the course to be followed by the endurance riders. They were on the road nearly a week making careful observations and noting every feature which might prove of value to the contestants. The projected route is from Los Angeles to Bakersfield, to San Luis Obispo, to Santa Barbara and return to Los Angeles, and the total distance is 529 miles. About 400 miles of the route is over rough and sandy mountain roads, and the pathfinders do not hesitate to state that the riders who finish with clean scores will have earned their medals. The run is to be a three-day affair, and is scheduled for May 30, 31, and June 1.

The run will be open to all F. A. M. riders, regardless of club affiliations. Every contestant finishing with a perfect score will receive a gold medal; a rider finishing with 500 points to his credit will be awarded a silver medal, and the 250-point men will be given bronze medals. The entrance fee is $10. Among well-known coaster riders who have already entered and who are expected to be well to the fore are J. H. Shafer, Irwin Knappe, James J. Leonett, Arthur Judd, Fred Everett and Lincoln Holland. Immediately after the close of the run a banquet will be served at the clubhouse of the Los Angeles M. C., to which all the contestants and their friends will be invited.

LUBY'S PLEASANT TRIP.

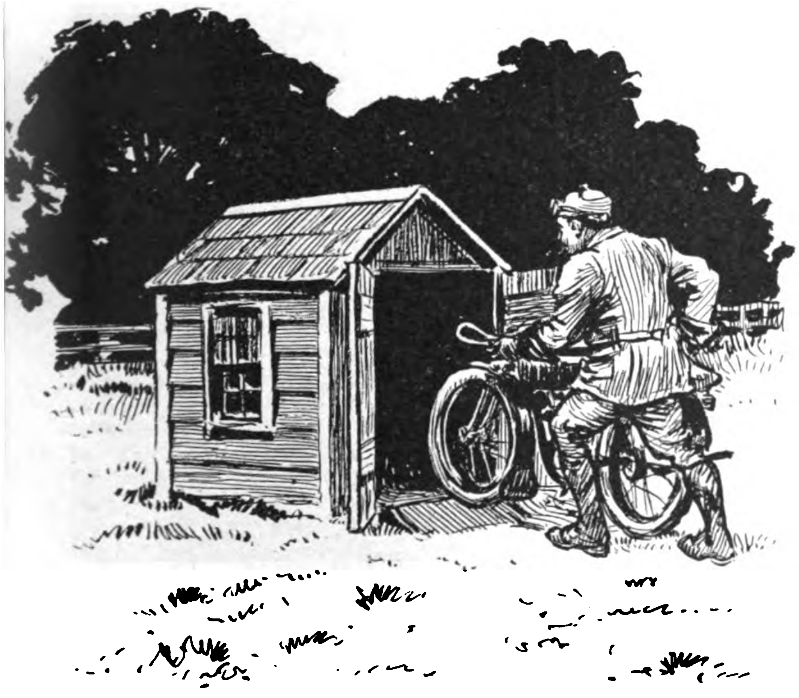
HAVING just completed a 7,000-mile trip on his Harley-Davidson motorcycle, George Luby, of 3336 Eliot street, Denver, declares that he enjoyed this trip better than any other outing he ever had and recommends a cross country motorcycle trip to anyone who is tired of other outdoor sports. As the trip was mostly for pleasure, Mr. Luby took plenty of time to see the country. He left Denver on July 15, and reached Boston a month later, covering on an average two hundred miles a day, with nine or ten hours' riding.

After a tour of the New England States, Mr. Luby returned to Chicago, but was compelled to take a Southern route home on account of the heavy rains, and he headed for Baton Rouge, where he remained until March 15, when he started his homeward journey. In making this trip Mr. Luby visited eighteen States, and the whole trip was made without an accident and with an expense account that averaged $1.25 a day.

PLAN GREAT TRIP.

FEW riders in the country have shown the enthusiasm of three Detroit, Mich., motorcyclists and their wives who are planning a transcontinental journey to last until 1914. The riders will start on the trip in June and their first objective points will be San Francisco and other Pacific Coast cities. Those who will form the party are Mr. and Mrs. Albert Wellman, Mr. and Mrs. Reuban Winslow and Mr. and Mrs. John Schnall.

JACKSONVILLE (Fla.) riders are planning for holding the Jacksonville-St. Augustine races, which they hope to pull off in a week or so. Considerable rivalry exists among the riders of various makes over the winning of this contest.



I.—"Nothing like having one's own little garage. So handy, no expense, etc."

II.—"This is a snap; a cosy little home and a gas wagon in the bargain."

Manufacturers

MORE ROOM FOR THORS.

So rapidly have orders piled up of late at the plant of the Aurora Automatic Machinery Company, particularly for the new twins and 5 h. machines, that the company's big staff is working on a special schedule. Still it has been found impossible to meet all the demands made upon the factory within the the last sixty days. From now on, however, there will be little or no delay in quantity shipments, as the company's excellent factory organization has allowed it to put on the extra speed required to catch up with developments. A new building is now in course of erection which will give an additional floor space of 18,750 square feet. It will be devoted exclusively to the manufacture of Thor motorcycles. Throughout the departments of the present plant no expense is being spared to facilitate the production of machines so that shipments to dealers need not be unreasonably delayed, and the Thor builders report that the general outlook for new business as well as the handling of present orders could hardly be improved upon.

THE BELT-DRIVEN EAGLE.

Although correctly described in our issue of April 18, an error was made in labeling an illustration of the new twin Eagle, with 9 h. Spacke motor. This model is belt, not chain driven, being fitted with a Spartan V belt, 1½ inches in width. Among the features other than those mentioned in our April 18 issue are its automatic spring stand, tire equipment of 28 x 2½ and 28 x 2¾ inches on the front and rear wheels respectively, a direct muffler cut-out, wheelbase of 58½ inches, and a handsome finish of gray enamel, with black stripes and panels. The new model is listed at $275.

MEETING RUSH ORDERS.

Finding it impossible to meet all the demands made upon its factory, the Carbo-Light Company, of Anderson, Ind., manufacturers of Carbo-Light tanks, has just closed a contract with the Shenango Manufacturing Co., of Pittsburgh, Pa., for 60,000 finished Carbo-Light tanks. The Carbo-Light officials were prepared to make an extensive addition to their plant recently but it was decided that this could not be completed in time to tide the company over the present rush of orders and as a result the big order was placed with the Shenango company which is well fitted to deliver the tanks without delay.

TO MAKE TIRES.

E. T. Rugg & Co., manufacturers, of Newark, O., have organized a new corporation for the purpose of manufacturing motorcycle and automobile tires. The concern will be known as the Newark Auto Tire Company, and E. T. Rugg will be the president. The concern will open a plant in Newark.

ON THE GOODYEAR STAFF.

The following salesmen were appointed recently by the Goodyear Tire and Rubber Company, of Akron, O.: George Bullock and W. E. Parsons, at the San Francisco branch; G. R. Kreps, motor-truck tire salesman in Philadelphia; M. J. Dobler, city salesman in New York City; Woodson Reese, to cover northern Missouri, out of the Kansas City branch; H. B. Annable, at the Spokane branch, and H. C. Falkell, at the Cincinnati branch. G. G. Woodward, formerly motor truck tire salesman at New Orleans, now holds the same position at Memphis, Tenn.

The following additions were made to the staff during March: F. B. Sullivan and Myron T. Sparks, motor-truck tire salesmen, Boston, Mass.; Frank R. Isaac, motor-truck tire salesman, Philadelphia, Pa.; E. C. Heid, Baltimore; Robert E. Campbell, St. Louis; E. F. Crawley, Jacksonville; J. B. Linerd, city salesman, New York. V. D. Lersch, formerly at Cleveland, is now a salesman at Buffalo. J. H. Whetstone has been transferred from Buffalo to the Detroit branch, and Glen Schrader, formerly of Indianapolis, is now at the Dayton branch. J. J. Kendall is now at the Charlotte branch, and H. Q. Tennant, formerly special sundries salesman at Atlanta, has been made inspector in the company's adjusting department. W. E. Dermody is city salesman at New Orleans, and G. T. Hancock has been appointed local branch manager of the recently opened Newark branch in New Jersey. C. E. DeVore and Carl Davidson are missionary salesmen at Cleveland, and W. M. Boggs has been appointed city salesman at Philadelphia. P. G. Smith, formerly assistant to C. W. Martin, Jr., at Atlanta, Ga., has been transferred to the Akron office to assist Mr. Martin in his new duties as manager of the motor-truck tire department.

JOINS PIERCE SALES STAFF.

W. B. Allen, widely known as a motorcyclist throughout New York State, has just identified himself with the Pierce Cycle Company, of Buffalo, as a salesman. He will cover New York State and New England, and will use a Pierce single on his travels. Mr. Allen has established a reputation as an endurance rider, and was formerly captain of the Elmira M. C.

NEW ADVERTISING IDEA.

F. W. Buchanan, of 229 Bedford street, Johnstown, Pa., agent for the Flying Merkel machines in Cambria and Sumerset counties, has adopted a novel method of calling attention to his store and the Merkel products. This enterprising dealer has made arrangements with a local photographer whereby the holder of one of Buchanan's business cards is enabled to have his photograph taken free of charge. The system is proving entirely successful as an advertising experiment.

NEW ENGLAND DISTRIBUTOR.

Announcement is made that Stanley T. Kellogg, of Bridgeport, Conn. one of the best known and most popular workers for the development of the motorcycle field in the Eastern States, will hereafter be New England distributor for Minneapolis machines, produced by the Minneapolis Motorcycle Company. There is already a steadily growing demand for the Minneapolis products in this territory, and that it will be rapidly developed with Kellogg on the firing line goes without saying.

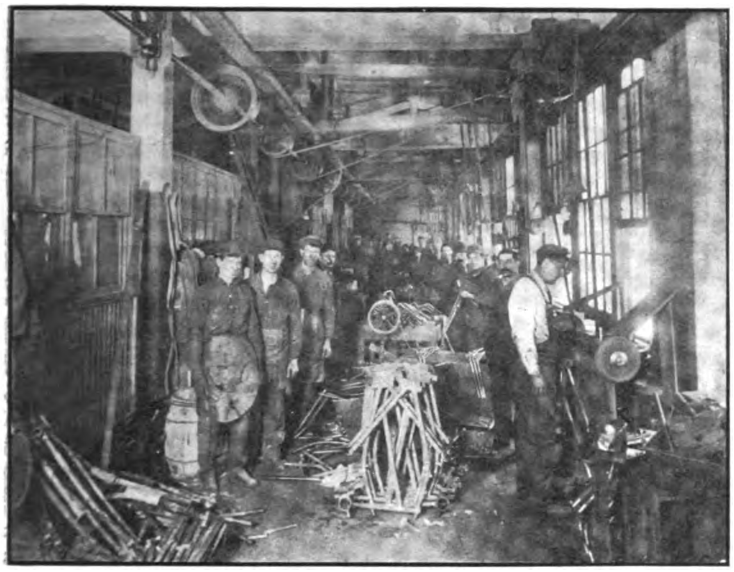
The Minneapolis company is finding a remarkable demand for its fore-car delivery van, with two speeds, and orders for the new 9 h. twin, recently placed on the market, are running far beyond expectations. Despite the heavy pressure to which the factory has been subjected of late, immediate shipments are being made of all models, including the van and big twin types.

Jack Prince is said to have a "friend" in Ray Peck, a San Bernardino rider, who will soon come East to try his skill on the Chicago track.

PROMOTING MERKEL SALES.

Frank Libbey Valiant, Now Advertising Manager of the Miami Cycle & Mfg. Company.

MAKING GOOD HEADWAY ON EXCELSIORS NOW



Buffing and Polishing Room.

Nickel Plating and Brazing Department.

SALES MANAGER KIRK, of the Excelsior Motor, Manufacturing & Supply Co., reports that his company is finding the demand for its machines 200 per cent. greater than ever before, despite the fact that it has been hampered so far with its shipments. Between seven and eight hundred machines have been delivered, but Mr. Kirk admits that this output is but a drop in the bucket, as it has not furnished demonstrating machines to more than one-third of the Excelsior agents. The Excelsior factory has been turning out machines at the rate of thirty a day for some time past and it is expected that an output of 75 machines daily will be possible in a week or two. The new company has added considerably to the Excelsior plant, having installed a complete enamel and nickel-plating department, as well as a buffing room.

"We are now in better condition to handle our trade than ever before," says Sales Manage Kirk. "Much of the delay in making our shipments has been occasioned by the slowness of manufacturers in forwarding accessories, but this difficulty has now been overcome. We have nearly 800 men at work in our factory and with the new departments in full swing we are making excellent headway."

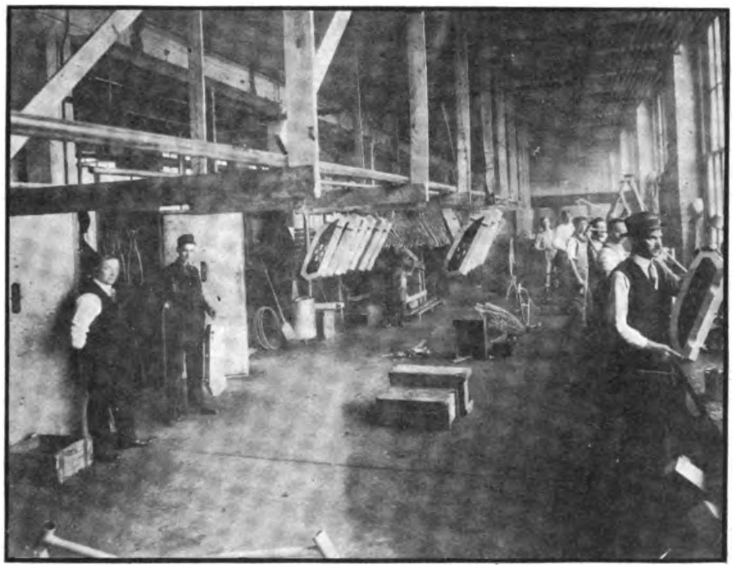
Referring to the trend of the demand for 1912 machines Mr. Kirk stated that his company is selling four twins to every single.

CHANGE MEETING DATES.

THE Atchison (Kan.) Motorcycle Club announces that hereafter its meetings will be held on the first and third Tuesdays of each month, instead of on Thursdays, as in the past.

CLIMBED STIFF GRADE.

C. R. SHORT, on a Reading-Standard, negotiated Topango Canyon grade, near Los Angeles, on April 20. He forded eight streams to get there and made the 840-foot rise without stopping.



Newly-Installed Enamelling Department.

MINNEAPOLIS DISTRIBUTORS.

MILLER BROTHERS' Auto and Supply House, 1315-17 14th street, N. W., Washington, D. C., is now represented by a branch establishment in New York avenue, one of the finest exclusive motorcycle stores in the capital city. The Miller firm is distributing Minneapolis machines for the District of Columbia, Virginia, Maryland and a southeastern tier of cities in West Virginia. An unusual demand is being felt for the Minneapolis delivery van model, and the company has one man who devotes all his time to the handling of sales in this department. Another salesman is traveling throughout the district taking care of a large country trade.

NEW FIRM INCORPORATES.

THE State Auto Sales Co., of Cleveland, O., has been incorporated with a capital stock of $10,000 to deal in motorcycles and supplies, in addition to motor cars. The incorporators are Mark B. Mead, George F. Hammond, N. G. Fligle, B. S. Benjamin and R. M. Dorrance.

NEW SALES POLICY.

IT is announced that arrangements which have existed between the Billings & Spencer Company, of Hartford, Conn., and the Claire L. Barnes Company, of Chicago, Ill., have been discontinued by mutual consent. In the future the Billings & Spencer Company will market its products of forgings and tools direct, which will greatly facilitate their dealings with the trade.

During the past two years the Billings & Spencer Company has more than doubled its manufacturing capacity, and the new plant at Dividend, Conn., which is devoted exclusively to the manufacturing of heavy forgings, is now in full operation. As a result, the company is now in a position to give unusually prompt attention to deliveries. Lively business is reported.

AN ACCESSORY CATALOG.

VALUABLE suggestions for the fitting and use of accessories and special attachments are to found in a neat little booklet just published for free distribution by the Harley-Davidson Motor Company, of Milwaukee. It will be sent upon request. The adoption of the motorcycle for many commercial purposes has created special needs for accessories. As far as possible these needs are being met by the manufacturers of accessories, and the Harley-Davidson company has brought together the various fittings that have been found meritorious and described them all under one cover. The booklet is well illustrated.

SCHICKEL IN EVANSVILLE.

LOUIS SCHOENE, 1023 Main street, Evansville, Ind., has taken the agency for the Schickel motorcycle, and is attracting no end of attention with his demonstrator.

OMAHA and Council Bluffs motorcyclists and bicyclists are laying plans for a speedway to Lake Manawa from the latter city.

Exterior and Interior Views of New Temporary Tinning Department of the Harley-Davidson Motor Company.

IN order to accommodate $40,000 worth of new machinery and to permit of numerous changes calculated to facilitate the production of its machines, the Harley-Davidson Motor Company has moved its entire tinning department to a site some distance from the plant, and the work of getting the new department into operation is being prosecuted with typical Harley-Davidson celerity.

GRADE PERCENTAGE.

EDITOR MOTORCYCLE ILLUSTRATED: I wish to draw attention to a mistake made in the number of March 7, page 40, where reference is made to "the steep banking of the track, 50 degrees, which would figure out over 100 per cent. as a grade," etc. To be precise, an incline of 50 degrees figures out as a grade of 76.6 per cent. Example: A roadway rises 75 feet in a distance of 700 feet, what is the grade percentage? Here is the answer: $\frac{75 \times 100}{700} = 10.7$ per cent. of grade.

A READER.

W. B. Allen, New Pierce Salesman.

CARR SEEKS A PARTNER.

HOMER S. CARR, of Wilmington, Del., plans to make a Western trip by motorcycle, starting about May 15, and is desirous of hearing from another rider who contemplates such a tour at that time. Communications may be addressed to him at 509 New Castle avenue, Wilmington.

HARLEY IN ALBANY.

THE Albany Motorcycle Company, H. L. Bagg and Ira Malcolm proprietors, has taken the agency for Harley-Davidson machines in Albany, N. Y., where the firm conducts an up-to-date motorcycle establishment at Robin and Sherman streets.

THE Minneapolis *Journal* has purchased another Minneapolis motorcycle to be used in the news despatching department.

NEW VALVE SYSTEM

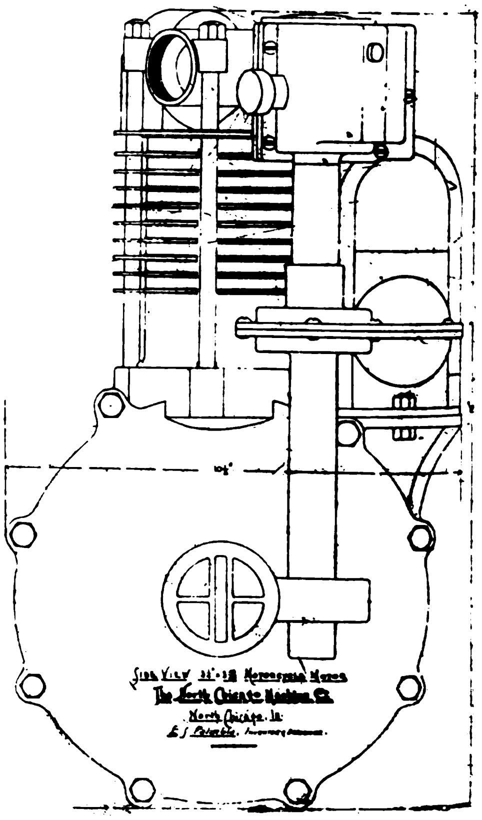
Phantom Motor Shows Novel Features Calculated to Give Increased Horsepower and Silence.

THROUGH improvements in design of the Phantom motor, manufactured by the North Chicago Machine Company, of North Chicago, Ill., it is claimed that an approximate increase of 20 per cent. in horsepower is obtained, and this, combined with the unusually quiet operation of the engine, is rapidly winning a place for it in the esteem of gas engine users. The new valve arrangement shown in the Phantom motor is a combination of poppet valve and sleeve valve. This principle is not an untried mechanical feature, but has been used with success in large stationary gas engines for years. The Phantom improvement, for which the company has patents pending, consists in operating these valves by cranks instead of cams, a method which is more positive for high speed work. The sleeve valve which performs the functions of closing the exhaust and opening the intake passage is never subjected to the high pressure and temperature of the compression and explosion of the gases. The one poppet valve closes both the exhaust and intake passages, so there are no moving valves under pressure as is the case with sleeve or piston valve motors.

With all high-speed air-cooled motors difficulty is experienced in keeping the exhaust valve cool. The high temperature causes preignition, and necessitates a lower compression with resultant loss of power. By the Phantom valve arrangement, the incoming cool gases fully envelop the one poppet valve, thus equalizing the high temperature caused by the outgoing exhaust gases and at the same time keep the valve from pitting and becoming leaky. The opening and closing of the poppet valve by a crank is so uniform and smooth a motion that there is little or no pounding on the valve seat. This eliminates the noise and also prevents leaky valves.

The vertical shaft at the side of motor which operates the valve mechanism is connected to the crankshaft by a 2 to 1 spiral gear and a 1 to 1 set of spiral gears drive the magneto from the same shaft. This shaft and gear runs in oil, so it is absolutely noiseless. This method places the magneto in perfect alignment with the motor which insures positive ignition. The crankcase has ball bearings and the connecting rods have roller bearings. The piston has three rings. All parts are interchangeable. Every moving part is enclosed in an oil tight compartment and running in oil, thus guaranteeing long life to the motor. The magneto is placed back of the cylinder. The Bosch magneto will be used unless otherwise ordered.

The oiling is by a circulating system. The oil is carried to the valve mechanism box at the top of vertical shaft, the valve mechanism running in oil. The oil follows the inclosed vertical shaft down to the spiral gears of the magneto and crankshaft, oiling them. Then it runs into the ball-bearings in the crankcase and the roller bearings of the connecting rod, after which it drops to bottom of the crankcase. From here it is forced again up to the valve mechanism box to repeat the downward circulation.



LOS ANGELES RIDERS VIEWED AT CLOSE RANGE

Observant Visitor Finds Them Keen Sportsmen, Quick to Extend the Hand of Fellowship and Loaded to Capacity with the Joy of Living—An Afternoon of Record-Crimping at the Playa del Rey Saucer.

BY L. J. BERGER

LOS ANGELES, CAL., April 20.—Things look so different when you examine them at close range. Yesterday I climbed onto the tandem seat of a 6 Merkel twin, behind Charles Fuller Gates, the F. A. M. referee, and was whisked about 17 miles to the motordrome at Playa del Rey, which is next door, so to speak, to Venice, the Coney Island of this section. I saw Graves, Balke and Don Johns break a bunch of world's records on Excelsiors, crouched fearsomely with some others out of range of the aforesaid referee while some engines were being measured, listened to some of Paul Derkum's railroad stories and generally had such a fine time that I felt it would be unjust to these good fellows out here not to write a few words about them.

I did hear one young racing man, who was "born with a brick in his hand," and who will do things later if he can control himself, swear under his breath against Gates because Gates would not let him and the others get in the way while the engines were being measured; but the fact is, Gates handled that record-breaking stunt yesterday as well as I could expect any man to handle it. Gates came here about 16 years ago to die. He has gained two inches in height, weighs something less than a ton, thinks and talks under high compression, and expects to have more or less trouble with other people as long as he lives. Yet he has no enduring vindictiveness, as is proven by the excellent brand of friendship he has shown for the man in the hospital—De Rosier; and his predecessor here as referee said yesterday that Gates is undoubtedly the best man in this section to manage a race meet. The job requires some of the qualities of a policeman, and Gates has these.

The reason the one-mile record did not go yesterday was because a semi-gale of wind blew in from the sea, only a couple of miles away. To the east, beyond a range of mountains, lies the Mojave desert. Except for the mountain range there is a valley or draught-flue from the sea to the desert. The hot air, rising from the alkali barrens, creates a semi-vacuum, into which the air from the sea blows almost constantly and everything in its way, including Playa del Rey motordrome and the city of Los Angeles beyond, comes in for a more or less vigorous blowing up when the wind is really active. That was the case yesterday. Faces were burned and cut by the wind and sand. But the fish dinner at Venice tasted good, and the chance to get acquainted with what may be called the real westernism of these Los Angeles motorcyclists was more than a compensation for minor weather discomforts.

Side by side they sat at the track, full of joke and ginger when not busy with the stop-watches. Cal Blaylock, the stockily built president of the L. A. M. C., sat alongside President Younger of the rival club—a tall Kentucky mountaineer, who wears a black slouch hat and makes you think of Abraham Lincoln. Derkum, a keen, grinny, humorous chap who once crawled out of a locomotive cab to avoid being killed and explained to the superintendent afterward that he did it so as to get a better view of the wreck, and A. H. McCulloh, formerly referee, a Canadian who went through the Boer war and has medals to prove it, also were there.

Los Angeles motorcycledom is not made up of "native sons." They come from all parts of the world; but the bright, clear air and the general natural conditions make them all one in certain characteristics, and one cannot help liking them and feeling that it is too bad that the outside world has the impression that ill nature and squabbling prevail in this beautiful place, from which one may look at any time to magnificent hills and feel that whatever happens life is worth living.

After the record work we called on Jake De Rosier at the hospital. His bed is elevated at the foot and a weight totaling 26 pounds, made up of those iron pieces that are used to help in raising and lowering windows, hung from the foot, being attached to the broken leg to keep it from becoming too short. Mrs. Jack Prince and Mrs. De Rosier—the latter a girl of 17, the former the very capable helpmeet of the world's greatest track builder—came in during the call. De Rosier says this is the hardest hospital experience he has ever had. It is the tenth time he has had bones broken, and he has suffered like a martyr. Why he continues to race is one of the mysteries.

They have all qualities of roads here, as elsewhere; but the general riding conditions are much easier than the average, and whether the surface be gravel, natural clay, oiled or asphalted, it is generally dry and therefore rideable; and the legal speed limit throughout the State is 20 m. p. h. Add to that the usual percentage which is tacked on everywhere and you may reckon that riders here are in the habit of "traveling some." President Younger of the new club remarked casually yesterday that in 23 months he has ridden something more than 30,000 miles.

Motorcycles are not as plentiful on the streets as one would expect, in view of the figures and the big sales, but they are here just the same. So are bicycles, in large numbers. On the bicycles the handlebars, shaped like the horns of a Texas steer, are the most noticeable feature. Commercial riders use all sorts of carrying devices, some sticking their heads between heavy packs of newspapers or other freight, hung on their chests and backs. In most cases the riders own the machines and are newspaper distributors, etc., on their own account. One little merchant of this kind could not have been more than 12 years old. He was perambulating proudly on a new Harley-Davidson single.

A general tip: Don't come to California unless you are sure of a job or a living; but whether you come provided with this assurance or not, the climate of this section, at least, makes the blues almost impossible. The air is brilliant. The faces show the uplift of superior climatic conditions. You can find dust and wind and sharpness here, but after all's said the State is royal and is well named "California."

On the day following the Playa del Rey trials came one of those delightfully sudden changes in the weather to which this wonderful country seems subject. Yesterday a sharp wind blew stiffly up the flat valley from the sea; today (Sunday) balmy breezes are being wafted in and hundreds of tandemites are motorcycling over the level roads to Venice, where thousands of good-natured folk in bathing suits are basking on the sunlit sand. With such coquettishness does the southern California climate woo the motorcyclist.

Charlie Balke has started for the Excelsior factory in Chicago, and does not expect to return to Los Angeles until late in the year. By the way, some of the "Fearless" one's friends believe his recent sensational work has got on his nerves a bit. They have found no hint of yellow in him, even under the most trying circumstances, but it cannot be denied that he shows signs of wear. A rest should help him. As for Graves—folks out here say he has no nerves. Few riders are so lucky.

Going out to Venice I noticed a motorcycle shop near the suburbs that should be photographed and exploited for the benefit of some Eastern dealers who need to learn the sales value of an attractive storefront. The establishment is that of the California Motorcycle Company, with the M. M. and two-cycle Schickel in its big show windows. The architecture of the front, the color scheme and the window display make an artistic ensemble calculated to impress any prospective buyer.

Speaking of Gates again—and most folks in racing circles are these days—let it be known that Charles Fuller was a pioneer worker in the interests of motoring here. He put San Diego, 130 miles to the south, on the automobile map, and his road signs designed to give warning of the bad curves, hills, etc., are still in use. He also produced most of the earlier maps of southern California and some other sections of the State, which has a coast line 700 miles long, as far as from New York City to Savannah, Ga.

If workers in Los Angeles who own motorcycles desired to make the most of a really big recreation opportunity hundreds of them would rent the little furnished beach "apartments" which are beginning to appear in clusters of seven at Santa Monica, near Venice, and ride the seventeen miles to the city every day for business. These dwellings, habitable the year round, are within 100 feet of a dip in the briny, and are fitted with "disappearing" beds, linen and table ware. Electric light and running water, for cooking and shower bath, are included in the present rental of $10.50 per month. Gas for cooking comes extra. All provisions are brought to the door. Not the least important feature of such an arrangement would be the ride to the city, up the flowered valley with hills to the south and majestic mountains to the north and east.

Having rhapsodized sufficiently, now let us have a word of business. Right here in Los Angeles where even the little newsboy-merchant understands the economy and business-building value of the motorcycle, there are still chances to multiply the sales of machines several times. Advertising will do it.

SOLUTION OF THE SKIDDING PROBLEM

Massachusetts Rider Avoids Falls by Fitting Anti-Slip Tire on Front Wheel and Allowing Rear Wheel to Take Care of Itself—His Interesting Theory.

ONE of the most interesting points that has been raised in many a day in connection with the ever-vital tire problem is taken up by C. A. Shaw, a motorcyclist of Groton, Mass., who advances the rather startling theory that studded and other forms of non-skid treads are much more necessary on the front tire than on the rear. He claims to have eliminated falls from skidding almost entirely by working on this principle, and his arguments, while upsetting most of the accepted tire ideas, at least have the weight of his personal experience behind them. Mr. Shaw treats the question as follows:

When I read Volney Davis' account of his cross-country ride nothing struck me more forcibly than the nonchalant way in which he mentioned his falls—all save the one which left him unconscious for two hours. Then, too, I frequently read in the columns of the trade papers of club runs and find it casually mentioned that "Rider So-and-So" took several spills. One gets the impression from these stories that the rider, realizing the treachery of a deep rut or a big stone, stepped lightly from his machine for a moment and then with a hop-skip-and-a-jump landed back in the saddle and proceeded joyously on his way. How far will this idea "hold water?" Not far.

What It Means to Fall.

Now, the fact of the matter, as every experienced rider knows very well, is that a spill from a motorcycle is likely to prove mighty uncomfortable for both rider and machine. In the last three years I have taken five spills. One which occurred in soft mud did no damage, and another seriously crimped my personal pride, because it took place in full sight of two parties of grinning automobilists. The three other spills were more dangerous. In one of them I damaged my carbureter, broke a pedal and ruined a pair of gloves, and in each of the others I broke a pedal and lost sections of my hide.

"Shucks!" you say, "what's he cussing about?" Well, say what you will those falls were not pleasant, and the possibility of repeating them helped to mar later trips for me. Also they were very ignominious, and they tended to lower the motorcycle in the estimation of otherwise sympathetic bystanders. They set me to figuring.

Working Out a Theory.

Last fall I did a good deal of thinking on the subject of avoiding spills and recalled all the details attending the falls I have referred to. It struck me that each one was due, not to the rear wheel skidding, but to the fact that the front wheel had not properly held the road. Then I reverted to my experience as a bicycle rider. When a bicyclist strikes a slippery car track, for instance, he is safe if his front wheel passes over safely. The rear wheel takes care of itself in nine cases out of ten. Have you even seen two boys on bicycles, one chasing the other? The pursuer catches up and perhaps allows his front wheel barely to touch the rear tire of the machine in front. Like a flash he goes down, while the front machine has not even felt the contact.

Pondering on these conditions convinced me that the solution of the anti-skid problem lay in keeping the front wheel in its proper position on the road. Finally I proved this to my satisfaction on a muddy day last fall, when I started out with a smooth, well-worn front tire. At every puddle I could feel the machine skid and it was necessary to jockey along very carefully. Then I stopped and fitted to my front tire a set of steel-studded anti-skid bands which I had originally intended for service on the rear tire. The difference in riding was simply amazing. The tendency to slip and skid was gone and I could sit back and enjoy the outing.

Further Experiments.

This set me on the right track and early this spring I bought a casing with the most prominent anti-skid projections I could find and placed it on the forward wheel. The rear wheel carried a tire with corrugated tread which, however, was well worn. I know this was a rather startling act of heresy, for we have all been brought up to believe that as the wear is heavier on the rear tire it should have the better tire. Well, that article of faith no longer has a place in my creed.

With the tires described I started out over muddy country roads and found that the front tire held to the road like a leech. The rear wheel occasionally had a few fancy steps all to itself, but it has since been quite unable to shake the equilibrium of the outfit and always comes into line with its better-behaved brother. The plain facts in a matter of this kind are satisfying enough, but it is also pleasant to sit down and consider the reasons on which one's faith is founded. There are two prime points that require consideration on a motorcycle in connection with skidding: The distribution of weight and the action of the spring fork.

Influence of the Fork.

Fully two-thirds of the weight of the machine and rider rests on the rear wheel, as we all know, and this again brings up the question of holding the front wheel to its position. This wheel has but little weight to carry and consequently it is likely to bob about and be thrown from its course by comparatively slight obstacles. Weight would push it through the soft mud or sand and allow it to take a grip on the road, and lack of this weight gives it a tendency to "float." As soon as there is a deviation from a straight course the front wheel, having nothing to "bite," begins to cause trouble.

The action of the front fork aggravates this. An obstruction which causes the wheel to rise compresses the springs, but this compression must be released immediately and the springs push the front wheel down against the road. As a result the pressure is constantly varying, and there is a sort of bobbing effect. If the front wheel is turned even slightly in mud at a time when the pressure against the road is at its minimum a fall is imminent. And these falls due to front wheel skidding are mighty sudden things. The rider doesn't have time for any C. Q. D. or S. O. S. distress signals. There is simply a jerk and the next instant he is groveling in the mud and trying to stop the racing engine.

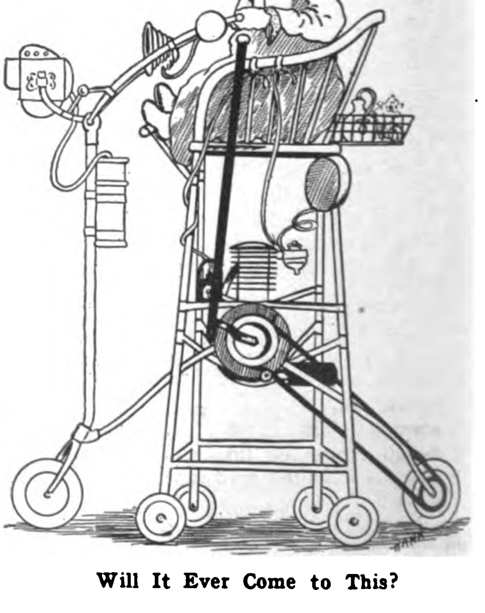
Tests Tell the Story.

After all, there is nothing like a practical test to convince a rider that he has been working on false premises. Just let him give more attention to his front tire and allow the rear tire to take care of itself, to a great extent at least, and he will find it easy to avoid many of the spills to which he is now subjected. I know for I have been through the mill. In my opinion, it is all-important to have studs or projections on the front tire which are long enough to grip the roadbed, even though the weight upon it may be comparatively light.

For the coming summer I am going to try a front tire with steel studs, and I expect to find this an arrangement par excellence. It will not be the best possible equipment for riding over car tracks and in paved city streets, but in the open country I believe it will work wonders. And it is in the country that ninety-nine per cent. of our brothers of the single-tracker do their riding.

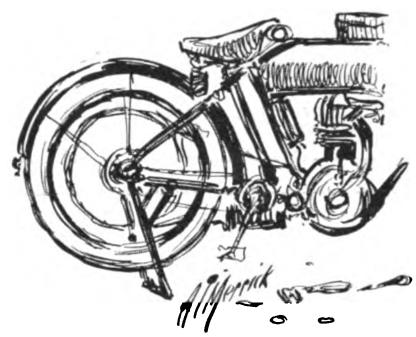
IN POLITICS AT LAST.

CANDIDATES for county offices in Milwaukee, Wis., expect to use the two-wheeler to cover the county and visit the farmers before election day.



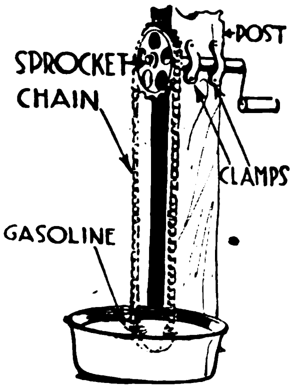
Will It Ever Come to This?

Going to "Start Something."



SCIENTIFIC CHAIN CLEANING.

REALIZING that many riders of chain-driven motorcycles dread the ordeal of giving their transmission agent a thorough cleaning, P. H. Brehmer, of Zanesville, Ohio, has submitted a description of a simple mechanical device by which a chain may be cleaned thoroughly and with minimum difficulty. He argues that the natural method to be followed in removing foreign matter from a chain should involve action of all the parts so that dust and grit may be worked out, and to this end he turns the chain over a sprocket or similar bearing in such a way that its lower loop dips into a pan of gasoline. Practically the same result might be obtained by passing the chain through the hands, with the lower loop submerged in gasoline, but at the cost of much time and unpleasant labor. The device suggested by Brehmer will entail little or no outlay and it may be used indefinitely.



He suggests that the rider obtain a small sprocket—preferably of the 10-tooth size—and mount it on the end of an axle. For the latter a short piece of broom handle will serve. On the opposite end of the axle is to be fitted a crank so that the sprocket may be turned handily. The axle is then strapped loosely to any upright surface which will permit of the crank being turned. Brehmer has fastened his chain-cleaner to the leg of a work-bench and finds that it works well in that position. The device must be mounted far enough from the floor so that when a chain in placed on the sprocket its lower loop, as referred to above, will just dip into the pan of gasoline placed beneath it. Then turn the crank and the cleaning process is under way.

As the chain passes over the sprocket the action of the gasoline-covered rollers will work the dust and grit out, and the sharp turn at the bottom loop will effectually clean the rivets and joints. As the chain works up over the sprocket the gasoline will run down carrying with it the foreign matter. This washing operation is carried still further as the chain passes through the basin of gasoline. Brehmer argues that this system is far superior to brushing a chain, as the brush does not reach all the wearing surfaces and tends to force the dirt between the parts instead of bringing it out. If a regulation sprocket is not easily obtainable a satisfactory substitute may be fashioned. Good results will be obtained through merely using the axle referred to—minus the sprocket—and working the chain over it and through the gasoline basin while a small brush is held against the chain on the "up" side to give the rollers the turning motion they would naturally receive from a sprocket.

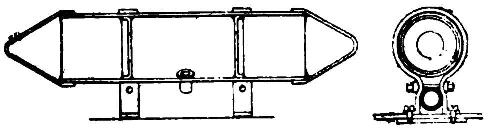
When the chain is entirely clean, usually after about five minutes of the gasoline process, it should be hung up to dry. It should next be placed in a pan and covered with a good medium cylinder oil which must be heated until it is lukewarm. This thoroughly lubricates all the parts and the chain is then ready to be wiped dry and placed back on the machine. Brehmer states that he has ridden chain-driven machines for the last four years and that he gets 3,500 to 6,000 miles of service from a short chain by cleaning it in the manner described after 500 to 800 miles of travel. He reports that he has never been troubled with a broken chain.

SHORE SPEEDERS, BEWARE!

STEPS have been taken by the Board of Freeholders of Middletown Township, N. J., to appoint a motorcycle policeman, whose duty it will be to patrol the county roads and keep an eye on automobilists who speed to the shore resorts.

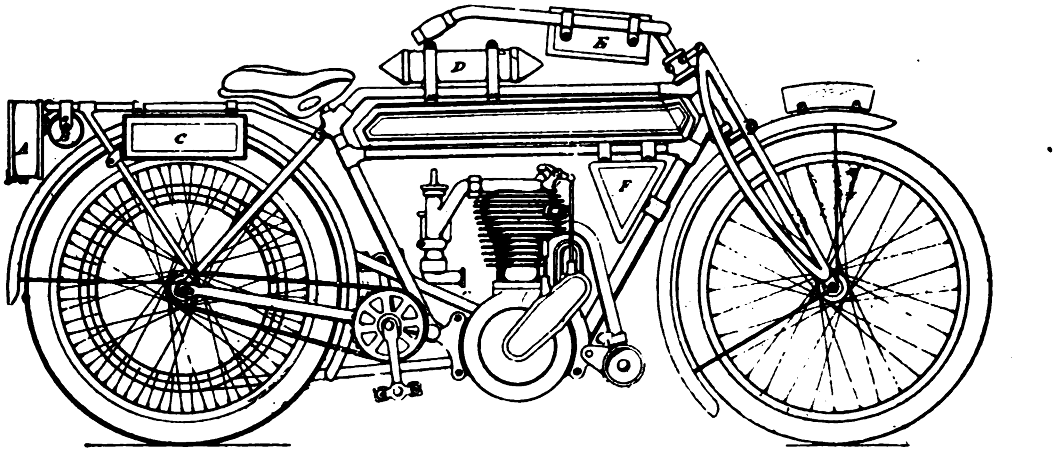
FROM ENGLAND.

CARRYING tools, spare parts, carbide and other necessaries for touring has generally resulted in rather inconveniently concentrating the various "extras" in one or two portions of the machine. If these are fitted in bags or a box on the luggage carrier, mounting and dismounting are interfered with. F. Hall Bramley in the *Cycle and Motor Trader,* of London, suggests a most convenient method of carrying these extras, with excellent utilization of space. In the illustration herewith, the rear box A is cylindrical, and is divided by a small hollow internal cylinder, and resembles a large collar box. The lid is at the rear. Belts are carried inside the internal cylinder and tubes outside, within the outer box. B is a metal box for carrying a spare can of carbide; it has a spring in the cover to prevent the can from rattling. C is a pannier bag fitted with drawers for tools, spare spark plugs, etc. There is one on each side of the luggage carrier. D is a cone-ended metal tank for extra gasoline, and there is a connection for a length of gasoline tubing at the bottom to lead it to the main tank. This can be used for oil, if desired. E is a carrier box fastened inside the angle between the handlebars, for carrying tools, etc., most likely to be wanted. F is a metal case held between the brace tube and front down tube, and may be used for carrying the oil can, kerosene can, etc. No doubt certain articles of clothing could be carried in the handle-bar box E.



APPOINTING SUB-AGENTS.

KUMLER BROS., Flanders and Reading-Standard agents in Cleveland, Ohio, have placed a sub-agency with the Woodland Avenue Cycle Co., Woodland avenue and East 27th street.



QUESTIONS & ANSWERS

MUFFLER CAPACITY.

C. S. LUTZ.—A muffler should have a capacity of from three to ten times the volume of the cylinder for a single cylinder, and 50 per cent. more for a twin, that is, for a 2 31/32 by 3¼ inch single cylinder motor, the volume of the muffler should be from 42 to 140 cubic inches capacity, and for a twin 63 to 200 cubic inches capacity. Make the muffler, 3 inches diameter by 6¾ inches length, with two partitions equidistantly within. These partitions, to be made of steel plate, about 16 gauge, drilled as follows: First plate, 16 to 20 holes about ⅜ inches diameter; second plate same number of holes of ¼ or 5/16 inches diameter. Place plates in position so that holes on first plate are opposite spaces between holes on second plate. Rear plate, 1¼ inch outlet fitted with short pipe or hollow lug, whose rear end is flattened to hasten the exit of the gases. This may seem a large muffler for your motor, but it will undoubtedly have a minimum of back pressure and noise. Slight modifications of the number of holes may be necessary; these you will have to determine for yourself should occasion arise.

CHANGED CAM PROFILE.

FRANK JOHNSEN.—By changing the shape of the exhaust cam, you affected the speed of the motor so that it will not take more than half-open throttle without choking. The change from the mechanical to the automatic inlet valve might also have an effect on the speed, depending on the strength of the valve-spring. It is very rarely that the make of motor you mention works as poorly as you state. The normal speed of the motor in question is well up to 2,100 r. p. m., with considerable range above that speed, by acceleration. Did you try other settings of the valves and examine the gearing for wear before re-shaping the cam? We do not think you can get much more out of the motor than you have, since its re-construction. It is generally advisable to leave the profile, etc., of a motor's cams alone, and endeavor to remedy faults by re-setting, as the motor has been passed by the factory's testers, and they would condemn any motor that failed to attain a given power and speed. This is particularly the case with the makers of your machine, as they are extremely exacting as to the performance of their product. Of course, if the motor had been refitted by other than the firm's representatives before you got it, the trouble was not due to design or construction originally.

NEW YORK RIDERS IN JERSEY.

DUDLEY M. GALLUP.—The question has not yet been decided as to whether it will be necessary for a New York rider to have a New Jersey license when riding in that State. An editorial on this subject will be found on page 33 of this issue.

ONLY ONE USED.

B. P. FIELDS.—The carbureter mentioned is the only one that has been used in racing, touring, etc., on the make of motorcycle mentioned.

A WORTHY SUGGESTION.

EDITOR MOTORCYCLE ILLUSTRATED:

In the latest issue of your publication I note that plans have been laid to bring the southeastern tour to the 1812 convention city along the old National Pike south of Pittsburgh, but not to Pittsburgh. I would suggest that you use your influence to have this plan changed so as to include us in the line of travel. It seems hardly fair to pass so close to a district having about two million people who are just beginning to take an interest in the motorcycle, and not bring the boys through so that we may see them. This year, for the first time, we have succeeded in waking up a portion of the population to the advantages of the motorcycle, and we have a fairly large number of riders in Pittsburgh who are F. A. M. members.

The change I suggest would be to have them leave the National Pike at Uniontown and proceed to Connellsville, Mount Pleasant, Greensburg and Pittsburgh. Another route would be to leave the pike at Brownsville and then follow the Monongahela river to Pittsburgh. Either of these routes would take the riders through densely populated country which is much in need of motorcycle advertising. The route from Pittsburgh would be to Washington, where the pike would be struck again. Most of these roads are of macadam or brick, while the National Pike between Uniontown and Washington is none too good.

RALPH K. MERRILL.

Pittsburgh, Pa.

ROBERTS TO SELL PARTS.

H. T. ROBERTS, for some time past identified with the sales organization of the Troxel Mfg. Co., of Elyria, Ohio, and one of the best-known workers in the motorcycle field, has severed his connections with the Troxel company to enter upon a business of his own. He has made arrangements to handle the products of a number of well-known manufacturers of motorcycle parts and will be their exclusive agent in dealing with the makers of motorcycles. He will handle motorcycle parts only.

That Roberts is well fitted to occupy this important position in the trade goes without saying. His sales experience has been varied and thorough, and his ability to make friends—and hold them—will not be his least important asset in his new field. Roberts was formerly identified with the Yale, Harley-Davidson, Excelsior and Thor machines.

NEW JERSEY LICENSES.

L. KUDRLE.—Under the present condition of affairs we should advise your getting a New Jersey license, either temporary or yearly. You have no proof that you are eligible as a non-resident rider except your personal identification, which would not be considered by the authorities of other States. Therefore, it is better to get a license from another State (New Jersey in this case). The Bureau of Tours, Automobile Club of America, West 54th street, New York City, will furnish them on short notice. The cost for the 10-day (temporary) license is $1. For the yearly license the cost is $2.

MUSSELMAN PATENTS.

FOLLOWING is a description in brief of the fourth of the patents controlled by A. J. Musselmann, and which was carried over from the article appearing in last issue.

The fourth patent involved, Number 895,576, was issued to Archibald J. McCollum, of Chicago, August 11, 1908, and assigned to the Armac Motor Company. It relates to the construction of an automatic inlet valve and dome designed to economize overhead space and adaptable to motors having the carbureter secured to the dome directly. The carbureter connection is by means of an elbow projecting upwards from the dome proper and tapped so that the connection will be horizontal. The dome is made with a well in the top, and in the center of the well is an upwardly projecting hollow wall which forms the guide for the valve stem. The end of the stem is reduced in diameter at its upper part, and over this reduced section is fitted a C-shaped washer which takes the place of the ordinary spring cotter. The lower part of the dome is threaded to screw into the motor, and a lock-nut is fitted thereon to adjust the valve construction to the carbureter as regards position and height from the top of the motor. The washer is formed to fit the upper part of the stem so that it is readily removable by compressing the valve spring and slipping to one side.

COMPETITION RULES.

CHAIRMAN THORNLEY, of the F. A. M. Competition Committee, announces that copies of the new racing rules have just been received at his office and that the booklets will be mailed promptly on application.

COMPLETE BELT SCHEDULE.

THE Graton & Knight Mfg. Co., of Worcester, Mass., has prepared a complete schedule of motorcycle belt dimensions covering all standard machines for the years 1909, 1910, 1911 and 1912. In each case both flat and V belts are provided for, the length and width being given in a table which permits of easy reference.

CANADIAN RIDERS LAUNCH NATIONAL BODY

Toronto, Hamilton and London Clubs Bring 350 Members Into New Association and General Officers Are Chosen at Convention—Plan Reciprocal Pact With F. A. M.

THE Canadian Motorcyclists' Association sprang into existence at a well-attended convention of club delegates, held at Hamilton, Ont., on Thursday, April 18, when comprehensive plans were entered upon to establish the organization in all parts of the Dominion. At this inaugural session a very fair nucleus of a membership was obtained by the entry of three of the strongest clubs in the country, namely, Toronto, Hamilton and London, thus furnishing a list of 350 members to start with. A communication was also received from Winnipeg, enclosing fees for ten members, and promising further support as soon as a local tangle is cleared up.

Immediately upon the creation of the Association, the assembled delegates began to do big things. The first national championships were awarded to the Hamilton M. C., which has an excellent one-mile speedway at its disposal, the event to take place on Dominion Day, July 1. It was also decided to hold an annual national endurance run, the first trip to be held in the thickly-populated western portion of the Province of Ontario. This tour, for which an appropriate shield has already been promised by a prominent Canadian manufacturer, will be a 300-mile affair, circuitous in route and open to all members. It will be arranged so that contestants may join "the procession" at any point along the line of march and as the route will be a complete circle, every competitor will be able to ride the full distance. Path-finders will start from every large city along the route. The event will probably be held in August.

Although the Toronto club was the originator of the idea to form a Canadian association, and is, by far the strongest organization in the whole Dominion, that body insisted upon equal representation at the inaugural convention, although it was agreed at the gathering to establish a sliding scale for representation at all general meetings of the association, according to affiliated memberships. Clubs of from 10 to 25 members will be allowed one delegate; from 25 to 100, two delegates and for each 100 members, one delegate. A number of minor projects were launched and on many occasions the experience of the Federation of American Motorcyclists was investigated before a final decision was reached. A departure from F. A. M. ruling, however, was the establishment of only two classes of riders, trade riders and amateurs. Real professionalism will not be encouraged, but it is the intention to draw a sharp line between the two divisions created.

The whole country was divided into four districts as follows: (1) British Columbia; (2) Alberta, Saskatchewan and Manitoba; (3) Ontario and (4) Quebec and the Maritime Provinces. As yet only the general officers have been selected, but it will not be long before a comprehensive system of government to assume direct control of each individual district, will be attempted. For the present the following will direct the affairs of the association: President, K. R. Spencer, Hamilton; vice-president, J. W. Cunningham, London; secretary-treasurer, T. I. Anderson; directors, Nelson Chambers, Hamilton; W. G. Tite, London; J. Scott and F. A. O. Johnston, Toronto. Publicity Commissioners, F. Benson, London; J. Nash, Hamilton and W. M. Gladish, Toronto.

The officers decided to make overtures at once to the Federation of American Motorcyclists for a working arrangement whereby reciprocal relations will be established. It is not considered that this matter will provide many difficulties as leading officials of the American body have already intimated that they will do all they possibly can to establish friendly relations and finally arrive at a working agreement of international character. This will undoubtedly sanction the interchange of riders.

The motorcycle sport is gaining ground in the Dominion with lightning rapidity, although it is conceded that the game is only in its infancy as yet. It is hoped that the Canadian Motorcyclists' Association will grow up, with the pastime, to be one of the leading motorwheel institutions of the world. The association has got away to a fine start and, apparently, the policy of the organization is in the hands of an able set of officers, so that success seems assured.

WHITE HOPE IN THE SADDLE

Above is shown the Pueblo fireman upon whom the sports of the country are pinning their faith to wrest the pugilistic championship from Jack Johnson. He's not yet a motorcycle enthusiast, but they say he's bound to be one.

A BROOKS ENTHUSIAST.

MESSRS. J. B. BROOKS, of Birmingham, England, take justifiable pride in the following letter, recently received from a rider in Groton, Mass.:

"Dear Sirs:—In 1910 I bought a 5 h. Indian, equipped with one of your B104 saddles. In 10,000 miles' riding there has been not a break and the saddle is better than ever. Such a fine record has made me wonder whether English motorcycles are made with same care and superior material as your saddles are, and I am considering the practicability of buying an English machine."

"This is a clear indication of the beneficial influence of quality," say the well-known saddle-makers, "and knowing as we do the excellence of the Brooks productions we are not surprised that here as in every other country in the world, excellence is keenly and enthusiastically appreciated."

ZILBERMAN IS BUSY.

M. ZILBERMAN, located at 924 Canal street, is agent in New Orleans, La., for Indian, Flying Merkel and Henderson motorcycles. He reports having sold forty-seven machines in 90 days, and states that the boom is just getting under way. He is supplying the New Orleans police department with machines. Indian riders of the city will soon organize a club and take steps to affiliate with the F. A. M.

AFTER YOUTHFUL SPEEDERS.

OMAHA, NEB., is waging a campaign against juvenile riders of motorcycles who borrow machines and take long chances in piloting them through the city streets.

TEXAN IN NEW QUARTERS.

AUSTIN W. BURGES, a dealer of Houston, Texas, recently completed the removal of his motorcycle business from 801 Fannin street to a new building at 1103 Capitol avenue.

PRACTICAL CHRISTIANITY.

MEMBERS of the Bethany Presbyterian Church, in Trenton, N. J., recently held an entertainment to raise funds for the purchase of a motorcycle to be presented to the Rev. Wilmer Lahmann, a missionary in Africa, who is supported by the church.

CEDAR RAPIDS MEET.

ARRANGEMENTS have been completed by the Cedar Rapids (Iowa) M. C. for a high-class racing program to be given on Memorial Day, and entry blanks may be obtained by addressing Secretary F. H. Smetana.

THE Terre Haute (Ind.) M. C. is planning its first 1912 race meet for May 30.

MOTORCYCLE AS FIRST AID TO THE ANGLER

Tedious Scouting Trips for Finny Denizens of Lake and Stream Become Pleasure Jaunts When Power Two-Wheeler is Called Into Action—An Alluring Tale of A Pickerel Catch.

BY THE OLD SCOUT

WHEN these first warm and balmy days of early spring appear, giving us a delightful foretaste of the coming summer, my mind promptly turns to two things—motorcycling and fishing. Before I became acquainted with the motorcycle, I thought only of fishing; now I combine the two. It is when a person is able to enjoy two such fascinating sports at the same time that life really seems worth living after all.

If I were to describe all the occasions on which my faithful two-wheeler has carried me off into the wilds after various kinds of fish, I should be compelled to waste much good ink and paper. So I don't attempt to describe them; merely let them linger in my memory, each a record of the best kind of a good time —and then I thank heaven for the motorcycle. By it the transportation problem has been satisfactorily solved. It costs something to be the owner of a motorcycle, of course—did you ever know anything worth while that came absolutely free?—but it is worth more than it costs. In striking a balance I don't merely figure in the railroad fares and the time it has saved me—no small amount, by the way—since that would not be giving the little single-tracker a square deal. But I count in the pleasure and satisfaction it has given me; the opportunity to get off into nature's out-of-doors, and breathe air untainted by city smells or factory smoke. And I know whereof I speak when I firmly declare that the motorcycle is worth all that it can possibly cost—and a lot more.

Locating the Fish.

Coming now to the all-important question of angling, let me say that the motorcycle adds fully 100 per cent. to the pleasure of such a trip. In the first place, it provides a quick, cheap, and easy method of getting on the ground. When an angler makes his mind up to take a chance at the finny denizens of river or lake, he is not anxious to spend the best part of the day in getting there. Car fare means money, to say nothing of the nuisance of being pinned down and hampered by the arbitrary time-table. And then, of course, there never is a train going your way just when you want it. Driving out with a plug and wagon "can be did," but it is so deadly slow. Going by automobile is fine—when you have an auto. Walking is—well, call it impossible. But the little power-driven two-wheeler bangs the spike on the top-knot. If you own a motorcycle, and like to fish, you have probably hit upon the joys of the combination. If you like to fish, and are so unfortunate as not to own a motorcycle, the sooner you get in line, the better for you.

With a motorcycle you are absolutely independent. If so desired, you can put on a tandem attachment and take a friend with you, at a fraction of the cost of other means of conveyance; or even strap a good thick pillow on your luggage carrier, and let him straddle that. Then tie the rods across your handlebars or the tank, and be off. You can go where and when you please; stay as long as you wish to; and need not bother your mind about the necessity of making connections with some jerk-water accommodation train that was never known to accommodate anyone. On trouting excursions I have even ridden my machine down into the woods, and left it leaning against a convenient tree beside the brook until I had fished as much of that stream as I cared to. And when I was through fishing there was no tiresome walk; the motorcycle was on the job, ready to take me out.

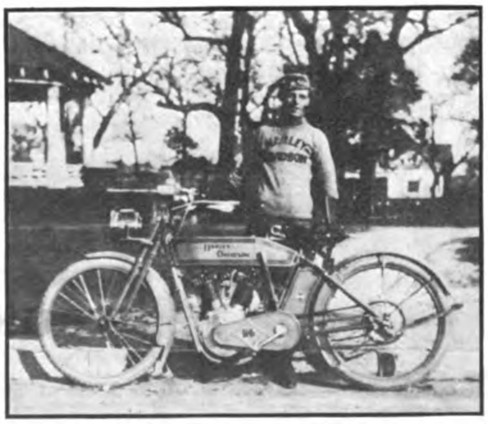
No Roads Are Too Rough.

If you try it you will find that your motorcycle will take you practically anywhere, no matter into how rough a country your angling enthusiasm carries you. I have ridden my chugger over roads—they were not roads at all, but that is the only word I can think of to describe them—where the bottom of the crankcase bumped and knocked against projecting snags and stones. I should not recommend such riding, of course, but merely mention it in passing to show to what extent the machine can make good as a first aid to the angler. It is not necessary to pick out bad roads when you go fishing via motorcycle, and when your route takes you over a fine stretch of macadam that is so much the better.

About thirty minutes, or one hour, or two hours, distant from my humble dwelling, depending upon whether a motorcycle, a trolley car, or shank's mare, provides the transportation, is a small pond. It nestles at the base of a steep and precipitous cliff, and is quite pleasant to look upon, but is chiefly important from my point of view because of the pickerel to be caught there. Its possibilities along this line, I believe, are not known to so very many anglers, and your obedient servant has taken no pains to spread broadcast the information. He's not exactly piggish, he hopes, but nevertheless he knows a good thing when he sees it. In my State the pickerel are protected by law in the early spring, as they are supposed to be spawning at that time. On May 1, however, one can legally go pickerel fishing, and that day is quite apt to see me chugging out to the aforementioned pond to try my luck for an hour or two.

An Ideal Outing.

Last spring I hooked and landed a three-pound pickerel in "my pond," and you should have seen how he fought! I had a fine catch that day, and planned to drape the fish over the motorcycle, jacked up on her stand beside the pond, and take a snap of her, since a kodak had recently come into my possession. She indeed made a fine picture, with the gently rippling surface of the pond behind her, and the steep, rocky cliff across the stretch of water as a background for the whole. But if you have ever tried to take pictures, you probably know how it usually is the first time. That was the way with me. In my experience I either set the shutter so that it admitted too much light, or not enough; I gave it too short a time, or not enough; and I undoubtedly joggled the camera when I squeezed the bulb. The picture? It might have been a herd of cows grazing in a meadow; it might have been a merry picnic party on a mountain side; in fact, it might have been most anything, but it was most certainly *not* a lusty four horse single ornamented with a glistening catch of pickerel.



George Huter, President of the Lone Star M. C. of Dallas, Texas.

For a Night Trip.

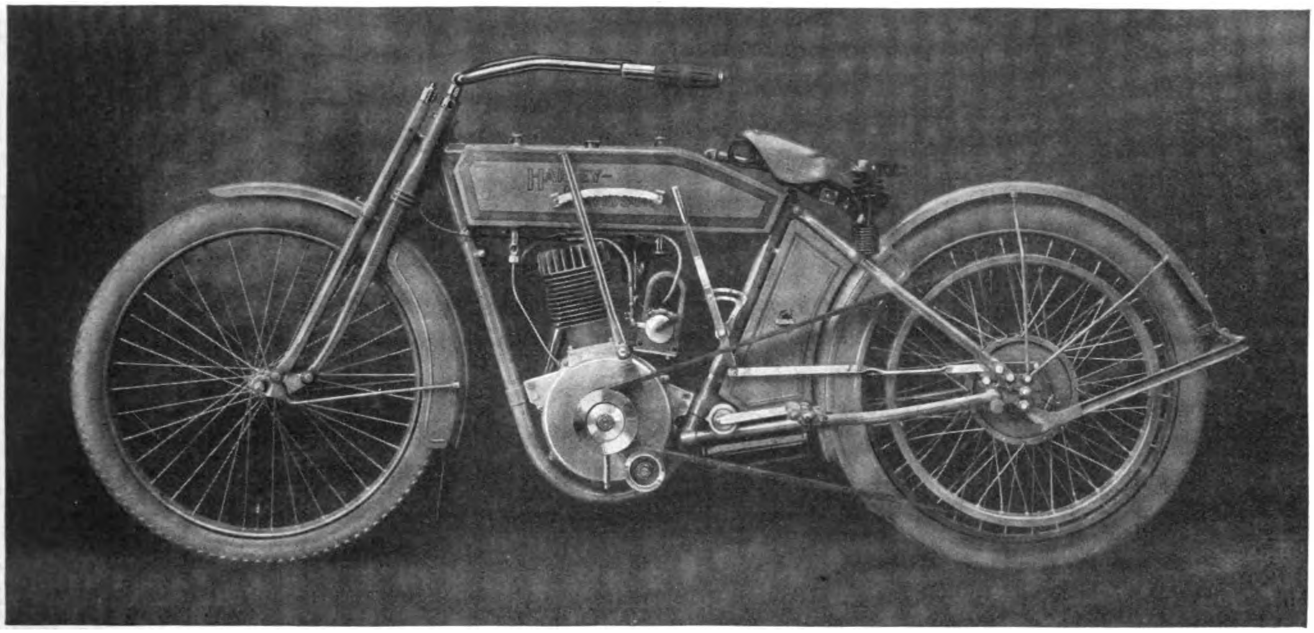
I have even used my motorcycle for going fishing at night. You know that some fish prefer to dine when no one can see them. Bullheads are a notable example. Often on summer evenings in early summer I have gone chugging off to some pond bullhead fishing. It is good fun, all the more so if you can induce a fellow motorcyclist to go with you. You can sit at your ease, puffing away on your pipe—any other form of a smoke is out of place on a fishing excursion—and listen to the many night sounds that some to your ears. The whip-poor-will never sounds so beautiful as when his plaintive call is heard under such circumstances, and from across the pond some old bruiser of a bullfrog will join in with his deep bass voice to make a duet of it. And, best of all, you know that when ready to return home, you won't have to walk. You have not discovered half the pleasures that the motorcycle brings until you have taken some fishing trips with it off into the wilds.

CARRYING ON GOOD WORK.

THE Minneapolis motorcycle club has placed a ban on the open muffler and is out after all violators of the rule, whether club members or not. This is due to the fact that professors at the University of Minnesota have complained to the police that motorcyclists are speeding up and down the avenues near the university with their mufflers open and making so much noise that classes in recitation at the university can hardly be heard. Three or four arrests have been made in the last two weeks and as a result those riders who have been injuring the motorcycling sport have quit the nuisance.

CALIFORNIA COMMISSIONERS.

R. Y. LESLIE, of Pasadena, F. A. M. commissioner for California, announces that he has appointed the following local commissioners: E. A. Holdridge, Modesto; C. E. Raunds, Oxnard; T. T. House, Napa; Charles R. Fox, Lemoore; D. F. Clark, Stanford University; W. L. Raines, Red Bluff; H. C. Pieper, Petaluma, and W. P. Westfall, Vallejo.



WE defy anyone to find a Harley-Davidson owner who is not more than satisfied with the Ful-Floteing Seat.

The Ful-Floteing Seat cannot develop side-play, vertical chatter, or lost motion of any kind whatsoever, and we have yet to hear of the first broken spring, although 4700 1912 Harley-Davidsons are now on the road.

Practically no strain is put on the plunger or sleeves so these parts cannot cause trouble.

In fact, NO PART of the Ful-Floteing Seat offers any room for improvement.

Every part of the Harley-Davidson is built as good as the Ful-Floteing Seat.

Harley-Davidson Motor Company

208 C Street Milwaukee, Wisconsin

TOURISTS TRIUMPH OVER IOWA GUMBO

Spills Feature Last Leg of Journey by Cedar Rapids Motorcyclists Between Marshaltown and Their Home City After a Storm, but Gumbo Roads Fail to Upset Their Riding Schedule.

BY M. F. HUNTER

"SAY, Opie, let's take a trip Sunday."

"All right, Hunter, how about a run to Marshaltown and return?"

That's the way plans for our outing were launched, and they were perfected with equal celerity. At 4.30 Sunday morning we were tuning up our Flying Merkels and before 5 o'clock we were spinning over the roads. An hour later we had breakfast in Belle Plaine and a run was then made over good roads to Tama, where we were greeted by a number of old friends. From our home city, Cedar Rapids, to this point we had made excellent time and we settled down with satisfaction for our jaunt over Iowa roads to Marshaltown.

Passing through the Indian Reservation we found nine miles of fine going, the highway being kept in condition by the Indians themselves, and soon after 9 a. m. we pulled into Marshaltown. Our machines had given us no trouble. On returning to our mounts after having dinner we discovered that some kind townsman had taken Opie's pump, but we regarded this as a mere incident and refused to allow it to dampen our spirits. While we were enjoying an after-dinner smoke we noticed a chap making a careful examination of our machines and learned that he did not hold the motorcycle in high esteem. Finally he asked whether our machines could climb a hill near his place, and we assured him they could if the grade did not too closely approach the perpendicular.

The hill was in a pasture back of his barn, but we were determined to make good our boast and we climbed it to his satisfaction. After lounging a while we pulled out of Marshaltown at 1.15 p. m. and were only two miles on the road when rain fell. We sought shelter in a nearby barn and were delayed two hours before we could resume our journey. Then we found the Iowa gumbo in poor condition for motorcycling. However, we stuck to the road as best we could, determined to reach Cedar Rapids. Opie spilled and bent one of his pedal cranks, but we straightened it and went on. Soon afterward I sprawled in the road, but my machine was not damaged and we lost no time on repairs. It was getting dark when we arrived in Tama and we decided to remain there for the night. We were caked with mud and our machines were in the same condition, but they still chugged as merrily as ever.

M. F. Hunter and "Opie". Timms.

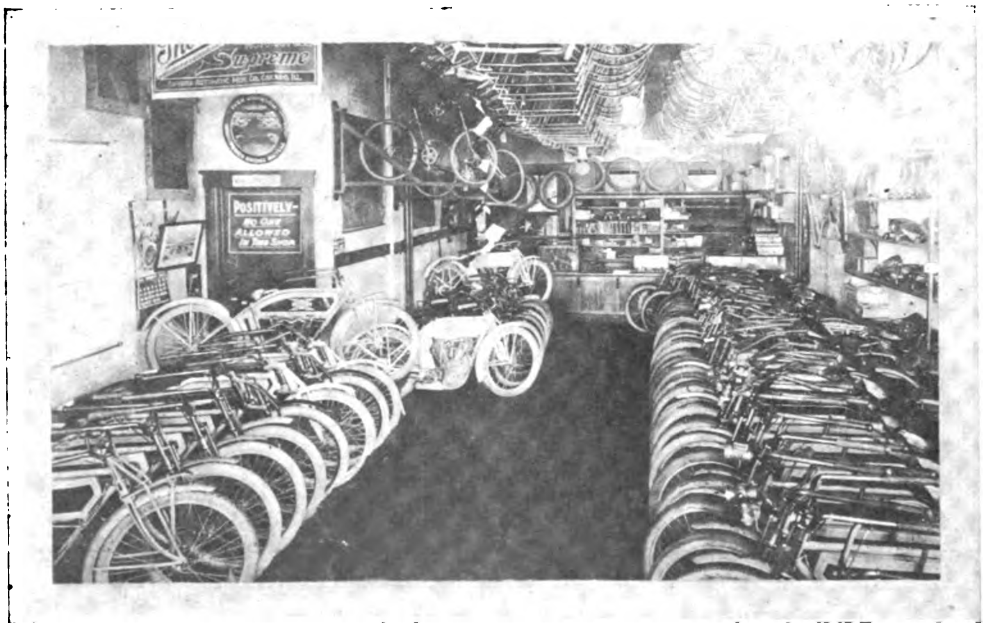
At 8 o'clock the following morning we were on our way again still ploughing through bad roads. It had rained again during the night and several spills marked our progress to Cedar Rapids. Still we were in anything but a gloomy mood when we finished the trip. It had not been a boulevard outing, by any means, but we had enjoyed it and if the necessity had arisen we would unhesitatingly have started over the route again, despite the gumbo roads. My companion was F. H. Timm, known to his friends as "Opie."

STREATOR OFFICIALS.

ROSS ARTHUR heads the Streator (Ill.) M. C. as president, and his associates are as follows: Cliff Tyler, vice-president; Art Van Loon, secretary-treasurer; Fred Plock, captain; L. Bennalack, first lieutenant; W. Maher, second lieutenant.

SUPREME COMFORT.

E. Walter Litzko, of New York, His Harley-Davidson Twin and His Pipe, Which He Declares Is a Great Combination.



Show Room of the Casino Cycle and Supply Co., of Cleveland.

HOW ABOUT THIS RULING?

Minneapolis Riders Are Fighting Regulation Calling for Two Headlights on Their Motorcycles.

MINNEAPOLIS, MINN. — Motorcyclists of the Twin Cities have been aroused by the recent decision handed down by Judge W. L. Kelly, of St. Paul, requiring all motorcycles in the State of Minnesota to carry two lights in front and one in the rear, the same as automobiles. The dealers are especially stirred up over the matter and are raising funds among the local riders to fight the matter in the courts if necessary.

Edward A. Thiem, of the Thiem-Joerns Company, of St. Paul, manufacturers of the Thiem motorcycle, says that practically every motorcyclist in St. Paul and Minneapolis carries a strong light in front and a small red tail light, and that the two are enough to answer every purpose. Mr. Thiem claims there is no reason for a second front light and no place to put it.

A. G. Albrecht, president of the St. Paul Motorcycle Club, called a meeting of all motorcycle dealers and riders in St. Paul on Saturday, April 27, to consider plans for raising funds to take an appeal to the State Supreme Court.

The decision of Judge Kelly was given recently in a damage suit growing out of a collision in which the plaintiff held that the defendant did not have the required number of lights. Since the mass meeting the motorcycle clubs have been pushing the matter vigorously and unless they fail to obtain a reversal of the decision they will ask the next legislature to amend the law.

No one lubricating oil is best for all Motorcycles. This is absolute.

YOU may not care for speed. But, to safeguard your machine, you do want its greatest horse-power efficiency.

Wasted horse-power results from restrained action—either from friction or some other injurious deterrent.

As oil saves power, it follows that one oil saves more power than another.

No one would think of using the same lubricant for a sewing machine and a battleship.

The needs of two motorcycles often differ quite as widely.

In planning for a complete range of motorcycle lubricants, we first analyzed the construction of every American motorcycle.

We found that they required several grades of lubricating oil. We then produced the oils.

So far as it was practicable, we filtered out the free carbon.

All the oils were put through practical demonstrations on their respective motorcycles.

Our ultimate findings are shown in the list on this page. You will see scheduled there the correct oil for your machine.

Some motorcycles change type from season to season. The list gives the oil required for each season's type.

In quality, the oils establish a world standard. The grade indicated for each make and each season was arrived at, not by guess, but by careful study. It was later verified by thorough demonstrations.

GARGOYLE

Mobiloil

A Grade for Each Type of Motor

The quality of Gargoyle Mobiloil necessitates a price that is somewhat higher than that of the usual motorcycle lubricating oils.

However, their use should result in an actual saving. Properly used, they will go farther than less correct oils.

Gargoyle Mobiloils are supplied to owners through garages, auto-supply stores and others who handle lubricants.

If the retailer who generally supplies you carries no stock at present, you should have no difficulty in securing through him the grade of Gargoyle Mobiloil you require.

The various grades go by the following names:

Gargoyle Mobiloil "A" Gargoyle Mobiloil "B"
Gargoyle Mobiloil "D" Gargoyle Mobiloil "E"
Gargoyle Mobiloil "Arctic"

They are put up in barrels, half barrels, in 5 and 1 gallon cans. All are branded with the Gargoyle, our mark of manufacture.

The list below shows the right oil for your Motorcycle.

Explanation: In this schedule the letter opposite the name of motorcycle indicates the grade of Gargoyle Mobiloil that should be used. For example, "A" means "Gargoyle Mobiloil A." "Arc." means "Gargoyle Mobiloil Arctic." Recommendations cover all types of the same make unless otherwise stated.

LONG TOWING TRIP.

GORDON TOWNSEND, a bicyclist of Atchison, Kan., recently was towed over 100 miles on his machine by Harry Fishwick, an Atchison motorcyclist, whose mount stood up nobly under the unusual strain.

NEW CLUB IN BLOOMINGTON.

MOTORCYCLE activities in Bloomington, Ind., were increased recently when a new club was organized to succeed the McLean County Club. The new club adopted a resolution asking the city council to place a ban on the use of the open muffler.

MORE than half the motorcyclists in Akron, Ohio, lined up in a twenty-mile parade recently. The city has 450 riders.

THE Holland (Mich.) Motorcycle Club recently made its first run of the season to Grand Rapids.

HOW IT IS DONE IN JERSEY

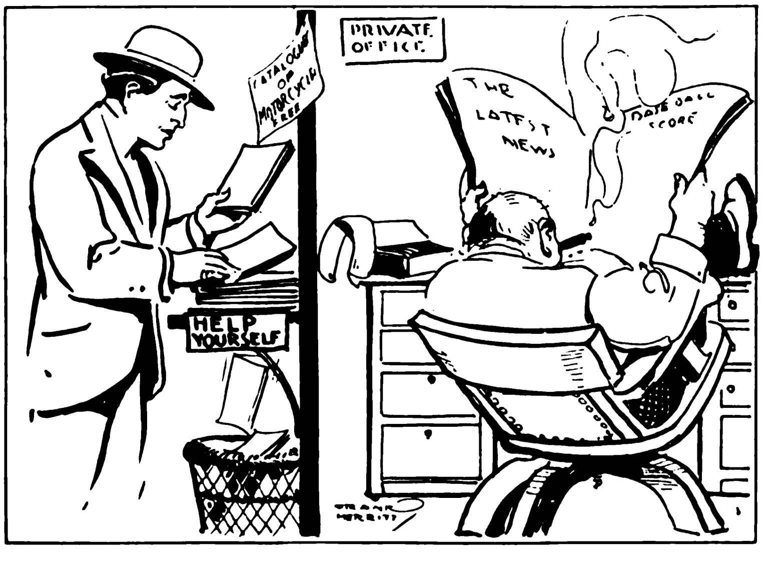
Camden Motorcop Chased High-Speed Automobile Thirty Miles and Finally Captured the Offenders.

MOTORCYCLE POLICEMAN KAY, of Camden, N. J., recently chased a speeding automobile thirty miles on his machine and finally arrested the offenders. The chase started in Camden and ended in Hammonton. Kay placed the speeders under arrest in Camden and started to pilot them to police headquarters, but on reaching a side road the high-speed car swung off and headed out of the city at a breakneck pace. This aroused Kay's dander and he settled down to the chase, determined to land his men if he had to trail them all over the State.

After the more populous suburbs of Camden had been passed the driver of the automobile threw caution to the wind and whirled across country in a manner that brought peaceful homesteaders gasping to their front gates. Not far behind was Kay, doubled over his handlebars and burning the road very much after the manner of a streak of chain lightning that has had its feelings hurt. Kay's only fear was that his gasoline would run out, but it didn't. Finally Hammonton came into view and the automobile was still leading by less than one hundred yards. Kay was on the verge of exhaustion, but he flashed through the town without diminishing speed. As the automobile was passing out of Hammonton a farmer's wagon blocked the road ahead, and the car was forced to slow up for a few seconds. That was all Kay needed, however, and he leaped onto the footboard of the big machine, allowing his motorcycle to roll to the side of the road.

When his breath returned the Camden officer placed his hand on the butt of something that bulged his hip pocket and remarked that the party was under arrest. And he wasn't in a mood to argue the matter. Folks down Camden way now look upon Officer Kay and his single-tracker with pardonable pride, and automobilists of the vicinity are running their cars at such low speed that they are in danger of being run down by milk wagons and perambulators.

THE Evansville (Ind.) Motorcycle Club is considering plans for a long-distance run to Indianapolis and return by two of its members. The distance is 408 miles.



A GOOD CATALOG

is in its way an excellent thing. Properly compiled, handsomely printed and intelligently illustrated, it serves a very worthy purpose in promoting sales.

But the most expensive catalog is quite incapable of talking.

That's the dealer's cue.

Very few, if any, prospects expect to get all they want to know out of a catalog. They like to "talk it over," and have their questions answered by the agents for the machines they contemplate purchasing.

The dealer who places 75% dependence upon catalogs doesn't buy machines in carloads.

HEITGER MOTORCYCLE CARBURETERS

Made especially for motorcycles in a factory devoted to this product alone, with capacity of 1,000 per week

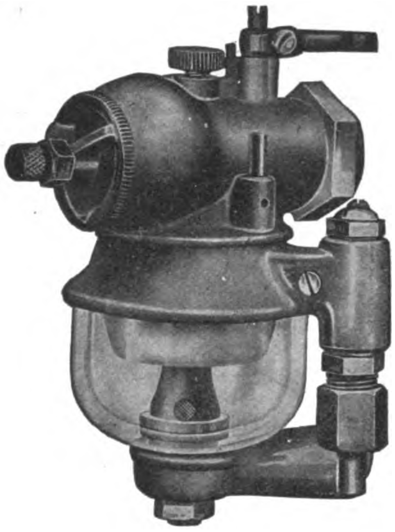
Read what this rider says about the HEITGER, this is an unsolicited testimonial, we have hundreds of such.

New York, February 20, 1912.
Heitger Carbureter Co.,
Indianapolis, Ind.

Gentlemen: I notice in the February 8 issue Motorcycle Illustrated, in your advertisement, that I had traveled 2,200 miles on my sturdy Emblem, in all kinds of weather, etc., from 4 below to 102 above without the slightest trouble.

I may now add an epilogue to that, I have covered more than 12,000 miles to date without the slightest trouble and without renewing a single part. I would rather pay more for a HEITGER and feel assured of never having trouble than experiment with others.

"F. L. Valiant."



Model H—¾", Net $9.50.
Model G-D, Net $10.00.
Either Glass or Metal Bowl.

There are over 25,000 of them in use, in all parts of the country, on all makes of machines. They will give the minimum and maximum speeds your machine is capable of, as slow as five miles and up to the limit; never fail to INCREASE the speed of ANY machine. With motor in good condition we guarantee 75 miles per gallon, road riding. Thousands of riders are getting up to 100 miles per gallon; have economy records up to 200 miles per gallon. The glass bowl enables one to eliminate doubt as to gasoline level, dirt, etc.

HEITGER CARBURETER CO. **1129 Bleecker St. Indianapolis, Ind.**

Insist On Standard Pedals

Our products for the Cycle Trade include:

Emergency Axles, Sager Motorcycle Toe Clips, Diamond E Spokes, Bridgeport and Standard Pedals, Sager and Standard Toe Clips.

No other pedals give that "turkish carpet" feeling to the feet. The deep rubber corrugations in the big cushions keep the feet where they are put—they eliminate jars, bumps and other disagreeable features when negotiating rough roads.

With one eye to *durability* and the other to *comfort* we have succeeded in producing the ideal motorcycle pedal.

Write for our catalog. Standard quality plus Standard output mean big business for you, Mr. Dealer.

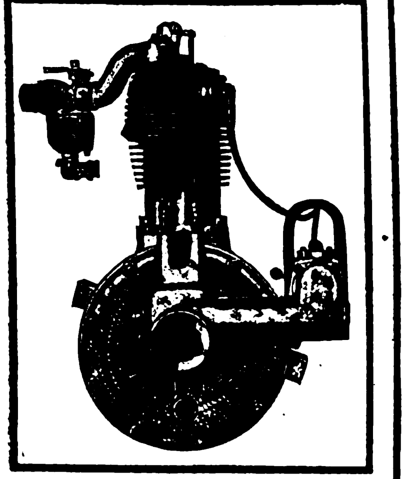
A REVOLUTION IN MOTORCYCLE MOTOR DESIGN



In bringing out our DE LUXE line of motorcycle motors, we have introduced a large number of improvements, and offer these motors as the most advanced now before the trade.

NOTEWORTHY IMPROVEMENTS.

One-piece crank shaft.
One-part crank case with cover.
Improved cam and magneto drive.
Oil tight motor.
Large Valves.
Simplified design throughout.
Reduced number of parts.
Silent Motor.
Large ball bearings mounted in steel lined pockets.
Equipped with Bosch Magneto.

These improvements in design, together with the high grade materials used in construction, the modern methods of manufacturing applied, and the remarkable performance of these motors in road tests mark a revolution in motorcycle motor building.

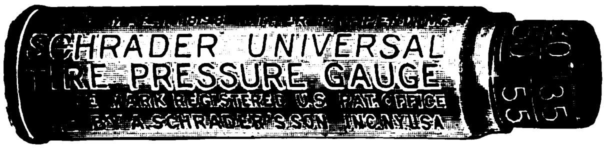
Have You Had Trouble With Your Tires?

A very large percentage of all punctures and blow-outs occur from improper tire inflation.

WOULD YOU PAY $1.00 TO OVERCOME

delays, difficulties and expense resulting from these misfortunes?

Schrader Universal Tire Pressure Gauge



CHRADER UNIVERSAL
RE PRESSURE GAUGE
TRADE MARK REGISTERED U.S. PAT. OFFICE
A. SCHRADER'S SON INC. N.Y. U.S.A.
35
55

(Made under patent dated March 1, 1898.)

Accurately registers at all times the exact air pressure in tires.

Simply hold gauge to tire valve for a second and recording sleeve will indicate air pressure and remain fixed until pushed back into place by the finger.

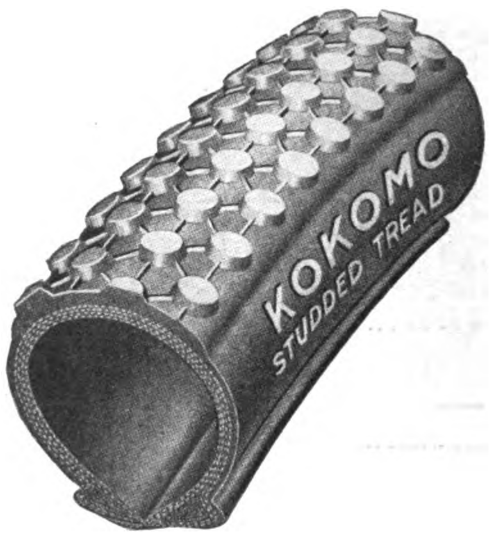
Carried easily in vest or change pocket, being only 2½" long. So simply constructed as to almost never become out of order, and if it does go wrong it will immediately tell by the action of the indicating sleeve that it needs repairs. Leather case comes with it.

PRICE $1.00 EACH

Guaranteed Simple and Absolutely Accurate

Can be obtained from all tire manufacturers, jobbers and dealers, or

A. SCHRADER'S SON, Inc.
28-30-32 Rose Street NEW YORK CITY



The materials entering into the construction of a tire are important factors, but something more than the best materials is necessary to produce the desired results—that something is the knowledge of rubber and how to handle it from its crude state to the finished article.

Kokomo Tires

SIXTEEN YEARS OF EXPERIENCE is back of every Kokomo Tire, and experience counts for more in the manufacture of rubber tires than in any other industry.

It is this experience that eliminates the guesswork and places our product beyond the experimental state.

Kokomo Motorcycle Inner Tubes command the largest sales because of their uniform quality.

Supplied in both Butt-End and Endless.

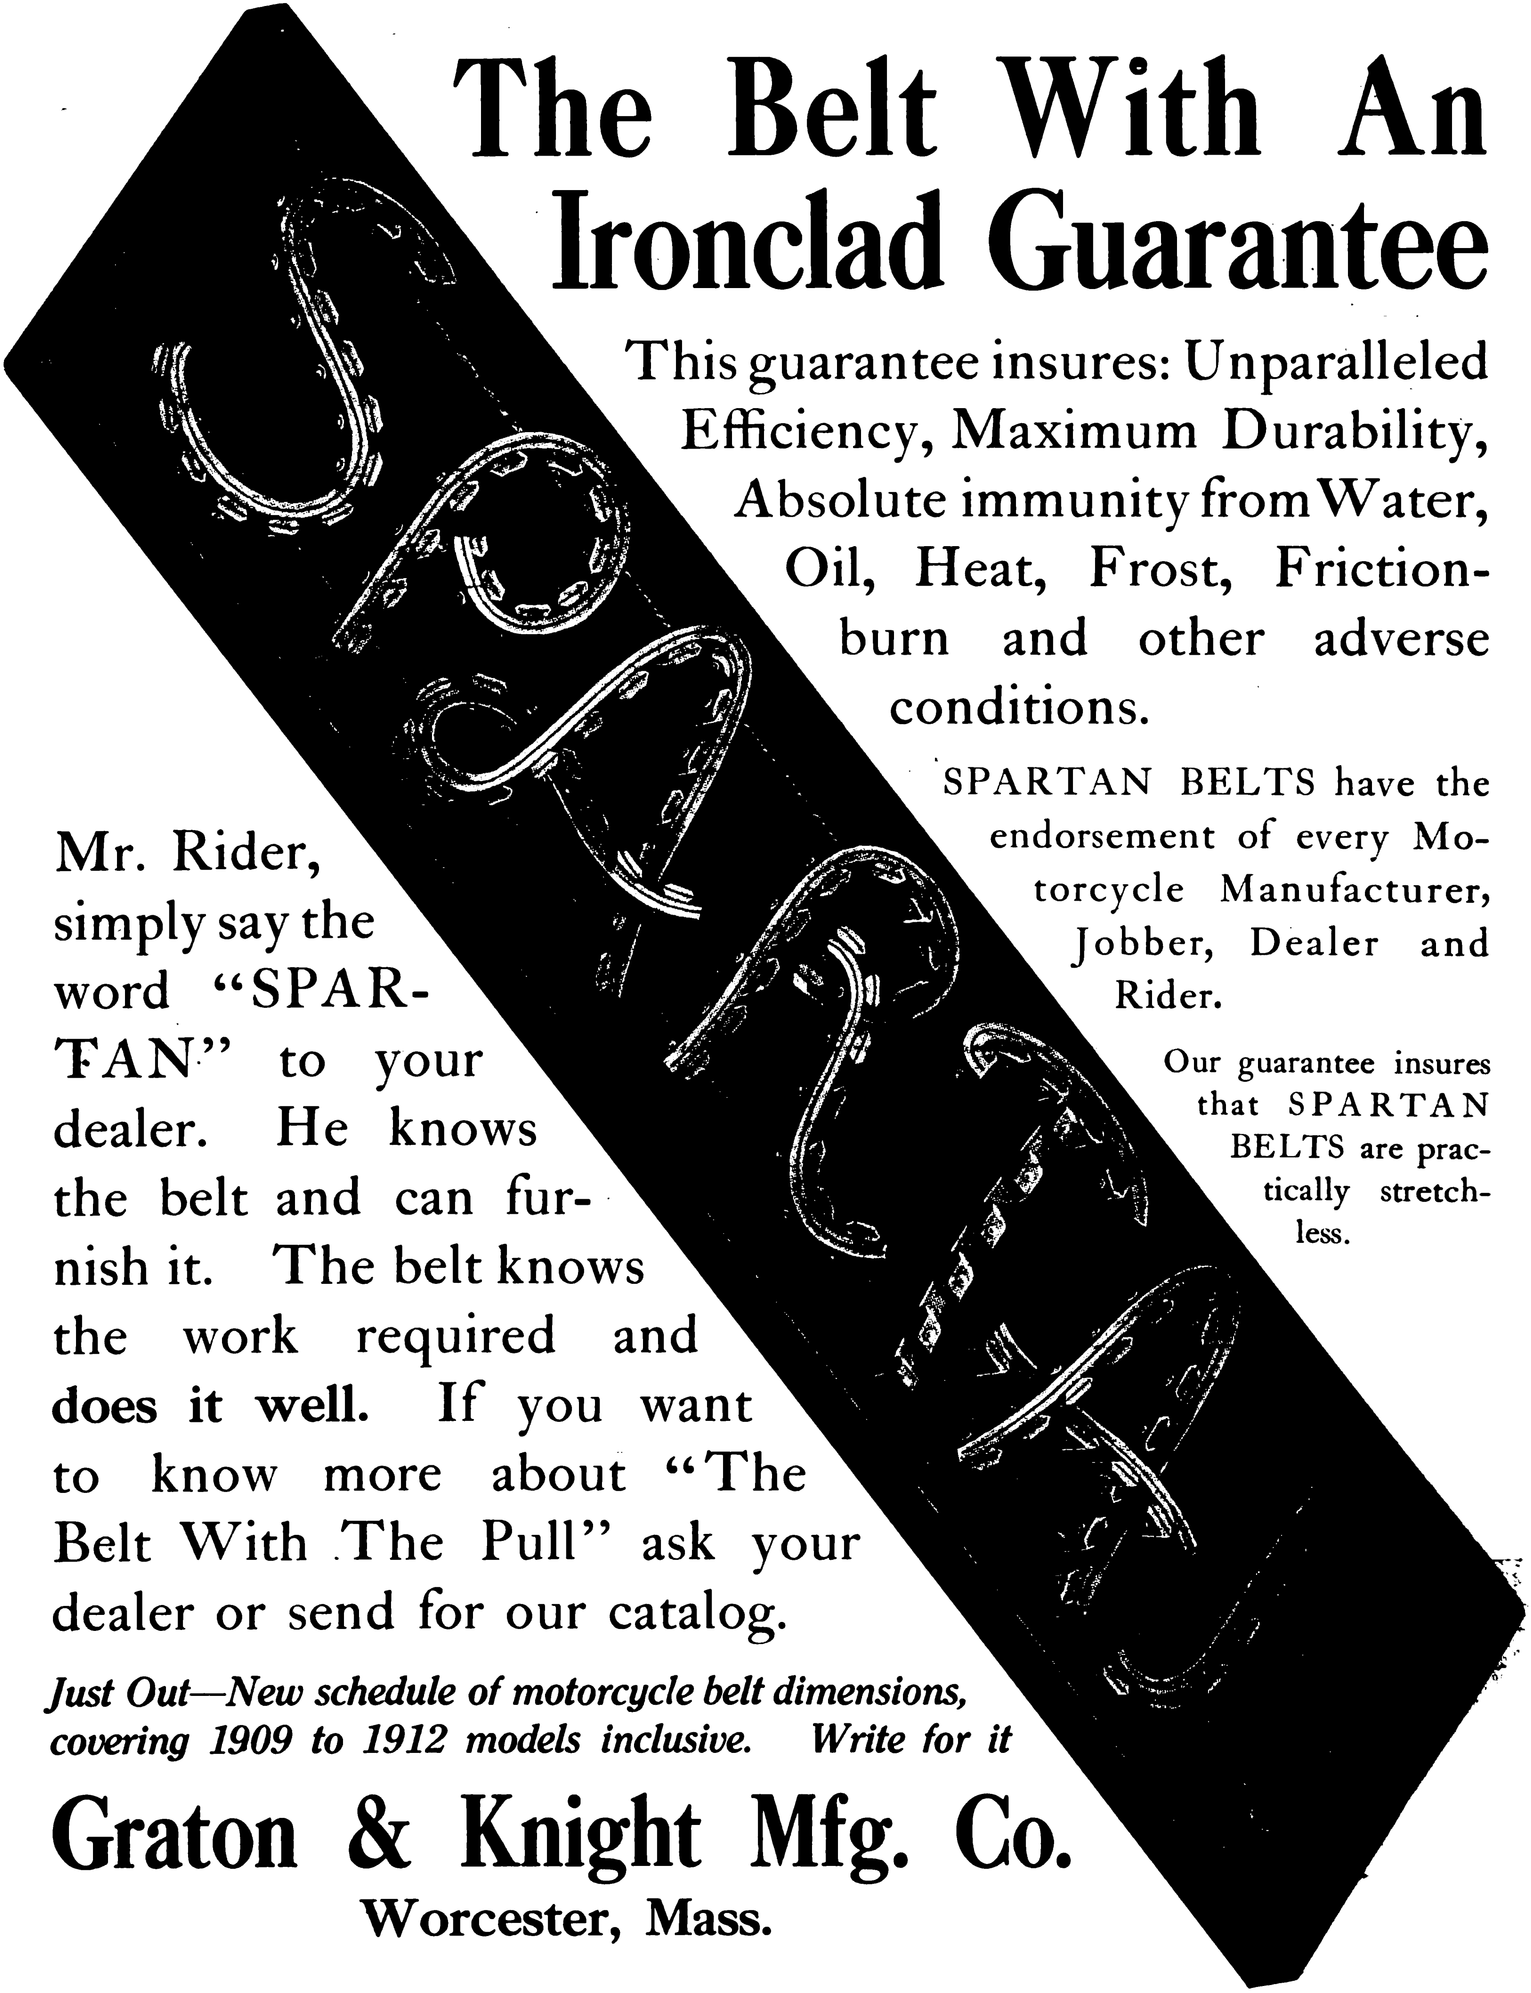
SPARTAN BELTS have the endorsement of every Motorcycle Manufacturer, Jobber, Dealer and Rider.

Our guarantee insures that SPARTAN BELTS are practically stretchless.

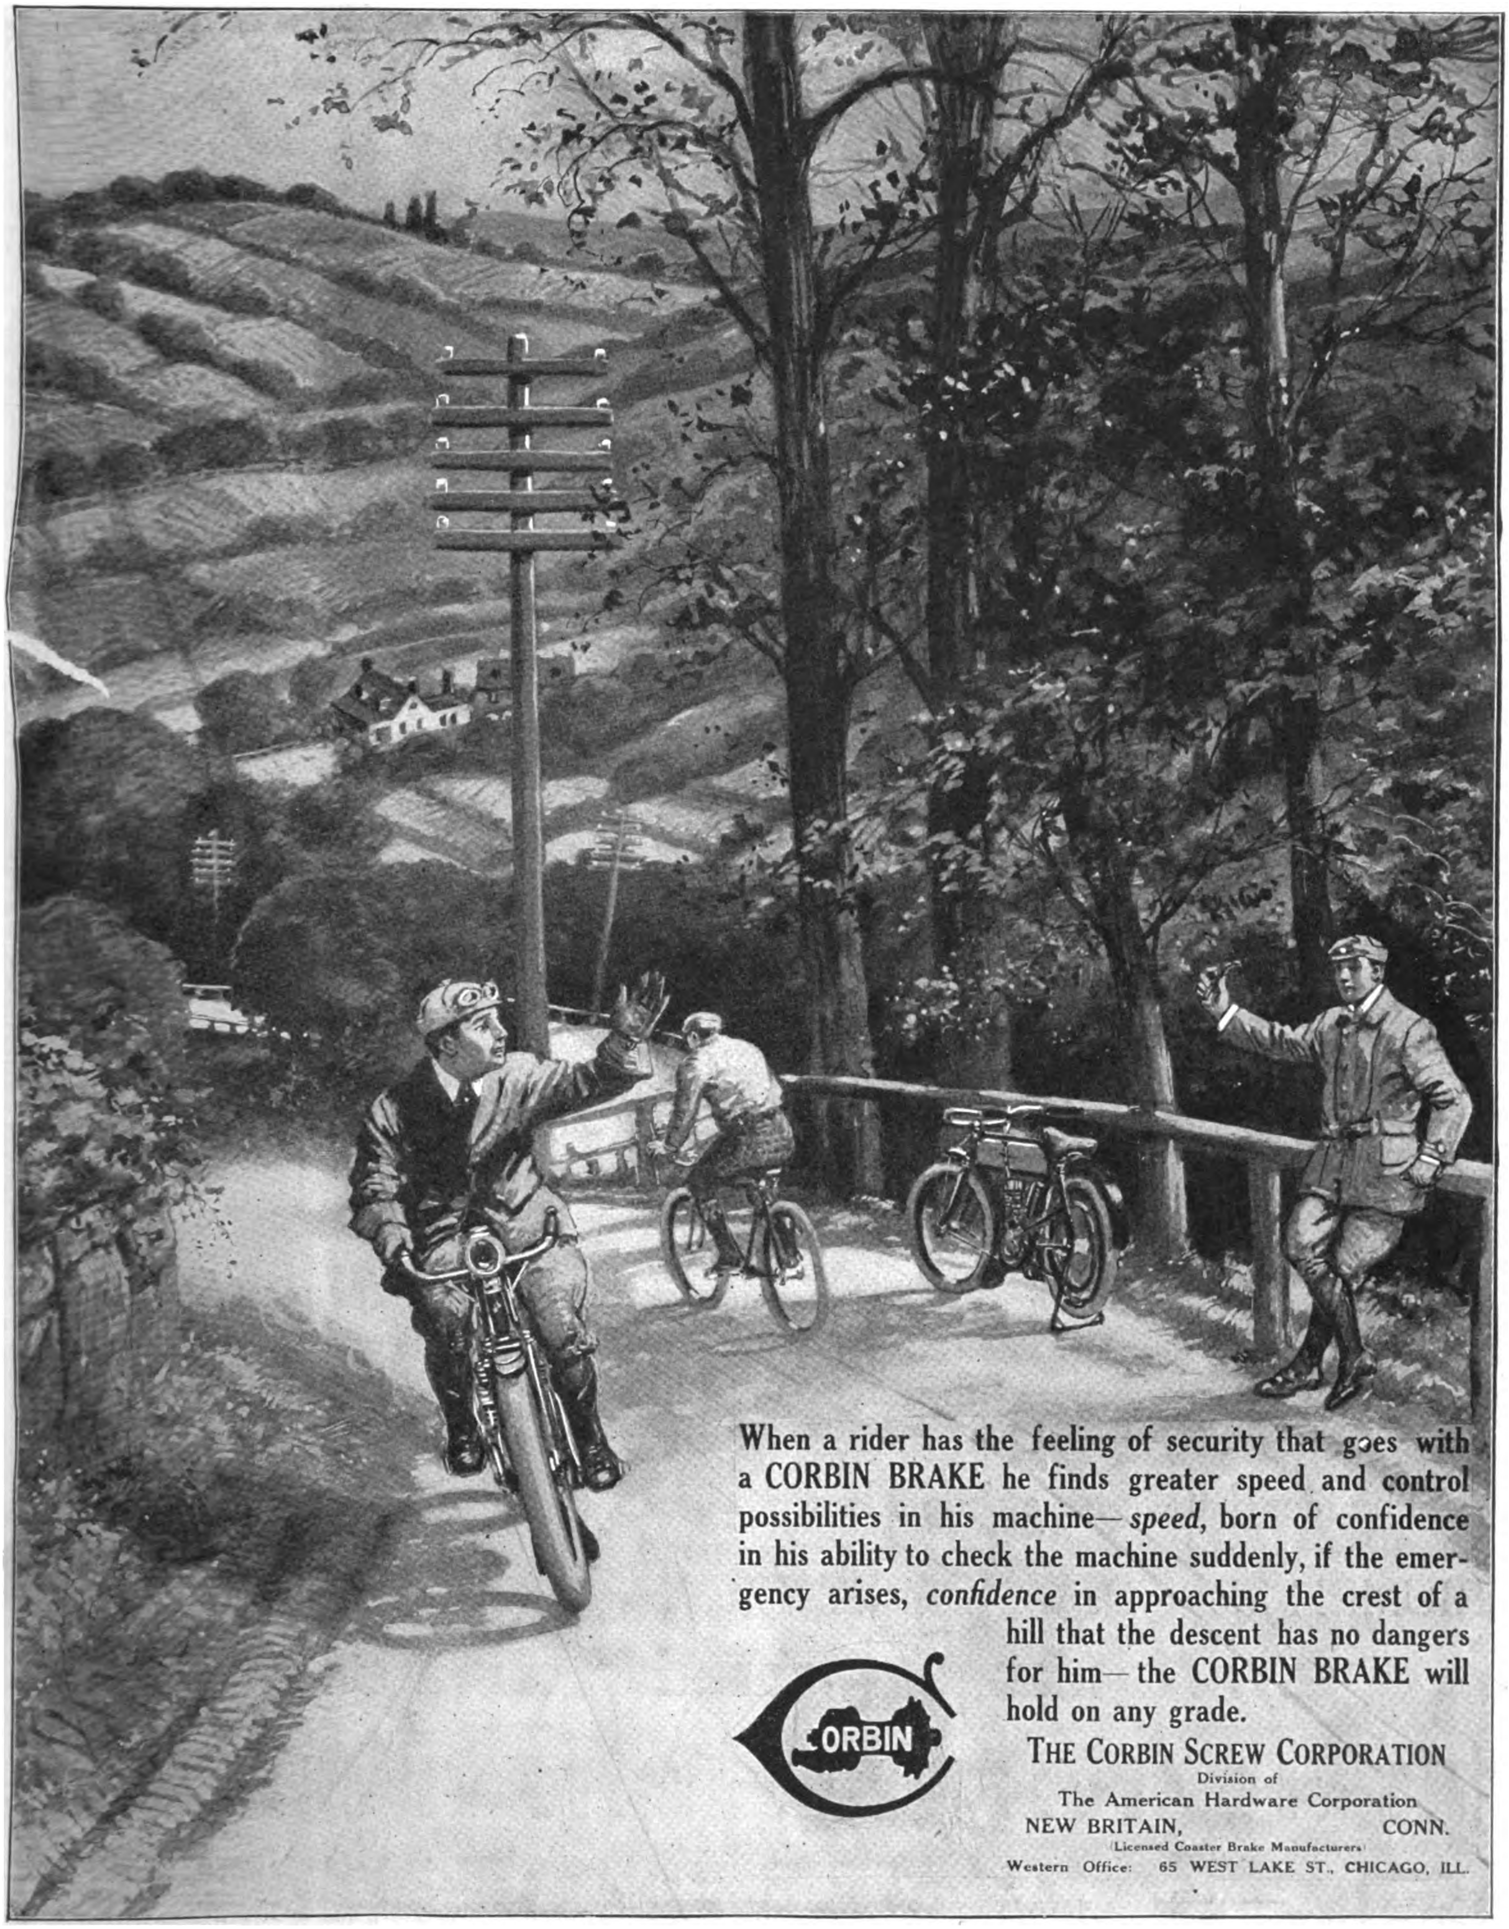


Mr. Rider, simply say the word "SPARTAN" to your dealer. He knows the belt and can furnish it. The belt knows the work required and **does it well.** If you want to know more about "The Belt With The Pull" ask your dealer or send for our catalog.

Just Out—New schedule of motorcycle belt dimensions, covering 1909 to 1912 models inclusive. Write for it

Graton & Knight Mfg. Co.

Worcester, Mass.



When a rider has the feeling of security that goes with a CORBIN BRAKE he finds greater speed and control possibilities in his machine—*speed*, born of confidence in his ability to check the machine suddenly, if the emergency arises, *confidence* in approaching the crest of a hill that the descent has no dangers for him—the CORBIN BRAKE will hold on any grade.

TRIUMPH ANNOUNCEMENT

For months we have been industriously engaged in the manufacture of motocycle parts preparatory to the commencement of deliveries of our product. We have been too busy to talk. We have said nothing, but have sawed wood. Now that we have our wood about all sawed, we talk to attract your attention to the result of our labors—THE TRIUMPH MOTOCYCLE.

The TRIUMPH is built by thoroughly seasoned, skilled mechanics who have had from four to ten years' experience in motocycle construction. They know exactly how a motocycle should be built. Every Department Head is an old timer. The Foremen of our Nickel Plating and Enamelling Departments have been at this class of work for 25 years. The Velvet Finish of the TRIUMPH will demonstrate the superior quality of their work.

You can appreciate what this means, Mr. Dealer, in having an organization which knows exactly what they are doing and how to do it. If we did not have such an organization of workers we would not dare to take the risk of extending to you the broad, liberal Sales Policy and Dealers' Contract we have prepared for you to take advantage of.

You know the kind of a Sales Contract you would write for yourself if given that privilege. Well, Mr. Dealer, that's the kind of one we are ready to sign with you. It's evenly balanced—of the "live and let live" kind—and just as full of pleasant surprises as the TRIUMPH Motocycle, which we tell you of on the opposite page.

The fact that we have adopted such a broad, liberal Sales Policy has already convinced many dealers that we have unbounded faith and confidence that the TRIUMPH Motocycle will meet with instant favor with buyers.

Excelsior Auto-Cycle Wins Again

READ THIS LETTER FROM THE PIONEER MOTORCYCLE HOUSE, EXCELSIOR AGENTS FOR PHILADELPHIA AND VICINITY:

"We have landed a repeat order from the New Jersey Gas Co. for eight more Excelsior Auto-Cycles to take the place of the——————— which they are discarding.

"Few companies have put their machines through as hard a test as the New Jersey Co. has. Last year they purchased both Excelsiors and——————. The Excelsiors are still in fine shape, but the—————— have given a lot of trouble and the gas company will hereafter use Excelsiors only. In the near future they expect to increase the number of Excelsiors to at least fifteen."

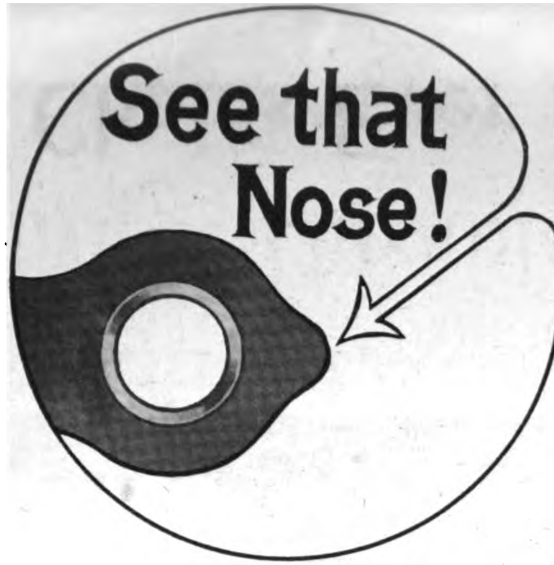
Chains Ever Made

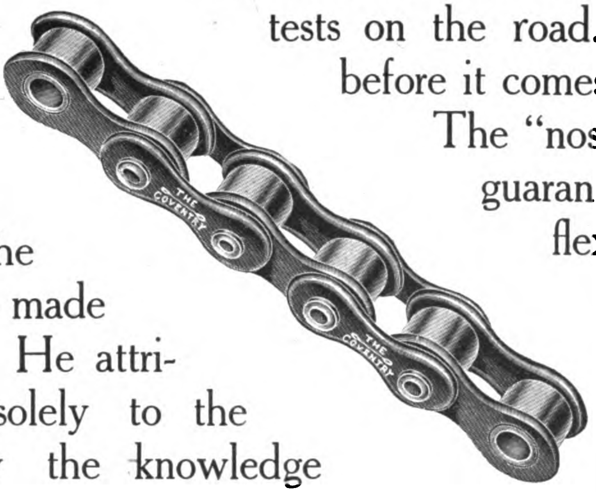
"The Coventry" Chains

are *different*. They are different not only in that they have a distinguishing feature, the "nose" shown here, which adds 20% to the life of the chain—but they are also different in that into no other chain on the market does there enter such perfect material, high-class workmanship and minute examination. In addition to the three thousand inspections which each chain receives, it is subjected to the most gruelling tests on the road. Each chain must *make good* before it comes to you.

The "nose" on "The Coventry" Chains is a guarantee of enormous strength, maximum flexibility and absolutely noiseless operation.



See that Nose!



O. C. Godfrey, the winner of the Tourist Trophy, at the Mount Anglaust Hill Climb made 52 miles an hour uphill! He attributes his terrific speed solely to the confidence engendered by the knowledge that he was using "The Coventry" Chains. He knew that a chain capable of bearing a strain of 3600 lbs. to the foot would "see him through".

Our catalog goes into details. Write for it.

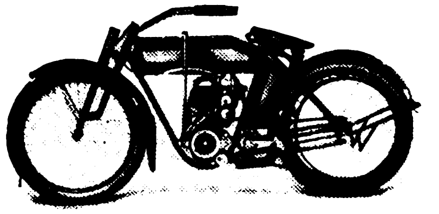
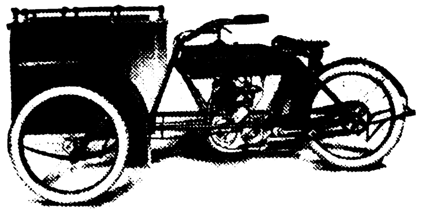
"RIDE ONE Minneapolis AND SEE"



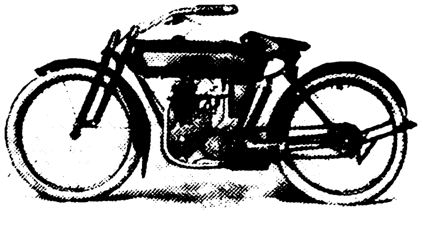
SPECIFICATIONS—MODEL N.

Motor—MINNEAPOLIS 5 H. P. Unit Power Plant. Bore, 3½ inches; Stroke, 3¾ inches; Displacement, 36.08 cubic inches.
Carbureter—Schebler, 1-inch.
Valves—Mechanically operated.
Ignition—High tension Bosch Magneto.
Lubrication—Force Pump.
Handle Bars—Extra strong, with positive fastening at the stem. No expander used.
Tanks—Heavily reinforced. Gasoline capacity, 2 gallons. Oil capacity, 3½ quarts.
Transmission—Enclosed drive gears on ball bearings. One drive chain. Two-Speed gear on countershaft. Multiple disc clutch enclosed. Gear ratio, 4½ to 1 on high, 9 to 1 on low gear. Clutch control on handle bar.
Fork—Triple Spring, with handle bar braces.
Wheel Base—55 inches.
Finish—Dark Green with Light Green Panels.



DELIVERY VAN SPECIFICATIONS.

Size of Van—36 inches long, 24 inches wide and 24 inches high. Double doors in front, hinged weather proof cover. Locks on door and cover. Nickel plated guard rail on top of box.
Wheel Base—82 inches.
Road Gauge of front wheels, 42 inches.
Wheels—26 inches, 2½-inch tires.
Ball and Socket steering knuckles.
Springs—Semi-elliptical.
Frame—1¼-inch, 10-gauge, high grade tubing.
Axle—1¼-inch, 10-gauge, high grade tubing.
Rear Frame—Same as Model N throughout, having **Unit Power Plant, Two-Speed Transmission, Multiple Disc Clutch** and **Free Engine**, with the clutch control on the handle bar.
Gear Ratio—6 to 1 on high, 12 to 1 on low.
Carrying Capacity—300 lbs., exclusive of weight of rider.

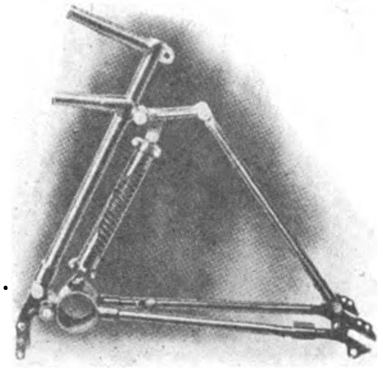


SPECIFICATIONS—MODEL P.

Motor—MINNEAPOLIS 5 H. P. Bore, 3½ inches; Stroke, 3¾ ins.; Displacement, 36.08 cubic ins.
Carbureter—Schebler, 1-inch.
Valves—Mechanically operated.
Ignition—High tension Bosch Magneto.
Lubrication—Force pump.
Handle Bars—Extra strong, with positive fastening at the stem.
Fork—Triple Spring, with handle bar braces.
Wheel Base—55 inches.
Tanks—Heavily reinforced. Gasoline capacity, 2 gallons. Oil capacity, 3½ quarts.
Transmission—Two-inch flat belt, shaft on ball bearings. Gear ratio, 4½ to 1. Idler pulley connected with ratchet on left side of tank, controlled by left hand while right hand controls the right grip, thus shifting to a free engine instantly. Idler wheel mounted on ball bearings.
Finish—Dark Green with Light Green Panels.

The True Spring Frame

Suspends rider and machine on a resilient coiled spring. The Minneapolis patented spring frame affords comfort impossible to surpass and strengthens, instead of weakening the frame. Any model can be equipped with this spring frame for $15 extra.



The Minneapolis spring frame entirely absorbs road shocks and does away with the tiring change of distance between saddle and pedals found where rigid frame is used and accentuated where saddle alone is hinged on springs.

TRUE COMFORT in motorcycling IS NOT found in bounding on a spring seat-post or slipping the clutch on a single-geared machine, but IS REALIZED by MINNEAPOLIS RIDERS through easy ability to go anywhere at any time; through the front-and-rear-spring frame suspension; the two-speed chain transmission, and the absolute dependability every day in the year.

IF EVERY RIDER WOULD try the Minneapolis two-speed over a Hilly, Rocky and Sandy road, appreciating the ease of shifting from high to low gear, and the genuine pleasure in pulling steadily and slowly up the steepest hills and through any kind of road-bed, it would be ABSOLUTELY IMPOSSIBLE TO MEET THE DEMAND FOR MINNEAPOLIS two-speed machines. As it is, where one of these machines goes repeat orders invariably come in as a good trial under the most extreme conditions makes the strong advertising asset of a GENUINE BOOSTER.

CAN ANY RIDER, realizing this, afford to remain IGNORANT OF THE MEANS TO SECURE COMPLETE SATISFACTION? No? Then wouldn't it be wise FOR YOU to call at the nearest MINNEAPOLIS AGENCY to prove these statements?

HAVE YOU EVER WONDERED WHY?

It is very seldom that the Minneapolis goes into the hands of a "GREEN" rider. It is almost universally the choice of the man who has owned one or two other machines and learned that complete enjoyment in motorcycling depends on both physical comfort and the mental restfulness that comes from confidence in the machine, its mechanism; ease of control and ability to go anywhere; and he knows also that those who buy value buy comfort and those who buy bargains buy grief.

The MINNEAPOLIS TWO-SPEED has been in use for years and has been greatly advanced each year; to the extent that though the 1911 transmission was believed to be perfect, the 1912 type is greatly superior to it and is absolutely impossible to improve on, as months of service in the hands of thousands of riders has failed to develop any defect—which proves that it is POSITIVELY TROUBLE-PROOF.

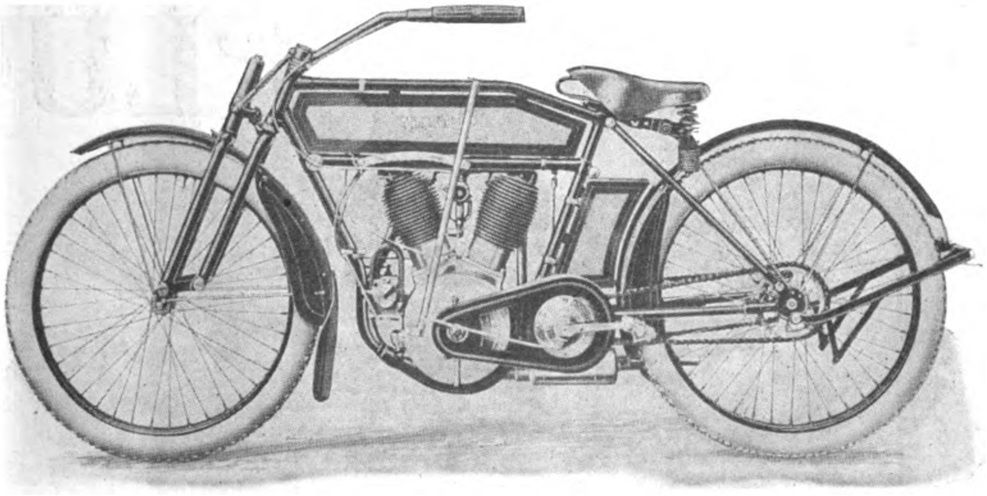
The MINNEAPOLIS Transmission CANNOT BE CLOSELY IMITATED because the patents are thorough.

There is pleasure in handling the MINNEAPOLIS. Our DEALERS have a full line to MEET EVERY DEMAND. What is more, they have the satisfaction of PLEASING EVERY CUSTOMER. The MINNEAPOLIS DOES THINGS that ENTHUSE the rider.

RIGID TESTING AND CLOSEST INSPECTION COUPLED WITH FINEST MATERIAL AND WORKMANSHIP EXPLAIN THE UNEQUALED POWER, SPEED, COMFORT, DURABILITY AND ECONOMY OF THE

10 Minneapolis H.P.

The One REAL Twin



Great Reserve Power, Tremendous Speed, Absolute Dependability Proven by Months of Heavy Service.

Built to Meet the Popular Demand for Excessive Power and—HAS NO EQUAL.

MOTOR—Two Cylinder; Bore, 3½ inches; Stroke, 3¾ inches.
POWER—Rated 10 H. P. 11½ to 13 H. P. Actual brake test.
DRIVE—Double roller chain with clutch on countershaft.
CLUTCH—Ten large steel discs.
CARBURETER—Special 1-inch Schebler.
MAGNETO—Bosch high tension.
VALVES—Intake made of nickel steel; exhaust of same material with cast-iron seat welded to rim section. Both mechanically actuated and located in opposed position in one pocket.
LUBRICATION—Positive drip feed directly through connecting rod crank pin bearing.
CONTROL—Double grip; piano wire.
HANDLE BARS—Extra strong; with positive fastening at the stem.
TANKS—Gasoline capacity two gallons. Oil capacity three and one-half quarts.
FRAME—High-grade steel tubing with special reinforcements wherever necessary. Continuous loop.
FORK—Triple spring with extra braces to head.
WHEEL BASE—Fifty-five inches.
WHEELS—Twenty-eight inches.
GUARDS—Three and one-half inches wide, with rolled edges and large side shields.
TIRES—United States or Goodyear; 28 x 2½.
BRAKE—Thor; extra wide.
STAND—Quick action; extra strong.
SADDLE—Mesinger or Troxel.
FINISH—Dark green with light green panels; four coats, hand rubbed and baked. Unusually attractive. All bright parts heavily nickeled and polished.
TOOL KIT—Large metal box. Complete tool kit, tire repair outfit and pump with each machine.
PEDALS—Standard rubber. Three-piece crank hanger.

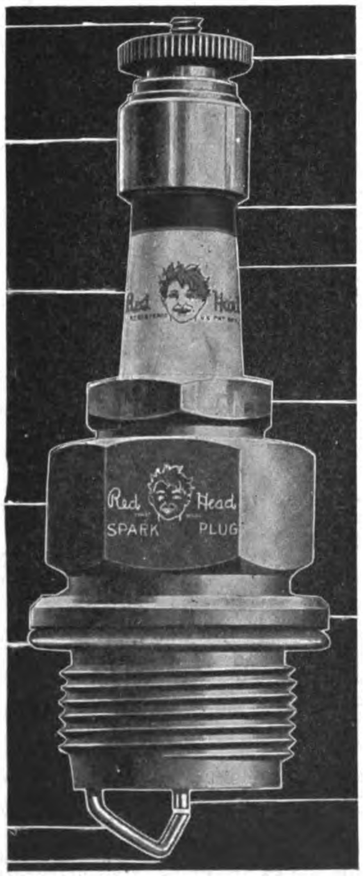
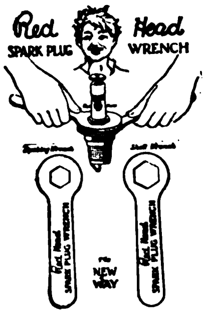
MAGNETO PLUG



Indispensable Spark Plug Wrenches FREE

Try to recall how many spark plugs you have broken by using big, clumsy wrenches to loosen the bushing and in taking plugs out of cylinders. RED HEAD SPARK PLUG WRENCHES with fixed openings fit the bushing and shell and cannot slip and break the porcelains. It is no longer necessary to use a vise to take plugs apart for cleaning. You can do it in your hands with RED HEAD WRENCHES. Every motorcycle rider needs them. Your dealer will give you a set FREE with every set of four RED HEAD Plugs.



I am a good motorcycle rider.

I am the plug that laughs at the heat—my porcelain is ***guaranteed not to crack.***

I am the companion to such good motorcycles as the Flying Merkel, New Era, Marvel, Henderson, M. M., American, and others.

No other spark plug has such a strenuous task cut out for it.

Other motorcycle manufacturers getting in line for 1913 is proof that I'm making good.

I am equipped for teamwork with highly-developed magnetos and I delight in demonstrating my mastery over an incorrigible carbureter.

Empire Motorcycle Tire

4,000 MILES

Mestly Tandem, Tee

A GOOD RECORD, CONSIDERING

Scranton, Pa., April 10, 1912.

Empire Tire Company,
Trenton, N. J.

Gentlemen:—I received my twin last summer, and after getting familiar with it I decided to spend my vacation touring New Jersey and New York States.

The total weight of my wife, myself and luggage was about 300 lbs., so I decided to place a 3¾-inch Empire on the rear wheel.

We found the tire very resilient and reliable on both the sandy spots in New Jersey and the hard State roads of New York State.

I have had no tire trouble in over 4,000 miles with the exception of a few punctures, which are a pleasure to repair with your butt-end inner tubes.

I shall ride on Empire Tires in the future.

Yours very truly,
WM. M. HORNLEIN,
845 Adams Avenue,
Scranton, Pa.

Do it now. They cost more—but wear longer. INSIST on your dealer and your factory using EMPIRE TIRES on YOUR machine.

R-S

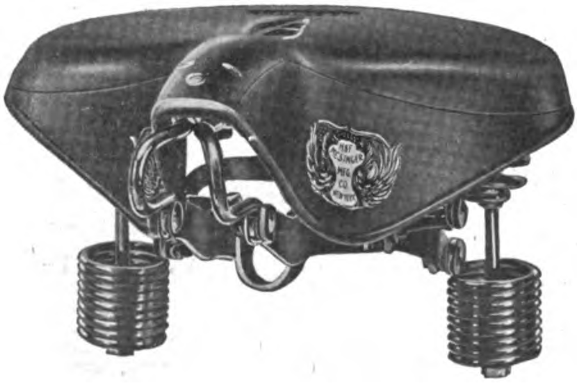
THE MESINGER IS THE IDEAL TOURING SADDLE

MESINGER CAVALRY No. 4, with open front, for lowest saddle position. The ideal seat for man or woman.

From the standpoint of maximum **durability** and maximum **comfort,** MESINGER SADDLES ARE IN A CLASS BY THEMSELVES.

Comfort

Comfort is insured by its **narrow pommel** —this means comfortable riding position at all times and prevents the rider from **sliding back;** front springs are absolutely indispensable when riding on rough roads—and they are fitted to Mesinger saddles without in any way sacrificing lowest saddle position obtainable. They retain their shape because they are hand padded by men who have made a life study of the proper making of saddles. **MESINGER Saddles are guaranteed to retain their shape.** Our patented shock absorber invites long trips and "irons out the road." It takes what the rider used to take.



STANDARD No. 4, showing open front for lowest position.

Durability

All frame parts on MESINGER SADDLES are made of steel. No castings are used. In no other saddle is such a high grade of leather employed. Our patent shock absorber, in addition to eliminating all road shocks, adds fifty per cent. to the life of the springs. **The Tops and Spring Parts on MESINGER SADDLES are guaranteed for one year.**

Our Tops are Stretched when formed, not afterward.

The narrow Pommel can only be obtained on Mesingers, which is the main feature in comfort.

MOTTO
"Ask the Rider and Watch Him Riding."

Be sure to have the name MESINGER on the saddle you buy or specify.

The greasiest grease made

The real test of a grease is not its looks or the feeling but its lubricating properties. SILEX is made to lubricate and last.

Continental-Erie Tires

Represent Concentration of Effort

BEFORE we started the MANUFACTURE of MOTORCYCLE TIRES we made a careful and comprehensive study of ALL THE MAKES on the market.

WE FOUND, after exhaustive experiments, that a large variety of treads DID NOT NECESSARILY IMPLY MERIT.

ON THE CONTRARY, we found that in producing VARIOUS designs of treads, several manufacturers SPENT TIME AND MONEY ON THE MOLDS which would have otherwise gone into the SELECTION OF HIGHER GRADE MATERIALS. In other words, they had to reimburse themselves for the EXTRA OUTLAY IN MOLDS by lowering the quality of materials used.

SO WE decided to CONCENTRATE our efforts. Way back in the dark ages of motordom, we had learned that the STUDDED TREAD, both from the standpoint of SAFETY AND DURABILITY, "put it all over" any other design of tread. The studs hold the road in a vise-like grip, and when worn down, then, and then only, begins the actual wear on the tire.

SO WE CHOSE the STUDDED TREAD and CONCENTRATED our years of experience in the making of high class automobile tires on ONE TREAD AND ONE QUALITY, the BEST. WE forgot prices in the selection of MATERIALS, and CONCENTRATED our ENTIRE ATTENTION on the making of this ONE STYLE.

HOW WELL we have succeeded is shown by the fact that every day observant manufacturers, jobbers, dealers and riders are writing to learn more about CONTINENTAL-ERIE TIRES.

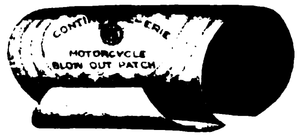
are on the same high order of merit as CONTINENTAL-ERIE TIRES.

In the manufacture of these accessories, we have anticipated the needs of the tourist in every particular.

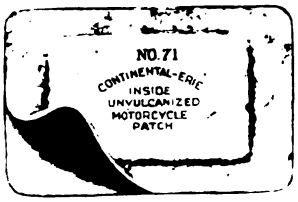
All our accessories are fully guaranteed.

NON-SLIP-LAG



The new lining for pulleys. NON-SLIP-LAG prevents tearing of belts, increases their life and affords additional power.

It is a well-known fact that the life of the belt is shortened at least one-half by either the burning of the belt, caused by slipping, or else by the deep ridges worn in it by screws in the pulley Lagging.



On the NON-SLIP-LAG there are no complaints of this kind as no screws or metal parts are required to hold Lagging on pulley and to come in contact with the belt. NON-SLIP-LAG can be applied to pulleys without removing the belt or pulleys in less than five minutes' time.

SHORT HANDLEBAR GRIP

CONTINENTAL-ERIE
MOTORCYCLE
REPAIR SLEEVE

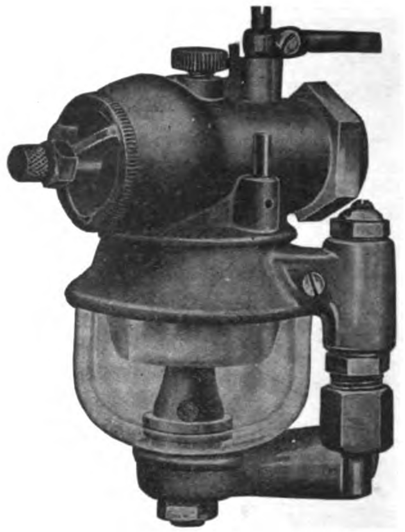
HEITGER

CARBURETER

1912



Model H—Price, ¾ in., $9.50; 1 in., $10.00.
Metal or Glass Bowl.

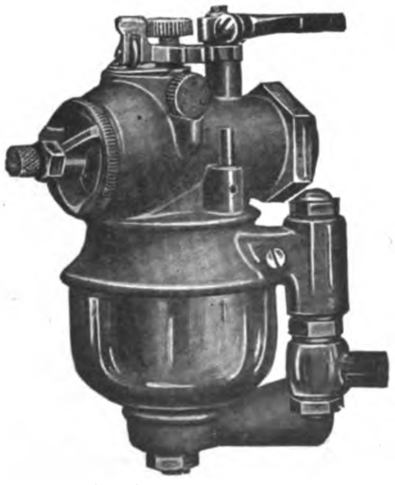
MODEL H, new type, has but **one** gasoline adjustment, but **two** feeds, one for high, one for low speeds, feeding from separate nozzles, giving maximum results at both speeds and intermediate with simplicity and reliability. No amount of vibration can affect it. Any speed easily adjusted and **stays** adjusted. Satisfaction guaranteed on **any** make of machine; adopted by manufacturers for 1912.

MODEL G-D, is our double adjustment, or mechanical needle valve type, which has been used for two years by leading manufacturers and thousands of riders with best of satisfaction. As some prefer this we will continue to make it. Either type gives maximum results with minimum of fuel.

A FEW REMARKS FROM USERS

M. A. WESLING, Ludlow, Ky.—I want to say I am well pleased with carbureter bought for my Thor 4, and would have no other. Your guarantee to run motor smoother and with more power is well said. You couldn't give me my old carbureter I was using. Have increased the gear on my machine and it pulls better than with the smaller one used before.

MARSHALL MOTOR CO., Kansas City, Mo.—We wish to state that the Heitger is giving excellent satisfaction on the New Era and Greyhound, handled by us. The high and low speed adjustment and glass bowl are the best on the market.



Model G-D—Price $10.00.
Metal or Glass Bowl.

Dallas, Texas, April 8th, 1912.

H. A. SIMPSON, Dallas, Texas.—This is to let you know that I am riding a big powerful 8 h. p. twin cylinder motorcycle equipped with one of your Model G-D double adjustment carbureters.

I have tried three other makes of well-known carbureters, and find by actual experience on the road that the Heitger gives more power and speed, greater flexibility and is more economical than any other I have ever used or tested.

With the Heitger I have made a record of thirty-five miles on one pint of gasoline, this being done against a strong wind and on a rough, hilly road, with a big twin thrown into the bargain. I have also had the satisfaction of increasing the speed of my machine over twelve miles per hour, and while I do not claim that these things are world's records, let the fellows with the other carbureters beat it if they can, and under the same conditions.

FRED M. GIDDINGS, Galesburg, Ill.—I received the carbureter for my single Excelsior and find it absolutely O. K. in every respect. It is certainly a pleasure for me to say this after the continued trouble with the old carb.

Write for our 1912 Catalogue

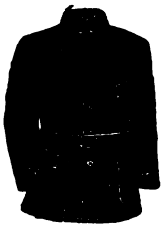
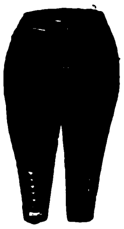
SPRING TOURING

Some riders use all their efforts and best judgment in selecting their motorcycle and then stop!!! Little do they think that half the pleasure of touring is the comfort of being properly equipped. To-day "Gentlemen" are riding and unless you want to be classed otherwise consider your appearance. Don't make the mistakes that others have made. Profit by their experience. Formerly they bought anything, but now they demand Nathan goods. They are not the cheapest but better than the best of other makes, and quality considered, they are the best values. The style, the perfect fit, the excellent wearing quality, the comfort found in Nathan goods are the points that count.

CLOTHING and LEGGINS

WE NOW MANUFACTURE LEGGINS AND CLOTHING AT PRICES TO FIT EVERY PURSE





Nathan's Motorcycle Suits

Our experts have used the same care in designing these suits as they have with all our products. The style, the perfect fit, the wearing qualities, the comfort found in these suits will agreeably surprise you.

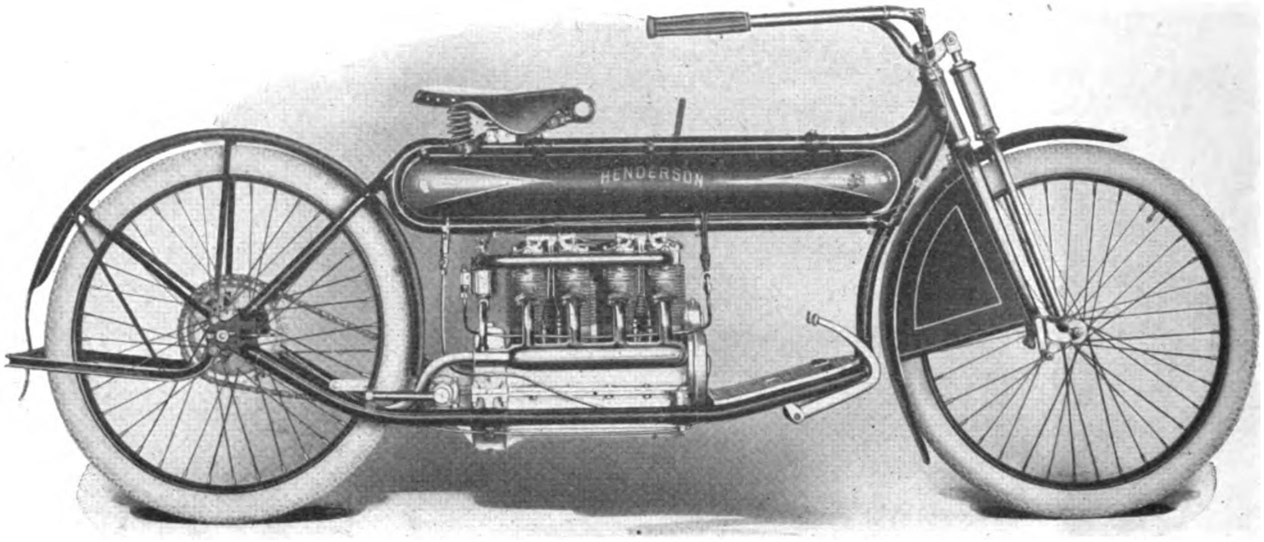
NATHAN NOVELTY MFG. CO., 84 A Reade Street, New York City, N. Y.

This tells you why the Henderson is actually without noise or vibration



The noiseless, vibrationless, 4-cylinder, 7 H. P. Henderson - $325

HENDERSON MOTOR CYCLE

Many motorcycle manufacturers have turned to the two-cylinder type in an effort to reduce noise and vibration.

But they have gone only part way; two cylinders produce little less noise and vibration than one.

Having four cylinders—and a motor as skilfully and carefully built as the finest automobile motor—the Henderson has achieved what many others have striven for in vain.

Its motor operates in absolute silence; it sets up no vibration because the four cylinders deliver power continuously instead of spasmodically.

But the advantages of this continuous stream of power do not end there.

You can throttle the Henderson to as low as five miles an hour; and still the motor pulls with steadinesss and strength.

You can jump the speed from five miles to the top limit so suddenly that it fairly "takes your breath away."

You have the greatest range of speeds —the greatest flexibility.

Combined with a long wheelbase, saddle well forward of the flywheel, low center of gravity and comfortable foot rest instead of pedals that places the legs forward of the motor and away from its heat, the Henderson gives the rider all the ease and comfort that ever will be possible in a motorcycle.

We want to hear right away from the dealer who can appreciate the tremendous sales possibilities of these exclusive Henderson features.

MAGNETO SIDE

HENDERSON MOTOR CYCLE

When we say the most perfect, we mean the most quiet, the most simple, the sweetest running, the most perfect cooling and the most powerful for its size.

And when you see it, and listen to its soft, sweet purr, and see how it pulls, even when throttled down to five miles an hour—there won't be a doubt left in your mind.

This motor and its continuous power permit us to use the strong-pulling chain drive.

Started with a crank, the motor is suspended low in the frame and the consequent low center of gravity gives the Henderson the maximum of safety at high speed and on turns.

Around this beautiful little motor we have built a machine in keeping with the high standard set by the motor.

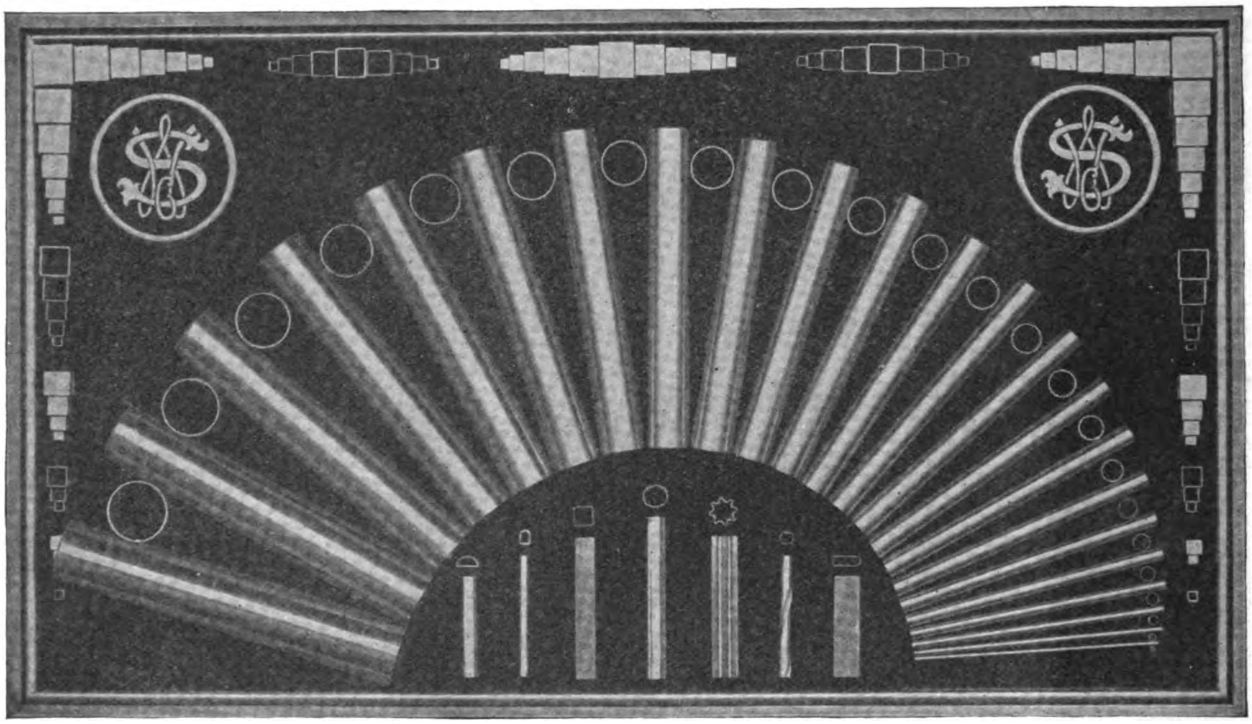
A machine of which the most fastidious rider can well be proud.

A machine that will never come into disfavor with the public because of a roar of gatling gun explosions.

A machine about which every prospective owner and every wide-awake dealer should know.

Write for the literature.

HENDERSON MOTORCYCLE COMPANY 264 JEFFERSON AVENUE
DETROIT, MICH.



"The Backbone of Your Machine is the Frame"

The ***strongest, lightest,*** most ***durable*** tubing made is "STANDARD" Steel Tubing.

To own a motorcycle with its frame made of "STANDARD" Tubing is to have an undying ***faith*** in your proudest possession.

It makes you ***know*** that you are ***safe*** when the other fellow's life is in jeopardy.

Speeding—Coasting—Touring—the frame must hold the ***vital*** parts of your motorcycle together—else you will not get where you want to go.

Tires may be filled with air—engine run perfectly—steering mechanism absolute in its operation—gas tank full—but a ***broken frame*** finishes your trip—put it into storage and walk—no other way will do.

The ***largest*** and ***best*** motorcycle manufacturers in the world use "STANDARD" Tubing. The ***holders*** of the world's time records and winners of endurance runs rode machines built of "STANDARD" Tubing.

When ***you*** buy a motorcycle just ask the dealer what kind of tubing is used in the frame—if he says "Standard" you need have ***no*** mistrust of the other parts because they're ***bound*** to be ***equally good*** and the men who use "STANDARD" Tubing ***guarantee*** their machines.

Over 40,000 people will become motorcycle enthusiasts this year because over 40,000 motorcycle frames will be made of "STANDARD" Tubing.

"STANDARD QUALITY"

SEAMLESS STEEL TUBING

NOTICE

There are no standard tubular parts for motorcycle frames. We manufacture tubular parts to blue print specifications and in quantities only and sell only to those to whom the design belongs.

We can, however, furnish to the trade at large, bicycle parts, such as **forksides, rear forks, rear stays,** *etc.; also the following motorcycle parts:* **Rims, pulley rims, mud guards, seat posts** *and* **straight lengths** *of* **tubing** *in quantities.*

If you are contemplating the building of bicycles or motorcycles send us your drawings and we shall be pleased to quote you prices.

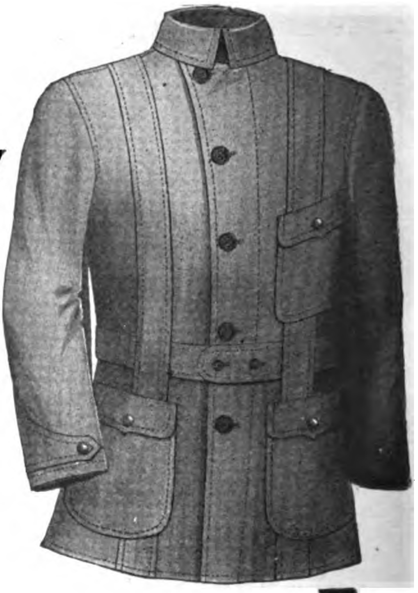
Strength in Every Fibre and Quality in Every Thread



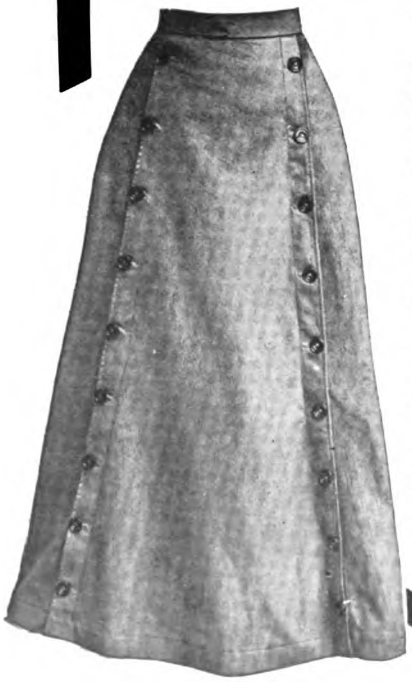
Style, Neatness and **Individuality;** these are the three important characteristics of AURORA BRAND Motorcycle clothing. Owing to the fact that it is cool, practical, light in weight, rain, dust and wind-proof, perfect-fitting, complete in workmanship and natural in outline

AURORA AURORA BRAND **BRAND**

Motorcycle Clothing

is the choice of discriminating riders throughout the country.

Motorcycle Clothing for Ladies



We wish to call attention to our ladies' clothing department, and particularly to the skirt illustrated here. This skirt may be used either for riding or walking purposes. The two divisions of the skirt are formed in front by a button panel and when worn this appears as an ordinary skirt. When it is desirable to ride, the front panel is unbuttoned at the left side, folded over and buttoned down the right side or removed entirely, as desired. We make a Norfolk Jacket to complete this habit, which is similar to our men's jacket. (See illustration.) These habits are symmetrical in outline, practical, smart, sensible and are the perfection of the tailor's art.

INDIANA LAMP CO. Connersville, Indiana

"PIGS IS PIGS"

BUT THERE IS A DIFFERENCE IN DROP FORGINGS

Most any old steel may be forged, but efficient service requires special steel, scientifically prepared for the particular purpose.

YALE drop forgings are made from "Arrow Tip" steel which we have selected after careful tests of everything in the market.

There is also a vast difference in the handling and treatment of the forgings after they leave the hammer.

Our drop forging plant is one of the largest and best equipped in the country, and we make thousands of special forgings of the highest grade for many of the biggest and best automobile builders in the business.

The YALE MOTORCYCLE naturally gets the best we can produce, which means the height of mechanical perfection in every detail, and YALE FORGINGS are largely responsible for the absolute dependability for which the YALE is famous.

REAL QUALITY—YALE QUALITY

begins in the forge shop and foundry and can be attained only when every detail of production is carried out in a single plant under unit management and inspection.

Write today for catalogue that tells the whole story of YALE PERFECTION. Four models—4, 5 and 7 horsepower. Prices, $210 to $285.

All Orders Shipped Same Day Received **DEALERS—Write For Our Proposition Today**

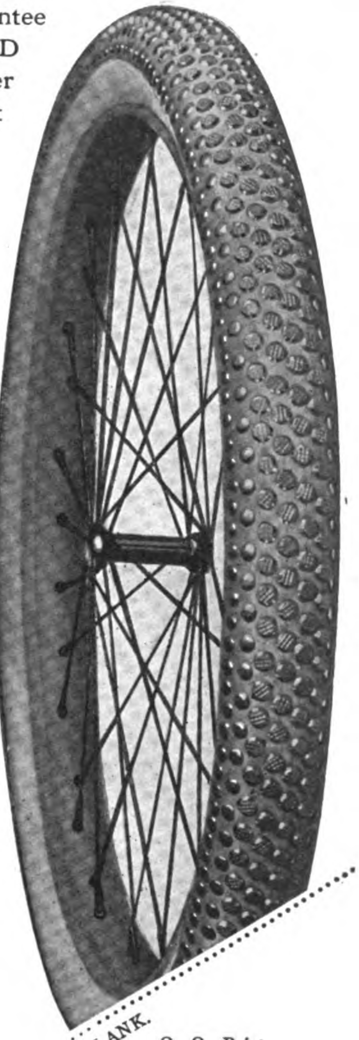
TIRE PROTECTION WITH A GUARANTEE

No longer is it necessary for motorcyclists to worry about PUNCTURES, BLOW-OUTS, GLASS CUTS, SKIDDING and unnecessary tire expense, which heretofore has MARRED the pleasure of all motoring—"BRICTSON" DETACHABLE TREADS will eliminate all this.

10,000 Mile Guarantee

SEND FOR COPY OF SAME



Yes, we will give you a 10,000 mile written guarantee with every "BRICTSON" MOTORCYCLE TREAD on a daily mileage basis of twenty-five miles per day. Can you get this kind of a guarantee on your rubber tires? Figure this guarantee out and you will see that it covers a period of 400 days.

Design and Construction

Made of select, specially prepared chrome tanned leather, soft and pliable, which gives with the "BRICTSON" the full benefit of the pneumatic tire. Studded on the surface with small neat-looking steel studs, designed to give perfect traction as well as a perfect "non-skid." There are layers of the best tire fabric between the layers of leather, which add strength and keep the tread from stretching. In addition to all these important features, the "BRICTSON" is lined perfectly smooth on the inside so there are no rivets or studs in contact with the rubber casing, making it impossible for the tread to injure the casing in any way.

The "BRICTSON" is the only scientifically constructed tread in that it CANNOT slip or slide on the rubber casing in ANY direction, owing to the patented, scientific method of fastening. It is held in position on the rubber casing by equal tension from all points of the circle, and for this reason may be adjusted to PERFECTLY fit the casing over which it is applied, which CANNOT be accomplished with any other method of fastening, and also envelops the entire casing, excluding sand, stones, mud, or even water from coming in contact with the rubber casing.

The "BRICTSON" is the ONLY TREAD THAT HAS PERFECT TENSION ADJUSTMENT FROM ALL POINTS OF THE CIRCLE, which other tread manufacturers have tried to imitate with metal contrivances that only detract from the appearance of the tread, add weight, and destroy the pneumatic feature, but still do not accomplish the desired result.

The "Brictson" Exclusive Patented Way of Fastening

The "BRICTSON" has no HOOPS, HOOKS, BUCKLES, SPRINGS, or any other unnecessary metal contrivances to add weight, break or eat into the rubber casing; neither is it cemented, laced, vulcanized, riveted or fastened to the rubber casing in any way—NATURAL INFLATION OF THE TIRE DOES THE TRICK—Simply clamped between the head of casing and rim—strictly Quick Detachable.

PRICES: One-half the price of a rubber casing and guaranteed three times as long. Compare the following prices:

26 x 2¼	$5.50	28 x 2¼	$6.50	28 x 2¾	$7.50
26 x 2½	6.00	28 x 2½	7.00	29 x 3	8.00

Other sizes on application.

Ask Your Dealer for "Brictson" Detachable Treads

Ask the best dealer in your town to show you the famous "BRICTSON" Guaranteed Detachable Tread. If for any reason he cannot supply you, fill out the attached ORDER BLANK, pin your check to same, mail it, and I will ship you the treads on TEN DAYS' FREE TRIAL, and if you don't find them perfectly satisfactory within 10 days from receipt of treads, return them and I will cheerfully refund your money. OLD SOL No. 1

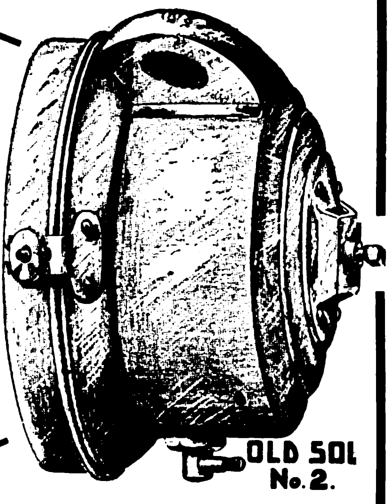
"Old Sol"

"Makes the Sun Work Overtime"



OLD SOL No. 2

Some Reasons for "Old Sol's" Supremacy

LIGHT PROJECTION

"Old Sol No. 8" has a light throwing capacity of 1,500 candle-power—superior to a great many and the equal of any automobile headlight. That's because of our specially ground dioptic lens which is a feature of our line.

CONSTRUCTION

Made of heavy gauge brass throughout, with high grade dioptic lens specially ground to our order. A strong point is the bracket arrangement, which enables lamps Nos. 1, 3 and 8 to be attached to every machine sold in the United States and Canada.

DURABILITY

While heavily and staunchly constructed, the "Old Sol" line of lamps is lighter than any other lamp on the market. All our lamps are re-inforced at points most susceptible to wear.

PREST-O-LITE

"The Light Universal"

Ask Any Experienced Motorcyclist

He will tell you the advantages of Prest-O-Lite on your machine.

One accident on the road at night, due to poor light, costs many times the price of Prest-O-Lite.

If you are going to ride after dark, don't trust to the poor, unsatisfactory, unreliable light of a generator.

Don't get any "imitation" lighting system that is not backed by complete service.

Don't experiment. Don't take chances. Profit by the experience of thousands and get Prest-O-Lite—

When you buy your machine

Insist Upon Prest-O-Lite!

It is the ONLY gas tank that is backed by universal service.

If you are a "stay-at-home," the chances are you don't need *any* light on your machine.

But if you are going out on the open road—if you are really to realize the joys of your motorcycle—you must have service.

You will find Prest-O-Lite Exchange Stations in practically every city, town and village in the country. 15,000 agencies that guarantee you service no matter where you go.

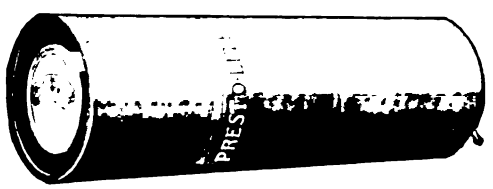
And one point more—the best time to get Prest-O-Lite is when you buy your machine.

Ask the dealer how much it will cost you to have Prest-O-Lite put on.

If you want any further information about Prest-O-Lite we will gladly send you our Motorcyclist's Booklet, showing how the small tank is easily attached to any machine. Ask for it today.

Price of Tank $10

EQUIPPED WITH GAUGE.



Dimensions: Length, 13¼ inches; diameter, 4 inches; weight, 8¾ pounds.

Our Handy Rule and Gasoline Gauge sent on request. Measures gasoline in tank; flexible for measuring tires, etc.

FISK

MOTORCYCLE TIRES

These are a one-quality product. They are not offered on a low price basis but they will average more mileage than other tires can give.

Motorcycle tires have to meet the same road conditions as automobiles, but spare tires cannot easily be carried. Hence motorcycle tires must be exceptionally tough and durable.

We have a type to suit every need, a tire for every road condition—for wet, slippery pavements, for muddy roads, for dirt, board or cement tracks.

Fisk Tires will give better service under severer conditions than any other standard high grade tires. They are hard to puncture. The great majority of dealers sell them.

TOURING

Count the miles—then figure the cost

Right now, at the beginning of the season, when it is just as easy to select one brand of tires as another bear in mind this fact—

Actual tire value is the *only* thing that can determine actual tire cost

Next Fall, when you are laying up your machine, you won't be particularly concerned about the first cost of your tires *if* the service-cost for the season has been satisfactory. It is a foregone conclusion that this service-cost will ***not*** be satisfactory unless you start with tires into which have been built the maximum of service-yielding qualities. You cannot hope to get more out of your tires than the manufacturer puts into them.

United States Motorcycle Tires

are the product of co-operative factory methods absolutely unprecedented in the history of tire making. Think what it means in mileage economy to have incorporated in ***one*** brand of tires ***all of the strong points*** of two such famous brands of tires as G & J and Morgan & Wright.

This is what you ***actually get*** in United States Motorcycle Tires.

There can be no question about the ultimate economy of buying tires made as these tires are made.

Why not try them?

THE BEST ROADS IN NEW ENGLAND

This map affords riders in Connecticut, Rhode Island, Massachusetts, Vermont, New Hampshire, Maine and also Southeastern New York and Northern New Jersey their choice of scores of tour circuits of from fifty to five hundred miles each.

NEW ENGLAND TRIPS

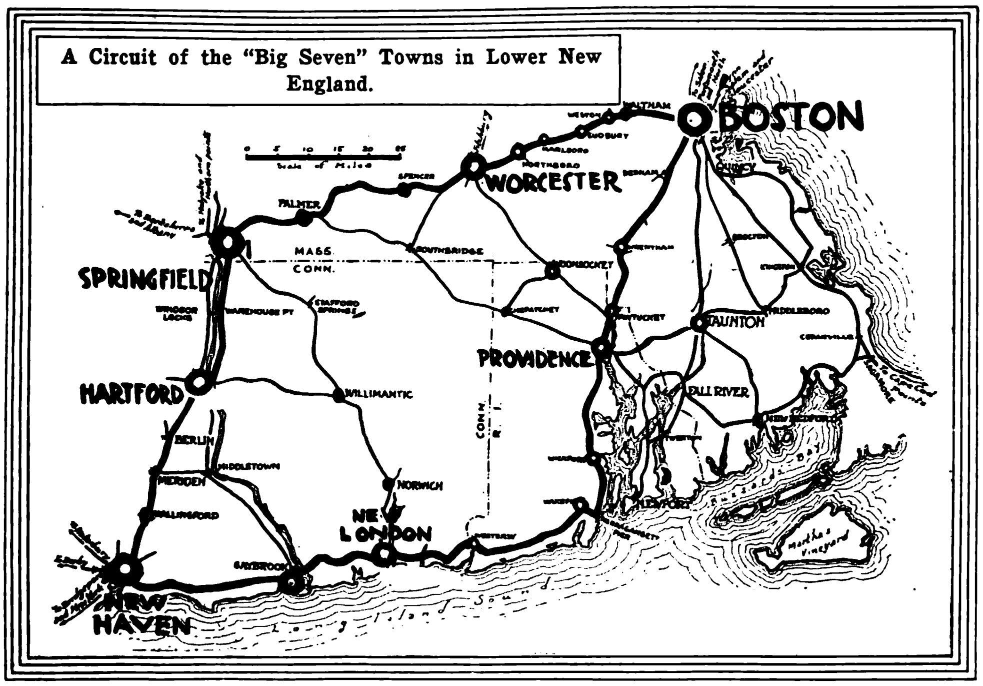
Few sections of the country are richer in historical interest or more bountifully supplied with features calculated to charm the observant motorcycle tourist than New England. Dotted with bustling manufacturing cities and liberally sprinkled with quaint towns, some of which have not even been jostled in the march of civilization for more than a century, this region holds out its lure for the tourist of practical bent as well as the romanticist. It does not lack variety. On one hand is the mammoth factory from which your shoes come; just over yonder hill may nestle a cottage which echoed to the battle-cry of patriots when history was in the making and a mile to right or left mansions and broad estates may give a suggestion of old-world magnificence. Always there is pleasing scenery, mostly over rolling country but sometimes bordering on the rugged.

Boston offers many special points of interest. No tourist should overlook a visit to Boston Common, a 48-acre park of great historical interest in the heart of the city; one of the features in the Common is the Soldiers' Monument. On Beacon Hill stands the State House, also well worth a visit; just below the State House in Beacon street a tablet indicates the site of the old Hancock mansion, and in this section of the city there are many handsome public buildings. The Custom House, Faneuil Hall, the Old South Meeting House, the Museum of Natural History, the Massachusetts Institute of Technology and the Museum of Fine Arts are easily reached, and should not be passed without inspection. In short, a ride through Boston and its environs will gain in interest at every turn. The roads in this section are good, as a rule, garages are plentiful and hotel rates are reported to be moderate.

Cambridge, the seat of Harvard University, is not without its attractions. After inspecting the University buildings the tourist may visit the Common, featured by the Soldiers' Monument and a number of handsome statues. Craigie House is another point of interest. It was occupied by Washington in 1775-76 and was the home of Henry W. Longfellow from 1837 till his death. In Mt. Auburn Cemetery are the graves of many famous men, among them Longfellow, Lowell, Josiah Quincy, Agassiz, Phillips Brooks and Oliver Wendell Holmes. The Charles River Speedway, on the south bank of the Charles river, is one of the finest drives in the district. The rider who makes a side run over into Charleston should see the Bunker Hill Monument, visit the navy yard and the birthplace of Samuel Morse, inventor of the electric telegraph. Short trips may be made to Nantasket Beach and Paragon Park, amusement places on the outskirts of Boston. Other favorite resorts within easy riding distance of Boston are Newton, Revere Beach, Arlington Heights and Middlesex Falls, and longer runs may be made to Concord, Lexington, Providence and Newport.

Providence and Newport are never overlooked by the tourist in Rhode Island. Narragansett Pier is an unfailing source of amusement and interest, and the hundreds of palatial residences in these places also attract the visitor. Hingham is a quaint Massachusetts town, worthy of more than passing attention, and Plymouth holds out as its prime attraction Plymouth Rock, landing place of the Pilgrims. Joseph Jefferson, the internationally famous actor, is buried at Sandwich, Mass.; Provincetown is an ancient fishing village where the town crier is still in evidence; Salem overlooks a good harbor and has two crumbling forts; Swampscott is a seaside resort with charming combinations of rocky bluffs and sandy beaches; Gloucester is a typical New England fishing town whose fisherfolk furnished the characters for Kipling's "Captains Courageous"; Waltham is a busy manufacturing city and Somerville is the seat of Tufts College; New Bedford, Dartmouth and other towns in the Buzzard's Bay district, are best known for their fisheries.

The motorcyclist touring New Hampshire who finds himself in the vicinity of Exeter should visit Phillips Academy, which has numbered among its pupils Daniel Webster, George Bancroft and Edward Everett. Concord, the capital city, has several spacious parks and fine drives; Manchester, the largest city is chiefly interesting as a manufacturing center. The tourist in this State will not find the special features so closely crowded as in Massachusetts, but the scenery shows greater variety and particularly in the Lake Winnipiseegee region it has touches of rugged beauty, lapping over, as it were, from Maine. While the latter State does not always offer good roads for the motorcycle tourist it amply repays those who include it in their touring routes. Old Orchard has one of the finest bathing beaches in New England, and should not be overlooked on a visit to Maine. From Portland, the largest city, pleasant runs may be made to Riverton Park, Falmouth, Foreside, Underwood Springs, Cape Cottage Park and the twin lighthouses on Cape Elizabeth. One of the most pleasant outings over a longer route is to the Bay of Naples. Casco Bay is a yachting center, crowded with pretty wooded islands, and there are many similar resorts, all rich in scenery. Running along the Kennebec river to Iceboro the tourist will find the largest



A Circuit of the "Big Seven" Towns in Lower New England.

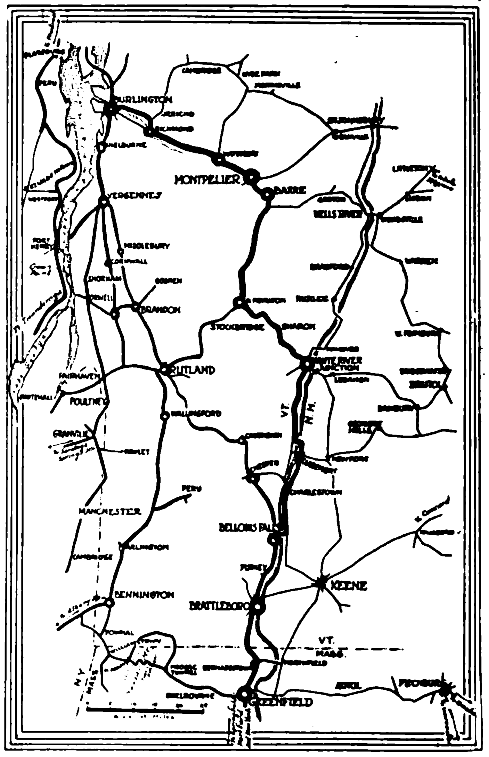
ice-houses in the world. Numerous interesting side trips may be made from Augusta which lies on both sides of the Kennebec river. In Bangor the tourist will do well to look into the lumber industry, this city sawing and shipping no less than 150,000,000 feet of lumber annually. From Bar Harbor the visitor may go over the Ocean Drive to Schooner Head, Great Head and the Otter Cliffs, a 12-mile round trip.

At Rumford Falls the Androscoggin river descends 180 feet in three leaps, affording a spectacle of unusual beauty. The scenery throughout this entire district is impressive. The Rangeley or Androscoggin lakes, a group of half a dozen small bodies of water, are well-known show spots in Maine. Many hunting and fishing clubs have their headquarters in this section, and the tourist-sportsman need not remain idle. If possible a run should be made to Moosehead Lake, from which a view of Mt. Katahdin may be had in clear weather. It is for its scenery that Maine will be remembered by the tourist and a camera will prove a valuable addition to the luggage pack.

All the main touring routes in Vermont take the motorcyclist through beautiful country. In the western section of the State many resorts on the shore of Lake Champlain offer attractions, and there are scores of picturesque small towns in which the tired tourist may find hospitality throughout the central district. The roads are hilly in many places, but they are fairly well kept and in good weather the run through Vermont should not prove the least enjoyable feature of a New England outing.

Connecticut, like Massachusetts, offers a pleasing combination of busy manufacturing towns and drowsy villages. In the former the tourist may see some of the world's best-known metal products being prepared for the market, and the latter afford opportunities for restful observations in ideal surroundings. New Haven is the seat of Yale University, and Hartford, the capital city, is beautifully laid out. The latter has a number of fine parks and drives calculated to attract the motorcycle tourist. In touring New England it is advisable to provide for stops at all the larger cities so that full benefit may be derived from the scores of side trips which are possible. This suggestion applies with particular force to Massachusets, New Hampshire and Vermont as many of the most entrancing views and other features lie only an hour's ride off the general touring lines.

As many of the routes are hilly a 2-speed machine will add to the rider's enjoyment.



From Vermont to Lakes George and Champlain.

Twenty-five Interesting New England Tours

1. Augusta, Me., to Moosehead Lake via Bangor, 163.5 Miles.

Fair Dirt and Good Gravel Roads.

0.0 Augusta. 6.9 Riverside. 11.9 Vassalbow. 19.1 Windslow. 19.4 Waterville. 22.7 Fairfield. 23.2 Benton Sta. 25.0 Benton. 29.5. Glens Falls. 106.6 Wilton. 115.2 Saratoga.

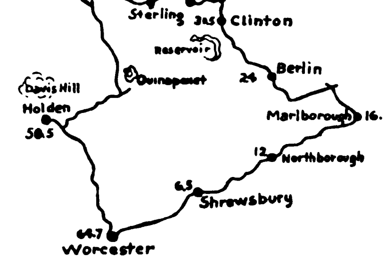
BOSTON TO SPRINGFIELD.

GO out Beacon street in Boston to Commonwealth avenue and follow the latter through Newton. Follow main road through Wellesley to Natick; about three miles out of latter city take left hand road to Framingham. Go to Westboro, to N. Grafton and to Worcester, taking left turn in going out of Lake View. From Worcester follow car tracks to Leicester; cross tracks and climb Leicester hill to Spencer. Pass through Spencer to W. Brooksfield to Palmer. From Palmer go through Ludlow and Indian Orchard to Springfield.

This route may be reversed for the return trip, as there is ho better one between the cities mentioned. Roads from Boston to Worcester are excellent outside of the streets through small towns, which are quite rough. The roads follow the car tracks for a great part of the distance, so that no difficulty should be experienced in keeping on the route. The tracks cross the pike at several points, and there are some sharp turns. The road from Worcester to Springfield is fair for about 30 miles, and the balance is excellent. Some steep hills, but should be climbed without serious trouble. Good hotel accommodations in Worcester and Springfield; rates $1 to $2 a day. Many good restaurants. Two good repair shops in Worcester and several in Springfield. Between Worcester and Springfield railroad tracks cross road in several places, and care should be exercised.—*Submitted by John N. Burford, of Brookline, Mass.*

A MASSACHUSETTS TRIP.

A CIRCUIT out of Worcester, Mass., of about sixty-five miles, is contributed by Edwin E. Aldine, who gives the following directions: Ride from Worcester to Shrewsbury, passing Lake Quinsigamond about three miles out, and taking the road on the left where the Marlboro, Boston and Worcester car lines separate. Proceed to Northboro over the same State road and follow the Marlboro and Worcester car line into Marlboro. At the end of the car line on Lincoln street take the road to Berlin, pass through Berlin, Clinton, the outskirts of Lancaster, Sterling and Princeton, north of which is Mt. Wauchusett. Returning to Princeton take the State road going south of Worcester, passing through the scattered villages of Quinatoxet, also near Holden Center. The total distance is 64.7 miles. The road from Shrewsbury to Northboro is in fine condition, affording splendid riding, that district being quite interesting from a scenic point of view. Near Marlboro not a little dust is likely to be encountered. Beyond Princeton the mountain road is rather steep. Motor vehicle regulations are strictly enforced here, and only at certain times in the day is the passage way quite clear. The best time to attempt the climb is between noon and 3 o'clock. The points of interest include the American Steel & Wire Company's plant, the largest of its kind in the world; Clark College and Worcester Poly, all in the city of Worcester. On the outskirts is a water resort. From Shrewsbury an excellent view may be had of the surrounding country. From the summit of Wauchusett, on a clear day, the Boston habor, forty-four miles away, can be seen through a telescope.



IMPORTANT.

IN the office of MOTORCYCLE ILLUSTRATED *we have on file detailed road directions for each one of the 340 tours given in this issue. Riders desiring to make any of these trips are invited to write to us for complete information. Simply mail us a postal, giving the number of the tour you contemplate making, and complete road directions will be forwarded as soon as possible.*

TURLOCK OFFICERS.

FOLLOWING a successful banquet recently the Turlock (Cal.) M. C. elected Louis Patterson as its new president; Arthur Swanson, vice-president; R. E. Shelton, secretary-treasurer, and Oscar Swanson, captain. The club is affiliated with the F. A. M., and is steadily increasing its membership.

LAWRENCE OFFICERS.

JAMES HOUK is president; A. B. Carter, vice-president; W. Byron Wentling, secretary; A. J. Hess, treasurer, and L. J. Tower, publicity man, of the newly organized Lawrence (Kan.) Club.

ZANESVILLE RACE MEET.

EARLE GARRETT, William Williams and P. R. Brehmer are making arrangements for a race meet to be conducted under the auspices of the Zanesville (Ohio) Club at the Fair Grounds on Decoration Day.

WINONA HAS A CLUB.

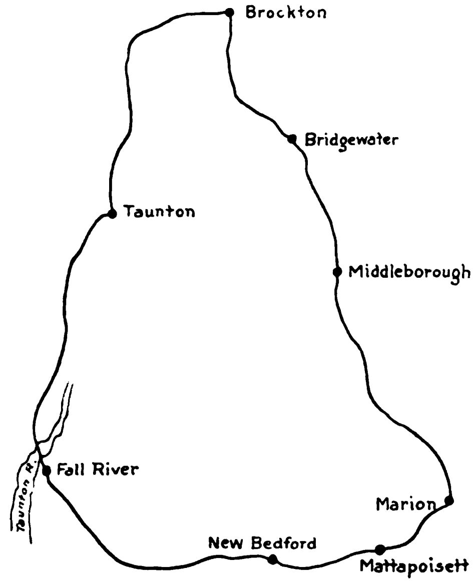
WINONA, MINN., now has a club. At a recent meeting of riders in that town at the shop of R. E. Haesley, J. P. Jensen was chosen president, and Haesley as secretary.

The Calgary (Alberta) Club is arranging for a run to Banff on May 24, 25 and 26.

According to present indications Ansonia, Conn., will soon have a motorcycle club.

A BAY STATE TOUR.

ON Sunday, April 28, I had the pleasure of touring with a party of five brother F. A. M. members from the City of Spindles, Fall River, Mass., to Taunton, where we made



our first stop after an eighteen mile run over a very good macadam road. Leaving Taunton we rode northward on a direct road to Brockton via Eastern Centre. From Brockton we went by way of Bridgewater and Middleboro and over the well-known Swamp Road to Wareham. We then made the thirty-two miles without trouble into Marion and thus on to New Bedford. This section abounds in beautiful scenery, while the road conditions are perfect. From New Bedford to Fall River the distance is fifteen miles, making the total for the circuit one hundred and eight miles. I earnestly recommend this trip as one of the finest in New England, if not in the entire country.—*Submitted by Dr. C. M. Green, Fall River, Mass.*

PROVIDENCE CLUB'S ANNUAL HERRING RUN.

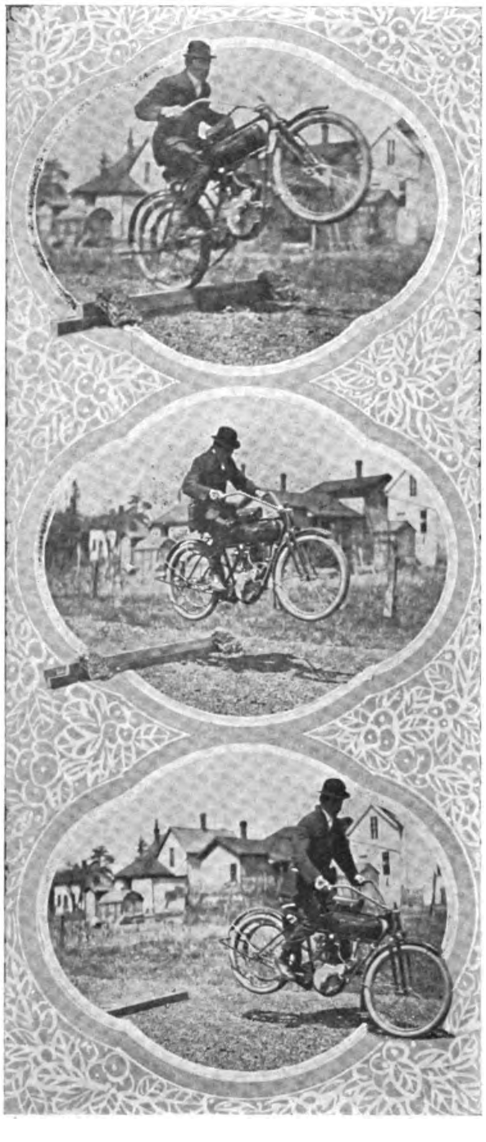
NO less than 125 motorcyclists of Providence, R. I., and vicinity participated in the annual Herring Run of the Providence M. C., held on April 28, and the outing proved one of the most successful in a long string of enjoyable runs given under the auspices of the squad. The riders gathered at Exchange Place in Providence at 10 a. m., and a few moments later Captain C. A. Anderson gave the word which started the brigade chugging on its way to Taunton. The club was joined by small parties of riders at several points along the route, and before Taunton was reached the squad numbered nearly 200 enthusiasts.

Nearly all the Providence riders turned out in their new club uniforms, Norfolk jackets, breeches of olive Fustian cloth and puttees. When they pulled into Taunton they were met by a large delegation of riders from Boston, Lynn, Brockton, Fall River, New Bedfard and Attleboro. After viewing the herring going up the fishways in the Taunton River the riders returned to Taunton, where B. A. Swenson, the Providence clubs' popular treasurer, had his usual treat for the boys. A fine lunch was served by Mr. Swenson at the headquarters of Felix Beauvais, Indian agent in Taunton, and no less than 300 riders were on hand for the refreshments. When the engines had been tuned up and Swenson cigars were in full blast the riders departed in squads for their various towns, and the Providence party swung out over the road again for home. The annual Herring Run opens the touring season for the Providence club, and has come to be one of the most important outings of the year.

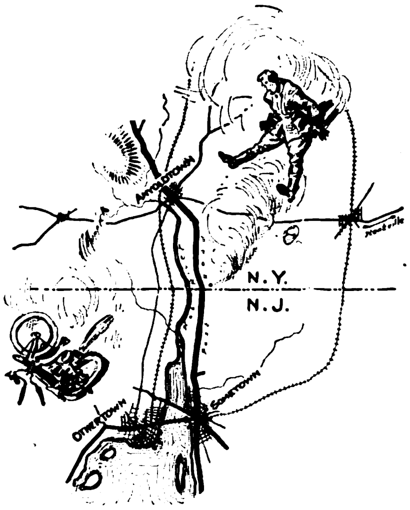
New members are now being taken into the Providence ranks at every meeting, and all the expectations of the officers are being exceeded as far as growth is concerned.

HURDLING WITH MOTORCYCLE.

THAT the sturdiness of Flanders motorcycles is put to an extreme test before the machines leave the hands of the testers is proved by the accompanying photographs, which show M. Marcel Krieger, of the company's testing squad, taking a hurdle. Krieger is a Frenchman, as his name implies, and before taking up motorcycle engineering he gained some fame as an aviator. The pictures indicate that he still has a hankering to fly. Krieger originated the 4 by 8 scantling test for the Flanders forks, and goes through the stunt almost daily. He approaches the scantling at good speed and bounds into the air about two feet upon striking it.



AN OBSTRUCTION



"I'd Like to Get Hold of the Fellow Who Ran the State Line Over That Road."

"NOISY" TRADEMARKS.

EDITOR MOTORCYCLE ILLUSTRATED:

Now that we are well into the biggest year the motorcycle trade in this country has known we cannot afford to overlook any point which may have a bearing on the future. Admitting this, is it not about time to consider our system of trademarking machines? This is a matter which is now receiving attention from hundreds of buyers and prospective buyers, and, insignificant though it may seem, it has an influence upon sales.

At the beginning of the 1911 season a prominent automobile maker applied his trademark in gold to the hood of his car. The signature was but two inches long—insignificant compared with the size of the car—but protests were received from all parts of the country. These objections show what close buying conditions have been brought about by competition in the automobile field, and they also give a hint of value to motorcycle builders.

No one who knows the conditions doubts that this is motorcycle year. Selling is easy just now, when the supply does not meet the demand. Later, when the reverse is the case, sales will hang on minor points. Over-noisy trademarks will be one of these. One evening last week the writer overheard a prospective buyer (a doctor), who was inspecting a certain motorcycle, remark that he would buy it "if the manufacturers would pay him for his services as a sandwich man." The machine under consideration had a signature in gold a foot long.

To show just how absurd the tank-sign trademark is: Suppose the tire, magneto, belt and saddle makers insisted upon placarding the equipment they supply with signs in proportion to the tank mark, which is seldom less than four by six inches! The modest plate on the head and the transfer on the rear mudguard are legitimate and even desirable, but the "all-who-read-may-run" display on the tank is objectionable. What may find favor with some "rah-rah" spirits is bound to prove offensive to conservative taste and hurt the sport. We need the conservatives in our ranks, and their desires are worthy of consideration at all times. This is a little point, perhaps, but of such opinions are made.

Toledo, Ohio. N. R. THURSTON.

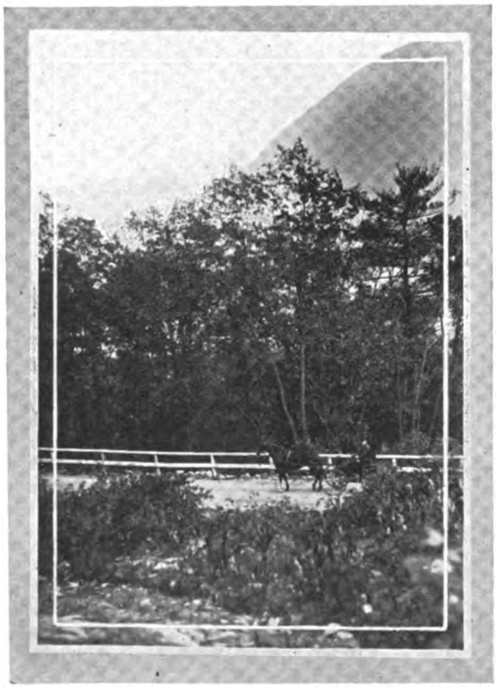
EMPIRE STATE TOURS

LYING as it does in the path of practically all the main eastern touring routes New York State offers the motorcyclist extraordinary conveniences in the way of road posting, hotel accommodations and garage facilities, and these combined with its myriad resorts, its lake frontage on the west and its scenic beauty throughout the Catskill and Adirondack mountain regions bring it well to the fore as a vacation ground for the tourist. Some of the most attractive routes carry the motorcyclist through the Catskill Mountains, for which the main gateways are Kingston and Catskill, both located on the west bank of the Hudson and easily reached from New York City. The Catskills are an outlying group of the great Appalachian system, running parallel with the Hudson river for 15 miles, at a distance of about eight miles from its west bank. Their picturesque scenery, cool and healthy atmosphere and easy accessibility make these mountains a popular summer resort, and as a result good hotels and boarding houses sprinkle the entire district. Many of the mountain streams afford excellent trout fishing.

The chief gateways to the Adirondack Mountains are Utica, Plattsburg, Port Kent, Westport, Malone and Saratoga. The whole of this district, sometimes referred to as the "Adirondack Wilderness," is densely covered with forest, much of which is still virgin and the scenery possesses a tone of solemn grandeur which comes as a surprise to the tourist after his comparatively short run from the city regions. In the mountain valleys lie many beautiful lakes, offering inducements for the fisherman as well as the casual sightseer. It is in this section that the combination of mountain, lake and forest is at its best. All kinds of camps are to be found near the touring routes, ranging from the luxurious bungalow to the makeshift but comfortable lean-to. Hotel rates vary greatly, but it is reported that satisfactory accommodations may be obtained at a reasonable figure, particularly if the tourist is willing to make his stops just outside the lines of the big resorts. Upper Saranac Lake, 7½ miles long, is one of the largest sheets of water in the district. Small steamers ply to and fro on it, affording the tourist an opportunity to break the monotony of the road by a short boating trip. Lower Saranac Lake, 5 miles long, is sprinkled with 52 islands and is a favorite summer and health resort. In the village of Lower Saranac are the Berkeley, Von Dorrien and Riverside hotels, all first class, but a trifle steep on rates. One or two-day stop-overs may be arranged, however, in more modest accommodations and with proportionate prices. As automobile travel has been heavy through this region of late years all the main roads are well marked and are kept in fair condition.

Lake Placid is a favorite boating and fishing center in the Adirondacks, and Keene Valley, in its combination of the gentler and sterner beauties of nature and its convenience as a starting point for all kinds of excursions, is one of the best known headquarters in the mountains. The valley is traversed by a good road. A most popular trip out of Keene Valley is to Ausable Lakes, and it should by no means be omitted. For the tourist who wishes to discard his motor temporarily and go in for mountain climbing there are opportunities on every hand; some of the most exhilarating climbs may be made without guides.

Saratoga Springs, one of the best-known inland watering places, is situated near the eastern edge of the State and 180 miles from New York City. The famous saline springs are about 30 in number. Saratoga Springs has no unusual scenic or commercial advantages, but the tourist cannot afford to overlook it. It was here that Sir John Burgoyne surrendered to the American army in 1777 after a memorable battle. The hotels of Saratoga afford accommodations for about 20,000 people. The visitor at Saratoga should, of course, sample the famous spring water which is sold at nearly all the spring-houses for five cents a glass, but it should not be indulged in too freely without medical advice.



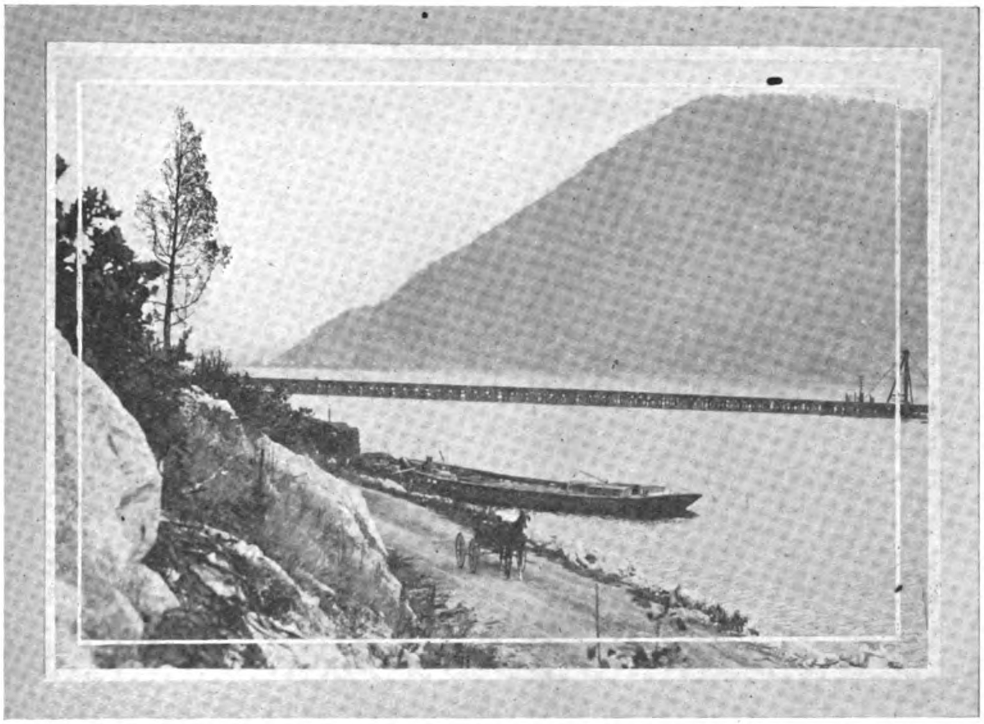
New York State Road Near Anthony's Nose.

After sightseeing in the Adirondacks the tourist will do well to turn his attention to Lake George, which lies to the southeast of the mountains. This fine body of water is 33 miles long and three-quarters of a mile to three miles in width. It is flanked on both sides by wooded mountains which sometimes descend to the water in bold crags, and many pretty little islands dot it —220 in all. As Lake George is a favorite summer resort there are many hotels on its banks and the tourist should find it easy to satisfy all his wants. Fishing for lake-trout, perch and bass is a popular pastime and boating excursions are daily features during the summer. Much romantic interest attaches to the lake because of the part it played in the books of Fenimore Cooper, and it is also rich in historical data. The picturesque ruins of old Fort George may still be seen. It was from this point that General Abercrombie started with his fleet on the disastrous expedition against Fort Ticonderoga in 1758. Several days or a week may be spent to advantage in this section, and the interesting side trips are practically unlimited.

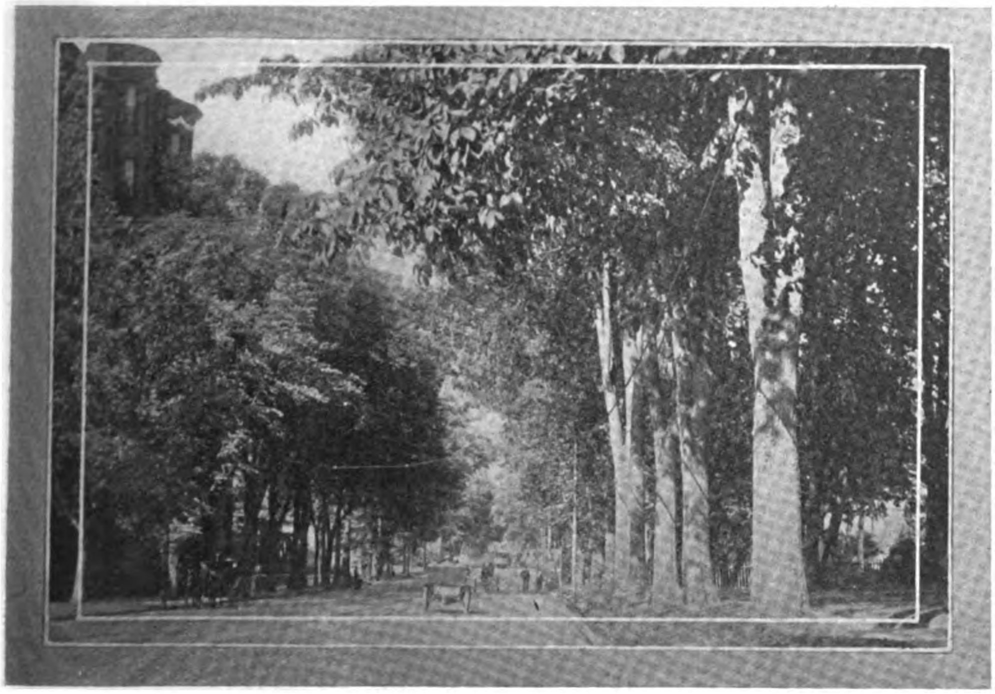
Lake Champlain, 118 miles in length, is another of the beauty spots of the Empire State. Its shore-line is indented by scores of pretty little bays and inlets, and the surrounding scenery is deeply impressive. Fort Ticonderoga, located on the west side of the lake at the foot of Mt. Defiance, should be visited without fail. Its story is one in which history and romance are woven most alluringly. Crown Point, near Ticonderoga, is surmounted by a lighthouse and the ramparts of the famous old fort. In this region there are amusements and accommodations to suit every inclination and every purse. The roads as a rule are fair, during the summer, and the touring routes are well marked.

For the motorcyclist who makes his way westward across New York State there are many points of scenic and historical interest. At Little Falls the Mohawk river makes several pretty little leaps and the houses cling picturesquely to the steep and rocky sides of the defile. The Mohawk here descends 45 feet in half a mile. The gorge affords an excellent opportunity of studying the crystalline rocks of the Laurentian formation, part of the oldest dry land on the surface of the globe. Utica is the headquarters of the American cheese trade. Genesee street is a beautiful thoroughfare which is certain to appeal to every motoring tourist. On the route between Utica and Ogdensburg the rider views the Trenton Falls which are not as widely known as their beauty and grandeur warrant. At this point the West Canada or Kahnata (amber-water) creek forms a highly picturesque ravine with abrupt, rocky sides through which the water descends 310 feet in two miles. There is a charming series of five falls and innumerable rapids. Here the motorcycle tourist should temporarily abandon his mount and descend to the floor of the ravine where striking views of the falls may be obtained. Half a day may well be spent in this vicinity.

On the line from Utica to Binghamton one of the points of interest is Richfield Springs. This village nestles at the head of pretty Candarago Lake (boating and fishing), and is much frequented for its picturesque scenery and for its sulphur springs. There are good roads leading around the lake. On reaching Syracuse the tourist should inspect the buildings of Syracuse University, which has 3,200 students. Between Syracuse and Rochester the rider has a good view of Lake Onondaga to the right. He will pass through a beautiful pastoral district and cross the Erie canal several times. At Palmyra, near this point, Joseph Smith, the Mormon prophet, claimed to have found the golden plates of the Mormon bible. At Auburn the State prison (1,200 convicts) may be visited. W. H. Seward, Secretary of State during the Civil War, lived in Auburn and is buried in Fort Hill Cemetery.



Along the Hudson; Anthony's Nose in the Background.



Genesee Street, Utica, the Home of Vice-President Sherman.

As the tourist proceeds westward he will pass through a rich farming country, dotted with quaint little towns and here and there marked by a manufacturing city. Rochester is a city of fine residences, lively manufacturing interests, beautiful drives and spacious parks. At this point the Genesee river plunges over two falls. Flour mills and breweries are among the largest manufacturing plants. Hotels, restaurants, theatres and garages are plentiful. Buffalo is primarily a commercial city, its location fitting it to handle much of the traffic from the great Northwest. Lumber, grain and live stock are among the chief articles of trade. It has acres of beautiful parks, broad streets, costly residences and beautiful statues. Among the latter is included the McKinley monument. One of the show places of the city is the Albright Art Gallery. Numerous resorts dot the Buffalo shore on Lake Erie and the Niagara river, and fine boat trips may be enjoyed. From Buffalo fair roads lead in all directions.

A comparatively short run from Buffalo over fair roads brings the tourist to Niagara Falls, the country's greatest scenic offering and one of the world's wonders. So much is known of the great falls that only passing reference need be made to them. The motorcyclist may ride from the city of Niagara Falls out to Goat Island and Luna Island just at the brink of the cataract. Little or no walking is necessary. Later he may cross the suspension bridge into Canada and view the falls from the Canadian side if he cares to go through the red tape which will be unwound by the customs officials. The visitor should make a trip to the foot of the falls on the steamer *Maid of the Mist*, and should also go down into the Cave of the Winds beneath the great American falls. The tourist will not be bothered by vendors or other graft-seekers as these matters are now regulated by the government.

Just where the St. Lawrence river flows into Lake Ontario are the Thousand Islands, among the most popular of the country's resorts. Needless to say these islands are dotted with hundreds of amusement places, hotels and camping colonies. The rider who makes his way to Cape Vincent, Clayton or Alexandria Bay will be within easy reach of them as these places are on the New York bank of the St. Lawrence, opposite the islands. The scenery is an ideal combination of water and mountain views. Fishing and boating are favorite pastimes.

For the tourist who makes his way southward in the southeastern section of the State the Hudson river offers many fine views. He may spend a day profitably in Albany, the capital city, and also give up some time to Cohoes and Troy. Proceeding down along the river he will find fair to good roads, well marked, and plenty of handy stopping places. On arriving in New York City the traveler should obtain a city guide and thus make arrangements to visit such of the show places as interest him, not overlooking the Brooklyn Bridge, the Hudson and East river tubes, Metropolitan Museum of Art, Central Park, the Natural History Museum and St. Patrick's Cathedral.

STATUS OF NEW YORK RIDERS IN JERSEY

Assistant Attorney General Rules That Motorcyclists of Empire State Are Entitled to Full Touring Privileges Under New Reciprocity Law if They Carry Any State Registration Tag.

UNDER the recently enacted motoring reciprocity law in New Jersey motorcyclists of New York who carry registration tags of any other State will be eligible for full touring privileges. This decision is embodied in an opinion just rendered by Nelson B. Gaskill, Assistant Attorney General for New Jersey, and made public through J. B. R. Smith, New Jersey Commissioner of Motor Vehicles. The special ruling with reference to New Yorkers was made necessary by the fact that they are not obliged to carry licenses or registration tags in their own State, and because a question was raised as to how they could be brought within the scope of the new reciprocity statute. The decision of Assistant Attorney General Gaskill simmers down to the statement that all outside riders touring in Jersey must show a registration mark, and as New York State does not supply any the Empire motorcyclists must obtain them from New Jersey or a neighboring State.

The decision referred to was given in reply to a communication from Chairman J. Leo Sauer, of the F. A. M. National Committee on Legal Action, who was in receipt of many inquiries from New York riders as to their present standing in New Jersey. It is addressed to Commissioner Smith by the Assistant Attorney General, and is in full as follows:

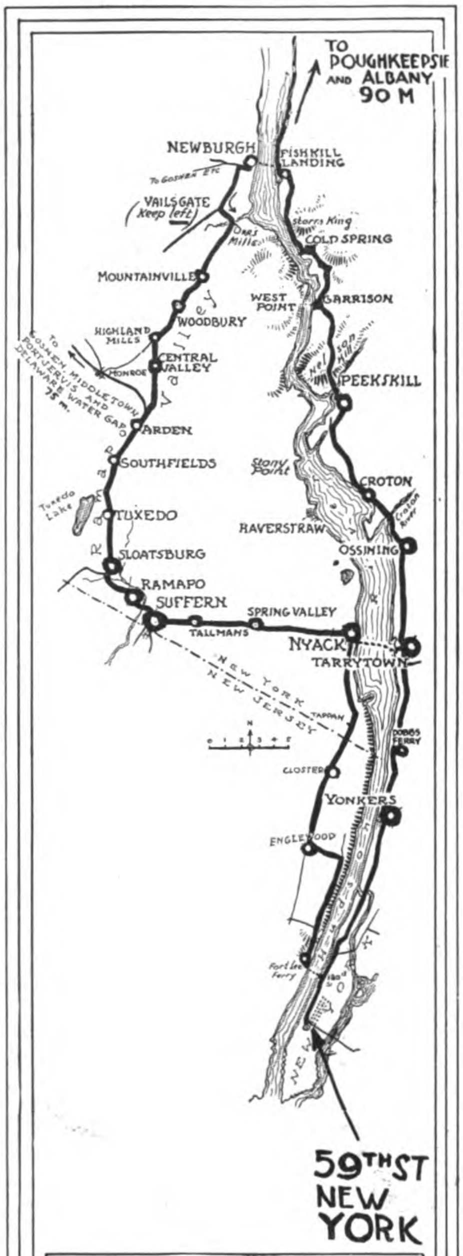
"J. B. R. Smith, Esq., Commissioner of Motor Vehicles, Trenton, N. J.

"Dear Sir: I am replying to your letter of April 18, in which you state that a question has been raised as to whether New Jersey should require that motorcycles belonging to residents of New York should be registered in New Jersey. I note that you have ruled that inasmuch as New York does not require either registration or the display of markers on motorcycles, that New Jersey will be compelled to adhere to its original law, and the reciprocity law cannot apply.

"An examination of the statutes leads me to concur in the conclusion which you have reached and announced. Paragraph 7 of the act of 1912 gives free entry for fifteen days into this State by any person with a motor vehicle which has been registered in, and the owner whereof has complied with all the laws of the State in which he resides with respect to the registration of motor vehicles and the display of registry numbers, and who shall conspicuously display such registration number as required thereby. This seems to contemplate, undoubtedly, that a motor vehicle which may be driven in this State under the provisions of this act shall have been somewhere registered, and by some official authority received an identification number, which shall be displayed when such vehicle is driven in this State. Since New York apparently does not require the registration of motorcycles and issues no identification number to them, it is impossible for such a vehicle to enter this State under the provision of the law referred to and comply with its terms, because such New York motorcycle has no identification number which may be displayed. Such motorcycles, therefore, not being within the purview of the recent statute can secure rights or privileges in this State only under the prior statute requiring registration.

"The act under which the eight-day privilege was formerly granted seems to have been distinctly repealed by the act of 1912.

"NELSON B. GASKILL,
"Assistant Attorney General."



NEW YORK CITY TO MONTREAL.

Two routes to Newburgh, one on each side of the Hudson, are shown above, the balance of the journey northward to the old Canadian town being indicated in the three maps of the opposite page.

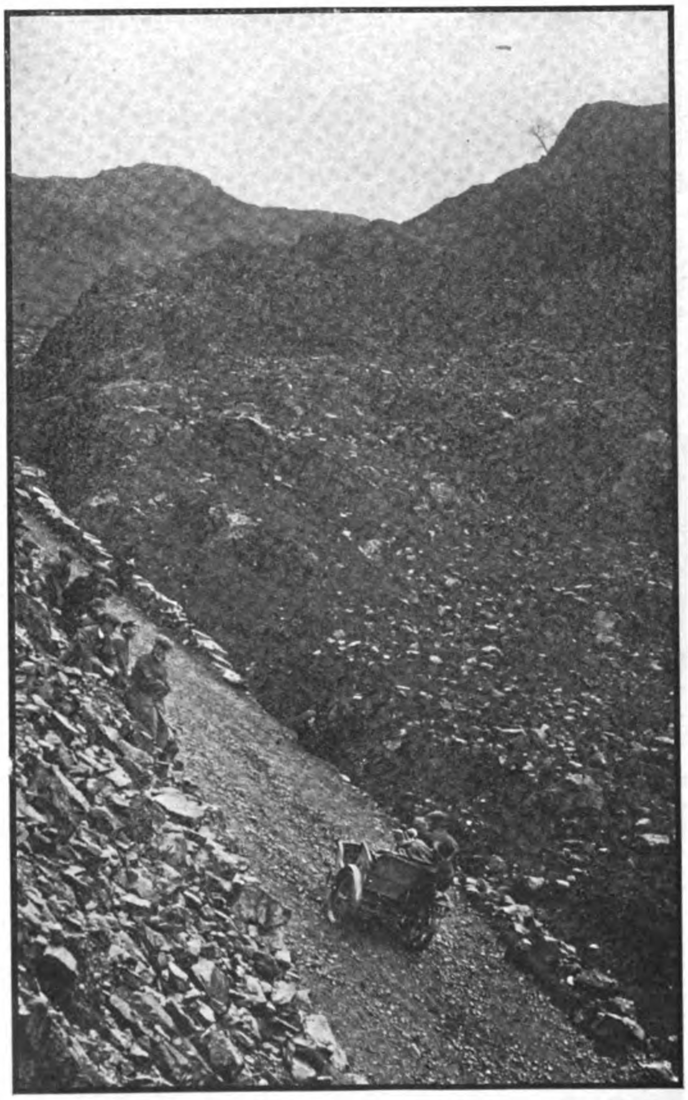
TACOMA OUTINGS.

ARRANGEMENTS have been made by the Tacoma (Wash.) M. C. for a run to Centralia via. Grand Mound Prairie and return via. Tenino on May 26. The route covers about 130 miles. On April 14 the club held a run to Olympia; on April 28 a trip was made around the lakes, to Steilacum Asylum, Dupont, Hillhurst, Roy and return via Mt. Tacoma road, and on May 12 the club riders went to Buckley, Enumclaw and Deep Lake, returning via. Auburn. Beginning May 1 the club entered upon a series of night runs, one to be held every Friday evening, starting from Wright Park at 8 o'clock.

UP HONISTER PASS.

THAT all British roads are not level boulevards will be seen by reference to the accompanying photograph, which shows C. R. Collier, the well-known Matchless crack, climbing the 1-in-3 grade of Honister Pass, in Cumberland, England. The road is very popular with coaching parties, who leave the sprags down while they make the ascent, and the surface is therefore badly cut up. Collier used a single-geared twin Matchless, and his passenger stayed aboard during the entire ascent. American riders who are hesitating about fitting side-cars for fear that with the attachment they will be unable to negotiate steep hills should be convinced that, properly attached and equipped, the sidecar outfit will go anywhere that the wheels will hold. We are indebted to Messrs. H. Collier & Sons, Ltd., of 44 Plumstead road, Plumstead, London, for the photograph, etc.



C. R. Collier Taking Honister Pass.

INDIANA MEET.

A BIG meet of motorcyclists is planned to be held at Gary, Ind., some time next month. The purpose is to get together riders from all parts of Indiana in order to promote co-operation among Indiana motorists. The idea is being worked out by President Snyder of the South Bend Club.

IN NEW JERSEY AND PENNSYLVANIA

NEW JERSEY and Pennsylvania offer the tourist a remarkable range of scenery and points of interest; in a day's run westward from the sandy beaches of the Jersey coast the traveler may climb into the mountains of Pennsylvania and look upon Nature in some of its most rugged and inspiring aspects. The rapidity with which the transition can be made from the comparatively flat shore region to the mountains contributes in no small way to the general charm of touring by motorcycle in these States. Not without justification has the Lehigh Valley in eastern Pennsylvania been referred to as "The Switzerland of America." At many points along the main routes sheer walls of rock, hundreds of feet high, meet the eye of the tourist; almost every stream, however small, has its rapids and miniature falls; rocky grottoes indenting the mountainsides are approached by winding roads which lead the explorer to dizzy heights and always there is the soothing, distant view of mountain rising behind mountain.

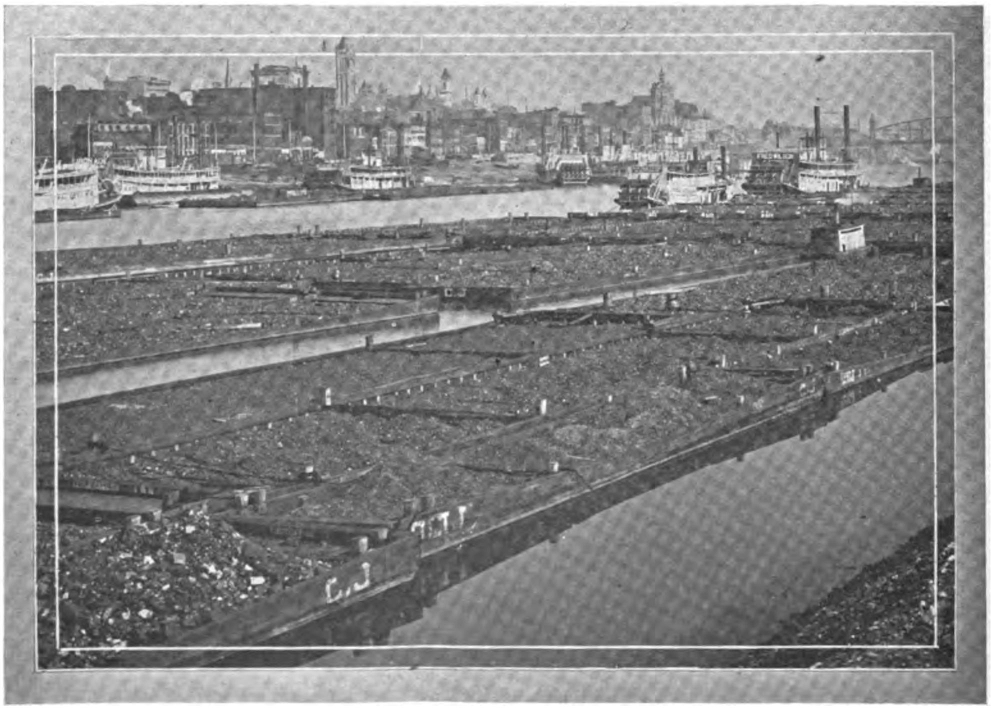
Throughout the valley there are excellent facilities for fishing, hunting and camping. Little villages nestle precariously on the mountainsides and at the base of the mountains, much after the fashion of crag-shadowed Swiss towns, and on all sides there is hospitality for the thoughful tourist. As might be inferred, the roads of eastern Pennsylvania are never of the boulevard type, although many of the best-known lines of travel are well kept. The rider in this region must expect hills, plenty of them; but it is safe to say that every climb has its compensations.

Philadelphia has many points of historical interest and not a few fine buildings. Fairmount Park is one of the show places, and this with numerous well-kept drives, will gladden the heart of the motoring visitor. Among the most popular sight-seeing points are the Betsy Ross House, Independence Hall, the Quaker meeting house, Girard College, the Quaker burying ground, the League Island navy yard and the zoological gardens. Going north from Philadelphia the tourist will pass Norristown, Allentown and a number of smaller places on the road to Bethlehem. The latter point is the American center of the Moravian Brothers, who settled there in 1740 under Count Zinzendorf. Many of the old Moravian schools and other buildings are still extant, offering features of unfailing interest for the visitor. Lehigh University, located above the town, ranks high for its work in engineering and metallurgy and is well worth an inspection. Its library contains 90,000 volumes. Bethlehem is also interesting as a manufacturing town, the Bethlehem Steel Co. (3,500 men) turning out a large quantity of armor plate and heavy ordnance. Silk-weaving and the manufacture of brass, zinc, steel and iron products are carried on extensively, and these plants are usually open to inspection. Throughout this entire district iron works are plentiful and interesting, although they do not improve the scenery. Slatington is the outlet for the most extensive slate quarries in America.

Mauch Chunk is one of the best-known resorts in the eastern section of the State. It is picturesquely situated on a rocky shelf on the brink of the river, with mountains towering behind it, and is visited annually by thousands of tourists because of the natural beauty of its location. The one great amusement feature in Mauch Chunk is the Switchback or gravity railroad, over which cars are drawn up on one side of the mountain to coast nine miles on a winding trip down the other side. The fare for the round trip is 75 cents. There are a number of good hotels and restaurants in Mauch Chunk. Linked closely with this town in the minds of Pennsylvania tourists is Glen Onoko, a beautiful little glen, traversed by a stream which makes a series of picturesque falls. The scenery here is rugged and unusually impressive. Motorcyclists will find heavy going through this section, but if the roads are at all presentable the rider should not forego viewing the scenic features which rise on all sides.

Wilkesbarre is the chief town in the beautiful Wyoming Valley. It is on the bank of the Susquehanna river and owes its prosperity mainly to the rich coal mines in the vicinity and to its manufactures of wire-rope, lace curtains and silk. The rider who passes through the fertile Wyoming Valley will find many points of interest, among them the obelisk marking the site of Fort Forty where the battle was fought which preceded the Wyoming massacre. Indian allies of the British at this point ravaged the valley and slaughtered no less than 300 men, women and children. One of the features pointed out in the valley is Queen Esther's Rock, where a half-breed queen of the Senecas tomahawked 14 defenseless prisoners. About 18 miles to the west of Wilkesbarre is the picturesque Harvey's Lake or Lake Shawanese, and in the same vicinity is beautiful Ganoga Lake. These lakes afford ideal stop-over points for the motorcycle tourist who wishes to make the most of the country through which he is passing. Hotel accommodations are good, and, as a rule, the rates are reasonable. Roads are only fair at best.

Williamsport is a



The Pittsburgh Water Front.

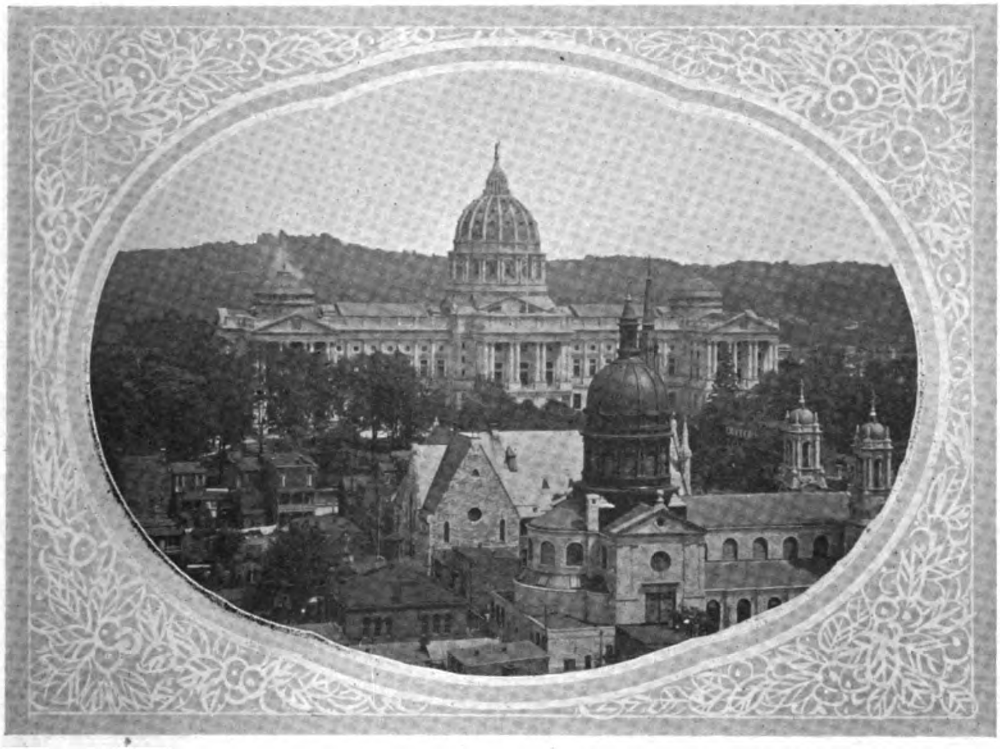
busy commercial city, chiefly engaged in the timber trade; Reading is known for its iron-making and Pottstown, Allentown, Lebanon, Shenandoah, Lancaster, Pittston and Shamokin all hold out inducements for the tourist who is capable of enjoying a combination of scenic and manufacturing interests. Harrisburg, the capital city, is featured by well laid out streets and parks and a number of handsome buildings. The new capitol, rebuilt some time ago at an outlay of $13,000,000, is one of the finest structures of its kind in the East. Visiting tourists should see the grave of John Harris, father of the founder of the town, and the stump of the tree to which he was tied by drunken Indians who meant to burn him alive. The grave and the tree relic are in Harris Park. At Harrisburg the Susquehanna river is crossed by four bridges.

To the southwest of Harrisburg the tourist will find Carlisle, seat of the government Indian training School Carlisle was Washington's headquarters during the "Whiskey War" of 1794, and it was captured by General Lee in 1863. Nearly every small town in this district has contributed in some way to history and the region is rich in war-time data. Hagerstown, just over the Pennsylvania line in Maryland, was a seat of military operations in the Civil War, and should not be overlooked by the tourist. One of the most fertile and widely cultivated farming sections of the State is the Juniata Valley. The scenery along the Juniata river, as the tourist crosses ridge after ridge of the Alleghenies, is of the most picturesque character. The story of this region is interwoven with historical reminiscences of the Scotch-Irish colonists who had to contend with the Indians. Huntington, the largest town on the Juniata river, occupies the site of "Standing Stone" where the Indians assembled for centuries to hold their councils. There is never failing interest in Johnstown and its surroundings. In 1889 this town and its inhabitants were wiped out by the bursting of a huge dam, above it, about 3,000 lives being lost. This catastrophe was made possible by the fact that the town is hemmed in by the high walls of the valley.

Forty miles to the southwest of Harrisburg lies Gettysburg, the scene of what is regarded as the chief battle of the Civil War. It may be reached over good roads. The battleground covers about 25 square miles and lies mainly to the southwest of the town. There are over 400 monuments on the field, erected with the utmost care as to localities, and more than $7,000,000 has been expended on the monuments and grounds. Several iron view-towers have been erected at the highest points. This battleground is probably better marked, both topographically and by art, than any other in the world.

Many manufacturing towns dot the western section of Pennsylvania and in this region oil is plentiful. In many districts the scenery is striking, but it rarely compares with that which features the Lehigh Valley in the eastern section. The country is rolling and often hilly with fair to poor roads. Hotels are not of the best except in the few large cities, but satisfactory accommodations can usually be obtained.

Turning his back on Pennsylvania and crossing the Delaware river the tourist finds himself in New Jersey, a State which crowds many points of manufacturing and historical interest into its comparatively small area. Trenton, Bordentown, Germantown, Camden, Princeton, Burlington, Paterson, Newark and Elizabeth are places which have war-time landmarks, but the interest of the casual tourist will probably run to the amusement resorts which mark the eastern shore of the State. The best known of these is Atlantic City, famous for its boardwalk and its fine hotels. It is the most frequented of American seaside resorts. Favorite side trips are to South Atlantic City over the Beach Drive (5 miles), to Longport, to Ocean City and over the New Boulevard to the mainland, an excellent road for motoring and driving. The Absecon lighthouse, 60 feet high, is open to visitors, and Brigantine Beach, an island to the north, may be visited by boat. Fishing and wild fowl shooting may be enjoyed close to Atlantic City, and the Country Club, near Pleasantville, includes excellent golf links, tennis courts and a polo field among its attractions. Five piers, ranging in length from 1,000 to 2,500 feet, extend into the ocean from the boardwalk and on them such attractions as roller skating, concerts and net-hauls are popular.



The Pennsylvania State Capitol in Harrisburg.

Ocean Grove is a well-known coast resort which was founded in 1870 by an association of the Methodist Episcopal Church. It is visited by thousands of persons yearly who elect to spend their summer vacations under the strict religious regulations of the place. It is worth a visit, but will provide no excitement for the tourist. Asbury Park is a prosperous town which has at least 50,000 visitors annually. It is largely frequented by those who object to the strict religious management of Ocean Grove, but who still desire a comparatively quiet resort. Sea Bright is one of the liveliest resorts on the coast and Point Pleasant is another popular watering place. Long Branch, taking its name from the long branch of the Shrewsbury river, draws many tourists annually. The original village lies inland about a mile, but the resort proper occupies a bluff looking out upon the sea over a remarkably fine beach. The chief amusements here are boating and fishing. Fine roads give the motoring visitor an opportunity to make the most of the vicinity. Few tourists overlook Lakewood on their trips through New Jersey. This little town nestles among the pines and is a favorite health resort. Georgian Court, the George Gould home, is the chief point of interest. Roads throughout this district are sandy, but usually negotiable without great difficulty. Lakehurst and Barnegat harbor summer colonies, and should be visited if convenient. Cape May City, on the extreme point of Cape May, is a small edition of Atlantic City.

Riding northward along the coast the tourist will find many quaint little fishing towns and a number of summer colonies. The roads are fair and the scenery pleasing, although not striking. This shore road may be followed to Perth Amboy from which point a ferry runs to Staten Island, giving easy access to New York City. Should the tourist turn to the northwest from Perth Amboy or a more southerly point he will encounter improved scenery as he approaches the Orange mountains. In the neighborhood of The Oranges there are excellent roads and fine estates. Princeton, seat of Princeton University, will well repay a visit, as will Paterson, one of the most productive silk-weaving cities in the country.

Roads in general throughout New Jersey are good, with some sand and a little clay in the central and southern districts. Some of the finest stretches are found along the eastern shore, which is followed by motorcyclists and automobilists in great numbers as they make their way from northern points to Atlantic City and adjacent resorts. Garages are plentiful.

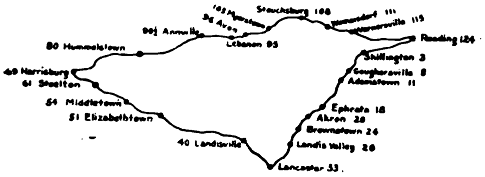
READING TO HARRISBURG AND RETURN.

START from Reading and pass through Shillington (3 miles) over State road to Ganglessville (8 miles), to Adamstown (11 miles), to Ephrata (18 miles), to Akron (20 miles), to Brownstown (24 miles), and into Landis Valley (28 miles). This part of the route is through rolling country, and is fairly good. There is a good-sized hill between Akron and Brownstown, but it should cause no serious trouble. Most of the roads in this district have a clay base and afford good riding when dry. From Landis Valley the route extends to Lancaster (33 miles), to Landisville (40 miles), to Elizabethtown (51 miles), to Middletown (54 miles), to Steelton (61 miles), and into Harrisburg (69 miles). The road from Landis Valley through Lancaster to Landisville is over a good pike. Between Elizabethtown and Middletown there is a macadam road, fair to poor, but the scenery is excellent. At Steelton the rider gets his first glimpse of the Susquehanna river.

At Harrisburg the homeward trip is taken up. From the capital proceed over the Lebanon and Reading pike through Hummelstown (80 miles), to Annville (90 miles), to Lebanon (95 miles), through Avon, Myerstown, Stoughtburg, Womesdorf and Wernersville into Reading. The total distance is about 124 miles. The latter section of the route has a few hills, but the pike is in fair condition and the grades should cause no trouble. While there are points of interest in nearly every town along this route the motorcyclist will derive his greatest satisfaction from the scenery which is inspiring at times and always pleasant.—*Submitted by I. D. Gechter, Reading, Pa.*



TWO FLANDERS WINNERS.

IN the first endurance run which Flanders "4" motorcycles have ever entered they carried away two perfect scores. The event was the 200 mile reliability contest from Brooklyn to Southampton and return, under the auspices of the Invincible Club. Only two Flanders motorcycles were entered; they were ridden by Fred Voelker and Eugene Miller, both private owners.

A JAPANESE RIDER.

FRED L. BROWN, manager of the Pacific Coast branch of the Pierce Cycle Company in Oakland, Cal., reports that the motorcycle is rapidly gaining in popularity among the Japanese of his district. The accompanying photograph shows H. Fujii, of Alameda, Cal., a Pierce rider who has made some long trips over California roads. Fujii experienced no difficulty in getting "the hang" of his mount, and in this connection Manager Brown states that the Japanese riders take excellent care of their machines. They are willing to pay a fair price, but are exacting buyers, and look into the features of their prospective mounts with great care.

H. Fujii, Alameda, Cal.

WISCONSIN CLUB'S FIRST RUN.

THE inaugural run of the Wisconsin Motorcycle Club will be held June 2 to Chicago and return. The F. A. M. championships at Hawthorne track will be contested on that day, terminating a four-day race meet held by the North Shore Motorcycle Club of Chicago. Much local interest is being shown, and many unattached riders are expected to make the run with the Wisconsin club.

Milwaukee followers of the sport will also have an opportunity to see the speed boys in action at the State fair track on June 8, the racing board announcing that date as the first of a series of races to be held there this summer.

EARLY TRAINING.

IN the accompanying photograph a nephew of Caesar Haravey, an enthusiast of Douglas, Ariz., is shown occupying the saddle of his uncle's machine. The lad, who is only three years old, insists upon playing around the motorcycle a great part of his time and is never so well satisfied with life as when he can view it from his perch in the saddle.

NORTHWEST NEWS.

ANNOUNCEMENT has been made by the Tacoma Automobile Club that races will be held on the prairie near Tacoma, July 5 and 6, and the club has given permission to the Tacoma Motorcycle Club to hold races on this new course July 4. It is expected that a number of motorcyclists from the large centers in the Northwest will take part in these events.

Theodore Tremper, Flying Merkel agent in Seattle, has remodeled his salesrooms and repair shop, the latter being fitted with free lockers, free work bench and tools for Merkel riders, which they are permitted to use at any time. A large bulletin board has also been installed.

At the present time there are upward of 500 motorcycles in use in Seattle. Between 200 and 300 machines are now ridden in Tacoma, and by the end of the present season this number will probably be doubled.

YOUNGSTOWN, OHIO, wants more rigid law enforcement and has added a motorcycle for the use of one of the police.

YOUNGSTOWN CARRIERS.

GAD DAVIS and James Ockerman, who appear in the accompanying photograph—Davis on the left—are the recently appointed delivery carriers for the post office in Youngstown, Oho. They are mounted on Emblem machines, Davis using a single and Ockerman a twin. The machines were purchased from Henry W. Hagen, Emblem agent in Youngstown. During the daylight rush hours both men will be on duty, and they will take shifts in handling the deliveries at night. As their trips take them to all parts of the city and suburbs, they often encounter bad going, but their machines have given no trouble.

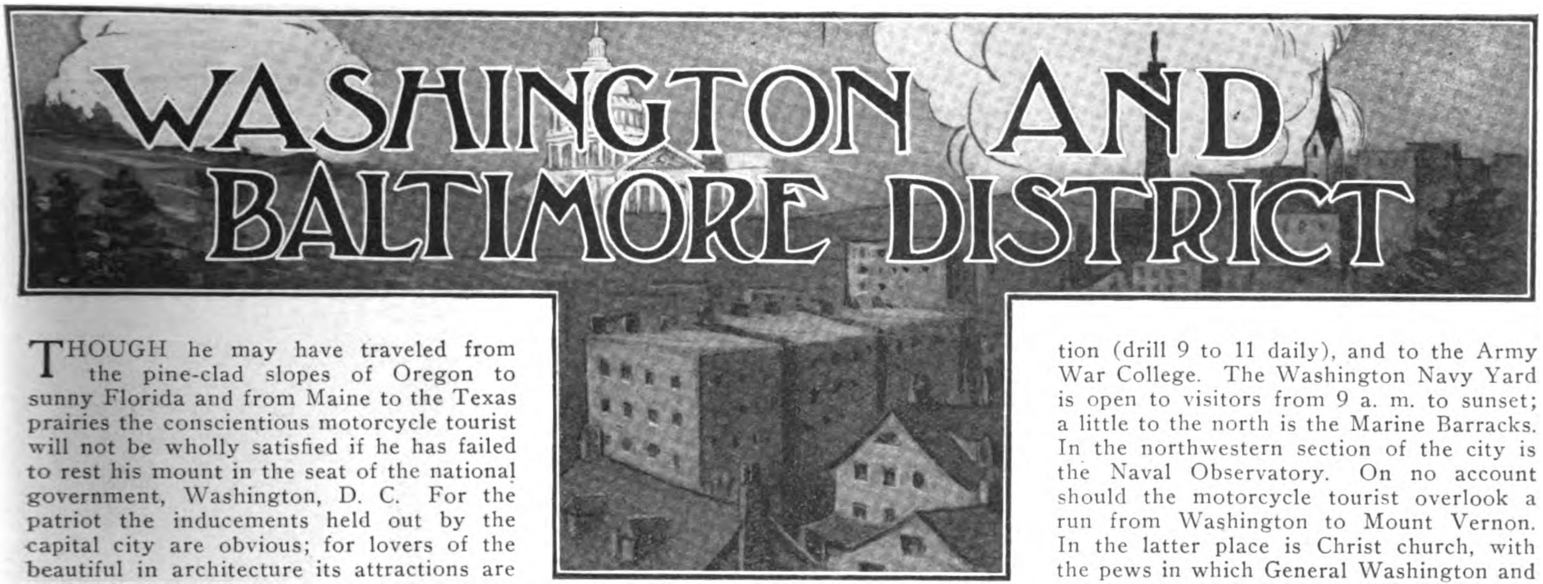
NOVEL X-RAY OUTFIT.

A NEW use has been found for motorcycles, and if the expectations of the designer are realized his plan will prove of immense value, not only as an adjunct to the medical staffs of armies, but the same idea could also be adopted with advantage by many large hospitals.

A prominent army surgeon has had an Indian motorcycle especially arranged and equipped not only for transporting a full-sized X-ray outfit, but he also uses the motor to produce the electric current required by the apparatus.

The 4 h. Indian in question was provided with an especially strong and rigid luggage carrier, upon which is fitted a substantial wooden platform, and on this platform was placed a dynamo, coils and all of the other apparatus necessary for X-ray work. A special pulley was fitted to the clutch of the machine for driving the dynamo. By means of the motorcycle the apparatus will be carried in the field where it can closely follow the operations of the army, and will enable the surgeons to perform many important operations immediately on the spot, and this will be the means of saving many a life which would be sacrificed if it was necessary to delay the operations until the sufferers could be conveyed to some established hospital.

To operate the apparatus the motorcycle is placed on its stand, and a belt slipped over the special countershaft pulley and the pulley on the dynamo. On letting in the clutch the dynamo is started and the necessary exposures can be made in a very short time.



WASHINGTON AND BALTIMORE DISTRICT

THOUGH he may have traveled from the pine-clad slopes of Oregon to sunny Florida and from Maine to the Texas prairies the conscientious motorcycle tourist will not be wholly satisfied if he has failed to rest his mount in the seat of the national government, Washington, D. C. For the patriot the inducements held out by the capital city are obvious; for lovers of the beautiful in architecture its attractions are innumerable and for the rider who delights in simply making his way through broad avenues, lined by beautiful estates and the finest example of the landscape gardener's art, it is equally alluring. Washington is a city of never-failing charm, and from a scenic viewpoint its environs rank high in the estimation of tourists.

Washington lies on the left bank of the Potomac river and covers an area of about 10 square miles. It is well laid out and its wide asphalted streets open up vistas of handsome public buildings, monuments and leafy squares with the Capitol and the Washington Monument dominating the entire view. Its plan may be described as that of a wheel laid on a gridiron, the rectangular arrangement of the streets having superimposed upon it a system of radiating avenues, lined with trees and named for the different States of the Union. The streets running north and south are numbered and those extending east and west are named by the letters of the alphabet. The circles formed by the intersection of the streets and avenues are among the most charming features of the city. Pennsylvania avenue, between the Capitol and the White House, is the principal thoroughfare.

Government Buildings.

It goes without saying that the Capitol and government buildings are the chief points of interest. The former ranks as one of the most beautiful structures in the world. The main building was completed in 1827 and the wings and the new dome were added in 1851-65. At all times during visiting hours guides may be obtained to escort tourists through the Capitol and other government departments. The motorcycle visitor who desires to view all the main points of interest in a limited time will do well to follow one of the "Seeing Washington" automobiles, as the routes followed by these machines cover the ground quite thoroughly.

To the southeast of the Capitol stands the Library of Congress, an enormous structure in the Italian Renaissance style, which was erected at an outlay of over $6,000,000. At the foot of the steps descending from the terrace on the west side of the Capitol is a heroic statue of Chief Justice Marshall; the broad walk to the north leads to the Naval or Peace Monument, and a similar walk to the south leads to the statue of President Garfield. The first part of the Reservation is occupied by the Botanic Gardens and the famous Bartholdi fountain. Passing through two small parks to the west of this point the visitor comes upon the buildings of the United States Fish Commission. Nearby stands the Army Medical Museum and a number of fine statues. Just to the west of the Medical Museum stands the National Museum, which is worthy of all the time and attention the tourist can give.

Smithsonian Institution.

To the west of the National Museum is the Smithsonian Institution (free admission on week days) erected at a cost of $450,000. It was founded with the proceeds of a legacy left by an Englishman, James Smithson, who never visited America and who was moved to make the bequest simply out of regard for the democratic principles involved in the government of the United States. However, the philanthropist's remains were brought to this country in 1904 and placed in the Smithsonian Institution. On the opposite side of the Mall, facing the Smithsonian, is the New National Museum, a large and dignified building in white granite. The next section of the Mall, beyond Twelfth street, contains the building of the Department of Agriculture. Near the southwest corner of the Agricultural Grounds is the Bureau of Printing and Engraving, where the processes of manufacturing paper money, bonds and stamps are shown to visitors. The tourist now finds himself in the open grounds in which the Washington Obelisk rears its lofty shaft to the skies. It was built at a total cost of $1,300,000 and stands 555 feet high. From the top a wonderful view may be had of the city and its surroundings.

The Treasury Building, the huge building of the State, War and Navy Departments, the Corcoran Art Gallery, the public library, the post office and minor government buildings should all be visited. In Tenth street the tourist will find Ford's Theatre (now used by the government) in which President Lincoln was assassinated by Booth on April 14, 1865. It is one of the most interesting historical points in the city. A visit may be made to the Washington Barracks, now used as an artillery station (drill 9 to 11 daily), and to the Army War College. The Washington Navy Yard is open to visitors from 9 a. m. to sunset; a little to the north is the Marine Barracks. In the northwestern section of the city is the Naval Observatory. On no account should the motorcycle tourist overlook a run from Washington to Mount Vernon. In the latter place is Christ church, with the pews in which General Washington and General Robert Lee used to worship. The old Carlyle House is another point of interest. Col. Ellsworth, the first man to die in the Civil War, was killed in the Marshall House at the corner of King and Pitt streets, Mount Vernon. Adjoining the city is a national cemetery with 4,000 graves. There is a refreshment room at the terminus of the electric railway. Mount Vernon, an old-fashioned wooden mansion, stands on a bluff above the river. It was inherited by George Washington in 1752 from his brother Lawrence. The central part of the house was built by Lawrence and General Washington added the wings. The house and grounds are preserved as nearly as possible in the condition which prevailed during Washington's lifetime.

After becoming sated with fine architecture the motorcyclist will welcome the opportunities offered for many excellent side runs out of the capital city, one of the best being the trip to Mount Vernon. Other jaunts to points of historical interest may be made over fair roads which are well marked, as a rule. Fair garage service may be obtained, even in the outlying districts, and small hotels and boarding houses provide for meals and stop-overs. The rider who passes through this section will do well to read up a bit on history and obtain a good guide book of Washington proper. It will also be advisable to inquire into the traffic regulations and motoring provisions of the capital city as it has been found necessary there to place motorists under a rather strict set of ordinances. Special information should be obtained as to tandem riding in view of the fact that legislation has been pending of late relative to passenger-carrying on motorcycles.

Virginia Landmarks.

The tourist who crosses the Potomac river into Virginia finds himself in a region which abounds in historical landmarks and fine scenery. Nearly every quaint little town has its war-time story to tell, and in some districts the villages have undergone little or no change in half a century. Fredericksburg (Exchange Hotel; $2 a day) is a quaint old town on the Rappahannock, founded in 1727. It was the scene of a hard-fought battle in 1862, when the Confederates under Lee defeated the Union troops under Burnside. The huge national cemetery on Marye's Heights contains 15,000 graves and is well worth a visit. There is also a large Confederate cemetery. The suburbs of Fredericksburg are rich in historical data. At Chancellorsville, 11 miles to the west, "Stonewall" Jackson was mortally wounded in a memorable battle, and a little to the south is Spottsylvania Court House, the center of some of Grant's operations in 1864. George Washington spent his boyhood near Fredericksburg and his mother died there. At Guinea the house in which "Stonewall" Jackson died is still standing, and Doswell, another picturesque town, is the birthplace of Henry Clay. For those who wish to visit an all-year-around resort Glen Allen is recommended. It is a popular rendezvous for Richmondians.

Richmond, the capital of Virginia, is built on seven low hills rising on the north bank of the James river. The city was founded in 1737 on the site of the home of the famous Indian chief Powhatan. At various national crises it was chosen as the meeting-place of important conventions. In 1861 it became the seat of government for the seceding States, and ultimately it was the chief objective point of the Union troops. When finally compelled to evacuate Richmond the Confederates set fire to the tobacco warehouses and other stores and a large part of the city was destroyed. A heavy trade in tobacco, machinery, locomotives, flour and shipbuilding is carried on. No visitor should leave the city without inspecting the large tobacco factories, which are among the most interesting sights of the district. Capitol Square is one of the show places of the city; it contains a fine statue of George Washington and statues of other notables. To the east of the Capitol is the State Library, which contains 80,000 volumes.

In Twelfth street, at the corner of Clay, the visitor will find the Jefferson Davis Mansion, or "White House of the Confederacy." It is now fitted as a museum for Confederate relics. In St. John's church the Virginia convention was held in 1775, and the pew is pointed out in which Patrick Henry made his famous "give me liberty or give me death" speech. Large tobacco factories are to be seen, and at the corner of Main and Fifth streets is the site of the house in which Edgar Allan Poe spent his boyhood. From Gamble's Hill Park the visitor will obtain a good view of the river with its numerous falls and islands. Below lie the great Tredegar Iron Works, where most of the cannon of the Confederate government were made. During the last three years of the Civil War battles raged all around Richmond, and the suburbs of the city have many historic landmarks. Short side trips should be made to these points of interest.

Drewry Bluff, about 10 miles south of Richmond, has remains of the old fortifications, and Chaffin Bluff, the Dutch Gap Canal, Varina, Meadowville, Curle's Neck, Pickett's and Malvern Hill are other points worth visiting. City Point, at the mouth of the Appomattox river, was General Grant's headquarters in 1864-65. Jamestown was the seat of the earliest English settlement in America. The only remains of the original town are the tower of the church (in which Pocohontas was married in 1614), and a few tombstones. Newport News is a busy manufacturing town from which it is only a short jaunt to Hampton and Old Point Comfort, the famous health resort. At this point is Hampton Roads, one of the best harbors on the Atlantic coast. It was here that the Confederate ironclad *Virginia* (the old *Merrimac*) nearly annihilated the wooden fleet of the Union prior to the arrival of the famous turret-ship *Monitor* from New York.

The Treasury Building in the National Capitol.

Norfolk has numerous points of interest for the tourist. Its trade is mainly in cotton, coal, oysters and fruits and a visit should be paid to its shipping quarter. Some time may also be spent to advantage at the Norfolk navy yard. Petersburg is of interest as the scene of the final operations of the Civil War; Charlottesville was the home of Thomas Jefferson and is the site of the University of Virginia; Hot Springs and Greenbrier White Sulphur Springs are frequented by health-seekers and tourists. Throughout the central and western sections of the State manufacturing interests are not so well developed as in the east, but there are many thriving towns lying in picturesque surroundings. The roads are reported to be only fair, and not always marked, but motorcyclists who have toured that region feel well repaid for their efforts. On the whole few States offer greater inducements than Virginia for the rider with a leaning toward war-time romance and historical data, and considerable time should be given to side trips.

The tourist who finds himself in the vicinity of Baltimore, Md., should not fail to visit the city and inspect its show places. As it lay just outside the main battle zones of the Civil War and the Revolution the city was not ravaged as some other southern cities were and as a result its progress was not seriously retarded. The natural center of the city for the visitor is Mt. Vernon Place, a small square beautifully laid out and marked by monuments. In the middle rises the Washington Monument, a shaft 130 feet high. The huge courthouse, the City Hall, the Johns Hopkins University, the Woman's College and Bryn Mawr School and Johns Hopkins Hospital are among the city's finest buildings. Druid Hill Park, a pleasure ground of 700 acres, holds out many inducements for the motorcycle tourist. It is beautifully laid out and has many striking views. From Baltimore many good roads offer opportunities for delightful side trips, one of which should be to Annapolis, the seat of the United States Naval Academy. Owing to the manner in which it is divided by Chesapeake Bay the State of Maryland provides a remarkable diversity of scenery, and scores of small watering places furnish ideal stopover points for the rider who is in a position to rest a few days from road work.

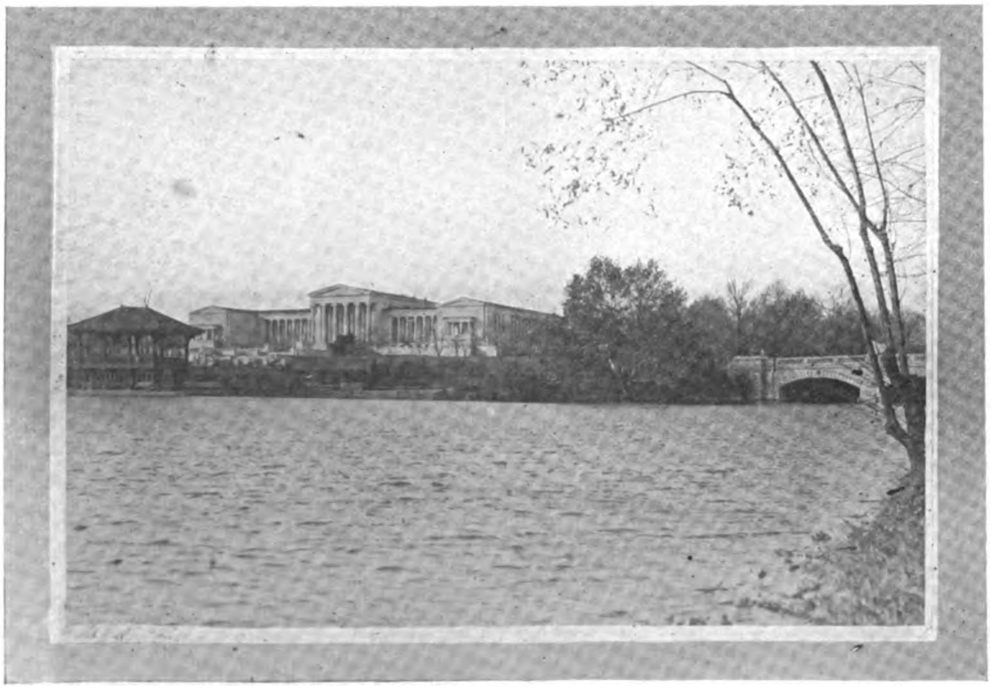
ERECTING CLUB QUARTERS.

THE clubrooms at Luna Park, Cleveland, in connection with the new Motordrome are under way and it is announced that they will be completed in about ten days. The Motordrome management has received six new racing machines for use on the big bowl.

ANOTHER UNIVERSITY CLUB.

ANOTHER motorcycle squad has been organized in a State university. This time it's the University of Maryland Club at Baltimore. Other clubs have been formed at the University of Illinois, at Champaign, and Ohio State University, at Columbus.



The Albright Art Gallery in Buffalo, N. Y.

WASHINGTON RUNS

Clubs of the Capital City Are Making Weekly Trips Over Fair Roads to Points in Maryland.

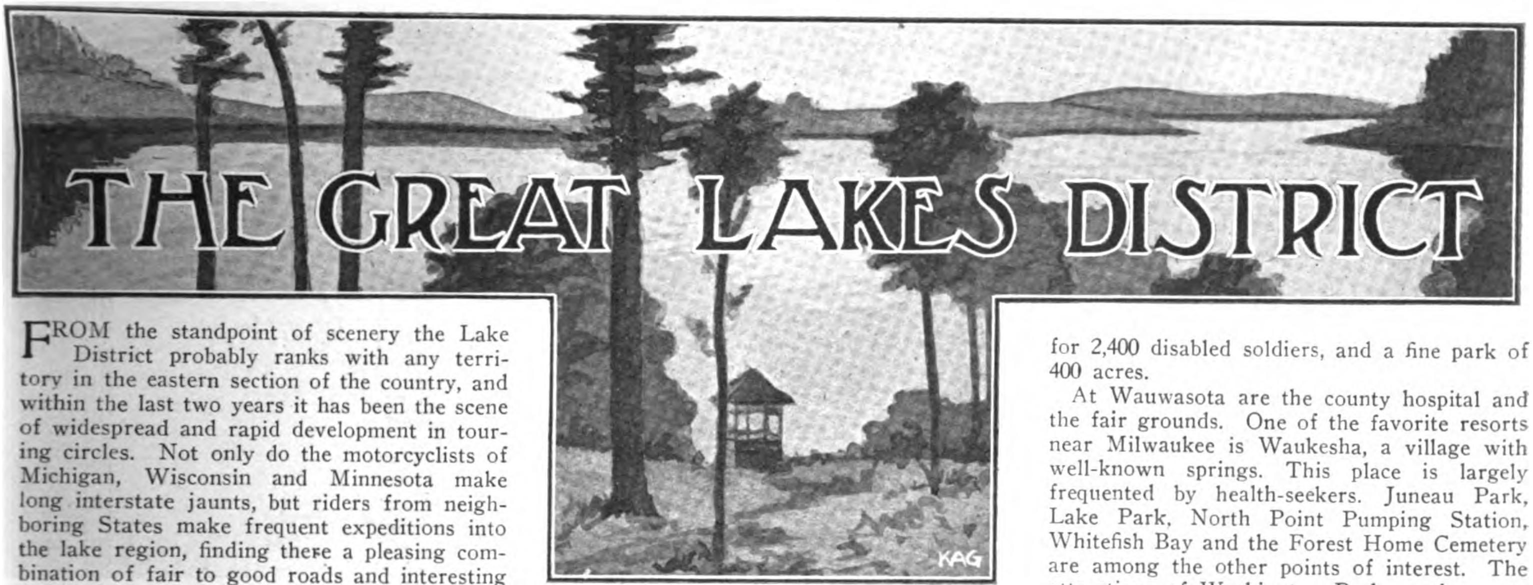
WASHINGTON, MAY 15.—Judging by present indications the year 1912 will be a banner one in local motorcycle circles, as the sales, up to this time, are surpassing all records. It is significant, in view of the signal recognition of the motorcycle for business and pleasure purposes, that most buyers are demanding the twin cylinder machine. One local agency had sold sixty-two machines up to May 1.

The two clubs here are in excellent conditon and the members are taking full advantage of the long delayed fair weather. Spins to surrounding towns, in a body, are taken every Sunday, and even during the week individuals may be seen starting off on runs into Maryland or Virginia. The Washington Motorcycle Club made a most enjoyable run on Sunday, May 12, to Leonardstown, in Southern Maryland. The National Capital Motorcycle Club also inaugurated club runs early, and these are being kept up. The roads out of Washington, through Virginia are not in good condition, and as a result the Maryland tours are favored.

EDITOR CAPPER UP-TO-DATE.

THE Kansas Short Grass M. C. (which is in reality the Kansas M. C. on account of its State-wide scope) now has an official State organ in the Topeka *Daily Capital,* published in the capital city of the Sunflower State. Arthur Capper, the editor, is one of the most enthusiastic motorists in the State, and he generously gives the boys a whole page in each Sunday issue, the news being supplied by the publicity men of the various Kansas clubs.

W. K. GERKEN has been elected president of the Port Arthur M. C., of Port Arthur, Tex., which was recently organized with a good charter list of hustling riders.



THE GREAT LAKES DISTRICT

FROM the standpoint of scenery the Lake District probably ranks with any territory in the eastern section of the country, and within the last two years it has been the scene of widespread and rapid development in touring circles. Not only do the motorcyclists of Michigan, Wisconsin and Minnesota make long interstate jaunts, but riders from neighboring States make frequent expeditions into the lake region, finding there a pleasing combination of fair to good roads and interesting towns. Few cities in the country hold out greater inducements for the motorcyclist than Detroit, which has the production of motorcars as one of its chief industries. Among the points worth visiting are the huge soda ash plants of the Solvay Process Company, J. B. Ford & Company and the Michigan Alkali Company. About three miles from the city lies Belle Isle, 700 acres in extent and forming a beautiful public park, which retains many of its most impressive natural features. Among the city's points of interest are Elmwood Cemetery, Fort Wayne, on the river; Water Works Park, Palmer Park and Clark Park. There are numerous popular fishing and shooting resorts within easy riding distance of Detroit and the tourist who elects to make a two or three-day stop-over need not remain idle.

Lansing, the capital of Michigan, is a manufacturing city, and Grand Rapids is featured by no less than 100 furniture factories; the most beautiful building in the city is the Ryerson Free Library. Mackinac Island, a rocky and wooded little islet, has become a favorite summer resort and the tourist who enjoys a day's fishing will do well to head in that direction. Throughout the summer there are few sections of the country more satisfying than Detroit and its environs. All along the lake shores of Michigan, in fact, the tourist will find amusements and points of scenic interest, and little difficulty should be experienced with the roads in good weather.

Resorts Near Milwaukee.

Tourists hardly need to be told that Milwaukee is the city of excellent beer, and when touring Wisconsin they should make the most of the opportunity to inspect the huge breweries. These plants turn out over 4,000,000 barrels of lager beer annually, at an estimated value of more than $30,000,000. Pork packing is also carried on extensively, and other staple manufactures are leather goods and tobacco products. One of the favorite thoroughfares is Sheridan Drive, skirting the lake front for two miles to the south. About three miles to the west of the center of the city is the National Soldiers' Home, with accommodations for 2,400 disabled soldiers, and a fine park of 400 acres.

At Wauwasota are the county hospital and the fair grounds. One of the favorite resorts near Milwaukee is Waukesha, a village with well-known springs. This place is largely frequented by health-seekers. Juneau Park, Lake Park, North Point Pumping Station, Whitefish Bay and the Forest Home Cemetery are among the other points of interest. The attractions of Washington Park on the western side of the city include a large herd of deer. This State, like Michigan, has numerous picturesque resorts on its lake shores and fishing, boating and hunting are favorite pastimes. Tourists who move westward into Minnesota should stop at Duluth and inspect the great flour factories and grain elevators. Minneapolis is also a flour-manufacturing city, and St. Paul is not without its points of interest for the tourist who leans toward the practical. It is primarily a manufacturing city. Throughout this entire region there is a pleasing diversity of scenery, ranging from the wooded lake shores to the attractive cities and towns of the interior sections.

Roads in Wisconsin range are not invariably good; in fact, some are very poor, but they are being improved gradually. Michigan roads in general are in better condition than those of Wisconsin, and the average struck should be quite satisfactory to the rider who does not attempt to go too far off the touring routes and away from the cities.

DETROIT TO LONDON.

Western half of the Detroit-to-Toronto tour. The balance of the route, from London to Toronto, is shown at the top of this page.

A WISCONSIN TOUR.

FROM Fort Atkinson proceed to Jefferson and there take the east road to Helenville; from that point go through Sullivan to Rome and on to Golden Lake. The next leg brings the rider into Waukesha, from which point the jaunt to Milwaukee is taken up. For the return go back over the same route as far as Junction House and then take the north road. This leads through Pewaukee, and from there to Hartland, from which point there is a fair road to Oconomowoc. From the latter place proceed to Concord, and from there to Johnson's Creek. The next town worthy of note is Jefferson, and from this point the route to Fort Atkinson is over the same roads followed on the out trip. The total distance is about 132 miles.

From Fort Atkinson to Jefferson the roads are good; gravel and hard clay bottom nearly all the way; Jefferson to Golden Lake, sandy roads and numerous hills; Golden Lake to Waukesha, level road in good condition; Waukesha to Milwaukee, good country road. On the return the route from Junction House to Oconomowoc is over macadam roads; from the latter point to Johnson's Creek sandy stretches are encountered, and from the creek to Jefferson two sandy hills are the only obstacles to be overcome.

Several of the towns on the route offer points of interest. In Fort Atkinson there are the big plants of the James Mfg. Co. and the Northwestern Mfg. Co., and the factory of the C. L. & G. Creamery Package Co., each worth a visit; Lake Koshkonong, six miles south of the city, is an attractive summer resort. At Waukesha the great springs will prove interesting, and in Milwaukee there are plenty of amusement features. Oconomowoc is a pretty summer resort.—*Submitted by Clarence Mussehl.*

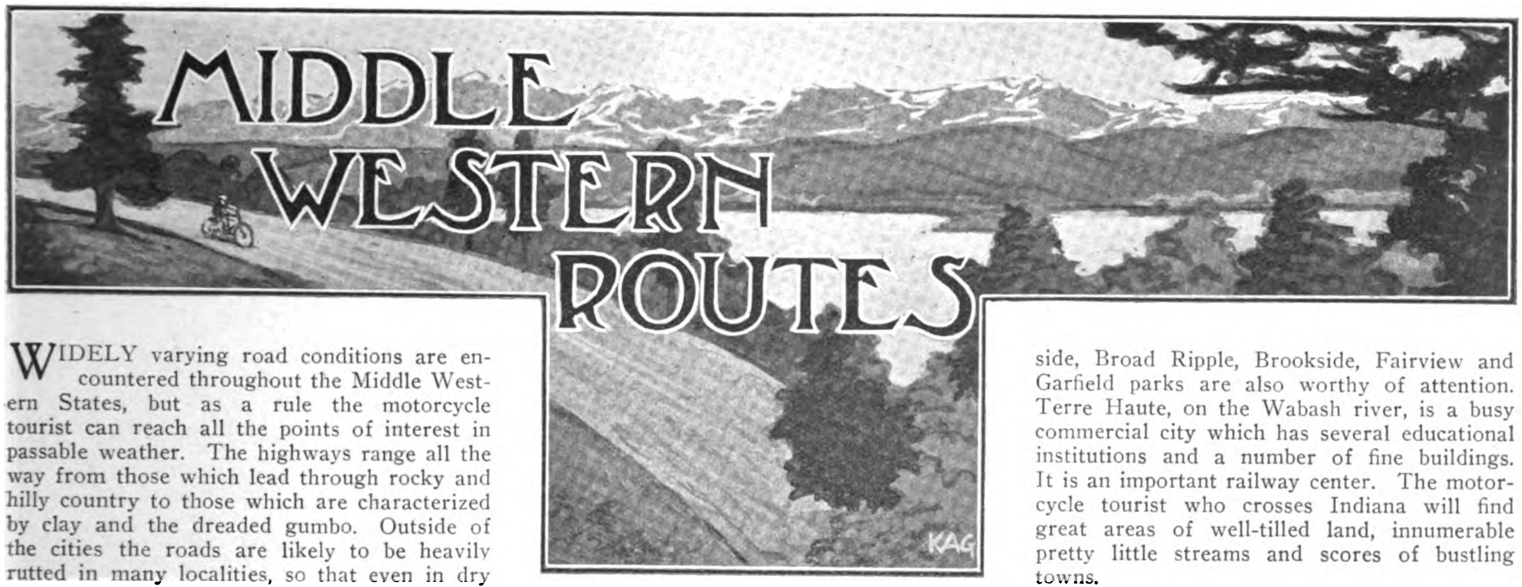
WASHINGTON CLUB ADOPTS COLORS.

AT a meeting held Wednesday, the 1st inst., the Washington M. C. decided upon orange and blue as its club colors, and ordered ribbons embodying these colors and suitable for affixing to the handlebars of members' machines. In all probability the club will enter a team in the Bennings Meet on Decoration Day, a local newspaper having announced its willingness to donate a cup for a club contest.

The Washington Club has set a precedent in posting on the walls of its club rooms photographs of every well-known make of machine, this having been done largely to demonstrate the truth of its claim that the club was not organized in the interest of any one make of motorcycle.

The club voted in favor of Cleveland for the 1912 F. A. M. Meet.

MIDDLE WESTERN ROUTES



WIDELY varying road conditions are encountered throughout the Middle Western States, but as a rule the motorcycle tourist can reach all the points of interest in passable weather. The highways range all the way from those which lead through rocky and hilly country to those which are characterized by clay and the dreaded gumbo. Outside of the cities the roads are likely to be heavily rutted in many localities, so that even in dry weather there is bound to be some rough going.

The tourist in Ohio will find busy little towns marking all the touring routes and no difficulty should be experienced in arranging for stop-overs and garage service. Toledo, Columbus, Cleveland, Youngstown, Akron, Mansfield, Canton, Dayton, Springfield and Cincinnati are the cities most popular with tourists, and in nearly every case these are approached by good roads. The visitor in Cleveland will be interested in visiting the iron and steel works and the foundries and machine shops which annually produce goods to the value of $85,000,000. Among other manufactures are wire, gas-stoves, motor-cars, electric lamp carbons and paints. The tourist may put in half a day to advantage at any of the city's big plants. The most interesting buildings are the City Hall, the new Federal building, the Western Reserve University structures and the Colonial Arcade. Wade Park, which contains monuments and statues, and Lake View Cemetery are points which should be visited. The city has many fine drives, beautiful parks and striking residences. Numerous side trips may be made over good roads, and delightful boating trips are to be enjoyed on the lake. Plenty of garages and repair shops and all classes of hotels are at hand.

Toledo, on the Maumee river, is a railway and manufacturing center, and some time should be devoted to inspecting its shipping district and its public buildings. Cincinnati is the second city in size in the State. Among its points of interest are Tyler Davidson Fountain, the U. S. Government building, the Chamber of Commerce, Eden Park, the Art Museum, Spring Grove Cemetery, the Zoological Garden and Suspension Bridge, which connects Cincinnati with Covington. Dayton lies at the confluence of the Mad and the Great Miami rivers and has manufactures of machinery, flour, paper, etc., to the value of about $40,000,000 annually. The National Cash Register Company's arrangements for the welfare of its 2,000 employees are extremely interesting and this plant is well worth a visit. Springfield is chiefly interesting for its manufactures, as is Columbus. It turns out iron and steel products, carriages and agricultural implements in great quantities, and any one of its big factories will repay the tourist for the time devoted to a visit. The streets of Columbus are broad and well paved. The State Capitol is a large and imposing building surrounded by a park which is full of tame grey squirrels. Other important buildings are the Ohio State University, the Deaf and Dumb Asylum, the State Penitentiary, the U. S. Barracks, Starling Medical College and the Board of Trade. Goodale Park lies at the north end of the city and should be visited.

Indiana roads are generally fair and the tourist through this State will be impressed chiefly by the scenery. Indianapolis, the capital city, is a great railway center; an extensive trade is carried on in live stock. The focus of the city is Monument Place from which four wide avenues run diagonally to the four corners of the city. In the center of this place rises the Soldiers and Sailors Monument, 285 feet high. The State Capitol was erected at a cost of $2,000,000 and is worth a leisurely inspection. Important buildings are the John Herron Art Institute, the Blind Asylum, the Propylaeum, the Deaf and Dumb Asylum and the Winona Technical Institute. The Riverside, Broad Ripple, Brookside, Fairview and Garfield parks are also worthy of attention. Terre Haute, on the Wabash river, is a busy commercial city which has several educational institutions and a number of fine buildings. It is an important railway center. The motorcycle tourist who crosses Indiana will find great areas of well-tilled land, innumerable pretty little streams and scores of bustling towns.

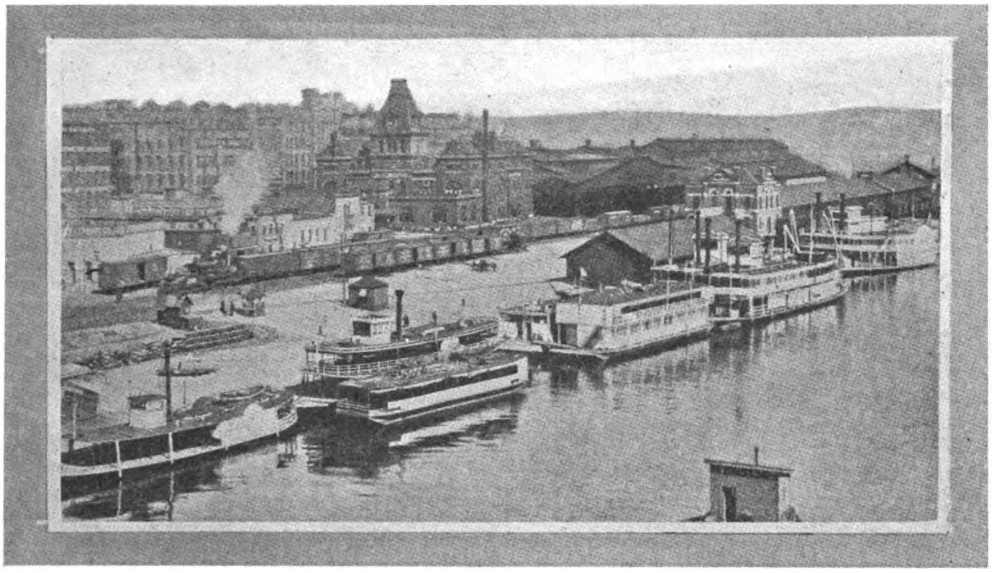
Soldiers' Monument in Indianapolis.

The road conditions prevailing in Indiana will be found to a great extent in Illinois, and the character of the towns and scenery is much the same. From Chicago interesting touring routes run to all sections of the State, passing through busy little manufacturing towns and in many cases following streams of more than ordinary beauty. While in Chicago the tourist should visit the Auditorium (built at cost of $3,500,000), Grant Park, the Art Institute of Chicago, the Public Library, City Hall and the County Building, the Board of Trade and the Federal Building. The public parks of Chicago cover about 3,000 acres in all and afford over 100 miles of driveways within the city limits. The Lake Shore Drive is one of the show places of the city, and few visitors overlook Michigan avenue, Drexel boulevards and Grand boulevard. Washington and Jackson parks are connected by a wide boulevard known as the Midway Plaisance. The visiting motorcyclist who can spare the time should make the most of these excellent thoroughfares, many of which are lined by handsome residences.

A visiting point of never-failing interest is the stockyard district. Tourists will experience no difficulty in gaining admittance to the yards, but an introduction will probably have to be obtained in order to go through any of the large packing houses, the processes of which are extremely interesting. Another trip may be made to one of the big grain elevators, of which there are about fifty. It will be advisable to obtain a good guidebook of the city and then arrange for trips according to individual leanings, all tastes being provided for somewhere in the big city.

Tourists who find themselves in Rockford, Ottowa, LaSalle, Bloomington, Peoria, Quincy, Springfield, Danville and other cities of this class will be interested chiefly in the manufactures; machinery, carriages and agricultural implements figure heavily as articles of trade. Many of the Illinois roads are of gravel and these afford fair going under all weather conditions.

Iowa routes carry the tourist through some exceptionally fine farming country and the scenery is pleasing. Des Moines, Fort Dodge, Cedar Falls, Cedar Rapids, Clinton and Council Bluffs are points at which the rider may make pleasant stops, Des Moines being the capital city. There are some gravel roads and a few sections in which gumbo is encountered; on the whole the traveling is fair. According to reports from riders in Nebraska that State



The Mississippi Water Front at St. Paul.

should be scratched off the list of tourable districts. Its roads are bad. Conditions are about the same in nothern Kansas, but in the eastern and southeastern sections of this State there are some touring routes over which motocyclists have made pleasant trips. Topeka, the capital of Kansas, has large mills which invite inspection and among the interesting buildings are the Capitol, the Reform School, the State Insane Asylum, Grace Church Cathedral, Washburn College and Bethany College. The smaller cities hold out few inducements for the tourist but they are often picturesquely located.

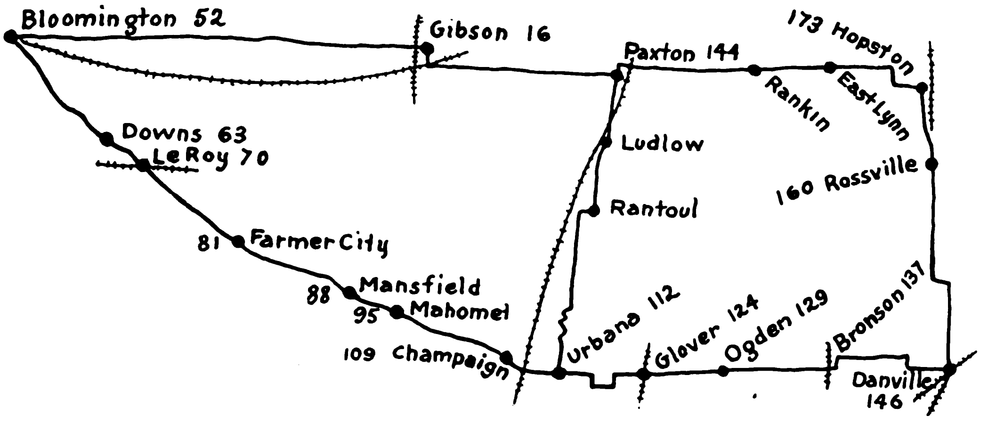
Comparatively few tours run into Oklahoma owing to the fact that the roads are only fair at best and because the scenery is monotonous. This State is pre-eminently an agricultural and cattle-breeding district, but it also has valuable coal fields. It is estimated that there are 50,000 Indians within its borders and the redmen are probably the most picturesque features to be seen. Ponca City is the White Eagle Agency of the Ponca Indians and should be visited if presentable roads are found in that section.

Kansas City is the touring center for Missouri, and St. Joe is also the objective point of many motorists. Under favorable weather conditions roads are likely to be fair to good in the eastern section. They are fair in the central district and rather poor in the western parts. Aside from quite pleasing scenery there is little to entice the visitor off the main touring lines. Kansas City is a railway center and its manufactures represent more than $40,000,000 annually. The Missouri river is crossed here by three fine bridges. Among the most attractive features of the city's extensive system of parks and boulevards are the Paseo, Swope Park and Penn Valley Park. St. Louis and Jefferson City are also the starting points for touring routes which pass through many small prosperous towns.

BLOOMINGTON-CHAMPAIGN-DANVILLE.

GO northward from Paxton three-quarters of a mile and turn westward; route is then 15 miles due west to Gibson City, with only one jog. Leaving Gibson City go up hill northward three-quarters of a mile and then proceed due west 36 miles to Bloomington. Take old State road to Champaign, passing through Downs, Leroy, Farmer City, Mansfield and Mahomet. Leave Champaign for Urbana, following interurban line closely to Danville; slight jog to southward a few miles from Champaign, then back on old course a few miles farther on. Leave Danville north on Vermillion street; 27 miles to Hoopeston; Rossville only town of importance on this leg.

Road almost straight, having one little jog just north of Danville. From Hoopeston leave west on the street south of Main street; go west one mile, jog north one-half mile and then ride over 22 miles of straight road back into Paxton, staying about one-half mile north of L. E. & W. R. R. the whole distance. Total distance, 196 miles. Two days may well be given to the trip.



For a shorter trip of one day a short cut can be made from Champaign to Paxton by going north past Big 4 depot in Urbana and taking several turns through Rantoul and Ludlow, making a total of 144 miles on the circuit through Bloomington, or a total of 119 miles on the route through Danville.

Roads from Paxton to Gibson are very good the greater part of the time, being traveled very much (about eight miles of good gravel). About four miles of good gravel out of Gibson toward Bloomington; dirt roads to within a few miles of the city, then gravel. Old State road from Bloomington to Champaign almost always good, but in the dry season very dusty. Several strips are fine. Road from Champaign to Danville mostly dirt, but is well traveled and follows interurban line closely. Roads from Danville to Hoopeston are fine, gravel greater part of way. From Hoopeston to Paxton there is not much gravel, but road is always in good condition. On the short cut there is very little gravel until within five miles of Paxton, then fine roads into town.

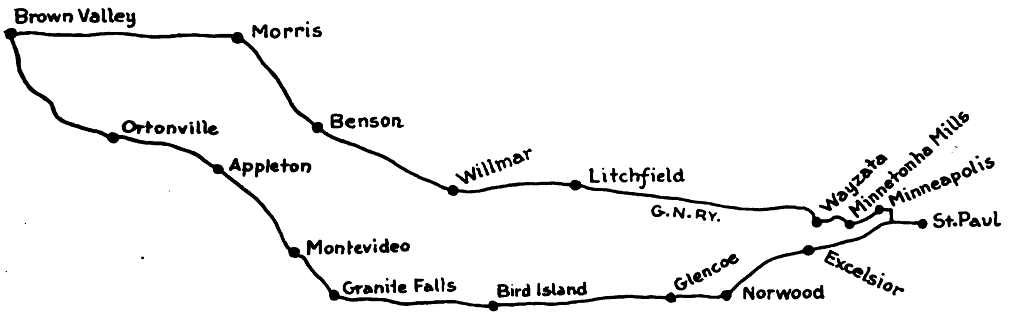
Hotels: Paxton, The Middlecoff; Bloomington, Illinois, or Hills (half block west of South side of Square); Champaign, The Beardsly (N. Niel street); Danville, Aetna (on the Square); Hoopeston, The Cunningham.

At Paxton there are many miles of pavements and a pretty little park; a large canning factory (Yours Truly Pork & Beans), and a model Township H. S. building and grounds at Gibson City. Beautiful residences and Wesleyan University at Bloomington make that town very attractive. The University of Illinois at Champaign and Urbana, is a big drawing card. The campus is very pretty and there are many miles of beautiful drives through the twin cities. The big attraction at Danville is the Old Soldiers' Home two miles East.—*Submitted by W. C. Gilmore, Champaign, Ill.*

TOUR OUT OF ST. PAUL.

START from the St. Paul Hotel, St. Paul, Minn., and proceed as follows: Up 6th street to Summit avenue, to Mississippi boulevard; turn right and follow boulevard to Marshall avenue bridge; cross bridge and turn left on Minneapolis side, taking boulevard to Minnehaha Park; Minnehaha boulevard to Lake Harriet; turn right, go around Lake Harriet and cross bridge between Lake Harriet and Lake of the Isles. Here is found the most picturesque natural park in Minneapolis. Go out Hopkins road to Mississippi boulevard and turn right, following boulevard to Minnetonka Mills. There turn right and follow same boulevard to Wayzata; turn right at Wayzata post office and follow the only road—rather sandy—to Long Lake, 27 miles from St. Paul.

Turn right in middle of village of Long Lake, cross G. N. tracks, turn right on first road and proceed into Delano. Follow good, main road (few grades and no steep ones), through towns of Waverly, Howard Lake, Cokato, Dassel into Litchfield for



Brown Valley
Morris

Granite Falls
Bird Island
Norwood

dinner. G. N. tracks in sight nearly all the way from Long Lake to Litchfield. Latter place 76 miles from St. Paul. Lenhart Hotel there is a good one; rates $2 a day. Sign boards show way out of town; good roads through Atwater to Willmar, situated near fine lake for crappie and bass fishing. Leaving Willmar, route runs along Great Northern tracks to Benson, and to Morris, where night stop may be made. La Grande Hotel, rates $2 a day, gives fine service. This point 157 miles from St. Paul.

Pass through Graceville to Brown's Valley, 47 miles from Morris, follow good road along Big Stone Lake 20 miles to Ortonville; continue to Appleton, 22 miles from Ortonville, and dine at St. James Hotel; rates $2 a day. Follow C. M. & St. P. R. R. through Milan and Watson to Montevideo; turn right at depot and follow same tracks to Myers; cross bridge and follow Minnesota river to Granite Falls. Few hills, but good roads. Cross bridge at latter city, turn right and follow tracks again through to Sacred Heart, Renville, Olivia and into Bird Island for second night. Van Dyke is good hotel here; rates $2 a day. Third morning follow tracks over fine roads to Hector, Buffalo Lake, Stewart, Brownton, Glencoe, Norwood and Cologne; continue northward over some bad hills through Chaska; turn left here and continue out main street to Excelsior; then return to Minneapolis will be made over same boulevard used at start. Instead of continuing into St. Paul on Summit avenue, branch off on Lexington avenue to Como Park; thence to Rice street to St. Paul Hotel for finish. Run covers about 400 miles; should be made in two and a half days.—*Submitted by E. J. Megow, of St. Paul.*

Chicago to Davenport.

CHICAGO TO DAVENPORT.

GO from Chicago to St. Charles over good road, easy to follow; from this point to DeKalb there are a few turns but the road surface is satisfactory. Then comes Dixon where the rider crosses the Rock river; picturesque scenery. Follow car line to Sterling; beyond Sterling road is of black loam, bad in rainy weather; at Fulton the Mississippi river is crossed; bridge toll, five cents. The next town is Lyons and from this point to Clinton, Iowa, there is a brick pavement. The Lafayette Inn is a good place to stop in Clinton; garage opposite. From Clinton to Davenport road is along Mississippi river; scenery beautiful; cross Mississippi at Davenport, riding back into Illinois. Toll on bridge. After leaving Rock Island good road is encountered to Princeton; American House gives satisfactory service at this point; Ennis & Pearson garage on Main street. From Princeton the route extends westward through La Salle to the Fox river, which is crossed at Ottawa. The road then continues along the Illinois river and drainage canal to Joliet. From this point the route is easily followed into Chicago. Total distance, 398 miles. Trip can be made with pleasure in three days, but more time can be given profitably to the outing.—*Submitted by Ray Blomgren, Chicago, Ill.*

BEWARE NEBRASKA "ROADS."

EDITOR MOTORCYCLE ILLUSTRATED:

My advice to any rider who is considering a tour through Nebraska is to make a very careful investigation before attempting to use a motorcycle here. The reason is painfully obvious: Practically speaking, *there are no roads in Nebraska.* In this section of the "wild and woolly" a motorcyclist who knew anything about a real road would be something of a curiosity. For several months in the summer—provided the dust and sand are not too deep—the so-called "main-traveled" roads are passable, but for the remainder of the year they are beyond description.

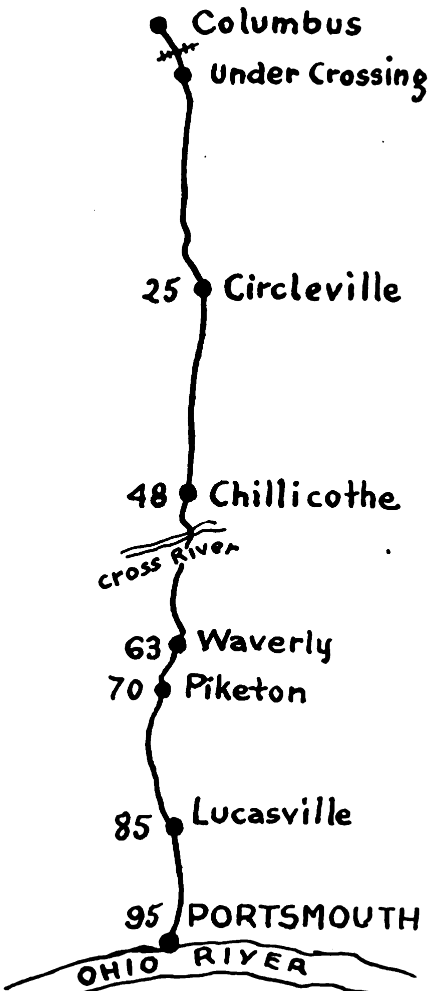
Farmers used to "work" these alleged roads some ten or twelve years ago and they were then in better condition. Since the farmer has been taxed for road maintenance, however, and the actual work has been taken out of his hands, county commissioners have been in charge and the results have been sad. From time to time these officials have the roads scraped and quite often the dirt is left in hummocks in the middle of the driveway. There it hardens and the effect of trying to ride over it on a motorcycle is similar to what might be expected in piloting a single-tracker over a log-jam. It beggars words. I have encountered these conditions for more than a mile at a stretch. We would welcome an opportunity to extend our hospitality to visiting motorcyclists, but under existing road conditions we do not see how a rider of a power two-wheeler is going to get in to pay us a visit.

A NEBRASKAN.

Lincoln, Neb.

COLUMBUS TO PORTSMOUTH.

LEAVE Columbus on High street, going south, and after riding about 25 miles pass through Circleville; continue over same road to Chillicothe, and there take the main street out of the city, turning to the left and following the same route to Waverly. Take the first road south out of Waverly for 10 miles and cross river to Piketon;



Columbus
Under Crossing
25 Circleville
48 Chillicothe
Cross River
63 Waverly
70 Piketon
85 Lucasville
95 PORTSMOUTH
OHIO RIVER

turn left after leaving Piketon to Lucasville and then ride on to Portsmouth.

Roads from Columbus to Portsmouth are fine; in fact, there are no better in Ohio. The scenery is beautiful, and all the conditions are conducive to a most enoyable trip. The run can be made on a 4 h. machine in about four hours, and the hills are not so steep that the machine should have trouble in pulling double.—*Submitted by H. L. Berlin, Columbus, Ohio.*

THE FAR WEST

ABOUNDING in scenic attractions and traversed by touring routes on which the roads afford no end of variety, the States embraced in the Far West district have come into favor with the motorcycle traveler of late in proportion to the increased dependability of his mount. That many of the highways in this picturesque region require a sturdy machine and a hardy rider must be taken for granted—but do not all machines and riders answer these qualifications? It would so appear from their performances. However, there are routes for the fairly conservative rider as well as for the grizzled veteran, and no tourist need overlook Colorado, for instance, merely because every dazzling view exacts its toll in the form of a climb. What motorcyclists have done in the past may be done again, and stories that come out of the West lead to the conclusion that every discomfort has its balancing compensation.

The tourist who chugs into Denver will find a thriving city spread out on the south bank of the South Platte river about fifteen miles from the base of the Rocky Mountains, of which it commands a superb view. Not without justification is it referred to as the "Queen City of the Plains." Many of Denver's buildings are large and handsome, its private residences and gardens are attractive and all its business streets are paved with asphalt. It is in the heart of a rich mining district and is the center of numerous railways. From the direction of the Union Depot the tourist will enter the city through a huge bronze arch bearing the word "Welcome," and the Denverites make this something more than an empty greeting. They mean it.

Among the imposing buildings which should be inspected are the Denver Club, the University Club, the Public Library, the United States Mint, the State Capitol, erected at a cost of $2,500,000; the Court House, the Custom House and Post Office and the Auditorium. The City Hall, the Chamber of Commerce, the Mystic Shrine Temple, the Westminster University of Colorado, the Jesuit College of the Sacred Heart, the Art Museum and the University of Denver should also be visited. No tourist should overlook a trip to one of the city's great smelters. Among the chief of these are the Boston & Colorado and the American Smelting & Refining Company plants. A good idea of Denver's suburban districts may be obtained by following the electric railway over Capitol Hill and through Montclair to Aurora. Visits may be made to Elitch's Zoological Garden, to Berkeley Lake and Manhattan Beach. "Seeing Denver" observation cars start from the Brown Palace Hotel over two routes, one for the residence quarter and the other over a scenic line. The latter cars run to the foothills and cover a distance of 50 miles for a fare of one dollar. Needless to say the motorcyclist can dispense with these cars almost entirely and reach practically all points of interest on his machine.

From Denver to Golden, Central City and Silver Plume there is beautiful scenery. Beyond Argo and Utah Junction the tourist will obtain a wonderful retrospect of the city, with Fike's Peak in the distance. To the east is the Platte river and to the west rise the Rocky Mountains. Farther on the traveler descends into Clear Creek Valley and in the Clear Creek Canyon the cliffs sometimes tower 1,000 feet. Denver proper is a highly attractive city but it is the great variety of its side trips that moves the visitor to wonder.

Pueblo is one of the most active cities in Colorado. It has many industries, including great smelting and steel plants. One of its notable features is Mineral Palace, a curious building with twenty-eight domes; it contains specimens of all the minerals found in the State.

Colorado Springs is the principal health resort of Colorado. It is a capital center for innumerable attractive runs and excursions. Several charming parks have been laid out within the city itself and on the surrounding bluffs, such as that on Monument Creek, with its three springs. The city is not without its striking buildings and it is well supplied with hotels suited to all purses.

The Cripple Creek region is famous for its mining operations, and Leadville, Grand Junction, Fort Collins and Greeley are places which should not be overlooked by the tourist who finds himself in their vicinity. On the whole Colorado roads are fairly good. There are plenty of hills and some sand, but the motorcyclist should be able to make headway at all times. In the vicinity of Denver and other points of great altitude some carbureter

A Birds'-Eye View of the City of Denver, a Great Motorcycle Town.

trouble must be expected and adjustments will have to be made in proportion to the height at which the machine is being driven. It will be found that side trips to points of unusual scenic beauty are possible from nearly every town, and the tourist should take advantage of these whenever it is possible.

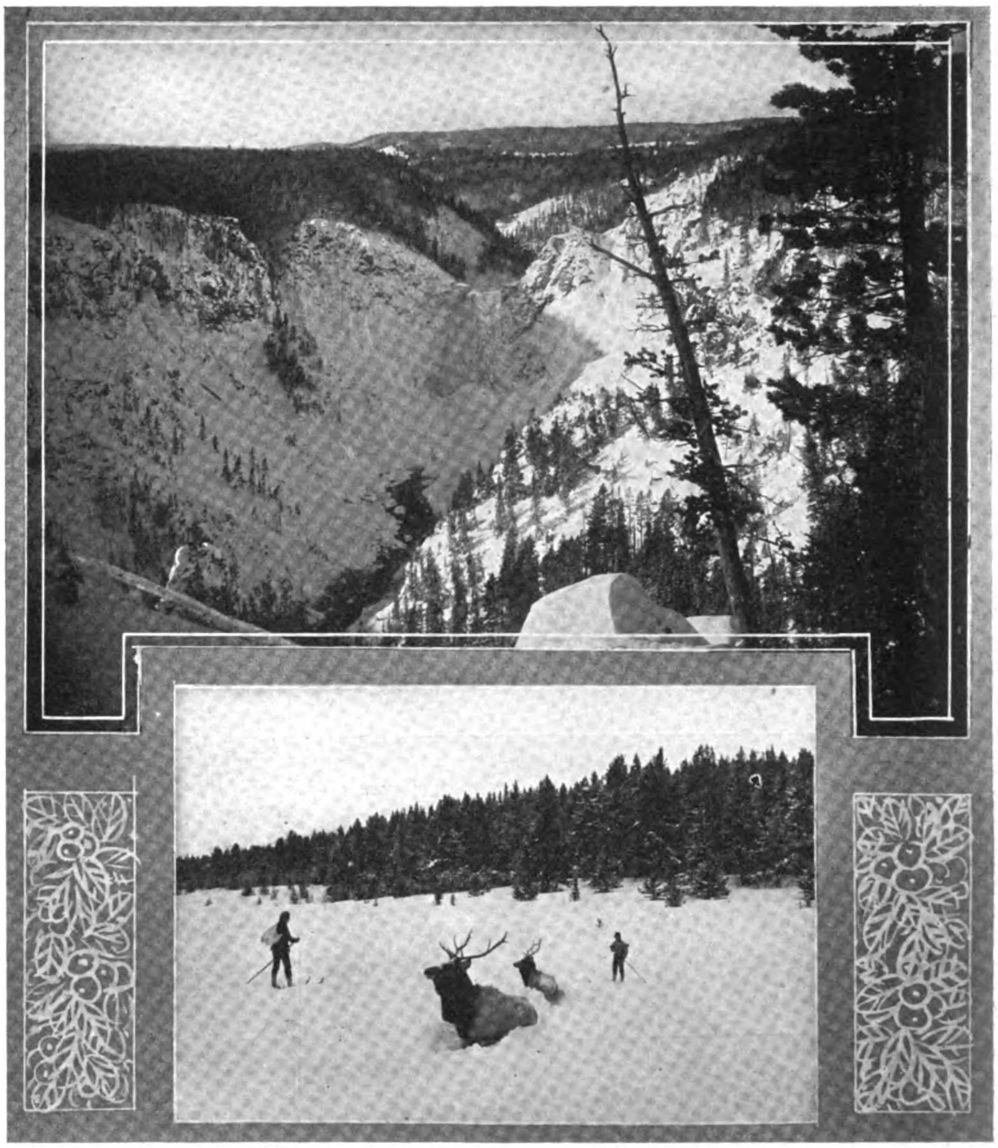
Motorcyclists who make their way into New Mexico should visit Santa Fe, the capital city, which is, next to St. Augustine, Fla., the oldest city in the United States. It was founded by the Spaniards in 1605. Long before this the site of the city was occupied by the Pueblo Indians. It is a most quaint and interesting town with its narrow streets, adobe houses and its curious mingling of American, Mexican and Indian types. The focus of interest is the plaza, or public square, with a soldiers' monument. Nearby is the Governor's Palace which has been the abode of Spanish, Mexican and American governors for more than 300 years. It is well worth a visit. It harbors the museum of the New Mexico Historical Society, containing old Spanish paintings, historical relics and Indian curiosities. The Ramona Industrial School for Indian children is another point of interest. A visit should be paid to the makers of Mexican silver filigree work, whose shops are mainly near the plaza.

Albuquerque is another highly interesting New Mexico city. One of the features for tourists is the Alvarado Hotel, built in the old Spanish Mission style; it contains a valuable collection of the arts and crafts of the Moki, Zuni, Navajo, Apache and Pima Indians. The central transcontinental tour route enters New Mexico at Rator and touches Springer, Las Vegas, Santa Fe, Albuquerque, Carthage, San Antonio and Magdalena, and a branch to the north passes through Laguna and McCarthy. The southern transcontinental route passes through the southwestern corner of the State. touching at Mesquite, Afton, Deming and Lordsburg.

The tourist in Arizona will find that the central and southern transcontinental routes meet at Phoenix. Near this city are the remains of several prehistoric towns and short side trips will lead to the ruins of pueblos with some of their adobe walls still standing. Bowie, Benson, Tucson, Redrock and Florence are interesting towns on the southern route, which passes through the southeastern corner of the State. On the way to Phoenix the central transcontinental route touches Springerville, Fort Apache and Roosevelt Dam, quaint places which still retain some of the true flavor of early days in the West. Great variety must not be expected in the scenery of this region, but the irrigation systems arranged for the watering of the vast barren sections should prove highly interesting.

Southern Wyoming is traversed by the northern cross-country route which enters the State at Cheyenne and touches at Laramie, Rock Creek, Rawlins, Wamsutter, Rock Springs and Granger on its course to Moyer Junction. At this point one route goes southward to Evanston and over into Utah, and another proceeds in a northwesterly direction into Idaho. Off these main routes roads lead into the northern districts, but little is known of their condition, and they are likely to be bad. Even the principal lines will give some hard going. It is likely that the tourist who wishes to visit Yellowstone Park, in the northwest corner of Wyoming, will find it necessary to ship his machine from some point on or near the main tour route, probably from Montpelier, Pacatello or American Falls. To the north of the main tour line the roads are certainly not inviting and many of them may be unridable.

The southern offshoot of the main tour which divides at Moyer Junction, Wyo., passes through the Great Salt Lake region of Utah, touching at Ogden, Brigham and Ketton, and side trips may be made from this line to points on the shores of Salt Lake, although it is not advisable to proceed into the southern section of the State without making careful inquiries as to road conditions. They are likely to be very bad, and besides there is little or nothing to attract the tourist south of Salt Lake City. The chief feature of interest in this place is the Mormon Tabernacle, an extraordinary structure erected in the shape of an oval or ellipse. The interior presents one of the largest unsupported arches in the world, and the general beauty of its architecture attracts visitors. Near the Tabernacle is the Mormon Temple, built at an outlay of $4,000,000. It is not accessible to strangers and is the scene of the mysterious rites incident to the Mormon teachings. All the Mormon buildings, including the Assembly Hall, a granite structure with accommodations for 3,000 people, are worthy of inspection and they afford the chief points of interest for the tourist.



Great Falls of the Yellowstone in Winter Time.
Elks Stalled in the Snow.

Montello is the first Nevada town to be touched by the main touring route which passes through Utah, and from this place the rider will make his way over indifferent roads to Cobre. Here the route divides again, the southern offshoot passing southward to Cherry Run, Ely, Hot Creek, Tonopah and Goldfield and the other branch striking off through Wells, Deeth, Elko, Palisade and Eureka. From Eureka the route goes almost directly westward through Austin, Fallon and Reno. Between these routes and north and south of them the roads are not to be depended upon, and will probably be poor even in good weather. There is no guarantee of good roads even on the main touring lines, but the rider with a machine in good running shape should get through. It may be necessary at points in this region to ride railroad ties for miles at a stretch. The towns are interesting principally for their mining operations and the scenery is not particularly attractive. It is a combination of plains and hills, with some rugged sections.

Southern Idaho is traversed by the northern branch of the main touring route, and north of this line touring by motorcycle should not be attempted. The tour route itself will put the rider to many a severe test and it should not be departed from unless the traveler has detailed information concerning the roads he proposes to use. Throughout all the Middle West great care must be exercised by the rider to avoid getting in to a region from which it will be necessary to ship his machine. In short, the main touring routes will furnish all the excitement necessary and they should be followed. Boise, the capital of Idaho, is a busy little mining city. Not far distant from it is Weiser (2,121 feet), which is the gateway to the district known as the "Seven Devils," named presumably from the hills rising near it.

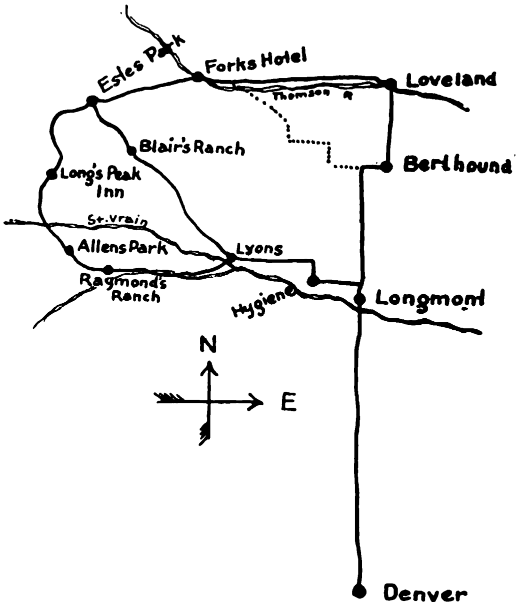
IN COLORADO MOUNTAINS.

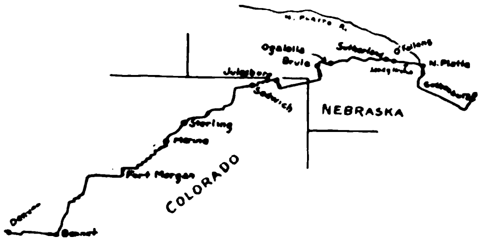
STARTING from Longmont, go north 10 miles, east 1 mile to Berthoud, north from east edge of Berthoud 7 miles to Loveland (road winding a trifle); west from north part of Loveland twelve miles to mouth of canyon and westerly 22 miles to Estes Park. Leaving Estes Park return 2 miles to Dunraven barns, then southeasterly up Park Hill 7 miles to Blair's. Down from Blair's 15 miles to Lyons, then east 6 miles and south 1 mile to Hygiene, east 4 miles, south 1 mile to Longmont. Distance, 86 miles. Or for longer trip, leave Estes Park south, ½ mile, west 1 mile to Highland Gate, southerly 7½ miles to Long's Peak Inn. South 9 miles to Allen's Park; southeasterly 5 miles to Raymond's Ranch, east 16 miles to Lyons, then to Longmont as above.



The short trip above can be made in a day without too much hurrying. The latter could also, but it is better to take several days. Two weeks could be spent on it with a great deal of pleasure. Either of these routes affords as grand a scenic trip as one could wish for, through the mountains for the greater part of the way. The roads are for the most part good, others fair. There are some good stiff hills, but none that cannot be made with a motorcycle if equipped with a good free engine device. From Longmont at the start one travels for eighteen miles through an exceptionally good agricultural district, with the Continental Divide about 10 miles west. From Loveland the road is winding to the canyon of the Thompson river. From the mouth of this canyon to Estes Park one sees some of the most wonderful scenery to be found anywhere. The renowned "Box Canyon," said to be even more grand than the Royal Gorge, features the lower end of the trip. As one rises higher the mountains change, and the stream grows more rapid. There is no monotony. No one ever regrets this trip. It is delightful all the way to Estes Park. The return by way of Blair's brings one to an elevation of 9,000 feet above sea level. One travels a great deal of the way on top of the front ranges. Part of the way is through woods, part open. One crosses the Little Thompson River and follows the North Fork of the St. Vrain for several miles. All these streams have an abundance of trout, Rainbow, Eastern Brook and what are known as "natives." There are dozens of short trips to be made from Estes Park, so that one could spend several weeks there if desired. The return trip by Long's Peak Inn and Allen's Park is not an easy one. A great deal of the road is good, but not all. In good weather, however, it is all passable. This road follows, for the most part, on top of a range of mountains, at an altitude of about 9,000 feet. The hotels are good and there are a number along this trip. A great deal of the road is marked with sign-boards of the Denver Motor Club.—*Submitted by L. B. Flanders, Longmont, Colo.*

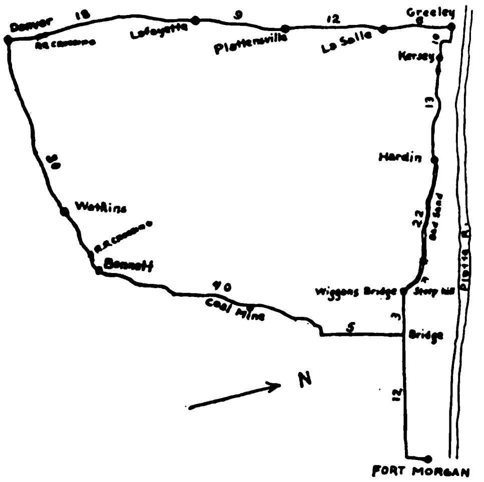
NORTH PLATTE TO DENVER.

ROBERT J. McWILLIAMS, of No. Platte, Neb., submits the following tour covering the distance between No. Platte and Denver. Three miles west of No. Platte turn north one mile and ride west into Ogalalla and then riding west and north for five miles turn south one mile and another mile west into Brule. South of Brule across the river then turn right and follow the river until a point south of Julesburg is reached, where one can be ferried across the stream into Julesburg. Between Julesburg and Sterling there are good dirt roads. The road from Sterling into Denver is all sign posted. The roads between Ft. Morgan and the latter city are particularly good, the hills, of which there are many, being easily climbed. The total distance is one hundred miles.



FT. MORGAN TO DENVER.

THE accompanying map shows a route from Fort Morgan to Denver, to Greeley and return to Fort Morgan; distance 202 miles. From Fort Morgan to Denver the roads are fine; the 97 miles can be covered in about five hours. Proceed from Fort Morgan to point marked X on the map, then turn southward and ride on to Denver, passing the coal mines and a number of small towns. From Denver to Greeley the roads are slightly hilly, but in good condition. The Rocky Mountains can be seen in the distance, and the scenery is beautiful. Ten miles of the road from Greeley back to Fort Morgan are very sandy, and only a twin can get through without pushing. The remainder of this stretch is very good. There are no dangerous roads anywhere on the tour. As a rule the land is so level that 100 miles can be made on one gallon of gasoline.—*Submitted by Duyane Jackson, Fort Morgan, Col.*



HELD RUN DESPITE RAIN

Utica and Syracuse Riders Met at South Bay and Enjoyed Dinner—Planned Other Outings.

UTICA, N. Y.—Sunday, May 5, the date set for the inter-club run of the Utica and Syracuse motorcycle clubs, dawned dismally in both Utica and Syracuse. Properly speaking, it did not dawn at all, but a drizzling rain set in about 6 a. m. which continued intermittently up to the time of the start. Despite the unfavorable weather condtions about twenty-five of the members of the Utica Motorcycle Club gathered at the Parkway with some of the riders from Little Falls, Ilion, Mohawk and Herkimer. By the time Oneida was reached the rain was coming down very briskly and some of the riders lost heart and returned home, but a number of them kept on to South Bay. There they found about twenty-six riders from the Syracuse M. C. out of the forty who started, and some riders from Rome and Canastoa, so it was a fair-sized crowd that sat down to dinner. It did not rain in the afternoon and later the sun came out for a little while, so those who made the trip felt rather sorry for the faint-hearted ones who turned back.

The officers of the Syracuse and Utica clubs got together and took up the matter of the run with the Cortland and Binghamton clubs to Rexford's Falls, which will probably be held on the first or second Sunday in June. A great deal of interest is being shown in these inter-club runs, and it is expected they will continue througohut the season with different clubs in this section of the State.

The Utica Motorcycle Club is very anxious to exchange pennants with other motorcycle clubs and any club sending a pennant to President Homer G. Bulkley, 128 Oneida street, Utica, N. Y., will promptly receive a UMC pennant in exchange.

MORE TRACK TALK.

BALTIMORE, Md.—Talk of a board track has been revived in this city. The visit of George Kreamer some days ago has stirred the local promoters, and a request has been made of the Park Board for the site of the old Coliseum on the Hartford road, which is now a part of Clifton Park. There seems to be some doubt as to whether the request will be granted, but even if it is there does not seem a possibility of having a saucer this year, as the season for racing would be practically over by the time it could be completed.

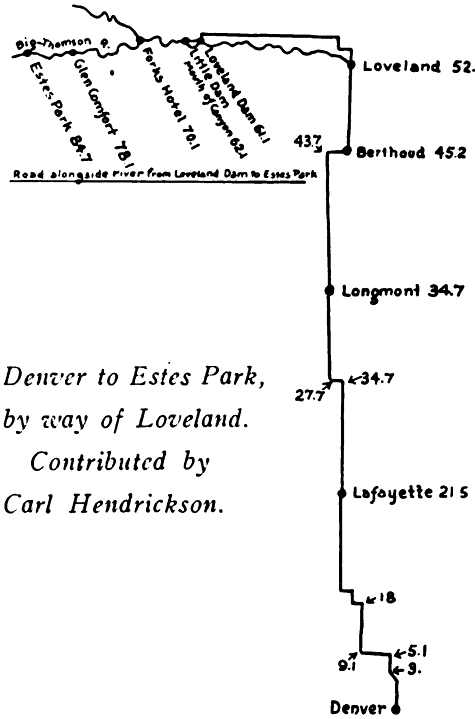
The men here favor a three-lap bowl, but there are no available sites for a track of such size. There are innumerable places which would accommodate a four-lap saucer, so the promoters will watch with interest the working of the new Cleveland track, and if it proves a success, they will probably erect a track of similar proportions in Baltimore next season.

CHICAGO FRANCHISE

Wanted by Both the Riverview Stadium Motordrome and the Chicago Motorcycle Club.

A RATHER peculiar situation has arisen in Chicago bearing upon the award of an exclusive board track franchise for that city. Such a franchise is wanted by M. W. N. Johnson, now sole owner of the Riverview Stadium Motordrome, and also by the Chicago Motorcycle Club, which would like to build a track on the south side of the city. The Chicago Club, however, has not yet secured a site for its proposed track. On the other hand, the Stadium Motordrome management is ready to hold its inaugural meet in July.

About the middle of April, Chairman Thornley signed a draft of the agreement adopted by the F. A. M. Board of Directors suggesting that it be executed at that time. However, there was some litigation then pending relative to the ownership of the track, and the execution of the exclusive franchise agreement and the payment of the fee was deferred. Late in April, a settlement was reached, whereupon Johnson wired $1,000 to Dr. Thornley, $750 in payment of the franchise fee and $250 to make up a purse which, as announced last year, was to go to the professional rider winning the largest number of races. The winner of this prize is Joe Wolters.

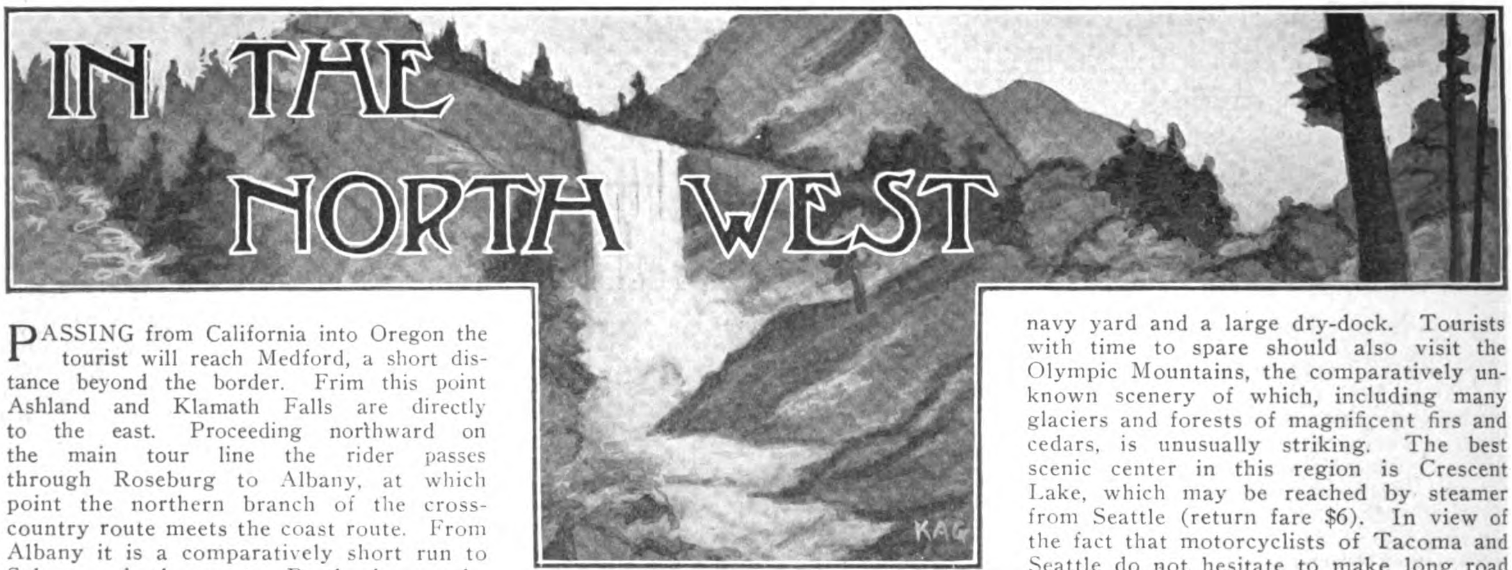


Denver to Estes Park, by way of Loveland. Contributed by Carl Hendrickson.

Johnson has also made application for six sanctions, and Chairman Thornley will undoubtedly decide in his favor, unless he receives formal objection within thirty days, from a majority of the members of the Board of Directors.

The Riverview races will again be refereed by H. T. Roberts.

SANCTIONS for race meets at Washington, D. C., and Lancaster, Pa., have been granted for May 30 and the boys are working industriously to make their respective programs interesting.



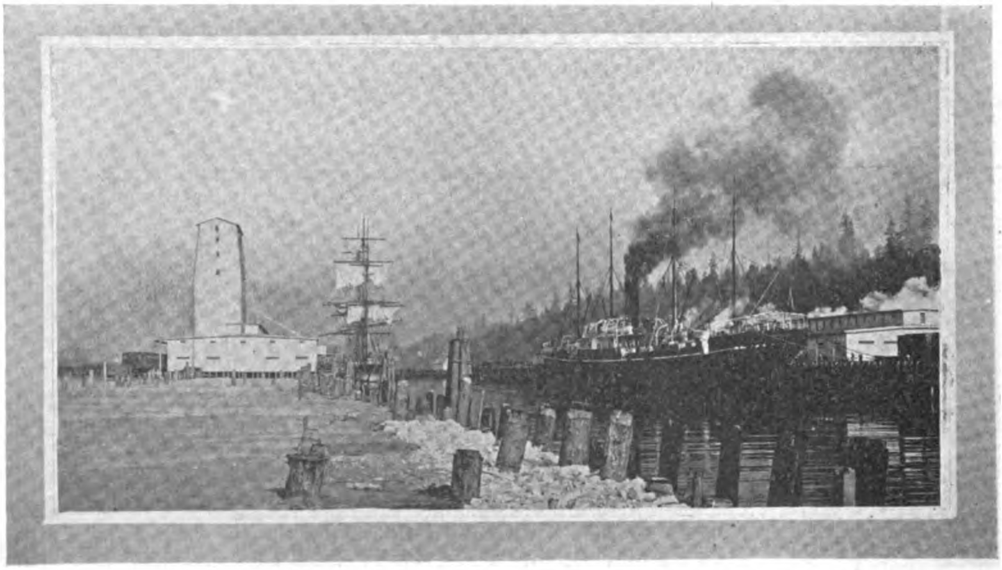
IN THE NORTH WEST

PASSING from California into Oregon the tourist will reach Medford, a short distance beyond the border. Frim this point Ashland and Klamath Falls are directly to the east. Proceeding northward on the main tour line the rider passes through Roseburg to Albany, at which point the northern branch of the cross-country route meets the coast route. From Albany it is a comparatively short run to Salem and thence to Portland, on the Columbia river. Above this point the roads are reported to be fair in good weather, and the rugged mountain scenery will repay the tourist who finds it possible to extend his trip on through Olympia and Tacoma to Seattle. From Seattle roads lead eastward to Spokane, but they are not always in condition to tempt the motorcyclist. Portland is advantageously situated on the Willamette river, above its confluence with the Columbia. The city is a railway and commercial center, much of its trade being in lumber; from 600,000,000 to 700,000,000 feet of timber is handled annually in this district. A visit to the shipping section of the city should prove interesting, and there are many imposing buildings which warrant the expenditure of time for an inspection.

Favorite excursions from Portland are by steamer up the Columbia river to the Cascades and to the Dalles. The scenery along the river is beautiful and fully justifies the trip. Steamers also descend the Lower Columbia to Astoria, affording a fine view of the wide estuary of the river. A visit to a salmon cannery may be combined with this trip. A steamer plies across the Columbia river to Megler, from which point a railway runs to Ilwaco. At the latter point the visitor will find large canning factories. Another fine outing may be enjoyed on the Willamette, a steamer running regularly to Oregon City, Dayton and Corvallis. Mt. Hood is conveniently ascended from Portland by taking the train to Hood river. Mt. St. Helens (a more or less active volcano), Mt. Adams, Mt. Jefferson and the Three Sisters may also be visited from Portland.

The tourist who finds himself in Tacoma should visit one of the large sawmills and also inspect the huge factories devoted to the manufacture of furniture and stoves. There are big foundries, smelting plants and flour mills at this point and any one of them is worthy of a special visit. Many good roads and paths lead from Tacoma to the natural parks, which begin about six miles south of the city and extend for 15 miles, with an average width of 10 miles. This large area is dotted with lakes and patches of virgin forest and is highly attractive from a scenic standpoint. The parks make ideal motoring places, as there is no dust in summer and no mud in winter. From this point Mt. Rainier may be seen, but a visit to it will require about three days' time.

Seattle, one of the most prosperous cities in the Pacific Northwest, lies on a series of terraces rising from Puget Sound. Only a short distance away lies Lake Washington, a beautiful sheet of water 20 miles long. It is a favorite excursion point and many parks have been laid out in the vicinity. The traveler should not fail to make a trip to Snoqualmie Falls (270 feet high), and a shorter trip may be made by steamer across Puget Sound to Bremerton, on Port Orchard Bay, which has a U. S. navy yard and a large dry-dock. Tourists with time to spare should also visit the Olympic Mountains, the comparatively unknown scenery of which, including many glaciers and forests of magnificent firs and cedars, is unusually striking. The best scenic center in this region is Crescent Lake, which may be reached by steamer from Seattle (return fare $6). In view of the fact that motorcyclists of Tacoma and Seattle do not hesitate to make long road jaunts, it may be taken for granted that the general going is fair, but some strenuous climbs may be expected. In general the scenery of Oregon and Washington is rugged, but the rivers and lakes relieve it here and there to such good effect that no section of the country offers greater attractions for the seasoned tourist.



Great Northern Docks in Seattle, Wash.

261. Big Springs, Neb., to Cheyenne, Wyo., 163.3 Miles.

Route Follows R. R., Some Good Parts; Balance Fair with Some High Centers. Direct Line Avoiding Denver.

Next in order Soldier and Martin to 416.0 Lava Beds, Arco and Blackfoot. 540.0 Pocatello.

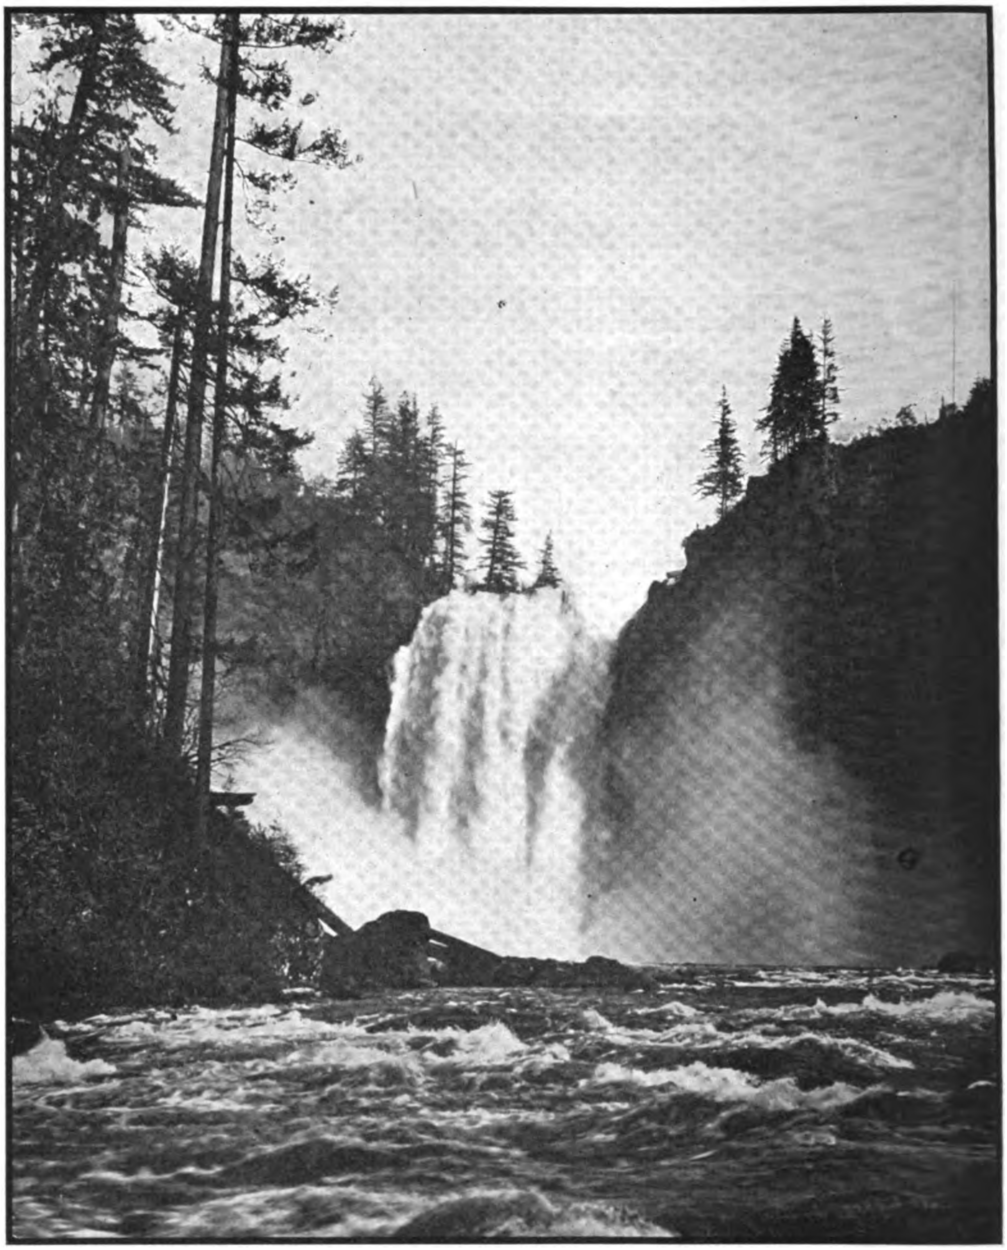
On One of the State of Washington's Finest and Most Picturesque Roads.

TO SNOQUALMIE FALLS.

MOTORCYCLISTS who have made the trip to Snoqualmie Falls at the right time of the year, and that is most any season, have said that it is one of the most interesting trips in the world. With the exception of the trip to Mt. Tacoma, which must always rank by itself, perhaps no other run leaves such an impression on travelers as this marvelous woodland highway, remarkable for its diversity and its natural glories, around hills and over some through valleys of indescribable beauty and down the ribbons of roads threading between towering trees mile after mile.

There are some wonderful woodland vistas between Renton and Falls City which are well worth traveling many miles to see. A grand view of Lake Washington is had at several points along the route, especially on the heights above Renton. Down the stretch which leaves Issaquah to the right, nestling in a hollow, stands Mt. Tacoma, with snow-top hanging in the heavens just where the two green-clad hills taper down in a charming framework.

Of Snoqualmie Falls too much cannot be said. At this time of year especially, an immense amount of water is going over the falls, which have a height of 375 feet. Returning by way of Kirkland is a splendid road, where the scenery is park-like, although still retaining the abandon of the woods. The highway is efficiently marked and forms one of the most traveled thoroughfares of the Northwest tourist from Seattle. The surface, take it all in all, is good both ways, with the Kirkland road the better of the two. From Kirkland a good ferry service across Lake Washington connects with Madison Park, at Seattle, providing an enjoyable round trip.—*Submitted by F. K. Haskell, Tacoma.*



Snoqualmie Falls.

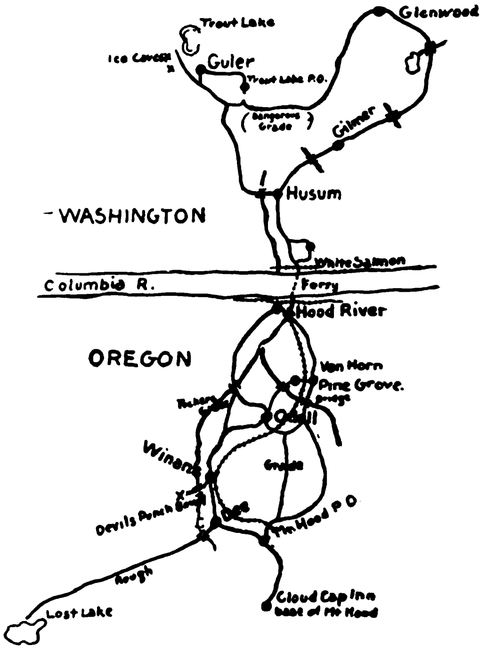
AN OREGON ROUTE.

GO from Hood River to Pine Grove, take left hand road; after crossing bridge turn to left, taking new Neal Creek road to Mt. Hood post office and Cloud Cap Inn. Return by same road to Mt. Hood post office; take left road to Dee; cross bridge to Lost Lake. Return by same road; at Wians visit Devil's Punch Bowl, return to Odell or take cut-off down river to Tucker's Bridge and to Hood River. Total distance, about 50 miles. From Hood River take ferry to White Salmon, then go to Husum; cross bridge at left, go to Gulers; visit Ice Caves; return via Trout Lake post office, Glenwood, Gilmer, Husum and White Salmon. Distance, about 60 miles.

Roads from Hood River to Pine Grove, macadam; from thereon earth roads, some gravel, usually in good condition. Mostly up grade to Cloud Cap Inn; rather rough from Dee to Lost Lake. Macadam from near Tucker's Bridge to Hood River. Roads from White Salmon to Gulers, earth, mostly good; no bad grades except near White Salmon. Returning, one bad grade near Trout Lake post office; lacks turn-outs; rough in places. Hotel accommodations: Hood River, Mt. Hood Hotel; Winans, Winans Hotel; others easily located.

From Hood River to Mt. Hood are orchards and strawberry fields; foothills heavily timbered; stop at Cloud Cap Inn, climb Mt. Hood; at Dee see one of the largest lumber mills on the coast; Lost Lake is worth a visit, also the Devil's Punch Bowl, a hole 150 feet wide and 100 deep through which the river foams. At Mt. Adams visit the Ice Caves; catch trout at Trout Lake.

June and July probably best for this trip. Do not attempt road from Mt. Hood post office to Cloud Cap Inn and from Dee to Lost Lake unless machine is equipped with clutch or two speed. Distances given are only approximate. On map the best route is heavily marked; roads lighter marked may be taken.—*Submitted by B. L. Clark, Hood River, Ore.*



THREE WASHINGTON TOURS.

THREE State of Washington tours are contributed by John R. Ritchie of Spokane. The first is a one hundred and ten mile tour around Mt. Colbert, through Hillyard, Mead, Colbert, Chataroy, Milan, Elk, Camden and over Camden Pass into Newport. There one takes the south road from Newport through Tweedie, Blanchard, Coleman and Spirit Lake to Rathdrun; then the west road from Rathdrun through Hauser, Moab, Otis and Trent into Spokane. The trip can be easily made in one day. The road from Mead to Newport is through a thickly wooded country and but little traveled. While it is not much of a speedway, the going is fairly good, the surface being for the most part hard, with very little sand or dust. The road between Newport and Spirit Lake is about the same, while from Spirit Lake back to Spokane the roads are straight and level, the only bad grade being just beyond Newport, a rough and sandy 20 deg. hill. There are several pretty lakes along the route which invite stop-overs, with hotel accommodation at Spirit Lake and Rathdrun, both popular summer resorts.

SPOKANE TO WENATCHEE.

LEAVING Spokane by way of the State Aid road, go through Deep Creek and Reardon into Davenport. Following the main road west, pass through Preston, Wilbur, Almeia and Heartline into Connelly City. Frequent 10 to 20 per cent. grades are encountered up to this point and there is a two hundred-yard stretch of sand west of Heartline. The first really difficult grade is two miles west of Connelly City, a 15 per cent. ascent, sandy and five miles long. A few miles farther on the road begins winding downward and is quite sandy in places. From the summit to Waterville there is a new road, with dust holes here and there. Waterville proper is a quarter mile north of the main road. A few miles beyond this town one begins the descent through Box Canyon to Columbia River. The grade is rough and steep, ending at Orando Ferry, where motorcyclists are compelled to pay a 35 cent fee for ferryage across the stream. From the landing on the opposite side to Wenatchee the road follows the river. Rolling 10 to 20 per cent. grades predominate. Wenatchee is a town of 6,000 inhabitants, with a motorcycle shop and good hotel accommodations. There are also hotels at Wilbur and Connelly City and Waterville. The run can be made in one day on a twin or a two-speed single, but hardly on a smaller powered single speed machine.

WENATCHEE TO SEATTLE.

LEAVING Wenatchee by the south road, follow the river through Malaga to the right fork, 15.3 miles from the starting point. Follow the main road here to the summit of Wenatchee Mountain, then down the other side into Ellensburg. The road from the twenty-mile point to the summit, 28.8 miles, is not ridable for a single speed machine. It is only a trail, the grade reaching 35 per cent. An idea of the character of the climb is given by the following table: 21.5 miles, 2,500 feet; 22.6 miles, 2,953 feet; 24.5 miles, 3,500 feet; 25.3 miles, 4,400 feet; summit, 28.8 miles, 5,250 feet. The grade on the south side is much easier, 25 per cent. being seldom reached. The road up the valley from Ellensburg on to Easton is good. From Easton it is best to ship one's machine forty-three miles to Moncton on the C. M. & P. S. Railway at a cost of about $5. However, if the tourist is willing to take the risk, these forty-four miles can be negotiated, although I would not guarantee that it may not take two if not three days. The road from Moncton through North Bend, Fall City and Renton to Seattle is good, partly macadamized. There are hotels at Ellensburg, Easton and Fall City.

VANCOUVER, B. C., TO PORTLAND, ORE.

JOHN CORNYN and H. A. Rodolf, the former of Vancouver and the latter of Bellingham, Wash., contribute maps and tour directions which, combined, cover the route between Vancouver and Portland, including Bellingham, Everett, Seattle and Tacoma, the total distance from Vancouver to Portland being 376.75 miles. This road has been signposted by the Seattle Automobile Club so that it is almost impossible for a tourist to lose his way.

The distance between Vancouver and Bellingham is 60.7 miles. Having reached Bellingham one travels from that town by way of the Pacific Highway to Burlington, where you cross the Skaget River on a ferryboat, then to Mt. Vernon and on to Everett, passing through small towns like Milltown, Stanwood, Silvanna and Marysville. The distance from Bellingham to Everett is 66 miles. From Everett, Seattle is 31 miles distant by way of Edmonds and Ballard. Next in order in the way of big towns comes Tacoma, 150 miles from Bellingham and 43 miles from Seattle by way of Georgetown, Kent and Auburn. From Tacoma through Steilacom and Lacey the distance to Olympia is 40 miles, making the total from Bellingham 190 miles. It is best to allow two days for the trip each way with night stops at Seattle. Should one desire to make Portland, go by way of Yelm, Chehalis, Kelso and Woodland, the distance from Tacoma to Portland being approximately 162 miles.

The roads are mostly gravel, though macadamized here and there. There are not many hills too steep for a single cylinder machine of 4 h. Hotel and restaurant accommodations are good. The mountain scenery is superb, the snow-capped summits of Mt. Baker and Mt. Ranier towering over many other peaks of the Cascade Range. Bellingham, Everett, Seattle, Tacoma and Olympia are among Washington's leading cities and have many points of interest. Seattle is the

largest city in the State and is noted for its parks and boulevards. Olympia is the State capital.

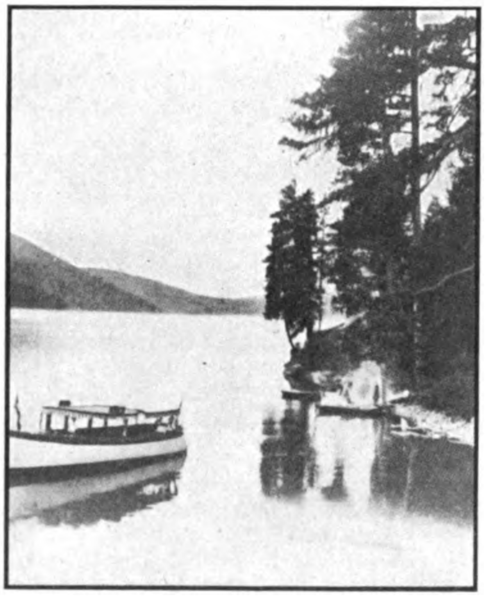
FINE TRIP IN WASHINGTON.

TACOMA motorcyclists and in fact all owners of machines in Pierce County are much gratified with the new road leading toward Tacoma out of Buckley. The run to Buckley from Tacoma is generally looked upon as one of the prettiest drives in the country. A portion of the road has recently been improved with a patent two-layer concrete material 24 feet wide, and the four-mile section into Buckley is laid with water-bound rock macadam.

Lake Union; Seattle in the Distance.

From a scenic standpoint the run to Buckley is well worth the time of any motorist. Every kind of view is offered. From Tacoma one follows Bay street to the Cushman Indian school. There the road branches off to the left, crossing the Puyallup river bridge and the Indian reservation, turning at Fife to the right and following the State-aid highway through North Puyallup. In this part of the trip the rider has passed through the rich truck garden district of the lower Puyallup valley and has come to the great berry district on the north bank of the Puyallup river. From North Puyallup the road cuts directly through Boatman's grove of splendid fir trees. From here the highway that the rider must take branches off to the right from the Pacific Highway route to Seattle, and crossing a steel span over the Struck river, enters the business part of the thriving town of Sumner. Gasoline and oil may be had there.

There are two routes here that offer themselves for the journey to the northeast corner of Pierce County. Driving east out Main street one may select the roads running off to the right in several places and eventually come to the one road over Elhi hill. Or, starting out Main street, one may take a course that leads a trifle to the left, or north, and mounting a hill, skirt presently to Lake Tapps, and from there southeasterly toward Buckley.



Spirit Lake, Wash.

But the Elhi hill road is equally interesting. It winds up gradually through the firs and cedars—twisting and turning in snake fashion and occasionally offering a beautiful view of the cultivated Puyallup valley on one hand and Mt. Tacoma on the other. Then after approximately two miles of travel on a sort of plateau, the road turns rather abruptly to the right and almost plunges down into the valley. The hill is quite steep, but the road has been so built that the grade is not dangerous. From the bottom of the hill to Buckley is approximately ten miles. Fine farms and occasional settlements are the rule for the remainder of the route.—*Contributed by F. K. Haskell, Tacoma.*

Nine-Mile Bridge, Wash.

A TOUR OUT OF SPOKANE.

RIDE out Hamilton street and follow the car line to Hillyard. Turn to the left and follow the Calispell road in a northerly direction, passing through Mead over a high bridge at Deep creek; then up a sandy hill across the railroad track. Keep to the left until you come to Colbert. Leave Colbert, going north about a mile and turn right and proceed to what is known as the main Calispell road. A long, winding hill crossing a railroad brings you into Chateroy. From Chateroy go north up a short hill on to a long, level stretch through a densely timbered country, finally coming out at the bridge over the Little Spokane river. Turn left from Calispell road and pass through a swamp at the foot of a lake, keeping to the right along the lake to Steven's Ranch. The roads thus far are of a hard, sandy formation and while the country is of a hilly character there are no insurmountable grades. Leaving Steven's Ranch pass out along the main road to the Old Colville road. Turn right, following this road until you come to Steven's Lumber Mill; passing south of the mill take the left road up a short hill, and then along a level stretch to Deer Park, and south on the main traveled road through the Arcadia Orchard, Denison and Mayside to Dortford, which is on the Little Spokane river. Going south from Dortford you come to a long, winding hill through a thickly wooded district, soon striking the automobile boulevard which leads into Spokane.

Four days may well be given to this journey, as there are numerous interesting side trips, such as the run to Horseshoe Lake.

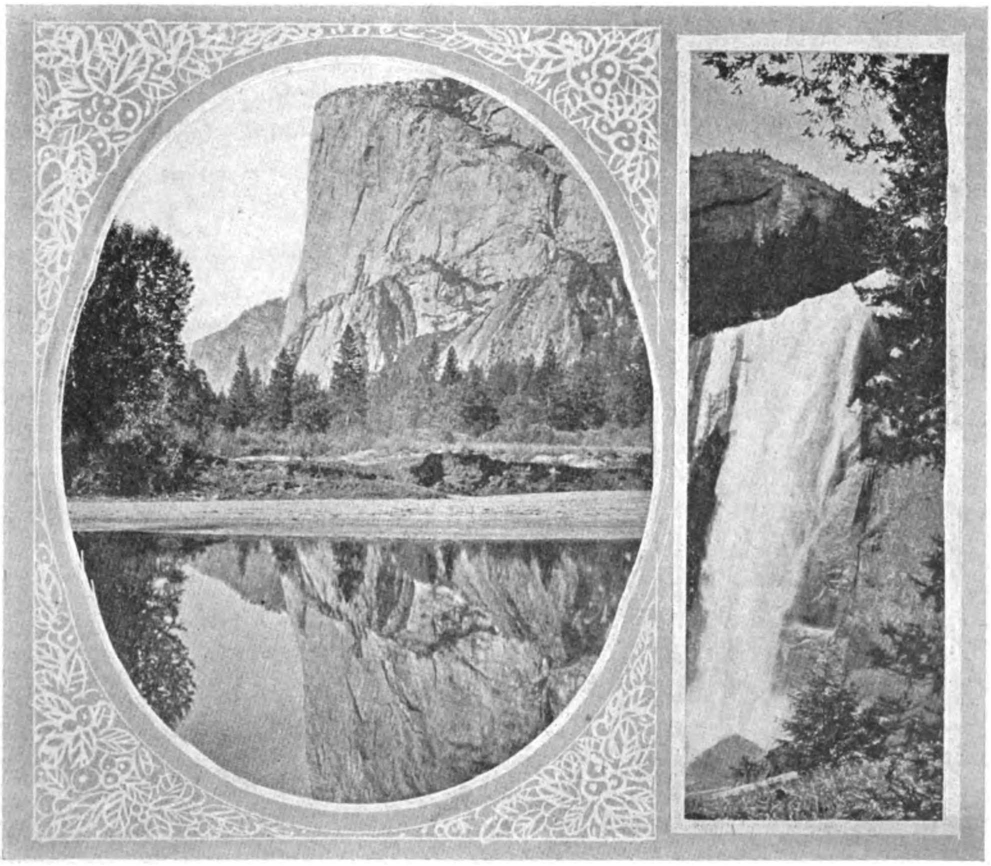
ON THE PACIFIC COAST

THROUGHOUT the Pacific Coast States, California, Oregon and Washington, Nature has set a stage of wonderful scenic diversity for the operations of the motorcyclist. In lower California there is the unfailing lure of the Southland, the glorious contrast of plain and mountain and flowered valley; quaint mission towns dot the touring routes and picturesque scenes beckon the traveler on every hand. Northward the mildness of the climate tones off into Oregon, with its rugged coastline and its sterner interior beauty, until finally the tourist finds himself climbing into the mountains of Washington. It is safe to say that between Seattle on the north and Los Angles on the south the motorcycle traveler will experience every thrill possible to the open road. There is none of the monotony which marks touring in some of the Middle Western States, and not the least important feature is a system of fair to good roads.

The rider who is following the southern transcontinental route will enter lower California by crossing the Colorado river near Blythe. He will then proceed to Mecca and Beaumont, and finally arrive in San Bernardino. At this point he enters what is called the Garden of Southern California; but even here he must not expect to find the country an unbroken paradise of orange trees and roses. Great areas are covered with orange and lemon orchards, it is true, but there are also wastes of sand. As a matter of fact southern California owes its most attractive features of vegetation to its settlers who have brought to it streams of revivifying water. San Bernardino County alone is twice as large as the State of Massachusetts. The metropolis of this section is, of course, Los Angeles, but San Diego, Pasadena and Santa Barbara are picturesque cities which should be included in the itinerary of the tourist.



Mirror Lake and the Vernal Falls in the Yosemite Valley, Cal.

In 1885 Los Angeles was an adobe village; today it is a city of brick and stone which harbors more than 60,000 inhabitants. It is the capital of southern California, and the headquarters of its fruit culture. The plains and valleys surrounding the city are one mass of vineyards, orange groves and orchards. One of the chief charms of Los Angeles is the sudden contrasts it presents. For instance, a three-minute ride from the center of the city will bring the tourist to the remains of the humble Mexican village which was the forerunner of the present city. Here he will find the characteristic adobe church and many of the marks of other days. The transition from the modernism of the city to the ancient atmosphere of the little village is so rapid as to be striking. Los Angeles has its Chinatown, quite distinct from the American portion of the city, and it will amply repay the tourist for a visit. There are two large ostrich farms in the vicinity of Los Angeles, one of which should be visited.

Sixteen miles from Los Angeles rise the Sierra Madre Mountains, near which lies the city of Pasadena. A striking feature of these mountains is that they rise so abruptly from the San Gabriel Valley that the tourist in Pasadena may look directly to their bases and even ride to them without difficulty. Well-paved streets, usually palm-lined, handsome public buildings and beautiful grounds are features of the city. From Raymond Hill a wonderful view of Pasadena may be obtained, and the visitor should not fail to make this ascent. The San Gabriel Valley is a famous wine-making district, a great part of its wine output being sent to European countries to be imported back into the United States and paid for as French and other brands. No visit to Pasadena would be complete without a trip to the neighboring mountains. At the very base of the cliffs are orange and lemon groves, and from these the traveler climbs rapidly into a region of mountain grandeur. Rubio Canyon, a wild gorge, is a favorite show place. If there is sufficient time an ascent of Mt. Lowe should be made by the cable road. This is a never-to-be-forgotten trip.

Riverside is another attractive city, about 60 miles from Los Angeles. The pride of this city is its far-famed Magnolia avenue, fifteen miles in length, with two broad drives lined by pepper and eucalyptus trees. No motorcycle visitor should fail to make a trip over it. All about Riverside are orchards with inviting roads for the motoring tourist. Redlands is another "orange city." One hundred and twenty-six miles southwest of Los Angeles is San Diego, a charming city of fine buildings and wonderful vegetation; it has an excellent view over the ocean from Point Loma. The latter is a famous bathing place. Much of the charm of touring in this region lies in the fact that whatever is to be seen may be reached easily. In or near every town in southern California is a picturesque mission, from every hill exquisite views are to be obtained and on all sides the best of hotel accommodations are available.

Passing northward from Santa Barbara the tourist reaches Bakersfield, on the north-central route, or San Luis Obispo and Paso Robles on the coast route. Continuing along the coast the traveler will touch Salinas and San Jose, at which point the route divides, one branch going to Oakland, and the other to San Francisco. It would be folly to attempt a description of San Francisco's points of interest within the limited scope of this treatise. Let the tourist obtain a good guidebook to the city and its environs and then make the most of the attractions offered. After leaving Bakersfield the inland course is to Fresno, Merced and Stockton, where a turn may be made to the west to Oakland. The motorcyclist who proceeds northward from Stockton arrives in Sacramento, the capital city, which lies on the Sacramento river just below its confluence with the American river. It has wide streets, well laid out, and many beautiful parks. The State Capitol has a library which contains 150,000 volumes. One of the features of the city is the Riverside Drive, along the Sacramento. A short distance north of Sacramento is Auburn, marking the junction of the coast touring route with one of the branches of the transcontinental tour course. From Auburn the northern route leads to Marysville, Oroville, Red Bluff, Anderson and Redding, and thence to Yreka, near the northern boundary of the State. All the towns mentioned have their points of scenic interest, and the route is one of never-failing fascination. The vivid contrasts in the southern section of the State are found here in only slightly modified forms; the tourist will not find this portion of his trip monotonous, even though he may not encounter anything particularly striking aside from the scenery.

LOS ANGELES TO OAKLAND.

Go from Los Angeles north on Wilshire boulevard to Hollywood; turn right on main road to Cahuenga Pass, a short 10 to 15 per cent. grade, and then continue over Chalk Hill and through Calabasas, Resada and Newberry Park. Go over the Conejo grade (about 10 per cent.), and pass through Camerillo, Springville, Elrio, Ventura and through Casitas Pass (12 to 25 per cent. grade), to Shepherd's Inn and on to Summerland and Santa Barbara. Proceed then to Soleta, Elwood, Naples, Gaviota Pass (10 to 12 per cent. grade), Santenynez Mission, Losolivos, Sisquoc, Foxen Canyon (10 to 15 per cent. grade), Santa Marie, Arroys Grande, Reeds, Steele and into San Luis Obispo.

From this point go out the main street two and a half miles upgrade to Santa Margarita, Dove, Templeton and Paso Robles; from the latter point proceed one mile and then turn right to San Miguel; there turn to the right again and go via Bradley, Jolon (8 per cent. grade), King's City, Soledad and Gonzales to Salinas. Follow main street out of Salinas to Santa Rita, Raines and San Juan grade (one mile—10 to 15 per cent.); then proceed to Sargent, Gilroy, Rucker, Morgan Hill, Coyote, Edenville, and finally to San Jose. From this point the route continues northward to Milipitas, Warm Springs, Centerville, Alvarado, Elmhurst and Fruitvale, and into Oakland.

On the whole the roads are good if the trip is made early in the summer—not later than July 1. Between Los Angeles and Santa Barbara there is a sandy stretch of about 10 miles over Cahuenga Pass, and

Los Angeles to Oakland, by Way of Santa Barbara, San Luis Obispo and Salinas.

some very sharp turns in the Casitas Pass. From Santa Barbara to San Luis Obispo there are only a few rough spots. On the next stretch the Jolon grade may give trouble. It is usually deep with dust which covers many rocks. From Salinas to Oakland the road is fair.

The following are good hotels: Santa Barbara, Carlton House San Luis Obispo, Commercial; Salinas, Abbott House; Oakland, Key Route Inn. Garages: Santa Barbara, Wood's; San Luis Obispo, first garage on east side of Main street; Salinas, Salinas Cyclery; Oakland, Keystone, 22nd street and Telegraph avenue.—*Submitted by A. S. Harris, South Berkeley, Cal.*

AN EXCITING CHASE.

DEPUTY SHERIFF A. SCHLAGER, of La Porte, Ind., mounted on a motorcycle, recently made a wild ride through that city in chase of two supposedly automobile thieves. The shots fired by the deputy were returned by the would-be robbers, who finally ran the car into a fence and made good their escape.

RACE IN MOVING PICTURES.

A MOVING picture firm at Bartlesville, Okla., is showing pictures of the recent motorcycle races held in that city. The films show Wells Bennett (Indian rider), champion of Kansas, and Roy Goode, a Kansas "hope," in a hot contest, and also depict a spill taken by Bennett. The films are being shown in Kansas and Oklahoma.

SPECIAL OKLAHOMA TAGS.

A SPECIAL tag has been ordered to be affixed to motorcycles in Oklahoma City, and the chief of police has been instructed by the mayor to arrest every rider who exceeds the speed limit or travels through the streets with open muffler.

The Calgary (Alberta) Club is arranging for a run to Banff on May 24, 25 and 26.

SEATTLE SCHEDULE

Washington Riders Complete Plans for Fine Series of Runs and Races—Club Rules for Road Work.

AT a recent meeting the Seattle (Wash.) M. C. adopted the following rules to govern its road trips for the coming season. They were outlined by Captain William Taft:

Special attention must be paid to road courtesy at all times; club members are warned against road racing with either motorcyclists or automobiles; exercise particular care when passing a scared horse on the road; mufflers must be kept close except on very steep hills or out in the country; on runs where it is specified that members shall ride in pairs no rider shall desert his partner—in case of trouble he must remain and give all the assistance possible; no rider will be allowed to start until the captain so orders, and no rider shall run ahead of the captain without good cause; parade formation will be adhered to through towns whenever possible.

On April 7 the club held a run to Bothel, Kirkland, Redmond and Falls City and returned by way of Renton. On April 21 a tandem run was made to Lakeside Inn. A hill-climb was held at Grouse Ridge on May 5, the club riders making the trip by way of Renton. They returned through Kirkland. Other features of the club's program have been listed as follows: May 19, picnic tandem run to the "Narrows" at Tacoma; May 30, race meet; June 2, tandem run to Olympia; June 16, third annual endurance run to Portland, Ore., and return; two-day run with $300 in prizes for perfect scorers; June 30, tandem run and fishing trip to Cedar Mountain; July 4, race meet; July 14, Northwestern District tandem run to American Lake, in conjunction with the Tacoma, Everett, Olympia, Centralia, Chehalis clubs and others.

CAPTURED ESCAPING JAIL-BIRD.

THE efficiency of the motorcycle for police use was demonstrated at Coffeyville, Kan., recently when a machine was brought to use to capture an escaping prisoner. A man was in the jail waiting to be taken to the State reformatory. Plumbers were at work in the jail and it was necessary to have the door open in order to carry in supplies. The jailer did not put the prisoner in a cell and when a chance presented itself the "bird" made a break for liberty. The prisoner, who was eighteen years old, soon outdistanced the jailer and was about to escape.

R. E. McCullough, city plumbing inspector, also agent for the Indian, was in his office and saw the jailer giving chase to the fleeing man. McCullough ran out of his office, took the police machine and gave chase. After a run of five blocks across unpaved streets he recaptured the man and turned him over to the police.

EXPLAINED NEW ORDINANCE.

COUNCILMAN DOWLING, of the Cleveland City Council, recently addressed the Cleveland M. C. at a special meeting with a view to making clear the provisions of a new motorcycle ordinance. The measure prohibits the carrying of a passenger on a luggage carrier or on the tank of a machine and a regulation tandem attachment with handlebars and pedals must be provided if a passenger is to be accommodated. A ban has also been placed on the undue smoking of motors and the ordinance prohibits the use of the muffler cut-out within the city limits. The police have received orders to enforce the rules strictly.

McACY SAVED THE DAY.

AS a means of replenishing the President's supply of collars an Excelsior machine thoroughly demonstrated its efficiency in Savannah, Ga., recently.

President Taft visited that city on May 1 and was entertained by a luncheon at the Casino in Thunderbolt, five miles from Savannah. The day was warm and the President's linen wilted most distressingly, so that at 2 o'clock Officer McAcy, whose photograph appears herewith, was dispatched from the Casino to the De Soto Hotel for more collars for the President. He mounted his Excelsior, rode the ten miles and delivered the collars to the President's aide at 2:17. The photograph and the above information come from the Balfour Hardware Company of Savannah.

IN THE LAND OF DIXIE

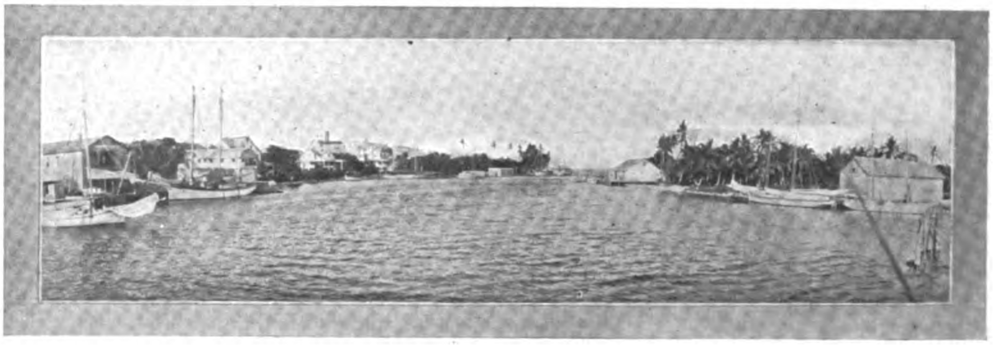
TOURING conditions in the Sunny Southland would be ideal but for the fact that roads in many of the outlying districts are unimproved and therefore not conductive to long jaunts for any but the hardiest riders. The scenery throughout this section of the country is widely diversified and usually pleasing. Here and there it assumes aspects approaching the sublime and for panoramic interest the tourist will find parts of it unsurpassed except in the Far West. Many of the towns retain their ante-bellum atmosphere, their quaint homesteads and picturesque roads and bridges practically unchanged, and in some sections the tourist feels that he has stepped back through half a century into "the old South." Hospitality is a by-word with the typical Southerner, and the reasonable visitor is always welcome. Hotels are old-fashioned in many instances, but usually to be depended upon for artistic cookery. Their very quaintness adds to the enjoyment of the full-fledged tourist. In the larger cities, of course, the best of service is always obtainable, but the experienced traveler will keep off the beaten track—wherever the roads are rideable.

The eastern section of North Carolina is dotted with winter resorts, couched in ideal surroundings, but aside from their scenic attractions they hold out no special inducements for the motoring tourist. All the roads are hilly, even in the eastern districts; some have alternating sandy and rocky stretches, but quite a few of them have been traveled by motorcyclists and a two-speed machine should enable the rider to reach most of the points of interest. Side trips are not recommended without careful inquiries as to roads. It is regrettable that so many of North Carolina's natural beauties are inaccessible to the motor tourist, but a Good Roads movement is now being taken up to remedy this condition and the State will no doubt prove more inviting in a year or two. Raleigh is the capital and most interesting city, but many of the smaller towns along the coast will repay the tourist for a short visit. Wilmington, in the southeastern corner of the State, is a thriving city engaged largely in the tobacco and lumber trade and shipping.

Road conditions in South Carolina show little or no improvement over those existing in its sister State on the north. Tourists should keep quite close to the main routes here and even then great areas of swampy land will be encountered which at certain seasons render the highways practically impassable. In the northwestern section of the State sandy and rocky hills abound, and it is advisable to follow a coast route in passing through. Columbia, the capital city, lies on the high banks of the Congaree river in the center of the State, and has several notable features for the visitor. One of the most imposing buildings is the State House, in the grounds of which stands a handsome monument to the "Palmetto Regiment" which served with distinction in the Mexican War. The State Penitentiary, the University of South Carolina and other public buildings are worth inspecting. Pleasant jaunts may be taken through the fair grounds and in Sydney Park. Large car, machine and iron plants may also be visited.

Charleston is the largest city in South Carolina and is one of the chief seaports of the Southern States. It is also well to the fore as a point of historical interest. The Civil War began at Charleston with the bombardment of Fort Sumter, and the city was more than once attacked by the Unionists in ensuing years, being finally evacuated in 1865. Tourists should not fail to visit the phosphate mines near the Ashley river. The South Carolina Military Academy, the cadets of which figured prominently in the Civil War, is located in Charleston and should be inspected. One of the show places is St. Michael's church, which was struck repeatedly by shots from the Federal cannon during the seige of the city. Among the more interesting buildings are the College of Charleston, St. Philips church (Calhoun's grave in the churchyard), St. Finbar's cathedral, the old Huguenot church, the Medical College, the old powder magazine (now occupied as a chapter room by the Colonial Dames), and the Porter Military Academy. To the north of the city about 3 miles is Magnolia Cemetery, which should be visited for a view of its fine live oaks (draped with Spanish moss), its azaleas, magnolias, camelias and almond trees. This trip is most effective in May or June. No tourist should fail to visit the Gardens of Magnolia, on the Ashley river, the chief glory of which is its azalea bushes, some of which reach a height of 15-20 feet. The semi-tropical vegetation makes the park a place of remarkable beauty. On the Cooper river, to the north of Charleston, is a United States naval station with a drydock. A number of fine side trips to parks and quaint amusement places may be mapped out, but care should be taken to make inquiries relative to road conditions.

The latter admonition also applies to touring in Georgia. Good roads are comparatively few and there are numerous swampy sections. In the dry seasons some of the highways are in fair condition, but at other times the term road as applied to the touring routes is a misnomer. The motorcyclist should keep to the main lines as much as possible, along which good hotel and garage accommodations are usually obtainable. Savannah is one of the most interesting cities in Georgia. It is well laid out and its semi-tropical vegetation is seen to excellent effect in numerous parks and squares. The city is rich in historical atmosphere. In 1778 it was captured by the British, who repulsed an attempt to retake it the following year. The port of Savannah was closed to commerce by the Federal fleet from 1861 to 1865, and Sherman occupied the city at the close of his famous "march to the sea." The first steamship to cross the Atlantic ocean started from Savannah in 1819. The visitor will find much to interest him in the warehouses and wharves along the river, and later he should inspect the City Exchange, the Customs House, Christ Church and the Federal Building. A boulder monument in Court House Square commemorates Tom-O-Chi-Chi, the Indian chief from whom General Oglethorpe acquired the site of the city. Monterey Square, one of the show places



A Palm-bordered River in Florida.

of the city, contains a fine monument to Count Pulaski, who fell at the seige of Savannah in 1779.

Side trips may be made to Bonaventure Cemetery over the Thunderbolt shell road; to Thunderbolt, on the Wilmington river; to White Bluff, over another fine shell road; to the Hermitage, a fine old Colonial mansion on the Savannah river; to the Isle of Hope, on the Skidaway river; to Tybee Beach, a popular bathing place, and over the Savannah Grand Prize automobile course, one of the best in the country.

Atlanta, the capital, referred to as the "Gate City," is known principally for its industries. The chief point of interest in the history of the city is its seige and capture by General Sherman, who after holding the city for two months here began his famous "march to the sea." Atlanta is one of the main distributing points in the South for northern and western manufactures. The staples of its domestic trade are tobacco and cotton. Among the buildings worthy of note are the State Capitol, the new Court House, the City Hall and the Chamber of Commerce. The finest residence district is Peachtree street. Tuskegee is the seat of the well-known industrial school for colored pupils and a short stop should be made here. Athens and Macon are lively cities, the latter being a cotton mart and railroad center. The Wesleyan Female College and Mercer College are located in Macon and near Griffin is the Georgia Experimental Farm.

After making his way into Alabama the motorcycle tourist should find it possible to spend a pleasant day in and about Mobile, owing to the fact that the city has many fine drives shaded with magnolias and live oaks. The city is the only seaport in Alabama, and is therefore interesting for its shipping. About 6 miles to the west is Spring Hill, with a large Roman Catholic College; Monroe Park is a popular resort reached over a good shell road, and Frederic's restaurant, at the end of the shell road, is a favorite eating place for those who lean to fish, game and oysters. More distant resorts are Point Clear, Magnolia Springs and Alabama Port. Throughout this region the scenery is beautiful and the many shell roads in the vicinity of Mobile afford fine traveling by motor. Beyond the city the main roads traverse a typical southern landscape, passing savannahs, canebrakes and pine forests and winding around bayous. Pass Christian is the chief of the summer and winter resorts of Alabama on the Gulf coast. Dunbar, formerly known as English Lookout, from its occupation by the British in 1812, is a noted fishing center and if the roads are presentable the motorcycle tourist would do well to make a short stop there. One of the best-known tour routes in this district is from Atlanta, Ga., to Birmingham, Ala. The roads are reported to be poor in many places and only fair at best. In rainy weather touring in this region should not be attempted. The country is inclined to be flat and swampy in many parts and clay is also encountered. Hotel and garage accommodations are very uncertain outside the large cities.

Florida is one of the most attractive States in the southern division for the motoring tourist, owing to its excellent climate and fair roads and the great number of resorts which dot its coast and the banks of its rivers. In late years automobile traffic to the Florida beaches and fishing resorts has been exceptionally heavy and as a result the State has taken steps to improve many of its roads. Some of them, of the shell type, rival northern boulevards. Near the best-known resorts rates for hotels and garages are likely to be high, but it is always possible to obtain reasonable service by departing a short distance from the beaten track.

Jacksonville is the commercial metropolis of Florida and is much frequented as a winter resort. It offers no points of special interest to the passing tourist, who will probably regard it merely as a stage on the way to St. Augustine and more attractive points. However, pleasant runs may be made over shell roads to the north of the city and in the suburb of Riverside to the southwest. Pablo Beach, Atlantic Beach and Mayport are places near Jacksonville which offer bathing inducements and the usual line of seaside amusements.

No tourist should fail to give due attention to St. Augustine, one of the most picturesque and interesting little cities in the country. It lies on the Atlantic coast near the southern end of a narrow peninsula formed by the Matanzas and St. Sebastian rivers. The older streets of the city are all very narrow; the houses are built of coquina (a kind of shell limestone) and some of them have overhanging balconies. The gardens and squares are full of palmettos, orange and citron trees, date palms, magnolias and bananas. It was to Florida that Ponce de Leon went in his search for the "Fountain of Youth." He landed at the Indian town of Seloy (on or near the site of St. Augustine), but re-embarked after failing to find the fountain. As St. Augustine dates back to 1565 it is one of the oldest permanent settlements in America; the tourist will find evidences of this on all sides. From 1565 to 1665 the city had a very checkered existence, being the center of almost continuous warfare between the Spaniards and neighboring Indian tribes. In 1586 the city was plundered by Sir Francis Drake and by Captain John Davis in 1666. Many of the older and more picturesque features of the place are now disappearing, but an effort is being made to erect new buildings in a style in harmony with the local atmosphere and traditions and the visitor will still find much to impress him. In the center of the city is the Plaza de la Constitucion, which contains several fine monuments and statues. On the south side of the plaza runs the Alameda (King street), which leads to a fine group of buildings in the Spanish or Moorish style. There are some fine drives and many beautiful gardens and little shaded squares. The visitor should not fail to see the City Gate, made up of two pillars 20 feet high, which date back to the Spanish period. The Huguenot graveyard is another point of interest.

Fort Marion, lying on the Matanzas river, invariably charms the tourist, and St. Francis Barracks, the Military Cemetary and Flagler Hospital are worthy of attention. In St. Francis street, opposite the barracks, stands what is probably the oldest house in the United States. It was built by the Huguenots in 1564. Ormond and Daytona are watering places of national reputation, and should be visited without fail. At Ormond the smooth beach, as hard as a boulevard, is used for motoring, and there are numerous fine drives. Excellent roads lead to Daytona from Ormond. New Smyrna is an old and interesting town. It has a ruin believed by some antiquarians to be the remains of a chapel built by Columbus on his second voyage in 1496 or 1497. The Indian river is a favorite fishing ground, and its banks abound with small game. Palm Beach is one of the most fashionable winter resorts in the country, and is worth a visit. Rockledge, Pensacola, Miami and Key West all have their points of interest and relics, and they may be reached by good roads. Tallahassee, the capital city, has fine drives, gardens and squares and some old buildings.

Mississippi, like some other Southern States, has regions of scenic beauty not within the reach of the motorcyclist. Practically all its roads are poor, and most of them are beyond description. It would be foolhardy to attempt long tours through this State, and even short runs will be attended by all kinds of road trouble. Owing to the present flooding of the Mississippi river the entire western section must be left out of the reckoning by motoring visitors.

Tennessee offers only fair roads, mostly dirt and clay. In the eastern section the Cumberland Mountains make touring difficult; in some districts, impossible. Nashville, in the north-central section, and Memphis, in the southwestern corner of the State, are the most interesting cities. Memphis is best known as a distributing point for cotton, but it has other trade of importance. Tourists should visit the Cotton Exchange, the Merchants' Exchange, the cotton compresses and the cottonseed oil mills. A number of the smaller towns are of historical interest, and some points in the eastern section have war-time data.

It goes without saying that the tourist in Louisiana should visit New Orleans, located on the Mississippi 106 miles above its mouth. Owing to the survival of the buildings, manners and customs of the original French and Spanish inhabitants the city is one of the most interesting in the country. It has many miles of good streets, scores of shady squares, and whole districts which exude the atmosphere of a century back. The French quarter should be visited, and the levee, the Cathedral of St. Louis, the French Market, Lafayette Square, the Howard Library, the Cotton Exchange, the Tulane University of Louisiana, the City Park, Audubon Park and the cemeteries are all worthy of attention. Among the favorite resorts of New Orleans is Lake Pontchartrain, five miles to the north of the city; a game or fish dinner at one of the garden restaurants here is a regular feature of a visit to the Crescent City. A side trip may be made to the Battlefield of New Orleans, and another to the National Cemetery, which contains 12,000 graves of Union soldiers who fell during the Civil War. Like other Southern States Louisiana does not hold out road inducements for the motorcyclists outside of the larger cities. Its roads are only fair at best, mostly dirt and clay, and usually cut up to such an extent that they are in no condition for motorcycling. However, a number of pleasant side trips may be arranged out of New Orleans, Baton Rouge and several of the other more important cities.

Arkansas roads are rough, and the tourist in this region must expect heavy going much of the time. The State is not without its scenic attractions, however, and Hot Springs, in the Ozark Mountains, is a favorite resort. Pilot Knob and the city of Little Rock are points of interest.

Texas roads, as a rule, are fairly level, but some rough going may be expected, and there are fords to be made on almost every touring route. The topography of the region is not calculated to enchant the motorcycle tourist, the State making its greatest appeal to the visitor through its climate and its vast open territories. Abilene, Big Springs, Fort Stockton, Fort Worth, El Paso, Dallas and Houston are touched by touring routes, but the joy of riding itself must repay the tourist through this section. Points of real interest are few.

A SOUTHERN TOUR.

FIFTEEN members of the Montgomery (Ala.) Motorcycle Club participated on Sunday, April 29, in the tour outlined herewith.

Starting from Montgomery one passes Washington Park, and three miles farther on crosses the Patonna Creek over a covered bridge. This creek flows into the Alabama river, and there are fine fishing and camping places along its banks. Pope Hull is five miles distant, and after riding three miles Pintlalla creek is crossed. Next in order comes Colquette, Liberty, Old Fleta and Fleta, twenty-three miles from the starting point. As far as Fleta the roads are good, but nothing to compare with the speedway which spans the distance between Fleta and Ada, seven miles long and as smooth as a ballroom floor. Between Tharrin and Montgomery on the way back, one crosses the Atlanta Coast Line Railway five times, the crossing at Snowdown being a rather dangerous one. The city may be entered by any of the three roads shown on the map. Southern riders often travel from Montgomery to Troy, one hundred and six miles away, making it in half a day and, according to A. E. Dedrick, secretary of the Montgomery Club, the roads in that section are the finest in the South.

TRANSCONTINENTAL ROUTES

THROUGH the courtesy of the American Automobile Association, 437 Fifth avenue, New York City, which publishes many excellent touring maps, we reproduce herewith a map showing the principal three transcontinental routes west of Chicago. This map has been designed to show simply the main routes, their branches, and the principal north and south connections in their geographic relation. The scheme of light and heavy lines is used to show the relative importance of the routes from a strategic point of view and must not be understood to imply that road conditions are either good or bad, though naturally the main routes are planned to include as large a proportion of good roads as possible.

Bearing upon the subject "Touring Across the Continent," Mr. Robert Bruce, of the Route and Map Service of the American Automobile Association, whose maps are likely to be adopted by the F. A. M., says:

"In the days of the ox-team and 'prairie schooner' several well-defined trails were beaten across the prairies and mountains by a process of natural selection, keeping as close as possible to the bases of supplies and at the same time taking the easiest passes through the Rocky mountains. The first of these early transcontinentalists were the explorers Lewis and Clark, who between 1804 and 1806 followed up the Missouri river to its source, crossed the Bitter Root range to the Snake river and traced that river and the Columbia to the month of the latter, near where the city of Portland now stands.

"Travel across the continent did not become extensive, however, until about 1830, when the old Santa Fé trail was opened. This began at Little Rock, Ark., and followed the Arkansas and Canadian rivers across Oklahoma to Santa Fé. A few years later this route was practically superseded by the new or 'the' Santa Fé trail, from Kansas City across Nebraska to La Junta, Col., and thence southward to Santa Fé, continuing across Arizona and New Mexico to Los Angeles.

"The great colonizing movement to the Northwest reached its full strength in 1852. These pioneers, to whose enterprise we owe the States of Oregon and Washington, followed what is known as the 'Oregon trail,' from Omaha up to Platte river, across the southern part of Wyoming and the northern part of Utah to the Snake river, and down this through Idaho to the Columbia. The story of the Oregon trail has been told by Ezra Meeker, who, in 1906, retraced his journey of a half-century before and inspired many of the towns along the way to erect memorials to the memory of the pioneers.

"When the first railroads were built across the plains they for the most part followed the old trails, thus securing the easiest grades across the mountains. Thus the Union Pacific keeps fairly close to the line of the Oregon trail, and the Atchison, Topeka and Kansas to the Santa Fé trail. No matter which route the transcontinental tourist may choose, he will find himself more or less directly dependent on a railroad. In the deserts of Nevada and Arizona the railroad has often the only supply of water. The towns in which the tourist eats and sleeps owe their existence to the railroad, and the roads between them nearly always parallel the tracks. In some places the railroad bridge is the only means of crossing an otherwise impassable river or canyon, and the railroad officials issue passes to use them, allowing the tourist to start bumping across the ties at times when he will not be likely to meet a train coming in the opposite direction.

"There are three separate and distinct transcontinental routes available to the tourist west of the Missouri and the Mississippi. The most northerly follows the Oregon trail from Omaha to Granger, Wyo.; there it branches, one fork continuing along the trail of Portland, and the other bearing south to Ogden, Reno, Sacramento and San Francisco, or to Goldfield and Los Angeles.

"Second, and occupying a midway position geographically, is the Santa Fé trail route—Kansas City to Santa Fé to Los Angeles. Third, and most southerly, is that from Memphis through Dallas, Fort Worth and El Paso to Los Angeles, covered by E. L. Ferguson in the late fall and early winter of 1910."

A TACOMA BOOMER.

CLINTON HULL, president of the Tacoma (Wash.) M. C., who appears in the accompanying photograph, is one of the most active riders in his district. He has done much to advance the cause of the motor two-wheeler in the Northwest, and is always to the fore in planning the undertakings of the Tacoma squad.

GIVEN ANOTHER CHANCE.

WHEN Miss Hortense Gowing, of Wilmette, Ill., appeared in court recently under a charge of speeding, Officer Larkin, who had arrested her, pleaded in her behalf. The judge suspended sentence, whereupon Miss Gowing thanked His Honor and offered to take the policeman for a ride.

THE latest machine registration in Cleveland shows that there are over 2,000 motorcycles in use in the city.

WILMINGTON TO KANSAS CITY.

HOMER S. CARR—The route is: Wilmington to Baltimore via Newark, Elkton, Perryville, Havre de Grace, Belair and Towson. Follow route 76 in this number to Cumberland and route 99 to Pittsburgh, Pa. Take route 145 to Columbus, O., then number 134 to Indianapolis, Ind. From Indianapolis take route 214 to Terre Haute; then go to St. Louis via Marshall, Ill., Martinsville, Casey, Greenup, Teutopolis, Effingham, Vandalia, Hagerstown, Mulberry, Greenville, Pocahontas, Highland, Collinsville and East St. Louis.

From St. Louis take route 239 to Mexico. From Mexico go to Kansas City via Thompson Station, Clark, Higbee, Yates, Armstrong, Glasgow, Slater, Marshall, Mt. Leonard, Corder, Higginsville, Mayview, Odessa, Oak Grove, Independence and Centropolis. Details of this latter part of the route will be seen on tracing back route 230. Route 241 similarly treated gives the tour St. Louis to Terre Haute.

GAS CITY, IND., TO PHILADELPHIA.

WALTER BACON—From Gas City go to Muncie via Matthews, Wheeling, Stockport; then on to Richmond via New Burlington, Blountsville, Thornburg and Greens Forks. From Richmond go to Cincinnati via Liberty, Oxford, McGonegle, Hamilton, Symes Corners, Mt. Healthy and College Hill. From Cincinnati follow tour 133 backward to Columbus (see Middle West tours, this issue); then take route 145 backward to Pittsburgh. From Pittsburgh take tour 148 to Hagerstown, Md.; then go back over tour 76 to Baltimore. From Baltimore go to Philadelphia via Towson, Belair, Churchville, Havre de Grace, Perryville, Elkton, Newark, Del., Wilmington, Chelsea, Village Green and Darby. The hilly portion of the whole distance is between Pittsburgh and Hagerstown, Md., over the National and Baltimore Pikes.

ACCORDING to newspaper report Miss C. A. Coe is the first woman to ride a motorcycle in Rochester. She rides an R-S.

CONSUL E. N. Gunsaulus reports that there are 1,000 motorcycles in use in Johannesburg, So. Africa, and that the trade leaders there look forward to continued activity.

BALTIMOREANS ON OUTINGS

Riders of the Monumental City Enjoy Sunday Trips to Points of Interest—Plans for Chesapeake Run.

BALTIMORE, Md.—The first long run of the motorcyclists of this city this season was held on Sunday, May 5. The "Flying Squadron" of the Indian M. C. and several boys from the Maryland Club went up to Harper's Ferry, W. Va. Incidental to this long jaunt the Indians held what they called a "Triplet Radius" run. This was nothing more than three separate runs on the same day. One squad, made up of novices, took a short tour out into the country; another, composed of those who did not care to go on a longer trip, went to Frederick for dinner, and the remaining riders went out into the neighboring State.

Capt. Ed. Butler, of the Woodbine Indian Club, met the boys at Ridgeville and escorted them to Frederick. William Moelsworth, of Mt. Airy, joined the tourists up State and went all the way to Harper's Ferry. He demonstrated to the city boys that he is a genuine rough rider, and led them a merry chase over the mountains. The trip was made in good time, and when the participants returned they were tired but satisfied. Howard A. French and Caspar French met the bunch at Ellicott City. The boys derived some consolation for their long day's outing from being given two full points in the run contest, the prize being a diamond-studded gold medal offered by Howard A. French to the winner.

Near Snoqualmie Falls, Wash.

The Chesapeake M. C. has decided to hold a 12-hour, 200-mile endurance contest to Lancaster, Pa., on Sunday, June 30. Entrance blanks will soon be printed. The fee to enter will be only fifty cents. There will be seven or eight prizes for the best scores. The following firms have agreed to donate prizes: Eclipse Machine Company, Elmira, N. Y.; Howard A. French & Co.; Little Joe Wiesenfeld Company, and the Chase Motor Company.

The Los Angeles M. C. recently extended to the Maryland M. C. the courtesy of forwarding one of its pennants, which is unique in design. The local club is working on a new penant, and will reciprocate when it has been completed.

The bane of motorcyclists in this section is the toll system in effect on some of the good roads. The Maryland M. C., tired of forking over excessive tolls on the Reisterstown pike, which is traveled more than any other road in this section, made a request of the turnpike company that the toll be reduced. Much to their surprise the company complied with the request and the toll hereafter will be only three cents for motorcyclists.

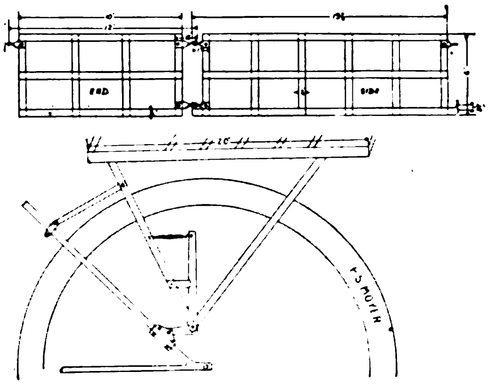
COMBINED CARRIER & FRONT WHEEL STAND
CAN BE USED FOR CARRYING A BASKET, VALISE, ETC.
SMALL PARCELS CAN BE CARRIED IN A BASKET STRAPPED TO CARRIER
SIDE VIEW
CARRIER CAN BE SWUNG DOWN AND USED FOR FRONT WHEEL STAND WHEN STOPPED OR WHILE REPAIRING PUNCTURES
LOAD CAN BE SEEN WHILE RIDING
LESS SHAKING THAN REAR CARRIER
DOES NOT INTERFERE WITH MOUNTING OR DISMOUNTING
CAN BE USED FOR STAND
WILL FIT ANY MAKE MACHINE

No. 45.

42—Rear carrier with oak box reinforced with strap iron bands, and clamps for holding to frame of machines. Two doors at top of box open outwardly together, leaving large space for luggage. Props come together and are fastened at hubs. Dimensions of box, 19 inches x 14 inches x 9 inches. Contributed by Rhett Stuart Rosemond, Washington, D. C.

43—Front luggage carrier and stand combined. Parcels can be fitted in basket strapped to carrier frame, or a valise can be fitted. Spring holder keeps carrier in upper position, notch in blade fitting over cross member as shown. Contributed by M. B. Morris, Jr., Edina, Mo.



No. 46.

44—Pannier pocket carrier and skirt guard combined. Pocket is normally 13 inches x 7½ inches, but can be extended to 13 inches x 7½ inches x 5 inches. Made of leather or canvas, and can be used in connection with tandem attachment without interfering with passenger. Contributed by M. B. Morris, Jr., Edina, Mo.

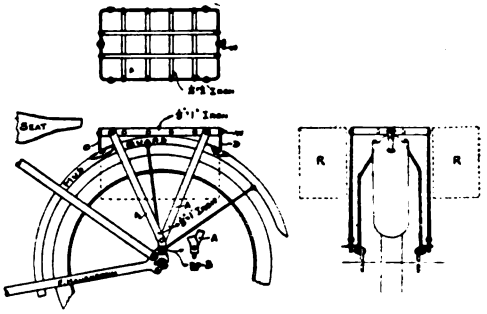
45—Front luggage carrier with attachments for gas-tank and headlight. Framing of 2 inches x ⅛ inch stock all around base and for stays. Twin top doors on box. Box of ½-inch oak, galvanized iron or leather, reinforced with band iron. Contributed by M. B. Morris, Jr., Edina, Mo.

46.—Rear luggage carrier, with hinged end for various-sized packages. Rear carrier stay is spring-suspended as shown. Clamps to rear forks. Framing of ½-inch flat stock. Contributed by P. S. Moyer, Greenville, Pa.

47—Rear carrier for small packages; readily removable or replaceable. Braces A are riveted together, and shoulder fits in socket B. Strap C riveted to luggage carrier and lower end hooks in hole in mudguard. Rear strap D similarly fitted, but fastens to carrier by nut W. Extra receptacles RR can be carried as shown. Contributed by F. Hauenstein, San Diego, Cal.

48—Rear carrier of 1 x ⅛-inch strip, with capacity of from 25 to 150 pounds. Openings as shown. Attachments to rear stays and axle ends. Not enclosed, but could have sheet-tin lining fitted if desired. Contributed by B. B. Hitterdal, Hitterdal, Minn.

49—Rear carrier of folding type, of ½-inch boards and canvas, with telescoping top covers. Bottom compartments shown at A and DD; rings for straps at F; hinged covers at CC. Detail of inside board B; G is hole for hook-bolt and E axle eye. Contributed by C. F. Rowe, Stephentown, N. Y.



No. 47.

A CORRECTION.

IN our issue of May 2 we inadvertently stated that luggage carrier number 32, contributed by H. J. Maffio, Globe, Ariz., was a rear carrier. It is intended to be carried by hooking over the handlebars, the rubber covers being fitted to obviate scratching the machine.

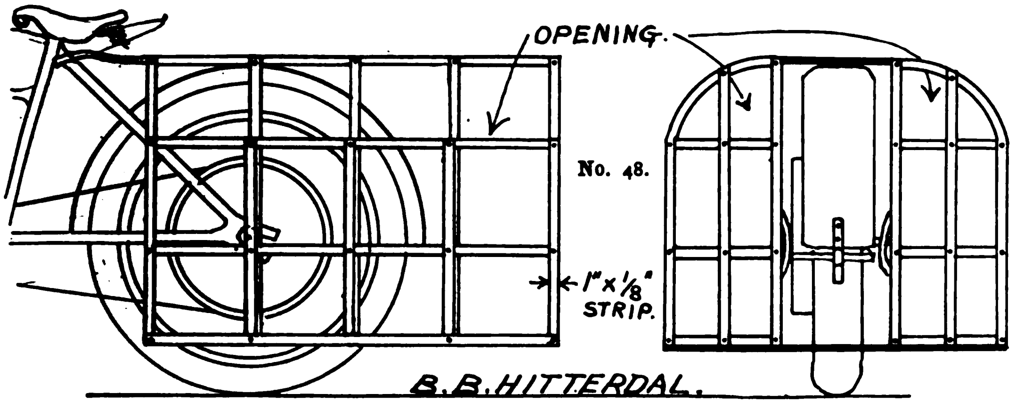
TO CLIMB WARNER HILL.

WARNER HILL has been selected as the scene of the annual hill-climb of the Cleveland M. C. instead of Snake Hill. Mr. Penniman, one of the club riders, has perfected an electrical timing device which will be used for the first time by the club.

READING RACES IN JULY.

A RACE meet will in all probability be held by the Reading Club at the Fair Grounds in Reading, Pa., some time in July.

The latest machine registration in Cleveland shows that there are over 2,000 motorcycles in use in the city.



No. 48.

CONEY ISLAND TRACK

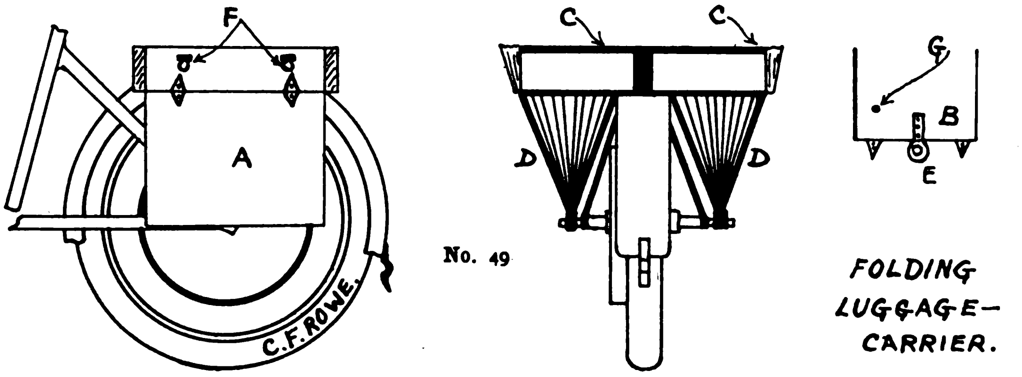
Work Started on Brighton Beach Park Motordrome—Opening Scheduled for Middle of Next Month.

WITH plans accepted by the building commissioners, work has been started on the Stadium-Motordrome at Brighton Beach Park, Coney Island, for the construction of a three lap course. The stand will seat ten thousand people, and it will be possible to accommodate a like number in the infield, which will be reached by a cement subway. The banking of the track will be fifty degrees, and the management is confident that it will be possible to do a mile in less than 35 seconds.

Coney Island has long been classed by the trade as one of the best spots in the world for a motordrome, but the tremendous value of real estate and strict building regulations have made the problem one of great difficulty compared with the other propositions where tracks have been erected. But with remarkable possibilities from a gate-receipt standpoint, the New York promoters will be able to offer the best prizes in the field, and the greatest stars of both this country and Europe are expected to be seen on the Brighton course. Work will be rushed with the expectation of its being finished by the middle of June.

ZANESVILLE MEET MAY 30.

AT a recent meeting, the Zanesville Club elected Earl Garrett, William Williams and Pearl Brehmer as a committee to conduct a race meet for the benefit of the club on Decoration Day, and the following program has been prepared. Novice—3 miles; belt drive—4 miles; stock 4 h.—4 miles; 5 mile open; pursuit race, 10 mile limit; 6 miles open; 25 mile open. It was deemed advisable to substitute the above program for the proposed 100 mile race, as the local track is only one-half mile, and some difficulty was anticipated in securing entries for such a fatiguing race. The wisdom of the change is apparent, as already many pledges have been received from riders in Columbus, Coshocton, Marietta, Newark, Kenton and Lancaster. The Marietta Club boys have announced their intention to hold a club run to Zanesville, as have also the Coshocton and Newark Clubs, while a large number will ride through from Columbus. Entry blanks may be obtained from P. R. Brehmer, acting secretary, 27-29 North 6th street. Prizes aggregating $250 will be awarded. The race will be under F. A. M. sanction and, as the track is one-half mile, will be limited to 30.50 racing machines and 50 cu. inches touring machines.



No. 49

PT. BREEZE TRACK

Philadelphia Motordrome, Now Ready for Practice, to Be Opened Memorial Day With a Big Meet.

THE management of the Board track in Philadelphia announces the completion of the structure, and Manager Baeuerle states it is now open for practice. In the construction of this track, the element of strength and rigidity has been first considered. Supporting timbers are the heaviest used for this purpose and are placed on concrete foundations.

The track is situated in Point Breeze Park, the new amusement resort which is to open May 30, the date set for the opening of the Motordrome. The facilities for reaching the track are perfect. For motorcycles and automobiles a good macadam road extends from Broad street direct to the park, where ample provisions for checking motorcycles have been made. Machines will be conveyed through a tunnel into the enclosure of the track and will be in full view of their owners during the races.

The track has a seating capacity of 8,000, the grandstand surrounding the entire track. At any time the seating capacity should prove inadequate, the enclosure will be thrown open for those unable to secure seats.

One of the most prominent features of the design and construction of this track is the calculation of the angle of vision, the relation of the seats to the track surface being such that no persons in any part of the grandstand need rise from the seats to secure a full view of the riders directly in front.

Anyone wishing further information should communicate with Mr. Baeuerle at the office of the Point Breeze Motordrome Association, Point Breeze Park.

SIX-DAY ENDURANCE SERIES

Eight Factory Teams Will Compete in Novel Grind Calling for 200-Mile Road Trip Daily.

UNUSUAL interest has been aroused in connection with the six-day series of endurance contests for factory teams to be held June 10-15, inclusive, under the management of the Chicago Motorcycle Club, and there is every reason for looking forward to the trials as the most significant so far conducted in this country. Only factory teams will be eligible, each competing company being allowed to enter three riders, and that the runs will be desperately contested goes without saying. Five complete trials are scheduled, each to start from the headquarters of the Chicago club in the morning and finish there in the evening, with the exception of one to Indianapolis. The latter will require one day each way and the night will be spent in Indianapolis.

Plans for the series were launched during the Chicago Show, when several of the manufacturers pledged themselves to enter teams. Since the show the project has been developed rapidly and eight entries are now assured, Harley-Davidson, Indian, New Era, Thor, Pierce, Yale, Minneapolis and Wagner teams being listed. The two latter companies will be represented for the first time in an official endurance contest and their participation will add not a little to the general interest in the program.

An unusual rule, outlined to insure perfect fairness throughout the tests, will provide that the members of each team shall not ride together. They will be hooked up with the riders of competing opposing teams, and each contestant will thus be enabled to call the attention of the judges to any action that he considers questionable on the part of a competitor. In short, there will be no opportunity for collusion by the riders of any team, and each entrant will win or lose on his own ability to stand the grind. On Sunday morning, June 15, a complete tour will be made of the city's system of boulevards, after which the teams will be checked out. Later a banquet will be served and a $500 trophy will go to the team having the highest score.

COFFEYVILLE RACES.

THE Coffeyville Motorcycle Club is planning to hold races July 4. The track on which the races will be held is considered a fast one as George Clark, auto racing driver, drove an automobile on it within one second of the world's record for a half-mile track.

CONTTANT GETS HIS MEDAL

Measurements of Motor Used in Parkway Race Satisfy Dr. Thornley—Rumors Are Unfounded.

AFTER three measurements of J. U. Constant's 2¼ h. machine, on which he took second place in the recent Bidwell Trophy road race, the motor dimensions were found to be approximately those of the stock 2¼ h. motor of 1906 model of Indian make. The first measurements were made at 2142 Broadway, New York, on Friday, May 3, in the presence of representatives of the leading motorcycle journals, by Chairman J. T. Thornley and were as follows: Average of bore taken at top and base of cylinder, 2.666 inches; stroke, 3.450 inches. This was too long in the stroke for the factory dimensions of 3¼ (3.250) inches. Dr. Thornley then returned to his office, but several riders present applied a foot-rule to the motor and on their asserting that the measurement was in error, Constant sought out the Chairman, who returned but declined to make further measurements. Accordingly, D. R. Hobart, representing MOTORCYCLE ILLUSTRATED, remeasured the stroke at the doctor's request, and the average of six measurements was 3.255 inches, or .005-inch over size. The parts were then sealed and on the next day the flywheel was put between lathe centers and the official stroke measurement was given as 3.228 inches. Allowing for inaccuracies of the lathe the stroke could be considered as 3¼ inches with several thousandths either direction. Accordingly Constant was awarded the silver medal for second place in the race.

Three-Speed Epicyclic Hub Gaining In Popularity Among English Riders

The Leading Two Types—Great Things Predicted For The "Decompressor"—Endurance Run Rules Stiffened

THE British industry is at present sizzling with interest in variable gears. Probably the most popular type at the moment is the three-speed epicyclic hub. The experience gained with push-bicycle hubs, both in design and in metallurgy, has begun to flood the market with three-speed hubs, selling at about $50 complete; and these hubs are neither weighty, unwieldy nor unreliable. They include a separately spoked belt-rim, usually an aluminum casting, and a multiple disc clutch of from 12 to 24 plates, according to whether it is intended for side car or solo use. The two most popular samples are the Armstrong and the Sturmey-Archer, and the characteristic technical features of each may interest American designers. The Armstrong designer takes the view that it is undesirable to have two pinion trains in operation on any given gear, and as a consequence he uses his direct drive, from engine pulley to belt rim, without intermediate pinion trains, as his middle ratio. His gear affords ratios of say 3¾, 5½ and 7¼ to 1, of which the 5½ is the direct drive. This is admirably suited to a solo machine in fine weather, but it is not ideal for side car work. The small diameter of the engine pulley induces great liability to beltslip, especially with a side car climbing a hill in wet weather; the top ratio is too high to be of much service for side car work at any time with a small engine; if the engine pulley is enlarged, the bottom ratio is too high for real emergencies. Moreover, this hub does not allow of the engine being started up free with the back wheel on the ground.

The Sturmey-Archer hub has a much shorter public record, but possesses manifold attractions. It permits of the engine being started up free with the back wheel on the ground. Its direct drive is the top ratio, and the bottom gear is procured through a double pinion reduction, which necessitates increased friction, but permits of a very low emergency ratio being used in conjunction with a large engine pulley. If one may venture a prophecy, the real future of the variable gear lies with the counter-shaft patterns. Such gears utilize a chain and sprocket drive to the counter-shaft, on which an 8-inch pulley may be used to transfer the drive to the rear wheel, so that very low emergency gears, suitable for side car work with a 3½ h. engine, may be obtained without any fear of belt slip. Two or three leading makers are busy behind the scenes perfecting gears of this pattern for the 1913 season. They have the additional advantage of retaining an accessible back wheel. On a good British machine it is possible to detach the rear wheel in two minutes. You simply unhook the belt, and run off the axle nuts with a box spanner. There is no pedaling chain, as the engine starter (if one is fitted) acts on the engine direct, not on the rear wheel, and the only rear brake acts on the belt rim, and is dodged either by edging the wheel out of wide forks (if the shoe be inside the belt rim), or by simple withdrawal (if the shoe work in the V of the groove). Hub gears obstruct this accessibility by reason of their two control rods.

The Decompressor—English makers are now mostly coquetting with another novelty which I warmly commend to American designers. It's name—"decompressor"—is the only undesirable thing about it. It may be applied in various forms, but generally consists of a supplementary exhaust cam, of closely measured dimensions, slid in or out of engagement by a tiny pedal, and having the effect of preventing either inlet or exhaust valve from completely closing on the compression stroke, while leaving sufficient compression for the engine to fire and run light. I first tested one of these decompressors last August, and I see immense possibilities in it. You can start a 200-pound machine by pushing it gently along at a pace not exceeding three miles an hour—this is no fable—and you can walk the machine round and round the back garden of a small suburban villa with the engine firing with perfect regularity. It generates enough power to propel the rider on the level, even with the decompressor in action. After demurely stepping aboard, you cut out the special cam with your pedal, and shoot off at a more rational speed. This device is going to enormously enlarge the motorcycling public in Great Britain.

I think we have reached a stage ahead of you. We have exhausted the demand from sporting riders. Nearly all our young, sporty athletic boys are already motorcyclists, and for an expansion of our market we have to look to staid, timid, nervous, elderly and non-athletic people. The supposed difficulty of starting a motorcycle is the main deterrent with this huge army of potential riders, and the decompressor is going to clear it right out. I fancy your inferior roads still have a tendency to limit your market largely to the sporting type of rider; but as soon as you begin to touch the staider types of buyer, push the decompressor for all you are worth. There is money in it. It makes starting a motorcycle as easy as wheeling a baby carriage, and it is a far better talking point and demonstration asset than the best free engine clutch ever made. Moreover it goes well with the free engine. Fit a decompressor, and you can run a motorcycle engine both slowly and quietly, and it won't get hot, either.

Our Endurance Run Plans—There is going to be a big stiffening up of the regulations in our two chief endurance runs, the English and Scottish Six Days. Present suggestions make it probable that the old custom of allowing the riders 30 minutes or an hour before breakfast each morning for adjustments and repairs is going to die a sudden death. The boys will wheel their machines out of the locked garage sharp to starting time, hastily replenish oil and gasoline tanks under observation, and then the clock will be pressed, and they will be off, with never a moment to spend in tuning up. Once on the road they will find they have to climb two abnormal precipices every day, and that a single failure on an observed hill drops them from the gold to the silver medal class at one swoop. The old cozy interval between maximum and minimum time, which allowed us to perform many unauthorized repairs, will disappear, except for a three minutes' checking allowance; and some ardent spirits even talk of sealing the tool bags. This drawing tight of the cords shows what a high opinion the authorities take of modern reliability.

KNOCKING IN MOTOR.

HENRY CHAMPION—The knocking may be due to too large a jet opening and looseness of the wrist-pin or big end bearings. First try reducing the jet opening, noting if the color of the exhaust is deep blue at low speeds, with weakening in color at higher speeds. Try running with less spark advance also. If the bearings mentioned are loose, the suggestions made will not remedy the knock and an adjustment will have to be made. We refer you to our Motorcycle Manual for further information.

MEMBERS of the Aberdeen, Hoquiam and Montesano clubs, in Washington, have voted to co-operate and build a three-foot roadway between the three cities for the exclusive use of motorcyclists.

July 4, Detroit, Mich.—Race meet by Motorcycle Club of Detroit Wheelmen, on mile track.

July 4, Elmira, N. Y.—Race meet by Elmira M. C.

August 6-9, Detroit, Mich.—Cycle Parts and Accessories Association annual summer convention.

August 17, Pratt, Kan.—Start of 15-day tour of Short Grass Motorcycle Club.

September 2, Detroit, Mich.—Race meet under auspices of Motorcycle Club of Detroit Wheelmen on State Fair grounds track.

MOTORCYCLIST "GETS THERE."

WITHIN four hours after a gang of auto bandits had beaten and robbed a Chicago bank cashier of $1,000, two efficient motorcycle policemen had captured the chauffeur and got a confession from him, although in the chase one officer had to jump from his machine to the running board of the automobile and grapple with the driver.

Officers Weber and Dubach were riding in the neighborhood of the robbery some time later and spied an automobile going at about 45 miles an hour. The two motorcycle officers took up the chase. The driver noticed their approach and increased his speed. Finally Officer Weber and his motorcycle ran along the side of the big car and he ordered the chauffeur to stop.

Instead, the driver turned his machine quickly toward the curb in an effort to throw the officer, but Weber was too swift and in an instant he jumped from his motorcycle to the running board of the auto, beat the driver into submission with the butt of his revolver, climbed in the front seat and stopped the car.

After reviving the chauffeur, Officer Weber drove the machine to the police station. In the hat of the chauffeur was found a $100 bill, which the bandits had paid him for driving them from the scene of their attack on the banker to another part of the city when they escaped.

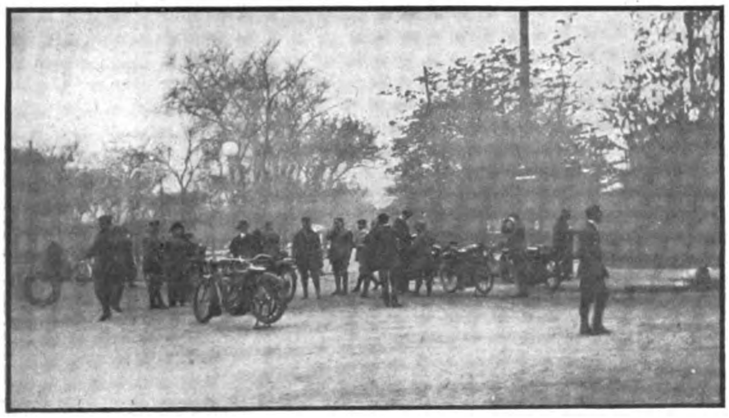
Assistant Chief of Police Schuettler, after hearing the confession of the man, said that his capture was one of the most exciting in the history of Chicago and that the feat of the motorcycle officers was a strong argument for the use of the two-wheelers where speed and reliability were needed in an emergency.

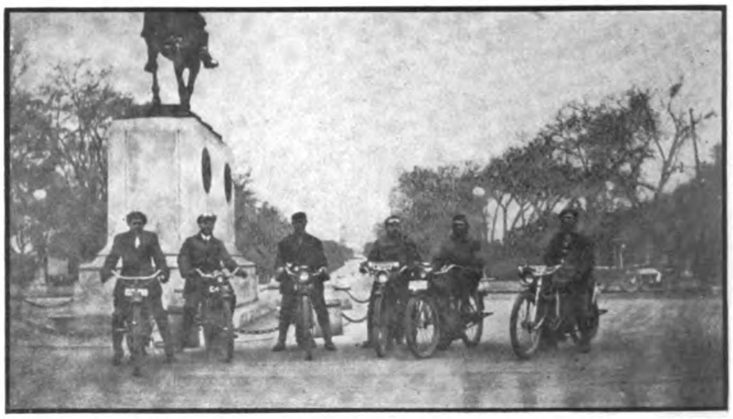
FOR CANADIAN RIDERS.

TYPOGRAPHICALLY neat and giving promise of meeting a need long felt by riders in the Dominion, the *Canadian Motorcycle*, a publication just launched in Toronto, enters the field under auspicious conditions. The first number, published for April, contains several articles of a semi-technical nature and considerable matter of general interest to the motorcyclist. A number of illustrations add to the attractiveness of the booklet.

BIG GOLD MEDAL SQUAD ON INVINCIBLE RUN

Over Sixty Riders, in Single and Double-Century Divisions, Finished Trips With Perfect Scores—Well-Managed Program Drew Ninety-nine Entrants in All, Including Side-Cars.





BEDFORD REST, in Brooklyn, appeared to be a motorcycle magnet early on Sunday morning, May 5, riders from all parts of the metropolitan district having assembled to give their machines, new and old, a try-out over the famous South Shore roads to Southampton and return, under the auspices of the Invincible M. C. As the day broke fair most of the riders arrived unprepared for the rain which fell later in the day and caused considerable discomfort. Captain J. C. Fawcett, of the Invincible Club, gave the word to start soon after 6 a. m. and the riders got away very quietly. This was strongly in contract to many club "getaways" in which the contestants line up for a photograph and then go off with a roar.

In the 200-mile division, with Southampton as the turning point, there were eighty-eight starters, including two side-cars, one being occupied by Mrs. John U. Constant, the redoubtable John U. piloting the machine; the other was an M. M. outfit occupied by George P. Jenkins and his dog Spot, and the machine was mounted by "Ginger" Walters. A year ago the dog Spot made a similar trip and returned with sore eyes, but this year he was provided with a pair of goggles which he lost on the return trip. W. M. Annes was accompanied by his wife on a tandem attachment, and both appeared to be in good trim at the finish.

After the first division was on its way a rider mounted on a single dashed up the hill and inquired whether a lady on a 7 twin had arrived. He was answered in the negative, but a moment later a young woman appeared sailing up the hill with an escort. She was Miss Frances Loeb. It was her desire to accompany the double-century squad and without delay she started after the first division, but turned right on the Parkway, toward Prospect Park and it was necessary for one of her male companions to ride after her. Finally she was headed in the right direction, but minor troubles caused her to abandon the trip at Patchogue. Dr. Thornley, of the F. A. M. Competition Committee, appeared on the scene before the second division started, but as he does not enter into competition of any sort he merely rode to Patchogue for old times' sake. There were eleven riders in this division.

Owing to the fact that parts of the Merrick road are being repaired, some of the riders went by way of the Jericho Turnpike, which is in splendid shape, then turning into Hicksville and cutting back into the Merrick road below Massapequa. While this route is about ten miles longer than the other, it has the advantage of avoiding the smaller villages which are numerous on the first stretch of the Merrick road, and also cuts around a number of speed traps, as some of the Merrick road squad discovered to their sorrow. Seasoned riders pronounced the general course in good condition, while others complained of numerous rough spots. These rough spots accounted for quite a few punctures, one rider reporting four.

H. A. Stout, on a Pierce 4, got caught in one of these bad stretches near Oakdale, and when his machine swerved he struck a log. A physician who happened to be passing in an automobile gave him "first aid" attention but found that he had escaped with bruises. Later while riding over the Shinnecock Hills W. Hetherington, who was closely following L. Campani, ran into the latter, who had struck a sand hole and gone down. The machines were not damaged, and their riders escaped with cuts and a few bruises.

While the riders were at dinner in the Commercial Hotel at Southampton a late arrival caused a stir by coming into the dining room with the announcement that it was raining. Some of the boys dropped their napkins at the shock, but the shower proved to be a light one. Dinner was finished, but afterward the boys lost no time in getting under way. It was 4.30 when the first riders appeared on the Eastern Parkway on the return trip, J. C. Davis, W. H. Ray and W. McMann being the first three home. J. H. Mann, Leslie Vine and A. Brown shared similar honors by leading the second division back to the starting point.

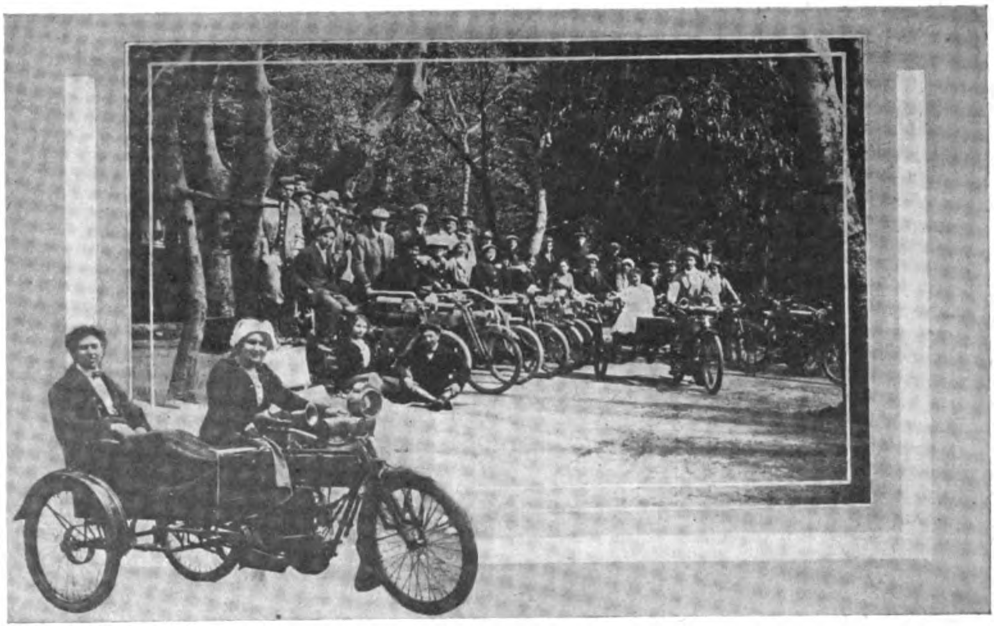
A heavy shower started soon after 4 o'clock, causing some of the riders to nurse their machines gingerly over the slippery streets, so that Captain Fawcett extended the time for checking in until 6 p. m. This helped quite a few of the boys to qualify for medals, and the officials were highly commended for their sportsmanlike attitude in the matter.

On the outward trip the mudguard on John Constant's side-car went adrift in some inexplicable manner and fell under the wheel, causing the machine to run off the road and cut some rather fantastic capers before it could be controlled. Neither Constant nor his passenger were injured, however, and the trip was continued to Southampton on time. Kenneth Conklin and Harvey Barnard attempted to cover the Southampton course twice by starting from the Bidwell-Conklin store on upper Broadway, New York, on Saturday night with a side-car. It was their intention to alternate in driving the 7 twin Indian and side-car, and to return in time to start out again with the Invincible boys on Sunday morning, but an accident caused them to abandon their plans. The side-car broke away from the machine and gave Conklin a bad spill, from which he emerged without serious injuries, and the riders made their way to the little village of Speonk. There they found it impossible to obtain lodgings and the night was spent in a farm wagon. The next morning the machine and side-car were shipped back to New York.

The riders who finished with clean scores were mounted as follows: Indian, 31; M. M., 6; Harley-Davidson, 4; Yale, 4; Merkel, 4; N. S. U., 4; Pierce, 3; Thor, 3; Excelsior, 3; Reading Standard, 2; Peugeot, 2; Flanders, 2; New Era, Waverley, Monarch, Emblem and Minneapolis, one each.

The official list of gold medal winners is as follows: W. M. Annes, D. C. Anderson, Frank P. Baker, J. Buckingham, O. S. Brandt, J. Beveridge, C. R. Burbank, G. W. Barnes, Jr., J. U. Constant and Mrs. Constant in side-car, J. Corbans, E. W. Crosbie, A. N. Corwin, J. J. Cox, Louis Compara, Wm. Dill, C. J. Davis, H. H. Davis, Wm. Earth, Eicholtz, J. Edwards, N. Ennello, C. J. Frolke, G. J. Fuehrer, J. B. French, A. E. Fisk, F. P. Frazer, J. C. Fawcett, W. Ginger, H. E. Hill, W. Hetherington, B. J. Heurlander, Jr., G. P. Jenkins, H. J. Krackowaza, Otto Krause, Gus. Koster, A. Krender, H. L. Livingston, A. P. Lane, E. M. Miller, D. Moler, E. J. Madden, C. D. Morgan, E. L. McClintock, A. M. McIntyre, W. Obert, A. B. Pollock, Chas. Rowland, E. A. Spitzer, Otto Shoefer, P. W. Stevens, J. Steele, Leo Schwartz, D. R. Thompson, A. J. Thomasian, Fred. Voelker, G. A. Vacareza, O. P. Warlick, Billy Wray, Harry Wills, A. Watzer, Ziechiel. In addition the following officials by vote of the club are also entitled to gold medals: Frederick H. Chase, referee, located at Patchogue; Robert F. Graves, checker, located at Brooklyn; George G. Nason, checker, located at Southampton.

The silver medal winners were as follows: M. M. Aiken, A. C. Brown, H. L. Clark, E. C. George, H. J. Mann, E. L. Parris, R. G. Taylor, L. N. Vine, C. J. Washburn.



Paul and Mrs. Derkum and Other Los Angeles Riders in the San Antonio Mountains.

PATTERSON FOR PRESIDENT.

WE have a letter from P. E. Zimmerman, of Lindsborg, Kan., booming for president of the F. A. M. Dr. B. J. Patterson, of Pratt, Kan., now vice-president of the Central District.

"Those who know Dr. Patterson through trade publications are aware that the doctor is a veritable human dynamo possessing the rare knack of doing big things in a big way, but only those who have worked with him in the accomplishment of the extraordinary know the real caliber of the man; know of his great executive ability, his ability to organize. Make him president of the F. A. M. give him a stenographer and a bunch of postage stamps and he will put the old organization on such a high plane as his most enthusiastic supporters never dreamed of."

A MODEL CLUB.

REALIZING that the motorcycle game has been hurt by reckless driving and riding with mufflers open the Coffeyville Motorcycle Club, of Coffeyville, Kan., has adopted rules governing members of the club with a view to remedying these evils. The club has made the offense of riding in the city with the muffler open a club misdemeanor, and any member guilty of violating this rule will be fined from one to five dollars. A second offense will mean expulsion from the club.

SECRETARY GIBSON'S APRIL REPORT.

NEW members.—New England, affiliated, 74; unaffiliated, 9; renewals, 26; Atlantic affiliated, 242; unaffiliated, 47; renewals, 106. Peninsular, affiliated, 31; unaffiliated, 8; renewals, 7. Lake, affiliated, 174; unaffiliated, 47; renewals, 64. Gulf, affiliated, 8; unaffiliated, 4; renewals, 2. Central, affiliated, 28; unaffiliated, 13; renewals, 9. Southwestern, affiliated, 73; unaffiliated, 16; renewals, 27. Pacific, affiliated, 49; unaffiliated, 2; renewals, 3. Canadian, affiliated, none; unaffiliated, 1; renewals, none. Insular, affiliated, 16; unaffiliated, none; renewals, none. Total affiliated, 694; total unaffiliated, 147; total renewals, 241; grand total of new members, 841. Last number, issued in April, 1912, 14,361.

New members by States: Massachusetts, 72; Rhode Island, 8; New Hampshire, 1; Connecticut, 1; New York, 175; New Jersey, 33; Pennsylvania, 49; Maryland, 6; District of Columbia, 25; North Carolina, 1; Alabama, 5; Georgia, 6; Florida, 22; Tennessee, 6; Kentucky, 6; Texas, 4; Oklahoma, 2; Ohio, 116; Indiana, 42; Illinois, 38; Michigan, 6; Wisconsin, 3; Missouri, 16; Minnesota, 3; Iowa, 7; South Dakota, 5; Kansas, 26; New Mexico, 1; Colorado, 3; California, 84; Montana, 7; Idaho, 2; Washington, 40; Utah, 1; Oregon, 2; Canada, 2; Manila, P. I., 16.

ACCORDING to present indications Ansonia, Conn., will soon have a motorcycle club.

STATE AND GOVERNMENT SERVICE.

THE Reading Standard Company reports that its Philadelphia agent, W. G. Rhodes, has sold to the State ten R-S twins to be used by the Pennsylvania Chestnut Tree Blight Commission; also that four Tourist Models were recently shipped to Panama for government service.

LA PORTE BANQUET.

SEVENTY-SEVEN motorcyclists of La Port, Ind., and vicinity attended the annual banquet of the La Porte Motorcycle Club on April 24. When a fine menu had been given proper attention, speeches and orchestral selections rounded out the program. Among the speakers was Chief of Police William Meinke.

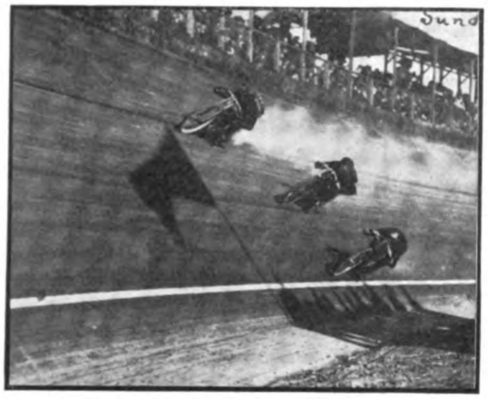
THE South Scranton (Pa.) Club is preparing for a meet about June 12.

Wichita (Kan.) Club Members Enjoying Informal Supper. District Vice-President Patterson and His Daughter at the Extreme Right.

THRILLS IN DENVER RACES

Humiston and Swartz Figure in Exciting Spill on Tuileries Bowl—Some Close Finishes.

THRILLS were the order of the day in the races at the Denver Tuileries Motordrome, Sunday, May 5. Three stirring finishes and one sensational accident served to keep the large crowd on edge throughout the program. L. J. Humiston, of Los Angeles, had a narrow escape in the last mile of the fifth race. Humiston was thrown when his front wheel touched the rear wheel of Swartz's machine. The impact threw Humiston to the running board and as he shot up he collided again with Swartz. Humiston was nearly unconscious when picked up, but it seems that he sustained no serious injuries. Summaries:



Swartz, on the Pole; Fleckenstein and Armstrong Neck and Neck with Him.

Two-mile amateur, 30.50 class—Won by Hurlburt (Indian); time, 2:28⅖.

Three-mile professional, 61 class for B riders—Won by Fleckenstein (Indian); time, 2:17⅗.

Three-mile professional, 61 class for B riders—Won by Bowan (Merkel); time, 2:14.

Five-mile open professional, 61 class—Won by Hasha (Indian); time, 3.32.

Five-mile professional, 61 class for B riders—Won by Cox (Merkel); time, 3:40.

Five-mile open professional, 61 class—Won by Hasha (Indian); time, 4:48⅗.

Wintry weather, with heavy rain and snow, prevented the running off of a program at Tuileries Park, Sunday the 12th inst. Hasha, Humiston, Chapple, Albright and the Denver referee will be in Chicago at the season's opening of the Stadium Motordrome at Riverview.

Hasha, on the Pole; Marty Graves Next, and Armstrong High on the Saucer.

RECORDS GO TO EXCELSIOR.

IN the account of the recent record-breaking trials by Graves and Don Johns on the Playa del Rey saucer in California MOTORCYCLE ILLUSTRATED stated inadvertently that Johns rode an Indian; his mount was an Excelsior, the machine used with such signal success by Balke in his coast performances. Owing to his youth and the fact that he is just out of the amateur ranks Johns' exhibition is all the more remarkable and other "big doings" are expected from him and his Excelsior before the summer is over.

IN NEW QUARTERS.

THE Sun Motor & Supply Company, New York distributors for the Flanders, and agents in this country for the N. S. U. motorcycles, N. S. U. two-speeds and parts, has moved from 206 W. 76th street to more suitably located quarters at 307 Amsterdam avenue, between 74th and 75th streets, right off Broadway.

A BIG WEEK.

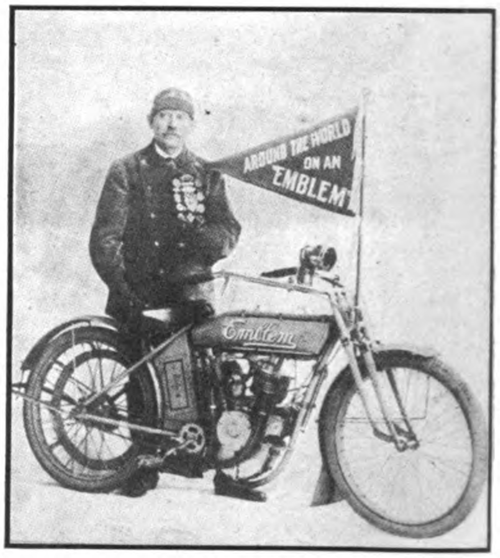
A RECORD of $3,000 worth of sales in one week was recently made by the Savannah, Ga., dealers. The roads about Savannah are reported to be in fairly good condition.

THAT NEWARK RUN.

AS announced in the last issue of MOTORCYCLE ILLUSTRATED, a 24-hour endurance run of the New Jersey Motorcycle Club of Newark will be held May 29 and 30, the start being made from Newark at 6.30 p. m., May 29. The circuit will carry the contestants through Elizabeth, Perth Amboy, Keyport, Freehold, Hightstown, Trenton, Princeton, Belle Mead, Summerville, Clinton, Washington, Belvidere, Hackettstown, Newton, Sussex, Port Jervis, Newburg, Tuxedo, Suffern and back to Newark by way of Singac and Caldwell. The schedule will call for an average mileage of 18 an hour. The contestants will be divided into the following classes: Private owners, trade riders, extra passenger and ladies' invitation classes.

KIPP ON THE ROAD.

H. KIPP, of Toronto, who looks after the Hendee interests in Canada, has been spending the last two weeks in Eastern Canada working up new connections. Last week was spent in Montreal, where the motorcycle game is still very young, after which he went to Ottawa. Kipp intends to ride back from Ottawa to Toronto, a distance of 275 miles, on an Indian mount.



AROUND THE WORLD ON AN EMBLEM
Emblem

RIDING AROUND THE WORLD.

F. J. Koegel, riding an Emblem, has just left Angola for a trip around the world. Koegel is now on his way to New York via Buffalo, Rochester, Syracuse, Utica and Albany. From New York he will sail for England and thus to France, Germany, Russia, Siberia, China, Japan and across the Pacific to either Portland, Ore., or San Francisco, from one of which cities he expects to complete the final leg of his long journey. Koegel has already made a 'round the world trip on a bicycle, and expects to complete his motorcycle circuit in six months. He is riding a 7 h. twin Emblem, fitted with a V-belt, Continental tires, 2½-in. in front, 2¾-in. on the rear wheel, and an Eclipse clutch. Mr. Koegel also holds the world's record for walking around the world.

DERKUM MAPPED ROUTE.

PAUL J. C. DERKUM has laid out the three-day endurance run which will be started from Los Angeles Decoration Day, the route being by way of Bakersfield, Wasco, Santa Barbara, and schedule will call for a mileage of 181 the first day, 189 the second and 202 miles the last day.

HOBART'S NEW CLUB.

THE Hobart (Ind.) Motorcycle Club has just affiliated with the F. A. M. on 100 per cent. basis, bringing in fifteen members; W. E. Corr is secretary, his address being P. O. Box No. 166.

WHIPPLE'S SPECIALS.

WHIPPLE'S late specials, announced May 1, include a number of big bargains in first class second-hand machines and new accessories. The list is well worth writing for.

DEATH CHEATED ONCE MORE.

PROMPT response by a physician on a motorcycle saved the life of Ralph Plazo, of Woodsocket, La., rendered unconscious by a fall from a buggy. An artery was severed and the victim would have bled to death had not Dr. George W. Ashton, on a motorcycle, reached Plazo just in time to cheat Death.

COLUMBUS GETS F. A. M. MEET

Receives the Votes of Five Directors, Two Favoring Cleveland and Two Not Voting—Meet Opens Wednesday, July 17—Tentative Program Suggested by the Columbus M. C.—Prizes for Professionals

MILWAUKEE, Wis.—Five of the F. A. M. directors having telegraphed their votes for Columbus as the scene of the next national assembly President Hamilton formally announces that the convention will be held in the Buckeye capital. Two votes were cast for Cleveland and the ballots of the two remaining directors had not been received at latest reports. However, even if these two votes should be cast for Cleveland the Columbusites would still have the winning margin of one ballot.

President Hamilton's announcement is to the effect that Columbus will entertain the F. A. M. delegates and riders July 17 to 21, and that the national assembly will be held on Thursday, July 18, at the Virginia Hotel.

That the erection of the half-mile board track in Columbus had an important bearing on the decision of the F. A. M. officials is certain. Without this inducement to offer the Capital City would have been at a marked disadvantage, and the big meet would undoubtedly have gone to Cleveland where a new quarter-mile board saucer is under way. The F. A. M. directors welcomed an opportunity to have the National Championships decided on a half-mile bowl, and this, combined with the belief that Columbus is just about the proper sized city to stage the convention most effectively, led to the vote above recorded.

The directors also voted favorably upon the following resolution, offered by Dr. Thornley:

"Be it resolved by the Board of Directors that there be competed for at the National Meet three professional championships for the distances of five, ten and twenty-five miles; that the winners of these events shall be known as the National Professional Motorcycle Champions of America for the distances stated, and that for each championship there shall be awarded three medals consisting of gold, silver and bronze for the value of $50."

The following tentative program for the convention week has been submitted to the F. A. M. directors by the Columbus Motorcycle Club:

Wednesday—Reception of riders and delegates (F. A. M. Headquarters—Virginia Hotel). 8 p. m., reception and smoker at Columbus M. C. clubhouse.

Thursday—10 a. m., parade of riders through Columbus. 2 p. m., business session, hotel parlors. 8 p. m. entertainment of riders and delegates (including lunch and refreshments), at motordrome. A number of novel features of entertainment open only to members and their friends.

Friday—10 a. m., business session in hotel parlors. 2 p. m., races at motordrome. 8 p. m., visit to Olentangy Park.

Saturday—2 p. m., races at motordrome.

Sunday—2 p. m., races at motordrome.

NEW GRINNELL GLOVES.

A NEW style of Grinnell gauntlet gloves, made especially for motorcyclists, is being put out by the Morrison-Ricker Mfg. Co., of Grinnell, Iowa. This glove has a double palm—both palms being made of the same leather of which the entire glove is made. The "Reindeere" and black coltskin leather used is so soft that the extra thickness is in no way a disadvantage, but in every way an advantage. It means not only doubled wear, but greater protection for the hands against blisters, callouses, hand cramp, etc.

The texture of the leather used in this "Motorcyclists Special" glove, as it is called, has earned for it the additional name of "Grip-Tite." The leather has a natural velvety finish, permitting as firm and non-slip a grip of the hands on the handle bars as though they were unprotected.

GOOD NEWS FOR RIDERS.

FROM now on American riders will be allowed to compete in Canada, under the auspices of the C. M. A., and Canadian riders will be granted reciprocal privileges in the United States as the result of an understanding reached between F. A. M. officials and the recently organized Canadian body.

WESTING RUN MAY 26.

G. H. WESTING will give his annual motorcycle run at Indianapolis, Sunday, May 26. There will be a big dinner for all participants. In the past, only Indian riders have been invited, but this year it will be an open event for riders of all makes of machines.

MUSSELMAN VS. HENDEE CO.

ANNOUNCEMENT is made by A. J. Musselman, who controls the Blodgett knock-out front axle hub, patent number 710.241, that on May 3 he entered suit against the Hendee Manufacturing Company for infringement. Mr. Musselman claims that the patent is a basic one and that the knock-out front axle cannot be used by any manufacturer or sold by any jobber or dealer except when licensed by him. At the present time, the Eclipse Machine Company, of Elmira, N. Y., is the only concern which has agreed to accept Mr. Musselman's claim.

Springfield, Mass., March 15.—At the Hendee factory it was stated today that no papers had yet been served upon the Hendee Manufacturing Company. Mr. George M. Hendee stated that they had been manufacturing motorcycles for over ten years and during that time they have been conversant with the patent situation affecting motorcycles, and he claims that neither the Indian machine nor any of its parts infringes upon any existing patents. As far as the knockout front axle hub is concerned, he assures every dealer and user of the Indian full protection from all patent litigation.

TO ADD A STORY.

THE Emblem Manufacturing Company has ordered steel for the construction of an additional story to its present factory. Another building, as large as the one now in use, will soon be started, and it is expected to be ready for the 1913 business.

FIRST CANADIAN CHAMPIONSHIPS.

GREAT preparations are being made by the riders of Hamilton, Ont., for the holding of the first annual championships of the Canadian Motorcyclists' Association at Hamilton on Monday, July 1 next. Steps are being taken to bring in a glittering array of talent for the occasion, the stars promised including L. S. Taylor, of Columbus; Joe Baribeau, the French-Canadian; Stauder, of Rochester; Herb Kipp, Joe Golden and Harold Cole, of Toronto, and several Buffalo cracks.

COLE GOES TO CHICAGO.

WITH his point of destination Chicago, Harold Cole, of Toronto, the young Canadian titleholder, who mounts an Excelsior, slipped out of town quietly on Saturday last, in order to participate in the opening races at Riverview Motordrome. The Canadian youngster intends to try his luck with the big American cracks and incidentally pick out a nice machine for work this summer on the Canadian circuit.

NEW MOSLER HEADQUARTERS.

A. R. MOSLER & COMPANY are now installed in their new factory and offices at Webster and Wakefield avenues, Yonkers, N. Y. Visitors may take the Harlem Division of the New York Central to Wakefield station, New York City, or the Third Avenue Elevated to Bedford Park station, and there take the West Mt. Vernon car to Wakefield avenue.

Diamond

Motorcycle Tires

Studded Tread

Corrugated Tread

Tires for Touring

**Built for maximum speed,
Resiliency and Endurance**

When about to start on that cross-country tour look to your tires. Be sure they will bear the strain of the extra baggage without losing their resiliency.

Your tires can make or mar the pleasure of your trip.

Diamond

Motorcycle Tires

are not built for ten miles of death-inviting speed and then the scrap pile.

They are built for the long run through sand or mud and over rock-strewn roads. Mileage has not been sacrificed for resiliency or resiliency for speed.

Our fourteen years' study of tire problems and rubber compounding have produced a tire strong enough to carry the overload of tandem riding, resilient enough to absorb the irregularities of the road and as speedy as the law allows.

When ordering a new machine or equipment insist on Diamond Tires. Made in two treads, studded and corrugated, single clinch only.

Send for our attractive booklet on Motorcycle Tires.

The Diamond Rubber Co., Akron, O.

Our Service Stations in 54 cities do more than sell tires—they take care of Diamond Users.

RIGHT TO THE POINT.

CO-OPERATION—not competition—is the life of trade.

That's the new way of looking at an old theory, and the new way is right. Co-operation means more business and bigger business. It has taken this idea some time to take hold, but it is gaining ground every day.

In every line of business enterprise and endeavor co-operation is being recognized and it would be to the direct and immediate advantage of motorcycle dealers everywhere to gain this advantage now instead of waiting until everyone else had proved it. Now is the time to grab a "ground-floor" opportunity.

Two men can do a thing better than one. Three men can do a thing better than two. There is strength and untold influence in concerted action. That's what co-operation means. In plainer words it is "get together."

It has been said that "too many cooks spoil the broth," but it depends altogether on the cooks and what kind of broth they are making.

In New York City there is a strong Motorcycle Dealers' Association. During the six-day bicycle races in Madison Square Garden last winter the Dealers' Association had painted a large banner: "Motorcycles—Cash or Easy Payments—Ask Any Dealer." Or, words to that effect. There were thousands of people coming and going to the Garden that week—and every one of them saw that banner. I don't know how many dealers there are in the New York Association, but if there are a dozen, there was a case where a dozen cooks didn't spoil the broth. On the contrary, they served up the best dish in the world and the public seemed to relish it.

They "got together" on motorcycles.

There's the point. They concentrated. They had only one sign and it was conspicuous for that very reason. It was a bull's eye shot and it was effective.

Every dealer, no matter what make of machine he handles, must, of course, be a motorcycle booster. Each dealer must agree that a motorcycle is a mighty good thing. Well, that's common ground on which you can get together.

Each dealer must, of course, sell his own machines. He must be active and aggressive in presenting the particular merits of his particular machine. But, first of all, and behind it all, is that idea that the motorcycle, as a general proposition, is a great convenience, that it is economical, that it opens up a new world of pleasure to a rider, that it is safe and reliable and easily operated.

Every dealer can agree on these points. Then why not say them together? Why not have one big voice saying these things, instead of four or five smaller voices?

If John Hancock had signed the Declaration of Independence all by himself, it wouldn't have gone very far, probably. But, other good men agreed with him on certain fundamental principles, and they all said so together. They spoke with one voice, and the echoes haven't died away yet.

Motorcycle conditions in every community can be bettered by the concerted action of the dealers in that community. If motorcyclists are violating the speed laws and are bringing motorcycles into bad repute with their open mufflers, the dealers can help check the evil. If the city or town authorities are a little severe, the dealers can do good by talking it over with the authorities. If there is a chance to boost good roads, the dealers can help the cause.

One dealer can do his level best in these directions, but he will be just one man. But, if all the dealers join in these movements, they will have the weight of organization. They will have the influence of four, five or six men, instead of one.

A city official will be much more apt to give his attention to a delegation representing every motorcycle dealer in the community than he would to any one dealer.

There are many ways in which the dealers of a community can work together for their mutual good. Many of these ways can be figured out in advance. Others will suggest themselves as time goes on.

In my opinion, co-operative advertising offers another big opportunity for wide-awake and progressive dealers.

Most dealers can not afford to use large amounts of space in the newspapers. At least, not often. Their ads. must be smaller. These smaller advertisements are being prepared and furnished to dealers, without cost, by the Motorcycle Dealer's Information Bureau, at 23 East Ohio street, Indianapolis. Take, for example, the opening of the motorcycle season. There is a fine opportunity for all the dealers of a community to get together and, instead of each dealer using a small space, put all their space together and use it to say something that can be truly said of all motorcycles. Let each dealer's name appear at the bottom of the ad. Each will have an equal chance to reap the direct benefit, and each will have the advantage of telling the public something interesting about a motorcycle in a space that is large enough to attract wide attention. Petty jealousies should not stand in the way of an opportunity like this.

This plan of using a larger space could be used to fine advantage also right along through the season. For example, the large space could be used in a co-operative way once every week, or once every two weeks—or at whatever periods the dealers might agree. Then, between these times, each dealer could use his individual ads.

The Dealers' Information Bureau is anxious and willing to communicate with dealers who would take up these co-operative advertisements, and will prepare the copy without charge.

Dealers can certainly agree that the motorcycle will bring pleasure and satisfaction to any rider. Let's convince the public of that fact first, and then let the best man win the sale for the machine he carries.

Co-operation first—and then competition. But let even the competition be of a co-operative and friendly nature.

A. B. Coffman,
President, M. M. A.

ADVERTISING—2.

PUBLICITY alone does not sell a commodity, except, under certain conditions, particularly attractive bargains.

But a staple article that is being marketed at a fair profit does not sell itself even though most extensively advertised.

To consummate the sale of an article, judicious advertising must be preceded by up-to-the-minute methods of manufacture and distribution, and followed by an effective selling system.

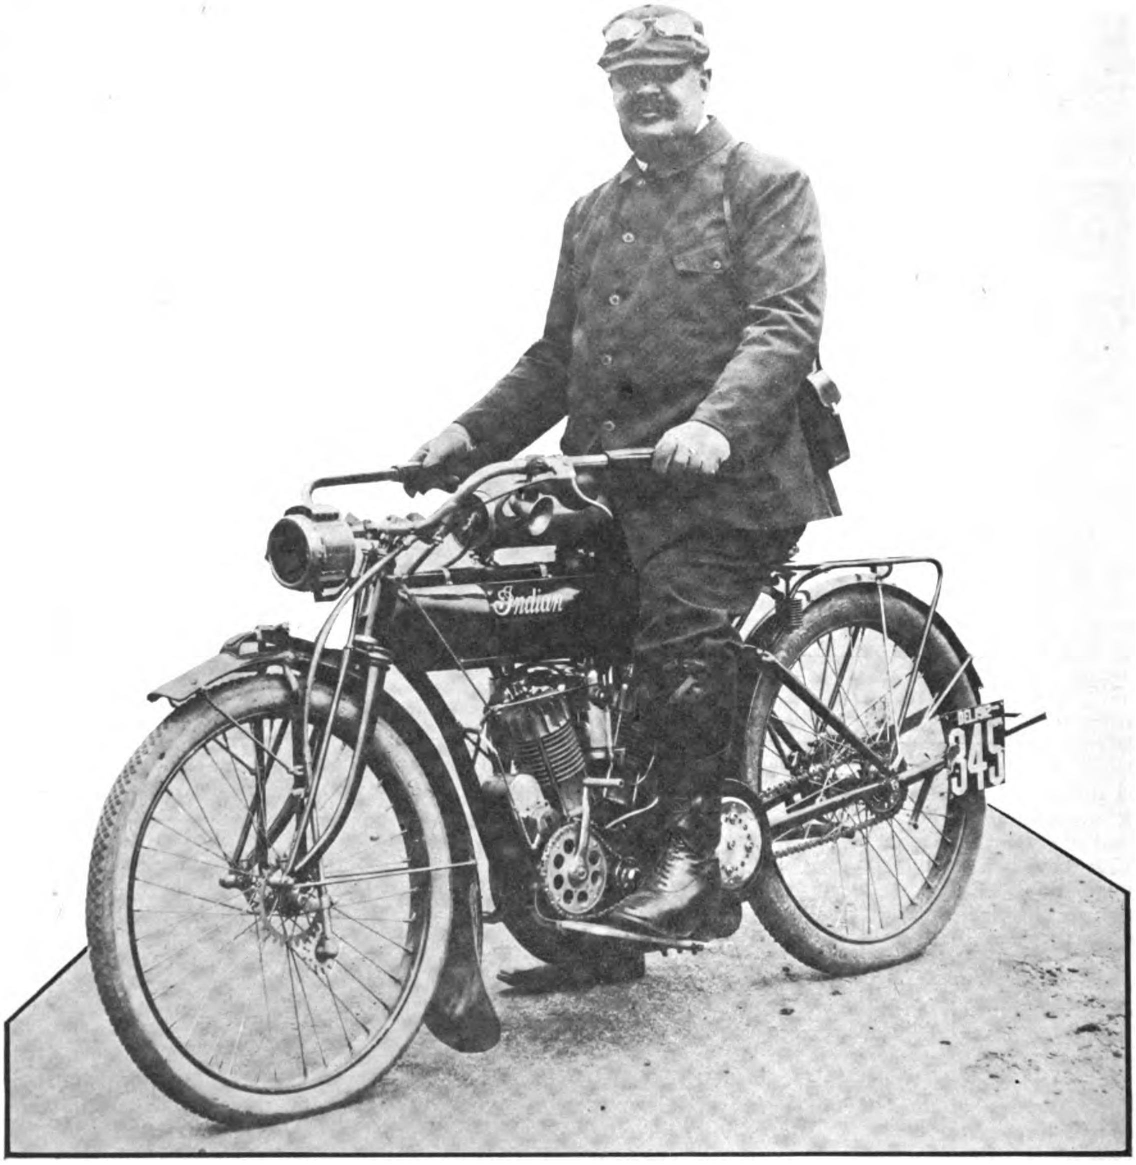
Manufacturers who are not in position to thus back up their advertising need not blame the publications they are using if their advertising does not prove sufficiently productive of sales.

The publisher cannot make an inferior article good, nor actually sell even a superior one.

But a publication like Motorcycle Illustrated *can and does put the wide-awake manufacturer and jobber in immediate touch with many who want to buy and are willing to pay the value of meritorious goods.*

The publishers of this paper guarantee not only by far the largest circulation in this field, but also that Motorcycle Illustrated *reaches the highest class of buyers.*

EMPIRES *for* TOURING



Simmons Rides Empires

Wilmington, Del., April 27th, 1912.

The Empire Tire Co., Trenton, N. J.

Gentlemen:—I write to tell you the satisfaction your "Empire" Tires have given me. I have been using your tires for three years and have never had one to go bad with me. My weight is about 240 lbs. and last year I rode in the Newark, N. J., Decoration and Labor Day runs and received a perfect score in both. I also took part in the F. A. M. tour to Buffalo, N. Y., there also having a perfect score, and your tires never gave me as much trouble as a puncture in any of the above runs that totaled 1,285 miles. The service from them is all that could be asked. Wishing you success, I remain,

Yours very truly,

JOS. B. SIMMONS.

When all motorcycles are built alike, one lubricating oil will suit all makes.

When winter is as warm as summer, one grade of lubricating oil will suit all seasons.

When heavy oils flow as freely as light oils, mechanical construction need not be considered.

Until then no one grade of lubricating oil will suit all motorcycles.

While we are recognized, in power-engineering circles, as the world leader in high class lubricants, we find lubrication no simple problem.

In producing a series of lubricating oils suited to the needs of all motorcycles, we analyzed the construction of every American motorcycle. We found that several distinct grades of oil were needed and now produce these grades: The various grades for motorcycle use go by the following names:

Gargoyle Mobiloil "A"
Gargoyle Mobiloil "B"
Gargoyle Mobiloil "Arctic"

Gargoyle Mobiloils are put up in barrels, half-barrels, in 5 and 1 gallon sealed, white cans. All are branded with the Gargoyle, which is our mark of manufacture.

They are handled by the higher class garages, auto-supply stores and others who supply motorcycle lubricants.

GARGOYLE

Mobiloil

A grade for each type of motor.

Vacuum Oil Company, Rochester, U. S. A.

DISTRIBUTING WAREHOUSES IN THE PRINCIPAL CITIES OF THE WORLD.

The list below shows the right oil for your motorcycle.

Explanation: In this schedule the letter opposite the name of motorcycle indicates the grade of Gargoyle Mobiloil that should be used. For example, "A" means "Gargoyle Mobiloil A." "Arc." means "Gargoyle Mobiloil Arctic." Recommendations cover all types of the same make unless otherwise stated.

TIRE COMPANIES MERGE

Goodrich Rubber Companies of New York and Ohio Consolidate Under Name B. F. Goodrich Co.

ALBANY, N. Y.—The B. F. Goodrich Company, a consolidation of the B. F. Goodrich Companies of New York and Ohio, with principal office in New York City, was incorporated recently with a capital of $45,000,000 to deal in rubber goods. The directors are: William A. Means, Walter K. Means, Harold E. Joy, Frank H. Mason, Charles B. Raymond, Edwin C. Shaw, Howard H. Bryant, William A. Fuller, Albert T. Pelz, Bertram G. Work, of Akron, O.; David M. Goodrich, of New York.

The capital is divided into $15,000,000 preferred cumulative and $30,000,000 common stock.

The new company takes over the two corporations for a consideration of $47,598,000 and allotment of certain shares of stock. The company paid a corporation tax of $22,500.

FRENCH SALES ARE ACTIVE.

BALTIMORE, Md.—The dealers in this city are continuing to do a fine business with the machines they represent. Howard A. French & Co. have been doing a record business with the Indian, and now rank among the best agents of the Hendee Company. Week before last a shipment of 17 Indians was received and disposed of, and last week there arrived 46 machines, consisting of singles, twins and two speeds, and all of them were eagerly grabbed up by waiting customers. French has now placed orders for nearly 300 Indians to be used before next November.

TO HANDLE THE WAGNER.

THE K-V Motorcycle Company, 7706 Lake avenue, Cleveland, Ohio, composed of George B. Knapp and K. C. Volk, is handling the Wagner machines for that city. Mr. Knapp has handled the Wagner on a small scale for several years, but the increased demand for the machines has necessitated the opening of a spacious store with facilities for repairing. A full line of accessories and bicycles will also be carried.

WESCHLER IN BALTIMORE.

BALTIMORE, Md.—About ten days ago Frank J. Weschler, secretary-treasurer of the Hendee Manufacturing Company, came down from Springfield and spent a few days here as the guest of Howard A. French. He went over the local field, and expressed himself as well pleased with the situation. He also visited Washington and Philadelphia before returning home.

MERKEL IN TOLEDO.

NEWBY BROTHERS, Flying Merkel agents in Toledo, Ohio, have been filling orders rapidly of late, and their shop has been running under unusual pressure. Clarence Newby was a visitor at the plant of the Miami Cycle and Manufacturing Company, in Middletown, recently, and he also found time to drop in at the Dayton motorcycle show.

BOSCH DISTRIBUTORS.

THE Canadian Fairbanks Company, Limited, with branches in St. John, Montreal, Ottawa, Winnipeg, Calgary, Saskatoon, Vancouver, Victoria and Toronto, have been appointed distributors for the Bosch Magneto Company in the Dominion of Canada. In each one of these branches mechanics are now being trained to make adjustments or repairs to the Bosch product.

NEW WAYNE BELT.

NEITHER acid nor chrome-tanned, the new belt just placed on the market by the Wayne Belting Company, Department M, Detroit, Mich., is known as a "neutral tan." It is made of buckskin, and severe tests in actual service during the past two months have demonstrated its efficiency. The manufacturers of this belt deal directly with the rider.

OBERWEGNER CATALOG.

THE Oberwegner Motor Company, of Toledo, Ohio, has just placed its new 64-page catalog in the hands of its printer and copies will soon be ready for distribution. The catalog will cover a full line of motorcycle supplies and accessories and will be well illustrated.

MONARCH DISTRIBUTOR.

P. J. CARLTON, well known to the trade in Cleveland, Ohio, has been appointed distributor for the Monarch motorcycle in that city. He has received his demonstrator and is creating an excellent impression with it.

PLAN CONCRETE ROAD.

A PROPOSAL to lay a solid concrete road from Hamilton to Toronto, Ontario, a distance of 42 miles, at a cost of $17,000 a mile, is proving a matter of great interest for Toronto riders, as this route is the most traveled of any in the vicinity of the city. A great many of the Ontario roads are being improved at present, but the Highway Commissioners have come to the conclusion that something better than gravel or macadam is needed for the intercity thoroughfare on account of the very heavy traffic thereon.

TAKING INSTRUCTIONS.

THE military-inclined motorcyclists of the Toronto M. C. are taking up a course of instruction at the Toronto Armory, in connection with the proposed motorcycle division to the Signal service of the Canadian militia, preparatory to going to the annual encampment at Niagara in June. Weekly classes are being attended when lessons in flag, heliograph and lantern signalling are heard.

TORONTO MEET PLANS

Races Under Auspices of Canadian Club Will Be Well Regulated—Some of the Rules.

ACCORDING to present indications, lack of plans or apathy on the part of the members, will not be the cause of any disappointment in connection with the series of race meets which the Toronto M. C. intends to put on during the coming season. Already great preparations have been made for the inaugural speed carnival of the summer, to be held on June 8, at the Exhibition half-mile speedway. The program for this "Battle of the Wheels," consisting of ten events, has already been announced, while the different committees of the club are hastening to prepare other details. Taught by the experience of last summer, the first real season of the club, the members are taking every precaution within reason.

Among other things, it is planned to run off the events at a meet with a snap and precision that will prove a hit with the crowd. The regulations framed will, in a measure, give a race meet a distinctly equine flavor. A paddock is to be provided for racing machines and their owners, who will, undoubtedly, form "stables" of their own. A scoreboard giving the competitors in a race, the winners, and time, will also be erected. It is also proposed to secure a bugler to call the riders on the track from the paddock to the track for a race. A new stipulation will be that competitors must carry the same numbers all season. This will facilitate the work of the entry clerk and the program printer.

An entirely new feature this year will be the presence of a squad of the St. John Ambulance Corps at every race meet. This squad will consist of a sergeant-surgeon, stretcher-bearers and first-aid attendants, all of whom will wear their military uniforms. Hospital headquarters will be maintained on the grounds.

Manufacturers and others have been very kind to the Toronto club this summer. A number of valuable cups and trophies have already been donated, while special contributions of useful articles for prizes, such as belts, tires, etc., have been promised. Among the latest offers has been a donation of a motorcycle belt by the Graton and Knight Company, Worcester, Mass., through C. F. Orr, the Canadian representative of the company.

DETROIT BOWL ASSURED

Prince Has Decided to Carry Through His Plans for a Big Board Track in the City of Straits.

DETROIT, MICH., May 12. — Jack Prince has returned to Detroit to take up the matter of building either a motorcycle or automobile track here. He expects to sell out his half interest in the Chicago track which last year drew a gate of over $60,000 in eight weeks and invest his money in Detroit, making this city his home. In consequence there are the brightest sort of prospects that Detroit will get the motordrome, either a half-mile track exclusively for motorcycles or a mile and a quarter to one and one-half miles for autos and motorcycles combined.

"I have been prospecting," said the veteran track builder, "and investigating local conditions. That is the only way to find out. I was in Baltimore, Newark, Providence, Boston, back to New York, back again to Detroit, then to Toledo, to Chicago, to Indianapolis, back to Chicago and then to Columbus. These are the only two that I feel sure of, Columbus and Detroit.

"The question of location always is the stumbling block. In Columbus the motorcyclists and the dealers pulled together and at our first meeting with 80 present, they subscribed $7,500 for stock. On my return they had all the $20,000 subscribed. The Detroit venture has thus far required seven visits and I am still seeking a suitable location. I plan to build in Columbus, sell my one-half interest in the Chicago Motordrome and give all my time to Detroit, spending five days out of seven in this city each week. I am going to make this a go for Detroit, as I believe it to be the best gasoline city in the country."

AKRON MEET ON JUNE 8.

THE Akron (Ohio) M. C. will hold its first race meet of the season on June 8, and great plans are being laid for it. The club held a smoker on May 7 to which all the motorcyclists in the city were invited. An interesting program was provided, about 100 members and guests participating.

Recently the City Council adopted an ordinance providing for yearly motorcycle licenses, instead of the perpetual license heretofore in effect. The riders are now working for a State license regulation at a nominal fee to do away with confusion which is resulting from the widely differing arrangements provided in cities throughout the State. Some of the towns place their fee too high, say the riders, while other towns have no registration at all. The Akron riders are also boosting plans for road improvements.

NEW JANESVILLE CLUB.

JANESVILLE, Wis., now has a club which will inaugurate activities by holding a race meet Decoration Day.

A PROMISING SQUAD.

MORE than 25 members have signed the charter list of the newly organized Bay City (Mich.) Club, which held its first meeting Sunday, the 12th inst.

Before the Start of the Englewood, (Ill.) Club's Recent Reliability Run.

FIFTY MACHINES LOST

Fire Which Destroyed Foley Garage Wiped Out Nearly All Concourse M. C. Mounts.

FIRE which broke out in the garage of J. C. Foley, on Jerome avenue at 165th street, at 3 a. m. on Sunday morning, May 12, destroyed the building and wiped out about fifty motorcycles, many of them belonging to members of the Concourse M. C. Practically nothing was saved. The fire was discovered by the watchman of the Pauls Garage, adjoining the Foley establishment, who at once telephoned an alarm. As the nearest fire station was a considerable distance away the blaze had gained great headway before the fire-fighters arrived and they could do little or nothing to save the contents of the building. Even the two new Indian and Thor machines which were being displayed in the windows were lost. The Foley establishment was the headquarters of the Concourse club and nearly all the members had their machines in the place when it was destroyed. One of the boys had just received his new machine from the factory and another had been ridden only 150 miles. There was no insurance. The origin of the fire has not been determined.

REGISTERED SHOPS.

THE following shops have registered with Secretary Gibson for the week ending May 10: Ashborne Motorcycle Co., 311 N. Main street, Burlington, Iowa; Waking & Co., 406 Main street, Richmond, Ind.; C. H. Danforth, S. Greenleaf avenue, Whittier, Cal.; A. D. Diener, Bellefontaine, Ohio; E. H. Paro, Titusville, Fla.; Gilfillan Bros., 223 W. Second street, Kewanee, Ill.; Platt Montfort, Huntington, L. I., New York State.

TWO PROSPECTIVE CLUBS.

WARREN, OHIO, has about fifty riders, and W. Cooper, of 26 First street, is endeavoring to bring them together and organize a club. Walter A. Good, of Ashland, Ohio, is working along similar lines.

NEW F. A. M. CLUBS

Eighteen Were Affiliated During April—Brockton Club Winner of Old Sol Lamp as Membership Prize.

CHAIRMAN ESTABROOK reports that during the week ending May 4 the following clubs were affiliated: 257—Muncie (Ind.) Motorcycle Club; Earl S. Sult, secretary, 204 East Main street, 15 members. 259—Napa (Calif.) Motorcycle Club; Otto Fisher, secretary, 14 Juarez street, 15 members. 260—Santa Cruz (Calif.) Motorcycle Club; V. V. Buckman, secretary, 18 Catalpa street, 100 per cent., 15 members. 261—Red Bank (N. J.) Motorcycle Club; E. E. Alexander, secretary, 100 per cent., 17 members. 262—Kings County Motorcycle Club, Hanford, Calif.; M. R. Homen, Jr., secretary, 15 members.

Eighteen clubs joined the Federation during the month of April, the winners of "Old Sol" lamps being the Brockton (Mass.) Club, 44 members; the Fort Recovery (Ohio) Motorcycle Club, with 20 members, and the Herkimer (N. Y.) Motorcycle Club, 19 members, being second and third.

S. E. Ragan, Jr., of Vicksburg, State Commissioner of Mississippi, has organized a club in that city. It will be a hundred per cent. organization.

John B. Quinn, who runs an F. A. M. registered shop at 201 Ridge street, Fall River, Mass., has been elected president of a newly organized club.

New clubs are being organized by Brandenburg & Miller, Martinsburg, Va.; R. P. Austin, of Lansing, Mich.; J. R. Mittelbach, of Iola, Kan., and George W. Grossner, of Jackson, Miss.

During the month of April forty-four F. A. M. repair shop certificates were taken out, those added the last week in April being the following: 639—R. C. Kirk, 204 E. Main street, Muncie, Ind. 640—Southern Motorcycle Co., 116 Edgewood avenue, Atlanta, Ga. 641—Herman's Repair Shop, 122 So. Union avenue, Pueblo, Colo. 642—E. H. McKenzie, 4712 Forsythe avenue, East Chicago, Ind. 643—H. A. Rowe, Harvard, Ill.

Frame Hung On Leaf Springs (Automobile Construction)

Greatest improvement in motorcycles! Four special vanadium steel long leaf springs—extremely elastic—absolutely unbreakable—frame is rigid—no hinges—and rides on these leaf springs with a silent, velvety action delightful to the rider. No other construction can possibly equal this in pleasure of riding.

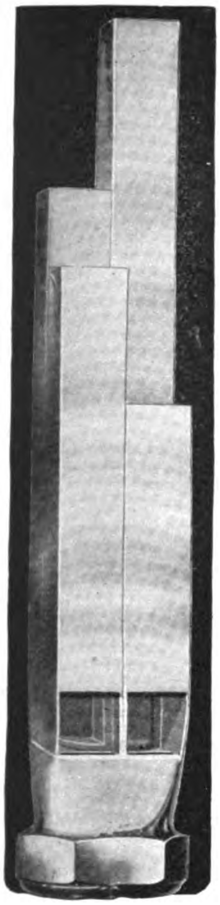
A trial will instantly convince you!

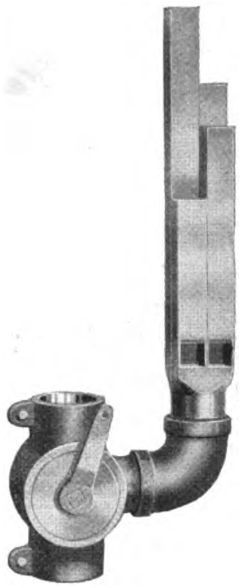
Most efficient single cyl. motor ever built. Has overhead valves, positive mechanical oiler, free-engine clutch, Bosch armored magneto, and automatic carbureter. Cylinder and head of semi-steel specially heat treated, connecting rod, crankshaft, etc., of vanadium steel. You can get into speed from a standstill without any jerks. Speed? 56 seconds to the mile!

We want live agents and are offering special introductory inducements in open territory. All machines of perfect workmanship, thoroughly tested and guaranteed satisfactory. Catalog and terms promptly mailed at your request.

WAVERLEY MFG. CO., Waverley Place, JEFFERSON, WIS.

CHICAGO BRANCH: MARQUETTE BLDG.





TRINITY CHIMES

An Exhaust Horn with a Musical Tone
Warns Without Giving Offense
A Hair Raiser When Needed

There is absolutely nothing about the Trinity Chimes to get out of order—no moving parts, no batteries, no wire connections. It never fails. It costs nothing to operate. It is operated by a three-way valve which is supplied with the horn. Its four tubes give a perfectly blended chord of pleasing harmony. Its body is a brass casting. The tubes are brass-wedged into slots in the casting, and instead of being of flimsy construction and supported separately, they are carefully brazed together, building up a unit of such strong construction as will last a lifetime. It is furnished in triple nickel-plate, highly polished.

Get the best horn at a lower price, don't spend more for one not so good.

EVERY DEALER SHOULD CARRY A STOCK OF TRINITY CHIMES

Fourteen Eagle Claims

THE EAGLE

1 Is the fastest stock machine built.
2 Is the most powerful motorcycle built.
3 Is the quietest machine built.
4 Is the easiest riding machine built.
5 Is the strongest machine built.
6 Is the cleanest machine built.
7 Is the classiest in appearance.
8 Is the most perfect mechanically.
9 Has the most perfect oil system.
10 Has the most convenient and positive control.
11 Has the lowest center of gravity.
12 Is the simplest in construction.
13 Is the most economical in gasoline and oil consumption.
14 Has the most efficient transmission.

There's a reason for each claim

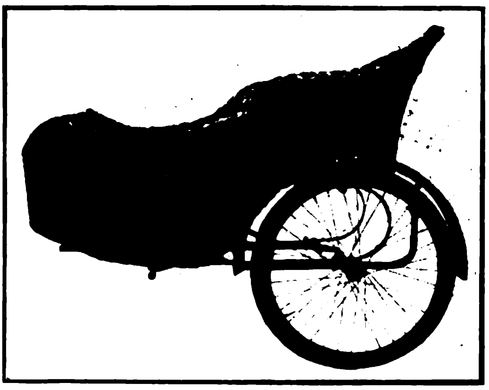
SPECIFICATIONS

Motor 9 H. P. DeLuxe, 3½" bore, 3¾" stroke.
Wheel Base 57".
Wheels 28", steel rims, knockout front axle.
Lubrication Automatic sight feed with hand pump in reserve. Oil glass in crank case.
Tanks Sheet steel. Lead plated. 2½ gallons gasoline. 2½ quarts oil.
Ignition Bosch high tension magneto, worm gear driven (absolutely quiet).
Transmission Special 23 ply Spartan Flat belt.
Free Engine Eclipse multiple disc clutch with positive lever control.
Brake New Departure Band Brake.



THE STRONGEST, LIGHTEST MOST COMFORTABLE SIDECAR IN THE WORLD

Body of Indian rattan, designed along the popular English model. Roomy, comfortable and commodious.

THE BAXTER SIDECAR

Chassis of seamless steel tubing, double truss frame construction; rigid mudguard; double tension spring absolutely absorbing all shocks.

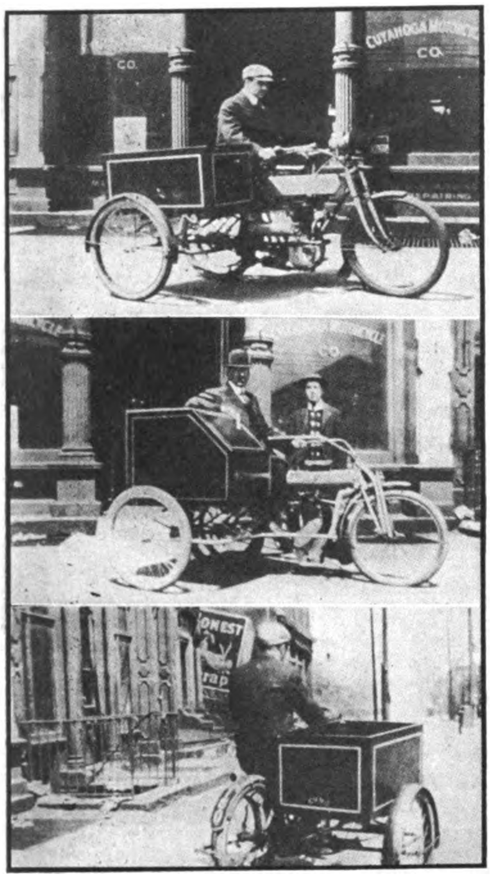
Can be attached to any motorcycle. All parts quick detachable and can be obtained separately.

Write for details.

JAMES S. R. BAXTER
OFFICES AND SALESROOMS, 2304 BROADWAY,, Y. N.

NEAT CUYAHOGA VAN.

THE Cuyahoga Motorcycle Company, of Cleveland is marketing a delivery attachment, as illustrated below. It is built on side-car lines, the frame joints being welded by the oxy-acetylene process instead of brazed. These joints are made of stamped fittings and steel tubing of 11 gauge is used throughout. There are two types—A and B, respectively—the compartment of the A type attachment measuring 22 x 36 x 18 inches, the larger one being 34 x 22 x 26 inches. Type B is featured by a deep front, thus doing away with much of the usual wind resistance. The prices are $50 and $60, respectively, and the company furnishes fittings for any standard make of machine. The street address of the manufacturers, The Cuyahoga Motorcycle Company, is 803 St. Clair avenue.



CONVENTION HEADQUARTERS.

CHAIRMAN W. J. SURRE and Messrs. D. B. Smith and L. M. Wainwright, of the committee in charge of the 1912 convention of the Cycle Parts and Accessories Association, which will be held in Detroit, August 6, 7, 8, and 9, announce that they have selected the Hotel Cadillac as convention headquarters. They suggest that those intending to attend the convention reserve accommodations, which may be had on either the American or European plan, at an early date. The committee is now working on a program to cover the entire four days, and it is safe to say, from past experiences, that it will be an attractive and an enjoyable one throughout.

The Des Moines (Ia.) City Council has voted to buy two machines for its police department.

Ansonia (Conn.) riders are contemplating the organization of a club.

CANADIAN PROGRAMS.

AT present the motorcyclists of Canada are looking forward to a season simply crowded with motor-wheel events of all kinds. From now until the end of the riding season, all available dates are occupied with some contest or other, a tour, or a club run, the situation applying to all the communities in the Dominion. Not including events of a strictly local character, the following list shows many of the dates already planned:

May 23—Vancouver M. C.'s three-day tour around Vancouver Island.
May 24—Race meet at London, Ontario.
May 24—Toronto M. C.'s first tour of the season.
June 8—Race meet at Toronto, Ontario.
July 1—Canadian Motorcycle Championships at Hamilton, Ontario.
July 1—Motorcycle races at Waterloo, Ontario.
July 6—Race meet at Toronto, Ontario.
August 3—Race meet at Toronto, Ontario.
August—Canadian Motorcyclists' Association first annual National tour.
September 7—Motorcycle races at Canadian National Exhibition, Toronto.
September 21—Dunlop Motorcycle meet, Toronto.

VAN RIPER IS SECRETARY.

GUERNSEY VAN RIPER, 513 Hume-Mansaur building, Indianapolis, Ind., has been appointed by President Hamilton as secretary of the 1912 F. A. M. National Tour. Mr. Van Riper is now working on the entry blanks, the routes and rules, and will keep the members of the organization advised through the trade papers. Those desiring preliminary information may obtain the same by addressing Mr. Van Riper.

A MISSOURI CENTURY RUN.

ALL the streets inside the limits of Kansas City are of asphalt, macadam or rock, the macadam and rock roads being well oiled and comparatively free from dust. Rock roads run from Kansas City to Belton. Next in order are Raymond and Lee's Summit, then Lone Jack to Oak Grove and on to Kansas City. There is a good dirt road from Belton to beyond Raymond, and a rather rutty dirt road, with steep winding hills, from Lone Jack to Oak Grove. This road, however, is now being improved. There is a dangerous railroad crossing East of Mt. Washington, also one at Dobson. The roads are comparatively level, except as above mentioned, and within a radius of ten miles of the center of Kansas City.—*Submitted by Fred W. Hammil, Kansas City, Mo.*

FLANDERS LITERATURE.

A SERIES of attractively prepared and handsomely printed circulars is being sent out by the Flanders Manufacturing Company. These folders discuss in a practical way such subjects as "Motorcycles for Architects and Contractors"; "Motorcycles for City Salesmen and Collectors"; "Motorcycles in Newspaper Work"; "Motorcycles for R. F. D. Carriers," and "Motorcycles for Physicians."

Copies of one or more of these folders may be had by writing to the Advertising Department of the Flanders Manufacturing Company, Pontiac, Mich.

ROCKFORD HILL-CLIMB.

A HILL climb was conducted under the auspices of the Rockford (Ill) club at Rockford, on Sunday, the 5th instant. Of the twin contestants, Henry Pherson on a 7 h. Merkel, equipped with Goodyear tires was a winner in .22⅘. Carl Swanson on a Harley-Davidson and F. H. Young on a Merkel were second and third respectively. In the single class, Harry Jacobson on a "four" Harley-Davidson, also equipped with Goodyears, won in 32. Herman Samuelson, four Harley-Davidson, was second and David Erickson, four Yale, third.

The Rockford club will hold a 186-mile run Sunday, the 19th, the route being from Rockford to Elgin, Aurora, De Kalb, Sycamore, Rochelle, Oregon and Byron, back to the starting point.

BALTIMORE'S FAIR RIDER.

BALTIMORE, MD.—Miss V. Grace Carrick, of Norwood avenue, Howard Park, Baltimore county, has the honor of being the first lady to own and operate a motorcycle in Maryland. She purchased from the Randall Manufacturing Company a few days ago a 1912 4 h. Pope. Last Monday she obtained her license as an operator and her tag. The machine has not arrived, but is expected in a few days, when she will go out on the road and demonstrate to the boys that she has some nerve.

Miss Carrick has had some experience with motorcycles, as she has been riding tandem. She will be made an honorary member of the Motorcycle Touring Club of Maryland.

ALL F. A. M. BOOSTERS.

THE San Jose (Cal.) Club has decided to affiliate with the F. A. M. as a 100 per cent. organization. This club is making preparations for the big motor meet June 23, at which time, it is believed, nearly, if not more than, two thousand riders will be present.

STRICT REGULATIONS.

MOTORCYCLISTS are cautioned to observe carefully the muffler cut-out and speed prohibitions in the following Connecticut districts: Berlin, Darwen, Greenwich, Groton, Hartford, Meriden, New London, Norton, Norwalk, Ridgefield, Rowayton, Westbrook, Winsted.

COSTUMED as above, J. H. and Robert Kyte rode through Westfield, N. J., one morning recently. They had been to a masquerade the night before and in order to join the party to have a photograph taken, rode in broad daylight through town to the photographer's.

Manufacturers

HENDERSON AGENCIES.

THE Henderson Motorcycle Company, of Detroit, expects to occupy its new factory at an early date. With this plant in full swing the company will be in a position to turn out upwards of 3,000 machines annually. Among Henderson agents appointed recently are the following: O. R. Stansfield, Kokomo, Ind.; George B. Knapp, Cleveland, Ohio; Meade Auto Company, Denver, Col.; Nebraska Cycle Company, Omaha, Neb.; Hess Motorcycle Company, Leavenworth, Kan.; W. H. Knight, Sioux City, Ia.; Anthony Cycle Company, Des Moines, Ia.

MERCIER OPENS NEW SHOP.

FRIENDS of Ferdie Mercier, who drop in at 704 Prospect place, Brooklyn, will find the popular speedster doing business once more under his own name. He opened an up-to-date motorcycle establishment at the address given about ten days ago and has since been on the jump. In addition to handling Minneapolis machines for the Brooklyn district Ferdie is operating a repair shop and is also prepared to store motorcycles. He has had one of the big Minneapolis twins out on the road several times of late and is convinced that he can get 75 miles an hour out of it.

A MATTER OF A HYPHEN.

HARLEY DAVIDSON and Harley-Davidson sound alike. The former is the world's champion fancy and speed ice and roller skater. Harley-Davidson, with the hyphen, is the name of a popular motorcycle made in Milwaukee, not many hundred miles from the home of Harley Davidson, who lives in St. Paul when he is not circling the globe.

Harley Davidson.

The name Harley-Davidson resulted from the association of Wm. S. Harley and the three Davidson brothers, Walter Arthur and William, when they combined their brains, mechanical knowledge and skill in the production of motorcycles.

The Harley-Davidson factory in Milwaukee was recently visited by Harley Davidson, en route for Australia by way of Vancouver, B. C. "Everywhere I go," said he, "people ask me about the Harley-Davidson motorcycle, and I have to convince them that I have no connection with the company other than friendship for Arthur Davidson and a wish for the continued success of the company."

THERE are few men in the trade better liked than is "Jess" Campbell, formerly of the New Era Autocycle Company, and now of the sales staff of the Consolidated Manufacturing Company. Campbell is an enthusiastic F. A. M. official, a conscientious businessman and big-hearted fellow who makes friends everywhere.

1,300 MEN MAKING CHAINS.

THE enormous plant of the Coventry Chain Company, at Spon End Works, Coventry, England, where "The Coventry" chains are made, has been enlarged by the erection of a large structure, making its total floor space one hundred thousand square feet. The Coventry Chain Company now employs over 1,300 skilled workmen. The firm is represented in America by the Sarco Engineering Company, 112 Broad street, N. Y.

ACCESSORIES CATALOG.

A WELL printed catalog of motorcycle parts and accessories is issued by the Saufley Supply Company, 624 E. 15th street, Kansas City, Mo. This concern guarantees all its goods to be exactly as represented, in default of which it will return money to any purchaser. Prompt shipments are also assured. The Saufley Company makes an interesting announcement, offering a prize, in the advertising section of this issue.

AD. COPY FOR DEALERS.

"NEW ads for old."

That is the slogan of the National Motorcycle Dealers' Information Bureau.

Four newspaper ads were sent to dealers who asked for sales suggestions and plans, and as often as a dealer publishes two ads in his home newspapers, and sends clippings of the ads to the Bureau, he receives two brand-new ads in return.

That's all it costs the dealers. They pay for new ads by showing that they have used the "old" ones.

Clippings are coming in to the bureau, at 23 East Ohio street, Indianapolis, Ind., from all parts of the country, showing that motorcycle dealers are awake and taking advantage of the help thus extended. Any dealer who is interested may have the bureau's full service free by writing to Merle Sidener, manager, at his Indianapolis address. Many favorable comments have been heard from dealers who are using the bureau's system.

Brown Quits Trains to Use a Motorcycle

Fred L. Brown, a salesman at Oakland, Cal., has a 256 mile trip, with calls in 9 towns.

He used to go by train, and it took four days.

Now he goes on his motorcycle in two days!

He saves his railroad fare, saves one-half of his hotel bills and one-half of his time.

In business or pleasure, a motorcycle will do as much for you.

Let us show you how and why.

Come in—or write for details.

Under our easy payment plan, your motorcycle will practically pay for itself while being used.

IN PHILADELPHIA

Mountain Run of the Harley-Davidson Club—Trade and Other Activities in the Quaker City.

TWENTY-TWO members of the Harley-Davidson Club made a run to Allentown, Pa., on Sunday, May 5. This is a distance of sixty-two miles each way over the most mountainous country in the eastern part of Pennsylvania and is a thorough test for any machine. All Harley-Davidson motorcycles were used, many being the New 7 h. chain-driven machines, which "simply ate up the mountains," as some members expressed it. All returned in good shape without any accidents to mar the day.

SIXTY PER CENT. INCREASE.

GEORGE S. MASLEN, No. 2206 North Broad street, the "Indian Man," reports business to be sixty per cent. better than last year. According to his figures he has sold more machines thus far this season than during the entire year of 1911. Mr. Maslen said that all the machines were sold and delivered in Philadelphia, and the Philadelphia territory. The third carload for the season was received on May 3 and all but a few were sold by the 6th. The commissioners of Springfield Township, Montgomery County, Pa., have recently ordered four machines to be delivered at once.

TO WIDEN STREETS.

MOTORCYCLISTS and autoists are much pleased over the news that the streets in the central portion of the city are to be widened so as to relieve some of the heavy traffic, if a proposal made by Chief Webster, of the Bureau of Surveys, is carried through. This project would include Thirteenth, Arch, Walnut, Locust and Fifteenth streets.

KRAUSE'S MOTORCYCLE HOUSE, No. 2123 North Broad street, has received an order from the New Jersey Gas Company, of Glassboro, N. J., for eight Excelsiors.

THE Never Puncture Tube and Tire Company has been incorporated under the laws of Delaware and will open salesrooms in the principal cities in the country. It is capitalized at $1,500,000.

PART of the frame department of the Pierce Cycle Company, occupying a space of 85 x 105 feet. Every frame is carefully filed and then finished off with emery cloth, for the enamelling department

Butler (Pa.) Motorcycle Club is planning a race meet on Decoration Day.

OLD SOL CATALOG.

A NEW catalog, well illustrated and telling the full story of Old Sol lamps, manufactured by the Hawthorne Mfg. Co., of Bridgeport, Conn., is now being distributed. It is practical in its treatment of the vital problem of lighting, and should prove of value to every motorcyclist. One of the features is a complete price list covering all the Old Sol lamp and generator parts. The catalog is made up in a handy pocket size, and will be sent promptly on request.

SEATTLE AGENT'S PREDICTION.

THEODORE TREMPER, Seattle agent for the "Flying Merkel," has made the following prophecy, which is heartily seconded by all other motorcycle dealers:

"Of course the majority of motorcycle riders use their machines for pleasure, and hundreds of owners are very well satisfied and get about all the pleasure it is possible to get out of the fine trips there are around Seattle, but the motorcycle is creeping into the commercial man's business. I predict that in a very short time the majority of Seattle business houses will be using motorcycles for their light delivery work.

"Speaking of good roads, there certainly has been a great improvement in roads here, and I believe it is the duty of every motorcycle dealer to assist in this movement."

LADD IS KEEPING BUSY.

S. B. LADD has been added to the staff of the Toledo retail store of the Consolidated Manufacturing Company, where he is acting as assistant manager. Mr. Ladd has been connected with the motorcycle trade for the last five years and is a thorough going booster for the power two-wheeler. He is also at the head of a motorcycle messenger service now being operated in Toledo.

CYLINDER CASTINGS.

R. L. McCLEES—Write • G. I. Stine, Fremont, Ohio, or perhaps the Harry R. Geer Co., 856 McLaran street, St. Louis, Mo., could supply you.

ICKMAN CYCLE C
BICYCLE DEALERS

DURING the recent motorcycle races in Birmingham, Ala., a number of trade workers and riders found time to pose for a photographer, and the accompanying picture is the result. From left to right they are: E. M. Edwards, of the Alexander Seawall Company, Atlanta, Ga.; E. J. Cortines, salesman for the Miami Cycle & Manufacturing Company; Arthur Mitchell, of the Flying Merkel racing squad; Joe Redlinger, salesman for the Pope Manufacturing Company; Carl D. Stier; P. A. Hickman, former Southern amateur bicycle champion and now proprietor of the Hickman Cycle Company, and Robert Stubbs, of the Indian racing camp.

MOTORCYCLE MANUAL, 51 Chambers Street, New York

F. A. M. NATIONAL ASSEMBLY

J. A. Hall Claims That It Should Be Held During Winter Months, Separate From the F. A. M. Meet—Offers Amendments.

THAT the F. A. M. meet and the National Assembly of the same organization should be held at a different time and at different places, the former as now and the latter during the winter months, preferably during the New York or Chicago shows, is proposed by J. A. Hall, of Brooklyn, N. Y., who has formally notified President Hamilton of his intention to offer such amendments to the Constitution and By-Laws of the F. A. M.

In advocating this change Mr. Hall calls attention to the fact that experience has demonstrated that it is impracticable to properly transact business during the summer meet. He argues that the long program of attractions which is customarily arranged by the National Meet Club makes it difficult, if not impossible, to give sufficient time to the business affairs of the Federation.

"It seems hardly necessary," says Mr. Hall, "to say a word of indorsement of these changes, for the time has come when all who have the real interest of the F. A. M. at heart realize that these changes are absolutely necessary. With the rapid growth of the F. A. M. comes greater importance of business matters, that should receive the careful consideration of every member and every delegate. Seven or eight men of the Board of Directors should not be called upon to decide for a membership of nearly 15,000. Through their delegates each individual member should feel that he has something to say in the organization. As evidenced very strongly at the last National Assembly at Buffalo, the important business of the organization cannot be properly attended to at a summer session. It seems almost absurd that in an organization of the size of the F. A. M. important business matters should be brought up for consideration after a smoker, with every one in a hurry to get away.

"The winter meeting between November 15 and February 15 could be held during the New York or Chicago shows. Delegates should have their expenses paid by the various clubs they represent. No pleasure events should be on the program until after all the business sessions. The latter could be followed by an annual banquet, and I am satisfied that this arrangement would help greatly to make the organization better and stronger than it is today."

The amendments suggested by Mr. Hall are as follows:

First: That the first clause of Section 1 of Article 3 of the Constitution, which now reads: "There shall be held between June 15 and September 15 of each year a National Assembly of the F. A. M. at such time and place as the Board of Directors may decide upon, etc.," shall be changed to read: "There shall be held between November 15 and February 15 a National Assembly of the F. A. M. at such place and time as the Board of Directors may decide upon, etc."

Second: That the following, to be known as Section 3, shall be added to Article 3 of the Constitution:

"Section 3: There shall be held between June 15 and September 15 a national F. A. M. Championship Race Meet at such time and place as the delegates to the annual meeting of the National Assembly shall decide."

Third: That the clause in Section 1 of Article 8 of the By-laws which now reads: "Between the dates of June 15 and September 15," shall be changed to read "between the dates of November 15 and February 15."

Fourth: That the following addition be made to Article 8 of the By-laws, to be known as Section 3:

"There shall be held between the dates of June 15 and September 15 of each year a National F. A. M. Championship Race Meet at such time and place as the delegates to the national meeting of the National Assembly shall decide."

BADGES FOR REFEREES.

AT the suggestion of Dr. J. P. Thornley, Chairman of the Competition Committee, the F. A. M. Board of Directors voted this week in favor of a resolution providing that he secure the badges to be given to official referees on condition that they have served satisfactorily for a period of not less than six months. The resolution is as follows:

"Be it resolved by the Board of Directors of the F. A. M. that the Chairman of the Competition Committee is hereby authorized to expend enough money to buy badges for referees, said badges to be of silver, and not to exceed in cost $5 each; that the badges shall remain the property of the F. A. M. and that they shall not be issued tô a referee until he has deposited the sum of $5, which shall be returnable upon the surrender of the badge; and the Chairman of the Competition Committee is empowered to make rules and regulations regarding the distribution of these badges provided he does not issue a badge to any who has not served the F. A. M. as referee satisfactorily for a period of six months. The Chairman of the Competition Committee is empowered to select an appropriate design for this badge and to go ahead with the necessary work and arrangements."

F. A. M. RIDERS IN CANADA

Reciprocal Arrangement Between American and Canadian Associations Is Suggested in Letter to F. A. M. Officials.

THOMAS J. ANDERSON, Provisional Secretary of the Canadian Motorcycle Association, has written to President Hamilton and Chairman Thornley suggesting an interchange of American and Canadian riders. He cites the fact that the Toronto Club has arranged a race meet for June 8 under F. A. M. rules; that the Hamilton Club has been awarded the first annual Canadian championship races, to take place July 1, and that the Toronto Club has meets scheduled for July 6 and August 3. He points out that there are several riders this side of the border who would like to compete in Canadian meets, and that Canadian clubs are anxious to have them do so. He also writes that "the Canadian clubs are getting invitations from the Utica, Rochester, Cleveland, Buffalo and other clubs and would like to take advantage of their offers and at the same time have them come over here and give us a chance to show them that we can give them a good time."

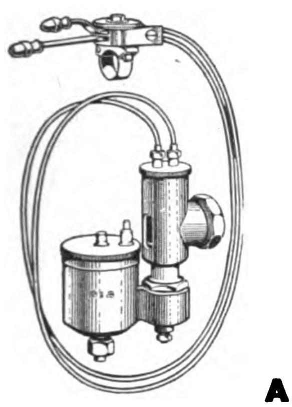
Accordingly Secretary Anderson suggests an agreement between the two organizations and as such an arrangement was favored by President Hamilton, Chairman Thornley and also by Chairman Sauer of the Legal Action Committee, to whom this matter was some time ago referred by President Hamilton, it has been announced by Dr. Thornley that reciprocal relations are now in effect.

FRENCH AGREES TO HELP.

BALTIMORE, Md.—President Hamilton, of the F. A. M., has requested Howard A. French to organize a squad from Baltimore to make the Southeastern tour this summer to the annual meeting. French has signified his intention to do all he can to make the southeastern section a big one. He will select a tourmaster and see that the boys are given a good send-off. Just how many will go from this city is in doubt, as many of the riders are awaiting the naming of the place and the time of the meeting, so they can arrange their vacations accordingly. The Southern riders, under the tentative plans formulated, will meet the Eastern riders at Hagerstown and then swing Westward to the meeting place.

PATTON-SEARLES.

CLARA SEARLES, an Owego girl, and Henry Tatem Patton, secretary and treasurer of the Ives Motorcycle Corporation, were married Wednesday, the 8th inst.



Imported Single-Jet **B & B** **Motorcycle Carbureter**

Fits Any Machine—Entirely Controlled from Handle-Bar

The B & B carbureter affords simplicity, efficiency and ease of control at all times. With a B & B you needn't bend down and take your hands from the bars in order to adjust your mixture. Instead, adjustment of the flow of gas and air to fit changing speeds is possible without the rider changing his upright position. Price is low, and material and workmanship the finest.

The Menarch is a Stayer

This letter gives you an idea of what it can do

IVES MOTORCYCLE CORPORATION.
Owego, Tioga Co., New York.

New York City, N. Y.,
May 7th, 1912.

Dear Sirs:

I herewith like to give you a little story about that 200-mile run.

As you saw on the entry blanks the start for the contest was set for 6 A. M., but owing to poor management in giving out the numbers it was 6.30 before we got started. The horizon was darkly covered with heavy clouds, and the rain threatened to set in any minute. Our next checking station was, according to schedule, at 9 A. M. in Patchogue, 61 miles from Bedford Rest, the starting point.

The pace cut out was killing on the machines and tires. My speedometer registered about 33 miles average speed until I got to Jamaica, and after leaving this place I averaged between 38 and 40, sticking to the big twins like glue. I got to Patchogue about 35 minutes ahead of time and took a little rest. I felt awfully cold and had to get some newspapers to put on my chest and the other riders followed my example.

After checking in at 9 A. M. we started in immediately for Southampton. Two hours' time was given to make the 40 miles, and you would think this is plenty of time. But here is where most got in trouble. The entire 40 miles of road were sand, sometimes to 6 inches deep, big holes and other friendly invitations to break frames and puncture tires. I rode through like a streak of lightning. This is the only way to get through. The rest of the riders tried the same; some succeeded, others not. Three machines broke their spring frames by snapping off the lower rear forks on both sides, not to talk about broken pedals and other troubles. One machine lost all the parts for the mechanical Intake Valves on both cylinders. Tires were punctured and blown out by the dozens.

Well, anyway, I did not have the least bit of trouble; never got off the machine. I got to Southampton ten minutes to eleven, which was checking time. Only two 7 H. P. Indians and one 7 H. P. R.-S. got there before me, and I should think this was great considering the fact that I rode a single cylinder. As soon as we sat down for dinner—one of those real good old Long Island shore dinners—it started in to rain without end. At 12.30 P. M. we started back for Brooklyn. 100 miles to go in the rain. No overcoat, no umbrella. Diagnosis: Riders and machines soaking wet. Well, we had to do it. Plenty of accidents happened. A Ford Auto skidded into me just outside of Amityville and took along my left pedal. I did not fall, however, and replaced the broken axle with a new pedal, which I luckily had along. I made Patchogue again in great time and finished in Brooklyn at 4.30 P. M. in good health, but wet to the skin. The machine attracted quite some attention and everybody was taking pictures of the big single that stuck to the twins. I am sure they are going to give me a big write up in the papers with my Monarch. I consumed three gallons of gasoline and three quarts of oil on the whole trip.

Out of 75 riders, as I understand, only a comparatively small number got medals, on account of being late at the controls. The way my machine ran was simply great.

Yours very truly,
(Signed) H. KRACKOWIZER.

This letter is a fair example of what EVERY rider of a Monarch thinks of his mount. Unstinted admiration and approval is the lot of every Monarch we build.

When Used as a Motor Coat

They're Off!

The Touring Season is now in full swing. From all parts of the country clubs and individuals are starting on jaunts, some long, some comparatively short. Before you start, look over your equipment.

Are You Purdy Equipped?

The far-sighted tourist knows that PURDY SPECIALTIES add the finishing touch to his equipment.

Two "necessities of merit" are the Purdy Motorcycle Whistle and the Purdy Motorcycle Pump. Be sure they are PURDY if you want to eliminate all warning and inflation troubles.

Purdy Whistle Model B

Handle Bar Grip Control. A very slight grip of the handle automatically opens the tone compartments and forces the **FULL** exhaust through the whistle—producing an effective, pleasing and far-reaching warning. Can be blown at slowest speed and yet be heard a mile in advance. Positively will not clog. Attachments for all motorcycles—attractively finished in a combination of dull and polished nickel plate. Easily attached in twenty minutes.

Price, complete, $6.00.

Purdy Motorcycle Pump

Compact—durable—convenient—can be easily attached to the front or rear fork of any motorcycle. A simple turn of a thumbscrew is all that is necessary to attach or detach it. Will not jar loose. Strongly made and handsomely finished in polished nickel plate.

Price, complete, $3.50.

You need our catalog before you start—write today

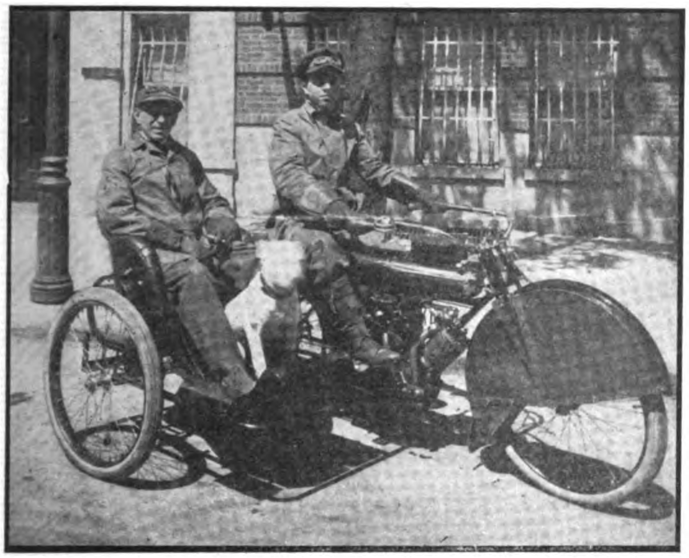
Remarkable Record Proving M-M Endurance



Geo. P. Jenkins and his dog "Sport" at the finish

In the Double Century Endurance

run of the Invincible Motorcycle Club of Brooklyn, on May 5th, to Southampton and return, (200 miles), 79 riders entered, representing teams composed of nearly all the important makes of motorcycles. The **M-M team** of six riders was the **only team to finish** all with perfect scores.

The road conditions were extremely poor and the going was hard. Besides this, some of the M-M machines were fitted with side-cars, and George P. Jenkins even added the weight of his fifty pound pet dog in the side-car with himself and still finished with a perfect score. None of the M-M machines had motor troubles, or troubles of any kind except punctures.

One team, representing a widely advertised make, announced before the run that they were going to go over the course twice while the others were going once and had their machines so placarded. This team averaged less than 100 miles each and none of their machines finished with a perfect score.

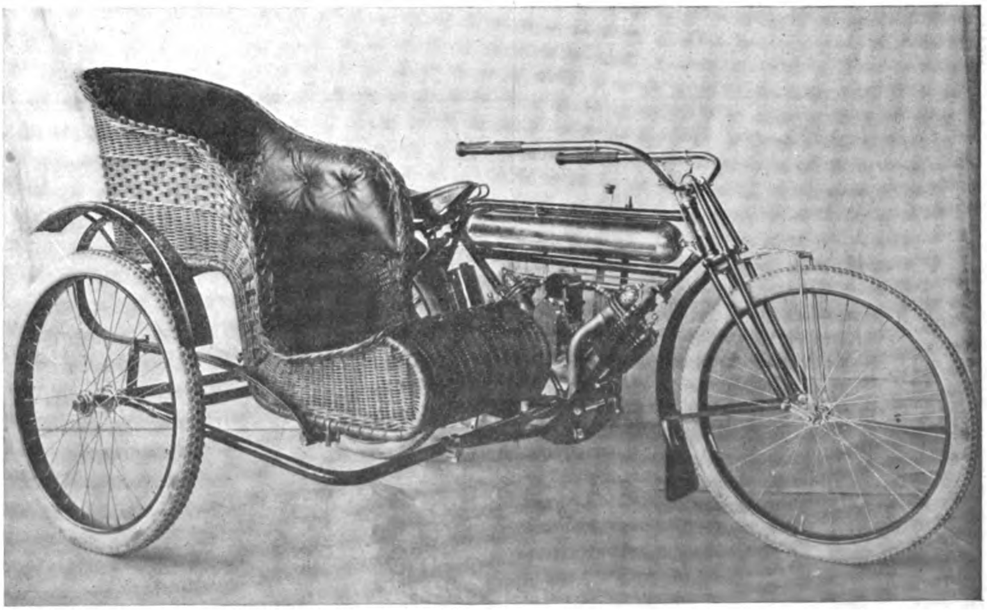
It has never been the policy of the M-M organization to indulge in much boasting, but **when it comes to actual service and endurance, the M-M is always there with both wheels,** and invariably finishes with flying colors while the other fellows fall by the wayside.

The New M-M *Side-Car*

The most comfortable, durable and neatest side-car yet produced is this M-M side-car. Notice its graceful lines, long easy springs, luxurious upholstering, and strong frame construction. The method of clamping to the motorcycle is extremely simple and convenient. Dealers will find these side-cars very convenient and effective as demonstrators and they can also be profitably used to rent out to local riders for special occasions. It will soon pay for itself in this way and this service will be greatly appreciated by riders and help the sale of new machines.

So much has been said about side-cars this season that we need add no further arguments to convince you that they are practicable and desirable. The extreme popularity and success of this attachment in England foreshadows a similar side-car craze in this country.

There is a big demand for side-cars so get your orders and specifications in early as our production capacity on this attachment will be limited.



New M-M Side-Car. Price $65

GOODRICH MOTORCYCLE TIRES

MADE WITH THAT WHITE TOUGH TREAD IN BOTH CORRUGATED TREAD AND LARGE STUDDED TREAD WITH THE CENTER RIB—BOTH TYPES NOW THE SAME PRICE. EVIDENCE THAT THEY ARE

"BEST IN THE LONG RUN"

During the past Winter, Mr. John G. Hogge of Urbana, Ill., made an extended tour on his motorcycle through Brazil, using Goodrich Tires. Read what he writes of their service:—

> "The tire which I used on the rear wheel of my machine while in Brazil has been run about 1,500 miles and it has barely commenced to wear. What is still more remarkable about this service is that this tire was run over the worst of roads, carrying a 200 lb. machine and myself (150 lbs.). Most of the time I carried about a hundred pounds of luggage on the carrier, and often a 135 lb. feminine passenger on the tank. 'Some load' on the rear tire!
>
> "It is also a well-known fact that heat is deteriorating to rubber, but the fact that Brazilian roadbeds are nearly always so hot from the rays of the sun that the bare hand can not be borne on the ground but an instant, seems to have had no effect upon Goodrich rubber other than causing the air inside to expand, making it necessary to frequently let a little air out of the tire to prevent bursting. All this was with 2½-inch tires. A larger tire would have undoubtedly been better. In view of the fact that large tires undoubtedly give better service and also that I expect to do some tandem riding next summer, I shall use the largest tire that will take the rims and go between the fork of my twin motorcycle."

For the coming Summer Mr. Hogge's itinerary includes the British Isles, France and Southern Europe. Needless to say, he is equipping his motorcycle with GOODRICH TIRES.

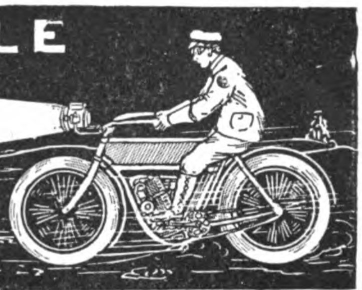
BRANCHES IN ALL PRINCIPAL CITIES

THE 20th Century MOTORCYCLE HEAD and SEARCHLIGHTS



Travel by Night with the Twentieth Century Light

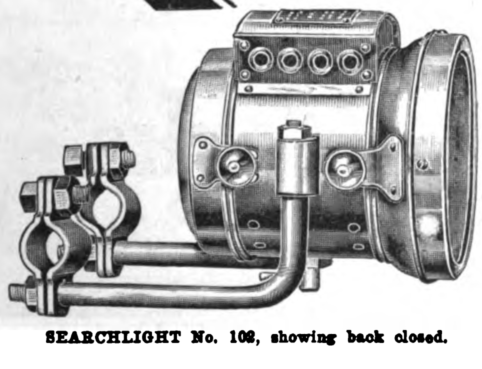
The ideal lamp. It is compact, sturdy and tremendously durable. It throws a brilliant white, piercing glow straight ahead, and does not diffuse its rays—it *concentrates* them. Your eyes naturally follow the light, and they belong straight ahead—as far ahead as the light will permit. The 20th Century *makes* you keep the road.

A Notable Fact

The cleaner the mirror lens, the *more brilliant* and *powerful* the light. The "open-door-to-the-lens" feature of the 20th Century permits of easy access to the lens for cleansing purposes.

The 20th Century Motorcycle Generator with its simple locking device is a fitting and worthy companion to the famous 20th Century Lamps. Handsome, compact, strong and absolutely gas tight. Will not jar loose yet can be opened with ease. No screw threads to corrode.

Our Bicycle Lamps have been leaders for more than a quarter of a century and are still leading. We put the same care, material and experience into their manufacture as we do in our motorcycle headlights and generators.



SEARCHLIGHT No. 102, showing back closed.

Mott Steel Rims Insure Longer Service

ROAD conditions in America are different than in any other country. They are good, bad and indifferent. Generally bad. On rocky, rutty roads the rims are necessarily subjected to considerable punishment.

The wise manufacturer gives careful consideration to this important feature of motorcycle construction. He knows that to cut costs by using rims other than

MOTT STEEL RIMS

is to invite dissatisfaction and possible cancellations.

Use **Mott Steel Rims.** They are strong—elastic. They are made in an enormous plant devoted exclusively to the manufacture of steel rims.

We will be in position to make delivery of the new standard Motorcycle rims within thirty days.

May we submit specifications?

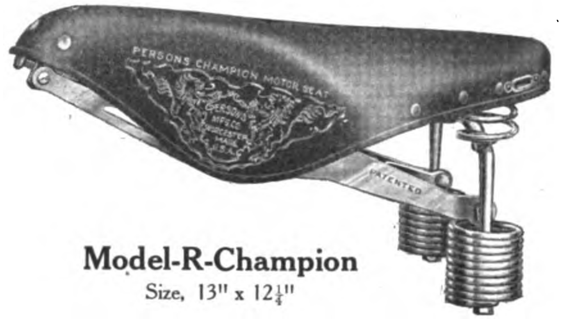
WHEN TOURING
YOU WANT
COMFORT AND DURABILITY
PERSONS SADDLES
COMBINE BOTH THESE ESSENTIAL FEATURES

SUPERIOR QUALITY



LARGE SIZE TOP FOR COMFORT
Constructed For Low Position

THE LIMIT OF DURABILITY

in leather top and metal parts. This is absolutely necessary for comfort. There is nothing so uncomfortable as a cheap, broken-down saddle. Like a pair of cheap shoes—they never feel comfortable and when they begin to wear they fall apart quickly.

THE BEST IS THE CHEAPEST IN THE END

REMEMBER—We are the only saddle makers tanning leather and we select in our tannery the finest quality, and best parts of pure oak tanned hides from which to cut our saddle tops.

THAT'S THE SECRET

YOU ALSO NEED A GOOD TOOL KIT

PERSONS CHAMPION KIT
SIZE 12¼" x 4¼" x 3½"

This one is large enough to permit of carrying a good supply of tools and spares, inner tubes, etc., and is out of the way as it fastens to luggage carrier as shown. We have other styles for attaching to top frame tube.

All our kits are supplied with or without lock and made from sole leather, hand stitched with double reinforced ends. They cannot rattle or jar loose.

IMMEDIATE DELIVERIES ON MAJESTIC SIDE-CARS

UTICA CYCLE CO.
Carroll Building, 115-117-119 Columbia Street,
Utica, N. Y.

THE MAJESTIC MFG. CO., Worcester, Mass.

Gentlemen: In reply to your letter of the 15th in regard to side-car, will say that we have had very little weather for driving out these cars, but have two running on Merkel motorcycles, and in each case the purchaser is well satisfied with results.

In regard to speed, the owner of one of these machines claims to have driven between thirty-five and forty miles an hour with no bad results.

We would be very glad to give you any information we may receive a little later when we have had a chance to see more of the services of Majestic Side-cars.

Yours very truly,
UTICA CYCLE COMPANY.

THE MOUNT PARAMOUNT.
15 South Fourth Street, Camden, N. J.,
April 29, 1912.

MAJESTIC MFG. CO.

Gentlemen: Your letter received and will say the service your side-car is giving me is excellent. I could not ask for anything better. I take wife and baby to the shore every Sunday, which is a distance of 60 miles one way, and can make it with ease in 2¼ hours. I have it attached to a 6 h. p. Harley. It certainly does pull that car along some. Your car rides fine and adds joys to motorcycling. Be careful and don't forget to tell your customers to get the car lined up right before trying it.

Truly yours,
WM. HECKENHORN.

Salt Lake, April 26, 1912.

THE MAJESTIC MFG. CO., Worcester, Mass.

Gentlemen: In replying to your favor of April 16 will say I received the Side-car in fine condition, and I attached it to my Indian 7 h. p. machine. Owing to bad weather and road conditions, have been unable to use it as much as would have done otherwise. The longest single run was twenty-one miles, partly over rough roads, the balance on pavement. My passenger was a 225-lb. man and took him at a 45-mile per hour clip where the road conditions permitted; the greatest speed was made up a fair grade.

For ordinary riding I can get at least 50 miles out of a gallon of gas.

My car is as good as the day I connected it.

Wishing you every success, I am,

Yours truly, FRED E. RAY,
10 E. 1st Street, Salt Lake City, Utah.

Pawtucket, R. I., April 23, 1912.

MAJESTIC MFG. CO., Worcester, Mass.

Gentlemen: Yours of the 22d at hand. In regard to side-car, we have been so busy we have not had time to attach same to a motorcycle as the machines have been selling as fast as we receive them. We expect a stock machine this week and will attach your car and give same a good test and write you later about same.

We have seen several different machines with side-car attached and parties like them O. K. and claim that car makes but very little difference in power of machine, one being attached to a Harley single in town.

Very truly yours,
STANDARD CYCLE AND SUPPLY CO.,
H. F. S.

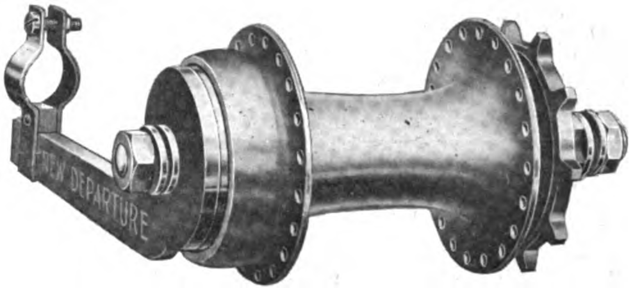
NEW DEPARTURE

Motorcycle Specialties

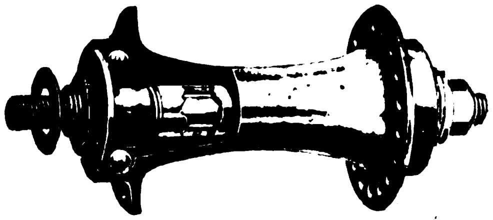
INTERNAL EXPANDING BAND COASTER BRAKE

The internal expanding band type, employing exactly the same principle as the emergency brake in the automobile. It operates against the forward movement of the wheel, hence, cannot lock, wind or bind. Riders prefer it because of its superior efficiency, reliability and strength. It is built for service beyond extreme requirements of riding. The 1912 model is absolutely the last word in a coasting and braking device for motorcycles of modern type.



"KNOCK-OUT" AXLE HUBS FOR FRONT WHEELS

The ideal front hub, constructed entirely of specially treated steel and gives maximum strength and wear. The axle is in a sheath and can be removed instantly without disturbing the adjustment or removing any other part of the hub. It runs on eighteen ¼-inch steel balls and is highly finished throughout. Motorcycle dealers and repairers should stock this hub. It has behind it the New Departure guarantee.



SUPERIOR BALL BEARINGS

New Departure ball bearings are an American product of guaranteed merit and offer advantages over the foreign-made bearings in price and other considerations. This bearing is made in standard sizes and can be used to replace any single row bearing of standard bore, diameter and width. Automobile garages and motorcycle repair depots should stock this bearing and save money.

Reliance

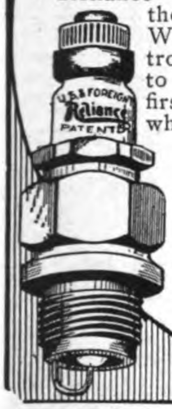
(REG. U.S. PAT. OFF.)

In Special Motorcycle Type

A single drop of water will put every spark plug out of business—except one—the "Reliance." Put the Reliance in a glass of water and it continues to spark.

Do you appreciate the full import of this statement? Water is the greatest short-circuiting medium known; if water won't affect a plug, nothing else will. Carbon and soot have absolutely no effect upon "Reliance" Plugs. Its patented electrical action destroys them as fast as deposited.

When you realize that ninety per cent. of all plug troubles are caused by carbon and soot you begin to appreciate why the Reliance should be your first and last choice; you see why those who have once used Reliance troubleless plugs will have no other.



Regular Type $1.00
Magneto Type $1.25

For sale by most dealers; if yours does not carry, write and we will ship prepaid at prices quoted.

WETPRUFE BELT

The Stretchless Motorcycle Belt

Why They Make Good

The reason "WETPRUFE" belts have longer mileage, stretch less and give better traction is to be found in the special tanning and preparation of the leather, as well as the workmanship and cement. Forty years' experience in belt-making has enabled us to solve all the perplexing problems. That's why "WETPRUFE" belts frequently give twice the mileage of ordinary motorcycle belts, with no stretch noticeable.

Duckworth
Chains Are Light---Strong---Durable

They are practically a continuation of the motor. Every shade of increased or decreased speed is immediately transmitted to the rear wheel, without the loss of an iota of power. Duckworth Chains are flexible.

On the track or on hills—no strain is too much for Duckworth Chains. They are made to withstand 3,500 lbs. to the foot. Duckworth Chains are strong.

The highest grade of steel, specially prepared for motorcycle chains, is used in Duckworth Chains. This accounts for their tremendous wearing qualities. Duckworth Chains are durable.

Our catalog is yours for the asking.

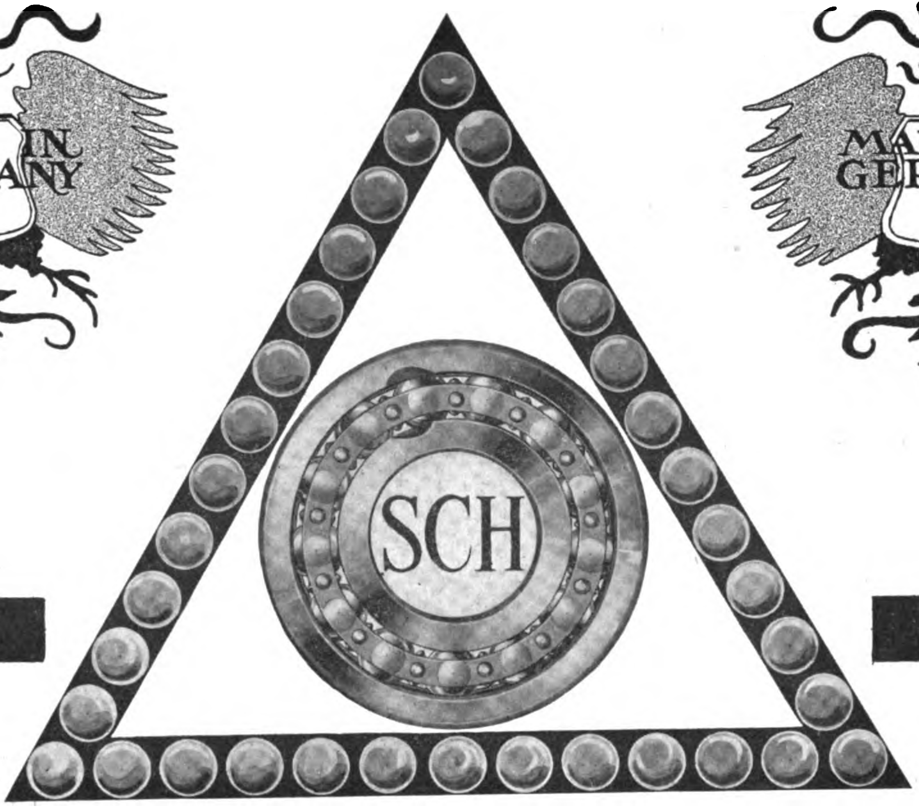
MADE IN GERMANY



MADE IN GERMANY

SCHAFER QUALITY

The entire performance of your machine depends upon the service obtained at the bearing points. If there is any part of your machine wherein you should use high grade equipment—wherein quality should be the first and last consideration regardless of cost—it is here.

"SHAFER BALL BEARINGS" are built to withstand the most extreme strains and stresses of hardest service. The durable, wear-resisting chrome steel used in their construction is of exclusive analysis, and free from blisters, air bubbles and every intrinsic weakness that might cause the balls to vary in weight, size or structural strength. The balls are uniform to within .0001 part of an inch and remain so over long terms of hard service. Recognized by engineers as the highest grade and finest quality of anti-friction bearings made today.

When you equip with SCHAFER you insure your machine against frictional deterioration. Why not eliminate every element of weakness or inefficiency at the bearing points by employing "SCHAFER BALL BEARINGS" exclusively?

Used on such high-class products as De Luxe Motors and two-speed gears and Minneapolis Motorcycles and two-speed gears.

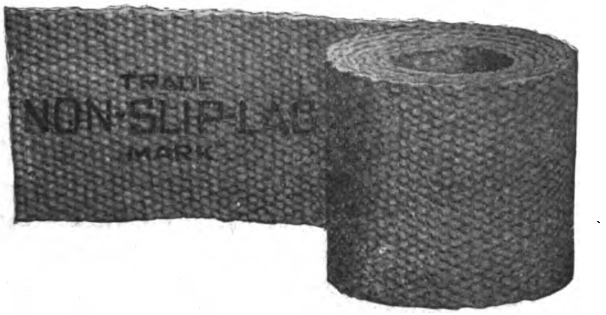
TRADE
Non-Slip-Lag
MARK

No More Torn Belts



Doubles the life of the belt and adds 25% to the life of the machine

Greatest advancement in covering for belt pulleys ever made

The new lining for pulleys. NON-SLIP-LAG prevents tearing of belts, increases their life and affords additional power.

It is a well-known fact that the life of the belt is shortened at least one-half by either the burning of the belt, caused by slipping, or else by the deep ridges worn in it by screws in the pulley lagging.

On the NON-SLIP-LAG there are no complaints of this kind, as no screws or metal parts are required to hold Lagging on pulley and to come in contact with the belt. NON-SLIP-LAG can be applied to pulleys without removing the belt or pulleys in less than five minutes' time.

Non-Slip-Lag is being used exclusively by the Eclipse Machine Co., for use on the Eclipse Free Engine Pulley.

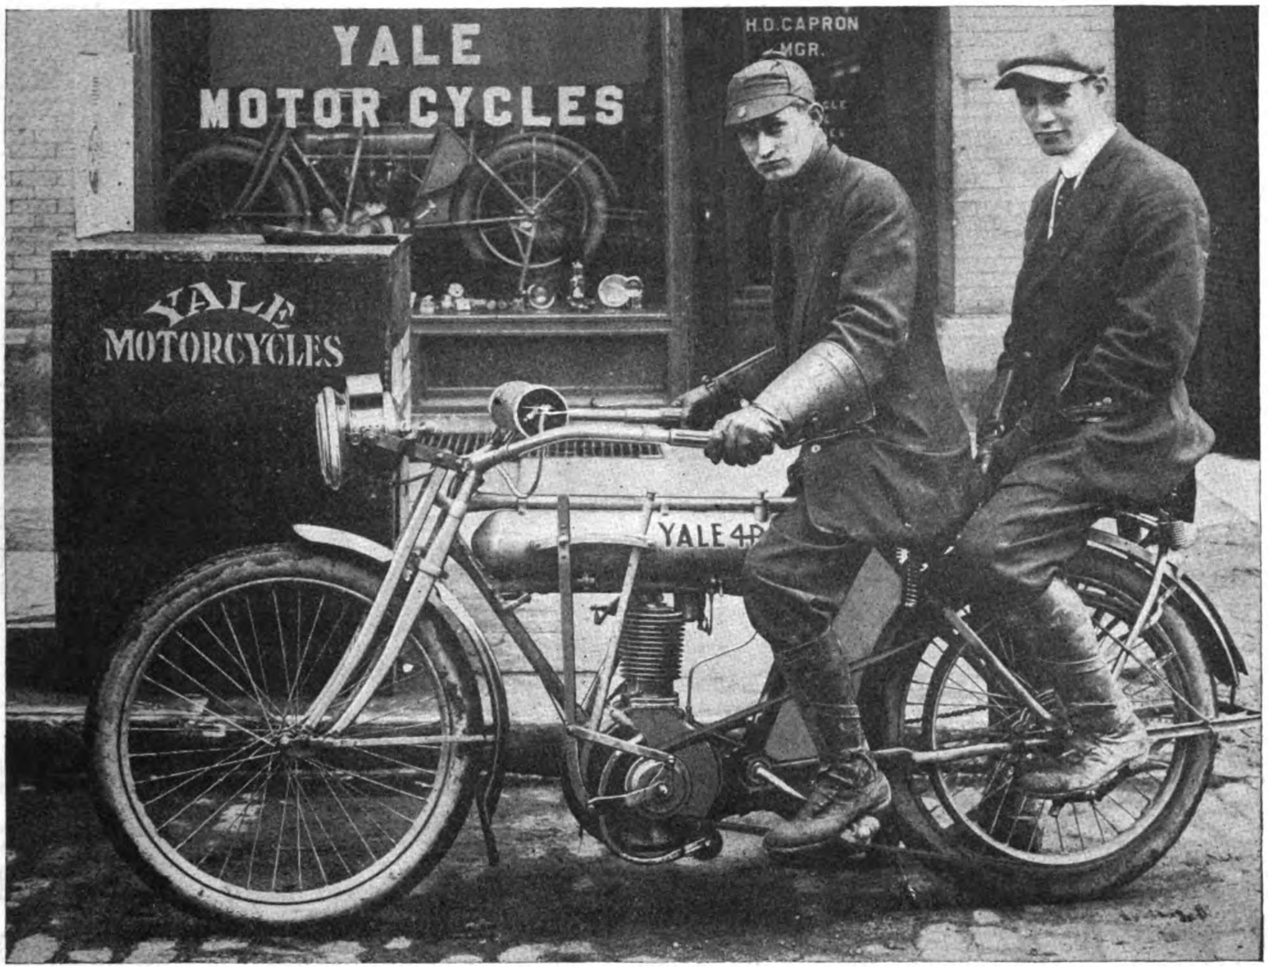
THE YALE PLUGGER



On May 15th, C. H. Ferguson and F. N. Gear rode a 1912 single cylinder 4 H. P. battery YALE from Cleveland to Toledo, 130 miles, through mud and rain, stopping 1 hour and 40 minutes en route, in 7 hours and 30 minutes time consumed.

JUST THINK OF IT!

Doing double duty through 130 miles of mud in 5 hours and 50 minutes, carrying two men weighing 140 and 170 pounds.

The motor did not stall once and was ready to make the return trip.

"On an R-S? That's Possible"

The rider's story of the conquest of some particularly "tough" hill, hitherto unscaled by a motorcycle, or of an out-of-the-ordinary endurance run over impossible roads, or of an exceptionally fast mile on the track; all these stories have a "fishy" flavor—until he backs it with the unanswerable argument, "I DID IT ON AN R-S." Chorus: "On an R-S? *That's* possible!"

That is the popular attitude toward "That Willing Winning Worker." The R-S "does things" and doesn't make any fuss about it. Its combination of tremendous power, enormous speed and marvelous endurance, not to mention its many inimitable constructive features, undeniably establishes its right to the title, "The Finest Motorcycle in the World."

Don't delay, but write for our catalog NOW.

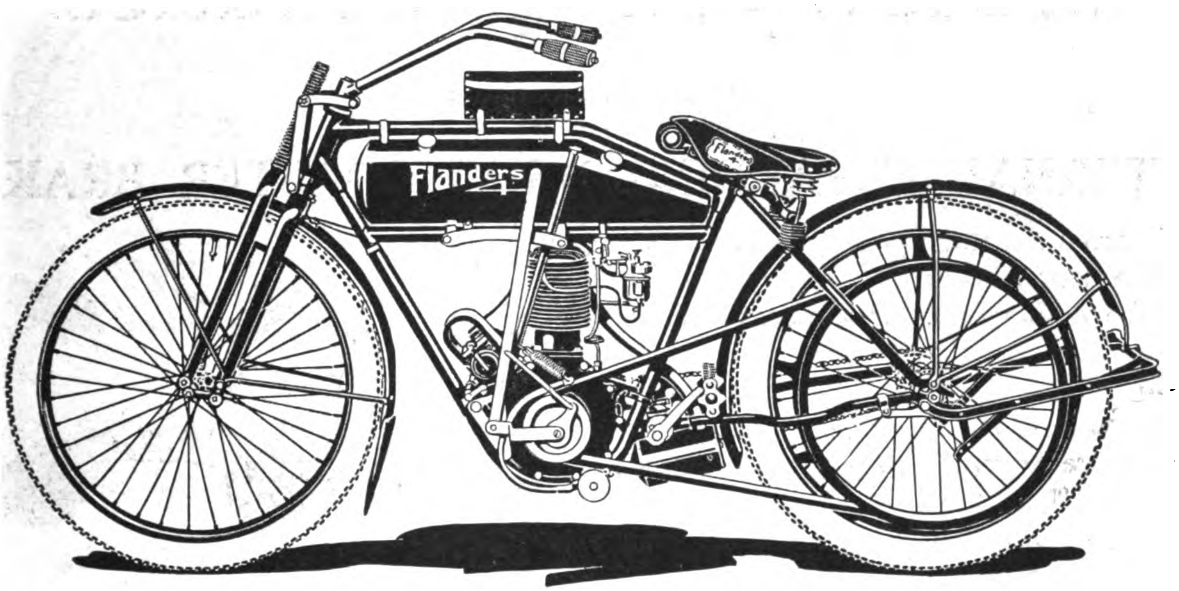
Flanders "4"

$175
AT THE FACTORY



Flanders "4" Wins Again

In the first Endurance Run which Flanders "4" Motorcycles have ever entered they carried away two perfect scores and two gold medals to attest that fact.

The event was the 200 mile Reliability Contest from Brooklyn to Southampton and return, under the auspices of the Invincible Club, May 5th.

Only two Flanders Motorcycles were entered and they were ridden by Fred Voelker and Eugene Miller, both amateurs and owners.

Flanders "4" was a "repeater", Sunday, May 19th, on the occasion of the Chicago-Milwaukee Endurance Run. Mr. Buell riding a Flanders "4" in competition with 24 other machines, 21 of which were "twins", was awarded First Prize—a beautiful loving cup.

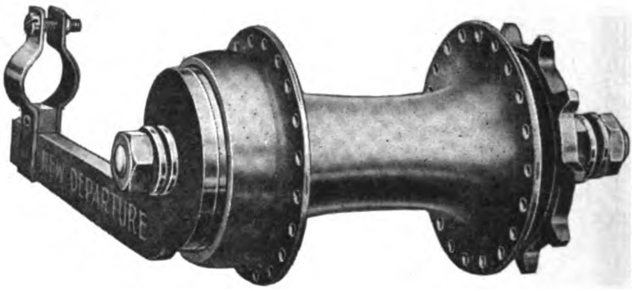
NEW DEPARTURE

Motorcycle Specialties

INTERNAL EXPANDING BAND COASTER BRAKE

The internal expanding band type, employing exactly the same principle as the emergency brake in the automobile. It operates against the forward movement of the wheel, hence, cannot lock, wind or bind. Riders prefer it because of its superior efficiency, reliability and strength. It is built for service beyond extreme requirements of riding. The 1912 model is absolutely the last word in a coasting and braking device for motorcycles of modern type.



"KNOCK-OUT" AXLE HUBS FOR FRONT WHEELS

The ideal front hub, constructed entirely of specially treated steel and gives maximum strength and wear. The axle is in a sheath and can be removed instantly without disturbing the adjustment or removing any other part of the hub. It runs on eighteen ¼-inch steel balls and is highly finished throughout. Motorcycle dealers and repairers should stock this hub. It has behind it the New Departure guarantee.

SUPERIOR BALL BEARINGS

New Departure ball bearings are an American product of guaranteed merit and offer advantages over the foreign-made bearings in price and other considerations. This bearing is made in standard sizes and can be used to replace any single row bearing of standard bore, diameter and width. Automobile garages and motorcycle repair depots should stock this bearing and save money.

EXCELSIOR AUTO-CYCLE

The Excelsior Auto-Cycle makes good because it is made better. Step by step the Excelsior engine, as it is constructed, is inspected and tested.

Every cylinder is tested under water pressure the same as steam boilers are tested. After the valves are ground in the cylinders are given a thorough air pressure test. Then, only when they prove absolutely air-tight, are the engines assembled and limbered up under belt-power. Every motor is then taken to one of our twenty testing blocks and under careful inspection put through a dynometer test.

Our dynometer block test is the only test which gives the opportunity to make every engine uniform—to judge their power with absolute accuracy—and to make adjustments while the engine is running under full load. Besides that test, each Excelsior Auto-Cycle is finally tested after it is completely assembled.

The length of time spent in construction of every Excelsior engine is one of the reasons why the Excelsior always makes good.

PREST-O-LITE

"The Light Universal"

Ask Any Experienced Motorcyclist

He will tell you the advantages of Prest-O-Lite on your machine.

One accident on the road at night, due to poor light, costs many times the price of Prest-O-Lite.

If you are going to ride after dark, don't trust to the poor, unsatisfactory, unreliable light of a generator.

Don't get any "imitation" lighting system that is not backed by complete service.

Don't experiment. Don't take chances. Profit by the experience of thousands and get Prest-O-Lite—

When you buy your machine

Insist Upon Prest-O-Lite!

It is the ONLY gas tank that is backed by universal service.

If you are a "stay-at-home," the chances are you don't need *any* light on your machine.

But if you are going out on the open road—if you are really to realize the joys of your motorcycle—you must have service.

You will find Prest-O-Lite Exchange Stations in practically every city, town and village in the country. 15,000 agencies that guarantee you service no matter where you go.

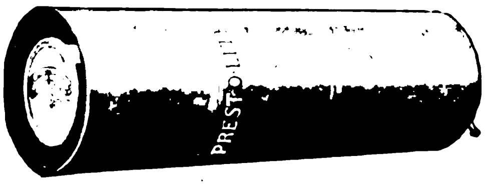
And one point more—the best time to get Prest-O-Lite is when you buy your machine.

Ask the dealer how much it will cost you to have Prest-O-Lite put on.

If you want any further information about Prest-O-Lite we will gladly send you our Motorcyclist's Booklet, showing how the small tank is easily attached to any machine. Ask for it today.

Price of Tank $10

EQUIPPED WITH GAUGE.



Dimensions: Length, 13¼ inches; diameter, 4 inches; weight, 8¾ pounds.

Our Handy Rule and Gasoline Gauge sent on request. Measures gasoline in tank; flexible for measuring tires, etc.

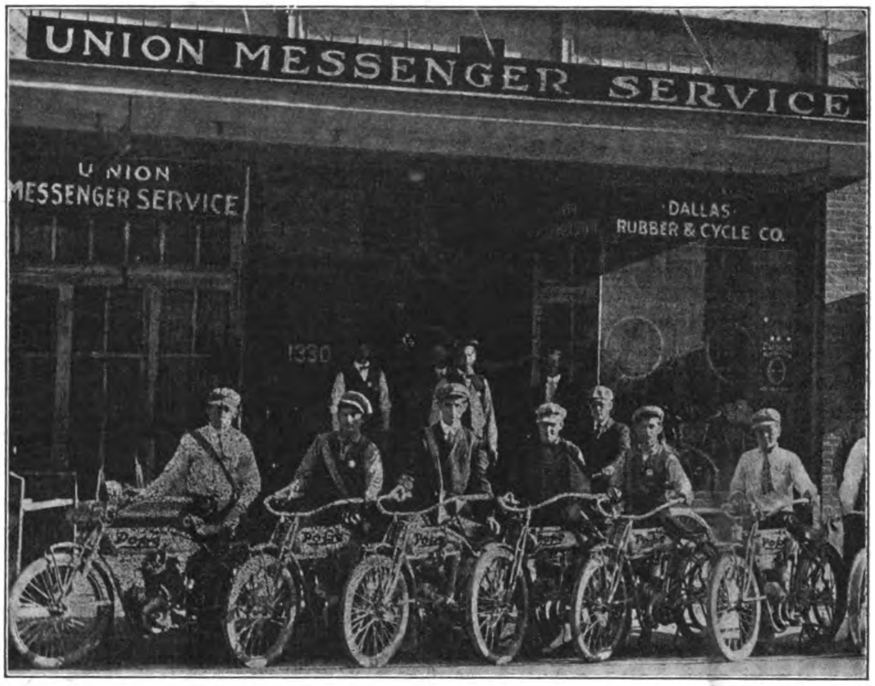
POPE MOTORCYCLES

For Messengers, Collectors, Solicitors

Study this picture. It tells a story of successful messenger service obtained by the use of six Pope Motorcycles.



SIX MODEL H'S USED BY UNION MESSENGER SERVICE, DALLAS, TEXAS

"Never Missed a Call"

MODEL H IS AN IDEAL MOTORCYCLE FOR ALL KINDS OF COMMERCIAL SERVICE on account of its reliability and low cost of upkeep. It has found special favor with those who are called upon to go distances in quick time, such as messengers, collectors, solicitors, linemen, policemen, etc., many of whom use and recommend the Pope above all other machines.

Pope Motorcycles have demonstrated their worth in messenger service at Dallas, Texas, where six are used by one concern—The Union Messenger Service. The proprietors say: "We wish to let you know of the success we are having with Pope Motorcycles. Their wonderful performances include usage during prolonged rains, heavy roads, etc., and we have NEVER MISSED A CALL. WE BELIEVE YOUR MOTORCYCLE IS RIGHT AND WE ARE IN A POSITION TO KNOW."

What the Messenger Boys Think of Their Pope Mounts

DALLAS, Texas, April 25, 1912.

POPE MFG. Co., Hartford, Conn.

DEAR SIRS—I have been in the employ of the Union Messenger Service for the past four years and rode the first Pope motorcycle in its service. Have covered over 5,500 miles, and made 1,300 calls, on original tires, and not a part replaced except control wire, since January 1, 1912. Have been in very bad weather and mud, and the Pope is equal to any and better than many I have ridden. Yours, (Signed) ORBIE BALDWIN.

I have been with the U. M. S. for several years, and now ride the second Pope motorcycle in the service. Have had no trouble of any kind, and while the weather has been bad and the streets very wet, I have always kept my honors of reliability and punctuality. Yours, (Signed) CLAUDE HOSEA.

I have been with the U. M. S. for some time, riding the third machine in the service, and after using the Pope, prefer it to any other. Yours,

(Signed) OLEN E. NOKES.

I am riding the fourth Pope in use by the U. M. S. and have had no trouble whatever. Tried to climb a telegraph pole to miss a wagon, and broke a front rim, but was back for work in a couple of hours, not straining the forks in the least. Yours,

(Signed) CLAUDE LE BLANC.

I am now riding for the U. M. S. on a Pope motorcycle, and after trying several others I think the Pope is the ideal machine for reliability and quick delivery. Yours,

(Signed) ROSS FISHER.

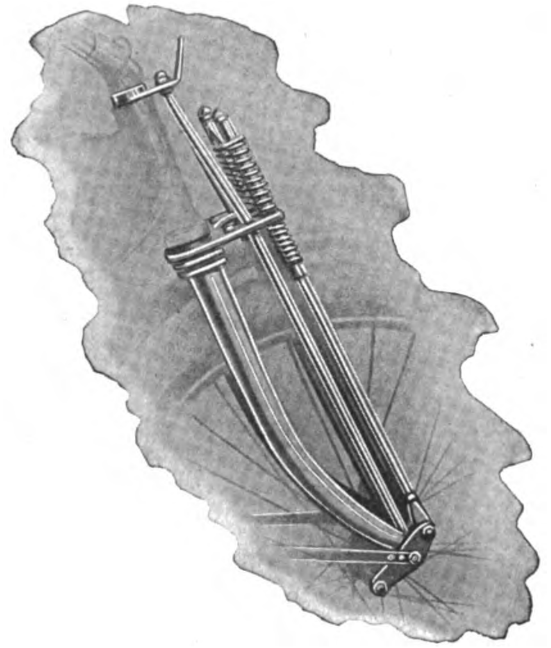
MOTORCYCLE TALKS

Front Forks, No. 6

(NOTE: This is the fifth instalment in the series of talks now appearing in the motorcycle papers dealing with those practical features that you should look for in the machine that you require for everyday service.)

Build a fork of the best materials, the finest steels, in the biggest factory—and if it fails there's a reason—It lacked good design.



The Schickel Spring Fork

This spring fork is remarkable for its easy riding quality. It has a perfect castor action, the wheel trailing from the end of the fork on short links.

The springs are made of vanadium steel, heat treated and are extremely tough and resilient.

It is impossible to bottom or reverse with this fork.

The absence of large moving surfaces makes oiling unnecessary.

Oil collects dust and grit which makes your forks unsightly. Little grease cups are fitted to the pins on the swivel plates.

The tension rods pass thru fibre bushings,—no disagreeable squeak comes out of a Schickel fork.

The fork sides are extra large and are heavily trussed and crowned.

The important connections are doubly protected against failure. There are two tension rods, two sets of springs, and two pairs of clevis plates.

THE SAFEST AND STRONGEST FORK EVER BUILT PROTECTS THE MAN WHO RIDES A Schickel.

**DEALERS
WRITE FOR FURTHER
INFORMATION**

For a few cents you can replace any part that might wear on a Schickel fork. THAT'S GOOD DESIGN. Excellence in designing and careful consideration for your pocket go hand in hand with the Schickel VALVELESS TWO-STROKE MOTORCYCLE.

United States Motorcycle Tires

have been selected as regular equipment for next season by *another* big, representative motorcycle maker.

We have completed arrangements with the POPE MANUFACTURING COMPANY, of Hartford, Conn., to supply the tires that go on next year's large output of Pope Motorcycles.

When firms of the standing of the Pope Manufacturing Company, and those others, determine to use one brand of tires in preference to all others in the regular equipment of their factory output, it is a mighty good indication that the tires selected possess every quality motorcycle tires should have.

Perhaps if you give the same thought to the tire question that the motorcycle manufacturer devotes to it you soon would discover why United States Tires are given the preference.

NEW JERSEY CLUB'S 24 HOUR ENDURANCE RUN

MUD-SPATTERED, bruised and exhausted, the riders who started out of Newark in the second 24-hour endurance run of the New Jersey M. C. on Wednesday evening straggled back to the city during the afternoon of Memorial Day, with their enthusiasm and their scores in tatters. No rider completed the course, owing to the execrable roads which were encountered following the downpour of Wednesday afternoon and the continued showers of Wednesday night. Twenty-three participants, including Mr. and Mrs. Clayton Cox with their N. S. U. and side-car, pulled out of Newark on time, but only nine riders reached Phillipsburg.

Here a conference was held and only four of the boys decided to continue. They were F. W. Crosbie, P. W. Stevens, George Riechey and Watson Kluczek, the three first named riding Yale sevens and Kluczek mounting a Harley-Davidson 4. Riechey dropped out at Sussex after being overtaken by what he refers to as a cloudburst. Exhausted and battered from many falls and unable to keep on the road, he crawled under a wagon shed and later made his way home as best he could. Kluczek did not get far beyond Phillipsburg. His belt burned out, and being unable to obtain another one in the vicinity, he gave up the fight. Later he made his way to Easton, managed to get a dealer to open his store and sell him a belt, and then headed for home. That left only Stevens and Crosbie on the road. The latter met his Waterloo at Stroudsburg and a message received from Stevens late in the evening of the holiday was to the effect that he was on his way home by train.

All the riders had harrowing tales to tell when they arrived back at the club-house in Newark, and it was the consensus of opinion that a mistake was made in attempting to pull off the event under the prevailing weather conditions. No blame attaches to the club officials, however, for it was admitted that the rain of Wednesday would have caused no serious trouble if it had not been followed during the night by heavy showers. When the squad left Newark at 6.30 on Wednesday evening the sky had cleared and there was every reason for believing that the boys would encounter no further rain.

This proved to be the wildest sort of a miscalculation, for the riders had hardly settled down to their long grind before another downpour drenched them and churned the country roads into huge troughs of mud, with miniature torrents coursing over them in many places. Falls were the order of the evening and many lamps had gone out of commission before the riders reached Freehold and turned westward across the State to Trenton. One of the entrants plunged into a wayside pond, another rode through a rickety picket fence and lived to tell the tale. Still another crashed into a cow and managed to continue. Inky blackness and flooded roads made up a combination that even the road veterans could not withstand, and one by one they abandoned the course and hiked for hotels and farmhouses. Some of them could find no better shelter than farm wagons and barns, but almost anything was welcome.

The Cox side-car got into trouble near Freehold, when the exhaust valve on the machine dropped, and for hours Cox and his nervy partner worked like Trojans to get back into the grind. Riders who returned to Newark early Thursday afternoon told of seeing Mrs. Cox holding a lamp in a downpour of rain at night, while her husband tinkered with the valve. The Coxes were advised to give up the fight, but Mrs. Cox was firm in her declaration that they would finish if enough of the outfit held together to carry them. The last rider to pull away from Freehold left the side-car and its gallant crew still working in the rain on a flooded road. Such exhibitions of gameness were quite common, and it is generally admitted that any contestant who reached Freehold should have honorable mention.

The nine riders who reached Phillipsburg were Stevens, Crosbie, Riechey and Mansfield, riding Yales; Watson Kluczek, on a Harley-Davidson; Lyons, Voelker and Miller, making up the Flanders team, and Harry Snyder, of the Pierce team. Owing to the fact that no rider completed the run the contest committee of the club could make no statement as to its rulings and a special meeting was called for Friday evening for the purpose of going into the situation carefully. Gold, silver and bronze medals were to have been awarded for the best general scores, a gold medal for the rider showing the most consistent performance and a silver cup for the winning trade team.

The starters and their mounts were as follows:

Yale team—P. W. Stevens, East Orange, 7 Yale; George Riechey, East Orange, 7 Yale, and Elmer W. Crosbie, Newark, 7 Yale.

Indian team—Howard E. Hill, East Orange, 7 Indian; William Brown, Newark, 7 Indian, and Carl Segelbach, Newark, 7 Indian.

Pierce team—Edward K. Van Almkirk, Rochester, 5 Pierce; William B. Allen, Elmira, 5 Pierce, and Harry Snyder, Paterson, 5 Pierce.

Flanders team—Fred Voelker, New York; Eugene Miller, New York, and H. B. Lyon, New York, all Flanders fours; Mr. and Mrs. Clayton Cox, Elizabeth, 7 N. S. U. and side-car; Harry F. Mansfield, Newark, 4 Yale; Herbert Weaklien, Newark, 7 Indian; Harry L. Clark, Newark, 7 Indian; Norman E. Heil, Paterson, 7 Merkel; Watson J. Kluczek, Newark, 4 Harley-Davidson; G. B. Hooper, Newark, 6 N. S. U.; Fred W. Beitner, Bridgeport, 4 Harley-Davidson; Fred Cordes, Newark, 6 Excelsior, and Clarence E. Caldwell, Bridgeport, 6 Excelsior.

The committee in charge of general arrangements for the run was made up of P. W. Stevens, chairman; E. W. Crosbie, W. E. MacDougall, Jr., Peter Cunningham, Roy Pascal, George E. Post, Henry Seib and Seth Eberhardt. The first control, at Freehold, was in charge of A. T. Spencer; the second, at Trenton, was handled by the officers of the Central Jersey M. C., who also provided much-needed refreshments for the boys; at the third control, in Phillipsburg, Earl Eckel, the well-known Washington (N. J.) rider was in charge; Ralph Babcock presided over the fourth control, at Port Jervis, E. W. Allen was stationed at Newburg (N. Y.) and Roy Pascal was in charge of the checking at Cushmall Hill. At the club house the checking sheet was in the hands of Financial Secretary Peter Cunningham. The run was started from the club headquarters, 339 Washington street.

RACES AT HAWTHORNE, CHICAGO.

TEN-MILE, free-for-all, 61 class; Don Johns (Excelsior), first; Matthews (Thor), second; Ed. Bomark (Indian), third. Time, 9:27⅖.

Five miles, private owners, 30.50 class; Fred Pierson (Indian), first; W. Williamson (Excelsior), second; time, 6:33⅖.

Ten miles, free-for-all, 30.50 class; Matthews (Thor), first; D. Rapini (Thor), second; time, 11:00⅘.

Five miles, trade riders, stripped stock machines, 61 class; Matthews (Thor), first; Ed. Bomark (Indian), second; time, 5:03⅘.

Five miles, free-for-all, 61 class; Illinois State championship; Don Johns (Excelsior), first; Matthews (Thor), second; time, 4:49⅗.

Twenty miles, free-for-all, 61 class; Don Johns (Excelsior), first; Matthews (Thor), second; Bomark (Indian), third; time, 18:47⅘. Bomark had one mile handicap. Johns made up this distance and led Bomark by half a mile at the finish.

This issue of Motorcyle Illustrated will reach subscribers a day later than usual. The delay is due to the inclusion of Decoration Day racing news.

RACING MEETS

GOOD SPORT AND BIG CROWDS AT CLEVELAND SAUCER

CLEVELAND, May 30.—This afternoon's races at Luna Park were the prettiest yet held on the Cleveland saucer and a large crowd packed the stands to capacity long before the starting. The sun beamed down upon the spectators when Referee McConnell called the start, the first event on the program being a three-mile match race between Philadelphia and Cleveland riders. Carslake and Hunter represented Cleveland and Hollenbach and Klebes represented Philadelphia. Hollenbach took the lead for thirty yards, with Carslake second and steadily gaining. Carslake finally passed the Quaker City lad and held the lead to the finish. Schrieber won the amateur race, Huntsbery and Henikman having engine trouble, with Roehl, a new-comer, a close second. The three-mile invitation pro. was the hottest affair of the afternoon, Standen, Seliga and Gibson finishing neck and neck, with Standen in the lead by inches. In the second heat of the three-mile pro., the finish was so close that a dispute arose as to relative positions of Hollenbach and Carslake. The Philadelphian was finally awarded second, with Carslake third. Summaries:

First heat—Three-mile professional match between Philadelphia and Cleveland: Carslake, first; Hollenbach, second; Klebes, third, and Hunter, fourth. Time 2:44. Second heat—Klebes, first; Hollenbach, second; Carslake, third; Hunter, fourth. Time, 2:17½.

Twenty-five-mile amateur race for 7 h. p. machines—Schrieber, first; Roehl, second; Huntsbery and Henikman, out. Time, 4:53¾.

Two-mile invitation professional—Standen, first; Seliga, second; Gibson, third. Time, 1:33½.

First two-mile heat of the five-mile free-for-all pro.—Carslake, first; Klebes, second; Gibson, third. Time, 1:31⅕.

Second two-mile heat of the five-mile free-for-all—Seliga, first; Hunter, second; Huttinger, third. Time, 1:32⅘.

Final, five miles—Carslake, first; Seliga, second; Gibson, third. Time, 4:06¾.

HUGE CROWD AT NIGHT.

AN enormous crowd filled the stands a half hour before the races. The ropes were stretched in the arena and thousands were turned away at the gate. There were 18,000 paid admissions. All the races were hotly contested. Fortune smiled on the speed boys and the usual tire troubles were not experienced. Carslake ran away with two out of three heats of the Intercity match race with the Philadelphians in fairly fast time. Henikman showed his rear shoe to the amateurs in the fastest time yet made by amateurs on the saucer. Summaries:

First heat of Intercity pro.-match race—Two miles: Hollenbach, first; Carslake, second; Seliga, third. Time, 1:30.

Second heat—Carslake, first; Hollenbach, second; Klebes, third. Time, 1:29.

Final heat—Carslake, first; Hollenbach, second; Seliga, third. Time 1:30.

Five-mile amateur for 7 h. p. machines—Henikman, first; Schrieber, second; Roehl, third. Time, 4:52⅖.

Two-mile invitation professional—Hunter, first; Huttinger, second; Standen, third. Time, 1:34⅘.

Five-mile free-for-all pro.—First heat (2 miles), Carslake, first; Gibson, second; Knapp, third. Time, 1:40⅕. Second heat—Hunter, first; Seliga, second; Huttinger, third. Time, 1:34⅘. Final (five miles)—Carslake, first; Seliga, second; Gibson, third. Time, 4:02⅖.

THE NIGHT BEFORE.

CLEVELAND, Ohio, May 30.—Owing to threatening weather the attendance was below normal at last night's races on the new motordrome, but fast time and pretty racing predominated. The first event, between Hollenbach, of Philadelphia, and Brownie Carslake, of Melbourne, Australia, came to an abrupt end at the finish of the third lap when the Australian broke his chain and dropped his countershaft in some unaccountable manner. The amateur event, second on the program, was won by Huntsbery after a see-sawing affair with Schrieber. Fast time was made in nearly every event. In the second heat of the five-mile free-for-all, the finish was hot. Hollenbach took the lead and steadily increased his gain on Carslake and Seliga. The Philadelphia boy lost his lead to Carslake at the tape, however, the Australian winning by inches. The finish was so hot that Seliga elbowed Carslake, sending Seliga up on the fence at the top of the track. He rode along for thirty feet, then dropped back safely on the track. In the afternoon tryouts Knapp blew a front tire but escaped with bruises and minor cuts. Summaries:

Match, two miles, between Carslake and Hollenbach; called off on account of Carslake breaking chain and losing countershaft.

Five-mile amateur, Huntsbery, first; Schrieber, second; Henikmann, third. Time, 5:11.

First heat, three-mile invitation pro, Klebes, first; Hunter, second; Gibson, third. Time, 2:16⅖.

Second heat, three-mile invitation pro; Stanton, first; Seliga, second; Huttinger, third Time, 2:23⅖.

Second heat, two-mile match pro; Hollenbach, first; Carslake, second. Time, 1:34⅕.

First heat, five-mile pro; Klebes, first; Hunter, second; Gibson, third. Time, 1:37.

Second heat, five-mile pro; Carslake, first; Klebes, second; Seliga, third. Time, 1:35⅕.

Final, three-mile invitation pro: Klebes., first; Stanton, second; Seliga, third. Time, 2:11⅘.

Final of five-mile free-for-all pro; Carslake, first; Hunter, second; Gibson, third. Time, 4:02⅘.

CLEVELAND HILL-CLIMB.

THE hill-climb held by the Cleveland club on the Warner hill was a great success. Six events were on the program, but one event, the flexibility contest, was eliminated in order that contestants might attend the racing at the Luna Stadium. It was a Thor day in both the twin and single classes. Hawkins made the fastest time of the day, 28⅗ seconds. Kumler, on an R.-S. twin, carrying a tandem passenger, won the formula event. Summaries:

Stock, 30-50—Storm, Thor, first; Kumler, Flanders, second; Ferguson, Yale, third; time, 43 seconds.

Stock, 61—Hawkins, Thor, first; Booth, Indian, second; Patterson, Thor, third; time, 29 seconds.

In event three, Kumler, with Perry as passenger, on an R.-S., first; Colgrove, Thor, second; Ferguson, Yale, third; time, 56 seconds.

Thirty-fifty, open—Storm, Thor, first; Ferguson, Yale, second; time, 43⅖ seconds.

Sixty-one class, open—Hawkins, Thor, first; Booth, Thor, second; Kumler, R.-S., third; time, 28⅗ seconds.

SECRET RUN SUNDAY, THE 9TH.

THE first secret run of the Harley-Davidson Club from Philadelphia to Atlantic City, N. J., will be held on Sunday June 9, or in case of rain, the first favorable Sunday thereafter. This is to be held under the rules and with the sanction of the F. A. M. The prizes are as follows: First, gold-filled Elgin watch; second, United States tire and tube; third, Goodyear tire and tube; fourth, Solar lamp and generator; fifth, United States tire; sixth, Goodyear tire; seventh, United States inner tube; eighth, Goodyear inner tube; ninth, horn; tenth, set of Standard pedals; eleventh, handle bar watch and holder; twelfth, eighteen-inch hand pump; thirteenth, spark plug

WOLTERS WINS BIG EVENT

Captures Six-Mile G. A. R. Sweepstakes on the Chicago Motordrome in Presence of Big Crowd.

CHICAGO, May 30.—Joe Wolters, of Chicago, last year's hero of the Motordrome, came into his own at Riverview tonight when, on his Excelsior, he led the best field of motorcyclists in the country to the finish in the Grand Army of the Republic sweepstakes, the feature of the racing card. Charley Balke, of Los Angeles, was second, with William Samuselson, of Salt Lake City, third, and Ray Seymour fourth. The first three finished closely bunched, the six miles being covered in 4:12⅕.

The match race between Dave Kennie, of Los Angeles, and Court Edwards, of Denver, ended in a neat victory for Kennie after Edwards had won the second heat. The final of this event was at three miles, and Kennie made the fifteen laps in 2:14⅕. "Speedy" Hasha and William Samuelson carried off the honors in the other professional races, while the three-mile amateur event went to Peter Wenk. The Stadium was packed, the crowd being the largest of the season. The Bowler Sweepstakes will be the feature event Saturday night. Summaries:

Nine-mile race, three heats, three miles each—Classes A and B, professional: First heat, Class A, three miles—Hasha, first; Seymour, second; Balke, third; time, 2.03⅕. First heat, Class B, three miles—W. Samuelson, first; Edwards, second; T. Samuelson, third; time, 2:18⅖. Second heat, Class A, three miles—Balke, first; Seymour, second; Hasha, third; time, 2:05. Second heat, Class B, three miles—Kennie, first; Humiston, second; Renel, third; time, 2:18⅖. Final heat, Class A, three miles—Hasha (Indian), first; Balke, second; Seymour, third; time, 2:04. Final heat, Class B, three miles—W. Samuelson (Indian), first; Kennie, second; T. Samuelson, third; time, 2:11.

Four-mile event for amateurs—P. Wenk (Thor), first; E. W. Shaw, second; H. T. Mitchell, third; time, 3:15⅖

G. A. R. Sweepstakes, six miles—J. Wolters (Excelsior), first; Balke, second;; W. Samuelson, third; Seymour, fourth; time, 4:12⅕.

Match race, three miles: First heat (two miles)—Kennie (Thor), first; time, 1:33. Second heat—Edwards, first; time, 1:34. Final (three miles)—Kennie, first; time, 2:14⅕.

NATIONAL CAPITAL PROGRAM

WASHINGTON, May 30.—The motorcycle and automobile races today at Bennings track drew an immense crowd, testifying to the widespread interest in Washington and Baltimore in motor sports. The track was in the pink of condition. The races were sanctioned by the American Automobile Association and the Federation of American Motorcyclists. There were six motorcycle races and three automobile events.

The officers were: Referee, H. E. Duckstein; judges, Harry Ward, William Ullman and John K. Heyl; timers, J. L. Wilson, C. L. Clements, A. O. Hutterly, Maj. Leroy W. Herron and T. O. Wansleben; scorer, S. S. Grogan; umpires, Lester Marx and E. M. Dodson; starter, Howard Fisk; assistant starter, A. B. Cross; clerk of the course, W. F. Throop; A. A. A. representative, Horace Chandler.

The events were run without accidents with the exception of two spills during the motorcycle racing due to skidding. Marsh, on an Indian, was thrown but was not hurt, and Dessac, on a Thor, plunged over a fence but was not badly hurt. Results:

Three miles, private owners, stock machines, 30.50 cu. in.—First, Meyer, Indian, 4:32⅖; second, Morrison, Excelsior; third, Tromark, Merkel.

Five miles, club members only, stock machines, 30.50 cu. in.—First, Dedge, Indian, 5:59⅕; second, Morrison, Excelsior; third, Thome, Haverford.

Ten miles, open, 30.50 cu. in.—First, Tiemeyer, Indian, 13:33; second, Dedge, Indian; third, Fleckenstein, Indian.

Five miles, open, 61 cu. in.—First, Fleckenstein, Indian, 6:03⅘; second, Tiemeyer, Indian; third, Mongald, Indian.

Three miles, stock machines, 61 cu. in. (changed from ten miles)—First, Fleckenstein, Indian, 4:39; Dedge, Indian; third, Mongal, Indian.

Five miles, free-for-all, 61 cu. in. (changed from ten miles)—First, Fleckenstein, Indian, 6:00; second, Tiemeyer, Indian; third, Mongald, Indian.

STAUDER IS ELMIRA STAR

ELMIRA, N. Y., May 30.—"Eddie" Stauder, of Rochester, was the star of today's meet, winning three out of the four events which he entered. The track was heavy owing to the heavy rains of last night and this morning. Good time was made however, and the races proved intensely interesting to the thousand or more spectators. Teasdale, of Elmira, and Bishop and Stauder, of Rochester, furnished the features of the afternoon. In the sixth event, a 10-mile private owner race, Teasdale and Bishop furnished the prettiest race of the day. Another meet will be held here on the Fourt of July. Robert S. Morton, of Brooklyn, N. Y., acted as referee. The summaries:

Three-mile novice, Sturges, Elmira, first; time, 6.58⅗. Laycock, Rome, second.

Ten miles, open, Stauder, Rochester, first; time, 13:21⅗. Teasdale, Elmira, second; Peters, Elmira, third.

Five miles, private owners; Bishop, Rochester, first; time, 6:56. Teasdale, Elmira, second; B. E. Sturges, Elmira, third.

Ten miles, open miss-and-out; Stauder, Rochester, first; time, 13:37. Bishop, Rochester, second; Teasdale, Elmira, third.

Five miles, open; Stauder, Rochester, first; time, 7:00. Bishop, Rochester, second; Laycock, Rome, third.

Ten miles, private owners; Teasdale, Elmira, first; time, 13:25; Bishop, of Rochester, second.

Fifteen mile open event; Bishop, Rochester, first; 20:51. Stauder, Rochester, second; Laycock, Rome, third.

Teasdale was thrown from his machine twice during the afternoon; once in the fifth race and in the last race. The latter time he sustained slight injuries to his arm and leg. Stauder was spilled in the last race also, but managed to get up and win second place. Teasdale was compelled to retire after his spill in the fifteenth lap of the last event.

RAIN AT SALT LAKE.

SALT LAKE, Utah, May 30.—The motorcycle races scheduled for the Wandamere Motordrome today were postponed on account of rain.

DETROIT'S FAST CARD

DETROIT, MICH., May 30.—Don Klark, the Detroit boy, was the most consistent winner in the races here today, leading the field in three events and taking third in another. McLean was runner-up in the number of firsts, finishing ahead of the other starters on two occasions and taking second to Klark in the handicap affair. Klark also went out after the track record held by himself at 49 seconds, but negotiated the oval five seconds slower than on his previous trial. The summary:

Five-mile novice—McLean, Indian, first; Hillmaster, Merkel, second; McCaffrey, Indian, third; time, 5:28.

Ten miles, 61 cu. inch machines—Klark, Indian, first; Mahon, Indian, second; time, 9:23⅕.

One mile trial for time—Klark, 53⅗ seconds.

Five miles, 30-50 cu. inch stock machines—Ruprecht, Indian, first; Dougherty, Indian, second; time, 6:54.

Ten miles, 61 cu. inch stock machines—McLean, Indian, first; Dougherty, Indian, second; Klark, Indian, third; time, 10:45⅗.

Ten-mile handicap, open—Klark, Indian, first; McLean, Indian, second; Dougherty, Indian, third; time, 9:08.

Unknown-distance race, 16 miles, private owners—Klark, Indian, first; Mahon, Indian, second; Swafford, Indian, third; time, 15:51⅖.

SPRINGFIELD RECORD GOES

SPRINGFIELD, Ill.—Holman Johnson, of St. Louis, came here for scalps today in the second annual meet of the Illinois Motorcycle Club and tonight went home with them, as well as some new track records,tucked under his belt. L. P. Stone, of St. Louis, on a Thor single did his share of the winning also after he found out that his spark plug was full of dirt and cleaned it. The surprise of the day was the work of Walter Holley, of Jacksonville, on an old Harley-Davidson, vintage of 1908, on which he romped home the winner in two races before the other riders seemed to figure him as a contender to be reckoned with.

Johnson broke his own record for the local track, by making the distance in 56⅕, on his fifth mile of the ten-mile handicap. in which he was forced to work to the limit to come home a winner over Blucke, a local rider on a Harley single. He also cut down his own record of 10:02⅗ for the ten miles to 9:20⅕. The entry list included twenty-two of the fastest riders in Illinois and Missouri, and kept the crowd of 8,000 persons on their feet from 1 o'clock until 5:30.

Five miles, private owners, singles—First, W. Holley, Harley-Davidson; second, R. L. Stone, Thor. Time, 6:56½.

Five miles, trade owners, singles—First, W. Holley, Harley-Davidson; second, Rudolph W. Blucke, Harley-Davidson; third, Charles Hilton, Thor. Time, 6:58⅗.

Five miles, trade riders, twins—First, Paul Degner, Indian; second, Rudolph W. Blucke,. Harley-Davidson; third, L. P. Stone, Thor. Time, 5:34.

Five miles, trade riders, twins—First Holman Johnson, Indian; second, J. Ingels, Indian; third, William G. Pierce, Indian. Time, 4:55⅕.

Ten miles, private owners, singles—First, L. P. Stone, Thor; second, W.

Holley, Harley-Davidson. Time. 1:25⅘.

Ten miles. trade riders. singles—First, Rudolph W. Blucke, Harley-Davidson; second, W. Holley, Harley-Davidson. Time, 11:23⅖.

Ten miles, private owners, twins—First, Paul Degner, Indian; second, Lewis Biesenthal, Indian: Time, 12:05⅘.

One-mile time trials, twins—Hollman Johnson, Indian, 56⅕; Wm. G. Pierce, Indian, 1:30.

Ten-mile handicap, open—First. Hollman Johnson, twin Indian; second. Rudolph W. Blucke, single Harley-Davidson; third, Lewis Biesenthal. twin Indian. Johnston's actual time, 9:20⅕.

Five-mile handicap. open—First, L. P. Stone, Thor; second. Lewis Biesenthal, Indian twin; third, James Ingels, Indian twin. Time. 5:16⅖.

Ten-mile open 61 cu. in. limit (instead of 25-mile handicap)—First. L. P. Stone, Thor single; second. William G. Pierce, Indian twin. Time, 10:39⅗.

JOLIET 100-MILE RACE

On Dirt Track Won by Glenn Peterson in Two Hours; Cooley Second —5,000 Spectators on Hand.

JOLIET, ILL., May 30.—Hugging the rail all the distance and maintaining a steady average speed of fifty miles an hour, Glenn Peterson (Indian), of Joliet, won the hundred-mile grind at the annual meet of the Will County Motorcycle Club at the Ingalls Park track this afternoon. His time was two hours flat. A. Cooley (Indian), who led the field of six starters until the seventy-sixth mile, when his machine went dead for a time following a change of lubricating oil, finished less than a mile behind Peterson, and Howard Hyde (Indian). broke the tape third, four miles in the rear. 7 h. class—Allen. first; Perry. second; Stoll. third; time, 5:44⅘. Five-mile free-for-all—Hyde. first; Cooley. second; Fox, third; time, 6:20. Frank Beck rode an exhibition five miles in 5:31.

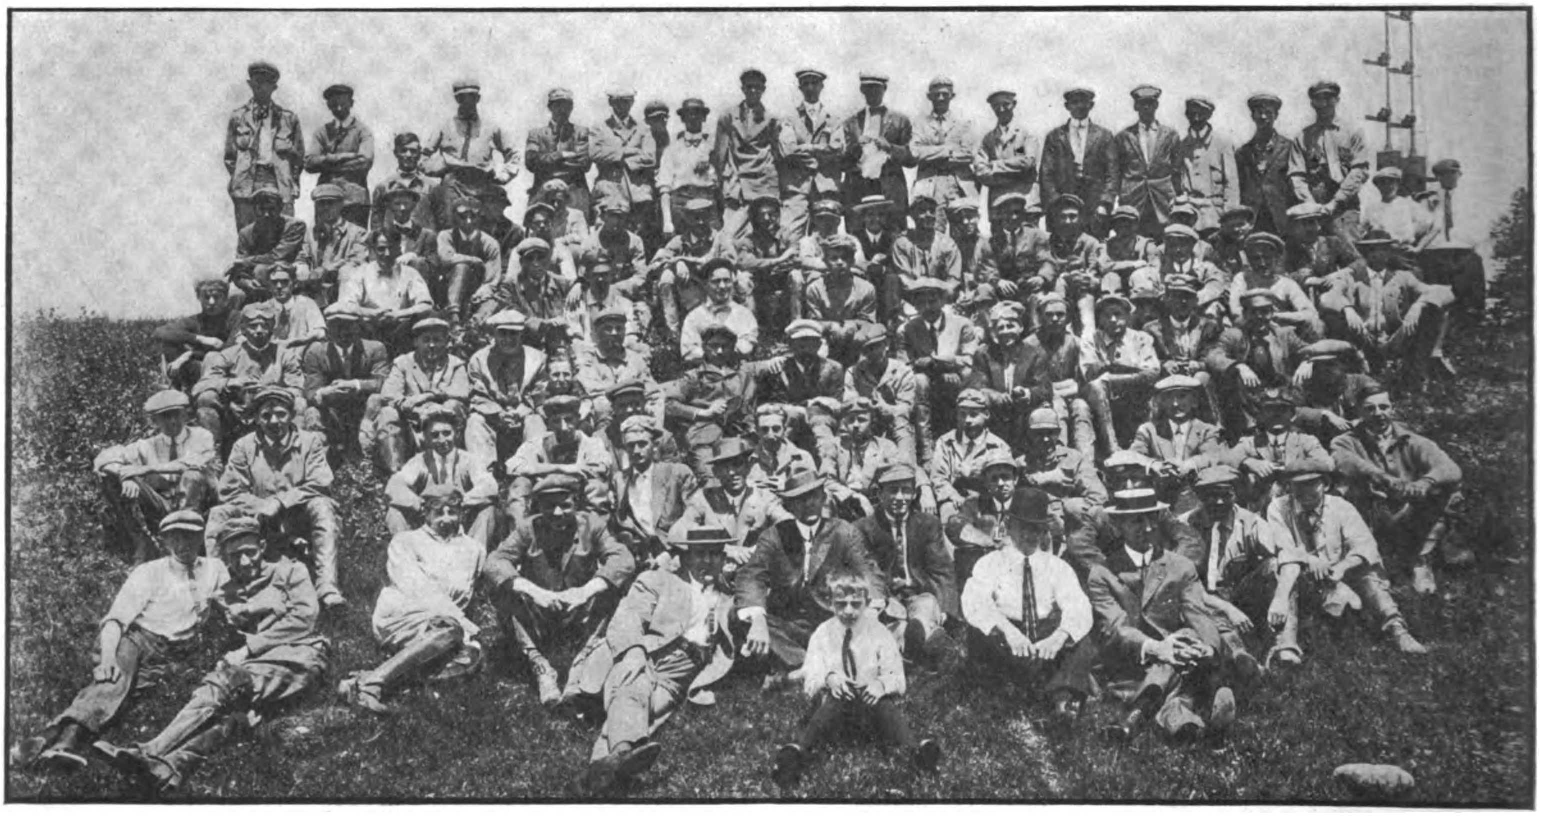
Five thousand people saw the race. and the keen competition up to the last minute made them stick to the finish. The track is a one-mile dirt circuit.

The winners in the other events of the day were: Ten miles, 61 inch—Allen (Harley-Davidson), first; Perry (Indian), second; Stoll (Indian), third; time, 11:22. Five miles, 7h. machines—Allen, first; Perry, second; Stoll, third; time, 5:44⅘. Five-mile free-for-all—Hyde, first; Cooley, second; Fox, third; time, 6:20. Frank Beck did an exhibition five miles in 5:31.

TO DOUBLE FEDERAL OUTPUT.

PLANS are being prepared by the Federal Rubber Manufacturing Company for a six-story addition to their enormous plant at Cudahy. This building. which will be 400 x 100 feet. was not contemplated in the original plans of the company, and when built will more than double the present capacity of the plant. The total floor space occupied at present, not including the projected six-story addition, nor other buildings now in course of construction, is 170,000 square feet.

CINCINNATI AND DAYTON RIDERS VISIT HOME OF THE FLYING MERKEL



MORE motorcycles were seen on the streets of Middletown, Ohio, on Sunday last, the 26th ult., than ever before graced that thriving city of industries, despite the fact that one of the largest motorcycle plants in the country is located there. The occasion was an invasion of members of the Queen City Motorcycle Club, of Cincinnati, and the Dayton Motorcycle Club, who rode to Middletown to view the big plant of The Miami Cycle & Manufacturing Company.

The Dayton club left the Gem City at 9 o'clock, about 35 strong, under the leadership of Captain Jacobs, of New Era Endurance Run fame, and the Cincinnati brigade left at practically the same hour. Both divisions picked up quite a number of riders en route, and altogether a few more than one hundred motorcyclists arrived in Middletown.

They first went out to the plant of The Miami Cycle & Manufacturing Company, where they were welcomed by President K. K. Jacoby, Treasurer H. S. Wise, Sales Manager James W. Ash, Superintendent Charles R. Miller, and last, but not least, Chief Engineer Joe Merkel.

While the riders lined up for their photograph the "Joe Weber" of the Cincinnati club, and the "Lew Fields" of the Dayton aggregation, got into a wordy warfare, which lasted until after Sales Manager Ash had made several praiseworthy though quite ineffectual attempts to get a lineup of practically one hundred motorcycles and riders on a 3-A Kodak film. After taking a view of them all lined up in front of the factory, H. G. Pohl, formerly of Buffalo, suggested that the big digout in the field opposite the factory would make an excellent stage setting for a modern version of "The Melting Pot." The picture taken there is here reproduced.

After checking in at the factory entrance. the visitors were divided into squads and shown through the immense plant.

Following the thorough inspection of the plant, the riders paraded downtown to the United States Hotel, where luncheon was served with Sales Manager Ash as host.

WOULD ABOLISH F. A. M. DISTRICTS

Chairman of Legal Action Committee Will Offer Amendments to F. A. M. Constitution and By-Laws with a View to Making Each State a Governmental Unit. E. M. Estabrook's Views.

BIG, but lacking in compactness and solidity; growing rapidly in membership and influence, nevertheless weak at the very roots of the organization—such is today the Federation of American Motorcyclists. The present condition of affairs is accurately indicated by Chairman Estabrook, of the membership committee, in his straightforward, practical letter published below. One cannot read Estabrook's communication without coming to the conclusion that he blames the present district government system, which is unwieldy and which has been, except in one or two instances, unproductive of results.

The exceptions simply prove the rule, and in order to bring the whole matter squarely before the national assembly, a series of amendments aiming to abolish the district vice-presidencies, and to place all responsibility squarely upon the shoulders of the State commissioners, will be introduced by the chairman of the legal action committee at the Columbus meeting next July. The amendments roughly outlined below are not intended to provide in all details a complete substitute for the present form of government, but simply to lay the foundations for a new structure, the need of which is generally recognized by those who have been at all intimately associated with the work of the organization. The proposed amendments are as follows:

The State the Unit.

Substitute for Sections 1 to 12 of Article IV of the Constitution, the following: "For convenience of government this Federation shall be divided into units comprising individual States and, in addition, as many districts as from time to time may be organized in Alaska, Philippine Islands, Hawaii, Porto Rico, Cuba, Mexico or in any other foreign territory. All responsibility for the growth and development of the organization in each of these units shall be borne by a commissioner to be appointed by the National President, said appointments to be approved by the Board of Directors."

The Officers.

Amend Section 1 of Article V of the Constitution to read: "The officers of the Federation shall be a President, a Secretary and a Treasurer, who shall be elected for a period of one year, and commissioners for each State and foreign district, to be appointed as above provided for. The governing body of the Federation shall be six directors who, together with the two living preceding ex-Presidents and President, shall constitute the Board of Directors." Amend Section 3 of the same article by striking out the words "the eleven Vice-Presidents, one for each district."

Secretary Gibson's Amendments.

Amend Section 1 of Article 1 of the By-laws by striking out "or the District Vice-Presidents." This amendment is offered by Secretary-Treasurer Gibson, who will also move to strike out Section 2 of the same article. Mr. Gibson's amendments have reference to the present confusing method of having some of the dues paid to Vice-Presidents. He will also move to have Section 2 of Article III read: "The annual dues shall be paid to the National Secretary," and to amend Section 5 of Article VIII by substituting for the word "President" the words "National Secretary."

The Chairman of the National Committee on Legal Action will move amendments to omit all reference to District Vice-Presidents in the By-laws, as follows:

Article I, Section 7; Article III, Section 2; Article V Sections 1, 2, 3, 4 and 5.

He will move to amend Sections 2 and 3 of Article V to provide for the appointment of county, local and ward commissioners, and to specify their duties and respective relations. Also an amendment, as already announced, to the effect that: "It shall also be the duty of each State Commissioner to report monthly, as nearly as possible on the 15th day of each month, any information he may have obtained regarding touring conditions in his State; of the passage or contemplation of any local, county or State legislation affecting motorcyclists; the organization of new clubs and any other information that may assist the National Committees in their work. Such reports shall be submitted as aforesaid by each State Commissioner to the National Secretary." (It may be advisable, instead of loading this work upon the National Secretary, to have another official, to be known as the National Vice-President, to receive and compile these reports.)

"At weekly intervals, or at once in the event of its being imperative, the National Secretary (or the National Vice-President) shall, from the information contained in the monthly reports of the State Commissioners, tabulate and mail to the Chairman of each National Committee all the information that may be of value to each of the said committees. A copy of each report so prepared for the Chairman of each National Committee shall also be sent to the President of the F. A. M.

"It shall be the privilege and duty of the President to insist upon the resignation of any State Commissioner who fails to comply with the Constitution and By-laws."

Amend Section 1 of Article X of the By-laws to read: "Any member removing from one State to another may obtain membership in the latter State by filing with the National Secretary notice of such removal. The Secretary shall notify the respective State Commissioners of such transfer."

The matter of the organization of States is not taken up in any of the above proposed amendments. Whether it would be wise to organize each State as the districts are now supposed to be organized is a big problem and suggestions bearing upon its solution are in order.

Chairman Estabrook's letter, in which he mentions some of the deficiencies which the above amendments are designed to remove, is as follows:

"Now this is not intended to be a fault-finding letter, as the chairman is fully aware of the conditions and circumstances bearing on the work of a State commissioner. Such facts or conditions as I lay bare are merely to assist our officers or delegates to a better understanding of working conditions, in order that they may devise some more efficient system or suggest ways of improving the present one.

Possibilities of Organization.

"While organization may not prove in all cases that it is efficient in rolling up the membership, still I believe in it and the principle. It offers possibilities at least, while with only one lonely State commissioner to cover a whole State, it makes the F. A. M. look exceedingly thin.

"I believe the rule to work from is to appoint a commissioner for every town and hamlet in which we have an F. A. M. member. Every county should have its county commissioner and all cities should have a city commissioner who would appoint ward assistants.

Measure of Efficiency

"In order to bring about this desirable condition of F. A. M. organization, I would suggest that the efficiency of a State commissioner be measured, not by membership results, but by the number of commissioners he has appointed.

"This may seem to be taking a radical view, or seeking to rob the State commissioner of some credit, but I do not see it that way. To begin with, the State commissioner is not the only one working in his State. First, there are the motorcycle journals and, secondly, the advertisements of the F. A. M. sent out through many catalogs and house organs. Then we have several hundred F. A. M. clubs, to say nothing of as many more club prospects which are continually making good, perhaps unknown to the State commissioner.

"More than this there are probably many hundreds of dealers who do the F. A. M. a good turn when the opportunity offers, as I can testify. Then we have five hundred registered shops, which are organizing clubs and taking care of individual memberships with literature always on hand. I might also mention the fact that these F. A. M. shops are displaying our F. A. M. signs, with invitations to 'join the F. A. M. here,' while about 250 shops are using our little repair shop electro on their stationery and on special matter.

"During the past two years there has been distributed throughout the country—reaching every nook and corner where a motorcycle has been delivered—115,000 envelopes containing an assortment of F. A. M. literature.

"Chairman Thornley and his referees and Secretary Gibson with his big office force are also responsible for much of our membership gains.

State Commissioners Get Credit.

"Without brain work or effort the State commissioner who has never wet a pen in the interest of the organization he represents—and there are a few of this class—can take to his credit whatever results accrue from this big array of publicity and actual work performed by others whom he knows not of. Such district vice-presidents as are not in touch with State representatives can also put on something of a front and point with pride to the achievements of this or that State commissioner of the dry pen variety, after reading Secretary Gibson's report of membership gains.

"Let us take my own—the New England district—which is not so very much worse than some others as to cause surprise. This district is making consistent and fair monthly membership gains, notwithstanding it has not had a commissioner or other officer except the vice-president for nearly two years, or since that indomitable worker, C. C. Wilber, was forced to quit by reason of overwork. This in itself tells the story, that, outside of the few commissioners whose activity is well known generally, there is little to commend.

"The drift of my remarks should make clear my reason for gauging the efficiency of a State commissioner by something more tangible than membership gains brought about by others.

"If we put our commissioners up against the State organization problem, measured by the number of commissioners appointed, we shall see what we shall see.

"If there is anyone who has a suggestion or two to offer at this time, please give us the benefit of it. "E. M. ESTABROOK."

BALTIMORE CLUBS BUSY ON THE ROAD

Motorcyclists of the Monumental City Are Co-operating on Enjoyable Weekly Trips into the County—French Offers a Medal.

BALTIMORE, Md.—The Indian and Maryland Motorcycle Clubs have been cooperating on their Sunday runs for the past month, and the boys find it more pleasant to have a big bunch out on the road together than to have only a few. On Sunday, May 19, the boys of both clubs started out for Hanover, Pa. Some dropped off at Westminster and others at Littlestown, while quite a number reached the destination. Two of the boys, Sam Ambach and Julian Hecht, kept on to Gettysburg, notwithstanding they had been warned about the bad roads. They were not satisfied until they had reached the highest observatory on the battlefield. All the riders were picked up on the way home, so that they arrived in the city in a squad. Mrs. Frank Boyd, wife of the president of the Indian Club, was the only tandem rider on the run.

The gold medal, studded with a diamond, offered by Howard A. French to the rider of any club for the record attendance during the season has created a good deal of enthusiasm among the boys. The riders of the Maryland and Chesapeake Clubs have entered the contest. Last Sunday the newcomers in the motorcycling field had their innings. The novices of the Indian and Maryland Clubs had things their own way for once. They went on a slow-paced run into the country, not so far from the city that they could not get back in time for dinner. Then, after the noon meal, they went out again, this time on a blind run. The speed boys were left out altogether. They could have gone along, but the speed limit was too low for them, and rather than "creep" over the roads, the Flying Squad got up a little party and beat it into the mountains.

Led by Capt. Fischer, the members of the Chesapeake M. C. went up to Hanover, Pa., last Sunday, traversing half the route that will be covered on the 200-mile endurance run to Lancaster, Pa., on June 30. The weather was fine, and the roads were in good condition. The board of directors has arranged for the endurance run, and has just announced the checking points. They will be Reisterstown, Westminster, Littlestown, Hanover, Abbottstown, York, Columbia and Lancaster. The riders will check in at these places both going and coming. Secretary George W. Coggins, Captain A. F. Fischer and Second Lieutenant Elmer Roof will go over the course on June 15, arrange for the checking places and determine upon the time to be allowed between points. Entry blanks will soon be printed, and riders from Pennsylvania, the District of Columbia and Maryland have been invited to participate. A large contingent of local men, representing the different clubs here, is expected to enter the contest and endeavor to pull down some of the ten prizes offered by the club. The Reading-Standard M. C. has already signified its intention to compete.

The chief social event of the season will be the annual outing given by Howard A. French to the local motorcyclists. This will take place at some shore resort along the Back or Middle rivers some time the latter part of June or early in July. Last year nearly 100 riders had a fine day's outing, but this time twice as many have said that they will be glad to dine with the genial Indian agent.

Howard French is doing everything possible to get together a large bunch of riders from this section to make the tour to Columbus next month. Many of the boys want to make the trip, but they are unable to state definitely whether they can go, as much depends upon whether they can arrange for their vacations at that time. Gus Heinz, the local speed boy, and J. A. Robinson are the only two who have stated positively that they are going to make the trip.

The commissioner of motor vehicles has been caught napping. Last year he had made up 1,000 motorcycle licenses and found that number to be sufficient. At this early period of 1912 he has discovered that all his tags have run out and that many motorcyclists are traveling about with temporary pasteboard tags, waiting patiently for him to have the regulation tags made. This he is doing as rapidly as possible, and to be on the safe side he is having manufactured over 2,500, as he figures that he will need that number if the present rush continues until the end of the year.

WILL SEND CATALOG TO THE TRADE.

THE Beckley-Ralston Company, manufacturers for the jobbing trade and factory distributors of accessories and supplies, Michigan avenue and Randolph street, Chicago, announce that their big 1912 catalog will be sent upon request to those who are actually established in either the bicycle, motorcycle or automobile line. The Beckley-Ralston Company are the well-known manufacturers of Maximus timers and carbureters, ignition specialties, Blue Ribbon exhaust horns, ring piston grease guns, foot rests, tool kits and other quality specialties, and distributors of many leading makes of spark coils, magnetos, spark plugs, batteries, ampere and volt meters, lamps, horns, wrenches, battery boxes, lubricating oils, rubber goods and other staples and specialties of merit.

OPENING MEETS ON NEW CLEVELAND BOWL

Record-Breaking Crowds Find Plenty of Thrills But No Serious Accidents and Sport is on the Boom—Carslake and Seliga Star In Pro Division and Tight Finishes Feature Every Program

CLEVELAND, OHIO.—Saturday, May 18, marked the opening of the Cleveland Motordrome, and motorcycle enthusiasts went wild over the little buzz wagons, playing upon the quarter-mile saucer like marbles in a bowl. While no sensational time was made all the races were pulled off in good shape. Long before the races, which were held in the evening, all the grandstand seats were filled and standing room was scarce. At 8 o'clock the reserved seats were packed to capacity. The arena was filled with automobiles and motorcycles, and ropes were stretched to keep the crowd off the track. The Cleveland City Council and other officials of the Sixth City occupied a reserved section of the grandstand. The attendance was 10,652.

Results: 5-mile professional, Mayor Baker Sweepstakes: First heat, 2 miles; Carslake (Indian), Seliga (Indian); time, 1.47.

Second heat, 2 miles; Huttinger (Indian), Hunter (Indian); time, 1:40½.

Final, 5 miles; Hunter (Indian), Seliga (Indian); time, 4:16.

Two-mile amateur match; Henikman (Indian); Huntsbery (Indian); time, 1:50.

Four miles, free-for-all, professional: First heat, 2 miles; Seliga (Indian), Carslake (Indian); time, 1:41⅗.

Second heat, 2 miles; Huttinger (Indian), Hunter (Indian); time, 1:42⅕.

Final, 4 miles; Carslake (Indian), Hunter (Indian); time 3:18⅘.

The officials of the new motordrome are as follows: Referee, R. S. McConnell; starter, H. J. Johnson; clerk of course, F. H. Penniman; judges, M. M. Foster, L. B. Lindsay, R. C. Bouton; timers, J. B. Preston, J. D. Waltz, J. H. Silsby; scorers, A. J. Macbeth, P. J. Frisby, C. H. Salisbury, P. H. Sheridan; umpires, Frank W. Page, W. A. Ladd.

Sunday, May 19.—Despite a chilling wind, nearly 8,000 followers of the motorcycle were on hand when the races were started at the Luna Motordrome tonight. A bad spill in the 5-mile amateur event marred the evening, when Ralph "Rocky" Hinoush, went down the boards, collecting several species of West Virginia timber. During the second mile of the 5-mile event, Scrieber was leading, with Hinoush a close second and Henikman six yards behind. Hinoush's machine looked like a sure winner and after passing Henikman, he took to Scrieber. Scrieber was seen to sway up the track and Hinoush kept at the same angle, his front wheel striking the rear of Scrieber's and throwing the former, and Henikman coming at the rate of 60 miles an hour ran over Hinoush, the two rolling to the bottom of the track. Henikman got up with a few scratches and a bent crank-hanger and handlebar, but Hinoush did not fare so fortunately. He was taken to the hospital, but it was later announceed that he was only slightly injured. He was riding the following day. Summaries: 5-mile amateur event, 7 h. stock machines, 2 heats: First heat, Hinoush (Indian), Scrieber (Indian); time, 1:59.

Second heat, Henikman (Indian), Mickel (Thor); time, 2:02.

Final, Scrieber leading when accident occurred; unfinished.

Three-mile professional match race, Carslake (Indian), Seliga (Indian); time, 2:37⅕. (Seliga looked a sure winner, leading by over half a lap, when his right pedal broke off, compelling him to hide with one leg dragging. Carslake easily overtook him and won by a lap.)

Two-mile consolation: Hunter (Indian), Knapp (Indian), Gibson (Indian); time, 1:47⅖.

Wednesday, May 22.—Another record-breaking crowd filled the motordrome at Luna Park Wednesday evening. The races were run off in much better order and faster time was made. Tire trouble was experienced, but no accidents occurred. The five-mile amateur event was hotly contested. Results:

Two-mile professional match race: First heat, Carslake (Indian), Seliga (Indian); time, 1:38. Second heat, Carslake (Indian), Seliga (Indian); time, 1:35⅘.

Five-mile amateur race, 7 h. stock machines: Huntsbery (Merkel), Schrieber (Indian), Henikman (Indian); time, 5:04⅕.

Three-mile professional: Hunter, first; Knapp, second; Huttinger, third; time, 2:22⅖.

Five-mile free-for-all, professional: Carslake (Indian), Hunter (Indian), Huttinger (Indian); time, 4:03⅗.

Saturday, May 25.—Tonight's racing had its thrills and held the crowd breathless time and again, especially at the finish of the 3-mile invitation professional, when Huttinger and Knapp locked bars immediately after passing the finishing line. They swayed for some time, but finally righted themselves. A little trouble was experienced in starting the free-for-all professional race, there being six riders for this event. Results:

Two-mile international match race: First heat, Hunter (Indian), Carslake (Indian); time, 1:37⅖. Second heat, Hunter (Indian), Carslake (Indian); time, 1:40.

Five-mile, amateurs, 7 h. stock machines: Kissig (Indian), Huntsbery (Merkel), Henikman (Indian); time, 4:48⅕.

Three-mile invitation, professional: Seliga (Indian), Huttinger (Indian), Gibson (Indian), Knapp (Indian); time, 2:22⅗.

One-mile exhibition: Carslake (Indian); time, 43 sec.

Five-mile free-for-all, professional: Carslake (Indian), Seliga (Indian), Huttinger (Indian), Hunter (Indian), Gibson (Indian), Knapp (Indian); time, 3:56⅘.

It was announced after these races that arrangements had been made with the managements of the Point Breeze and Coney Island motordromes for the exchange of riders throughout the season.

Sunday, May 26.—Brownie Carslake starred again in today's races on the motordrome. In the 5-mile amateur event, in which there were four starters, Kissig was disqualified for cutting in and see-sawing on the track. Huntsbery had motor trouble and dropped out early in the race. Results:

Three-cornered professional race, between Carslake, Huttinger and Hunter: First heat, Carslake (Indian), Huttinger (Indian), Hunter (Indian); time, 1:31⅕. Second heat, Carslake, Hunter, Huttinger; time 1:34⅖.

Five-mile amateur race, stock, 7 h. twins: Henikman (Indian), Kissig (Indian), Schrieber (Indian); time, 4:58⅕.

Three-mile invitation professional: Seliga (Indian), Knapp (Indian), Gibson (Indian); time, 2:25⅗.

Five-mile free-for-all, professional: First heat, Carslake, Seliga, Huttinger; all Indians; time, 1:35. Second heat, Hunter, Knapp, Gibson; Indians; time, 1:36⅗. Final, Carslake, Seliga, Hunter; time, 3:57⅕.

JOLTS FOR AMATEURS

CLEVELAND, OHIO.—Many amateurs try-out the Cleveland motordrome these summer days with a single-cylinder machine and attempt to climb to the top of the 60-degree track, to their disappointment. It takes an actual 60-mile per hour machine to get to the top, and hardly a day passes that some dealer does not get a job of straightening handlebars, crankhangers, etc.

ATTRACTIVE HAM LAMPS.

A LINE of lamps that merits more than passing attention is that manufactured by the C. T. Ham Manufacturing Co., of Rochester, N. Y. Under the trade name of "HamRoc" the firm makes a "cold blast" motorcycle lamp which can be furnished either as an oil lamp, burning kerosene, or with an acetylene burner in addition, using acetylene gas, thus making it a combination oil and gas lamp. The combination lamp can be used exclusively as an oil lamp, or if the machine is equipped with a generator, it requires but a moment to attach the hose to the outside tube in the rear of the lamp and adjust the shut-off.

It is claimed that the "HamRoc" will not jar or blow out, built as it is on the "cold blast" principle, which is a patent controlled by the Ham company. The "HamRoc" is attractively designed and is strongly constructed of heavy steel. The body of the lamp is handsomely finished in jet black, Indian red, royal blue, or French gray enamel with dome, door and font of polished brass, or brass nickel plated, as specified.

The Duplex, another Ham product, is a further development of the "HamRoc," being fitted with a rear signal attachment, which may be detached. It is easily fastened to the lamp by slipping it over the lug above the ruby jewel on the left side of the lamp.

POLICE COMMISSIONER JESSE B. COOK, of San Francisco, has been promised eleven motorcycles for police use as the result of tests which have shown that one motorcycle officer can do the work of two horsemen.

PITTSBURGHERS IN 450-MILE ROAD RACE

Three Nervy Motorcyclists Set Terrific Pace On Round Trip to Buffalo—One Contestant Retires With Broken Wrist and the Survivors Make a Spectacular Finish—Winner Spills Eleven Times.

A. G. Schmidt, Winner of Pittsburgh-Buffalo Endurance Race.

PITTSBURGH, PA.—A most interesting endurance contest was held on Sunday, May 19, when three local riders left Pittsburgh for a trip to Buffalo and return. The participants and their starting times were as follows: Harry D. Emmil, Harley-Davidson, 4:04 a. m.; Russell Geisey, Thor, 4:19 a. m., and A. G. Schmidt, Indian, 4:34 a. m. All three machines were 1912 4 h. stock models.

Geisey's Fast Start.

Emmil cut out a fast gait on the start, riding steadily to Butler, via Kittanning Pike and Saxonburg route, while Geisey made exceptionally good time over the Butler Plank Road, having gained five minutes over Emmil, who struck very bad roads to Butler. Schmidt rode easily to Butler, using the Plank and making no effort to gain over the leaders. So slowly did he ride that he dropped behind in his schedule time. In this way Geisey, who had been riding hard from the start, gained about fifteen minutes over him at Slippery Rock. Geisey and Emmil were now riding within a few miles of each other, while Schmidt was quite a distance in the rear. On leaving Butler, Schmidt settled into his saddle for better time. From Butler on he kept up a steady gait, gaining slowly on the leaders. Just before reaching Slippery Rock Schmidt had his first puncture, losing a little time in the stop. Outside of Slippery Rock Schmidt passed Geisey, who had jammed his brake, locking it so suddenly and tightly as to break several of the parts. Geisey here lost an hour in the attempt to repair his brake, but finding it beyond further use tore it out, patched up and rode on. Geisey here showed his pluck and sportsmanship by staying in the race, without any means of braking his speed. Emmil was still in the lead, with Schmidt second and Geisey third. The route now led to Mercer, in and around which town the riders struck slippery roads on account of a light drizzling rain. Keeping the same positions in the race, the three riders passed through Meadville and then to Erie. Between these points Emmil made another spurt, gaining but little. Leaving Erie the race began in earnest between Schmidt and Emmil. Schmidt who had been increasing his speed all along the road gained so rapidly as to catch Emmil at Westfield. The latter was unprepared for this, not suspecting that Schmidt would ride the rough roads at such speed. Emmil then opened up also, and the race was "nip and tuck" between the two as far as Buffalo, where they were checked in by the race officials.

Geisey Handicapped.

But to go back to Geisey at Mercer. Riding without a coaster brake and doing his utmost to make up an hour's lost time, Geisey opened up regardless of the poor condition of the roads. Coasting down hills at full speed and riding wide open on the hills and level roads gave him an exceedingly good average. Geisey kept this gait up through Meadville and Erie. About ten miles out of Erie he coasted down a long hill at a fast clip, struck mud and rocks at the bottom, swerved and was thrown headlong, falling on his right arm and breaking his wrist. This injury was not considered serious at the time and he tied it up with straps and started out for Buffalo, his wrist paining him more and more as he went along, until he was compelled to ride with his left hand only, letting the right one hang at his side. At Buffalo it was found that the wrist was badly broken, and had swollen to several times its natural size. He was compelled to withdraw from the race. Much credit is given Geisey for his pluck.

The Return Trip.

Leaving Buffalo at 4 p. m. Emmil and Schmidt rode together, off and on, to Erie, at which city they arrived at 7:30 p. m. They did not stop at Erie but kept on to Sagerstown, arriving at 9 o'clock. It was here decided to lay over for the night and start at daybreak, and the start was delayed until 7 a. m. the following day, when they again took to the road.

COLUMBUS PLANS ARE TAKING SHAPE

Committee Is Working Night and Day on Elaborate Program for Big F. A. M. Assembly—New Board Track Is Under Way.

COLUMBUS. OHIO.—It is proposed to make the 1912 meeting of the F. A. M. in this city one long to be remembered by the thousands who will attend, and 15,000 riders are expected to participate in the program. Arrangements are now being made by the local dealers to take care of that number of machines and possibly more. The general committee on arrangements consists of George H. Bangham, chairman; W. H. Snyder, P. A. Vogel, P. I. Haynes, L. P. Birkenbach, A. C. Edwards and C. E. Barr. Sub-committees will be named at a conference to be held soon between the general committee and F. I. Willis, of the F. A. M. board of directors. These sub-committees will have charge of the detailed arrangements for the five-days session and nothing will be omitted to make the meeting a success. There will be committees on publicity, racing, entertainment, reception and registration.

One of the features of the assembly will be the racing on the new board track. The work of constructing the saucer has already started under the direction of Jack Prince. It will be rushed to completion as fast as possible, as it is the intention to hold a preliminary race meet on the saucer on July 4. Assurances are given by Mr. Prince that the track will be completed by that time. While the matter has not been finally decided upon it is proposed to hold the race programs in conjunction with the F. A. M. at night. The saucer will be perfectly lighted by a system of electric lights. It is proposed to have at least three nights of racing and possibly four nights. The nights practically decided upon are July 19, 20 and 21. This would give the last night's racing on Sunday.

The board track is being built on a level field of 24 acres located in Arlington, one of the pretty suburbs of Columbus. It will be a half-mile track and the inclination will be 48 degress. The width of the track will be 20 feet. The seating capacity will be ample for a crowd of at least 30,000 people. The saucer is admirably situated from the standpoint of transportation facilities. One interurban line, operated by the Columbus Railway & Light Company, will run within two blocks of the track, and the company has promised adequate facilities for the handling of large crowds. Another interurban line is located only a short distance away and there is also the main line of the Pennsylvania railroad which practically adjoins the property, with a switch for the parking of special trains.

The time required to reach the track by interurban from the central part of Columbus is 20 minutes. The time required to reach the track over two fine macadam roads by auto or motorcycle is only 15 minutes, and at that no speed ordinances need be violated.

The board track is being constructed by the Columbus Motordrome Company, which has been chartered under the laws of Ohio with an authorized capital of $20,000. All of that amount has been subscribed, the greater part by the members of the Columbus Motorcycle Club. The officers of the Columbus Motordrome Company are P. A. Vogel, president; C. E. Barr, vice-president; George H. Bangham, secretary and treasurer, and W. H. Snyder, general manager. Mr. Snyder will have complete charge of the track and will operate it in a manner that will be free from objections, judging from his management of race meetings in the past.

This tie pace lasted to Mercer, where Emmil had tire trouble and was compelled to make a stop. This left Schmidt the open road. Emmil was on the road again in a few minutes and was hard after him. A short distance outside of Slippery Rock, Schmidt struck a boulder, breaking several spokes in his front wheel and bending the rim eight inches out of line. The average rider would have been a little dubious with a rim in such condition, but Schmidt, being a man to act on the spur of the moment, placed his machine on the road and pounded the rim into shape with a stone. He had just finished this job when Emmil's motor was coming up the hill on top of which Schmidt was making his repairs. Schmidt then jumped into his saddle and opened his Indian wide, making excellent time from that point on. He checked into Pittsburgh at 11:20 a. m. Monday morning. Emmil arrived fifteen minutes later.

Schmidt's Record.

Total mileage, 456 miles; time (actual), 30 hours 46 minutes; time (riding), 19 hours 30 minutes; average, 23.4 miles per hour; thrown 11 times; 2 blow-outs; 2 punctures.

HOODOO STILL PURSUES

Big Sunday Crowd at Denver Saucer Sees Fleckstein in Spectacular Spill —Fast Finishes.

DENVER, COL., May 27.—A hoodoo which has camped on the trial of the motorcycle stars at the Tuileries track asserted itself again at the regular Sunday afternoon program yesterday, when Lawrence Fleckstein collided with "Slivers" Boyd and was hurled from his machine, sliding along the track for a distance of forty feet on his head and shoulders, then rolling to the bottom of the track where he lay unconscious. The spectators thought he had been killed, but when the track officials reached him he had regained consciousness. His left shoulder was badly lacerated and his entire body was pierced by thousands of splinters, and physicians in attendance state that he will be incapitated for a month at least. Boyd managed to retain control of his machine and gave a great display of nerve by going after Bowen and overtaking him just before the finish.

All the races were hot contests between Boyd and Bowen for first place. Bowen was successful in pulling down two out of the three. Patterson, Swartz and King rode neck and neck on the consolation race, finishing in the order named. The amateur event was a very uninteresting one, with Hurlbut having a cinch on first. Summaries:

Two-miles, amateurs, singles, stock; 30, 50 class: Hurlbut (Indian), Shepherd (Merkel), Brek (Merkel); time, 2:26.

Three-mile open, professional, 61 class: Bowen (Merkel), Boyd (Indian), Fleckstein (Indian); time, 2:11⅘.

Five-mile open, professional, 61 class: Bowen (Merkel), Boyd (Indian), Cox (Merkel); time, 3:38⅗.

Three-mile consolation, 61 class, professional: Patterson (Merkel), Swartz (Indian), King (Indian); time, 2:20.

Seven-mile open, professional, 61 class: Boyd (Indian), Bowen (Merkel), Cox (Merkel); time, 5:14⅗.

LOOKING DOWN the STRETCH

June 1, Pittsburgh, Pa.—Pittsburgh Press Motorcycle Association race meet at Schenley Park Oval; half-mile dirt track.

June 1-2, Tulare, Cal.—Tulare Motorcycle Club's race meet.

June 1-2, 5-8, Cleveland, Ohio.—Luna Park Amusement Co.'s meets; quarter-mile board track at Luna Park.

June 2, Vincennes, Ind.—Vincennes Motorcycle Club's race meet; half-mile dirt track.

June 5, Toledo, O.—Motorcycle Manufacturers' Association meeting, Hotel Secor.

June 8, Beloit, Wis.—Beloit Motorcycle Racing Association's race meet; half-mile dirt track.

June 8, Milwaukee, Wis.—Wisconsin Motorcycle Club's annual races at State fair park.

June 8, Minneapolis, Minn.—Riverside hillclimb, Minneapolis Motorcycle Club.

June 8, Akron, Ohio.—Akron Motorcycle Club's race meet; half-mile dirt track.

June 9, Marion, Ind.—Marion Motorcycle Club, race meet.

June 9, Philadelphia, Pa.—Harley-Davidson Motorcycle Club's sealed time social run to Atlantic City.

June 10-15, Chicago—Chicago Motorcycle Club, six-day contest for factory teams only, 1,200 miles.

June 15, Rochester, N. Y.—Flower City Motorcycle Club's race meet; Crittenton Park half-mile dirt track.

June 16, Worcester, Mass.—Worcester, Motorcycle Club's first reliability run; Worcester to Concord, N. H., and return, 175 miles.

June 16-17, Seattle, Wash.—Seattle Motorcycle Club's annual endurance run; Seattle to Portland, Ore., and return, 352 miles.

June 28, Douglas, Isle of Man, Great Britain. —International Junior Tourist Trophy motorcycle road race; 150 miles.

June 29, Rochester, N. Y.—Rochester Motorcycle Club's race meet; half-mile dirt track.

July 1, Douglas, Isle of Man, Great Britain. —International Senior Tourist Trophy motorcycle road race; 187 miles.

July 1, Hamilton, Ont.—Canadian championship meet by Canadian Motorcyclists' Association.

July 4, Elmira, N. Y.—Race meet by Elmira M. C.

July 4, Cortland, N. Y.—Cortland Motorcycle Club, race meet; half-mile dirt track.

July 4, Detroit, Mich.—Motorcycle Club of Detroit Wheelmen race meet; State fair mile dirt track.

July 4, Marion, Ind.—Marion Motorcycle Club's race meet.

July 4, Indianapolis, Ind.—Indiana Racing Association's race meet; mile dirt track.

July 13-14.—Start of national tours from Albany, Baltimore, Chicago and Indianapolis for Columbus, O., finishing July 17.

July 17-21, Columbus, O.—Tenth annual F. A. M. national assembly and race tournament.

July 18, Columbus, O.—F. A. M. annual business meeting, Hotel Virginia; 9 a. m.

July 29, Marion, Ind.—Marion Motorcycle Club's race meet.

August 6-9, Detroit, Mich.—Cycle Parts and Accessories Association annual summer convention.

August 17, Pratt, Kan.—Start of 15-day tour of Short Grass Motorcycle Club.

September 2, Detroit, Mich.—Race meet under auspices of Motorcycle Club of Detroit Wheelmen on State Fair grounds track.

ROCKFORD RUN

Twenty-One Riders Finish Grind Over Heavy Roads, Four Merkels Scoring Perfectly.

DESPITE the fact that rain was encountered between Aurora and De Kalb on the endurance run of the Rockford (Ill.) M. C., held May 19, no less than twenty-one of the thirty-five starters managed to finish. The route led from Rockford to Marengo, to Elgin, to Aurora, to De Kalb, to Sycamore, to Genoa, to Belvidere and return to Rockford, a total distance of 154 miles. Owing to the heavy going many of the boys suffered spills but none were seriously hurt, and in only a few cases were the machines damaged so that they were unfit to continue.

The official score for the run was as follows: Vernie Peterson, Flying Merkel, 1000; Henning Johnson, Flying Merkel, 1000; Henry Peterson, Flying Merkel, 1000; Elmer Friels, Flying Merkel, 1000; Eric Erickson, Flying Merkel, 999; Carl Swanson, Harley-Davidson 7, 999; C. Soderquist, Harley-Davidson, 999; Andy Broderson, Yale, 999; Chas. Ind, Eagle, 999; Lloyd Shumway, Thor, 999; A. Johnson, Harley-Davidson, 998; David Johnson, Harley-Davidson, 998; Fay H. Young, Flying Merkel, 998; Otto Simons, Harley-Davidson, 998; Vic Anderson, Yale, 998; Ernest Oleson, Harley-Davidson, 998; Ralph Olson, 7 Indian, 994; Harry Jacobson, Harley-Davidson, 993; Herman Samuelson, Harley-Davidson, 957; Elmer Russell Harley-Davidson, 920; Vic Hayes, Harley-Davidson, 851.

TEN EVENTS ON CARD.

TEN events will make up the card of the Wisconsin club race meet which will be held at the State Fair track on June 8. Entries for the meet will close June 5 with H. J. Taylor, 498 Superior street.

LEADING TYPES OF VARIABLE GEARS FITTED TO MACHINES OF ENGLISH MANUFACTURE

The infinitely variable, the countershaft two-speed and the rear hub three-speed—A new phase of advertising—Side car is booming, with many de luxe styles—Endurance run rules more exacting than ever

By BRITISHER

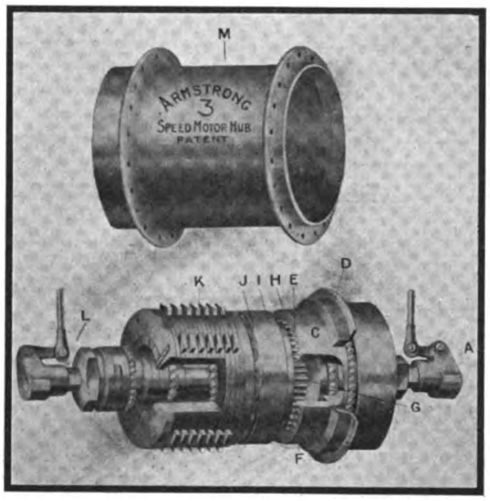
I BELIEVE the average American rider is getting almost as mustardy as our boys on the subject of variable gears, and with greater reason, for your sand patches and crudely-graded climbs throw a heavier strain on men and machines than any road emergencies on this side can present. And so it may interest your designers and users, to hear the present trend of variable gear development in the old country. To a casual observer, one who studies the aspects in the columns of a technical paper, there would seem to be considerable confusion and controversy in the gear market, because a few old-fashioned types of gears are contending with a rush of newly-coined youngsters; but actually the future lies with the survivor of three different types—the infinitely variable, the countershaft two-speed, and the rear-hub three-speed. I propose to say a word or two about each.

Infinitely Variable Gears.

The infinitely variable gear is practically confined to two designs, the Zenith Gradua, and the Rudge Multi. Both consist of two main items, first a device for expanding and contracting the engine pulley, incorporating a simple locking device, for fixing any desired diameter, and second, a device for taking up the belt slack. The pulleys of both gears are roughly similar, and afford ratios of from 3 to 9 to 1, with a 6-in. pulley, and an 18-in. belt-drum (in exceptional cases belt-drums of 19, 20, and even 21 in. are fitted, and enable lower gears to be obtained; but with a 26-in. back wheel, an 18-in. belt-drum is the largest desirable in solo work, as the drum may hit the ground in lurid corner work if its size is increased). The Zenith takes up the belt slack by bodily sliding the rear wheel in the forks; the Rudge by mounting the outer flange of the belt-drum on a dummy sliding hub-shell. The latter plan results in a very heavy rear wheel; the former hampers removal of the rear wheel. Both increase the liability of belt slip, by reducing the diameter of the engine pulley to the minimum at the period when the greatest strains are thrown on the belt; and the pressure of the flanges in lifting the belt does not enhance its durability. The control of pulley and belt-slack is ingeniously performed by one lever on both designs. It is a great delight to be free to select just the ideal gear for every road variation, but the bad effects on the belt may cause the ultimate disappearance of both designs.

The Countershaft Type.

Next comes the countershaft two-speed gear, which at the moment is the most popular of all. It owes its popularity to a variety of causes. One is its past history. A gear-box similar to the Indian was first introduced in 1905 on crude and heavy 5-h. single cylinder tri-cars, and despite of chain drive, coarse slogging engines, and a laughably inefficient free-engine clutch, these gear-boxes stood up to their work well (they were larger and heavier than the present Indian design). It is easy to fit a plate or cone clutch on the countershaft. Belt troubles are simply avoided either by driving with chains throughout, or by driving the primary shaft off the engine by a light chain in an aluminum case, and mounting an 8-in. pulley on the countershaft, whence a belt proceeds to the rear drum. This plan doubles the wearing life of any belt, as compared to a 4-in. pulley direct drive. This gear further claims the merit of leaving the rear wheel very accessible. I have often changed a cover on the road within 15 minutes. If the axle nuts are removed and the belt unhooked, the rear wheel drops out, for the sole brake on the rear wheel is either outside the V belt-drum, in which case it offers no obstruction; or inside the V, in which case the forks and chain-stays are built wide enough to allow of the wheel being slipped past the brake-shoe without loosening it. Consequently these countershaft gears are for the moment in the ascendant, some being operated by sliding dog clutches, with a separate free engine clutch, others being controlled by double friction clutches, preferably split bronze rings and wedge bars.



Armstrong 3-Speed Gear.

A—Gear-operating mechanism.
C—Internally toothed lower gear ring.
D—Thread on to which hub shell is screwed.
E F—Planet wheels.
G—Sun wheel.
H—Carrier holding 8 planet wheels.
I—Top speed gear ring.
J—Clutch springs.
K—Disc clutch.
L—Clutch-operating mechanism.
M—Hub shell.

The Epicyclic Hub.

But the promising gear of the day is without contradiction or doubt the three-speed epicyclic hub, a compact lightweight fitment of about 10 lbs. in weight. Two makes of this gear, each produced by a firm with long experience in the pedal-cycle gear trade, are popular. Each contains two sun and planet trains. On one gear the direct drive is intermediate, and each indirect drive is obtained via a single reduction. On the other gear the direct drive is the top gear, the second through a single reduction, and the third through two reductions. The merits of each plan are obvious. Each reduction entails frictional losses of approximately 10 per cent. Consequently the first-named type of gear secures the highest low-gear efficiency. On the other hand it can only obtain a really low emergency ratio by reducing the size of its engine pulley, so that the belt works under the least favorable conditions at the moment of a supreme test. The second type can secure a low emergency ratio with a big engine pulley; but its emergency ratio shows frictional losses of 20 per cent. Each gear includes a friction clutch of the 24-plate type. The gears and clutch are separately controlled, a top-tube lever being employed for the gears, and a foot-rest pedal for the clutch; but the gears are changed without declutching, no harm being done if they are banged home in the most reckless way. My foot-brake stripped its thread on a most dangerous hill the other day, when I was traveling fast on the top gear of 3 to 1; I banged in the bottom gear of 8 to 1 without declutching or lifting my valve, and the gear stood the strain unmoved. At the same time these gears cannot yet be regarded as perfect. They are already absolutely reliable provided they are oiled regularly, and the rather flimsy devices for preventing the spindle from turning are kept in order. The gears came through last season's trials, including the Tourist Trophy race, without a single failure. Their faults are as follows:

1. They considerably obstruct access to the back wheel; the control rods must be removed before the wheel can be dropped out, and during removal the adjustments of both controls are disorganized, and must be carefully re-made when the wheel is replaced.
2. The clutch is at the wrong end of the hub, so that it does not protect the gears from engine shocks, and has to transmit not merely the power of the engine, but also the power of the engine on the low gear; this must shorten the life of both plates and springs.
3. The oil-retaining qualities of the hubs are next to non-existent, so that very frequent lubrication is essential. I never take out my machine without lubricating the hub, and as the passages are small, it is a weary business to inject the needful quantity.
4. The control adjustments need rather frequent attention.

Give Dependable Service.

Nevertheless, these gears are absolutely reliable, they are far lighter than any two-speed countershaft gear, and they provide three separate ratios. The man who struggles along with but one gear is apt to think that a perfect two-speed gear will fulfill wildest dreams, but he does not know what he is talking about. We all need an emergency gear of say 7 to 1 for emergencies in solo work, and say 10 to 1 for a go-anywhere passenger outfit. And we are tempted to think that this emergency ratio, plus a normal gear of say 5 to 1, would be satisfying. The three-speeder man is better educated. The difference between roaring along at 30 miles an hour on a 5 to 1 gear, and ticking along with the engine barely turning on a 3 to 1 gear, also at 30 miles an hour, is nothing short of colossal; and no three-speeder man would dream of going back to a mere two speeds. Indeed, it is highly probable that we shall see four-speeded hubs on the market next season; for the existing three-speeded hubs can be converted into four-speeded hubs with a very slight increase of complication. There would be no need of an extra planet train. The top gear would be direct; 2d, through right-hand planet train; 3d, through left-hand planet train; and 4th, through both planet trains. As soon as our riding public get educated up to the delights of three-speed and four-speed work, the coffin of the countershaft gears will be screwed down forever. A three or four speed countershaft gear-box is a mechanical possibility of course; but the fact that it does not enjoy the full benefits of the gear reductions in the primary drive compel it to run more quickly than a hub gear; and hence it would have to assume colossal weight and proportions, rendering it forever inapplicable to the motorcycle, which is steadily becoming smaller and lighter. So, if I may conclude with a prophecy, I expect the ultimate survivor of our variable gears to be a four-speed hub; its clutch will be at the belt-drum end of the hub, and its control gear will be so modified (perhaps by the insertion of snick joints in the rods) that its adjustments are not interfered with when the rear wheel is taken out, and consequently it will cease to prolong the task of changing a tire.

A New Phase in Advertising.

THE change that is passing over the British market in motorcycles is well illustrated by the altered attitude of the trade towards advertising. In the past motorcycling was the hobby of a limited number of sporting youngsters, and speed was the talking point par excellence. As a consequence the trade was driven into a very costly advertising campaign, dependent upon victories in road races, hill-climbs, and track meets. To-day the trade is gradually withdrawing from these events. Our manufacturers have already bound themselves to abstain from competing with trade riders in the Isle of Man races, and recently they have entered into another bond to abstain from supporting dangerous hill-climbs. The bond lays the emphasis on the danger involved in mile a minute work on corner-some hills, but the secret motive is the comparatively valueless nature of sporting successes under modern conditions. The real selling advertisement now consists in getting as many of your machines as possible into the hands of staid, elderly users, who in daily riding for business or pleasure, demonstrate how reliably your machines run, how easily they start, how slowly they climb awkward hills, and how cheaply they are maintained. Within a very few years the majority of makers will withdraw for good and all from all sprint competitions, and by doing so will considerably reduce their advertisement percentages without losing any of their market.

The Modern Side-Car.

THE side-car a few years back was clinging desperately to a very precarious and limited market. To-day it is booming everywhere. The machines of a few years back, with their weak engines and single gears, were incapable of hauling a side-car with any credit, though a rushing rider could tug round a light uncomfortable skeleton chair of wicker with some kudos. To-day, efficient engines, starting clutches, and three-speed gears render it possible for a 3½ h. p. machine to draw a side-car over any roads with ease, speed, and credit, and the side-car is blossoming accordingly. The modern side-car de luxe has a canoe or torpedo body, with side-door, cape hood, windscreen, and spring cushion; its sidewheel is separately sprung, and provided with a stand to facilitate tire repairs. The rigid type is gradually ousting the flexible-joint and castor-wheel patterns, as the average rider soon masters the steering problems of these hybrid tricycles. The axles have been considerably increased in strength owing to several fatalities, a ⅞-in. axle of high-grade steel being now deemed essential to security. Light wooden and metal paneled coachwork is popular, but the future perhaps lies with waterproof leather panels on steel frames, as the 3½ h. p. engine may be considerably slowed by fitting too substantial a construction.

Stiffening Up of Endurance Runs.

IT gives one the glad eye to notice what a marked stiffening up of the schemes for the annual six-day endurance runs is in progress. That the governing body can suggest, and the trade view with serenity, such an extraordinary tension of the rules and route proves how rapidly motorcycles are advancing towards perfection. In previous years the route has been carefully laid so as to embrace as many centers of population as possible, and to avoid all really abnormal hills; the time schedule has been liberally designed, so that the unlucky rider could accomplish many minor repairs and adjustments between towns without being late at the next control; and in addition a whole hour was allowed for garage attentions every morning. This year the routes do not aim at centers of population, the public is so keen that you can rely on it to come out and watch us on the freak hills, and seeing us trickle through a town no longer satisfies them. The roads twist in and out with the honest desire of including every ascent however rough and precipitous, because it is well known that nearly every man jack in the trial will storm masterfully up the worst hills that can be provided. The time schedule is so stiffened that we shall have to hustle along between controls, for the promoters know that few entrants will require to adjust or repair en route; and finally it is probable that we shall be deprived of the garage hour in the morning, and left even to replenish our tanks in running time, 'cos why? We don't expect to have to do anything except fill up. There's frank proof of progress for you, gentlemen!

MUNCIE, Ind., now has a club of forty-four riders which is planning summer runs. The first outing was held recently to Marion.

"IT WAS A DANDY."

THE appended letter from Robert Caldwell, a motorcycle enthusiast of Stamford, Conn., tells its own story, and the photograph is not less expressive. Mr. Caldwell writes as follows:

STATIONERY & TOYS
STAMFORD MOTORCYCLE Co
READING-STANDARD
43

"I received my subscription receipt in the form of a booklet and thank you very much for it. I think it is very neat and it will come in very handy. That touring number was certainly a dandy and if I could not get another I would not take a dollar for it. I am enclosing a photograph that I snapped last Sunday and you will note in the center of the picture that some one is very much interested in looking at a paper. That paper is the touring number of MOTORCYCLE ILLUSTRATED."

DES MOINES WANTS SILENCE.

DES MOINES, Ia.—Local motorcyclists must stop using the cut-out in this city. That is the edict issued by Chief of Police Jenny. The chief thinks the use of the cut-out is unnecessary, and that it is used simply to attract the attention of passersby and give the impression of a high-powered machine. The local motorcycle club will co-operate with the police in stopping the use of the cut-out. Chief Jenny made an investigation of the matter before taking his stand. He has letters from many manufacturers stating that the cut-out is not necessary on city streets.

AN OBLIGING STRANGER.

A YOUNG man living in the east end of Cleveland was tinkering with his motorcycle recently when something went wrong. A stranger watched him for several minutes and finally offered assistance. It was gratefully accepted, and in a short time the motor was buzzing in great shape. The stranger then jumped into the saddle to give the machine a short try-out. It worked well and the stranger has not been seen since. Neither has the motorcycle. "He must have discovered that the frame was made of Standard tubing and become so deeply impressed that he failed to bring it back," writes the Standart Welding Company, which forwards the clipping.

NO TANDEM FOR HER.

MISS LILLIAN OBIN, of Cohoes, N. Y., joined the ranks of motorcyclists in her city some time ago and is now one of the most consistent riders. She refuses to occupy a tandem seat and insists that the real joy of motorcycling lies in piloting the machine.

WITH OUR FRIENDS ACROSS THE SEA

Tourist Trophy Regulations.

REGULATIONS for the 1912 Tourist Trophy races under the auspices of the British Auto Cycle Union have been officially passed upon, and only minor changes are noted. The only important departure from the rules which governed the 1911 T. T. events has to do with the cubic capacity of the motors, says *The Motorcycle*, of London. Last year the twin machines were allowed 85 cubic centimetres greater capacity in the senior race, and 40 cubic centimetres in the junior event. This year singles and twins will compete on even terms for the first time in the history of the Tourist Trophy contests. All motors, no matter of what type, must be within the same limits, viz., 500 c. c. for the senior race, and 350 c. c. for the junior. Under this arrangement advocates of the single-cylinder mounts expect to show excellent results, particularly in the junior race.

A Military Test.

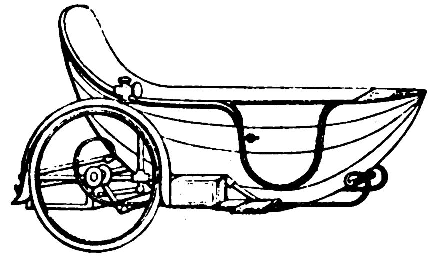
NOW that rapid progress is being made in the introduction of motorcycles into American army service special interest attaches to a novel test held recently at Rugby, England, when one hundred British riders undertook to break through a cordon of Boy Scouts. The scouts, numbering 250, were thrown out within a six-mile radius of the Clock Tower in Rugby, and it was the purpose of the motorcyclists to elude them and reach a specified headquarters inside the lines. A proportion of three motorcyclists to two scouts, or vice versa, indicated a capture for the larger party as soon as it was within twenty yards of its quarry, and if the proportion was less than three to two either way both parties were obliged to retire 100 yards and await reinforcements. At the start the motorcyclists wore white badges, which were exchanged for red ones when they were captured. All telegraph and telephone lines were supposed to have been cut, and the motor squad was obliged to communicate with its base in Coventry through motorcycle despatch riders. A number of the riders succeeded in breaking through the lines.

Novel Side-Car Body.

WITH the American side-car boom for 1912 well under way riders on this side are giving more than ordinary attention to the latest passenger-carrying outfits in the British market, where they have long been exceedingly popular, and many novelties are noted. One of the most striking side-car bodies in the new crop of English models is shown on this page, from a cut appearing in *The Motorcycle*. It is a boat-shaped outfit with a dropped frame. A six-inch mudguard is fitted with a footboard on which is a small locker to hold a generator or battery. The body is of reed cane, sprung from three points. W. Hastings & Co., of Huddersfield, are the makers.

English Tandem Boom.

IT is interesting to note that as American motorcyclists are beginning to swing away from the tandem seat and toward the side-car for passenger carrying, British riders, in rapidly increasing numbers, are deserting the "baskets" for the extra saddles, or pillion seats, as they are called on the other side. This English tendency will come as something of a surprise to motorcyclists in the United States as it has been taken for granted here that the Britishers would never become widely reconciled to the somewhat undignified tandem seat. Strange as it may seem, feminine enthusiasts in England have not been backward of late in voicing their approval of the tandem, and many of them point out that a side-car is not to be compared with the pillion attachment for an exhilarating trip. Several pages in a recent issue of *Motorcycling*, of London, are given up to letters in defense of the tandem seat, a number of them being written by women. The latter have been referred to in print as "pieces of feminine luggage," but even this has not dampened their ardor, and there are indications that the extra saddle—now losing some ground to the side-car in the United States—is destined to make it up on the other side.



An English Side-Car.

The Canadian Market.

AN English motorcycle publication is considerably exercised over the announcement that American manufacturers are making rapid progress with their sales in Canada and suggests that "at the end of this year the motorcycle market in Canada will be as completely in the hands of the United States as the motor car trade now is." That the latter statement admits of modification may be true, but the fact remains that American producers have made giant strides in the Dominion of late. It is pointed out that after paying 35 per cent. ad valorem duty as against the preferential rate of 22½ per cent. on British-made machines, the American manufacturers are still able to offer the Canadian buyers price inducements. Therein lies one explanation of the demand for machines from the States, but it does not fully cover the situation. The most potent factor in the upbuilding of American sales over the border has been the ability of the machines to romp off with most of the trophies in speed events. That is the story in the traditional nut-shell, and it is small wonder that the British brethren are disinclined to enthuse over the situation.

English Trade Figures.

REPORTS from England, appearing in the *Daily Consular and Trade Reports*, show that in 1911 the motorcycle manufacturers of the United Kingdom exported 7,357 machines, valued at $1,357,413. This was more than double the export business of 1910, when 3,341 motorcycles were sent out, valued at $596,545. Only 1,351 motorcycles were imported into the United Kingdom in 1911, a falling off from 1910, when 1,387 machines were brought in at a total value of $215,571. The latter statement is significant in that it shows how the British manufacturers are laboring to make the most of their home field by keeping out competition.

CREDIT FOR HOLLAND.

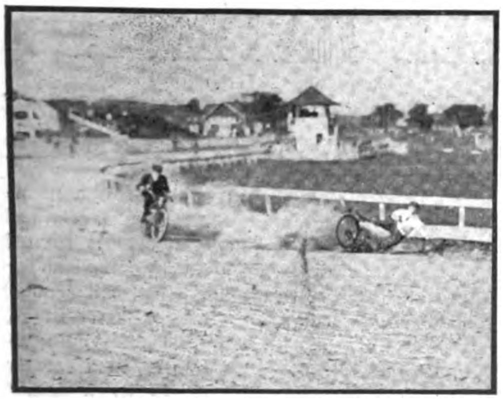
IN a recent reference to the big Los Angeles endurance run Paul Derkum was given full credit for mapping the route to be followed by the riders, when as a matter of fact the bulk of the work was done by Lincoln Holland, Jr., son of the well-known Los Angeles dealer of that name. Mr. Holland was chairman of the committee, and Derkum was one of the motorists who accompanied him on the pathfinding and mapping trips.

EMBLEM TOPPED THE HILL.

AN Emblem single was the only machine in a field of eight, representing six makes, which succeeded in topping Reservoir Hill in Kansas City, Mo., during a recent hill-climbing test. The grade is long and steep. The Emblem Motorcycle Co., of Kansas City, states that the machine referred to was taken to the steepest section of the hill and then started without help from the free engine or by pedaling.

A BUSY OFFICE.

F. A. M. work in the Secretary's office has now developed to a point where six persons are kept at it almost constantly. Secretary Gibson himself keeps the books, looks out for the vital records and directs the work in general; Mrs. Gibson assists him and verifies all the work of the other helpers, and three stenographers and typewriters are kept busy. The sixth member of the staff is an office boy.



Haas Going Down on the Lower Turn in the Private Owners' Race.

RUN IS POSTPONED.

MINNEAPOLIS, Minn.—The Minneapolis Motorcycle Club's endurance run which was scheduled for Sunday, May 26, has been postponed until June 2 because of the poor condition country roads are in just now from recent rains. The run was to be a 150-mile affair to Hutchinson, Minn., and return, but after three local riders had made the trip it was decided to call the meet off. Mud, clay and large water holes continually hampered the motorcyclists, and when nearly to Glencoe, Minn., the machines were stalled in the mud. The road is now being dragged by a road crew, and A. R. Horn, chairman of the endurance run committee, expects to find the route in fairly good condition in a few days. Over forty entries have been received for the event, which promises to bring out some fast time, weather permitting.

WICHITA ENDURANCE RUN.

MANY entries have been received for the first endurance run of the Wichita (Kan.) M. C., which is to be held on June 2, over a 200-mile route. The riders will be divided into three classes, and a silver cup will be awarded the winner in each division. For every perfect score a gold medal will be given. A winning rider must carry off a cup twice in succession before it becomes his permanent property.

NO TANDEM NEEDED.

WHEN Evan Davis and Miss Thera Knudson, of Milwaukee, Wis., decided to elope recently they placed their faith in a motorcycle and did not even bother to have a tandem seat attached. Miss Knudson, perched on the handlebars, and made the trip to Waukegan without mishap. There the marriage ceremony was performed, and Mr. and Mrs. Davis returned at their leisure, still using the motorcycle, however.

THE city council of Des Moines, Ia., has added a motorcycle for the use of H. L. Sani, a city engineer, who is well pleased with it.

CONSTANT TO THE FRONT

Brooklynite Leads Costello in Two Tight Events on Staten Island Track and Wins Time Trial

DARING work by Mercier, Constant, Cox, Costello and others featured the race meet held at the Richmond County (Staten Island) fair grounds on Saturday, May 25, and there was no room for complaint except as to the attendance, which was light.

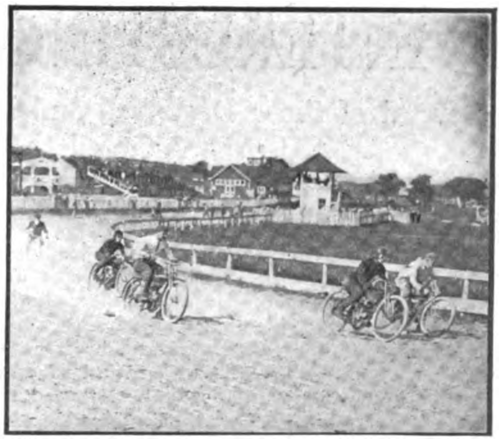
The most interesting event of the afternoon was the trade riders' whirl at three miles, with Constant and Costello fighting desperately for the lead over most of the route. Constant nosed his Indian steadily to the fore in the last mile and finished in 3:40. Costello, mounting a Merkel 4, held second position, and Haas, of the Staten Island M. C., was in third place. Cronin, riding an Indian 5, brought up the rear and Coughlin, who started with a Reading Standard 4, retired because of engine trouble.

The first event was a 5-mile race for private owners. It furnished the only spill. Going into the lower turn, which was badly rutted, Haas lost control of his Thor twin and went down, but was not injured. Eckels, the well-known speedster of Washington, N. J., rode in this race under protest—his Indian 5 having direct chain drive and no pedals—and led the boys home. Under the protest Cronin, who finished in second place, was declared the winner, his time being 9:34.

There was some exciting work in the 10-mile event for trade riders, Constant and Costello engaging in another duel which promised a spill or two but failed to deliver them. Every trip around the lower turn afforded spectacular exhibitions of skidding. Constant led the Merkel speedster to the finish, with Cronin in third position. The time was 12:43⅗.

In the 5-mile pro. event Johnnie Cox, riding an Indian 4, led Ferdie Mercier over the tape by a fair margin. Mercier mounted a Merkel 4. Cox's time was 6:56.

In the one-mile time trials Constant went the route in 1:13½, and Costello turned off a mile in 1:14⅖. The latter asked for a second trial and made a good start, but lost ground when his motor missed a few times on a turn, and was unable to do better than 1:23.



Coughlin and Costello Leading Trade Riders in the 3-Mile Event.

EAST ST. LOUIS CLUB.

THERE is no scarcity of motorcycle interest in East St. Louis, Ill., where about 100 riders are now buzzing over the roads on their single-trackers and several enjoyable runs have been made of late. One of the favorite trips is to Creve Coeur Lake and Gumbow, 40 miles each way, with facilities for a good chicken dinner at the turning point. Roads in the vicinity are reported to be good.

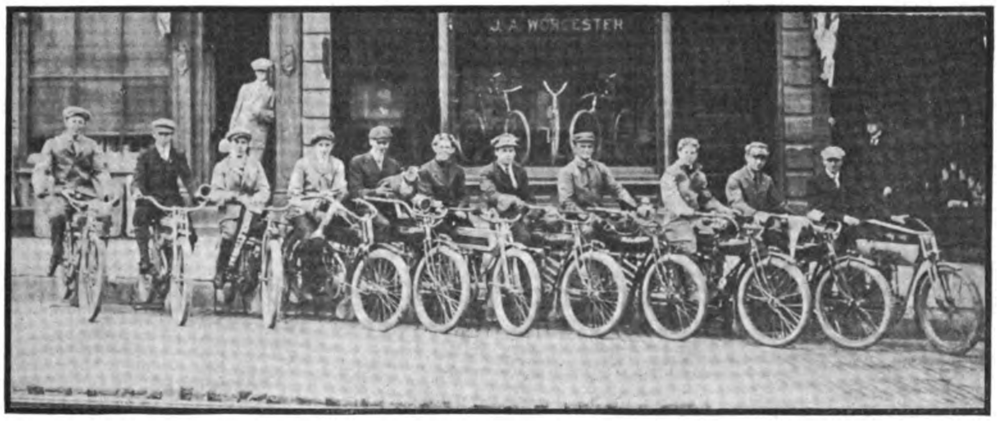
E. R. Rodgers, manager of the Western Union telegraph branch in East St. Louis, and Payton Read, of the Read Cycle Co., are the organizers of an F. A. M. club recently formed in the city. Officers have been elected as follows: Hall Hamel, president; C. E. Heins, secretary; Payton Read, treasurer; Bert Bradbery, captain; Thomas Callahan, business agent. The club has 19 paid-up members, and promises from about 40 others.

CHANGES OF ADDRESS.

SUBSCRIBERS to MOTORCYCLE ILLUSTRATED *who contemplate changing their addresses are requested to send us notice to that effect at least two weeks in advance. Although the post offices notify this paper in such cases, its notices are usually received some time after the change of address has been made. As a result subscribers who depend entirely upon postal notices to this paper, often miss one or even two issues of the paper, or at least have such issues delayed in transmission.*

McHENRY COUNTY CLUB.

THE McHenry County Motorcycle Club held its last meeting at Woodstock on May 22 and elected the following officers: President, Mac. Schellenger; vice-president Harold Miller; secretary-treasurer, R. J. Latter; captain, Arthur Skinner. The club has fifteen members, and many lively prospects. The captain of the club has got some nice runs mapped for the season, and the riders are looking forward to them impatiently.



A MIDDLETOWN SQUAD.

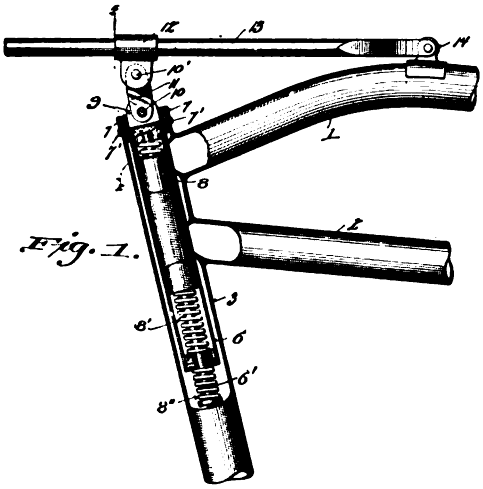
WHILE plans for a club have not been launched as yet motorcyclists in Middletown, N. Y., are not lacking in fraternal spirit, and the accompanying photograph indicates that they do not overlook the pleasures to be derived from co-operative road work. The picture is forwarded by C. Wesley Breese, who is striving to bring about the organization of an F. A. M. squad. Breese explains, by the way, that quite a few riders of the city were not on hand when the photograph was obtained.

INTERESTING NEW MOTORCYCLE PATENTS

Several of those Described and Illustrated Below Apply to the Motorcycle Exclusively While Others May Also be Adapted to the Automobile—Harley-Davidson and Troxel Improvements.

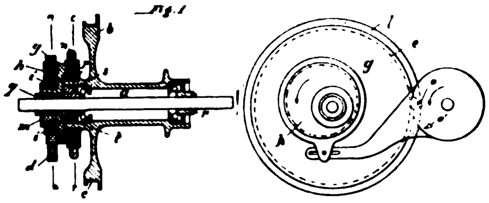
AMONG recently issued patents of interest to motorcyclists are those covering the improved seat support, designed by William S. Harley, which has been attracting attention on Harley-Davidson machines since the opening of the season; one covering an improved arrangement of the rear springs on Troxel saddles, and several other inventions which may be adapted to either two or four-wheeled motor vehicles. Several of these devices are described and illustrated herewith:

1,024,684. Seat Support, patented April 30, 1912, by William S. Harley.—This relates to the shackle connection between the spring-controlled seat-mast and the pivoted seat-bar shown in the drawing. The link 11, is pivoted at 10 and 10′ respectively to the saddle bar trunnion head 9 of the spring plunger, and to the lugs on collar 12 fitted to saddle bar 13. The arrangement is designed to permit of a low saddle position without interfering with the rise and fall of the saddle and seat bar, but preventing transverse play of the parts mentioned. The well 6 and the springs 8 and 8′ of the spring device within the seat post are clearly indicated in connection with the above.

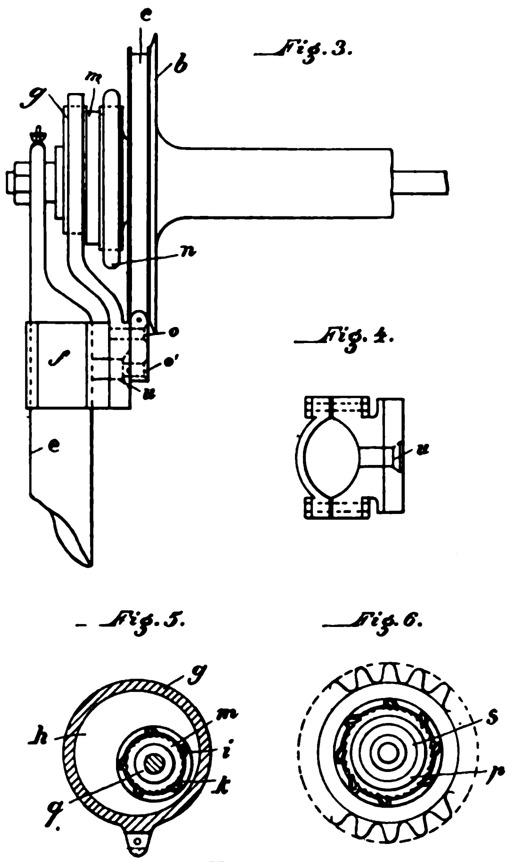


Patent No. 1,024,684.

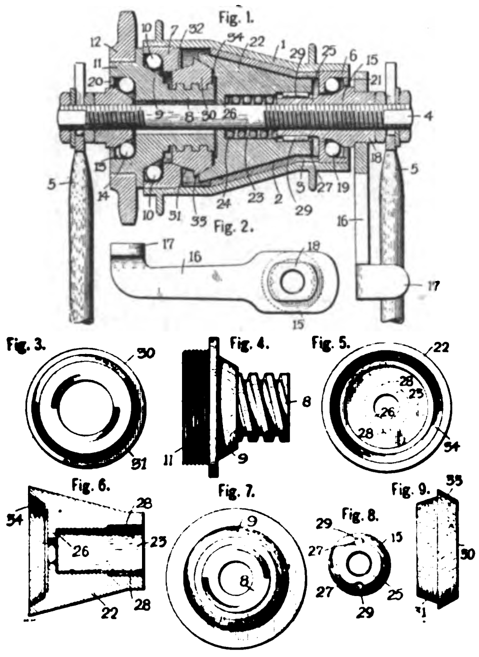
1,023,076. Free-Wheel Back-Pedalling Brake, patented April 9, 1912, by Franz Goebel, of Hann-Münden, Germany.—This relates to a brake operated by back-pedalling in which the operating lever arm is outside the hub of the rear wheel for greater length and in conjunction with a brake wheel and band which can be readily renewed when worn. The outside location of the lever is designed to give less braking effort on the part of the rider for the same effective braking service in the device. The hub of the wheel has a wheel *B* for the band *c*; brake lever *d* is anchored to the rear fork tube by clamp *f*, a pin *u* being fitted on which *d* can turn when elevated or depressed by an eccentric strap *g*. The eccentric *h* gets its motion from the pawls *i*, which engage in teeth *k* on a member m. This latter is fitted to a free-wheel device *n*. When back pedalling, *m* is rotated backwards by *n* the eccentric is moved and *g* depresses lever *d*, tightening the band *c* on *b*.



Patent No. 1,023,075.



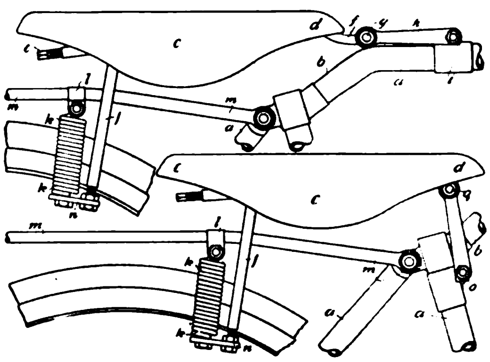
Patent No. 1,023,076.



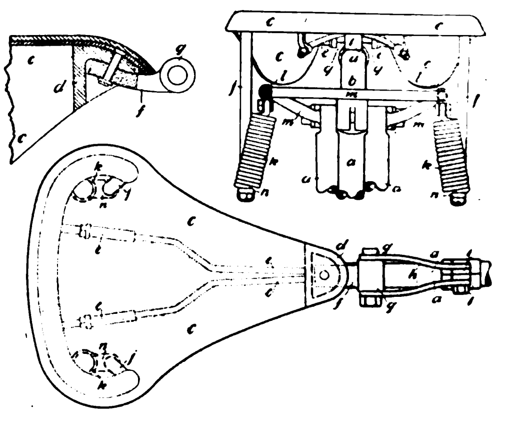
Patent No. 1,023,347.

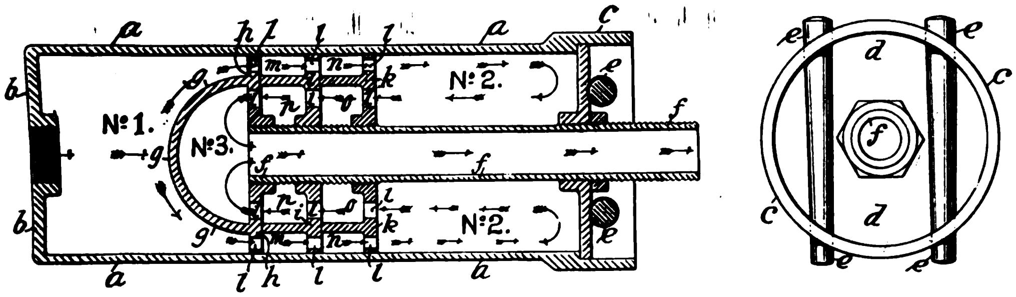
1,023,347. Back-Pedalling Coaster-Brake, patented April 16, 1912, by Jos. H. Whittington, Buffalo, N. Y.—This relates to a coaster brake in which the braking is by a lateral movable element shifted by a clutch device when back-pedalling movement is imparted to the driving mechanism. A cone member 22, normally is held away from a coned shoe 2 within the hub 1 by a spring 23. Part 30 fits within a smaller coned portion of 22 and is threaded to fit part 8, which is controlled by sproket 12. When the rider back-pedals, part 8 is rotated, driving forward (to the right in the drawing) cone 30, which in turn pushes cone 22 to engage with shoe 2 and give the braking effect. On pedalling forward again, 8 withdraws 30, and spring 23 withdraws cone 22, releasing the wheel and hub. The stationary portions of the mechanism are anchored by arm 16 to the stay 5 of the frame. In coasting the driving mechanism is stationary, and hub revolves freely on the ball bearings 10 and 19.

1,023,744. Saddle for Motorcycles, etc., patented April 16, 1912, by Edward Lycett, of Olton, England.—This relates to a saddle adapted to mounting direct on the frame of the machine by means of links and clips at the front and a spring shock absorbing device to a bar at the rear, the latter acting as a luggage carrier. The patent shows arrange-



Patent No. 1,023,744.





Patent No. 1,023,644.

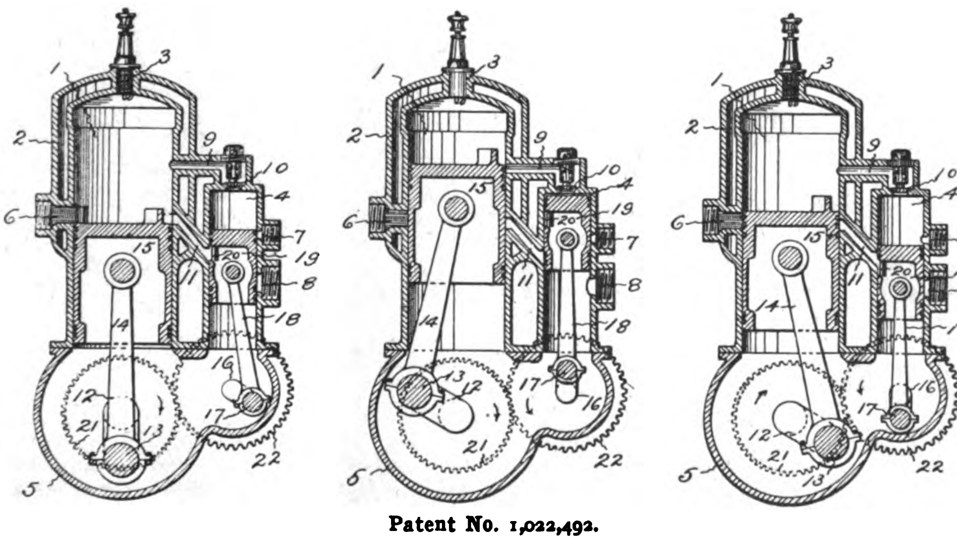
ment of the saddle frame to suit the conditions of suspension. The nose of the saddle frame is fitted with a piece having an eye *g* to which the rockers *h* are articulated; the latter attaching at *o* to clip on the seat mast tube. The rear portion of the saddle frame is crescent shaped, and has posts *j* ending in platforms which carry shock springs *k*, which are attached to luggage carrier frame *m, m*. The latter is fastened to the joint where the rear stays and seat-mast connect. In one arrangement the nose piece is prolonged to give a horizontal position to link *h*, and thus give a saddle position farther to the rear and lower. Braces *e, e* connect the nose and cantle-members of the saddle frame.

1,023,644. Exhaust Muffler, patented April 16, 1912, by Joseph Hall, Manchester, England.—This relates to a readily-dismountable muffler, the arrow indicating the course of the exhaust gases. The "pot" of the muffler is the cylinder *b-a-a*, with the swell *c* in which a plate end *d* is fitted and held in place by pins *e* passing through holes in the swell *c*. *G* is the spherical end of the perforated plate device *l-l-l*, which is screwed to the exhaust outlet tube *f*. This latter passes through the head *d* as shown. The gases from the motor enter through a threaded port in the end *b-b*. by pulling pins *e-e* the whole interior of the muffler can be withdrawn and cleaned, etc. The expansion of the gases is in three stages: at No. 1, then at No. 2, and finally inside dome *g* at No. 3.

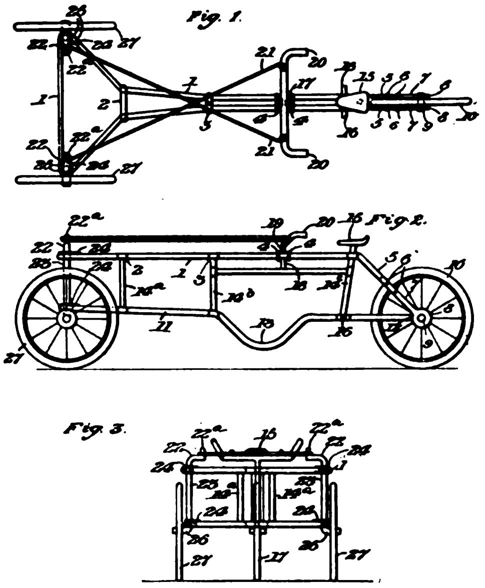
1,022,492. Internal Combustion Engine, patented April 9, 1912, by John J. McIntyre, Hartford, Conn.—This relates to a two-stroke engine having a pump cylinder and plunger which latter acts as a valve for causing the burnt gases to be expelled and pumping in fresh charges of mixture. The working piston 15 operates as usual in the cylinder, and the pump piston 20 works in the cylinder alongside. The crankshafts of both pistons are driven at equal speeds by gears 21 and 22. The exhaust port from the working cylinder is at 6; the gas port from the carbureter to the pump cylinder is 7; the port for scavenging air is 8, and passages to the working cylinder are at 9 and 11. A valve is fitted at 10 and 4 and is the upper portion of the pump cylinder. In Fig. 1 the piston 15 is ready to rise and 20 to descend. Port 6 is open, valve 10 is lifted and the air compressed above 20 enters the cylinder 2, driving out the burnt gases. In Fig. 2 the piston 20 is at its upper position, after having forced the new mixture up through valve 10 and passage 9 into cylinder 2. Air port 8 is opened and 7 blanked. Air therefore goes into the crankcase 5. In Fig. 3 piston 15 is descending and 20 ascending; port 7 is opened and scavenging air is about to enter the working cylinder under piston 20 through a port there—in and through passage 11.

1,022,675. Running Gear for Motorcycles, patented April 9, 1912, by Carl Hendricksen, of Seattle, Wash.—This is a tricycle or tricar frame consisting of an upper and lower construction with direct steering to the pivots of the front steering wheel by rods to the handle bars. In Fig. 2 the motor is hung in loop 13, and the rider sits in saddle 15 with his feet on rests 16. 21-21 are the rods leading to the arms 22 on the steering pivots 23, which are fitted with ball-races 6" and 9". The upper and lower portions of the frame are connected by pieces 14a, 14b and 14c. The upper frame is to be of one continuous piece of tubing bent as shown (I).

1,022,447. Saddle, patented April 9, 1912, by David S. Troxel, of Elyria, Ohio.—This relates to an arrangement of springs at the rear of a saddle in which two sets are employed on each side, for the purpose of absorbing shocks, etc. The springs are respectively coned in the upper pairs and cylindrical in the lower pairs. The upper springs are connected by a yoke attached to the cantle portion of the saddle frame, and bars from this yoke attach to the bottoms of the lower springs. The ends of the latter springs are in turn attached to the low frame of the saddle, as are the lower ends of the coned upper springs. The yoke swivels to give freedom to the mechanism when the saddle plays up and down. The upper springs are compression springs, while the lower are tension springs; both sets constantly carry the load or weight of the rider. In the drawing, 34 are the coned upper springs, 31 the yoke bar, and 33 the lower springs. The method of attaching the spring ends to the lower saddle frame 20-23 is shown as 36-38-37.



Patent No. 1,022,492.



Patent No. 1,022,675.

USE TIMING DEVICES.

A BAN has been placed on speeding in Cleveland and several motorcyclists have been caught of late in traps set by the police. Timing devices have been arranged and when an arrest is made there is no way in which the offender can talk himself out of paying a fine. The police are also hot on the trail of the open-muffler fiend.

TESTING MUFFLERS.

STEPS are being taken by the British Auto-Cycle Union to ascertain to what extent the average motorcycle can be muffled without seriously curtailing its power. Tests are being made with various types of mufflers, according to a news item, with a view of standardizing one which gives maximum power and minimum noise.

COMPARATIVE COSTS.

PATROLMAN RICHARD TATHAM recently submitted a statement to the Board of Supervisors of San Francisco, Cal., showing that it costs six cents to travel one mile with a horse and buggy on city business, and that the same distance may be covered in one-third the time at an outlay of half a cent on a motorcycle.

NO TANK RIDING.

A NEW ordinance in Cleveland prohibits the carrying of a passenger on the tank or handlebars of a motorcycle. Unless a side-car is used the passenger must be mounted on a regulation tandem attachment with pedals and handlebars.

DE ROSIER'S HARD TRIAL.

IN a letter written from the Crocker Street Hospital in Los Angeles, Cal., Jake DeRosier admits that he is now going through the most trying experience in his career as a racer. His leg, which was broken in two places above the knee, has been slow to mend, and the knee itself, also fractured, is giving him much trouble. For weeks past the plucky speedster has suffered torturing pain, and it is not likely that he will be able even to sit up in bed for another month. Referee Charles Fuller Gates and the riders of Los Angeles and vicinity have done everything possible to assist DeRosier since the accident, which occurred during a record-breaking whirl on the Los Angeles Motordrome, and the injured racer is deeply appreciative of the generosity with which he has been treated.

KIPP AS A "ROUGH RIDER."

HERB KIPP, of Toronto, the Canadian representative of the Hendee Manufacturing Company, recently rode from Ottawa to Toronto on a twin-cylinder Indian machine in twelve hours and twenty minutes. The distance was 298 miles, and Kipp's mount was piled high with luggage. The roads were rough and Kipp was once thrown while traveling at a good rate of speed. A few days later Kipp rode to Peterboro from Toronto, a distance of 109 miles, in a few hours.

Kipp reported that motorcycle business in Ottawa and Peterboro is very healthy, a great deal of interest being taken in the single-trackers in the two places. Clubs are about to be formed in each center and preparations are being made to hold race meets on the tracks, such as they are. Ottawa now has some forty machines, half of which are Indians. In Montreal there are about fifty riders, but club enthusiasm does not run very high, although an organization is promised for next fall.

ANNUAL ENDURANCE RUN.

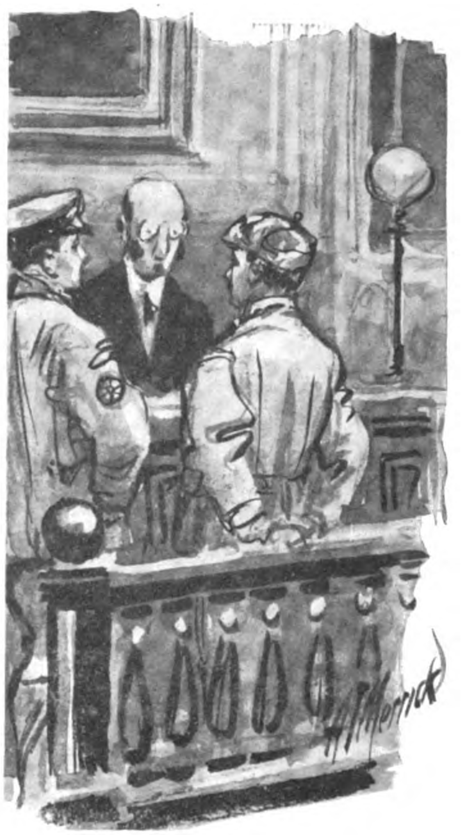
MINNEAPOLIS, MINN.—The annual endurance run of the Minneapolis Motorcycle Club was held on May 26. The run, which was about 150 miles in length, was from Minneapolis to Hutchinson, Minn., and return. About twenty-five riders participated. The route led from Minneapolis to Lake Minnetonka, to St. Bonifacius, to Glencoe, to Hutchinson and return.

HOUSER KEPT MOVING.

BRUCE HOUSER, a Findley (O.) motorcyclist, recently made a motorcycle trip from that city to Aurora, Ill., a distance of 327 miles, in fifteen hours.

"I say Bo, are we on de right track?"

"Sure—can't get lost, wid dis Touring Number. Hope dey get one out every spring."



The Culprit.—The traffic officer must be mistaken about my breaking the speed law for I ride one of those punk 'Putputts' motorcycles, and the best they can do is about ten mlies an hour.

The Magistrate.—What! I ride one of that make myself, and they are the best and speediest on the road. Ten dollars, and I wish the law would permit me to make it more!

AN UNREASONABLE TAX.

MOTORCYCLISTS of Norfolk, Va., argue that $10 a year as the fee for operating a power two-wheeler in their city is too high, and the Twin City M. C., of Norfolk and Portsmouth, is taking steps to have the regulations revised. In addition to the city tax the riders of Norfolk are called upon to pay a State fee of $2 annually, so that their complaint is not without justification.

GEOLOGIST IN THE RANKS.

J. S. CLARK, employed in the geological survey department at the State Capitol in Trenton, N. J., is one of the city's most enthusiastic motorcyclists. He says the machine allows him to combine business and pleasure most satisfactorily.

WANTS MORE MACHINES.

DES MOINES, Iowa, now has two motorcycle officers connected with its police department, and Chief J. W. Jenny is planning to add two more machines at an early date.

THE annual picture run of the Providence (R. I.) M. C., to Roger Williams Park, was held on Sunday, May 26. The riders gathered on Exchange Place, in Providence, at 11 a. m., and rode to the park in a body, where several photographs were taken.

FIRST SOCIAL RUN.

MINNEAPOLIS, MINN.—Under ideal weather conditions the Minneapolis Motorcycle Club held the first of its official sociability runs recently when about thirty members of the club journeyed up to Anoka for a day's spin. The riders gathered at Second avenue and Sixth street under the leadership of Captain Guy Webb and had an easy three hours' ride up to Anoka where the club had made arrangements for a chicken dinner at the Anoka Hotel. After dinner the riders took a short rest before mounting their wheels for a spin up the Rum River to Elk River, from which point they returned to the city by way of Champlain. The roads were in fine condition and many little speed contests were waged among the members of the club on the return trip.

So successful did the run prove that the club has decided to make them weekly events. For Sunday, May 12, the club had planned its annual reception to new members by holding a run around Lake Minnetonka with dinner at Excelsior, and a boat ride up into the upper lake for the afternoon, but rain caused a postponement of the outing.

INSPECTOR ON MOTORCYCLE.

DES MOINES, IOWA, is waging a pure milk campaign and to provide for thorough inspection of the city's dairies Milk Inspector Sasseen has been supplied with a motorcycle.

FOR POST OFFICE SERVICE.

IT is announced that motorcycles will be used in connection with the special delivery service for the New Orleans (La.) post office, and that the telegraph companies of the city are preparing to supply their messengers with motor mounts instead of bicycles.

A YOUTHFUL PILOT.

HARVARD WIMER, 13 years old, of Auburn, Ind., appears in the photograph on his brother's Excelsior. The youngster is capable of handling the machine perfectly even in crowded streets, and he has established a reputation for careful driving. He is the youngest rider in his section of the country and is duly proud of the fact. The picture is forwarded by C. G. Grill, Excelsior agent in Auburn.

HOW COOLEY LOCATED THE TROUBLE

Memphis Mouse That Nested in a Motorcycle Muffler Caused Some Excitement But Clever Sleuthing Foiled Him.

FROM Memphis, Tenn., comes the sprightly and more or less enlightening article which follows, diagnozing an ailment which tied up the innards of a motorcycle owned by Earl W. Cooley one morning recently. While departing somewhat from the viewpoint of the technician Mr. Cooley gives evidence of being in close affinity with his mount, and it is not likely that any motor affliction could long evade such an examination as the one here described. Says Mr. Cooley:

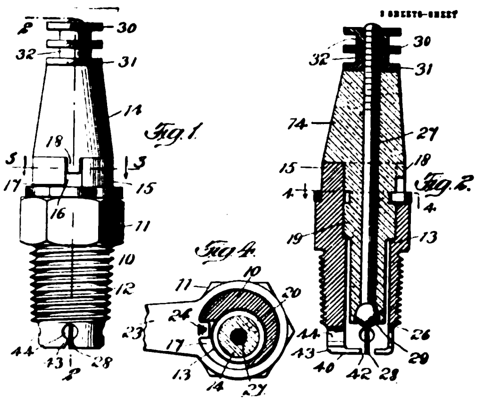
"The life of a married man is not wholly one of pleasure and recreation, particularly when he mixes up with a gasoline engine. He may have a few family jars and things may not go just right at the shop, but he can overlook these things or just take them with a smile. But when he has to ride 'steen miles to work, and he gets up late and his single-tracker refuses to start, and he can't get her started, he just has to sit down and cuss a bit.

"At least, that is just the way things went the other morning. My engine got a cranky streak on and the more I cranked it the crankier it got, until the air in my backyard had at least a few Blue Streaks in it. My machine is certainly one of the best made, and it cannot go dead if it gets gas and a spark—so the agent said—but I couldn't twist my tongue just right and the machine simply would not run. It is a high-pressure, double-action, single barrel, chain drive joy promoter, and will ordinarily start on a quarter turn.

"But this was an extraordinary occasion. At first I thought that the Tropic of Capricorn had got into the Canal Reservation, and sure enough the exhaust tube was bent. I screwed off the umbilicus and drew out the inner telescoping shaft, greased the pectoralis, cleaned the gumalickit, and finally did get it re-assembled. It looked good to me and I cranked 'er for over an hour to see if she wouldn't combust audibly. But nothing doing.

"Then I guessed that oil had accumulated in the hopsock, so the undulundator couldn't coalesce with the incus. I extracted the dumfud, wiped the gastric juice off of the doofunny and pumped oil about two-thirds of the way up the glass in the crank case. This made everything look all right. The motor should have said cop, cop, cop, right along now, but it simply said 'kachew, kachew.' Nothing else.

"Now, there is a tea canister annex suffixed to the main duodenum that runs up for'd the crank-hanger a piece, which has a couple of holes about the size of a fifty-cent piece in its rear end, and an attachment which is supposed to keep these holes closed. It is the duty of the above-described annex to say 'thung' at each explosion, but it was maintaining a discreet silence. Having noticed this, I decided to lie down on the grass (I needed the rest, anyhow) and investigate this. A careful investigation showed that mice from next door had built a nest of hen feathers and sox by carrying them through the holes in the annex, and this nest had plugged up the kapunker. When it tried to say 'thung' inside, the kapunker was stuffed up stiffer than the right leg of the Goddess of Liberty.



A Recently-Patented Spark Plug with Movable Electrode.

"I got the kapunker on again and confidence was immediately restored, and with a quarter turn she commenced to sing like a bird. A motorcycle is just as simple as driving tacks, but experience teaches that none of them will cop when it has a stuffed up snoot."

TO BUILD THEIR OWN ROAD.

MEMBERS of the Aberdeen, Hoquiam and Montesano clubs, Washington organizations, will co-operate on the construction of a three-foot roadway between their cities for the exclusive use of motorcyclists.

SOUND ADVICE.

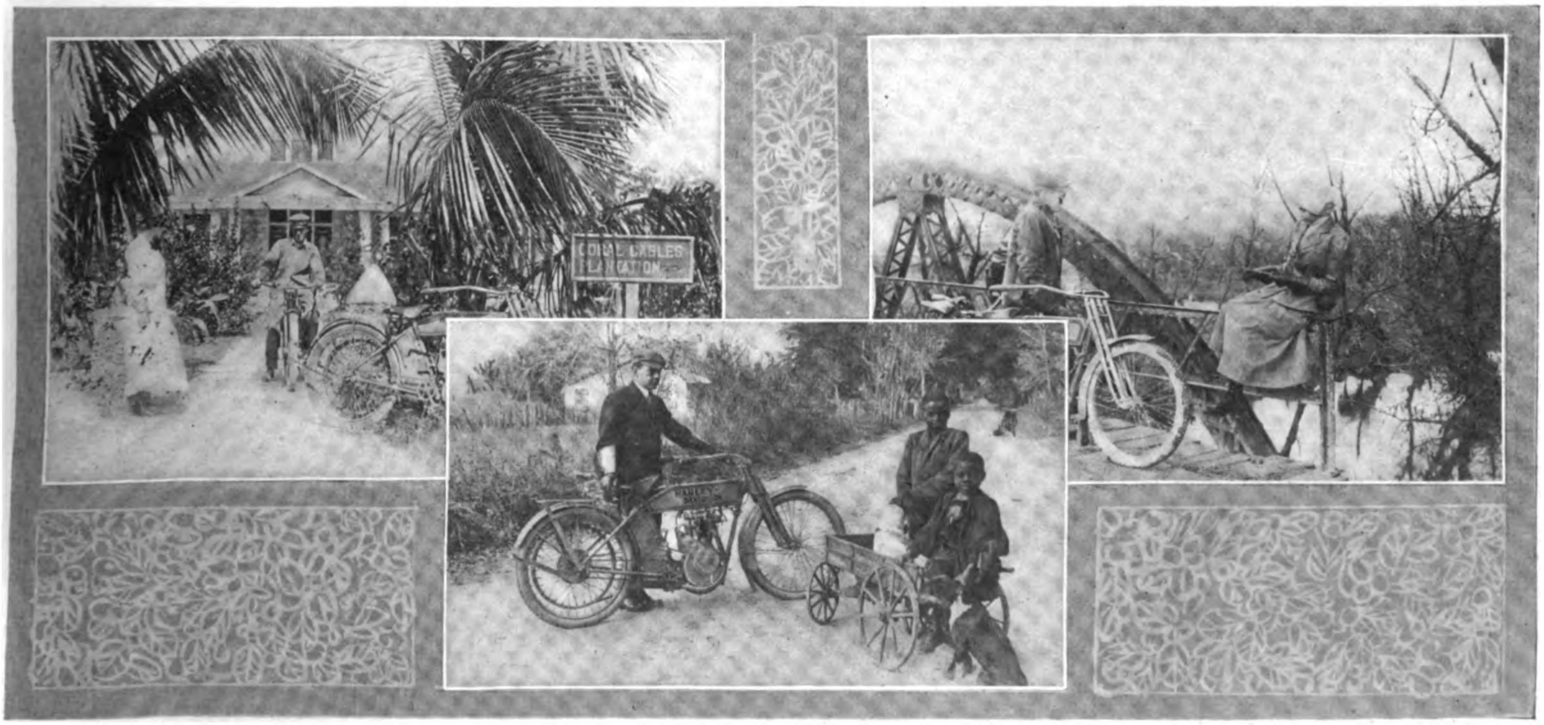
"IF a city wishes to increase the efficiency of its police department," says P. E. Thomas, who is connected with the department in Dayton, Ohio, "I advise the purchase of motorcycles."

SOLICITOR MOUNTS A THOR.

T. A. SEATON, chief solicitor for A. G. Spalding & Co., the well-known sporting goods house, is covering a broad district with the aid of a new Thor.

FLANDERS AGENTS.

LATTA BROS., 79 Tenth street S., Minneapolis, Minn., are now handling the Flanders 4. This is the first time that machine has been represented in the city, and it is proving quite popular.



Among the palms, the plantations and the little black fellows in the Southern States.

MORE RECORDS TUMBLE

Seymour and Claflin Set New Marks Until Their Oil Runs Low on Playa del Rey Saucer.

NEW professional records from one to twenty-one miles and improved amateur marks from one to seventeen miles were written into motorcycle history at the Playa del Rey saucer in California on May 17, when Ray Seymour and Lon Claflin spun the track in two hair-raising trials. Mounting his Indian, Seymour entered upon the record-crimping by turning off the initial mile in 36⅘ seconds, and there was no let-up in his terrific pace until his oil ran low and he was compelled to stop at the close of the twenty-first mile. From the first mile on Seymour's marks were as follows: 2 miles, 1:14⅖; 3 miles, 1:52⅖; 4 miles, 2:30⅕; 5 miles, 3:08⅖; 6 miles, 3:47⅖; 7 miles, 4:25⅘; 8 miles, 5:04⅖; 9 miles, 5:42⅗; 10 miles, 6:21⅘; 11 miles, 7:00; 12 miles, 7:39; 13 miles, 8:17⅖; 14 miles, 8:56⅘; 15 miles, 9:35⅕; 16 miles. 10:14⅕; 17 miles, 10:53⅕; 18 miles, 11:32⅘; 19 miles, 12:12⅘; 20 miles, 12:52⅘; 21 miles, 13:32⅖.

Lon Claflin, the Salt Lake City speedster, contributed his share to the excitement by reeling off the opening mile in 38⅘ seconds, and his other marks were as follows: 2 miles, 1:18⅖; 3 miles, 1:58⅘; 4 miles, 2:38⅘; 5 miles, 3:18⅘; 6 miles, 3:59⅕; 7 miles, 4:40; 8 miles, 5:20⅘; 9 miles, 6:01⅕; 10 miles, 6:42; 11 miles, 7:23; 12 miles, 8:03⅖; 13 miles, 8:43⅘; 14 miles, 9:23⅘; 15 miles, 10:03⅘; 16 miles, 10:44⅖; 17 miles, 11:24⅗. Shortage of oil also compelled Claflin to stop. Seymour has announced his intention of going after more records at an early date, and it is likely that Claflin will also make another trial for new marks.

When Marty Graves, mounting an Excelsior, rode two miles in 1:19⅖ on the Playa del Rey saucer on April 18, and continued this pace until he had been clocked for 25 miles at 16:35⅘ it was taken for granted that these figures would stand for quite a while, but Seymour in his latest trial lowered them at every circuit. Claflin has long been a rider who could be counted upon for sensational work, and his friends will not be surprised to learn that he has been stepping on the heels of old Father Time.

F. A. M. Referee Charles Fuller Gates superintended the trials and his officials were as follows: Henry Johns, starter; Paul Derkum, Percy Powers and H. H. Boore, timers; Fred Hofer, E. W. Hoag and Roy C. Barton, judges.

LOS ANGELES, Cal.—On May 24 Ray Seymour took up his record smashing again on the Playa del Rey saucer, at the point where he was halted through lack of oil in his May 17 trial, and completed the list of Indian records by establishing new marks from twenty-one to thirty miles. This leaves the Indian once more holding all records, both amateur and professional. The new records to be added to those made by Seymour on May 17 are as follows: 22 miles, 14:27⅕; 23 miles, 15:07⅕; 24 miles, 15:47; 25 miles, 16:27 and 30 miles, 20:21⅘.

LORAIN QUARTERLY TRIAL.

THE second quarterly trial of the Lorain M. C. is scheduled for June 2 to Toledo and return. A large loving cup will be the trophy.

Don Klark Lowering Dirt Track Record.

CLIPPED TRACK RECORDS

Don Klark Lowered Marks for Detroit Course in Series of Exciting Speed Duels with "Shorty" Matthews.

DETROIT, MICH.—Don Klark, mounting an Indian, lowered the local track records in three events at the meet held May 19 under the auspices of the recently organized Motorcycle Dealers' Association. He clipped two seconds off his old time for the mile in the time trials, going the distance in 49 seconds. In the 10-mile event for machines of the 61 cu. ins. class he led Shorty Matthews to the tape and set up a mark of 8:43. His time over the 25-mile route, the feature race of the card, was 21:36⅗. In the latter event Klark and Matthews fought all the way and it was only through the hardest kind of riding that the former managed to open up a margin of five lengths at the finish. Summaries:

5-mile novice; Dougherty, Indian, first; Moran, Indian, second; Swaffard, Indian, third. Time, 5:26⅗.

10 miles, 30.50 cu. in. machines; Matthews, Thor, first, Tullis, Thor, second. Time, 10:22.

10 miles, 61 cu. ins. machines; Klark, Indian, first; Matthews, Thor, second; Weitzman, Merkel, third. Time 8:43.

Unknown distance race, 30.50 cu. ins. machines; Matthews, Thor, first; Tulliss, Thor, second; Logan, Merkel, third. Distance, 9 miles; time, 9:23⅗.

One-mile time trials; Don Klark established new record for the track, 49 seconds. His former record, 51 seconds.

25 miles, 61 cu. ins. machines; Klark, Indian, first; Matthews, Thor, second; Tullis, Thor, third. Time, 21:36⅗.

CANADIAN CHAMPIONSHIPS.

THE official program of the first annual National Championships of the Canadian Motorcyclists' Association, to be held at Hamilton, Ontario, on Monday, July 1, on the Hamilton Jockey Club one-mile track, has been arranged. This meet will provide the first opportunity for riders in Eastern Canada to compete on a large track, and it is expected that many Canadian marks will go by the boards. There are ten events on the list, three of which are open championship races with distances at five, ten and twenty miles. There are also five and ten mile races for novices, private owners and an unknown distance event.

All entries close on Saturday, June 22, with President K. R. Spencer, 70 York street, Hamilton, or Secretary T. I. Anderson, 53 Chicora avenue, Toronto.

WARNING FOR RACERS

Chairman Thornley Points Out Danger of Forcing Track Owners into Combine Through High Rates.

BELIEVING that there is real significance in the old adage, "an ounce of prevention is worth a pound of cure," Chairman J. P. Thornley, of the F. A. M. competition committee, has prepared a letter of warning for speedsters who of late have shown some inclination to band together for the purpose of pushing up riding rates against track promoters. The board track boom which is sweeping the country has brought with it an unprecedented demand for experienced riders, but Chairman Thornley points out that unreasonable propositions from racing men will quickly force the track owners into a combination for mutual protection which will cause widespread dissatisfaction. His letter follows:

"It has come to my ears that certain professional motorcycle riders, realizing the scarcity of good riders and the demand for them by present and prospective motorcycle board tracks, have banded together to demand what appear to be exorbitant prices for their services.

"It is not the part of the F. A. M. to interfere with professionals as to the amount of money they get for their services, but it seems to me that it is my duty to warn and advice these men against getting the reputation of gouging when they have the opportunity. I want to warn them that the game is a young and uncertain one, and they may very readily by exorbitant demands, if not kill the goose that lays the golden egg, force track owners into a similar combination, which would result in their being squeezed in just exactly the way that they are apparently now trying to squeeze track owners. This is more than a remote possibility, and I would strongly advise the professionals not to indulge in such practices, but demand a fair remuneration for their services and not try to take advantage of the track owners' necessity.

"Moreover, I have also heard that some of the riders have entered into a contract with a man who does not own or promote

LOOKS LIKE A GOBLIN.

BUT it's only a freak picture accidentally snapped while Klark was breaking the dirt track record. He was coming so fast that he "beat the photographer to it."

a track, and that this contract is an individual contract between the riders and the gentleman referred to. In the first place, if such contracts exist it is easy to see that the gentleman making the contract expects to get something out of it. In other words, the riders have to be paid more than they otherwise would in order that the aforementioned gentleman can get his. I wish to say, that any such contract entered into by professional riders and a man who is not actually operating a track is not worth the paper it is written on, as far as the F. A. M. is concerned. The riders can break this contract whenever they feel like it, and unless the gentleman referred to can handle them legally, he need not look for any assistance from this office. Such contracts are bad in principle, and sooner or later get professional riders in such bad odor with track owners that they will simply lay for an opportunity to get even. I therefore hope that the professional riders will not enter into any contracts with anyone except actual promoters and track owners, and as the F. A. M. and this department of the F. A. M. has the best interests of the sport and of the professional riders as well as amateurs at heart, it would be advisable for the riders to consult me before they enter into contracts which might seriously embarrass them later on. I might say, that if exorbitant demands are persisted in by professional riders, in time it will become necessary for the F. A. M. to fix a standard fee for all professionals. This is a step which the F. A. M. would be very unwilling to take, and would only take it in order to save the professionals from subsequent squeezing they are sure to suffer from some sort of track owners' association if they persist in trying to hog everything in sight."

CALGARY ENDURANCE RUN.

A NUMBER of endurance runs are being planned through the southern part of Alberta, Can., by the Calgary (Alberta) Motorcycle Club.

ECONOMY AND GOOD TIME.

CHARLES L. SWOPE and J. Harry Ruth, of Hanover, Pa., recently made an excellent time and economy showing on their Merkel machines in a run of 127 miles. Swope mounted a Merkel 7, chain driven, and Ruth rode a Merkel 6 with belt drive. The last 54 miles of their trip were covered in 58 minutes, including three stops, and only seven quarts of gasoline were used throughout the trip. The accompanying photograph was taken as the riders were making about 40 miles an hour. The picture shows Swope facing on the right.

E. H. TRACY, of the Indian team at the new Luna Park Motordrome at Cleveland, May 18.

PLANNING TWO-DAY RUN.

THE St. Cloud (Minn.) M. C., which was recently organized with thirty-five charter members, reports that it contemplates holding a run to Minneapolis and St. Paul some time during July or August. Some members have advocated the plan of holding a two-day run to the Twin Cities instead of the usual one-day event, as it is claimed it would not be so tiresome and would give the members more time to see the cities.

TRACK FOR WATERLOO.

MOTORCYCLE riders in Waterloo, Ia., are rejoicing in the fact that they will soon have a splendid track for racing. Sufficient funds have been raised to establish a track in Prospect Park, near the tract now used by the gun club. Besides the track there will be a baseball diamond and a general athletic field.

INDIANA RACE SERIES.

RIDERS from Richmond, Terre Haute, Indianapolis, Columbus, Kokomo and other towns are arranging to attend the meets which will be held by the Indiana Racing Association on the Shelbyville track throughout the summer.

OPENED NEW TRACK.

THERE was a large turn-out recently at the opening meet on the new track at Opal, near Santa Cruz, Cal., and the local club scored a big success with the program.

BOYD A CHAMPION

By the Hardest Kind of Riding He Took Blue Ribbon Event at Denver from Cox and King.

DENVER, Col.—"Slivers" Boyd won the annual state championship by carrying off one of the most exciting and interesting events ever witnessed on the local saucer. Cox was only separated from first place by a margin of a few inches. Bowen, who was generally considered Boyd's chief rival, met with an accident just after the race started, his machine breaking in two at the head, but aside from giving the spectators a thrill no damage was done. Boyd demonstrated that he was entitled to his new honor by winning two of the three events entered, and only losing out in the third event by a few inches to Bowen and Cox. The thrills of the day were furnished by Cox, who in each event only lost first place by an inch or two, and was successful in beating both Boyd and Bowen for second honors in the events in which they did not pull down first place. Hurlbut had an easy time winning the amateur event.

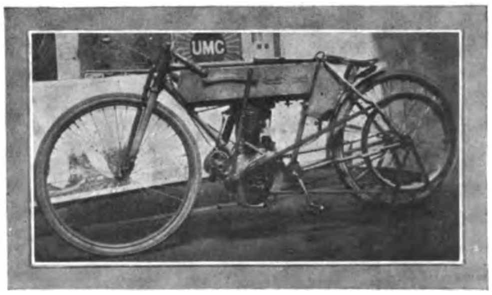
Summaries: 2 miles, amateurs, singles, stock; 30.50 class: T. Hurlbut (Indian), L. Parkhurst (Sears), T. Shepherd (Merkel). Time, 2:26⅗. 3 miles, open, professional; 61.00 class: "Slivers" Boyd (Indian), L. Bowen (Merkel), M. Cox (Merkel). Time, 2:12⅖. 5 miles, open, professional; 61 class: L. Bowen (Merkel), M. Cox (Merkel), "Slivers" Boyd (Indian). Time, 3:49⅕. 3 miles, consolation; profesional, 61 class: F. King (Indian), L. Fleckstein (Indian), A. Patterson (Merkel). Time, 2:20⅘. 7-mile State Championship; professional, 61 class: "Slivers" Boyd (Indian), M. Cox (Merkel), F. King (Indian). Time, 5:12⅖.

RIVERVIEW SANCTION.

CHAIRMAN THORNLEY, of the F. A. M. competition committee, has received a check for $750 from W. M. Johnson, representing the management of the Riverview Motordrome in Chicago, to cover a restrictive sanction for the track.

A HOME-MADE RACER.

W. STAUDEMAYER, of Danville, Ill., forwards the accompanying photograph of a home-made racing machine on which he has clipped off some fast miles. It is a 1909 model Excelsior, with 1910 cylinder. The frame is 26 inches high and 28-inch wheels are used. One of its novel features is a galvanized iron exhaust pipe. Staudemayer asserts that he buzz around a half-mile dirt track in 28 seconds. He has already won several races.



PLAN FOR A HANDY MOTORCYCLE GARAGE

Massachusetts Enthusiast Gives Detailed Instructions for Building an Attractive One at Small Cost that will Meet All Requirements of the Average Rider.

By ALFRED W. DEVINE.

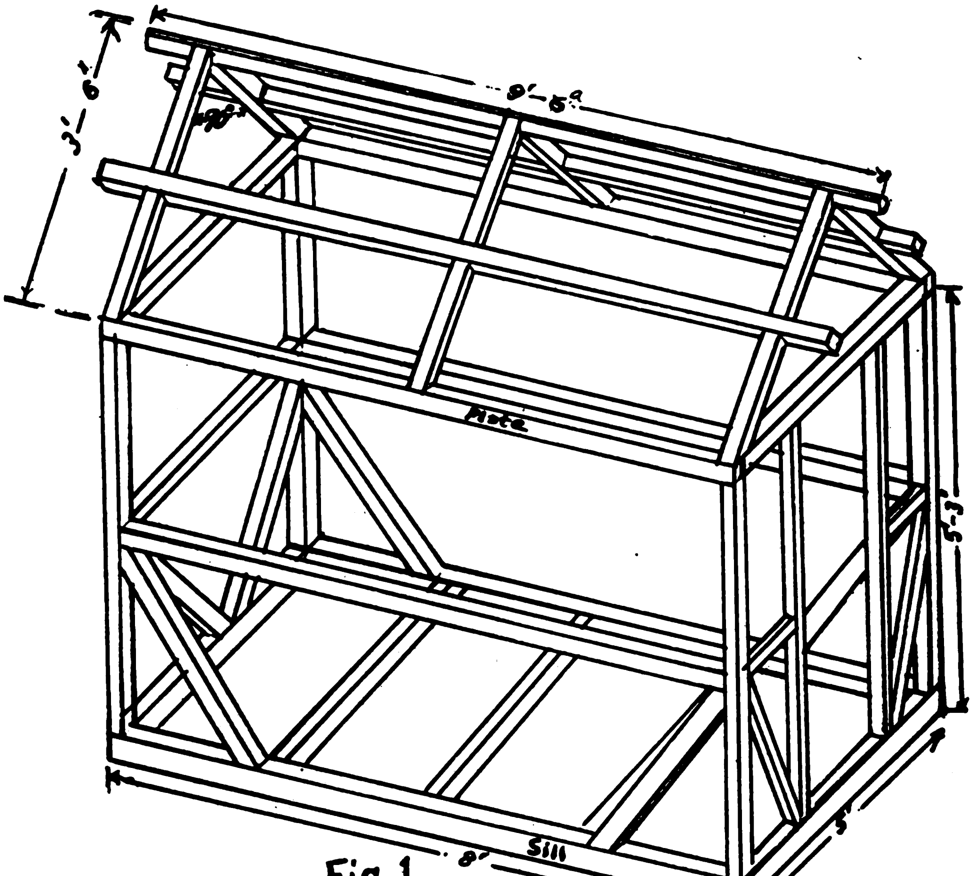


Fig. 1.

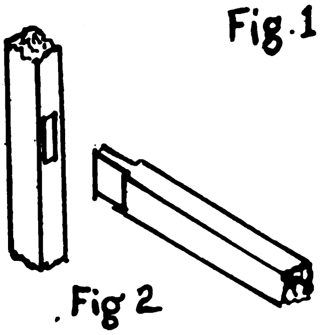

Fig 2

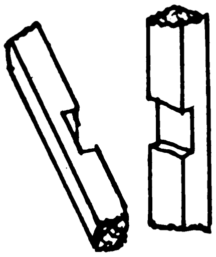

Fig. 3

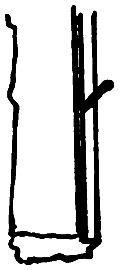

Fig. 4

ALMOST every motorcycle rider has felt the need, at one time or another, of a small motorcycle garage. By following a few simple directions, anyone can build a neat little house like the one shown in the photograph at a total cost of about twenty dollars. The materials needed are: Forty running feet of 2 x 4; 135 running feet of 2 x 3 (preferably planed on all four sides); 300 sq. ft. of 4-inch sheathing, and 40 sq. ft. of flooring. Any sheathing will do, but it must be well dried. In constructing this house the writer used a roof covering of canvas, but good sheathing will last for a number of years if put on properly. The best size nails to use are 8-penny wire nails for the frame work, and 6-penny finishing nails for the sheathing.

A view of the assembled frame-work is shown in Fig. 1. Square butt joints are shown for simplicity, but mortised or halved joints make a neater and stronger job. These joints are shown in Figs. 2 and 3 respectively. The floor timbers are of 2 x 4 joist, and all other frame members are of 2 x 3.

After selecting the most suitable spot for the garage, build four small foundations at points which shall be directly under the corners. These may be made by setting short posts upright in the ground, or by building small piers of red brick, or by other suitable means. Care should be taken that these foundations are firm and that they set level and even. They should be sufficiently high to prevent the rotting of the floor timbers through contact with the ground. The sills are set on edge and mitered at the corners, and the cross floor timbers are halved in at the ends.

Building the Frame.

Then place the corner posts in position with the 3-inch side toward the front and brace temporarily. Cut the plates out to the proper size and nail them firmly to the tops of the posts. The side plates will run the full length, but the front and rear plates will lack four inches of being full length, for they merely rest on the edges of the posts and butt up against the side plates, or they can be mitered at the corners as the sills were. Now cut the middle wall joists and permanent braces and nail them in place. It will be sufficient if the braces run back 2½ feet from the corners, for there will not be much strain on the frame.

After cutting the ridge pole to its proper length, it can be planed on both upper edges to give a flat surface for the roof sheathing. All the roof members are cut out before assembling them. The middle roof joists are halved-in with the jack rafters, and project over the ends to support the overhang of the roof.

Now cut the wall sheathing in 5¼-foot lengths, and nail it so that the upper ends are even and at such a height that they will come flush with the roof sheathing. This will be about three-quarters of an inch from the upper edge of the plate, but it can be accurately determined by laying a piece of sheathing on the roof so as to project over the side and then bringing up the wall sheathing till it comes flush. The lower edge of the wall need not be even, for it will be covered by the outer base board. Use finishing nails on the sheathing and drive the nails in at the inner edge of the bead, as shown in Fig. 4. If this is done, no nails will show when the wall is finished.

Door and Windows.

The uprights for the door-frame are cut and set 2½ feet apart. To make the door, take a sufficient number of boards cut to the approximate length, and lay them side by side on a flat surface. Block the boards on one side and drive them together from the other side with the aid of a small piece of spare sheathing so as not to mar the edge. When firmly in place, nail a block on the second side to keep the boards together. Then tack the three cross pieces on lightly with finishing nails. Now drill and countersink holes in the cross pieces for screws, one in each board on each cross-piece. Brace the door by placing two pieces of sheathing, one between each two cross pieces, diagonally upward, from the hinge side, and fasten them with screws. Remove the blocks and cut the ends of the door off evenly and to the proper length. The door should lap the frame about three-quarters of an inch on the top

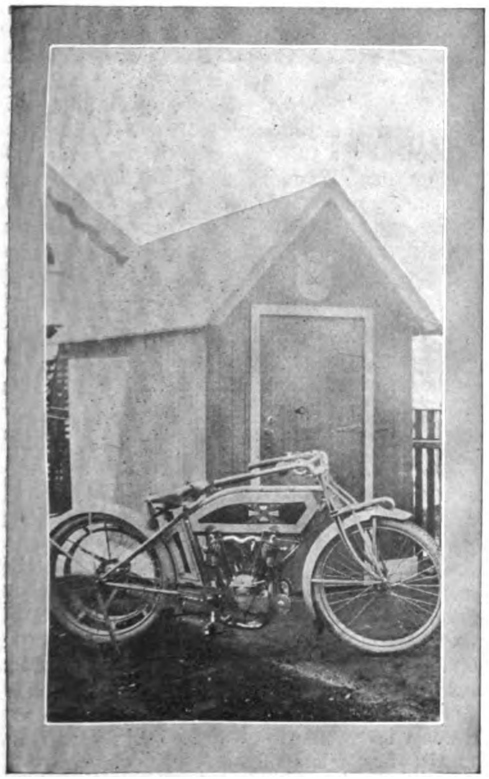
and sides, and 4 inches on the bottom.

The simplest window is made by having a sash (one containing six 8 x 10 lights is about right), which slides back and forth in guides. One window in the back will do, unless a great deal of work is to be done with the door closed. The opening should be left to one side of the center, so as to allow the sash to slide open wide. The sash can slide on the middle wall joist and can most conveniently be held in at the bottom by making a shelf which is put up so as to allow free sliding motion but keep the sash in place. Another guide should be placed at the top.

Care Needed on the Roof.

Great care should be exercised in constructing the roof. The sheathing should project about 9 inches over front and sides. To make it more durable it can be shingled or canvas can be stretched over it. If the latter method is used, the canvas should be obtained in widths which will allow a 4 or 5 inch lap at the joints. Stretch on the lower pieces on each side first and allow about three-quarters of an inch at each end for turning under so that the ends won't ravel. Tack the edges at intervals of about one-half to three-quarters of an ich all around. After the canvas is all on, two planed narrow strips of board or a piece of moulding should be nailed over the ridge pole to add to the appearance of the whole.

If the wood is dry it should be painted immediately. For the floor, heavy boards are the best, though not absolutely necessary. One and a quarter inch matched boards will stand heavy weights without bending and creaking or warping, and are therefore to be recommended. The interior walls should be stained to look well, for otherwise finger marks will soon discolor everything. A Yale night latch is the most satisfactory lock for the door, and the window can be fastened by means of a hook or bolt. Use good, solid strap hinges on the door, and fasten them with short bolts rather than screws.



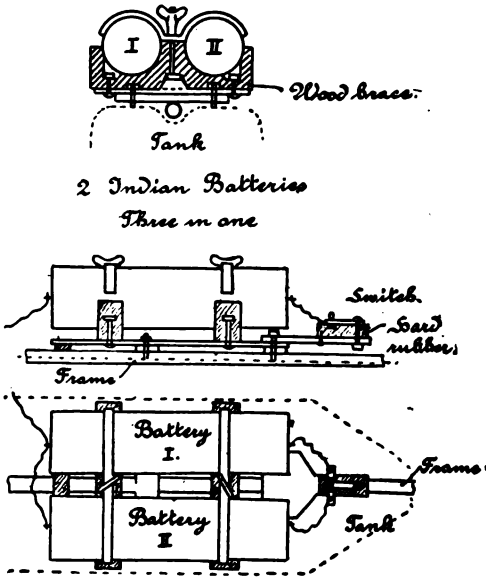
The Garage Completed.

In this article a great deal has been left to the ingenuity of the reader, for it cannot be supposed that the same details will be satisfactory to different people. If, however, the general directions are followed, and a little good judgment is applied, the result cannot but be satisfactory.

RESERVE BATTERY SYSTEM

Bayonne Motorcyclist Carries Two Sets of Batteries and is Thus Prepared for Ignition Troubles.

ALBRECHT HARRER, a motorcyclist of Bayonne, N. J., has worked out a neat and effective method of supplying his battery machine with a reserve ignition system, as described and illustrated herewith. The electric energy on his Reading Standard mount was formerly furnished in the usual way by a set of three dry cells, but Harrer has replaced these with two sets of Indian batteries (three-in-one) which greatly simplify the mounting and connecting and still afford the emergency system referred to above. The fastening of the attachment is accomplished by means of four bolts which formely held the tool-box in position. The arrangement of the wire connections and the double switch, as shown in the diagram, enable the rider to cut in or out either of the batteries.



The painting of the whole attachment in the color of the frame adds to the appearance of the outfit and makes a neat job. As will be noted in the photograph the batteries and holding device are not at all cumbersome. Harrer explains that he has found the old battery box on his machine handy as a tool carrier. The photograph shows Harrer in the driver's saddle.

Albrecht Harrer (in driver's seat).

FOR the well-meaning but over-confident motorcyclist who pilots his machine through country roads at night minus a light, or perhaps with a feebly flickering lamp of bicycle calibre, there is food for thought in a recent experience of Randolph Bates, of Egg Harbor, N. J. With a young woman occupying the tandem seat on his machine Bates was making reasonable speed over a good road when without warning he crashed into the rear of a farmer's wagon. Bates and his companion were thrown to the side of the road, cut and bruised, and the farmer whipped up his horse and has not since been heard from.

Those were the unfortunate conditions; now for the moral. The motorcycle ridden by Bates carried a lamp, not working at its best, perhaps, but still giving a light. The farm wagon carried no light at all! That is the significant point. The farmer felt no responsibility as a road user; he did not need a light and a thought for the safety of other travelers never entered his head. In short, he shifted his responsibility to the shoulders of the motorcyclist and then jogged blithely on, chewing the stem of his corncob. Whereon hinges the aforementioned moral: Motorcyclists who use the roads at night must always be prepared to think for the man ahead.

EMPIRE CORRECTION.

BECAUSE of a proofreader's oversight, on page thirteen of our Spring Touring Number, in the advertisement of the Empire Tire Company, it was stated that W. M. Hornlein, of Scranton, used 3¼-inch Empire Tires. The figures should have been 2¾ instead, which Hornlein used with remarkably satisfactory results on a tandem machine on which he and Mrs. Hornlein spent their vacation touring New Jersey and New York last summer. Regarding this tire Hornlein has written the Empire Company: "I have had no tire trouble in over 4,000 miles with the exception of a few punctures, which are a pleasure to repair with your butt-end inner tubes."

TO REMOVE RUST.

SAYS a veteran: To take rust off a cylinder, cover it with oil and run the motor until it is heated. Then wipe off the oil and most of the rust will come with it.

BURLINGTON CHARTER OPEN.

THE Burlington (Iowa) M. C. announces that its charter will be held open until the first week in July, and in the meantime a campaign is being waged for new members.

SIXTY NEW ORLEANS CLUB MEMBERS.

THE New Orleans Motorcycle Club, which has recently organized, has sixty enthusiastic members, and plans are being made for a large club house for their use.

PARK INSPECTOR BUYS ONE.

CHARLES J. GETZ, city forester at Ft. Wayne, Ind., has adopted a motorcycle to enable him to visit each of the city's parks every day.

Touring

CHICAGO TO RICHMOND

Road Conditions Described by a Richmond Motorcycle Tourist Who Made the Trip Recently.

M. A. BROADWELL, of Richmond, Va., has sent us some brief notes of a trip from Chicago to Richmond by way of Cleveland, Buffalo, Albany, Philadelphia and Harrisburg.

Mr. Broadwell left Chicago at 7:30 o'clock on the morning of April 29. He had no maps nor any touring information of value, and consequently had to depend largely upon a rider's instinct in covering the distance between the Western metropolis and Buffalo. He reached South Bend the night of the 29th, having found the roads from Chicago fair as far as Hobart and sandy to Michigan City, then again fairly good to Carlisle and South Bend. On the 30th Broadwell got as far as Waterloo and reports that the roads, most of the way, were very poor. More or less sand was encountered between Waterloo and Toledo. From Toledo to Cleveland, via Woodville and Elyria, the roads measured up to Middle Western standards, although rough in spots.

The Lake Shore road between Cleveland and Erie, via Geneva and Girard, afforded comparatively good going with sand now and then. The same conditions apply to the roads between Erie and Buffalo by way of Dunkirk.

Mr. Broadwell left Buffalo early May 4, determined to reach Syracuse by night. He succeeded in that effort, although he had no little trouble between Avon and Canandaigua, the roads in that section of the country being described as "simply rotten." Between Canandaigua and Syracuse, however, by way of Geneva and Auburn, riding was comparatively easy, although the grades are numerous, many of them winding. On the way to Albany as far as Utica road conditions were found acceptable, but beyond Fonda they were anything but that. "I was stuck twice," writes Mr. Broadwell, "before reaching Fonda. Once I had to push my machine a hundred yards up hill over slipping stones. As the machine weighs 220 pounds and I only 135, you can readily appreciate that it was not an easy job." However, between Fonda and Albany, owing to the excellent road conditions, the hardy tourist managed to make up some of his lost time.

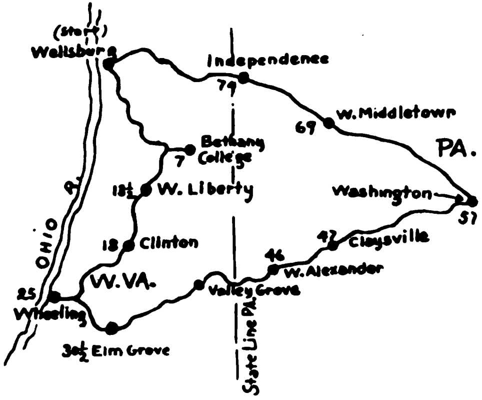
Nothing unusual occurred the nex day on the Albany to New York trip over good roads along the Eastern bank of the Hudson river. The one hundred and fifty miles were made in 6¾ hours. Perfect roads were encountered on May 7 in New Jersey between New York and Philadelphia. Hagerstown, Md., was the next night's stop. From Philadelphia to Lancaster the roads were quite satisfactory, although the toll gate nuisance abounds in this part of the country. From Lancaster to Gettysburg and thus on to Hagerstown one can ride under fairly comfortable circumstances. This is also the case as regards the roads between Hagerstown and Harrisburg, except for the fact that one encounters toll gates every five miles. The keepers charge two cents a mile for motorcycles and seven cents a mile for automobiles. Broadwell left Hagerstown the following day for Staunton, Va., and Charlottesville, the roads being good as far as Staunton. On the following day, which was May 10, Broadwell reached Richmond late in the afternoon, having left Charlottesville at 10 o'clock in the morning. He rode a single-cylinder Excelsior fitted with Diamond tires. His cyclometer registered 1,623½ miles.

PENSACOLA TO ATLANTA.

LAZAR COHN—Owing to the poor condition of and lack of specific information on roads in Western Florida, we suggest that you go across to Mobile, Ala., following as nearly as possible the line of the Louisville & Nashville R. R. through Northup to Muscogee. From there go on through Styx and Gateswood to Loxley, where follow the railroad to Bay Minnette, Dolives, Hurrican, Neurmoosha and Magazine to Mobile. From Mobile go north to Jackson, then to Sunny South and Selma. From Selma go to Montgomery, then to Opelika, Columbus (Ga.), Macon, Forsyth, Barnesville, Griffin, Pomona, Sunnyside, Hampton, Lovejoys, Jonesboro and Atlanta.

DETROIT TO INDIANAPOLIS.

W. SPEER—In the May 16 issue, on page 72, will be found route 106, Detroit to Fort Wayne, Ind. From Fort Wayne, follow back on route 208 (page 83) thus: Fort Wayne; 23.8 Bluffton; 32.8 Petroleum; 40.8 Pennville; 50.5 Redkey; 57.8 Albany; etc. Distances and road conditions are given.



Wellsburg-Wheeling-Washington, Pa., Tour. Contributed by Ray Blomgren.

FORMED MILITARY CORPS.

A MOTORCYCLE mobilization in which 99 riders took part was held recently at Daventry, a little town in Northamptonshire, England, for the purpose of forming a corps of motorcyclists who will be available for military duty in the event of an invasion of the British Isles.

A MOUNTAIN TRIP

Bakersfield Club Carried Cooking Utensils and Featured Recent Outing by Dining on Rainbow Trout.

ON a recent club run the members of the Bakersfield (Cal.) M. C. rode up into the mountains about 50 miles from Kernville and enjoyed an outing which would gladden the heart of any motorcyclist. They carried provisions, coffee pots and other cooking utensils and made the most of the fact that the trout season was open. The boys hooked a fine lot of rainbow trout, hunted to their hearts' content and finally jogged back to Bakersfield without having had a puncture or a bit of mechanical trouble. Such outings are held regularly, and they seldom foot up to less than 100 miles.

The Bakersfield club is now occupying its new quarters, suite of four large rooms and bath in the heart of the city, which, by the way, had 30,000 inhabitants. The club outgrew its old headquarters, but the club officials believe that they are not now prepared to meet all requirements.

ACROSS ROCKIES BY TANDEM.

E. Frank Winfield, now proprietor of The Outing Shop, a motorcycle and general sporting goods establishment in Grand Junction, Col., writes that the motorcyclists of his district are leaving nothing undone to advance the boom which is under way. The dealers have been hampered by slow deliveries on both machines and accessories, but they are now making progress. Winfield is laying plans for a tandem trip to Denver, across the Rockies and through Tenessee Pass, which is at an altitude of 10,400 feet. He will be accompanied by his wife, and the journey will be the first to be made over this route with a motorcycle passenger. Winfield uses an Indian twin for his tandem outings. He handles the Indian machines in Grand Junction in conjunction with Felix Carson, who also has the Excelsior agency.

DATA FOR ROAD GUIDE.

UNDER the auspices of the Minneapolis Automobile Association W. L. Foster, of Duluth, is making a 2,000-mile trip through the State by motorcycle for the purpose of obtaining road data to be embodied in a guide book.

A CROSS-COUNTRY TOURIST.

JOHN GETTMAN, of Pomona, Cal., started recently on his motorcycle for a cross-country trip to New York City from which point he will sail for Europe, leaving his power two-wheeler behind. Gettman is making his way eastward via San Diego, Imperial Valley and the Texas route. In the Lone Star State he will turn northward with a view of visiting Salt Lake City and Chicago before starting on the last leg of the journey to New York. The tourist has adopted this circuitous route to see as much of the country as possible.

From *Motor Age.*

A three weeks' journey from New York to Houston, Tex.

BIG ROAD MEETING.

VANDALIA, Ill., will be the scene of a big meeting in the interest of the Good Roads movement on July 4, when the delegates will gather from all the counties through which the National Road passes. The purpose of the convention is to develop plans for improving the old National Road and keeping it in good condition through the State with the aid of the federal government.

HAMPERED BY TAR.

MOTORCYCLISTS of Chester, Pa., wondered why their mounts did not pick up speed on warm days until they discovered that tar oozing out of wood block pavements was accumulating on their tires to such an extent that it imposed an extra pull against the motor. The effect was slight, of course, but noticeable.

THE COMPASS FOR TOURISTS.

DURING the last year the compass has come to be a necessity for motorcyclists who are making long tours through little-traveled districts, and a number of riders have used them to advantage. In some cases the face of the compass has been covered with phosphorous so that it may be read easily at night.

TAMPA TO JACKSONVILLE.

WILBUR MILLS and Elmer Wallace, two young motorcyclists of Tampa, Fla., devoted their vacation recently to a trip on their machines from Tampa to Jacksonville and return.

TOURING ROUTES.

REQUESTS for touring directions have been so numerous that our staff has been unable to give them all immediate attention. None has been overlooked, however, and the information called for in each case will be forwarded by mail as soon as possible. The indulgence of those who are eagerly awaiting information from this office is asked for just a few days more.

FAST HILL CLIMBING

Louisville Club Opens Season with Series of Exciting Events — Marshall Takes Four Firsts.

LOUISVILLE, Ky.—The Louisville M. C. held its first hill-climb of the present season on May 18, on Wood's Hill, in Cherokee Park, with about fifty entries in the five events. Frank Marshall, riding Indians, did the expected by taking all four events in which he was entered, though the fastest time of the afternoon was not made by him. The record for the climb was made on an Excelsior, ridden by Walter Kempf in the 7 h. twin consolation event, after he had been defeated by Marshall in the event proper. Kempf's time for the hill was 12 seconds flat, three-fifths of a second faster than Marshall negotiated the same distance.

Laid out over a fairly steep hill, with two sharp curves and no straighaway except for the last fifty yards, the course was 275 yards in length. An electric attachment was arranged so that when the front wheel of the rider passed over the starting line a circuit was completed and an electric bell notified the timers at the top of the hill, leaving no chance for the officials to make a mistake. Five regular events and two consolation runs were made. A summary follows:

First event, 4 h. machines, flying start; Marshall, first; Roche, second; Klein, third; Phillips, fourth. Time, 16:3.

Second event, 7 h. machines, flying start; Marshall, first; Ansback, second; Buxe, third; Baurle, fourth. Time, 12:3. Baurle and Kempf tied for fourth place, Baurle winning the tie by making the distance in 12:3, the same time that was made by Marshall in winning.

Third event, 6 h. machines, flying start; Smith, first; Skilton, second; Klein, third; Squires, fourth. Time, 14:4.

Fourth event, 4 h. machines, standing start; Marshall, first; Phillips, second; Shepherd, third; Roche, fourth. Time, 21:3.

Fifth event, 7 h. machines, standing start; Marshall, first; Ansback, second; Wolke, third; Davis, fourth. Time, 16:1.

Davis took the 4 h. consolation event in 19:2, and Kempf grabbed the consolation for the twins by taking the hill in 12 seconds flat. the record for the day.

Handsome prizes donated by dealers and stores of the city, were given to the first four in each event. Tires, saddles, carbureters, speedometers, riding clothes, etc., were among the prizes. The present plan of the club is to make this hill-climb an annual affair for opening the season in Louisville. Many persons saw the events, though the hill is quite a distance from any car line. Both sides of the road along the entire course were lined with people.

HAD TO HAVE MOTORCYCLES.

MOTORCYCLES figured prominently during the recent military maneuvers and aeroplane trials at Galesburg, Ill., the little speed boxes furnishing some of the thrills in each day's program.

ECLIPSE HUSTLERS.

IN the accompanying photograph appear some of the department heads who are working at top speed these days to keep abreast of orders at the big plant of the Eclipse Machine Co., in Elmira, N. Y. From left to right they are: A. C. Rice, who has charge of the parts department; C. H. MacPherson, factory superintendent; J. C. Ferguson, sales manager; J. H. Mantanle, general foreman, and F. S. Ellett, designer of the Eclipse brake and Eclipse free engine pulleys. All five are well known in the trade.

F·A·M

ESTABROOKISMS.

INTER-CLUB rivalry in the Canal Zone appears to be reduced to a minimum at the present time, for those Smallwood boys have annexed every rider on the zone.

WHILE there are few things that are indispensible, it is well to note in passing that the motorcycle is fast attaining a position of importance in governmental projects of large magnitude, such as the construction of the Isthmian canal and the advancement of civilization in the Philippine Islands and elsewhere. Then, too, its merit and usefulness as a necessary adjunct to army manoeuvres and actual warfare is rapidly being demonstrated to every country on the globe.

The motorcycle is now playing its alloted part in making good the assertion of Count De Lesseps when, surrounded by a brilliant retinue of officers and notable personages, he sailed a little way into the ditch and with the unscratched heights of Culebra dimly discernible through a telescope, he perpetrated that huge joke of declaring the Isthmian canal "open" to navigation.

AND now, after installing well organized clubs in the Canal Zone and the Philippines, the F. A. M. is looking towards Alaska to pave the way to a larger F. A. M., and the man is right at hand to turn the trick. Mr. Wm. F. Merchant, manufacturers' agent, broker, dealer and enthusiastic rider, is on the job for the F. A. M. and in time results will be forthcoming. Mr. Merchant's address is P. O. Box 171, Juneau, Alaska.

THE East Side M. C., of East St. Louis, Ill., 20 members strong, has decided to join the F. A. M. in a body. This is likewise true of the Ontario (Cal.) Club.

THE following local people are organizing clubs: W. H. Schmidt, Chico, Cal.; S. P. Glover, Nashville, Tenn.; T. P. Dackley, Boone, Iowa; J. R. Whiting, Northampton, Mass.; Jack McGarvie, Bennett, Iowa, and the Gulfport Automobile Company, Gulfport, Miss.

THE list of registered F. A. M. repair shops still grows; the latest: No. 653—James M. Poorman, Fulton, Ind. No. 654—G. A. Stevenson & Co., 103 Main street, Ottawa, Ill. No. 655—Frank J. Zugner, No. 205 S. James street, Rome, N. Y. No. 656—Panama-American Automobile & Supply Co., Culebra, C. Z., Panama. No. 458—G. W. Williams, No. 301 W. Erie avenue, Lorain, Ohio; re-issue.

F. L. SKINNER, 1233 Bloomfield street, Hoboken, N. J., has received F. A. M. number 15,000.

CAMPBELL SUCCEEDS WHITNEY

Chicagoan Resigns as Vice-President of Lake District and on His Suggestion Dayton Booster Is Named.

TO the regret of F. A. M. officials and motorcyclists throughout his territory, P. B. Whitney, of Chicago, has submitted his resignation as vice-president of the Lake District of the Federation. In a letter to President Hamilton Mr. Whitney explains that the pressure of business will not allow him to devote the time required to F. A. M. affairs, and rather than slight the duties of the office he decided to withdraw. Jesse Campbell, of Dayton, Ohio, has been appointed to succeed him. On retiring Mr. Whitney suggested the appointment of the Dayton hustler, and the F. A. M. directors lost no time in placing him at the head of the Lake District. Mr. Campbell is not a newcomer in the Federation arena. He has long been a consistent and result-getting worker for the F. A. M. and the present recognition does not come to him unearned.

Jesse Campbell.

In referring to Mr. Whitney's resignation, President Hamilton pays him a merited tribute. "It is only due him in consideration of all the work he has done for the F. A. M.," writes the president, "to state that the organization is losing one of its best officers; one on whom it has always relied and who has never been found wanting."

DIX IS ON THE MOVE.

C. F. DIX, local F. A. M. commissioner in Stockton, N. J., has taken the Indian agency for Flemington, in addition to his Stockton district and has appointed Otis W. Pimm, proprietor of the Flemington Garage, as sub-agent. He has already closed a number of sales in his new territory. Dix is using the advertising system furnished by the Manufacturers' Publicity Bureau and is convinced that it will do the work. Although his expanded business now keeps him on the jump he manages to give the F. A. M. affairs regular attention and is preparing to launch a club in Flemington to promote races, hill climbs and runs.

REGISTERED SHOP SIGNS.

CHAIRMAN ESTABROOK, of the Federation membership committee, is preparing attractive card signs, 10 by 14 inches, bearing the announcement on both sides that the shop in which they are seen is properly registered with the F. A. M. As soon as they are returned by the printer they will be sent out to all registered shop proprietors. Among the latest shop owners to obtain the stamp of F. A. M. approval are the following: J. C. Bogardus, Ithaca street, Horseheads, N. Y.; A. Gergishak, 1248 Golden Gate avenue, San Francisco, Cal., and W. E. Wandersee, 129 Gratiot avenue, Detroit, Mich.

ANOTHER CHICAGO CLUB.

THE Austin M. C., of Chicago, is one of the recently organized clubs that will soon be listed with the F. A. M. This squad has 30 riders, all full-fledged enthusiasts. F. T. Sherman, 5502 Iowa street, is secretary. Chicago now has, it is believed, more motorcycle clubs than any other city in the United States, but the number of active riders is plenty large enough to warrant organizations in each motorcycle center in the big Western town.

THREE CLUBS PROMISED.

AMONG club boomers who expect to have squads ready for affiliation with the F. A. M. before the summer is far under way are the following: The Sorenson Co., Peekskill, N. Y.; B. S. Thomas, 1113 Willard street, Ann Harbor, Mich.; J. L. Quinn & Co., 223 Franklin street, Michigan City, Ind.

IN AFFILIATED RANKS.

NEW club arrivals: Galion (Ohio) M. C., R. H. Evans, secretary; 22 members, 100 per cent.; Aksarben (Neb.) M. C., S. F. Boord, secretary; 16 members; Somerville (N. J.) M. C., E. J. Kenner, secretary, 234 Grove street.

COUNTY AND LOCAL WORKERS IN F. A. M. RANKS

Chairman Estabrook's Revised List of Federation Commissioners Shows That a Few States Are Well Covered While in Others Progress in Appointing Representatives Has Been Slow.

THAT there is still plenty of leeway for activity on the part of F. A. M. State and county commissioners throughout the country is evident from a revised list of Federation representatives just prepared by Chairman E. M. Estabrook, of the membership committee. This list indicates that while a number of the State and county officials have worked like Trojans during the last few months, others have not made the most of their opportunities to foster F. A. M. interest. In some States little or no progress has been made in the appointing of county commissioners, and the ranks of local workers in these sections have been correspondingly thin. Chairman Estabrook feels that in most cases the State official has made a conscientious effort to obtain county and local workers and that the failure to enlist more of these representatives is due to a lack of co-operative spirit on the part of riders in general.

"No doubt the boys mean well," writes the Bangor booster, "but the returns show that they are disinclined to shoulder the slight responsibility incident to acting as a county or local representative for the Federation. They do not seem to realize that the State officials must depend upon them to carry the F. A. M. banner forward into new territory, and that without their assistance comparatively little can be accomplished. The thickly populated States naturally offer better club fields than some of the districts where towns are scattered and roads poor, but it would seem that even in the less inviting sections there should be much more liberal representation of the Federation."

Chairman Estabrook's revised list shows the following squad of county and local workers in New York, appointed by State Commissioner Robert S. Morton:

E. C. Langworthy, Andover; Jos. Harrington, Auburn, Owasco Road; Robert Morse, Wales Hotel, Binghamton; Otto H. Peters, 330 Pearl street, Buffalo; Ralph H. Ames, Cortland; Charles S. Teasdale, 221 Lake street, Elmira; Lynn W. Shipman, Gowanda; R. Douglas Boyd, 58 N. Main street, Gloversville; F. E. Keller, R. F. D. No. 5, Huntington, L. I.; G. H. Ferrtsch, 55 Highland avenue, Jamaica; Geo. B. Carroll, Industry; A. C. Klages, 37 Vernon avenue, Long Island City; Wm. J. Ferris, Jr., Box 18, Lockport; M. B. Thompson, 114 S. Fulton avenue, Mount Vernon; Clinton Price, 233 Main street, Poughkeepsie; Robert C. Hayes, 155 Oak street, Plattsburgh; A. C. Noonan, Rome; R. J. Van Horn, Suffern; Geo. W. Fenner, 819 South West street, Syracuse.

The list of local commissioners for New York State is as follows:

Lewis S. Troll, 1398 Nostrand avenue, Brooklyn; J. U. Constant, 422 Gates avenue, Brooklyn; E. W. Crumb, Clark Mills; Louis F. Bradburn, 45 Chapel street, Canandaigua; Thos. Miller, Lee Centre; Milton Ackerman, Gull Bay, Lake George; W. J. Caldwell, Jr., 5 S. Water street, Newburg; Chas. Ackerman, 4 Mechanic street, New Rochelle; H. V. Miner, Oriskany Falls; Marvin Welch, 92 Chestnut street, Owego; Jno. Ochs, 207 Jefferson street, Rochester; Howard D. Ingalls, Scottsville; Geo. White, Taberg; Frank J. Bowen, 54 South street, Utica; Geo. Olney, Westernville; W. A. Ford, 1 Depot Sq., White Plains.

County commissioners of Pennsylvania have been named as follows by State Commissioner E. B. Connell:

E. A. Hagenbuck, 134 N. 6th street, Allentown; J. M. Davis, 1323 7th avenue, Altoona; G. H. Walter, 303 S. Main street, Butler; F. B. Airhart, Phoenixville; C. H. LaJeal, 627 W. 9th street, Erie; C. A. Pierce, 414 Locust street, Johnstown; A. I. M. Sheeder, Lock Box 262, Minersville; L. J. Spingler, 2003 Market street, Philadelphia; H. C. Becker, 411 N. 12th street, Reading; C. R. Jones, 627 Lackawanna avenue, Scranton; B. G. French, Tioga; T. W. Long, 43 E. Wheeling street, Washington.

Pennsylvania's local workers line up as follows:

Blaine E. Zerby, Allensville; Chas. H. Maderia, Burnhart; Wm. Stewart, W. Broad street, Bethlehem; Dr. N. C. Grove, 51 N. Main street, Chambersburgh; Chas. T. Calvin, Crabtree; A. E. Wildman, Cornwell Station; Ira Wagner, 414 Locust street, Cambria; S. H. Smith 132 Park street, Carbondale; Chas. H. Pierson, 203 Central avenue, Cheltonham; V. L. Hamlin, 23 Main street, Carnegie; J. M. Duncal, Esterly; E. H. Swartz, Park Bldg., 6th street, Ellwood City; Harry Bruce, Elizabeth; J. M. Williams, 18 7th street, Franklin; T. S. Blocher, High street, Gettysburg; A. P. Knight, 312 Park street, Greenburgh; E. Y. Kuenzig, 212 Main street, Girard; E. L. Watson, 1331 Berryhill street, Harrisburg; P. S. Coulter, 503 E. 8th street, Homestead; Ralph E. Wilder, 527 Thomas avenue, Johnstown; S. L. Burk, 47 Way street, Lewiston; J. Edgar Smith, 745 Cumberland street, Lebanon; H. R. Williams, Lancaster and Frederick street, Lancaster; W. D. Scott, Lititz; John J. Metz, Meadville; J. H. Hull, Mount Hope; C. S. Hartman, Mohnton; W. R. Nuss, 1320 Louise street, Munhall; H. D. Horton, 258 W. Washington street, New Castle; K. E. Banks, N. Railroad street, Oakmont; Wirt Sconton, Wood street, Parsons; Geo. Elias, Main street, Portage; Dr. S. D. Bashore, 110 Railroad street, Palmyra; G. E. Freshley, 15 York street, Pottstown; A. G. Schmidt, 106 Whitfield street, Pittsburgh; D. L. Santee, 202 W. Washington street, Rochester; M. Barnet, 207 N. Front street, Steelton; E. A. Hamilton, Mechanic street, Smethport; Lyle Geiger, 7306 Ellsmeve avenue, Swissvale; P. D. Wilcox, Phi Delta Theta House, State College; E. G. Young, Turtle Creek; J. M. Ritter, Jr., 228 Poplar avenue, Wayne; Geo. Smith, Weldon; E. E. Gillham, Weisport; R. D. Kalback, W. Leeport; B. F. Connor, 252 S. Main street, Wilkes-Barre; W. B. Hollingsworth, 22 Duboise street, Williamsport; H. H. Ebenshade, N. Grant street, Waynesboro; J. P. Wolf, 411 W. Market street, York.

State Commissioner R. Y. Leslie has made up the following list of local representatives for California:

E. B. Ellis, 1121 Laurel street, Berkley; D. F. Lightner, Bakersfield; Walter Johnson, Oakdale; W. G. Ramer, Corning; R. E. Gilbert, Calton; G. G. Willsey, Elsinor; Harry Eriekson, 160 J. W., Fresno; Chas. R. Fox, Lemoore; Lincoln Halland, Jr., 1034 S. Main street, Los Angeles; E. A. Haldridge, Modesto; T. B. Haines, Maricopa; E. S. Barron, Moravia; T. T. Dause, Napa; C. E. Rounds, Oxnard; E. F. Rase, Oakland; H. C. Pieper, Petaluma; W. B. Shortman, Porterville; C. W. Levengood, 386 S. Thomas street, Pomona; W. L. Rainer, Red Bluff; C. H. Lashee, Redlands; D. F. Clark, Stanford University, Box 877, Cal.; S. L. Lyon, Box J, San Diego; Frank McIntyre, 320 F. street, San Bernardino; A. C. Banta, 174 S. 2nd street, San Jose; P. E. Marlatt, Santa Rosa; E. A. Thormaker, 1025 10th street, Sacramento; C. C. Russell, 531 E. Market street, Stockton; J. E. Fannis, Turlack; W. P. Westfall, Vallejo; A. W. Taylor, Watsonville; P. I. Bennett, 120 W. Philadelphia avenue, Whittier.

State Commissioner M. E. Harding, of Kansas, has named the Rev. R. J. Mattingly, of Miltonvale, and Leslie H. Pitzer, of Pratt, as county representatives, and his list of local workers is made up as follows:

William Holcomb, Atwood; F. A. Slack, Beloit; Joseph Otter, Clayton; Fred Hyames, Dighton; A. C. Shaw, Emporia; Paul Warner, Ellsworth; L. I. Goodrich, Goodland; Raymond Sylvester, Garden City; Ferd Selle, Great Bend; Frank J. Overstreet, Kiowa; Louis I. Tower, Lawrence; P. E. Zimmerman, Lindaborg; P. B. Spencer, Monument; L. R. Tripp, Meridan; Leslie H. Pitzer, Pratt; I. F. Adams, Parsons; Claud F. Stone, Smith Center; Edward Anderson, Box 307, Salina; J. C. McCleery, Topeka; E. C. Street, Tescott; G. E. Woodwell, 620 E. Pine street, Wichita.

In Nebraska State Commissioner Charles H. Gabus has appointed the following local representatives: Arthur Brush, Auburn; Dr. J. C. Smith, Blair; Charles Westcott, Dunbar; C. W. Lockwood, Kenesaw; Victor Stinger, Nebraska City; C. E. Fredericks, Pawnee; Paul Belt, Walthill, and B. C. Wildman, York. State Commissioner M. E. Bowers, of Idaho, has named W. C. Gloystein, 360 Third avenue, Twin Falls, as a county representative; Alvin Knaac, of St. Joseph, has been appointed as a county commissioner in Michigan by State Commissioner A. F. Gregor; Michael Curnow, of Butte, is a local worker under State Commissioner R. D. Barnard for Montana, and Commissioner Maskell, of Oregon, has named three local officials as follows: M. P. Baltimore, of Albany; William Horsfall, of Marshfield, and Walt Shipp, of Salem.

State Commissioner W. F. Reed, of New Jersey, has named six assistants as follows: W. R. Smith, Camden; W. Wallace Bingham, Dover; Oliver Regener, D. D. L., Paterson; C. F. Dix, Stockton; George B. Yard, Jr., Trenton, and Charles W. Pearson, Vineland. Mississippi has one county commissioner, Guy Burrell, of Jackson, who was appointed by State Commissioner S. C. Ragan; Washington has two, F. G. Anderson, of Olympia, and R. A. Button, of Tacoma, appointed by Commissioner J. F. Gorman; Minnesota also has two, Herbert L. Fisher, of Beardsley, and A. E. Bakeman, of St. Cloud, appointed by State Commissioner Ira W. Stewart.

State Commissioner O. B. Peacock, of Tennessee, has appointed W. L. Hartman, of Memphis, a local representative; Commissioner E. B. Ewell of Virginia, has two local workers, W. H. Jeffrey, Jr., of Newport News, and W. H. Feuerstein, of Norfolk; in addition to its two county commissioners Washington has one local worker, C. C. Mecum, of Spokane, and Iowa has one local appointee, Ray G. Pratt, of Waterloo.

PROMISING CLUB IN ATLANTA.

ATLANTA, GA., has launched a lively motorcycle club of something over fifty members. The movement was started two or three weeks ago when the local riders were called together by Chas. L. Elyea, of the Elyea-Austell Co., Indian distributors for the Southeast, and given a substantial "feed." After having satisfied the inner man Mr. Elyea announced the purpose of the meeting, and the Atlanta Motorcycle Club came into being.

The club is rather unique in that motorcycle dealers will be associate members only, the idea being to have an exclusive riders' club, with the dealers on the side lines boosting and pushing for the good of the cause. The boys are enthusiastic regarding the outlook, and there is small doubt that the Atlanta club will take its place prominently among the most active and successful clubs in the South.

EVERETT HAS THE FEVER.

MOTORCYCLISTS of Everett, Wash., recently held a meeting at which plans were launched for the organization of a club. There are about 100 riders of the power two-wheelers in and near the city.

WORCESTER M. C. INCORPORATES.

AT a recent meeting of the Worcester M. C. steps were taken to incorporate under the laws of Massachusetts. A committee was also named to purchase canoes and rowboats for use on Curtis Pond, on the bank of which the clubhouse is situated.

FOLSOM HEADS ATLANTA SQUAD.

AT the last meeting of the Atlanta (Ga.) M. C. Stephen A. Folsom was elected president and the other officers were named as follows: J. R. Battelle, secretary; C. B. Kamper, treasurer; Mason T. Burke, captain; O. E. Cooledge, first lieutenant, and T. H. Glenn, second lieutenant. The club is intended exclusively for private owners.

CLUB RIDERS WEAR STARS.

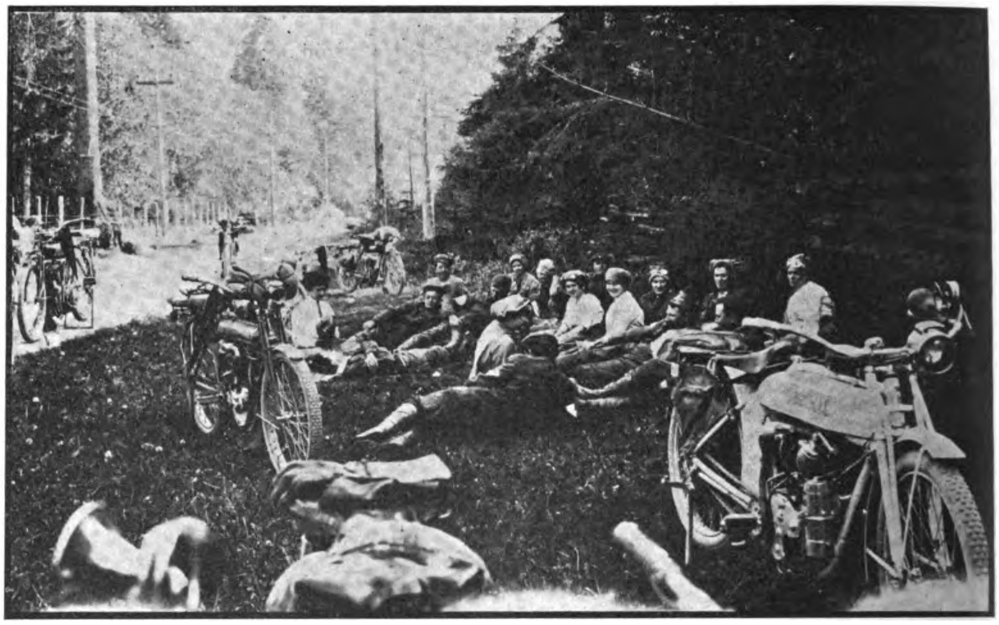
WITH a view to putting a stop to speeding within the city limits of Tacoma, Wash., the Tacoma M. C. has had a number of its riders appointed as special officers. They have received their stars from the city and from now on they will keep a close watch on the motorcyclists of their district.

THE WINONA STAFF.

JAMES JENSON heads the newly organized motorcycle club in Winona, Minn., and his associates are as follows: H. A. Patterson, vice-president; R. E. Haesley, secretary; John Krall, treasurer; Charles Hanson, captain; Benjamin Lauck, first lieutenant; Roy Meyer, second lieutenant; Joe Hoffarth and George Nelton, directors.

FLETCHER SIGNS UP.

DAVY FLETCHER, of Elyria, one of the star speedsters of northern Ohio, has signed up to ride on the new Cleveland motordrome. He will use a Thor.



Olympia (Wash.) Club Members and Girl Enthusiasts Resting by the Roadside During a Club Run Sunday, May 12.

A MILWAUKEE VETERAN.

J. W. WARNKEN, of Milwaukee, Wis., who was well known as a cyclist in the heyday of the bicycle, has taken to the motor-driven two-wheeler and is now one of the most enthusiastic F. A. M. workers in and about Milwaukee. He is heading a movement to improve Wisconsin roads which, from all accounts, are sadly in need of attention.

AN ANTI-NOISE SQUAD.

BY way of proving that motorcycles are not necessarily noisy the Lawrence (Kan.) M. C. is holding weekly sociability runs through the streets of the city. Needless to say, the muffler cut-out is not heard from on these outings.

PLANNED NOVEL FEATURE.

ON the first outing of the Ft. Wayne (Ind.) M. C., for the present season, a balloon ascension was to have been a feature, but the big gas bag caught fire and was destroyed. The club is preparing for a tour of the State.

OUTINGS FOR THE LADIES.

THE Topeka (Kan.) M. C. recently entertained its lady friends at a picnic dinner near Berryton, and other outings along similar lines are being mapped out.

A WINNIPEG BOOSTER.

V. C. PARKER, editor of *Modern Power*, has accepted the office of secretary of the Winnipeg (Man.) Motorcycle Club, which is affiliated with the new Canadian Motorcyclists' Association.

WANT A COUNTY CLUB.

MOTORCYCLISTS of Calumet, Mich., and vicinity have started a movement to bring all the riders of Keweenaw county under a club head. Combination runs are being held to boost the plan.

MOTORCYCLISTS of Little Rock, Ark., have organized under the name of the Capital City M. C. and a systematic campaign is being waged to increase the number of riders in and near the city.

MOTORCYCLES NOT INCLUDED.

NEW HAVEN, CONN., has an ordinance which prohibits the riding of bicycles on a sidewalk, but a recent court decision is to the effect that the measure does not embrace motorcycles. Confusion has resulted and steps have been taken to have the ordinance revised in order to head off any thoughtless motorcyclist who might prefer the sidewalk to the road for a pleasure jaunt.

BOTH WORK AND PLAY.

ACTING on the conviction that "all work and no play makes Jack a dull boy," the Trenton (N. J.) M. C. has bowling and pool tournaments and other amusements following its regular business meetings.

SPORLEDER TO RIDE.

RALPH D. SPORLEDER, the Milwaukee crack, is expected to be one of the feature makers at the big meet of the Beloit Motorcycle Race Association to be held in Beloit June 8.

VISITED PHILADELPHIA.

WITH a membership of fifty the Atlantic City (N. J.) M. C. has opened its riding season, and weekly trips will be made from now on. A recent run was to Philadelphia. The club is two years old and is growing steadily.

KELLER SUCCEEDS RODGERS.

ERWIN KELLER has been elected president of the Topeka, Kan., Motorcycle Club to succeed George Rodgers, resigned.

SEEK UNIFORM LAWS.

THE Fulton County Motorcycle Club, of Gloversville, N. Y., is advocating legislation for uniformity of laws governing the speed of motorcycles.

BAY CITY SQUAD.

RIDERS in Bay City, Mich., met recently at the headquarters of the Minute Motorcycle Messenger service and took up plans for the organization of a club.

PRELIMINARY plans have been laid by the Reading (Pa.) M. C. for a race meet to be held on July 4.

HUMISTON IN SPILL

Los Angeles Rider Catapulted from His Machine on Denver Bowl, but Escaped Serious Injury.

DENVER, Col.—Thrills were the order of the day in the motorcycle races at the Tuileries Motordrome on May 5. Three hair-raising finishes and one sensational accident served to keep the large crowd on edge from the start of the first race until the last rider had left the track.

L. I. Humiston, of Los Angeles, had a narrow escape in the fifth race The five entrants were riding in a group on next to the last mile of the contest, with Humiston in the rear, when the tire of his front wheel touched the rear wheel of Swartz's machine. It threw Humiston to the running board and as he shot up again he collided more forcibly with Swartz's rear wheel. This time Humiston's machine was thrown from under him, and as if shot from a cannon he went to the top of the track, sliding and rolling a distance of 200 feet until he reached the running board. He was picked up in a bewildered state, but an examination revealed no serious injury, although his body was filled with slivers, the result of his rapid flight over the surface of the boards. The other riders finished without a stop, Cox in the lead.

No exceptionally fast time was made, even by Hasha, who seemed to have an easy time in the two contests in which he competed. The other races, however, furnished some exciting sport as in every one of these the riders finished within a few inches of one another and the results were in doubt until the tape was crossed in the last lap. Summaries:

Two miles, amateur, single stock, 30:50 class—Hurlbut (Indian), Parkhurst (Excelsior), Barclay (Thor). Time, 2:28⅖.

Three miles, professional, 61 class for B riders — Fleckstein (Indian), King (Indian), Swartz (Indian). Time, 2:17⅕.

Three miles, professional, 61 class for B riders—Bowen (Merkel), Patterson (Merkel), Cox (Merkel). Time, 2:14.

Five miles, open professional, 61 class—Hasha (Indian), Bowen (Merkel), Fleckstein (Indian). Time, 3:32.

Five miles, professional, 61 class for B riders—Cox (Merkel), Patterson (Merkel), Swartz (Indian). Time, 3:40.

Seven miles, open professional, 61 class —Hasha (Indian), Bowen (Merkel), Cox (Merkel). Time, 4:48⅕.

EDMONTON HILL-CLIMB.

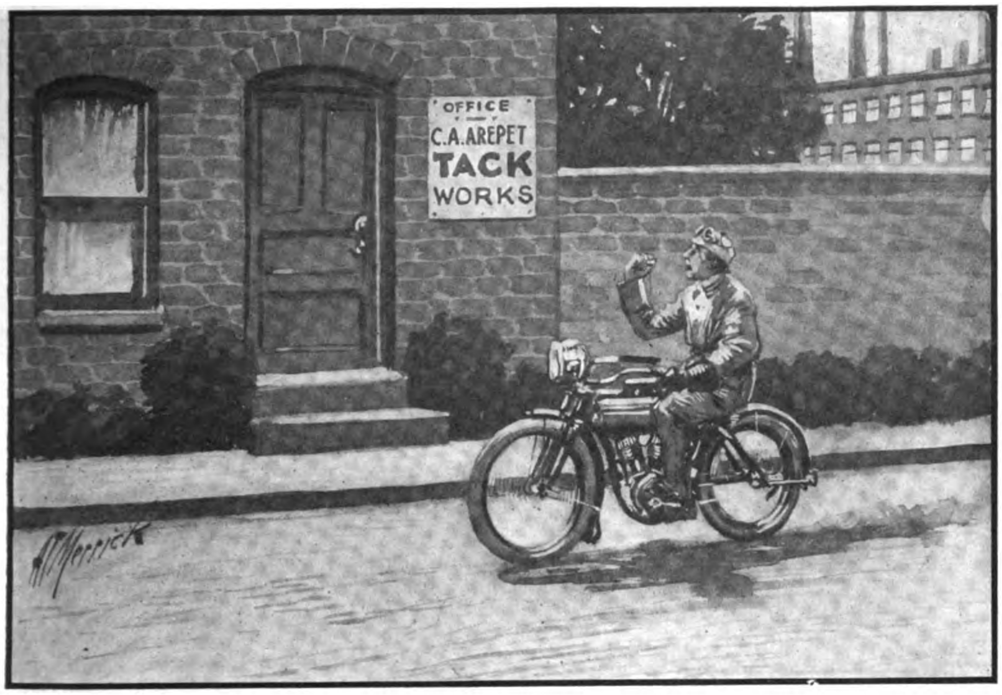
THE members of the newly organized Edmonton M. C., of Edmonton, Alberta, held their first hill-climb recently, the scene of the contest being a very rough grade with a tricky hair-pin bend, just beyond the limits of the city. Only one competitor, R. Williams, the president of the club, on a twin-cylinder Indian, was able to negotiate the hill, Williams making several ascents with ease. None of the other riders were able to pass the hair-pin, but prizes were awarded as follows:

Single cylinders—C. W. Leggett, Yale, first; J. Kerr, Reading Standard, second; G. Gorman, Yale, third.

Twin cylinders—R. Williams, first; Hetherington, second, and Garton, third, all Indians.

The event was marred by a slight accident, H. P. Brown, on a Flanders, being ditched while going at tremendous speed. The machine was scratched and although the rider was pinned beneath his mount, he escaped serious injury.

THE Lorain, Ohio, Motorcycle Club is planning to co-operate with the city council in abolishing the "tank rider" nuisance.



A SUNDAY MORNING IN TAUNTON, MASS. **He has had no trouble; the weather is fine and everything has gone just right, but the sign riles him just the same.**

ANNUAL HILL-CLIMB

Minneapolis Club Will Have Three Classes for Entrants and Award Prizes on Time Basis Only.

MINNEAPOLIS, MINN.—The date for the annual hill-climb of the Minneapolis Motorcycle Club has been announced for June 8, by Chairman William Edwards, and already the committee has received entry applications from several riders. The meet was originally scheduled for May 18, but as the club had not obtained permission from the park board for the use of Riverside Hill, where the contest is usually staged, the meet had to be postponed.

Considerable discussion has been made in regard to classing the machines, but the club has finally come to the conclusion that it will run the chain and belt machines in the same class, this being thought advisable because of the shortness of the hill and the general equality in weight of the machines and riders. Differing from past customs the winners will be decided upon by time alone, and not by the formula system.

There will be three classes for the event, one for the singles, one for the 5 and 6-horse twins, and the third for the 7 horsepower machines. One or two of the 5-horse machine owners have signified their intentions of entering the climb and will be allowed to compete in Class 2. Winners of the events will receive beautiful medals with the Minneapolis M. C. inscription and many of the motorcycle accessory companies have donated merchandise for the events. Nothing but the fully-equipped stock machines will be allowed to enter, but the riders will be allowed the use of racing handlebars.

A SOMERSAULT.

G. C. GREEN, Yale agent in Cedar Rapids, Iowa, appears in the photograph to the left, with one of his Yale riders to the right. The machine on the right turned a complete somersault just before the picture was taken, but the only damage was to the lamp and the rider's feelings.

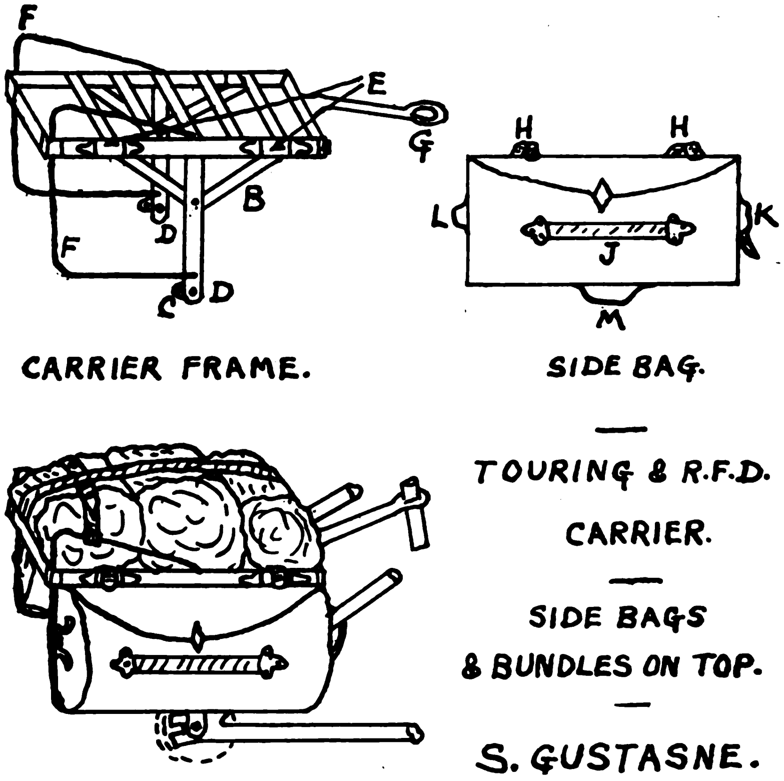
LUGGAGE CARRIER CONTEST

Last Designs Will Be Published in Next Issue—Prize Winners to Be Announced June 27.

LUGGAGE designs from No. 50 to 55 are shown herewith. By the time this issue of Motorcycle Illustrated reaches its subscribers the contest will have come to a close. However, there are still a number of designs as yet unpublished, and these will be illustrated and described in the next issue. The announcement of the prize winners will be made in the June 27 issue of Motorcycle Illustrated.

50. Folding rear carrier of ⅛ x 1-inch stock twisted at fastening points. Rod B is a brace for holding carrier open; D is a leather strap for parcels on top and for keeping the members from rattling when folded. AA are the ends and G the sides. F is a longitudinal brace, and E the main stay bar attaching to the wheel axle. Double nuts are used at the upper corners. H is the floor rod. The forward brace to the seat mast or rear stays attaches the carrier at the front to the motorcycle. One side is shown folded. Contributed by W. A. Harrison, Ashley, N. D.

51. R. F. D. or touring rear carrier with side bags supported by straps at ends to rods FF and to rear stays of machine, and loops to carrier frame. Flat bar fastens to axle and side members of carrier frame. Rods designed to attach straps to as per the illustration of carrier loaded. Bags have large loops for handling when off the carrier or when putting in place. For R. F. D. service, "local" distributing pouches like side bags on smaller scale are attached to top tube forward. Contributed by S. Custasne, Orient, Iowa.



CARRIER FRAME.

SIDE BAG.

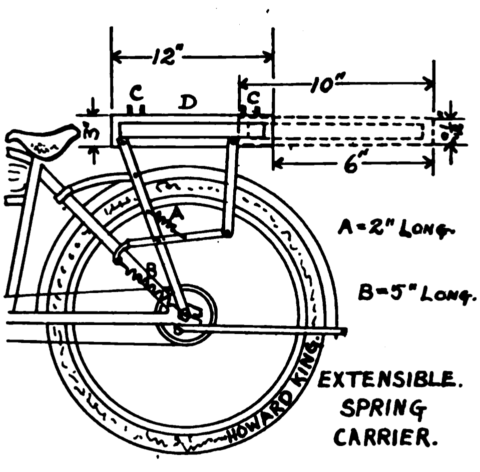
stayed longitudinally. Square canvas sack fits over hooks shown, which also carry straps for supporting platforms. Contributed by H. J. Maffio, Globe, Ariz.

55. Combined pannier bags and dress-guard with pockets in sides. Straps tie pockets shut and fasten to machine mudguard at top of each pocket frame. Shown extended in main view. Fastened to axles by bottom straps. Readily removable. Contributed by Wallace C. Smith, Greensburg, Pa.

TRUE SPORTSMANSHIP.

OWING to the fact that many motorcyclists of Cortland, N. Y., were desirous of attending the Memorial Day races at Elmira the Cortland M. C. called off the speed program which had been arranged for the holiday. The Cortland squad is planning a big meet for July 4.



No. 53.

UTICA RUN SCHEDULE.

OFFICIALS of the Utica (N. Y.) M. C. at the last business meeting approved the following schedule of runs to be held during the coming month: June 2, Rexford Falls; combination run with the Binghamton, Syracuse and Cortland clubs; June 9, outing to Madison Lake; June 16, run to Skeneateles Lake; June 23, outing to Cazenovia Lake; June 30, run to Richmond Springs. The club's tour committee is now at work on plans for other trips.

SAN JOSE OUTING.

A RECENT run of the San Jose (Cal.) Motorcycle Club was to Half Moon Bay, a popular resort which is reached by a pleasant two-hour ride over the San Francisco road and by way of San Mateo. Thirty members of the club participated in the outing, and the roads were reported to be in good condition except for a short stretch near Half Moon Bay. The club is planning a series of combination runs with other squads in the vicinity.

ABOUT fifty members of the Terre Haute (Ind.) M. C. recently rode to Clinton in a body to witness the races held there.

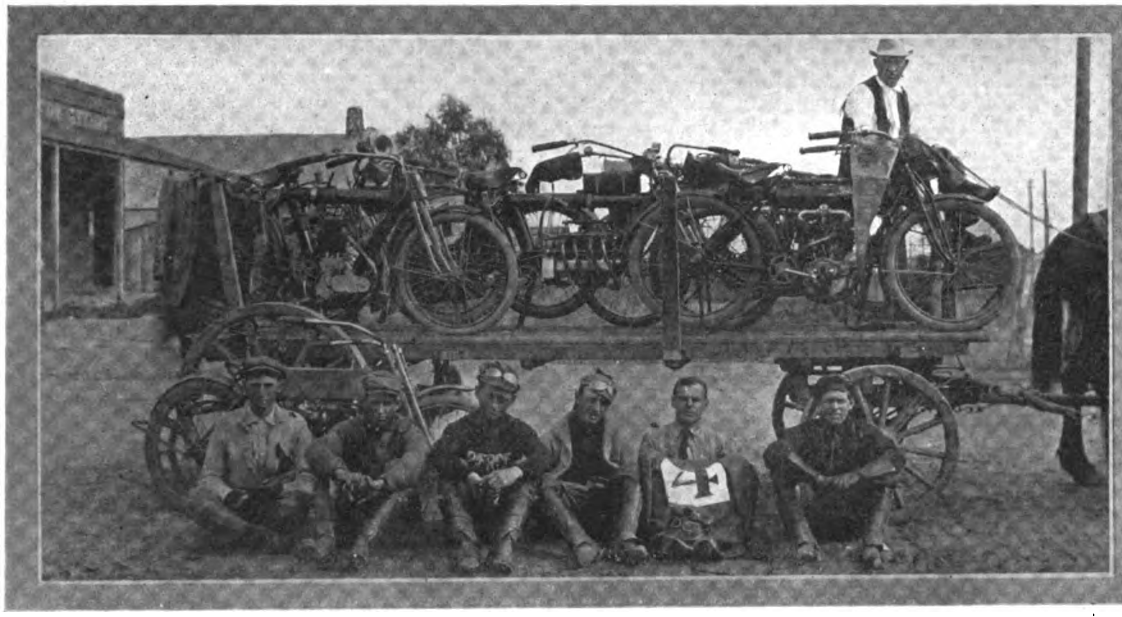
BILL SHAFFER

BAKERSFIELDERS TAUGHT EXETER A LESSON

After Arrests for "Speeding" By Alfalfa Deputy They Fought and Won Their Case; Then Showed Their Disgust by Carting Their Machines Out of the Town on a Truck.



"The Sorest Sextet of Riders in the State of California."

President Chas. P. Clark.

NOT long ago the Bakersfield (Cal.) M. C., one of the most progressive squads in the Golden State, held a 212-mile reliability contest through the San Joaquin Valley—and thereon hangs a tale. Nine of the riders were fortunate enough to reach Visalia, the county seat of Tulare county, with clean scores, but on the return trip they ran into trouble in a small town called Exeter. Despite the fact that they were traveling at a "crawl," the three leading contestants in the party were arrested for "speeding" by an Exeter deputy, and three of their companions, including Charles P. Clark, president of the club, gave up the run and stood by their comrades in distress.

Knowing that Exeter had a reputation for "putting the screws" to motorcyclists the boys passed along the word for very low speed through the town, but this precaution availed them nothing. As the party was passing through Exeter's one street a deputy stepped out, made a threatening dive into his hip pocket and in a bellicose manner announced that the riders were in the hands of the law. Conner, the Pierce trade rider; Lightner, the club treasurer, and Parks, another club member, were placed under arrest and headed for the "court." As President Clark approached the scene and realized what had happened he motioned to the riders behind him to dismount, thus saving them and himself from arrest. Clark then heard the whole story from the angriest trio of men in the State of California, and a council of war was held. In the confusion three members of the party slipped past the constable and hiked for home; the others accompanied the deputy and his victims, prepared to fight the case to a finish.

President Clark, being an attorney, was a particularly valuable member of the party, and he at once took charge of the situation on behalf of the men who had been arrested. He learned that many motorists had been arrested and fined without reason in Exeter; that the victims had always paid up promptly to avoid trouble, and that the town officials gloried in their high-handed methods of juggling the cases. Accordingly he decided to put a crimp in the system. The party proceeded to a barber shop, where the judge held forth in a small room in the rear, and when the officials were about ready, as they thought, to pocket the fines Clark stepped up and announced that he would represent the alleged offenders. This ruffled the judge and his constable, but Clark stood his ground. He stated that he would waive the reading of warrants and a jury trial, and demanded that the case be tried at once. About this time the town marshall arrived and attempted to "run the show," but was quieted.

THE following official notice has been forwarded by the Bakersfield M. C. to a large number of California motorcycle clubs and garages, with the request that it be posted conspicuously:

NOTICE TO F. A. M. RIDERS.

The Bakersfield Motorcycle Club desires to warn all riders belonging to the F. A. M. to avoid, if possible, the town of Exeter. The officers of this town have proved over-zealous in making arrests of alleged violators of the speed ordinance, and have failed to use discretion or good judgment of speed traveled. If necessary to pass through Exeter it would be advisable upon reaching the limits of the town to dismount and push your machines through, or hire small boys to do it for you.

BAKERSFIELD MOTORCYCLE CLUB.
Charles P. Clark, Pres.
D. Lightner, Sec.

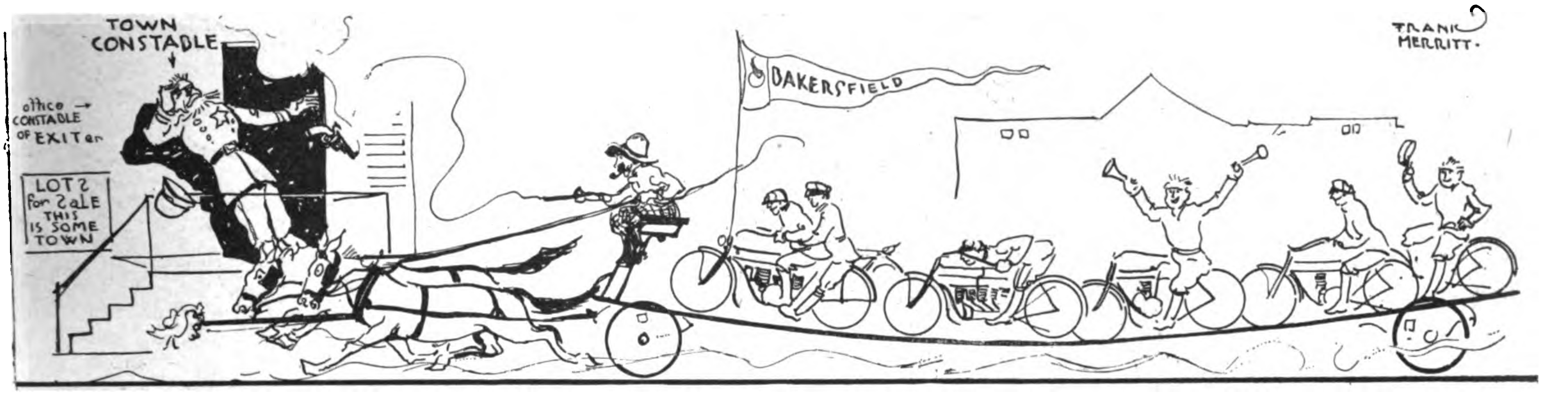
When asked what speed the riders were making when they were arrested the deputy said he didn't know, and that he had held up the trio because "the chief had waved to him to pinch them." The evidence showed that the "chief" was a quarter of a mile from the party in the direction in which the riders were traveling. They had not passed him and he was in no position to say whether their speed was ten or forty miles an hour. When the officers saw that their own testimony had spoiled their case they hustled around for witnesses, and the fun began. The first witness admitted that he was half a mile from the scene of the arrests. That settled him. Another, a typical out-country farmer, didn't know how fast the riders had been going, but stated that motorcycles had frightened his horse several times, and that he "hated the gol-derned poppin' things anyhow." This witness had answered only a few questions when it was evident that he was totally incompetent to judge speeds, and he was excused. And so it went. Witness after witness was called, most of them voluntarily favorable to the defense, and the others because they tried not to be. After a straight-from-the-shoulder argument Clark demanded a verdict of "not guilty," and the judge was obliged to give this decision.

After figuring that they had lost 1,050 points through the delay, and that they were therefore 50 points below zero, the riders thought no more of the reliability run and began to consider ways and means of getting out of Exeter. It was evident that they could not ride through the town at any speed without being arrested, and the weather was too warm to make pushing enjoyable. Besides, every member of the party was too sore mentally to consider such an expedient. Finally one of the boys suggested that a dray be hired, and the plan scored a hit. All the machines were loaded on the truck with the exception of one Harley-Davidson for which there was no room. This machine was towed behind the truck. The riders then climbed into their saddles, and in this fashion they turned their backs on Exeter, the horses drawing them at a three-mile-an-hour gait. In due time they reached the town limits, where they found a signboard reading: "City limit—Slow to 10 miles." Under this sign they tacked a notice warning all motorcyclists to "get off and push." The accompanying photograph shows the party as it reached the boundary line, and from the facial expressions of the riders it will be inferred that they were in a mood to fight a gang of wild-cats at the drop of the hat. In other words, they were sorely peeved.

Fortunately, one of the riders was a stenographer, and a complete report of the trial was obtained. Without loss of time the club forwarded a transcript of the proceedings to the local F. A. M. commissioner in Bakersfield, who in turn sent all the data to the F. A. M. National Committee on Legal Action.

"We want that town sued for damages," explains President Clark, of the Bakersfield club, "and we ask that the same action be taken against its constable for the actions of his deputy. You see, we lost a chance, and a good one, at a $75 prize, and we also lost our entry fees; we lost an average of $25 each in getting our machines back into shape, and—Oh, h——! nuff sed."

The Bakersfield boys are by no means ready to drop the matter, and they will leave nothing undone to make the officials of Exeter remember their treatment of the reliability riders. They point out that the State law provides for a speed of 20 miles on county roads, and 15 miles an hour within corporate limits of cities, except in places of congested traffic. In spite of these regulations some of the small towns try to enforce ordinances calling for 10 and eight miles an hour, and even five miles. It is argued that the majority of these ordinances are unconstitutional, and that a movement should be taken up to wipe them from the books. President Clark and the Bakersfield boys are full-fledged motorcycle boosters, and as such they discourage the use of the muffler cut-out and all unreasonable speeding.



GROUND BROKEN FOR NEWARK SAUCER

Four-Lap Track Under Construction at Electric Park Will Be Ready for Opening on July 4—Derkum May Manage It.

MOTORCYCLISTS throughout northern New Jersey are rejoicing over the announcement that plans for a board saucer in Newark which have been simmering for some time past have at last taken definite form, and keen appetites are being developed for the opening meet, scheduled for July 4. Ground has been broken for the new track at Electric Park. A gang of men razed the old grandstand last week, and work is now well under way on the foundation for the structure which is to be banked at fifty degrees with four laps to the mile. In the upper banking of the Newark track a scientific principle will be involved which the promoters and architects believe will permit of the highest speed with the same degree of safety afforded by a three-lap track. Instead of ending on a straight angle of fifty degrees the extreme upper edge of the track will curve skyward rather sharply, so that a racer who picks up sufficient speed will be able to stick to the outer circumference of the saucer with his machine practically in a horizontal position.

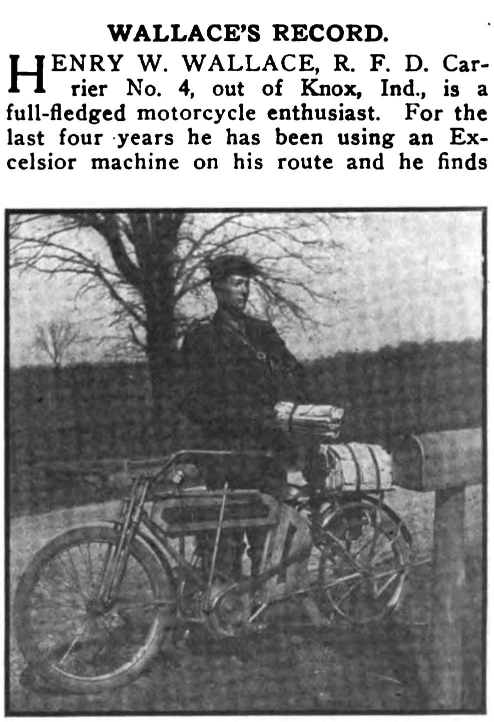
Inglis M. Upercu, a resident of Newark and the head of the New York Cadillac Automobile Company, with offices on upper Broadway, New York City, is the principal financial backer of the enterprise, and associated with him is A. C. Dunlap, manager of Electric Park. Mr. Upercu is a son-in-law of Judge Gottfried Krueger, owner of the park. He has been interested in the motordrome possibilities of the motorcycle for some time past, and when the present board track boom began to make itself felt in the East he decided that Electric Park would make an ideal site for a speed bowl. Despite his deep personal interest in all forms of motor racing Mr. Upercu will not figure actively in the management of the track, but will be represented by Mr. Dunlap.

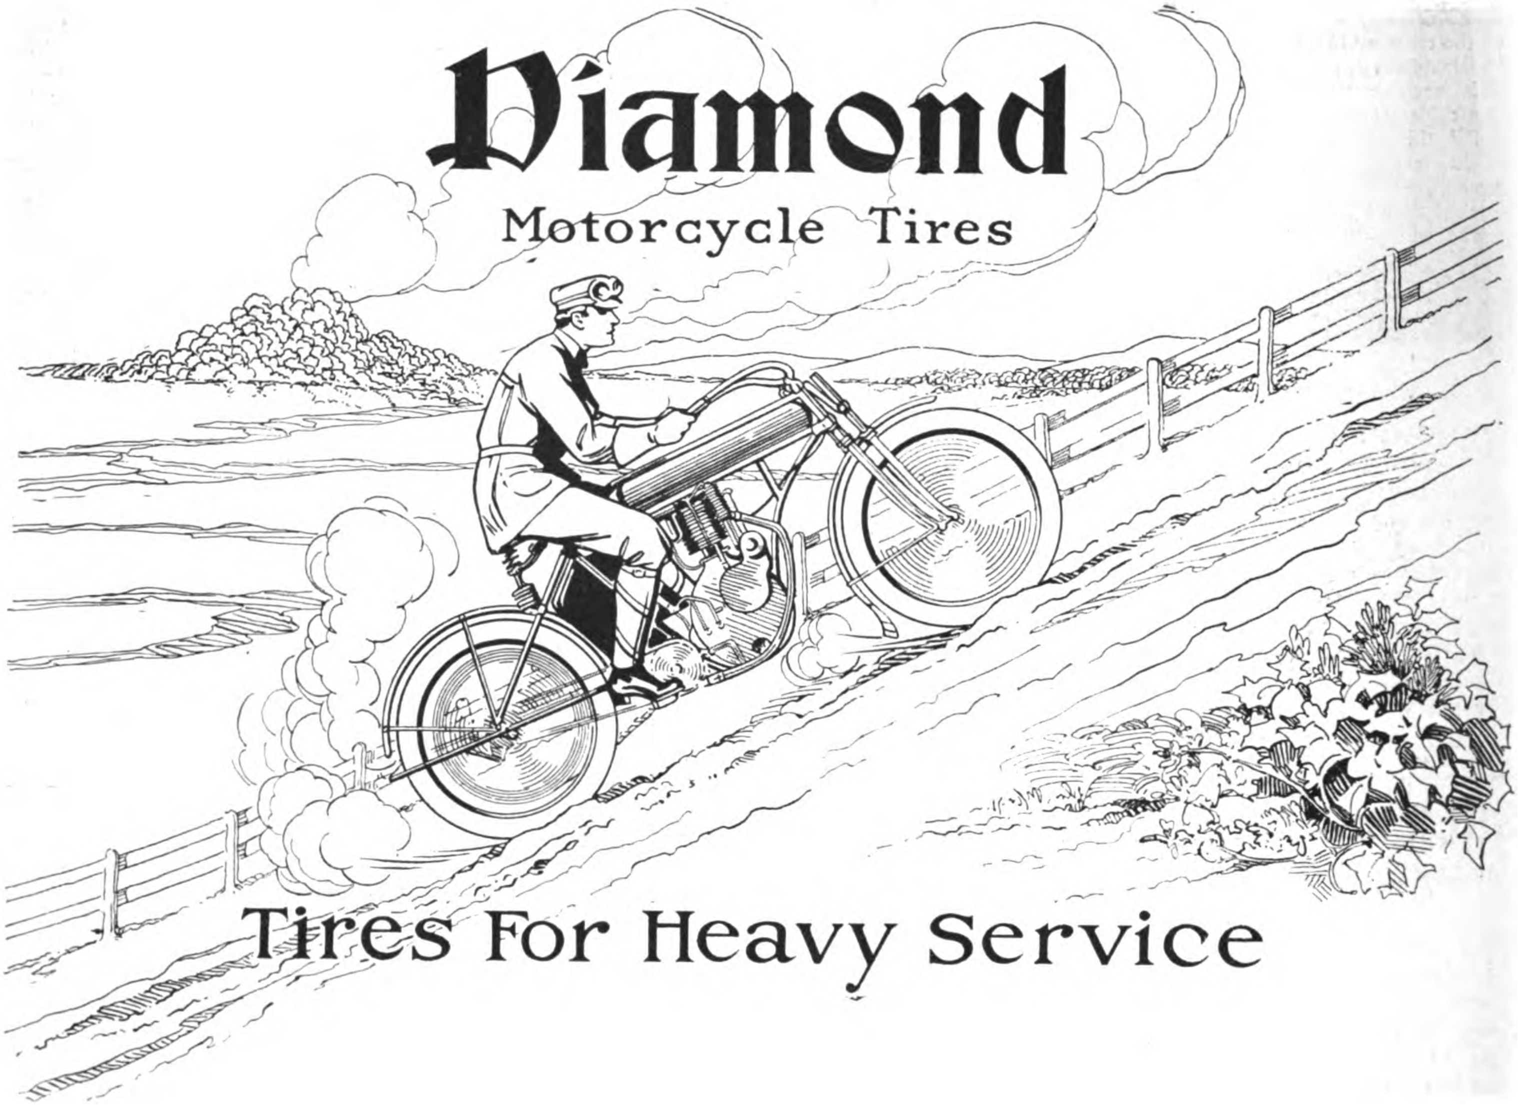
There is a well-defined report to the effect that Paul Derkum, who managed the new Los Angeles motordrome until it closed for the season recently, will be in charge when the Newark track is formally opened on Independence Day, but Mr. Upercu stated a few days ago that no definite arrangement has been arrived at with the western promoter. He admitted that his company had opened negotiations with Derkum, and hinted broadly that the "Daredevil" was preparing to come East for a conference. Derkum's experience as a speedster and his wide acquaintance with the boys who make a business of hounding old Father Time fit him admirably for the task of introducing Jerseyites to their new acquisition, and there are fairly good reasons for believing that he will be in authority when the record-crimpers get away at the first gun on the Electric Park track.

Inside the motorcycle track a field will be laid out for general athletics, and it is the intention of the company to afford all the features of a full-fledged stadium. There appears to be no scarcity of funds and Mr. Upercu is authority for the statement that Jerseyites are to be furnished with a speed bowl and incidental attractions second to none. The plans call for a big grandstand and well-arranged bleachers, and for the opening there will be seating accommodations for 5,000 spectators. If it is found necessary to extend these seating arrangements no time will be lost in providing more room.

WALLACE'S RECORD.

HENRY W. WALLACE, R. F. D. Carrier No. 4, out of Knox, Ind., is a full-fledged motorcycle enthusiast. For the last four years he has been using an Excelsior machine on his route and he finds that the time necessary for making his collections and deliveries is cut down more than one-half. He is also able to operate the motorcycle for about one-fifth of what it would cost him to use a horse and buggy. His total repair bill for last year was only $2.68, despite the fact that he makes 100 stops daily on a route 30 miles long.





YOU can't tell how far a tire will run by the color of the tread.

The only way to judge a tire is by its reputation or past performance, taking into consideration the conditions.

If you are seeking a racing tire, select the tire that you know has carried many a man to victory.

If you want a tire for all-around work on country roads or city streets, choose the tire you know has carried many a man to his destination.

Diamond motorcycle tires are not racing tires. They are not built for 10 miles of death-inviting speed and then the scrap-pile.

They are built for endurance—greatest mileage.

They are miniatures of the famous Diamond auto tire, the largest selling single brand of tires in the world.

The same specially woven fabric and compounded rubber and faultless workmanship enter into their construction.

They are the result of 14 years spent in tire building.

If you are seeking a tire for all-around road work—one that will stand the grinding wear of rock-strewn roads or the shock of being bumped over car tracks in the city streets, get Diamond tires. They will stay with you and deliver the mileage. The cost is no more than for other standard makes.

They are made in two treads, studded and corrugated —but only one quality!

Single clinch only and in all sizes to fit the 28 x 2½ inch rim, including the 29 x 3 inch, specially adapted for tandem riding, side cars, heavy riders and delivery machines.

Ask the reliable dealer about these dependable tires. They cost no more than other standard makes.

Send For Our Motorcycle Book. It's Worth Having.

We could build them cheaper
—But we won't;

We would build them better
—But we can't.

F. A. M. DISTRICTS SHOULD GO.

OBVIOUSLY radical are the proposed amendments to the F. A. M. Constitution and By-Laws, published elsewhere in this issue of MOTORCYCLE ILLUSTRATED. These amendments have no other purpose than to do away entirely with the existing districts and vice-presidencies, with a view to more clearly defining the duties of State and local commissioners, and placing the responsibility where it properly belongs, squarely upon the shoulders of the State Commissioners, the latter to be in direct touch, on the one hand, with the national officers, and, on the other, with their appointees in their respective States.

Districts, originally four in number, were worked into the organization of the F. A. M. "for convenience of government." The divisions thus effected were wholly artificial, the country having been arbitrarily divided into four parts of from 300,000 to 1,000,000 square miles each. From the start, the average district vice-president has been simply a title-holder. There have been a few brilliant exceptions. But those who actually accomplished anything as district vice-presidents would have done really remarkable work as State Commissioners. In any event, a State is large enough territory for any one who can give only his spare time to the work. That a single vice-president should have actually made progress throughout an entire district has been due to exceptional qualities in the men themselves, and not at all to the beauty of the system.

Reforms must be constructive. It is easy enough to do away with the old order of things, but, as a rule, extremely difficult to provide, in short order, a working substitute. However, in this particular case there is a basis upon which to work, namely, the State organizations, which, by the way, will not be satisfactorily efficient until the various State Commissioners are afforded the opportunity to work directly with the national organization. The proposed changes are, we believe, entirely worth while.

HILL CLIMBS.

AN English rider calls attention to the fact that hill-climbing contests in that country are no longer of value as teaching any practical lessons, either to the trade or the public. The same criticism applies here. Of what use is it to merely determine in any instance what make of machine is capable of attaining the highest speed up-hill, that is, under competitive conditions which are sporting rather than practical? As hill climbs are now generally conducted, they are usually won by single-speed machines, and if such winnings are to be taken seriously, then why do our manufacturers market variable-geared motorcycles, claiming for them, and quite truthfully, starting and hill-climbing superiority. As a matter of fact, the average hill-climbing victory, because of the conditions under which such competitions are conducted, is more or less freakish, and teaches nothing except that certain riders are more hair-brained or perhaps gifted with greater mechanical cleverness than their competitors.

Suggestions for the improvement of hill-climbing regulations are made by the British rider above referred to, who says:

"What I should like to see is a contest run on the following lines:—(1) A slow and fast test, the machine with the greatest difference in speeds to be awarded marks accordingly; (2) an acceleration test (both run on the level); (3) a straight-away hill-climb, after a run of 20 miles or so, with a restarting test on at least a 1 in 7 or 1 in 8 gradient; and (4) another climbing test on a hill with a real corner. This may sound a somewhat lengthy series, but it only embodies the various requirements of the ordinary user, and could easily be carried out in one day. My argument is borne out by such events as the Six Days Trial. The hills included are no more severe than those used for solitary hill-climbing competitions, but it is amusing to see all the crack hill-climbers turning out on two and three-speed machines. Why? Because they cannot guarantee that they will climb all the test hills unless so equipped, and they wish to banish risk of losing a gold medal.

ADVERTISING 3.

"Caveat emptor—Let the buyer beware."

An old principle in law, and it generally holds good in the courts today.

As applied to advertising, it is rigidly adhered to by many publishers, men who print anything that has "money in it," shifting the risks upon their readers.

Fortunately, however, there are among publishers exceptions to this rule. In fact, there is a minority whose standard is far above that of the "caveat emptor" species.

This high standard of publication ethics involves the principle that "a journal is no better than the worst advertisement it carries."

This is a rather strict conception of journalistic responsibility and yet why should any publisher object to having his paper measured by that standard?

A man is morally no better than the lowest act he would commit. By the same token, a line of high-class advertising does not excuse a publisher's acceptance of a single piece of dishonest copy. The latter determines the character of his publication.

We invite both the trade and our other readers to judge MOTORCYCLE ILLUSTRATED *according to the highest publishing standards. It is our fault if, thus measured, this publication is found under-weight.*

SELF-EXPLANATORY.

LAST Tuesday, we received, on a bill head, a letter from the Simplex Machine Works, Forty-fifth street and Sixth avenue, Brooklyn, N. Y., side-car manufacturers. It read:

"Enclosed please find check, etc. We have used up all our letterheads answering inquiries from subscribers to your paper.

"SIMPLEX MACHINE WORKS,
"Brooklyn, N. Y."

The IDEAL MOTORCYCLE SHOP

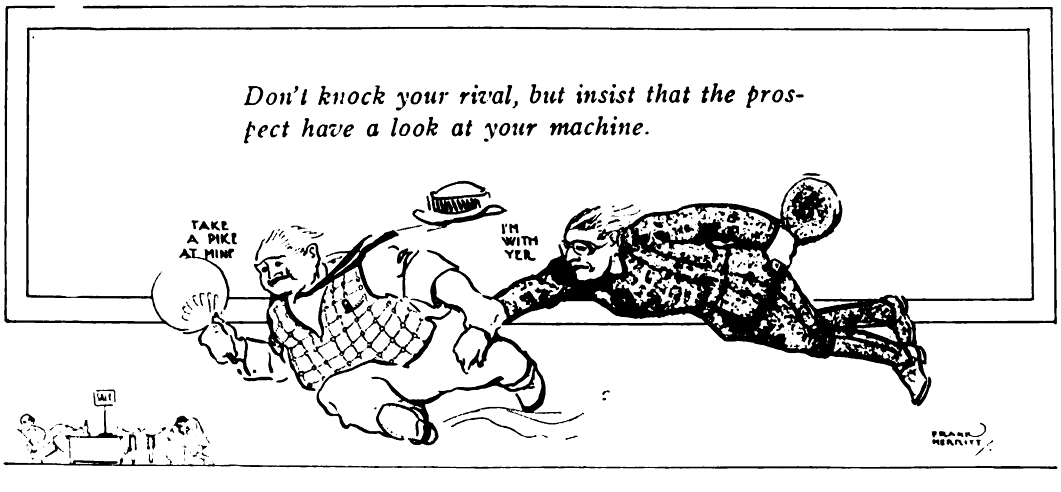
By GEORGE M. JOHNSON

A PREVIOUS article treated about certain matters in which altogether too many motorcycle agencies are remiss. It should be understood, however, that the writer is not suggesting reforms out of the fulness of his own vast experience. He is not a dealer; far from it. He is merely one individual rider, an enthusiast, to be sure, but he hopes that he represents just about the average devotee of the two-wheeler, and he fondly believes that what he wishes to see in a shop, and appreciates when he does see it, is not so very far different from what the average rider hopes for and appreciates.

And, by the way, speaking of enthusiasm, did you ever know a genuine, red-blooded motorcyclist who did not possess a good supply of that admirable quality? Circumstances may cause a man regretfully to give up the sport and no longer be ranked among the brotherhood, but he will always have a warm feeling in his heart for those of us lucky enough to be still skimming swiftly about the country. Enthusiasm and motorcycling go hand in hand. Every rider intends to be a booster for the sport, and the only trouble is that some have yet to learn just how the true booster should conduct himself. All of which, however, is drifting away from the subject.

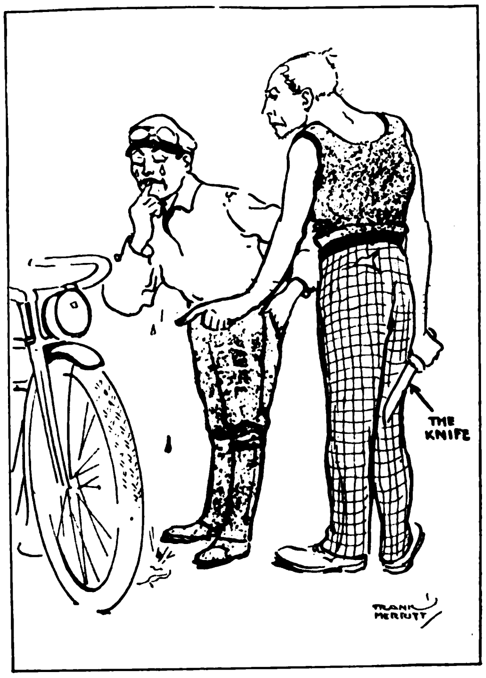
A Generous Viewpoint.

This Ideal Shop of ours should be run on the principle of not only boosting the sale of the Best Ever, but of helping along the general welfare of the sport. Business rivalry is a stiff proposition; no one can deny that. But the salesman never knows when his chickens may be coming home to roost, and savage criticism or comment directed at a rival dealer or machine is not likely to increase his own sales to any alarming extent. We riders prefer to hear an agent say, "Yes, So-and-So's a fine enough man, and he's offering a dandy machine, but you just ought to take a squint at *mine!* She is certainly the goods, and no mistake!" That's the way the chap in charge of the Ideal Shop would talk. But when he descends to acts of petty business rivalry, right then his shop drops out of the ideal class.



Don't knock your rival, but insist that the prospect have a look at your machine.

Even when a rival starts to wield the omnipresent hammer, that does not compel him to go and do likewise. If he is strong enough to refrain, his own conduct will stand out in all the more striking contrast.



"That Machine Will Always Give You Trouble."

As illustration of the point I wish to emphasize, let me relate a little story, a true story, too. I fear the agent mentioned was not qualifying for ownership or management of the Ideal Shop.

A Certain Rider was touring, many parasangs from home. For a long time all went well, and the Rider was happy and contented, as is usually the case with touring motorcyclists. At length, however, trouble came, not trouble with a big T, but merely a slight difficulty, one that could easily be adjusted at any agency of the tourist's make of machine. The Certain Rider limped along, and was soon gladdened by the sight of a goodly town.

"Surely," quoth he, "I can find in yonder city a man who sells and repairs the Best Ever!" For he was a loyal Rider, and thus regarded his faithful mount.

On he went, following a thoroughfare which gave promise of taking him some place or other sooner or later. Then he paused at seeing the glaring sign "MOTORCYCLES" in huge letters, shouting aloud at all who passed that way. The Certain Rider made known his needs to the manager of this place, but the latter shook his head.

"Huh!" grunted he in scorn. "Why don't you ride the Just-as-good? That machine of yours will always give trouble; never heard of one that didn't! I can't fix up the old boat now, but if you want to wait over a couple of days, I'll send to the Big City for the part."

But the Certain Rider did not wish to "wait over a couple of days."

"Isn't there an agent for the Best Ever in the town?" cried he in despair. "If so, peradventure he might have the small part in stock."

The Just-as-good man shook his head once more, doubtfully this time.

"Don't believe there's anybody handles that machine here," he stated, whereat the Certain Rider made much dole, and again limped forward with many lamentations.

But his sorrow was soon changed to rejoicing, for he quickly beheld another sign a few blocks down that same thoroughfare. The sign read, "BEST EVER MOTORCYCLES." The Certain Rider stopped, and found just the part he was seeking, whereupon he rode onward with a light heart. And why did the representative of the Just-as-good refuse to help the Certain Rider out of his difficulty by directing him to the second shop? Because, forsooth, the two of them were rivals, and he would be ding blinked, so he would, before he'd send anyone to that Best Ever joint!

Signboards Are Needed.

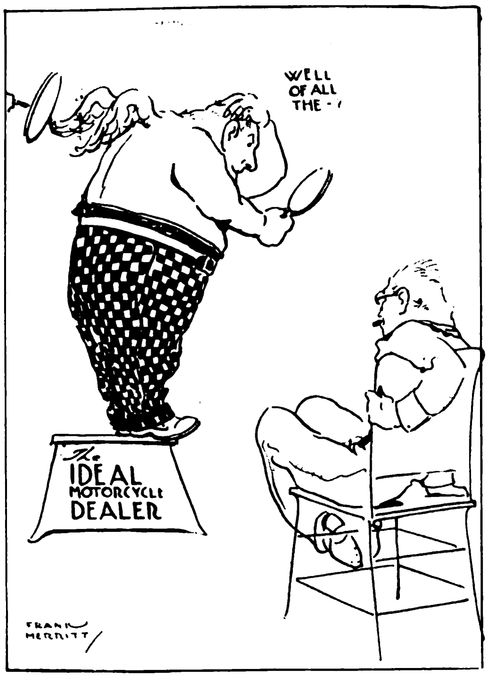
You get the point of that little story, do you not? Do you suppose such an agent would be popular with a very large proportion of local riders, no matter how excellent the machine he had for sale? And do you suppose the rider who went to him for help would ever recommend his establishment to anyone else as the Ideal Shop? No prizes are offered for correct answers to this puzzle. It brings up again the same old question of the personal relations between buyer and seller, and the importance of this is so great that no dealer can afford to overlook it.

There is another moral to the above story, one that might well be heeded by any dealer, whether he aspires to run the Ideal Shop or not, and it is of particular importance if he handles a popular machine and if there is much touring through his country. I refer to some advertising in the way of posters, signboards, or something of the sort on the more important roads leading into town. These would proclaim in letters loud enough to be heard that the agent for the Regal, Speedy, or whatever make it is, can be found in such and such a place when one reaches the city. That would help the rider who travels through to locate the headquarters of his machine, and I believe it would be highly appreciated. It is rather a nuisance to be compelled to ask the average citizen how to reach the agency of a certain motorcycle, when as likely as not he may never even have heard of the place. I have tried this myself on one or two occasions, and know how it is.

A Dealer Almost Needs Wings.

The Ideal Shop can only be a thorough success with the right man behind it, and he ought to be so nearly perfect as an all-around good fellow that you can almost feel the wings ready to sprout. He should know instinctively just how to treat all sorts and conditions of customers, never forgetting that courtesy is the first requisite in successful salesmanship. He should be careful not to say or do anything that could offend anyone's prejudices. He should himself be all in personal habits and conduct that he expects of those who frequent his place. It will pay in the long run.

In the course of my motorcycle wanderings I once ran across an agency unique in more respects than one. The owner had been led to add the motorcycle to his line of bicycles and sundries some time before; and I had quite a talk with him. In the conversation with me he quickly betrayed the fact that he was "long" on the hammer game, but decidedly "short" on salesmanship. In the first place, he was more or less ignorant—mostly more—of motorcycles and all things pertaining thereto. He didn't even seem to know enough to knock the other makes intelligently. Furthermore, he made some very startling claims for the machine he was trying to sell. And could he prove that the machine was able to do all those wonderful things which he claimed for it? Not much! the machine never had a chance; it had never even been out of the shop. There was hardly a machine of that make on the road in the whole district, and yet he let his demonstrator rot her tires in the show window. He wouldn't permit anyone to give it a good try-out on the hills for love or money; was probably afraid he couldn't sell the machine at her full list price if the enamel became scratched. The result is that he'll be lucky if he ever disposes of it at all, and at the same time, I'm willing to stake a fistful of florins that he is grumbling and kicking at the motorcycle business, because all the local buyers always stop at the other shops before they get to him. Who could expect them to do otherwise?



"A Dealer Almost Needs Wings."

The Repair Problem.

There are two or three morals to this tale, and you won't have to scratch very deep to find them. This is one. Every prospective customer knows that this dealer is not a competent repair man. If anything should go wrong with the machine purchased, he would know as little about remedying the trouble as the owner himself, perhaps not so much. Another moral; there are plenty of them. The customer cannot be ignorant of the fact that this dealer has no stock of parts on hand. If something breaks—and no machine made by mortal hands is infallible—what is the rider to do? That's easy. He will simply hang around while the up-to-date salesman writes a C. Q. D. letter to the factory. Do you wonder the boys don't buy? Who in the wide world would, under such conditions?

The Ideal Shop carries a *full* line of repair parts (note that the word "full" is printed in italics). Some of those parts, probably most of them, will never be called for, but the owner of our Ideal Shop believes in being ready for any possible or impossible emergency, and so his customers never have to wait. A new piston, cylinder, head, connecting-rod, spring-fork parts? Certainly! Here it is, all ready to be snapped into the machine at a moment's notice, and she's off down the road again. There is an old, one-time popular song to the effect that "I want what I want when I want it." Nothing truer was ever said of a motorcycle rider, and the man who has waited whole days and weeks for a small part, when the overworked factory is too far behind on its orders for complete machines to worry about small matters, is in position to appreciate doing business with the Ideal Shop. An engine part costing fifty cents probably looks pretty small to the factory rushing out two hundred dollar machines, but it assumes gigantic proportions in the eyes of the rider who is hankering to be on the road with the other chaps. Such a condition could never arise at this Ideal Shop of ours.

Stocking Repair Parts.

This keeping of repair parts in stock might well go farther than the machine itself. I don't know that we should insist on magneto parts, since the little juice producer is so uniformly reliable, but there is always a chance even there. Saddle springs, are a different matter entirely. I know not how many have snapped under the violent impact provided by the combination of a sudden bump in the road and my ungainly frame, but it is a good number anyway. It is quite some convenience to be able to get these springs at the shop, without waiting for a reply from the saddle company.

There is one thing to remember, Mister Dealer; the money you sink in a good supply of repair parts is not so much money lost, even if you never have an opportunity to sell those same parts. Your customers know you are ready—unless you "hide your light under a bushel," which is a very foolish thing to do—and you may be sure that they will appreciate it. And before long your business will be flourishing like the green bay tree, whatever that may be.

THE HAVERFORD HEARD FROM.

THAT the combination of low selling prices, good serviceable motorcycles and immediate deliveries seems to be an irresistible proposition this year is evidenced by the exceptionally good quarter-season of the Haverford Cycle Company of Philadelphia, Pa. It looks as if they are following in the footsteps of a celebrated mail order house who attribute their wonderful growth to the fact of offering a "big bunch" for the dollar. In the three models of the Haverford Big 4, the purchaser undoubtedly obtains an awfully big bunch for his dollar, offering as they do a motorcycle of good staying powers, well designed and finished, at exceedingly low prices.

Coincident with the splendid showing in their motorcycle sales is the fine increase in the business of the bicycle and accessories department, which has surpassed the business done during the similar period of last year by over 35 per cent. Each of the six Haverford stores has been kept on a jump to fill and ship orders.

A JERSEY SIDE-CARIST.

ASKER HOLMES, of Trenton, N. J., is one of the most consistent side-car drivers in his district. Accompanied by his wife he makes long weekly runs, sometimes across the State to the coast resorts.

THE Fulton County Motorcycle Club of Gloversville, N. Y., is advocating State legislation for uniformity of laws governing the speed of motorcycles.

THORNLEY WILLING

To Succeed Himself as Chairman of Competition Committee—Says He Likes the Work.

THAT Chairman Thornley will accept reappointment, if it is tendered him, is made plain in a frank statement issued this week by the Doctor, who considers an announcement from him in order in view of the publication of a wide variety of F. A. M. rumors by our New York contemporary. Dr. Thornley says:

"If there is one office in the F. A. M. organization which should be out of politics and kept out of politics, it is the office of the Chairman of the Competition Committee. The politician makes enemies, and has to make and keep friends; he also has to punish his enemies in order to keep them from becoming too powerful. The minute the Chairman of the Competition Committee starts in to punish his enemies, or reward friends, an independent, fair and just administration of his office will become impossible.

"The Chairman of the Competition Committee makes enemies fast enough, because of his rulings, and the more impartial he is the more enemies he will make because of adverse decisions against men who otherwise might be very friendly toward him.

"If I had absolute control of an organization, or were advising upon such an appointment, I would make it clearly understood that as long as the occupant of that office showed ordinary ability and was absolutely honest, he should be retained.

"In the first place, the work is such that it cannot be picked up in a moment by anyone, and while all men are liable to mistakes, a new man in such an office is ten times more liable to make serious errors than a fairly competent man who has had a reasonable amount of experience.

"As far as I am concerned, if the President and the Board of Directors, upon whom depends the choice of the Chairman of the Competition Committee, wish to retain me in this office I shall gladly remain, but if the F. A. M. elected a President and the majority of the Board of Directors who might be opposed to me, I would gracefully step down and out, still holding the very best wishes for the continued success of the organization in general, and the Competition Committee and its new Chairman in particular. The work is hard, but it is exceedingly attractive, and for that reason I like it.

"Incidentally, I have been mentioned in the trade press as a posible candidate for the presidency. As long as President Hamilton, who has done conscientious work, and has been fair and square, wants the presidency, there is no consideration conceivable which would induce me to run. My wishes, and all my efforts as far as I would feel justified in making any effort, would be thrown on President Hamilton's side. Should Hamilton wish to withdraw, and should he do so, I would consider it one of the worst misfortunes that had ever confronted the F. A. M. Then it might be conceivable that I would run if a nomination were presented to me in such a way as to make it apparent that I was serving the very best interests of the F. A. M. by running for the office. I most certainly do not want it, and while I would appreciate the honor, I feel that I am far better fitted to do good work for the F. A. M. in my present position than I would in the office of president. I am

"Sincerely yours,
"J. P. THORNLEY,
"Chairman."

TORMEY IS ADVANCED.

J. S. TORMEY, well known as a Goodyear hustler, has been advanced to the position of general salesman out of the company's San Francisco branch. He will cover the San Joaquin and Sacramento valleys.

MISS ALTA KEE, of Elgin, Ill., is the first feminine enthusiast of her city to pilot a motorcycle.

Atkins for speeding. 8—Stone arresting driver of test car after 18-mile chase.

BAKER AND MORTON

Chosen to Head South-Western and North-Eastern Sections of F. A. M. National Tour.

E. G. BAKER, of Indianapolis, and R. S. Morton, of Brooklyn, N. Y., will head two of the national tours to the F. A. M. meet at Columbus in July. Two other tourmasters will be appointed soon, and then the detailed routes will be sent, with other information, to all F. A. M. members. The appointment of Baker and Morton assures two good tours from Albany, N. Y., and Louisville, Ky. Baker will head the tour from Louisville—the Southwestern—and Morton will be in charge of the Northeastern tour—from Albany.

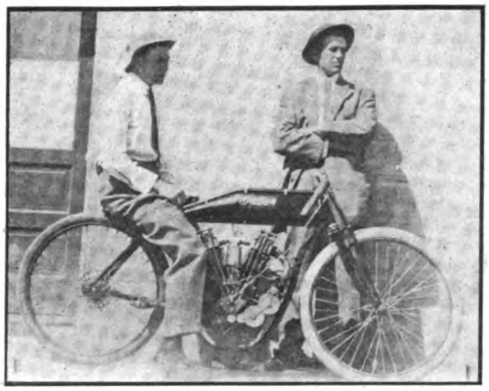
Tourmaster Morton is F. A. M. State commissioner in New York, and is widely known for his motorcycle enthusiasm. He is one of the "stand-bys," and can always be depended upon to "come through" when the interests of motorcycling and the F. A. M. are at stake. Tourmaster Baker is a well-known rider, having participated in many races and having a few records to his credit. He is extremely popular and is certain to line up a big squad. His route has already been completed, and he is ready for business.

The Southwestern tour will start from Sutcliffe & Co.'s store in Louisville, Monday morning, July 15, at 6 o'clock. The first day's run will end in Indianapolis, the distance being 150 miles, through the following towns: Jeffersonville (Ind.), Salem, Bedford, Bloomington (dinner), Gosport and Martisville.

The start from Indianapolis will be made from the Soldiers' and Sailors' Monument at 6 o'clock Tuesday morning, July 16. Tuesday's run will take the riders through Greenfield, Knightstown, Cambridge City, Richmond, Eaton, Dayton (dinner), Fairfield and Enon, into Springfield, where the riders will spend the night. The distance is 145 miles. Springfield is 43 miles from Columbus, and the Southwestern riders will freshen up and make the easy run into Columbus Wednesday morning, July 17, arriving with the other divisions at about 11 a. m. Each of the other divisions is expected to spend Tuesday night in some city 40 or 50 miles from Columbus, so that Wednesday morning's ride will bring the divisions into Columbus about 11 o'clock, fresh and smiling.

The distance from Louisville to Columbus over Tourmaster Baker's route is 338 miles. The first day is through a country noted for its scenery. The roads are good. For the second day, from Indianapolis to Springfield, the roads are splendid, and from Springfield to Columbus the going is excellent. Tourmasters Baker and Morton have entered heartily into the spirit of the tours, and say that they will see that their riders take it easy and have a good time on the way.

As soon as all the tours are routed and the other two tourmasters are named, this information will be printed and forwarded, with entry blanks, to Secretary Gibson of the F. A. M., by Guernsey Van Riper, 513 Hume-Mansur building, Indianapolis. Mr. Van Riper is serving as secretary of the tours, and with Chairman Willis of the F. A. M., the press committee is getting these things in shape. Secretary Gibson will send to all members of the F. A. M. an official notice of the convention and meet, together with the printed matter concerning the detail of the tours, which is being prepared by Secretary Van Riper.



Seymour and Claflin, Who Recently Established New Professional and Amateur Records.

SPECIAL PRIZE FOR WOLTERS.

SHORTLY after the Riverview Motordrome was opened in 1911 the management made an announcement to the effect that a special prize of $250 would be awarded the rider who scored the greatest number of points during the season, and this money has at last found its way to the pocket of Joe Wolters. Joe had a big lead over his nearest competitor when it came to piling up points, but the track management was a bit slow to take the matter up formally after the close of the 1911 racing season. When preparations were made to open the Riverview track for the present season the 1911 special award again came in for attention, and Chairman Thornley, of the F. A. M. competition committee, suggested that Wolters would probably appreciate a check. As a result Joe now has some of last year's racing money which would undoubtedly have gone the way of all coin long before this if he had received it according to the original arrangements.

LAST WEEK'S AFFILIATIONS.

THE following clubs affiliated with the F. A. M. during the week ending May 24: No. 107—Morgan County Motorcycle Club, Jacksonville, Ill.; A. R. Myrick, secretary, No. 300 E. State street; 17 members, 100 per cent. No. 267—Evansville (Ind.) Motorcycle Club; Ed. Tweitmeyer, secretary, No. 208 Main street; 36 members. No. 268—Fulton (Ind.) Motorcycle Club; Claude M. Studebaker, secretary, Box No. 85; 17 members. No. 269—Portsmouth (Ohio) Motorcycle Club; Tide Davenport, secretary, No. 111 Gallia street; 32 members. No. 270—Martinsburg (W. Va.) Motorcycle Club; E. J. Brandenburg, secretary, No. 401 N. Queen street; 14 members, 100 per cent. No. 272—Warren (Pa.) Motorcycle Club; H. H. Baldensperger, secretary, No. 301 Penn avenue West; 12 members, 100 per cent. No. 273—Panama Canal Motorcycle Club, Culebra, Canal Zone, Panama; T. H. Smallwood, secretary; 21 members, 100 per cent.

A TIP FOR RIDERS.

CHAIRMAN THORNLEY, of the F. A. M. competition committee, has received notice that an outlaw race meet is contemplated for June 2 at Rockford, Ill., and he warns Federation riders to ascertain beyond question whether a sanction has been issued before participating in any of the proposed events.

INDIANAPOLIS OUTING

Big Squad of Riders Went to Shelbyville as Guests of G. H. Westing and Enjoyed Dinner and Racing.

INDIANAPOLIS, Ind.—A most enjoyable motorcycle run was held in Indianapolis on Sunday, May 26, when over 200 riders were the guests of G. H. Westing, of the G. H. Westing Company. The run was to Shelbyville, Ind., where a motorcycle race meet was held under the auspices of the Indiana Racing Association.

One hundred and twenty-five riders, on every known make of motorcycle and from nearly every neighboring town, lined up at University Square, Indianapolis, Sunday morning at 8:30, to have their pictures taken. On the road to Shelbyville groups of riders joined the tourists from Columbus, Fairland, Valley Mills, Elwood, Richmond, Rushville, Kokomo and Edinburg, and by the time the body reached Shelbyville, after taking a roundabout route, there were over 200 machines in line. At Shelbyville the riders sat down to a chicken dinner as guests of Mr. Westing.

There were many women enthusiasts on the trip. Among them was Miss Viola Culp, the Elwood motorcycle racer, who rode down to Indianapolis from Elwood early in the morning so that she might make the whole trip from Indianapolis. Nelson Hodgin, the Terre Haute rider, who made an Indianapolis to Chicago and return record last summer, brought up his gang from Terre Haute for the Westing run, and they helped to make things lively on the trip.

At Shelbyville an interesting program was carried out before a large crowd of spectators. As a starter, Miss Viola Culp gave an exhibition of her racing skill by making a few circuits around the half-mile track. A bicycle race, between four Indianapolis riders, from the National Motorcycle and Cycle Club, was also a feature. E. G. Baker, of Indianapolis, was the main show at the race meet with his Indian. He took three firsts out of four events. Baker had a spill in the fourth event which he entered, the 25-mile open. Ray Hoffstatter, of Indianapolis, riding a Merkel, took second honors in most of the events, while other local riders figured in the results in some of the races.

Rainey, who finished second in the ten-mile tri-county event, filed a protest against Charles Harris, the winner, because Harris used Ray Hoffstatter's machine in the race.

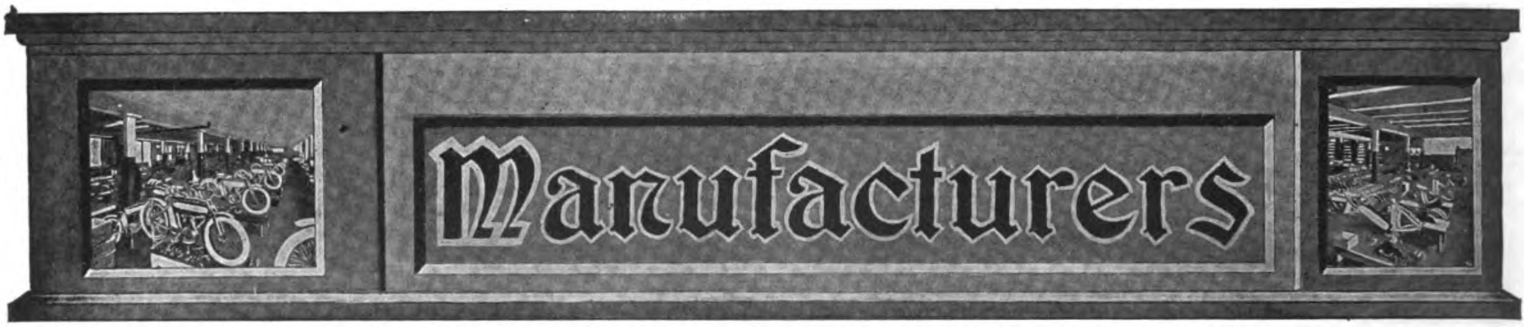
POSTAL AND POLICE SERVICE.

THE first post office in the country to use motorcycles for special delivery service is New Orleans, and Postmaster Leonhardt has put twelve Indian machines into service for that work by special authorization of the Post Office Department at Washington.

THE latest police departments to adopt the Indian are those of Woonsocket, Cranston and Warwick, R. I.; Little Rock, Ark.; Pittsburgh, Pa.; Greenville, Miss.; Terre Haute, Ind.; Duluth, Minn.; Clarksburg, W. Va., and Green Bay, Wis.

MADE TRIP TO BANFF.

MOTORCYCLISTS of Calgary, Alberta, Can., enjoyed an outing to Banff on May 24. A number of other trips along similar lines will be held each month, say the club officials.



ROSE PATENT SUITS

Philadelphia Company Gives Court Records to Prove That Its Claims Must Be Recognized.

OWING to the fact that misleading statements have gained circulation concerning the status of suits started by the Rose Mfg. Co., of Philadelphia, Pa., to protect the patents covering its Neverout license brackets, the firm has issued a circular letter which clearly defines its position. It is pointed out that every reasonable effort is made to avoid litigation over its patent rights and that no suit has been undertaken in a spirit of vindictiveness. Litigation is stopped, as the letter states, "the moment the protection of the interests of our corporation and our customers is assured." This is the attitude of the Rose company toward all the defendants mentioned in its patent suits.

The company's letter states that it holds basic patent rights covering both front and rear license brackets for automobiles, and that prompt legal action will be taken where its patents are infringed. One of the suits now pending is against Emil Grossman and allied corporations, including the Emil Grossman Company, the Eclipse Specialty Company, National Sales Corporation, Gus Balzer Company, American Auto Supply Company and Lowe Motor Supplies Company. The latter company was included in another suit against the Cox Brass Manufacturing Company, but the Rose company moved the Court to dismiss the bill against the Lowe firm and concentrate the action against the Cox company. Other firms against whom the Rose company's patent suits are pending are the E. A. Whitehouse Mfg. Co. and the Le Compte Mfg. Co., in the District of New Jersey; both these firms admitted infringement and a decision was rendered against them on demurrer. Another suit in the Northern District of Ohio, Eastern Division, is against the Eberhard Mfg. Co., the Pennsylvania Rubber and Supply Co., the Perkins-Campbell Co. and the M & M Co. These defendants filed demurrers, but the Rose company has stopped its action against the Perkins-Campbell Company on the admission of the Eberhard firm that it was responsible for the infringing articles sold under the Perkins-Campbell name.

The Rose company explains the necessity for its letter in the closing paragraph:

"Therefore, we warn the trade that the soothing assurances of the infringing manufacturers that our suits for ingringement are merely for advertising purposes are absolutely false, and in fact denied by the official records of the courts in which the several suits are pending, and, although our policy is to have as little litigation as possible, we shall bring additional suits whenever and wherever we fail to secure an amicable recognition of our rights."

A CORBIN STATEMENT.

CLARENCE A. EARL, manager of the Corbin Screw Corporation Division of the American Hardware Corporation, makes the following statement:

"We desire to say to the trade and public that we are prepared to meet any claims of A. J. Musselman under the so-called Blodgett patent against knockout axle hubs of our manufacture, and will protect our customers in the same. We never intentionally trespass upon anybody's valid patent rights and believe that we have not done so in this instance. Long before even the application for the Blodgett patent, our predecessor in business, P. & F. Corbin, made and sold knockout axles of substantially our present construction, and others antedated them in such manufacture and sale. In our hub we simply continue the long sold device and have not looked to or been forced to look to any disclosure of the Blodgett patent."

BOWSER MAKES A CHANGE.

ROY BOWSER, who appears in the accompanying photograph, recently left the employ of the Hendee Mfg. Co. and is now a member of the Harley-Davidson staff. He is a rider of wide experience who finds considerable time to boost F. A. M. affairs and the interests of motorcyclists in general.

NEW SPLITDORF COMPANY

Big Corporation Takes Over Interests of Well-Known Magneto House—C. F. Splitdorf as Vice-President.

WITH the formation of the Splitdorf Electrical Company, incorporated under the laws of New Jersey, with a paid-in capital of $3,500,000 and the election of John F. Alvord as president and C. F. Splitdorf as vice-president, the motoring world views a combination of interests of vast moment to the industry. The company has been formed as an entirely new organization with a stock issue divided into $1,500,000 of 7 per cent. cumulative preferred shares and the balance of two million dollars of common, with John F. Alvord acting for the Torrington Company, of Torrington, Conn., the direct sponsor for the new corporation.

The wide interests of C. F. Splitdorf, Inc., of magneto, coil and spark plug fame, are absorbed in the new company with the object of enlarging the present business of the long-established house of Splitdorf, so indissolubly connected with electrical devices for half a century. A command of practically unlimited resources in the concentration of manufacturing units for the production of ignition and lighting devices, of magnetos, coils and plugs and the perfection of practical instruments and methods in the development of motor cars and motorcycles, is the reason for the newcomer in the motoring world.

Mr. Alvord, who has been intimately connected with Torrington companies producing motorcycles and bicycle and motorcycle supplies, and with other organizations holding commanding positions in the supply of automobile windshields and carbureters and motor boat engines, brings with him into the new company several men who are closely identified with his vast enterprises. Bryant S. Keefer has been elected treasurer of the Splitdorf Electrical Company, and Carlos W. Curtiss, is secretary and general manager. John R. Viles, with Messrs. Alvord, Splitdorf, Keefer and Curtiss, will complete the Board of Directors.

No radical changes will be made for the present in the business which "Charlie" Splitdorf has made famous in every section of the country and with which he retains his interests and continues his inventive and selling activities. Facilities for increasing the present huge output of magnetos, coils and plugs are being studied by the new company and plans for the furtherance of manufacturing efficiency are at present under way, according to Sidney S. Meyers, the New York lawyer acting for the new corporation.

KORB & STEWART, of Evansville, Ind., have taken the agency for Yale machines, formerly handled in Evansville by W. T Gregson & Son.

DIAMOND SALE STIRS RUBBER TRADE

Big Developments are Looked for as Result of $45,000,000 Purchase by Goodrich Company—Combined Plants Employ 9,000 Men.

TRADE circles are still buzzing over details of the big deal by which the B. F. Goodrich Company, of Akron, Ohio, has come into possession of the interests of the Diamond Rubber Company, and it is likely that the $45,000,000 purchase will form a topic of conversation for manufacturers and motorists in general for some time to come. Formal announcement of the purchase has brought to a head various sale and merger rumors concerning the Goodrich and Diamond companies which have been afloat for some time past, and for those closely in touch with the American rubber industry the transaction does not come as a complete surprise.

Second Vice-President H. E. Raymond stated to a representative of MOTORCYCLE ILLUSTRATED that no "change in organization" was contemplated, at least not for the present. He admitted that press reports of the details of the purchase were substantially correct. It is pointed out that the Diamond stockholders, including a number of salaried employees of the company, have made tidy fortunes through the transaction since they will receive practically four and a half for one of their holdings.

The new company will have a plant of over sixty acres pretty well covered by buildings and factories, employing over 9,000 men. The Goodrich and Diamond plants adjoin one another, and it was the most natural thing in the world that they should finally come together.

It seems practically settled that B. G. Work, the Goodrich president, will continue at the head of affairs, with Howard E. Raymond, his right hand man, as general manager, and A. H. Marks, of the Diamond Company, as factory superintendent. Whether W. D. Miller will be associated with Mr. Raymond in the general management, or will retire from active management beyond a directorship, or retire altogether, can only be guessed at now.

There is no doubt that Diamond tires will continue to be made under their separate trade name, at least for the present.

Those who formed the combination are confident that Goodrich and Diamond will do far bigger things in future as a unit than they would have separately.

The changes that brought about the present gigantic combination were sudden. On April 1 the B. F. Goodrich Company, of Akron, became the B. F. Goodrich Company of New York, with its capital raised from $20,000,000 to $45,000,000. With Diamond added it will be $90,000,000. The Diamond Rubber Company's capital was $10,000,000.

ROOM FOR FIFTY MACHINES.

ACCOMMODATIONS for storing 50 motorcycles have been provided at the up-to-date garage of the Bidwell- Conklin Corporation, 2142 Broadway, New York City, and the establishment is now capable of meeting all the demands made upon it in this direction as well as in the sales and repair departments. Machines are lowered into the basement with an ingenious block and tackle apparatus so that there is economy of time and space. The basement being dry and fireproofed makes an ideal storage chamber. Special storage inducements are offered for tourists and no charge is made for overnight storage of machines belonging to touring F. A. M members.

KNUDSEN RESIGNS.

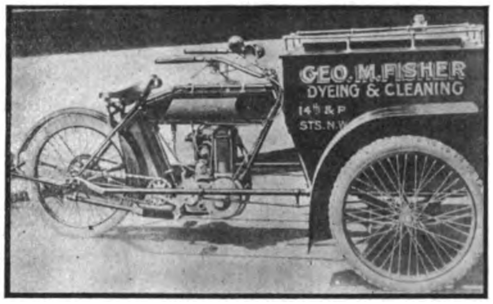
C. B. KNUDSEN has resigned as sales manager of the Minneapolis Motorcycle Company. He does not state in his announcement what his plans are, though it is safe to say that Knudsen has lined up something worth while, as he has fully demonstrated to the trade his ability to do big things well.

GOTHAM INCORPORATION.

GOTHAM SPORTING GOODS CO., New York City. To deal in sporting goods, motorcycles, bicycles, automobile supplies, etc. Capital $10,000. Incorporators: Benjamin Goodman, 354 Franklin street, Buffalo, N. Y.; Henry Ephriam, 57 Warren street, New York City, and Ben Stacy, 526 West 158th street, New York City.

THE Badger M. C., of Racine, Wis., held its annual banquet on May 30 at the Hotel Racine.

VAN SOLVES HIS PROBLEM.



GEORGE M. FISHER, proprietor of a dyeing and cleaning establishment in Washington, D. C., has been using the Minneapolis van outfit shown in the accompanying photograph for the last two months and getting the best of results. Prior to buying the van he experienced difficulty in covering his territory economically and with dispatch, but he believes that he has now solved the problem.

AN ECONOMICAL TRIP.

J. J. REID, of San Francisco, Cal., recently rode 3,500 miles on a New Era auto-cycle with an outlay of only $15 for gasoline. He is of the opinion that this is a fuel record and would like to hear from any rider who believes he has improved upon it. Starting from San Diego Reid went up along the coast to Oregon and made a roundabout tour on his way back in a search for a more promising place than San Diego in which to make his home. He did not find one.

LINING UP SPEEDSTERS.

TWO pro events and four amateur races are on the program to be offered by the Lorain M. C. at its meet on June 13.

CUP GOES TO HUYCK

Nine Riders in Chicago M. C. Grind Had Clean Road Scores and Decision Was a Close One.

CHICAGO, ILL.—Few events scheduled for the season in Chicago will compare in interest with the run held by the Chicago Motorcycle Club on Sunday, May 19. The club cup, valued at $200, was at stake, and the nine perfect road scores recorded evidence great effort on the part of the contestants. Nearly 200 miles were covered, the course lying over the sandy road to Milwaukee. Never before has more than one rider finished with a perfect score in competition for this cup, and from the fact that the last contest was an exception in this respect arose the difficulty which postponed a final decision until May 23, when Fred Huyck, Merkel twin, was named as winner. To choose the winner from the nine riders having perfect scores the competition committee arranged a system of technical demerits and at the completion of the examination the list read as follows: Purdy, Indian, 6 demerits; Hanke, H-D, 3 demerits; Puls, H-D, 5 demerits; Huyck, Merkel, 2 demerits; Barlass, Indian, 15 demerits; Monroe, Sears, 12 demerits; Erick, Minneapolis, 15 demerits; Miller, Excelsior, 6 demerits; Leander, Indian, 9 demerits.

On Tuesday morning following the race it was announced by the competition committee that the Flanders 4 ridden by R. E. Buell had been declared the winner at 2 a. m. that day, by a brake test between Buell and Huyck who had tied on road scores and technical demerits, but a statement by Buell himself that he was one-half minute late in Milwaukee brought about the reconsideration on Thursday when a deduction of one point was made from his road score. All riders with perfect scores will be awarded gold medals and those who did not fall below 990 will receive silver ones.

WINNIPEG'S OPENING MEET.

IN the opening meet in the River Park half-mile track at Winnipeg, Can., Saturday. the 11th instant, J. Cruikshank won in four starts, capturing both finals, with Pelham second in each case. **Summaries:**

Three miles, first heat—Pelham (Indian). first; Hughson (Merkel), second; Crabtree (Merkel), third. Time, 3:50.

Three miles, second heat—Cruikshank (Indian), first; Small (Indian), second; Hulton (Merkel), third; Lewis (Merkel), fourth. Time, 3:47½.

Five miles, first heat—Pelham (Indian). first; Hughson (Merkel), second; Crabtree (Merkel), did not finish. Time, 6:12⅕

Five miles, second heat—Cruikshank (Indian), first; Small (Indian), second; Lewis (Merkel), third; Hulton (Merkel), fourth. Time, 6:49.

Three miles, final—Cruikshank (Indian). first; Pelham (Indian), second; Small (Indian). third; Hughson (Merkel), fourth. Time, 3:37⅖.

Five miles, final—Cruikshank (Indian). first; Pelham (Indian), second; Hughson (Merkel), third; Small (Indian), fourth. Time, 6:02⅗.

Three miles, match race to decide tie—Small (Indian), first; Hughson (Merkel), second. Time, 3:47⅕.

Score by point system—Cruikshank, first, 6 points; Pelham, second, 4 points; Small, third.

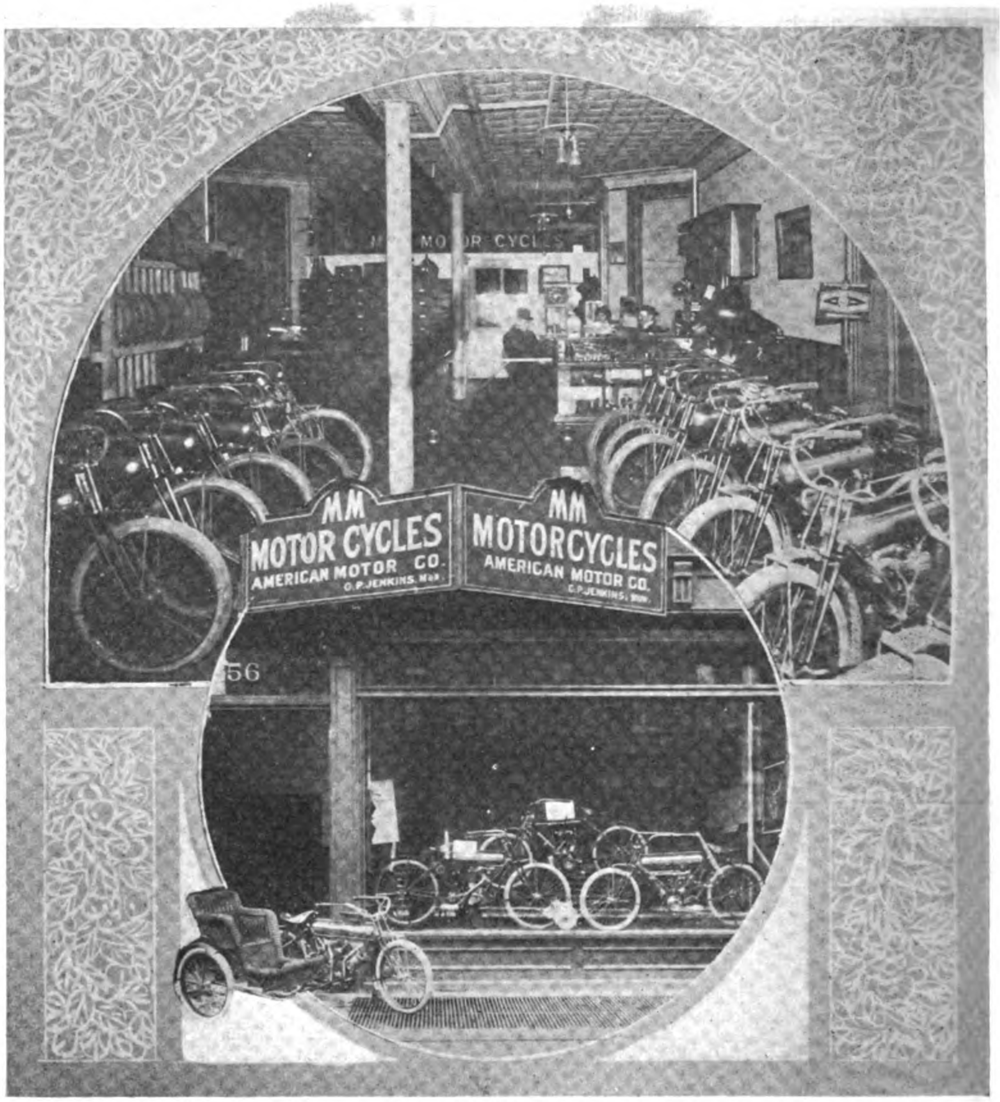
JENKINS' MODEL SHOP

New York Dealer Has Thoroughly Fitted Establishment in Which Cleanliness and Order Are Featured.

MODEL motorcycle establishments are unfortunately all too rare and for that reason the following description and accompanying photographs of the headquarters of George P. Jenkins, 256 West 55th street, New York City, should prove interesting to riders as well as the trade. The Jenkins store is fitted and operated on a basis calculated to impress every patron, and not the least important of its qualifications is scrupulous cleanliness in the showroom, offices and shop.

The garage is about 150 feet deep, and is divided into three main sections. The first is the showroom, about 65 feet in length, with a slight rise at the rear end to the level of the office and sales section. The machines, all M. M.'s, for which Jenkins is the agent, are arranged in two rows against the wall with a clear center on which wide matting leads back to the shop at the rear. Access to the elevated portion of the showroom is by a slightly curved ramp at the side of the short flight of stairs. A large table on the opposite side is used for the display of clothing and has files of all the trade journals on hand. Large racks accommodate tires, and cabinets display lamps, etc., near the front of the establishment. In the office and sales section, the right side is occupied by the usual office equipment and a tastefully arranged showcase. The left has a counter and drawer cabinets; all spare parts are kept in their special drawers and the accessories in a second cabinet similarly fitted. Parts for practically every M. M. model produced are stocked, and the value of parts alone is stated at $3,600.

Just in the rear of the parts cabinet is a well-fitted dressing-room giving access to the lockers by a door at the rear and communicating with the main runway directly. This is employed also as the proprietor's private office. A partition with glazed door communicates with the shop at the rear. The latter is excellently lighted by a number of windows and by incandescent fixtures at night. The bench takes up nearly two sides of the shop and is provided with vises, light drill press and an arbor press. A bicycle type grinder and large drill press are fitted at one side, and between these and the bench is a large tool closet in which each tool has its place. This systematic arrangement makes for facility in repairing and obviates all disorder, etc. On the left of the shop section are located the lockers, access to which is had from the dressing-room and from the door to the shop. The stockroom is still farther to the left and is accessible only from the sales section. Outside of the shop, walls and pillars are painted white and the floor a deep red. The window frontage is unusually large, enabling three or more machines to be exhibited without crowding.



BUSINESS TRIP TO ENGLAND.

J. W. GIBSON, department manager of the Canada Cycle and Motor Company, West Toronto, left for England on May 27 to attend to business in connection with the placing of the "Russell" motorcycle on the Canadian market in a few months.

RITCHIE, the Chicago Club twirler, has placed an order for a two-speed Thor machine through Whipple, Chicago's "Motorcycle Man."

NEW FEDERAL BRANCH.

LARGE gold letters on the windows of the first floor of the Evans building in Minneapolis, Minn., are to the effect that the Federal Rubber Manufacturing Company, maker of Federal motorcycle tires, has settled upon this attractive show corner for its branch headquarters. The quarters are right in the motoring district and Manager W. F. Bigelow says he is now ready to take good care of the motorcyclist. The new showroom and offices are accessible from both street and avenue, and the display windows are large enough to "sample" the best of the Federal line.

THE MINNESOTA BOOM.

ST. PAUL, MINN.—Figures compiled by Secretary of State Julius A. Schmahl show that 1,398 motorcycle licenses were sold during the month of April last. Mr. Schmahl has had to employ two men in his department to take care of the motorcycle licenses alone. Secretary Schmahl also reports that many farmers are now taking to the motor two-wheeler.

MINNEAPOLIS IN CLEVELAND.

THE Minneapolis has a new home in Cleveland, and will hereafter be handled by the Casino Cycle & Supply Co., at 6802 Superior avenue. This establishment, which also handles the Thor and Excelsior machines, is under the management of John A. Zucker.

THE SUN CATALOG.

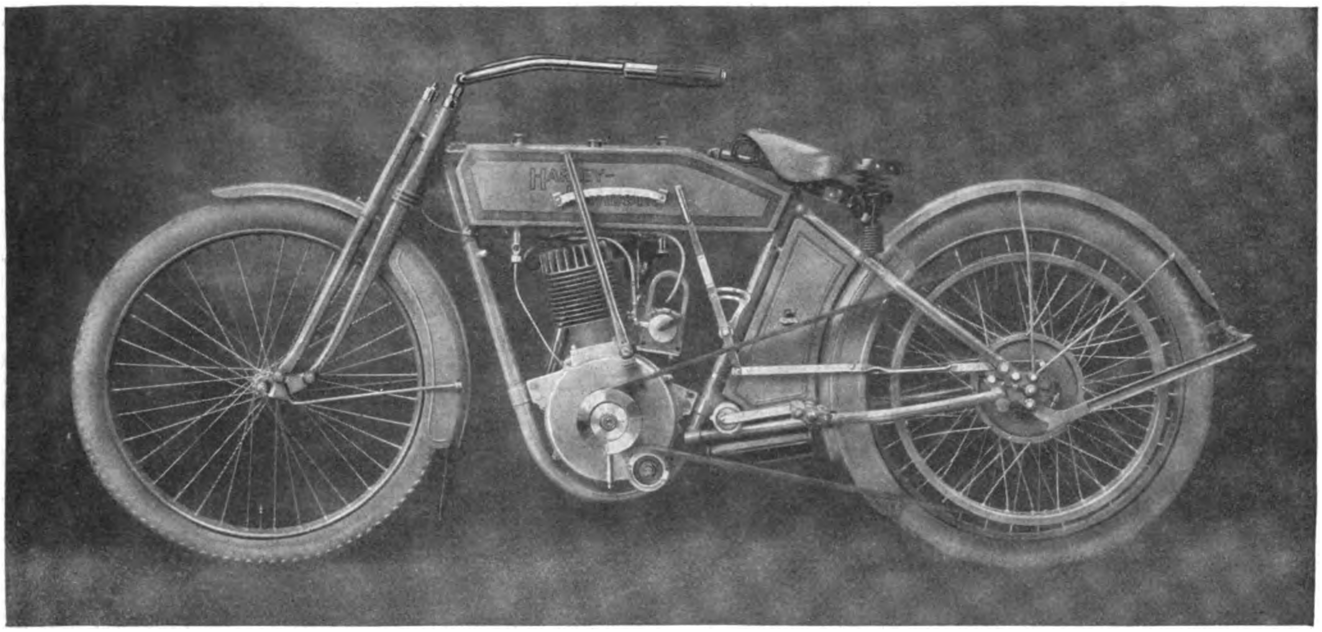
A NEW catalog of motorcycle specialties, comprehensively arranged, has just been published by the Sun Motor & Supply Co., 307 Amsterdam avenue, New York. One of the many attractive specialties listed and illustrated is the Cinch Tire Repair Kit, consisting of piercing tool, stretcher, closing pliers and 12 plugs. The complete kit measures 7 inches by 4 inches and weighs one pound, and is conveniently carried in the pocket. It has many enthusiastic endorsers for its exceptional efficiency and durableness. The Sun Motor & Supply Co. intends to mail 20,000 of their catalogs, the first 10,000 to be mailed at once. Besides marketing the Flanders and N. S. U. motorcycles and motorcycle specialties, the above company has been appointed distributor for the Graton & Knight belts and accessories.

McBRIDE TAKES ANOTHER.

PERCY A. McBRIDE, the Toronto motorcycle agent, has added a fifth line of machines to his stock. In future he will handle the Henderson four-cylinder product as well as the Excelsior, Pope, Bradbury and Motosacoche.

SELLING THE FLANDERS.

HENRY HAVENS, a Jacksonville (Fla.) rider, has been appointed as a traveling salesman for the Flanders Mfg. Co., and he is now touring his district in the interest of the Pontiac firm.



PULS and Hanke both finished the Chicago Reliability Contest with perfect scores.

Persons, the only other Harley-Davidson rider, was deprived of a perfect score by getting "pinched" for speeding.

The riders were not advised that there was to be a technical examination after the run or they would have taken the time to look over their machines (which were not new ones) before the contest.

Three or four tiny nuts which were missing from the pedal rubbers on Puls' machine and a loose carbureter screw and a loose spoke on Hanke's machine were all that were responsible for the technical penalties placed on the Harley-Davidsons. Of course these penalties in no way cast any reflection on the Harley-Davidson, for they did not and would not effect the running of the machines—at best they are only a matter of equipment not manufactured by us.

Persons' machine (a 1911 model) had covered something like 12,000 or 15,000 miles before the contest and came in in perfect shape.

The Chicago contest was severe enough to put some other makes entirely out of commission, but showed again that Harley-Davidsons can always be depended upon to "get their and back."

HARLEY-DAVIDSON MOTOR COMPANY

223 C STREET, MILWAUKEE, WISCONSIN

WEED TIRE CHAINS.

TO meet the demand for a non-skid chain device for motorcycle use, the Weed Chain Tire Grip Company, of 28 Moore street, New York, has brought out the anti-skid chains which bear its name, following the care in construction of the Weed product so long in use on automobiles. The chains consist of cross chains which are connected at intervals to two side chains, the former taking care of any skidding, etc., and being the actual working members of the device. When placed on a motorcycle tire and wheel, the chains "creep" continuously, keeping the tires clean and preventing mud or ice from caking in the forks and mudguards. This tends to eliminate extra resistance or weight and is a distinctive feature in the Weed product as compared to other detachable anti-skid devices.

The chains are easily attached or detached, and when out of use occupy very little space. They are carefully hardened by a secret process and have an extreme life under the most arduous service. The steering is unchanged when these chains are fitted, and the user can be confident of increased safety and a maximum of traction over any kind of surface.

HANDY PULLEY LAGGING.

"NON-SLIP-LAG," manufactured by the Continental Rubber Works, of Erie, Pa., for use on motorcycle pulleys, is as simple, efficient and economical a form of lagging as can be devised, and the rapidity with which it has come into favor indicates that the need of it has long been felt. "Non-Slip-Lag" is put up in rolls, and is stripped off as needed and placed upon the pulleys without the necessity for removing the belt. As no screws are used for fastening, the belt is not subjected to unnatural wear, and its life is materially prolonged. The Continental Company has been experimenting with this form of lagging for the last year, and is convinced that it has produced a power and money saver.

HEGSTROM REPRESENTATIVES.

THE Wesco Supply Company, of St. Louis, Mo., has made arrangements whereby it will act as distributor of Hegstrom spark plugs and other Hegstrom specialties in St. Louis for the coming season. The Wesco company has branch houses at Birmingham, Alabama, and Ft. Worth, Texas, and has 25 road salesmen covering the South. This is a new departure on the part of this concern, as heretofore it has been identified only with the electrical supply business.

TWELVE AT A CLIP.

M. ZILBERMAN, Indian agent in New Orleans, La., feels that he has given the motorcycle trade in his vicinity a big boost by selling twelve machines to Postmaster Leonhardt, of the New Orleans post office, for special delivery work.

WAKING UP THE PRINTS.

THREE-QUARTERS of the first page in the magazine section of the Philadelphia *Record* on Sunday, May 12, was given up to an article on motorcycles, accompanied by pictures. The artistic effect was highly pleasing, and that the trade in eastern Pennsylvania benefited by the advertisement goes without saying.

H-D HOUSE ORGAN.

ALWAYS on the alert to advance the interests of its dealers and keen for the exploitation of the motorcycle in all its fields, the Harley-Davidson Motor Co. is now embracing in its broad-gauge advertising campaign the publication of a house organ known as the Harley-Davidson Dealer. It is a well-printed and tastefully illustrated booklet dominated, as its name implies, by helpful information for the men who pass the H-D machines on to the riders. The first number, for May, is now being distributed, and it has met with unanimous approval of the dealers.

FOR DRY GOODS DELIVERIES.

THE Minneapolis Dry Goods Co., one of the largest department stores in Minneapolis, Minn., is the latest firm to see the adaptability of the motorcycle for delivery purposes. The company has just purchased a Minneapolis tri-car and is thinking of adding one more machine to the delivery service, so popular has it become.

6311
REPAIRING
L.J.M

MR. LOOMIS, traveling salesman of the Elgin Glove & Legging Company, in front of L. J. Mueller's store in Cleveland. T. H. Tucker and E. H. Tracey are also shown.

SOMETHING NEW, SAYS GREENE.

GUY GREENE, of the Eagle Motor Co., announces that he is about to market something new in the way of a racing machine. He has given it exhaustive tests and is well satisfied with its performances for both speed and endurance.

THE SIXTH CARLOAD.

THE Wisconsin Motorcycle Co., of Milwaukee, Indian distributors for Wisconsin and northern Michigan, recently received its sixth carload of the Wigwam machines and reports that the demand is unprecedented in the territory it covers.

MINNEAPOLIS HEADQUARTERS.

THE Pennsylvania Rubber Company, northwestern distributors of the Pennsylvania vacuum cup motorcycle tires, has just moved into its new Minneapolis (Minn.) headquarters at 34 Eighth street S.

NOBBY TREAD WINS.

THROUGH a decision rendered by Judge Noyes of the United States Court of Appeals for the second circuit, all question as to the right of the United States Tire Company to manufacture and sell Nobby tread tires has been removed. Judge Noyes reversed the decision of the lower court in a suit brought by another tire company in which the claim was set forth that the Nobby tread tire was an infringement. The suit was a complete victory for Nobby Treads. As most motorists throughout the country are aware, the Nobby tread is a non-skid tire, having large diagonally-placed knobs running circumferentially around the tread. It was first manufactured at the Morgan & Wright factory, one of the rubber plants now operated by the United States Tire Company.

MINNEAPOLIS DEALER INJURED.

FREEMAN H. BISSETT, of the firm of Hammer & Bissett, Minneapolis (Minn.) agents for the Indian motorcycle, went through a serious automobile accident recently which will necessitate his withdrawal from the motorcycle game for about a month. While returning from Lake Minnetonka in his automobile the machine ran into a rut and swerved off the road into a ditch. Mr. Bissett was thrown under the machine and was considerably cut up. "I ought to have known better than to have trusted myself to one of those automobiles," said Mr. Bissett. "Hereafter I will stick to the two-wheeler for it is the only thing for safety."

THEY NEED MOTORCYCLES.

POLICE officials of Atchison, Kan., say they have chased motor speeders in buggies, on horseback and in automobiles without being able to catch them and they are now going to equip themselves with motorcycles.

TELLING THEIR STORY.

KLINE BROS., handlers of Harley-Davidson motorcycles in Louisville, Ky., are waging a newspaper advertising campaign along broad lines which is bringing results.

TAKING A LONG GRADE.

THE accompanying photograph of a party of Meadville (Pa.) motorcyclists was taken just as the boys were starting up a grade 4,800 feet long, with a rise varying from three to twelve per cent. All the riders reached the top without serious trouble, but they admit that such hills do not add to the joys of road work in their territory. E. R. Durkee forwards the picture.

Why we lead the world in lubrication

Words and claims—no matter how oily—won't lubricate your motorcycle.

Your business sense asks:

"Who made the oil?"

We will sketch briefly the experience behind the oils recommended here.

Power-engineers all over the world recognize the authoritative leadership of the Vacuum Oil Company.

From Stockholm to Cape Town, from New York to Shanghai, leading manufacturing plants depend on our Gargoyle brand lubricants.

We supply 75 per cent. of the world's battleships, most of the ocean greyhounds, and practically every aeroplane in active use. Outside of the American market, we furnish lubricants to over seventy foreign automobile manufacturers.

Such buyers show small interest in words and claims, or price per gallon.

They select an oil for only one reason—because it gives more and better lubrication ***per dollar expended.***

That necessitates both the right ***quality*** of oil and the correct ***grade*** for the purpose.

The success of Gargoyle Mobiloils with American and foreign automobilists and motorcyclists is due to exact manufacturing methods.

Before making our recommendations, we analyzed the construction of every American motorcycle.

Gargoyle Mobiloils are put up in barrels, half-barrels, in 5 and 1 gallon sealed, white cans. All are branded with the Gargoyle, which is our mark of manufacture.

They are handled by the higher class garages, auto-supply stores and others who supply motorcycle lubricants.

The various grades for motorcycle use go by the following names:

Gargoyle Mobiloil "A"
Gargoyle Mobiloil "B"
Gargoyle Mobiloil "Arctic"

Vacuum Oil Company, Rochester, U. S. A.

General Sales Offices, 29 Broadway, New York City

DISTRIBUTING WAREHOUSES IN THE PRINCIPAL CITIES OF THE WORLD.

GARGOYLE

Mobiloil

A grade for each type of motor.

The list below shows the right oil for your motorcycle.

Explanation: In this schedule the letter opposite the name of motorcycle indicates the grade of Gargoyle Mobiloil that should be used. For example, "A" means "Gargoyle Mobiloil A." "Arc" means "Gargoyle Mobiloil Arctic." Recommendations cover all types of the same make unless otherwise stated.

QUESTIONS & ANSWERS

A VOLLEY OF QUESTIONS.

CHAS. D. MILES—(1) The motor will develop slightly more than the power stated in the catalog as a rule, but every motor of the same model will not necessarily give off exactly the same horsepower. This is true of all gasoline motors. (2) Probably not so fast as lighter-built machines of the horsepower mentioned, but of equal if not slightly better climbing ability. This depends a great deal on the ability of the rider to get all he can get out of his mount. (3) At least better than 56 miles per hour; possibly 60. Straightaway time (if the distance is sufficient) is better than any form of track time. It is quite difficult to get a sufficiently long straightaway to demonstrate this, as for a mile there should be at least a quarter mile before the starting point and an equal distance after the finishing point to develop the best speed. Present mile record, according to the F. A. M. official times, is 37⅘ seconds, made by W. E. Hasha on April 5, 1912, at Los Angeles track. (4) Yes, very secure, has been tested and found satisfactory for at least four years. (5) Yes. (6) Yes. (7) Over nine years. (8) For heavy service the 29 by 3-inch tire, if there is sufficient space between the mudguard and rim for fitting it. This fact might prevent the use of the 3-inch automobile tire. The 29 by 3-inch tire is not a freak, but a reliable construction.

FOR A TRIP ABROAD.

ROSS ARTHUR—If you are going to have your machine on board ship with you when you take passage, it can be carried as "excess baggage." If you are going to ship it ahead or to follow, have it sent by freight. The rates are the same in either case, but in the first your machine will go with you to your destination, while with the other it will go only to the freight port for the particular steamship line. The rates are: White Star, $10.25, unloading at Liverpool or Plymouth; Cunard, $5.13, Liverpool. These rates are for a crated motorcycle, not exceeding 40 cubic feet volume when ready to sling aboard. Insurance, which should be taken out, is to be had at the rate of one-quarter of one per cent. on the declared value of the machine.

Apply to the secretary, T. W. Loughborough, 99 Pall Mall, London, S. W., for information as to the Auto Cycle Union. The fee for membership is, we understand, $1.50 per year. The A. C. U. will be glad to arrange with you in getting the necessary licenses, etc. A license taken out in any part of the British Isles is good in any other part of England, Scotland, Whales or Ireland.

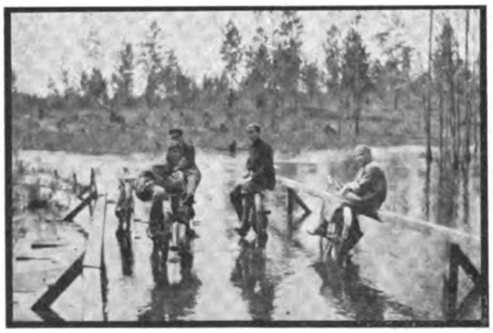
ST. CHARLES TO MILWAUKEE.

REV. THEODORE SCHOEWE—From St. Charles your first objective is La Crosse, Wis. The places passed through are: 5.9 Utica; 4.6 Lewiston; 6.7 Stockton; 7.8 Winona; 9.5 Witoka; 3.6 Ridgeway; 17.6 La Crescent; 3.4 La Crosse. The distance before each place is intermediate.

From La Crosse the route to Milwaukee is as follows: La Crosse; 13.4 St. Joseph; 11.4 Portland; 5.8 Cashton; 10.2 Ontario; 13.6 Kendalls; 7.1 Elroy; 4.7 Union Center; 3.8 Wonewoc; 7.9 La Valle; 7.9 Reedsburg; 8.2 Abelmans; 9.4 Baraboo; 15.7 Prairie du Sac; 1.6 Sauk City; 14.9 Ashton; 10.1 Madison. From Madison go on to 11.7 Sun Prairie; 8.1 Marshall; 4.4 Waterloo; 1.5 Portland; 13.1 Watertown; 13.2 Oconomowoc; 8.6 Hartland; 4.7 Pewaukee; 5.9 Brookfield; 13.3 Milwaukee. Distances: St. Charles to La Crosse, 59.1 miles; La Crosse to Madison, 145.6 miles; Madison to Milwaukee, 84.5 miles. Total distance, 289.2 miles. Roads, fair to good rolling and level, with several long grades between Winona and La Crosse. La Crosse to Madison, clay to Kendalls, sand to Baraboo, macadam and gravel with several rough stretches rest of route. Madison to Milwaukee, to Watertown, dirt and clay with sandy spots; rest good dirt or pike in dry weather.

ALABAMA ROADS.

JOHN F. HOLLEY, JR., of Mobile, Ala., who forwards the accompanying photographs, believes that few sections of the country need a Good Roads boom worse than that in which he is obliged to do his motorcycle riding, and one of the pictures affords ample backing for his argument. The boys who appear to be waiting for a second ark are in reality perched on a bridge which is under about six inches of water, and they have just made their way over roads which were almost impassable for wagons and teams, not to speak of motor-two-wheelers.



The other photograph shows five of the Mobile riders at Oak Grove, where they dined on a recent outing. From left to right are Martin, Holley, Weatherbee, Cumberland and Spottswood, the latter being Thor, Excelsior and Harley-Davidson agent in Mobile. All the boys appearing in the picture mount Thors.

TWO-SPEEDS IN THE HUB.

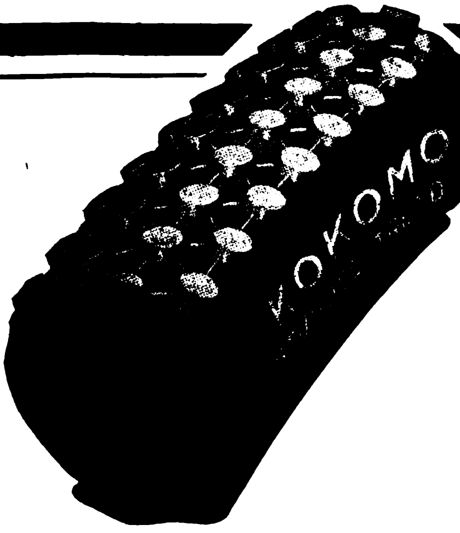
PHILLIP L. ALLISON.—Write the Thiem Mfg. Co., 2237 Hampden avenue, St. Paul, Minn. Other than the product of the firm mentioned we know of no hub-located two-speed gear manufactured in this country. There are no front wheel mounted carriers on the market as far as we know; for handle-bar carriers see our advertising columns. Consult your dealer.

TRENTONIANS ON OUTING.

TRENTON, N. J.—The Indian riders of this city, who have been patrons of John Sykes, the local Indian agent, were tendered an outing on Sunday, May 26, in the Allentown Harvest Home woods. The event was a rather novel one and a number of women were present as guests. The riders assembled at the Wigwam at 10:30 a. m. Captain Crist, who is president of the Central Jersey Motorcycle Club, handled the run. The trip was made to Princeton, Edinburgh and Allentown.

On arriving at the woods, luncheon was served. The afternoon was spent in games of various kinds, the feature of the program being a baseball game between the married and single men. The benedicts trimmed their bachelor brothers by the score of 10 to 3. Fred Arend captured the fat men's race after a rather spirited contest, and Hoffmann won at quoits over McCullic. There were about seventy-five riders present.

CHIEF ROOT, of the Freeport, Ill., police department, prefers a motorcycle to any other vehicle for police use.



The chief qualifications tires must possess are

Low { Original Cost
Up-Keep Exponso

and

Service-giving qualities;—their ability to take you over all kinds of roads—through sand, mud, snow, over stones and slippery pavements.

KOKOMO TIRES

are built with a view to meeting the requirements of the most exacting motorcyclist. Sixteen years' experience in the making of good tires has resulted in the production of a low-cost, durable, efficient tire that has been proven by many tests to have longer life, to require less attention and to be more adaptable to the severest conditions than any other motorcycle tire on the market today.

Literature sent upon request.

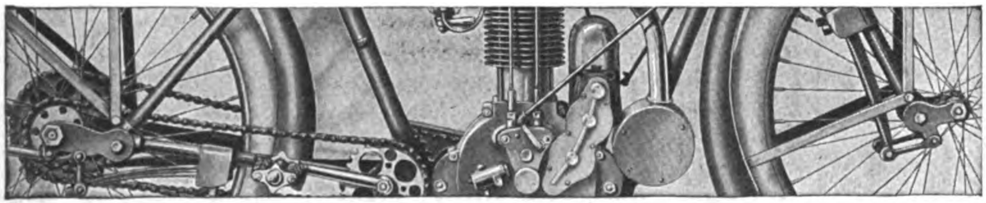
ST. PAUL, MINN.



The P.E.M.

Formerly The Waverley

Frame Hung On Leaf Springs (Automobile Construction)

Greatest improvement in motorcycles! Four special vanadium steel long leaf springs—extremely elastic—absolutely unbreakable—frame is rigid—no hinges—and rides on these leaf springs with a silent, velvety action delightful to the rider. No other construction can possibly equal this in pleasure of riding.

A trial will instantly convince you!

Most efficient single cyl. motor ever built. Has overhead valves, positive mechanical oiler, free-engine clutch, Bosch armored magneto, and automatic carbureter. Cylinder and head of semi-steel specially heat treated, connecting rod, crankshaft, etc., of vanadium steel. You can get into speed from a standstill without any jerks. Speed? 56 seconds to the mile!

We want live agents and are offering special introductory inducements in open territory. All machines of perfect workmanship, thoroughly tested and guaranteed satisfactory. Catalog and terms promptly mailed at your request.

WAVERLEY MFG. CO., Waverley Place, JEFFERSON, WIS. **CHICAGO BRANCH: MARQUETTE BLDG.**

51½% GAIN
IN NET CIRCULATION

A comparison of the 1911 and 1912 figures for January, February, March and April shows the **paid** circulation per issue of Motorcycle Illustrated to have been as follows:

1911	1912	Approximate Per Cent of Gain in One Year
January 12—7,280	**January 11— 9,025**	**25%**
January 26—7,460	**January 25— 9,250**	**25%**
February 9—7,525	**February 8— 9,325**	**25%**
February 23—7,625	**February 22—10,025**	**35%**
March 9—7,760	**March 7—10,275**	**35%**
March 23—7,795	**March 21—10,350**	**35%**
April 6—7,815	**April 4—10,725**	**35%**
April 20—7,895	**April 18—11,025**	**40%**

Note that even the **percentage** of annual gain in net circulation is rapidly increasing. Whereas the January, 1912, figures show a 25% increase over those of January, 1911, the circulation for April, 1912, is 40% more than for April, 1911. In January, 1911, the paid circulation was 7,280; in April, 1912, 11,025, at net gain of 51½ per cent in fifteen months. Returns by the American News Company are **not** included in any of the above figures. The News Company is now taking 5,250 copies per issue and returning 1,050, the actual news-stand sales being 4,200, and paid-in-advance-subscriptions 6,915, making the **total net paid** circulation of the May 16th issue **11,115** copies. Of that issue, 13,500 copies were printed.

All circulation records, including original subscriptions, News Company's and Post-Office receipts, printing and paper bills, etc., are open to inspection by anyone at any time. Before placing or renewing contracts, advertisers should insist upon having proofs of circulation from the publications they contemplate using.

TRINITY CHIMES

An Exhaust Horn with a Musical Tone
Warns Without Giving Offense
A Hair-Raiser When Needed

There is absolutely nothing about the Trinity Chimes to get out of order—no moving parts, no batteries, no wire connections. It never fails. It costs nothing to operate. It is operated by a three-way valve which is supplied with the horn. Its four tubes give a perfectly blended chord of pleasing harmony. Its body is a brass casting. The tubes are brass-wedged into slots in the casting, and instead of being of flimsy construction and supported separately, they are carefully brazed together, building up a unit of such strong construction as will last a lifetime. It is furnished in triple nickel-plate, highly polished.

Get the best horn at a lower price; don't spend more for one not so good.

EVERY DEALER SHOULD CARRY A STOCK OF TRINITY CHIMES

IMMEDIATE DELIVERIES ON MAJESTIC SIDE-CARS

OBERWEGNER MOTOR COMPANY.
Per A. Oberwegner, Mgr.
139-141 Michigan St., Toledo, O.

MAJESTIC MFG. CO., Worcester, Mass.

Gentlemen: After putting your Majestic Side-car through three months of continual hard usage, attached to a 1912 EXCELSIOR AUTO CYCLE, we have nothing but praise to offer.

This car has withstood the severe conditions without a particle of trouble. It is a big hit with the ladies, and we have sold a large number of machines on the strength of this Side Car.

The writer has had considerable experience with both former American and foreign made Side Cars, but your Majestic Side Car proves to us that you have studied the conditions carefully before you marketed same. Very truly yours,

OBERWEGNER MOTOR CO.

Havermeyer Place, Greenwich, Conn., 4/26/12.

TO THE MAJESTIC MFG. CO.

Gentlemen: Yours of the 22nd received and contents duly noted. I take pleasure in offering my approval of your meritorious Side-Car. It has filled a long-felt want, and I consider it all the makers claim for it. I am riding a Twin M M and attain a maximum speed of 45 miles per hour; furthermore, my friends all aver "The ride exceeded their most sanguine expectations." Yours truly,

GEO. BARNES.

THE MAJESTIC MANUFACTURING CO.
Worcester, Mass., U. S. A.

Dear Sirs: Yours of 20th received some days ago. In regard to side car I cannot say very much yet as I have not had much time to use same. But I can say that car certainly is a dandy. I had it attached to a 4 H. P. 1910 Indian; went along good with about 165 lb. passenger; made long steep grade with very little throttle. Of course I had to gear machine about 8 to 1 on account of several bad hills. No trouble to get anybody to ride in it either. If there is anything in this letter that you can use you are welcome to do so.

Yours very truly, D. L. SANDRETTO.

Lancaster, Pa., April 24, 1912.

THE MAJESTIC MFG. CO., Worcester, Mass.

Dear Sirs: Replying to yours of April 16th would say I have tried the Majestic Side-car, first on Single Cylinder Motorcycle, and it worked well on good roads. Then I attached the Side-car to a 1912 twin Reading Standard, and making an extra arm of tubing from under the seat of the Motorcycle to the tandem attachment and, connecting the rocker arm of the Side-car to the extra tube under seat of motorcycle, have run over good and bad roads fifty miles on one gallon of gasoline, carrying three men—one operator—one on Side-car and one on Tandem attachment—taking all hills and at different times speedometer registered 38 to 40 miles per hour. Yours truly,

JOHN H. TRAGESSER.

Lunar MOTORCYCLE LAMPS

Double Efficiency

Double strength, double service and twice the ordinary lamp's durability are contained in

"Lunar" Motorcycle Lamps

No other lamp on the market today can stand up longer under all kinds of treatment.

Special feature of LUNAR lamps is their double light. While the Mangin mirror throws an extremely powerful beam of light straight ahead, the inside reflector diffuses the rays, so that not only the road ahead, but the ditches on each side of it are clearly illuminated.

SPECIFICATIONS

"Lunar" Motorcycle Lamps are made of heavy gauge brass throughout with one piece body. All parts are interchangeable and easily removed for cleaning purposes. Extra heavy glass front; all rattle and vibration absolutely eliminated.

Diameter of Mangin Mirror, 5 inches; diameter of Flange, 8 inches; extreme length, 6 inches. Brackets adjustable to fit any motorcycle. Nickel finish will be furnished regularly.

Mr. Dealer—We have an extremely interesting proposition. Write.

THE NEW ERA AUTO-CYCLE CO., 22 Dale Ave., Dayton, Ohio

The Happy Motorcyclist

You won't be happy if you use cheap, inferior supplies. You can't depend on them. They may cause a break-down at any moment. You know this; so do we, and that is just why we won't stock the trash. An article has to be good enough to hold our "*money back*" *guarantee* or it doesn't get the name of

MECO SUPPLIES

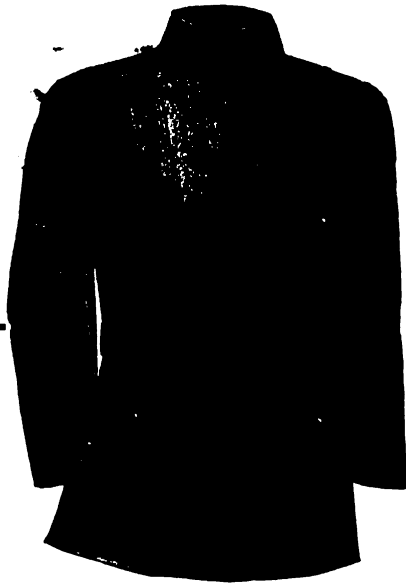
You don't have to pay any more for a Meco Guaranteed Accessory than you do for an inferior one—oftentimes less. The best is none too good for you.

The best the world produces is at your finger tips when you consult our big free catalog. Nowhere else can you get the large assortment. It's the wise Motorcyclist's guide to happiness. It contains

What You Want When You Want It

If you have a copy send us an order and become one of the Meco happy family. If you have not, write for it today. It will save you $$$. Wholesale and retail.

MOTORCYCLE EQUIPMENT CO.
Hammondsport, N. Y.



How Do You Look on a Motorcycle?

Are you thoroughly satisfied with your appearance? Is your suit all that you think it should be? Does it fit well? Is it comfortable? Was it made to **your** measure? Does it wear well? If you can't answer these questions satisfactorily, it's time you knew more about

AURORA
MOTORCYCLE CLOTHING
BRAND

Strength in Every Fibre
Quality in Every Thread

Aurora Brand clothing is made to fit you. Durability, style, fit and comfort are our "long suit." Made to withstand the hardest kind of service.

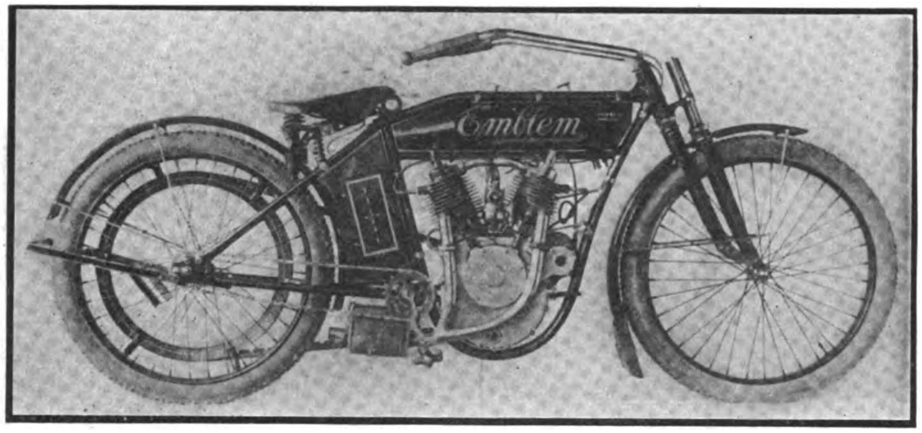
The illustration shows our natty, comfortable and durable Norfolk cut coat. It can be made to your measure in the latest style and in the following materials:

English Roseberry, English Whipcord, Fustian, Petrels and Khaki.

Dealers—get on the "Aurora" wagon—the selling's fine.

Fowler-Carnes Company
Aurora, Ill.

The Emblem is Honest



Send That Postal Today!

EMBLEM MANUFACTURING CO.
ANGOLA, ERIE CO., N. Y.

THE SERVICE

The Service given by the Emblem bears out in every way the promise conveyed by its clean, sturdy, HONEST appearance.

If there were such a thing as a motorcycle X-Ray it would reveal in the EMBLEM many exceptional features which are hidden from the casual eye. For instance, the triangle re-inforcement of every piece of tubing which enters into the construction of the EMBLEM. You can't see it, but it's there. Its presence means a lot to you—that's why the EMBLEM stands up so much longer than the average machine.

That is only one of the many "little but big" details to be found in the EMBLEM. We'll tell you the rest if you ask us.

Empires Used for Business

Chicago, Ill., May 9, 1912.

Empire Tire Company,
1305 Michigan Avenue, Chicago, Ill.

Gentlemen:—You will perhaps be interested to learn of my success on Empire Tires. I rode a set of 28x2½" Empire Tires on my 1910 Model Harley-Davidson single, touring Indiana, Michigan and Illinois in the pursuit of my business, which is that of piano tuning, totalling a mileage of over 5,000 miles, during which time I sustained only four (4) punctures; these being unavoidable and in no manner the fault of the tires. Other than this, have never had a particle of trouble.

My new Harley, ordered for this year's delivery, will certainly be equipped with Empire Tires.

Yours very truly,
FRANK D. SMITH, Piano Tuner,
4652 Park Avenue, Chicago, Ill.

5,000 Miles on Empire Tires

Your Protection

against poor lubrication is in insisting on having an oil with an established reputation. That is why you should insist on having Colonial; because it is made by a firm with a reputation of over thirty years' standing for high-class products.

COLONIAL
MOTOR
OIL
BORNE, SCRYMSER COMPANY

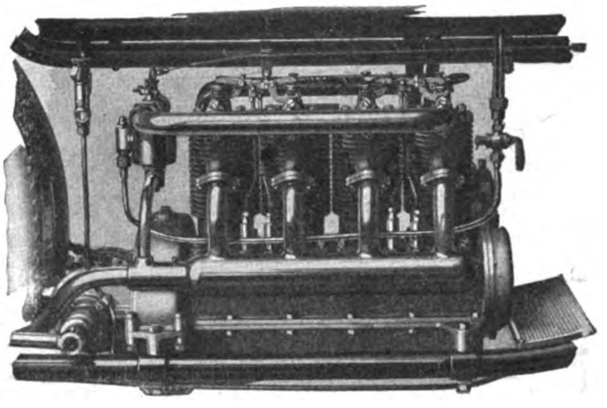
HENDERSON MOTOR CYCLE



Valve side of the motor of the four-cylinder, easy-running, silent Henderson—$325

You Have Said, Over and Over Again

When there is a motorcycle with the vital features of a high class automobile—

When it has a dependable, steady-running, multi-cylinder power plant—

When it can be throttled with ease and certainty—to 5 miles if desired—

When it starts with a crank—when it really is vibrationless and silent—when it doesn't mean straddling a hot motor—when it carries a passenger with comfort, dignity and pleasure.

I'd Gladly Own a Motorcycle

All of the above—and more—await you in the four-cylinder, 7 H. P. Henderson.

It's not cheap, but it's mighty good.

It's built for the man about town who appreciates quality and merit, and never could be tempted by models of the ordinary sort.

The instant response to the Henderson proposition vindicates our belief that there is a distinct class of young men who are ready to buy a motorcycle of class—good style and superb quality.

Write for the catalog.

Dealers who are alive to their opportunities should get in touch at once.

HENDERSON MOTORCYCLE CO.

F. A. BAKER & CO., 10½ Warren Street, New York

HALF PRICE FOR 1200

GOODRICH MOTORCYCLE CASINGS

"Goodrich" is a word to conjure with in the rubber trade and their product is the envy of all other tire manufacturers. Their inspection is so rigid that even so slight a defect as a mould mark on a casing won't pass muster and it is classed as a "second" though the intrinsic value may be in no way effected.

These casings, while not guaranteed, are, we believe, practically perfect and they carry our recommendation. This means much as our constant effort is to sell only satisfactory goods. The name is on every casing and the word "second" is inconspicuously stamped on the side, near the bead.

Single Clinch—White Tread

Priced Each Size, Inches	Corrugated	Bailey Tread	Large Stud
26 x 2¼	$4.00	$4.25	——

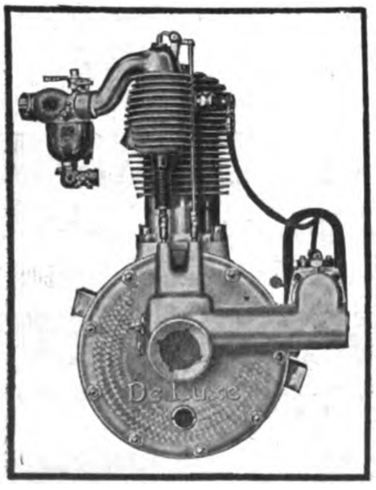
A REVOLUTION
IN MOTORCYCLE MOTOR DESIGN



In bringing out our DE LUXE line of motorcycle motors, we have introduced a large number of improvements, and offer these motors as the most advanced now before the trade.

NOTEWORTHY IMPROVEMENTS.

One-piece crank shaft.
One-part crank case with cover.
Improved cam and magneto drive.
Oil tight motor.
Large Valves.
Simplified design throughout.
Reduced number of parts.
Silent Motor.
Large ball bearings mounted in steel lined pockets.
Equipped with Bosch Magneto.

These improvements in design, together with the high grade materials used in construction, the modern methods of manufacturing applied, and the remarkable performance of these motors in road tests mark a revolution in motorcycle motor building.

Model G-D—Price $10.00.
Metal or Glass Bowl.

THE HEITGER CARBURETER

Model H, new type, has but *one* gasoline adjustment, but *two* feeds, one for high, one for low speeds, feeding from separate nozzles, giving maximum results at both speeds and intermediate with simplicity and reliability. No amount of vibration can affect it. Any speed easily adjusted and *stays* adjusted. Satisfaction guaranteed on *any* make of machine; adopted by manufacturers for 1912.

Model G-D is our double adjustment, or mechanical needle valve type, which has been used for two years by leading manufacturers and thousands of riders with best of satisfaction. As some prefer this we will continue to make it. Either type gives maximum results with minimum of fuel.

WE'RE FAIRLY SWAMPED WITH LETTERS LIKE THESE

Dallas, Texas, April 8th, 1912.

H. A. SIMPSON, Dallas, Texas.—This is to let you know that I am riding a big powerful 8 h. p. twin cylinder motorcycle equipped with one of your Model G-D double adjustment carbureters.

I have tried three other makes of well-known carbureters, and find by actual experience on the road that the Heitger gives more power and speed, greater flexibility and is more economical than any other I have ever used or tested.

With the Heitger I have made a record of thirty-five miles on one pint of gasoline, this being done against a strong wind on a rough, hilly road, with a big twin thrown into the bargain. I have also had the satisfaction of increasing the speed of my machine over twelve miles per hour, and while I do not claim that these things are world's records, let the fellows with the other carbureters beat it if they can, and under the same conditions.

Heitger Carbureter Co.

Fits Any Machine—Entirely Controlled from Handle-Bar

The B & B carbureter affords simplicity, efficiency and ease of control at all times. With a B & B you needn't bend down and take your hands from the bars in order to adjust your mixture. Instead, adjustment of the flow of gas and air to fit changing speeds is possible without the rider changing his upright position. Price is low, and material and workmanship the finest.

Reliance

(REG. U.S. PAT. OFF.)

In Special Motorcycle Type

A single drop of water will put every spark plug out of business—except one—the "Reliance." Put the Reliance in a glass of water and it continues to spark.

Do you appreciate the full import of this statement? Water is the greatest short-circuiting medium known; if water won't affect a plug, nothing else will. Carbon and soot have absolutely no effect upon "Reliance" Plugs. Its patented electrical action destroys them as fast as deposited.

When you realize that ninety per cent. of all plug troubles are caused by carbon and soot you begin to appreciate why the Reliance should be your first and last choice; you see why those who have once used Reliance troubleless plugs will have no other.

Regular Type $1.00
Magneto Type $1.25

For sale by most dealers; if yours does not carry, write and we will ship prepaid at prices quoted.

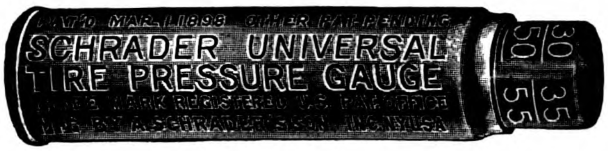
Have You Had Trouble With Your Tires?

A very large percentage of all punctures and blow-outs occur from improper tire inflation.

WOULD YOU PAY $1.00 TO OVERCOME

delays, difficulties and expense resulting from these misfortunes?

Schrader Universal Tire Pressure Gauge



(Made under patent dated March 1, 1898.)

Accurately registers at all times the exact air pressure in tires.

Simply hold gauge to tire valve for a second and recording sleeve will indicate air pressure and remain fixed until pushed back into place by the finger.

Carried easily in vest or change pocket, being only 2½" long. So simply constructed as to almost never become out of order, and if it does go wrong it will immediately tell by the action of the indicating sleeve that it needs repairs. Leather case comes with it.

Corbin Coaster Brakes

—For Motorcycles and Bicycles—

have long been proving their supremacy. Over 40 per cent. of all motorcycles now in use are equipped with the Corbin Brake. Wise bicyclists for many years have used either the Corbin Two-Speed Coaster Brake or the Corbin Duplex Coaster Brake. Either is a necessity, both are unrivalled.

Corbin Brakes lessen the risk of collisions and the danger of sharp turns, steep hills and railroad crossings. They give you confidence by giving you absolute control of your machine.

Specify the Corbin Brake for your motorcycle. Any bicycle repair shop can fit the Corbin Two-Speed or Duplex Brake to the rear hub of your bicycle.

Sold by bicycle and hardware dealers everywhere. Insist on CORBIN.

All the comfort—eas
motorcycle

We sincerely believe that the future development of the motorcycle will not produce a machine more comfortable, more flexible or more silent than the Henderson is today.

In other words, the Henderson stands for the ultimate attainment in these directions.

Let us take up the Henderson points, one by one, and you will see that our belief has a sound and substantial basis in fact.

The design of the Henderson, the type of its motor, its chain drive, all contribute to results in operation and comfort far in advance of the best of the single and twin cylinder productions.

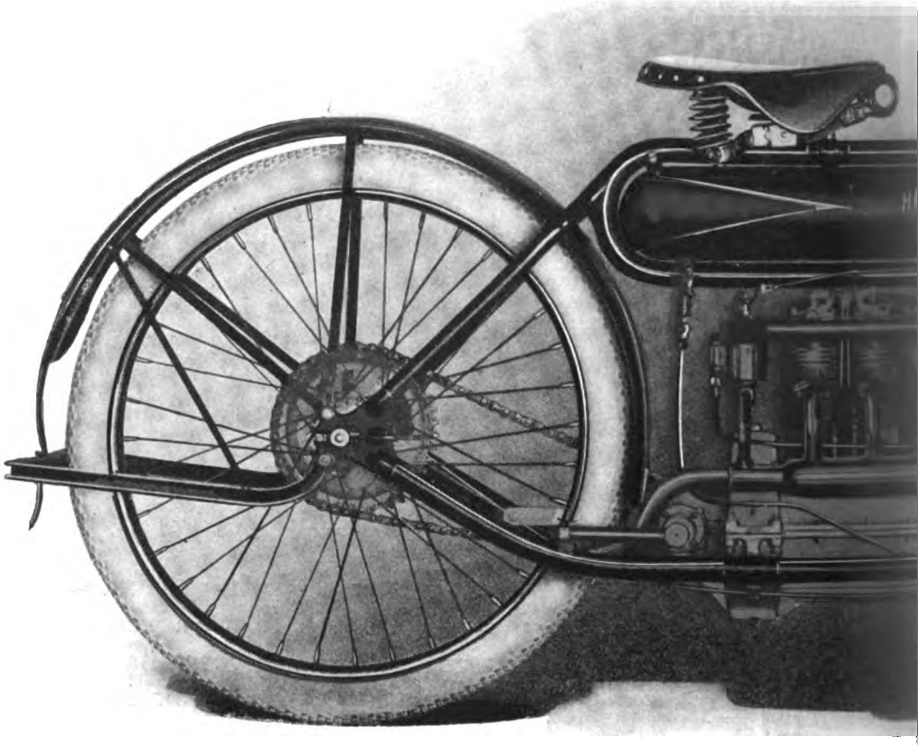
The Henderson, to begin with, is long and low.

Its wheelbase is 65 inches—which means comfort to the rider, who sits forward of the rear wheel—and its low center of gravity means that the Henderson holds the road at high speeds and on the turns.

This latter advantage is only one of the many resulting from the absence of pedals—for the Henderson has a free engine and starts with a crank.

Because of this, the motor can be placed lower in the frame; and the bulk of the weight brought closer to the ground.

The motor itself has four cylinders, and in flexibility and control corresponds to the four cylinder motor in an automobile.



The 4-cylinder, 7 H. P., fre

HEND
MOTO

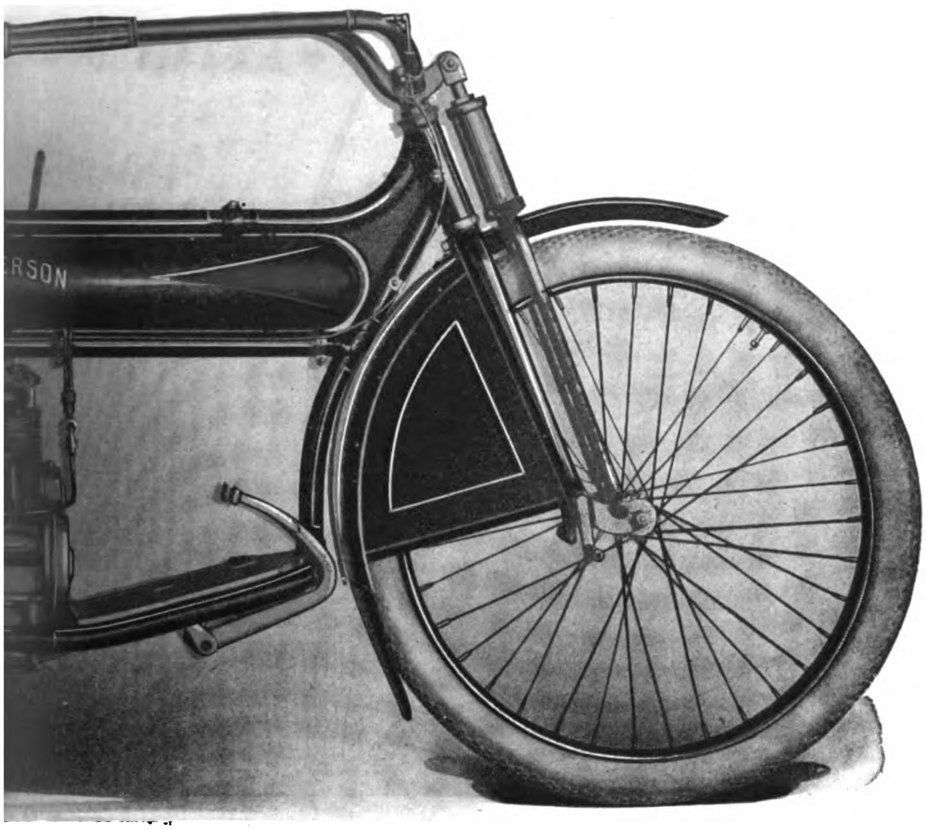
Five to 60 miles an hour—and there's no danger of the motor stalling at the five-mile speed, because it is pulling at even so slow a gait.

The ignition source is a Bosch magneto, of the regulation automobile type; with a spark range of 60 degrees instead of the 20-degree range usually found on a motorcycle.

HENDERSON MOTORCYCLE C

—silence—flexibility a

ill ever give



And the chain drive transmits and utilizes every ounce of power the motor generates.

More than that, the Henderson is quiet—as nearly noiseless as a high grade four cylinder automobile.

Starting with a crank and having no pedals, the Henderson provides a really comfortable footboard for the rider's feet, with the brake pedals conveniently located.

An extra passenger rides forward in an easy position.

So these are the reasons we say the Henderson represents the highest development it is possible to reach in the essentials named in the headline.

You can confirm our opinion by visiting your local Henderson dealer and trying out the machine for yourself.

If you don't know the Henderson dealer, send us the coupon.

ngine Henderson — $325

RSON
YCLE

The steady pulling power of the Henderson four-cylinder notor eliminates entirely the vibration that characterizes the nachine with one or two cylinders.

The pull is continuous instead of spasmodic, because the levelopment of power is continuous.

YALE 4 HP YALE 5 HP YALE 7 HP

To the Live Dealer, anxious to do business at a profit, who has existed so far this season on promises; who realizes he must now move quick in order to cash his share of this year's sales, the facts below are respectfully indited.

FIRST: All orders for YALE Motorcycles are shipped same day received at this office, made possible by increased factory facilities and early preparations.

SECOND: We are the only manufacturers equipping our complete line of motorcycles with 29 x 2¾" studded tread tires—10% oversize—eliminating all tire trouble.

THIRD: All YALE Motorcycles are equipped with the celebrated Y-A Shock Absorber, the ONLY original "jolt-killer"; mechanically perfect—absolutely necessary for real comfort—lasts forever.

FOURTH: The reliability of the YALE is proved by the World's Record for endurance made at Chicago, July 9, 10, 11, 1909, which record remains unbroken, and by winning all of the great endurance contests of the past eight years.

FIFTH: The record for low up-keep cost of operation, established the same year, 29c. per machine, has never been equalled.

Write today and learn the whole story of YALE Supremacy. Live agents wanted in open territory.

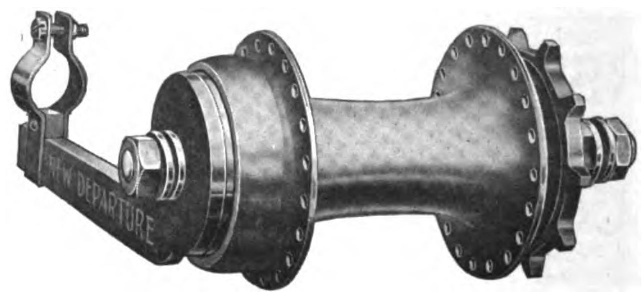
NEW DEPARTURE

Motorcycle Specialties

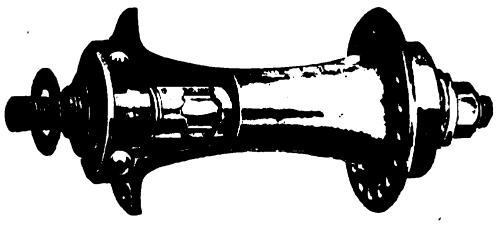
INTERNAL EXPANDING BAND COASTER BRAKE

The internal expanding band type, employing exactly the same principle as the emergency brake in the automobile. It operates against the forward movement of the wheel, hence, cannot lock, wind or bind. Riders prefer it because of its superior efficiency, reliability and strength. It is built for service beyond extreme requirements of riding. The 1912 model is absolutely the last word in a coasting and braking device for motorcycles of modern type.



"KNOCK-OUT" AXLE HUBS FOR FRONT WHEELS

The ideal front hub, constructed entirely of specially treated steel and gives maximum strength and wear. The axle is in a sheath and can be removed instantly without disturbing the adjustment or removing any other part of the hub. It runs on eighteen ¼-inch steel balls and is highly finished throughout. Motorcycle dealers and repairers should stock this hub. It has behind it the New Departure guarantee.



SUPERIOR BALL BEARINGS

New Departure ball bearings are an American product of guaranteed merit and offer advantages over the foreign-made bearings in price and other considerations. This bearing is made in standard sizes and can be used to replace any single row bearing of standard bore, diameter and width. Automobile garages and motorcycle repair depots should stock this bearing and save money.

COASTER BRAKE LICENSORS

COMFORT

POWER

100% Perfect in the Greatest Endurance Run Ever Held

THE FLYING MERKEL

puts it over 13 leading makes.

At Los Angeles, the greatest Endurance Run in the history of motorcycling was pulled off May 30th to June 1st. 563 miles of all kinds of roads had to be covered. Mountains were crossed 19 times, 3 deserts had to be plowed through, and 17 streams forded.

It certainly was some test, and only "The Flying Merkel" could stand up and finish 100% perfect.

"The Merkel" team—W. C. Vaughan and Frank Bryson finished with perfect scores—the three next best teams, 50%, and the others—forget it.

No More Torn Belts

TRADE
NON-SLIP-LAG
MARK

Doubles the life of the belt and adds 25% to the life of the machine

Greatest advancement in covering for belt pulleys ever made

The new lining for pulleys. NON-SLIP-LAG prevents tearing of belts, increases their life and affords additional power.

It is a well-known fact that the life of the belt is shortened at least one-half by either the burning of the belt, caused by slipping, or else by the deep ridges worn in it by screws in the pulley lagging.

On the NON-SLIP-LAG there are no complaints of this kind, as no screws or metal parts are required to hold Lagging on pulley and to come in contact with the belt. NON-SLIP-LAG can be applied to pulleys without removing the belt or pulleys in less than five minutes' time.

Non-Slip-Lag is being used exclusively by the Eclipse Machine Co., for use on the Eclipse Free Engine Pulley.

POPE MOTORCYCLE

Thousands Will Spend Their Vacations and Holidays on Motorcycles This Summer

A Pope Motorcycle is the ideal vehicle for vacation or holiday trips. It takes you wherever there is a road or a path to follow. You regulate its speed to suit yourself—stopping whenever you like. You are your own master, free to go as you please.

With a Pope Motorcycle you can take week-end trips to the mountains, the seashore, the woods, or lakes.

Somewhere out in the country, there's a stream or a pond that you'd like to fish. Have you considered how easily a motorcycle would get you there and back? The fisherman with a motorcycle or the motorcyclist with a taste for fishing, finds many opportunities to fish at odd moments.

If you would make the most of your holidays and vacation, spend them on a motorcycle. Get away from railroads and the beaten path of travel. See the country from a new view-point. Breathe the bracing air, enjoy the passing scenery; experience the thrill of motorcycling.

For touring and all-round use the Pope Motorcycle has no superior. It is comfortable to ride, easy to handle and economical to run.

Model H, with Imported Magneto, $165

Be Sure It Is

PREST-O-LITE

"The Light Universal"

Ask Any Experienced Motorcyclist

He will tell you the advantages of Prest-O-Lite on your machine.

One accident on the road at night, due to poor light, costs many times the price of Prest-O-Lite.

If you are going to ride after dark, don't trust to the poor, unsatisfactory, unreliable light of a generator.

Don't get any "imitation" lighting system that is not backed by complete service.

Don't experiment. Don't take chances. Profit by the experience of thousands and get Prest-O-Lite—

When you buy your machine

Insist Upon Prest-O-Lite!

It is the ONLY gas tank that is backed by universal service.

If you are a "stay-at-home," the chances are you don't need *any* light on your machine.

But if you are going out on the open road—if you are really to realize the joys of your motorcycle—you must have service.

You will find Prest-O-Lite Exchange Stations in practically every city, town and village in the country. 15,000 agencies that guarantee you service no matter where you go.

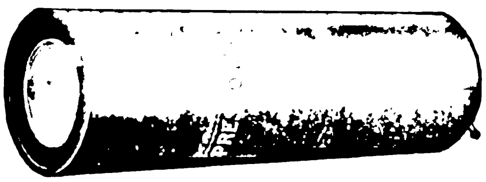
And one point more—the best time to get Prest-O-Lite is when you buy your machine.

Ask the dealer how much it will cost you to have Prest-O-Lite put on.

If you want any further information about Prest-O-Lite we will gladly send you our Motorcyclist's Booklet, showing how the small tank is easily attached to any machine. Ask for it today.

Price of Tank $10

EQUIPPED WITH GAUGE.



Dimensions: Length, 13¼ inches; diameter, 4 inches; weight, 8¾ pounds.

Our Handy Rule and Gasoline Gauge sent on request. Measures gasoline in tank; flexible for measuring tires, etc.

TIRE PROTECTION WITH A GUARANTEE

No longer is it necessary for motorcyclists to worry about PUNCTURES, BLOW-OUTS, GLASS CUTS, SKIDDING and unnecessary tire expense, which heretofore has MARRED the pleasure of all motoring—"BRICTSON" DETACHABLE TREADS will eliminate all this.

10,000 Mile Guarantee

SEND FOR COPY OF SAME

Yes, we will give you a 10,000 mile written guarantee with every "BRICTSON" MOTORCYCLE TREAD on a daily mileage basis of twenty-five miles per day. Can you get this kind of a guarantee on your rubber tires? Figure this guarantee out and you will see that it covers a period of 400 days.

Design and Construction

Made of select, specially prepared chrome tanned leather, soft and pliable, which gives with the "BRICTSON" the full benefit of the pneumatic tire. Studded on the surface with small neat-looking steel studs, designed to give perfect traction as well as a perfect "non-skid." There are layers of the best tire fabric between the layers of leather, which add strength and keep the tread from stretching. In addition to all these important features, the "BRICTSON" is lined perfectly smooth on the inside so there are no rivets or studs in contact with the rubber casing, making it impossible for the tread to injure the casing in any way.

The "BRICTSON" is the only scientifically constructed tread in that it CANNOT slip or slide on the rubber casing in ANY direction, owing to the patented, scientific method of fastening. It is held in position on the rubber casing by equal tension from all points of the circle, and for this reason may be adjusted to PERFECTLY fit the casing over which it is applied, which CANNOT be accomplished with any other method of fastening, and also envelops the entire casing, excluding sand, stones, mud, or even water from coming in contact with the rubber casing.

The "BRICTSON" is the ONLY TREAD THAT HAS PERFECT TENSION ADJUSTMENT FROM ALL POINTS OF THE CIRCLE, which other tread manufacturers have tried to imitate with metal contrivances that only detract from the appearance of the tread, add weight, and destroy the pneumatic feature, but still do not accomplish the desired result.

The "Brictson" Exclusive Patented Way of Fastening

The "BRICTSON" has no HOOPS, HOOKS, BUCKLES, SPRINGS, or any other unnecessary metal contrivances to add weight, break or eat into the rubber casing; neither is it cemented, laced, vulcanized, riveted or fastened to the rubber casing in any way—NATURAL INFLATION OF THE TIRE DOES THE TRICK—Simply clamped between the head of casing and rim—strictly Quick Detachable.

PRICES: One-half the price of a rubber casing and guaranteed three times as long. Compare the following prices:

26 x 2¼	$5.50	28 x 2¼	$6.50	28 x 2¾	$7.50
26 x 2½	6.00	28 x 2½	7.00	29 x 3	8.00

Other sizes on application.

Ask Your Dealer for "Brictson" Detachable Treads

Ask the best dealer in your town to show you the famous "BRICTSON" Guaranteed Detachable Tread. If for any reason he cannot supply you, fill out the attached ORDER BLANK, pin your check to same, mail it, and I will ship you the treads on TEN DAYS' FREE TRIAL, and if you don't find them perfectly satisfactory within 10 days from receipt of treads, return them and I will cheerfully refund your money. Remember, I take all the risk.

"Tire Luck" Usually Follows Tire Quality

Very often, when a man accomplishes something in his own particular sphere which raises him above the average of his fellow men we hear the remark, "he's lucky."

Possibly he has been lucky, as the saying goes.

Chances are, however, if you took the trouble to analyze the man and the situation you'd discover that the inbred qualities of the man himself had a heap more to do with his success than mere luck.

It's the same with tires.

We hear a great deal of talk about "tire luck." Doubtless so-called luck does have something to do with tire life. One rider will travel for hundreds of miles without a single puncture, while another wheels a new machine out into the street and picks up a nail before he has gone a quarter of a mile.

This is what we are pleased to call "tire luck."

But (and here is the important dollars and cents side of the question) if you analyze tire service the season through you will find that the tires which yield the greatest mileage service and which cost you the least in the end are the ones which have the most durability and the greatest aggregate of strong points built into them.

In other words, tire luck and tire quality usually go hand in hand. In the long run you get out of a tire exactly what the manufacturer puts into it.

The tremendous facilities of the United States Tire Company are devoted exclusively to the manufacture of one superior grade of tires. Our co-operative method of manufacture is unique in the history of tire building.

In our motorcycle tires, for instance, are incorporated the strongest individual points of two brands of tires, each of which formerly was recognized as a standard of quality the world over—G & J and Morgan & Wright.

No other tires in the world are made under conditions so favorable to the greatest possible tire durability as United States Tires.

Take the tire question seriously. There's a great deal more to tire service than luck.

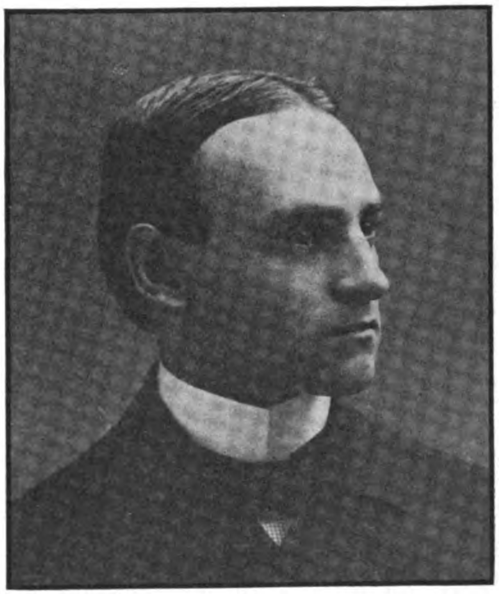
COLUMBUS BOYS HAVE THE RIGHT IDEA

Making Preparations for F. A. M. Meet on Nothing Less Than a Lavish Scale—The Story of How the Club Members Insured the Construction of a Board Track.

MOVED by an unusually dependable brand of civic pride and enthusiasm which for weeks past has been on the verge of bubbling over and splashing out into neighboring States, the F. A. M. convention workers of Columbus are now turning into the homestretch of preparation for what promises to be the most elaborate program ever arranged to cover an assembly of the national body. They are setting a record-breaking pace—and enjoying it. The half-mile board track which had no unimportant bearing upon the decision of the Federation directors is now well under way, and every person in the city who ever gave a second thought—or a first one—to motorcycle affairs appears to be taking a personal interest in it. And not without reason. Motorcycle speed bowls cost money, and when a club makes up its mind overnight to build one and then jingles the required shekels in its jeans almost before the ink is dry on the specifications there is a reasonable excuse for enthusiasm.



P. A. VOGEL.
Member of Committee of Arrangements and President of Columbus Motordrome Company.

That's about the way the Columbus club took up the board track proposition. The members are too busy just now to go into details anent the launching of the project, but if they had more time they might tell an interesting story. When it was decided that the half-mile saucer should be erected the proposed outlay was roughly placed at $15,000. This announcement was made at a special meeting of the club, and before the motorcyclists and their friends could be headed off and calmed they had subscribed $18,000. This turn of affairs led the committee to elaborate its plans considerably, and it was decided that the club would not accept anything less than the best half-mile bowl that money could buy. This decision became noised about, and before the committeemen could run up a danger signal again a number of enthusiasts rushed into headquarters and dumped several additional thousands into the fund. In short, the club had more money than it needed, and the most significant point is that every member was represented by a liberal donation. Outsiders came to the front generously, but the officials are justifiably proud of the fact that it was their own squad that started the merry jingle and kept it jingling.

Then Jack Prince, who builds a new speed bowl every time he sees a stop-watch, was called in. Prince is used to high-pressure work and in a few days he had turned over completed plans and specifications to a Columbus contractor. The latter took a hitch in his belt and buckled down to work on a well-located site which had been obtained by the club-committee, and that's about all there is to the story. The track will be finished in time for a number of preliminary meets prior to the arrival of the speedsters who are anxiously awaiting a chance to tune up for the championships, and it goes without saying that it will be a center of interest throughout the convention week.

Chairman Thornley, of the competition committee, has taken up the matter of the racing program with the Columbus club and requested that a schedule of the events be forwarded for his consideration. Of more than passing interest is the statement that the card will probably include two events for belt-drive machines. It has been suggested that the belted twins be matched in a race not to exceed ten miles and that the belt singles be sent out over the five-mile route. Such an arrangement, it is argued, will offset the objection heard in the past that too much time is consumed in races for belt machines, and there is every reason for believing that the five and ten-mile distances will meet with approval. Several manufacturers are now busy with plans for awarding special trophies, and, even more than in the past, the rider who keeps to the fore throughout the meet will be assured of big returns.

Reverting for a moment to finances—which refuse to be kept in the background, even when there is no necessity for worrying about them—the Columbus club has decided to confine its appeal to manufacturers to the meet program. They will be invited to take space in this medium at reasonable rates, but there will be no other application for funds. This allows the manufacturers to render material assistance on something more than a sentimental basis, for a well-printed program distributed in the convention city cannot fail of advertising value. If there is a psychological moment in motorcycle affairs for riders and prospects it is bound to find its way into the clock during the national assembly, argue the Columbus boosters, and it is with this conviction that they are placing the program proposition before the manufacturers. A representative of the club is now making a flying trip through the East for the purpose of getting in touch with the men who turn out machines and their fitments, and at latest reports the advertising space was going rapidly.

While the committee of Columbus club members is directing the general plans for the entertainment of F. A. M. officials and riders in July it is significant that trade organizations, city officers and leading merchants are assisting in every way possible. Not only have they contributed generously to the entertain-

W. H. Snyder Driving First Stake for Motordrome. Jack Prince to the Right.

ment fund, which now totals about $4,000, but they have extended that moral backing so essential to the success of a convention enterprise, and which is commonly withheld from motorcyclists by the non-rider. In other words, no lines are being drawn in Columbus; the man who does not ride a motorcycle has a friend who is in the ranks and this general feeling of comradeship is what promises to make the next national assembly of the F. A. M. one of the most friendly and enjoyable sessions the body has known. The Columbusites state that they are preparing to entertain 15,000 riders, and that if this number should be increased by 5,000 they will still be able to meet all requirements. Even the most optimistic Federation worker must admit that these are very liberal estimates, but the committee is determined to take no chances and as a result all the arrangements, race meet accommodations, parking space for machines, hotel facilities and general entertainment plans are being developed with a 15,000 attendance in mind.

Obviously, the success of the assembly from an attendance viewpoint depends upon the manner in which the four national tours are supported, and the Columbus officials are working in conjunction with the M. M. A. committee to enliven interest in the plans. Only a few days ago pathfinders were sent out over hundreds of miles of roads in the vicinity of Columbus, with a view to determining the general condition of the highways and except in rare instances they are in good repair. Unless a protracted spell of bad weather breaks into the program the last day's jaunt into Columbus will be a joy-ride pure and simple. After leaving the boat at Cleveland the riders in the northeastern division will be called upon to ride only about ninety miles before they reach the "deadline" on which the tourists of all four brigades will halt on Tuesday night of the convention week. The other tour divisions, with no boat trips to make, will do much more actual riding, but each one will reach a town approximately fifty miles from the convention city for the Tuesday night stop-over. Early on Wednesday morning the four divisions will start at the same hour and therefore arrive in Columbus together. Delegations of Columbus riders will be waiting at the four stop-over points to escort the tourists into the city and it may be taken for granted that their arrival will not be lacking in spectacular effect.

W. H. Snyder.

Fourth Tourmaster Chosen.

All four of the tourmasters for the national tours have now been chosen, Jesse A. Campbell, the new F. A. M. vice-president in the Lake District, having been appointed to head the tour from Chicago to Columbus. Tourmaster Campbell is well qualified to handle the Chicago division, and he will have the advice and help of P. B. Whitney, who was the 1911 tourmaster, as well as of J. A. Turner, of Chicago.

With Campbell at the head of the Chicago division, R. S. Morton leading the Albany, N. Y. tour, J. A. Robison in charge of the tour from Baltimore and E. G. Baker at the head of the division starting from Louisville, Ky., the F. A. M. tours will be in good hands and should be the most successful ever held. Baker has already announced his itinerary from Louisville to Columbus, and tourmaster Robison is the next to come to the front with the details of his tour. The other tourmasters are expected to have their itineraries completed within a few days.

The Baltimore, or southeastern tour, will start from the Madison avenue entrance to Druid Hill Park, Baltimore, Sunday morning, July 14. The first day's run will be to Cumberland, Md., a distance of 138 miles. The second day will take the riders 132 miles to Wheeling, W. Va. The third day's run is 72 miles, the night being spent at Zanesville. This leaves a run of 55 miles into Columbus for Wednesday morning, July 18, being in keeping with the plan for each division to spend Tuesday night, July 16, in some town forty or fifty miles out of Columbus. The total distance of the Baltimore tour is 399 miles and the detailed itinerary is as follows: Sunday, July 14: Leave Madison avenue entrance Druid Hill Park, Baltimore, at 6 a. m.; Ellicott City, Ridgeville, Frederick, Braddock, Middletown, Boonsboro, Hagerstown, Clear Spring, Indian Spring, Hancock, Cumberland; 138 miles. Monday, July 15: Cumberland, Eckhart Mines, Frostburg, Grantsville, Addison, Uniontown, Brownsville, Beallsville, Washington, Wheeling; 132 miles. Tuesday, July 16: Wheeling, Bridgeport, Cambridge, Zanesville, O., 72 miles; Wednesday, July 17: Zanesville, Reynoldsville, Columbus, 55 miles.

A strong effort will be made to have a big delegation from Philadelphia join the Baltimore division and the same effort will be made in Pittsburgh. The Pittsburgh riders may find it most convenient to join at Wheeling, W. Va., on Monday night. The effort for recruits will not be confined, however, to the larger towns. All are welcome.

FIFTEEN CLEAN SCORES

Los Angeles Grind Over Mountains and Through Desert Put Riders to a Record Test.

AFTER undergoing road tests more severe than any to which motorcyclists in this country had previously been subjected fifteen riders in the three-day endurance run of the Los Angeles M. C., starting on May 30, finished with perfect scores. There were 41 starters. The route was over 563 miles of mountain and desert roads, and was laid out as follows: First day, Los Angeles to San Fernando, 26 miles; Acton, 39; Del Sur, 26; Lebec, 50; Bakersfield, 44. Second day, Bakersfield to Wasco, 29 miles; Junction, 37; Paso Robles, 50; San Luis Obispo, 31; Santa Maria, 33. Third day, Santa Maria to Los Olivos, 35 miles; Santa Barbara, 54; Ventura, 35; Calabasas, 44, and return to Los Angeles, 30 miles.

The perfect scorers were as follows: R. D. Bissett, Excelsior 4, 1,000; A. J. Menegay, Indian 7, 1,000; W. C. Vaughan, Merkel 7, 1,000; O. Bosshard, Indian 7, 1,000; Paul J. C. Derkum, Indian 7, 1,000; Kenneth Verrill, Yale 5, 1,000; C. Biggs, Excelsior 6, 1,000; Howard Shafer, Thor 5, 1,000; Frank Bryson, Merkel 6; 1,000; F. L. Johnson, Excelsior 6, 1,000; Jimmie Leonett, Indian 7, 1,000; T. Johannsen, Indian 7, 1,000; L. T. Clark, Indian 7, 1,000; Erwin Knappe, Indian 7, 1,000; G. L. Ledbetter, Indian 7, 1,000.

Erwin Knappe, one of the perfect scorers, accomplished a remarkable feat in carrying a tandem passenger throughout the run. Spills and other mishaps were plentiful, some of the contestants sustaining painful injuries.

AN UNFORTUNATE DEBUT.

H. F. Potter.

H. F. POTTER, a member of the motorcycle squad of the Salt Lake City police department and one of the most popular riders in the vicinity, entered his first race meet on the Wandamere motordrome on the night of June 6 and sustained fatal injuries. Although a skilled mechanic and a fearless rider Potter had little or no board track experience and he was unable to control his machine at high speeds. In the seventh race he shot upward on the saucer and struck a pole with such terrific force that nearly every bone in his body was broken. The accident has deeply affected the track promoters and motorcyclists of the city, and it is likely that more stringent rules will be enforced in future with reference to racing recruits.

BIG TORONTO MEET

Ten Thousand Race Followers See Baribeau and Cole in Thrilling Speed Duels.

TORONTO, CAN.—The motorcycle race meet held on the half-mile track at the Exhibition grounds on Saturday, June 8, under the auspices of the Toronto M. C., was by far the best event of its kind ever held in Canada. The crowd exceeded expectations, over ten thousand spectators witnessing the races.

Joe Baribeau, of Springfield, Mass., formerly of Winnipeg, proved the particularly bright star of the afternoon, on an Indian, although Harold Cole, the local Excelsior speedster, and the present Canadian champion, shared considerable of the honor by capturing the feature event, the thrilling twenty-five-mile race. Both Baribeau and Cole are credited with new Canadian half-mile dirt track records as a result of Saturday's performances. The former bulleted around the course for ten miles in 12.10⅕ seconds, which was ten seconds ahead of the previous mark, while Cole eclipsed his own 25-mile record, made last fall, by exactly two seconds.

Summaries: Three miles, private owners, 22½ class—Won by W. Phillips, Indian; second, Roy Thomson, Motosacoche; Wilfred Morrison, Indian. Time, 4:26⅗.

Five miles, private owners, stock 30½ class—Won by R. D. Scott, Indian; second, F. W. Miles, Indian; third, Joe Golden, Indian. Time, 7:03⅕.

Ten miles, single cylinders, open—Won by Joe Baribeau, Indian; second, Harold Cole, Excelsior. Time, 12:33.

Five miles, private owners, belt drive, 30½ class—Won by N. Newport, Triumph; second, Percy Barnes, Triumph; third, A. F. Astley, Triumph. Time, 7:13.

Ten miles, open—Won by J. Baribeau, Indian; second, Harold Cole, Excelsior; third, A. A. Beattie, Flying Merkel. Time, 12:10⅕.

Three miles, side-cars, 30½ class—Won by Percy Barnes, Triumph; second, A. F. Astley, Triumph; third, Max Amoss, Rudge-Whitworth. Time, 5:03.

Five miles, single cylinders, open—Won by Joe Baribeau, Indian; J. T. Booth, Indian; third, A. A. Russell, R. S. Time, 6:58.

Five miles, private owners T. T. stripped stock. 30:50 class—Won by N. Newport, Triumph; second, R. D. Scott, Indian; third, E. Henderson, Flying Merkel. Time, 6:58.

Twenty-five miles, open—Won by Harold Cole, Excelsior; second, J. T. Booth, Indian. Time, 30:54⅗.

LATE CLEVELAND BULLETINS.

CLEVELAND, June 8.—With Earl Armstrong from Chicago, on an Excelsior, as the drawing card, the races at Luna Park tonight were witnessed by a record-breaking crowd. The feature event of the night was the 5-mile Judge McGannon Sweepstakes, which was hotly contested. Carslake again proved a star, winning every event entered and making a new record of 3:43 for five miles in the feature event. Armstrong, after some argument, was not permitted to ride in any of the professional events on Saturday, but rode a one-mile exhibition against time and broke the track record of 43 seconds, his time being 42⅖ for the four laps. Henikman cleaned the amateurs, breaking Huntsbery's record by two-fifths of a second, his time being 4:40.

Sunday evening, June 9.—Before another crowd of raving speed fans, who packed the arena and grandstand to capacity, Armstrong and "Shorty" Matthews carried off the laurels of the evening. Matthews eclipsed Armstrong's record of the previous night by two-fifths of a second. The feature event of the night was the half-hour race, which included nine starters. Carslake proved his endurance by riding 38 1-16 miles. In this event Huttinger broke an exhaust valve in the ninth mile. Gibson suffered the same fate in the eighteenth lap. Seliga made one stop for oil, in his thirty-fourth mile, putting him in third position and giving Hunter second place. Matthews smashed the amateur track record by knocking 34 seconds from the former time. Carslake, mounted on Matthew's Thor, failed in his attempt to lower the latter's record.

IN A SOLEMN ROLE.

THE value of a motorcycle in saving time was recently illustrated in a case which occurred in New York State. The curate of a catholic church had purchased an Indian motorcycle, and had just become proficient in operating it when he was called upon to attend a dying parishioner in a neighboring town. He at once mounted his Indian and arrived just in time to administer the last rites of the church to the dying woman.

SAMUELSON AND SEYMOUR

Dividing Honors In Pro Races on the Riverview Motordrome In Chicago.

CHICAGO, Wednesday, June 5.—Nine-mile professional, Class A: Hasha, first; Balke, second; Wolters, third; time, 2:01⅘. Second heat: Seymour, first; Hasha, second; Wolters, third. Time, 2:02⅘. Third heat: Seymour, Hasha, Balke; time, 2:04⅗.
Third heat: Seymour, Hasha, Balke; time, 2:04⅗.

Nine-mile pro, Class B. First heat: Kinnie T. Samuelson, Edwards; time, 2:13⅗. Second heat: W. Samuelson, Armstrong, Edwards; time, 2:12⅗. Third heat: W. Samuelson, Armstrong, Edwards; time, 2:09.

Four-mile amateur: Pete Wink, Jim Trafsky, Mitchell; time, 4:09⅗. Match race between Kinnie and Armstrong, two miles; Kinnie won both heats. First time, 1:31⅕; second time, 1:30⅗.

Chas. A. Comiskey sweepstakes, six miles: Seymour, first; W. Samuelson, Kinnie, Wolters, time, 4:15⅗.

Saturday night, June 8—Nine-mile pro, Class A; first heat, Seymour, Graves, Wolters; time, 1:59⅘; second heat, Seymour, Wolters, Graves; time, 2:01⅘; third heat, Seymour, Wolters, Graves; time, 2:03.

Nine-mile pro, Class B: W. Samuelson, Albright, T. Samuelson; time, 2:12⅘; second heat, Edwards, Mitchell, T. Samuelson; time, 2:23; third heat, W. Samuelson, Edwards, Albright; time, 2:08⅗.

Four-mile amateur: Pete Wink, Jim Trafsky, Shaw; time, 4:07⅕. Exhibition by Seymour; one mile, :39⅘. Barney Oldfield sweepstakes, six miles; Seymour and Wolters spilled. Won by W. Samuelson; Albright, second; time, 4:25.

Sunday night, June 9—Nine-mile pro, Class A, first heat: Seymour, Balke, W. Samuelson; time, 2:08⅘; second heat, Seymour, Balke, Samuelson; time, 2:09⅘; third heat, finish same; time, 2:07.

Nine-mile pro, Class B; first heat, W. Samuelson, Edwards, Kinnie; time, 2:14⅖; second heat, Samuelson, Edwards, Kinnie; time, 2:12; third heat, Samuelson, T. Samuelson, Humiston; time, 2:16⅖.

Four-mile amateur: Jim Trafsky, H. P. Mitchell, Pete Wink; time, 4:18. Chicago Motor Club sweepstakes, six miles; Seymour, Balke, W. Samuelson, Humiston; time, 4:19⅘.

FRANK HART has so far recovered from the effects of his Guttenberg accident that he is chugging about the metropolitan district with a new Indian 7 and side-car.

MILWAUKEE SPEEDFEST

Johns Shows Well on Excelsior Despite Hard Luck—Klark, Purdy and Hoyer Among Winners.

MILWAUKEE, June 9.—With a twenty-mile open race for machines of 61.00 cubic inches as a feature attraction, 3,000 speed lovers witnessed some classy racing at the motorcycle meet held at State Fair Park on Saturday. The twenty-mile race promised sensational developments, Klark on an Indian, and Don Johns, on an Excelsior, running neck and neck for five laps, with the advantage slightly in favor of Johns. On the sixth lap Johns' drive chain broke and he was compelled to stop for repairs. He started again, and had all but overhauled his competitor on the thirteenth lap when the same trouble again forced a halt and he dropped out. Again in the ten-mile open race, for machines of 61.00 cubic inches, with half a lap to his credit over Klark, Johns pulled out of the running when the rear wheel of his Excelsior got tangled up with the chain, resulting in the loss of a few spokes. Klark, on his Indian, made the best individual showing of any of the contestants. He placed in every event he entered, and marked two firsts.

Only one accident marred the meet. That was in the ten-mile stock race. Carl Zingel, a local boy, attempted to negotiate too short a turn when riding off the track, and ran into the fence. He was thrown to the ground and sustained a few bruises. The machine caught fire when the gasoline tank exploded and spectators were treated to a bonfire.

No records were broken. Despite the almost perfect condition of the track the riders made many poor starts. The best mark was made in the 5-mile open event for machines of 61.00 cubic inches. Johns, on his Excelsior, finished first in 4:35⅕, crossing the line nearly a lap ahead of Klark, who rode second. George Smith, on a Minneapolis De Luxe, gave a five-mile exhibition, negotiating the distance in 6:57. Klark and Caffarello, both riding Indians, gave a three-mile exhibition, Klark winning by three feet in 2:57.

Five-mile novice, 30.50 cubic inches: Purdy (P. E. M.), first; Hoyer (Thor), second; Mauger (Thor), third. Time, 6:05⅕.

Five-mile open, 30.50 cubic inches: Hoyer (Thor), first; Barr (P. E. M.), second; Klark (Indian), third. Time, 5:53.

Ten-mile stock, 30.50 cubic inches: Purdy (P. E. M.), first; Carpenter (Harley-Davidson), second; Ackerman (Thor), third. Time, 11:35⅕.

Five-mile open, 61 cubic inches: Johns (Excelsior), first; Klark (Indian), second; Burch (Harley-Davidson), third. Time, 4:35⅕.

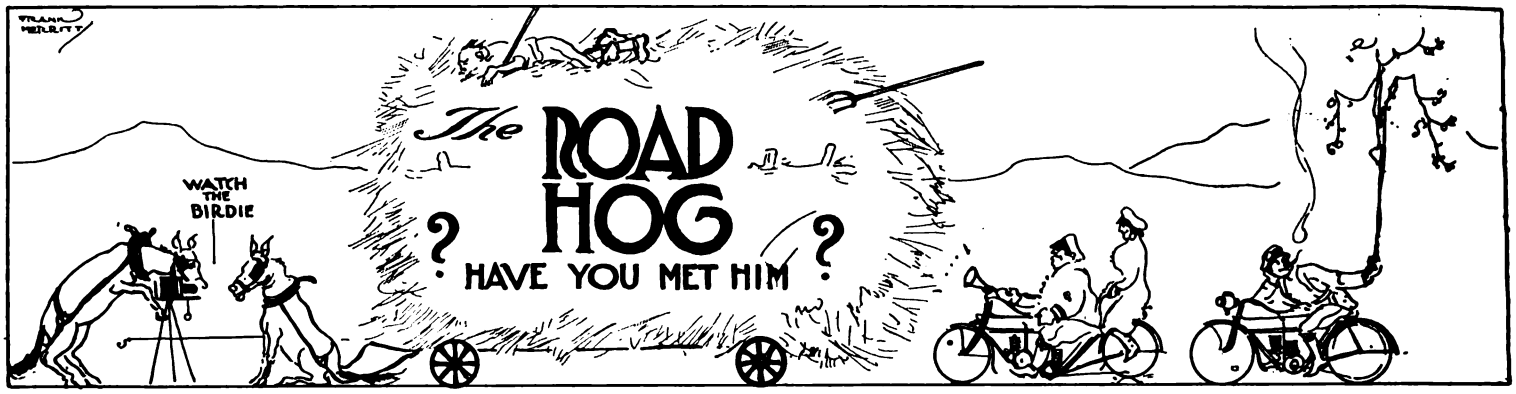
Ten-mile stock, 61 cubic inches: Cafferello (Indian), first; Hamilton (Indian), second; Burch (Harley-Davidson), third.

Ten-mile open, 30.50 cubic inches: Klark (Indian), first; Barr (Indian), second; Blankentine (Indian), third. Time, 9:49⅕.

Ten-mile open, 61 cubic inches: Klark (Indian), first. Time, 9:16⅘. Johns, the other entrant, did not finish.

Five-mile stock, 30.50 cubic inches: Hamilton (Indian), first; Purdy (P. E. M.), second; Ackerman (Thor), third. Time, 5:04.

Twenty-mile open, 61 cubic inches: Klark (Indian), first; Burch (Harley-Davidson), second. Time, 19:34.



The ROAD HOG ? HAVE YOU MET HIM ?

by The OLD SCOUT

I WONDER if there is anyone who uses the highways with greater or less frequency who has not met this particular variety of hog. Our fair land can boast of a good many different kinds of squealers, but the road hog is by far the worst of the lot. His bristles stick out farther, his grunt is more pronounced, and on the whole, he is what one might call utterly porcine.

You have all heard, doubtless, of the man who goes out and kills a fearfully large number of wild creatures; then to return and tell proudly of his exploit. He has been rightly tagged as the fish or game hog. Then you must be familiar both by hearsay and personal experience with the end-seat hog, who flourishes during the summer on the open trolley cars of all our cities. He is a pretty bad customer, too; but the road hog—words fail me!

Some years ago the magazine *Life* printed a series of pictures called "Snap Shots in Hades." The artist depicted quite humorously the penalty which he imagined was in store for certain people in the life to come; for instance, the man who lets his chickens ruin a neighbor's garden; or the man who pushes his lawn mower at five o'clock in the morning when you wish to sleep, or the man who proves himself a nuisance and a bore in any one of a dozen ways. Unfortunately the humorist did not include the road hog. The omission was probably due to the fact that he found it impossible to invent a suitable punishment. To do so would surely require a brain of more than common sharpness and ability.

The Road Hog.

Motorcycles Not Included.

There is one thing, however, for which we as motorcyclists should be profoundly thankful. And that is this: There are no motorcycle riders included under the odious term. When I say that there is no such thing as a motorcycle road hog, I trust I am not departing from the truth. At any rate, I have never seen or heard of one. Motorcyclists as a class are not always too considerate of the rights of the non-riding public, and that is a great pity, but they certainly are not guilty of some of those hoggish acts which can be truthfully ascribed both to automobilists and the drivers of horse-drawn vehicles.

My first experience with a confirmed road hog came several seasons ago, on a day when I chanced to be driving a four-wheeler instead of the motorcycle I usually straddled. Let me pause in passing to remark that the aforementioned four-wheeler was not mine; it belonged to a relative more blessed with worldly goods than the humble scribe. The road we were following was quite narrow, but nevertheless wide enough to permit two vehicles to pass one another. Ahead of us presently appeared a man driving a buggy. We honked and honked, but he steadfastly kept his position in the middle of the highway. He heard the warning plainly enough, as was shown by his turning around to regard us with an evil grin, which might have been interpreted as saying, "Well, what in Hades are you going to do about it?" There was no way to get by until he chose to give us room, and so we perforce puttered along on low gear behind that miserable old hay-seed and his spavined skate. We finally escaped only by coming to a wide place in the road where that son of perdition was no longer able to get in his malicious work.

A Despised Breed.

It certainly does make a person hot under the collar, no matter what kind of vehicle he is driving, to meet one of this despised breed. There is something so entirely uncalled for, and so utterly inexcusable, about the act of hogging the highway, that the man imposed upon can hardly be blamed if he occasionally bursts forth in violent language. That may not cure the hog—it probably won't, for the breed is usually incurable—but it at least makes the victim feel better; it serves as a safety valve for his overworked feelings.

We of the motorcycle clan find more road hogs among the automobile drivers than in any other class of vehicles. There is hardly a rider who has not had one or more experiences of the sort. Many auto drivers appear to be especially vindictive toward motorcyclists, probably because they can never beat us on the road. They are altogether too willing to crowd the smaller vehicle off into the ditch if opportunity is provided, well knowing that their heavy machines would not suffer from a collision.

One Memorable Experience.

My worst experience with an automobile road hog happened during the present season, and I haven't yet finished being angry over the affair. It happened when I was indulging in a little Sunday afternoon spin with a fellow rider. Our route led us through a moderate-sized town, following a trolley track. It so chanced that said town had lately been seized with the road improvement fever, which in this case took the form of several inches of crushed trap generously spread out on the highway, where it would doubtless remain until public spirit had tamped it down. The only part of the road uncovered by the crushed stone was that lying between the trolley rails and a foot or two on each side of them.

Just beyond the place where the incident occurred is one of the worst S curves I have ever met in my wanderings, and it is doubly dangerous when one considers that the road is traveled by a constant procession of automobiles, not to mention the trolley line, while a view of the road ahead is entirely obstructed by buildings. The driver of any vehicle surely takes his life in his hand when he rounds that curve, and under these circumstances it is especially important that he keep scrupulously to his own side of the road.

To return to Partner and myself, we were plugging along at a very moderate pace, riding on the trolley right of way, since that was entirely free from the sharp stones. Incidentally it was where we belonged, for the track lay on the extreme right of the road; beyond it was nothing but a deep gutter, set off by a bank. Partner was riding ahead, and just before we came to that S curve already mentioned, I saw an automobile coming on its

REVENGE ON THE ROAD HOG
657 WAYS TO MAKE A ROAD HOG MISERABLE BY DON

Badly-Needed Books.

left of the road, for, of course, the driver had no more desire to navigate the crushed trap than we had. That was perhaps to be permitted under such conditions, but as soon as he saw us it was certainly up to him to swing over to his own side, crushed rock and all, for we were as far to the right as it was possible to go.

A Critical Situation.

But the auto driver seemed in no hurry to turn out, and when the machine was twenty feet from him, Partner concluded to do the turning himself, and swung over to the left through the stone pile, thus giving the auto people a perfect right to kill him, for he was then on the wrong side of the road. They held straight on, however, and then it was my turn.

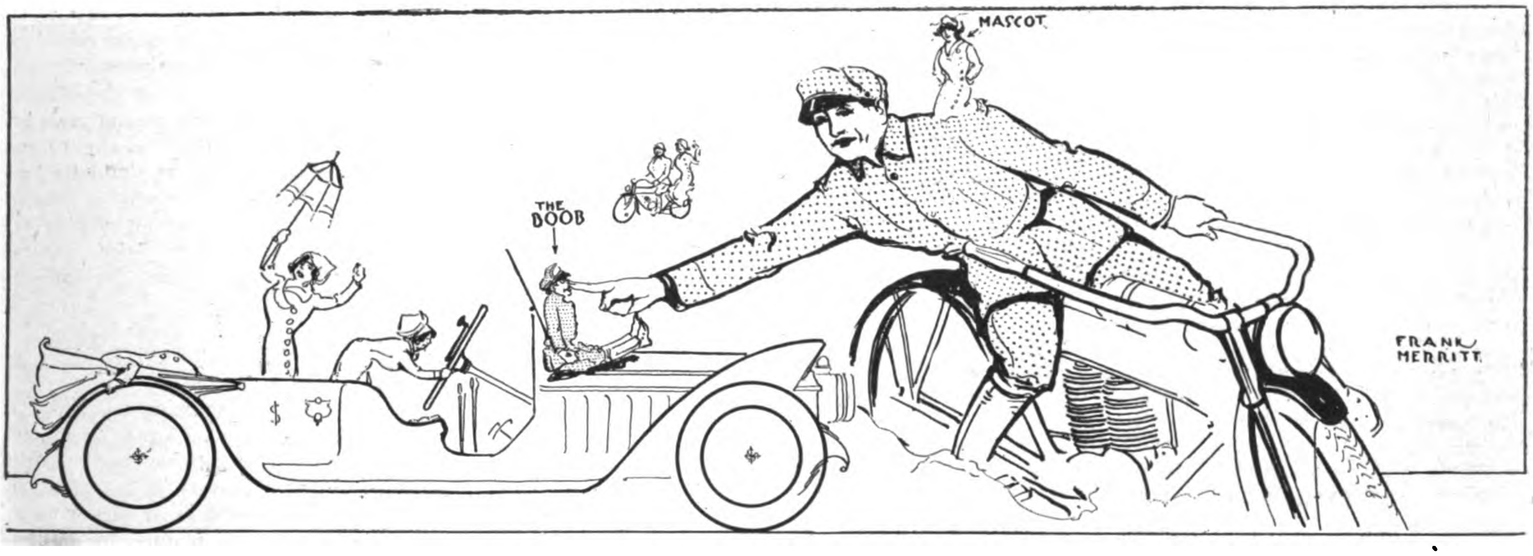
"Well, old fellow," was my thought, "I'm blessed if I'll turn out for you. I'm where I belong, and I'll stay here!"

But as a matter of fact, I quickly changed my mind and took to the gutter at my right, for had I not ditched my motorcycle, that chump behind the wheel would actually have run me down. The car was a big one, containing three ladies, one gentleman (so far as I know) and the hog, who was driving. As it went by me while I was dismounted in the ditch, I flatter myself that I told that party briefly, succinctly and expressively just what I thought of that style of driving. My language was not at all polite or elegant, nor did I desire it to be. I was mad, mad clear through, and I made no effort to select Chesterfieldian words. Even now I boil over whenever I think of the occurrence.

Since it happened I have often regretted that I did not turn around, overhaul the offending auto and have it out with the driver. I got the car's number, at least, and so can easily find out who is the owner, though it is barely possible that the owner himself may not have been responsible.

There is a lesson in an incident of this kind that it would be well for all motorcyclists to heed. Even though we are not likely to be road hogs, the public certainly has cause to complain at certain of us for other reasons. If a pedestrian is barely shaved by a flying motorcycle, it may make him feel just as much out of patience as one of us feels when crowded off the road by a hoggish automobile. Perhaps we should make it a point to be without error ourselves before proceeding to condemn the drivers of other vehicles on the highways. It is a poor policy to be so taken up with the failings of others that we are blinded to our own.

FRED HENRY has been appointed as the first motorcycle officer for the Trenton (N. J.) police department.



DREAMLAND'S SPEED CUP

Thrilling Whirls are Made on Seventeen-Lap Exhibition Track at Coney Island.

BROOKLYN, N. Y.—One of the latest attractions at Coney Island is the Dreamland Motordrome recently erected upon the site of Dreamland Park. The track is a scientifically constructed circular wooden bowl, 17 laps to the mile, and banked at an angle of sixty degrees. The enclosure can accommodate about 1,000 persons, and provision has been made for parking a number of machines. A. Swartz, manager of the track, has engaged a number of well-known professional motorcycle riders, among whom are W. J. Muller, one of the youngest riders in the country; "Doc" Campbell, who has recently returned from a racing tour abroad, and Rodman Law, known to the public as the man who jumped from the Statue of Liberty with a parachute.

These men give daily speed exhibitions on motorcycles, racing against time, in pursuit races and against high-powered automobiles. On Decoration Day the management had arranged a card of four events, the first of which was a race against time by Muller, on a stripped 5 h. twin Indian. Muller got away in fine shape and was clocked at 56 seconds for the mile. The second event was a pursuit race between "Doc" Campbell, on a 5 h. twin Indian, and Rodman Law on a 7 h. twin Yale. Law was allowed half a lap handicap, and "Doc" took up the pursuit. The riders whirled around the saucer at a terrible speed, with "Doc" gradually gaining on Law. On the second mile "Doc" caught up with Law and was declared the winner.

The third event was a two-mile exhibition race against time by "Fearless" Geo. Cook, driving a high-powered automobile. Due to the smallness of the track Cook was unable to make the speed that the motorcyclists did, and his time for the two miles was considerably slower. The final event was a match race between Muller on a 5 h. twin Indian, and "Fearless" Geo. Cook, driving a Buick 45 h. automobile. Muller got away first and immediately set out to gain a lap on Cook. On the twentieth lap he caught up with the automobile and, while endeavoring to pass it on the outside, was crowded from the rim of the bowl. His machine crashed into the railings, carrying part of them away, while he and his machine were catapulted to the bottom of the bowl. His left shoulder was dislocated.

The management has installed a number of powerful electric lights, and speed exhibitions will be given at night also. That motorcycle racing is popular around New York is indicated by the large crowds in attendance.

THE Park Board of Baltimore, Md., is now using a Henderson motorcycle for park patrol service, and the police department of Logansport, Ind., has purchased a Henderson.

ROAD IMPROVEMENTS

Three-Quarters of a Million Dollars Will Be Spent on Principal Long Island Highways.

BROOKLYN, N. Y.—Long Island riders who have been complaining of the poor condition of some of the principal highways will be pleased to hear that contracts aggregating over three-quarters of a million dollars have been awarded for the immediate improvement of these roads. A new kind of macadam is to be used, which is superior to the old, and which will wear much longer. One of the longest stretches of road to be improved is the Merrick road from Bayshore to Brookhaven, about thirteen miles in length.

Other roads to be improved are: Locust avenue, from Rockaway road to Farmers avenue; Hillside avenue, from Myrtle avenue to Hoffman boulevard; Rocky Hill road, from Queens avenue to Hillside avenue; Rockaway road, from city line to the Long Island Railroad, and from Lefferts avenue to Locust avenue; Springfield road, from Hillside avenue to Rockaway road; Cooper street, from Kings County line to Myrtle avenue, and from the Long Island Railroad to Woodhaven avenue.

Other contracts are to be awarded later. When the improvements are made to all the roads for which contracts have been awarded, Long Island riders will have some of the finest highways in New York State.

INTERESTING SUGGESTION

Made by Walter Davidson Relative to Penalizing Old Machines In Endurance Runs.

"IT seems to us that the F. A. M. should make some provision to prevent repetitions of the unfair decisions of judges or technical committees in the Rockford Endurance Run and the Chicago Reliability Contest.

"In the Rockford run the three judges (two of them, by the way, riders of other makes of machines) made it a point to penalize the Harley-Davidsons—that were otherwise perfect—one point each for loose stand nuts.

"As our machines are made with these stand nuts free fitted when they leave the factory, it seems pretty much of a presumption on the part of these so-called 'judges' to penalize a machine for having the stand nuts loose when they were made that way purposely. They are held on with a cotter pin and if it were not for the fact that washers would rattle we would use washers instead of nuts.

"In the Chicago Reliability Contest the riders were not advised that a technical examination would follow the contest. A machine certainly should not be examined afterward unless it has been examined before it started in the run, because with one rider with a new machine and another rider with a machine a year or so old, it is perfectly obvious that the older machine, unless it has been overhauled, will tend to have more things loose than a new machine.

"Puls, who was otherwise perfect in the Chicago run, was penalized for having two or three loose pedal rubber nuts. In the first place, these pedals are not manufactured by the maker of the machine, and in the second place as they were old pedals it is very likely that the nuts were loose before the rider ever started on the run. If he had been notified that there was to be a technical examination afterward he would certainly have put on new pedals.

"Hank, one of the other Harley-Davidson riders, was penalized for one loose spoke and a loose carbureter screw. Neither one of these parts is manufactured by the makers of the machine, and this also was a machine that had been run for some time.

"Both of these men had perfect road scores and had they known there was to be a technical examination they would certainly have had their machines looked over beforehand.

"This contest brings up a matter which has come to our attention several times in the past. This is in reference particularly to private owners who are riding machines sometimes three or four years old. There should be some provision made so that these riders are not penalized by the technical committee for wear or loss of certain parts which were either worn or missing when they started the contest. Private owners should be privileged, we believe, to enter an endurance contest without spending a lot of money to put their machines into the same condition as a brand new one, ridden possibly by a factory expert. After the contest the technical committee, we believe, should subtract from what penalties have been meted out to the private owners or those riding old machines the points which they noted before the contest, so that they are not penalized except for wear or parts lost in the one contest.

"We have placed the matter of the Chicago Reliability Run and the Rockford Endurance Contest before the F. A. M. Competition Committee and have also made suggestions to them with regard to riders of old machines, as herein outlined. Believing that the best way to prevent repetitions of the disagreeable circumstances surrounding the Rockford and Chicago contests is to give the true facts of the matter, we trust that this letter will be published."

COX A DARK HORSE

Denver Rider Springs Surprises By Leading Stars in Tuileries Saucer Races.

DENVER, COL., June 3.—Barring the unfortunate accidents to King, Fredericks and Patterson, the Sunday races at the Tuileries track were the best of the season. Jim Cox, regarded as an outsider, sprang into prominence by winning the initial open event and then by defeating both Boyd and Bowen in a match race. In the first event he was the winner all the way, no other rider having a look-in. In the match race between Boyd, Bowen and Cox, it was anybody's race until the last lap, when Cox whipped out from the rear and led both Boyd and Bowen. The 10-mile race was bitterly contested throughout, Cox, Boyd and Bowen having an even chance for victory and each at times having the advantage. In the eighth mile Cox left the other two and was not overtaken until the last lap of the tenth mile, when Boyd came up from the rear and defeated Cox by a narrow margin. Summaries:

Two miles, amateurs, single stock, 30.50 class—Hurlbut (Indian); Shepherd (Merkel); time, 2:25⅘.

Five miles, open, professional, 61 class—Cox (Merkel); Boyd (Indian); Bowen (Merkel); time, 3:41.

Seven-mile three-cornered match, professional, 61 class—Cox (Merkel); Boyd (Indian); Bowen (Merkel); time, 5:11.

Three-mile consolation, professional, 61 class—Patterson (Merkel); Swartz (Indian); Fredericks (Indian); time, 2:12⅖.

Ten miles, open, professional, 61 class—Boyd (Indian); Cox (Merkel); Bowen (Merkel); time, 7:28⅖.

SUCCESSFUL ROAD RACE.

A. W. STRATTON and G. Luby, of Colorado Springs, carried off the honors in the twin and single classes over a 90-mile course in the big road race held on May 30 from Colorado Springs to Pueblo and return. H. Smith and Earl Moore were badly bruised in spills, but neither suffered broken bones. All things considered the time was remarkably fast. Stratton, mounting a Harley-Davidson, covered the distance in 1:54; W. Glaskin, Indian, was in second place in the twin division, his time being 1:56 and D. Gibble, Harley-Davidson, was in third place. Gibble's time was 2:01. Luby's time in the single-cylinder class was 2:03; he rode a Harley-Davidson machine. E. Knight, mounting a Thor, completed the trip in 2:22 and W. W. Whiting, Harley-Davidson, finished in 2:42.

M. M. HEYETT, of Salina, Kan., who travels for an iron manufacturing company, covers his territory on a motorcycle.

BIG MEET IN PITTSBURGH

Speedsters Jostle Father Time in Six Events Which Draw 35,000 Racing Enthusiasts.

PITTSBURGH, PA.—From the contestants' standpoint the race meet held under the auspices of the Pittsburgh Motorcycle Club and the Pittsburgh *Press*, on Saturday, June 1, was the greatest that has ever been held in this part of the country. H. McK. Payne, astride an Indian, captured two firsts, two thirds and finished second once; Russel H. Geisey, who took two thirds, won one race and one second, rode a Thor; Charles F. Seitz, Indian, finished first once, second twice and third once. Harry D. Immel, Harley-Davidson, captured one event and finished second in another.

Payne's work was sensational. In the 25-mile race he flashed to the front when Seitz, who had been leading for two miles, spilled on the upper turn and from that time on he was never in danger. He also won the 10-mile open race. Seitz finished just two seconds behind Payne. Payne was third in the 10 and 5-mile events and second in the 10-mile race for the Championship of Allegheny County. The riding of Seitz was second only to the exhibition put up by Payne. Seitz captured the 15-mile race in 19:34, getting the jump on his opponents in the first lap. The feature of this race was the fight for second place, between Payne and Geisey, the former riding an Indian and the latter a Thor.

Geisey scampered home with a victory in the 5-mile open race, one of the most stubbornly contested events on the card. In this event Seitz led at the start and it first appeared as though it would be a run-away for him, but Geisey closed in on him on the third mile and trailed him from this time to the fifth mile, where he passed Seitz and kept the lead to the tape.

Two exhibitions were given by local riders noted for their fast riding. A. G. Schmidt, the present possessor of the record of a mile in 1:08, fell behind in his record-breaking reputation. The second exhibition was given by Russel H. Geisey, on a Thor. Geisey's time was better than that made by Schmidt, two miles being covered in 2:34. Summaries:

Ten-mile race for stock machines, private owners—R. K. Merril (Indian); F. R. Baisecker (Indian); Frank Brush (Harley-Davidson); time, 13:57⅘.

Twenty-five-mile race for stock machines, trade riders—H. McK. Payne (Indian); Harry D. Immel (Harley-Davidson); R. H. Geisey (Thor); time, 34:36⅕.

Ten-mile open race for trade riders—H. McK. Payne (Indian); Chas. F. Seitz (Indian); R. H. Geisey (Thor); time, 13:14⅖.

Fifteen-mile race for stock machines, trade riders—Chas. F. Seitz (Indian); R. H. Geisey (Thor); H. McK. Payne (Indian); time, 19:38⅘.

Five-mile open race for trade riders—Russel H. Geisey (Thor); Chas. F. Seitz (Indian); H. McK. Payne (Indian); time, 6:36⅗.

Ten-mile race for stock machines, Allegheny County Championship—Harry D. Immel (Harley-Davidson); H. McK. Payne (Indian); Charles F. Seitz (Indian); time, 13:53.

KENTON TO HAVE MEET.

KENTON, OHIO.—Local motorcycle enthusiasts are arranging for a racing meet to be held at the local race track some time at an early date. D. L. Tullis, the crack Kenton rider will participate in a number of the events.

RACINE, Wis., has 150 more motorcyclists this spring than last.

DENVER RACERS HURT

Frank King and Fredericks Figure in Sensational Spills and Former's Condition Is Serious.

DENVER, COL., June 3.—Two collisions on the Tuileries motordrome yesterday resulted in serious injuries to three local riders. Frank King's body was filled with long slivers, one of these penetrating close to the right lung. That King was not instantly killed is due to the heroism and quick wit of Andy Patterson who shot his motor to the interior of the track to keep from running over the prostrate rider. Again when Fredericks was lying unconscious Patterson was directly behind and again he shot his machine to the center, this time taking a bad fall and receiving cuts and bruises. Fredericks was unconscious for some time and it is feared he has suffered internal injuries. King and Fredericks rode the same machine and in each instance they were injured by riding into Swartz. Luckily for all concerned Swartz managed to stay on the track and thus saved other riders from falling. He was complimented upon his nerve.

ZANESVILLE SPEEDSTERS.

SEVEN races made up the Memorial Day card arranged by the Zanesville (Ohio) M. C., and every finish proved an enthusiasm generator. More than 1,000 people witnessed the events, which were staged at the fairgrounds track. Summaries:

Five miles, open—Tullis, Thor, first; Williams, Indian, second; Davis, third. Time, 6:25⅕.

Three miles, novice—Brehmer, Indian, first; Bascom, Thor, second; Price, third. Time, 4:33⅗.

Six miles, open—Williams, Indian, first; Evans, second; Davis, third. Time, 7:38.

Four miles, stock—Davis, first; Brehmer, second; Bascom, third. Time, 5:21⅗.

Pursuit race, 10 miles limit—Williams, first; Evans, second; Brehmer, third. Time, 13:29⅕.

The 4-mile belt stock event scheduled as the sixth number on the program was canceled and time trials were substituted. Tullis turned off a mile in 1:16, Evans in 1:16⅗ and Williams in 1:16⅘.

Twenty-five miles, open—Evans, first; Tullis, second; Davis, third. Time, 31:27⅗.

FROM R-S BULLETINS.

AMONG the Memorial Day racing bulletins received at the Reading-Standard factory are three which tell of excellent performances by R.-S. machines at Seattle, Wash.; Omaha, Neb., and Lancaster, Pa. At Seattle an R.-S. single, of the Tourist type, took first place in the 10-mile open, and third in the 5-mile event, and was the only strictly stock machine to win. W. E. Dewey, R.-S. agent in Omaha, disabled his ported machine and sent in a stripped stock 1912 twin which landed in second place in the 15 and 25-mile events. First place in the 5-mile race and second in the 10-mile went to a belt-driven R.-S. single at Lancaster.

SANDUSKY'S RACING CARD.

SANDUSKY, Ohio, turned out a crowd of 2,000 fans to the Memorial Day races staged under the auspices of the Sandusky M. C., and the program met all expectations. Summaries:

Three miles for 3 h. machines—Mielke, 2¾ Indian, first; Federkeil, 2¾ Indian, second. Time, 5:33.

Five miles for 4 h. stock machines—Kissig, Indian, first; Federkeil, second. Time, 6:47.

Ten-minute race for 4 h. stock machines—Federkeil, first; Kissig, second; Dillon, Indian, third; distance, 7½ miles.

Pursuit race for 4 h. stock machines—Federkeil, first; Kissig, second; distance, 4 miles. Time, 5:36.

Five-mile handicap for machines under 50 cu. in.—Macbeth, Reading-Standard, one-half mile allowance, first; Federkeil, Indian, one-third mile allowance, second. In this event Kissig fell and disabled his machine so that he was obliged to retire.

PROTEST NOT SUSTAINED.

DENVER, COL.—L. E. Bowen won the three-cornered match race from Boyd and Cox at Tuileries Park on May 30. Boyd was barely nosed out in the 7-mile struggle and at once lodged a complaint with Referee Osborn, charging that the engine on Bowen's machine was oversize. Bowen's machine was at once sealed up and official measurements taken later proved that the engine was within the limit of 61 cubic inches. Bowen won two events. Boyd defeated him in the 10-mile event, and in the other two in which he competed he was pushed to the limit by Cox. Cox seemed to be the hardest contender as in each event he was just nosed out of first place. In the last event Bowen, Cox and Boyd seesawed until the unlucky seventh mile when the magneto terminal on Cox's machine tore loose and forced him out; after that it was the same battle royal between Boyd and Bowen for first, with Boyd having a slight advantage at the tape.

The consolation event was likewise very close between Swartz, King and Patterson, finishing in the order named. Shepherd came in for the amateur honors, with Barclay a close second. Summaries:

Two miles, amateurs, single stock, 30.50 class—Shepherd (Merkel); Barclay (Thor); Beck (Merkel); time, 2:21.

Three miles, open, professional, 61 class—Bowen (Merkel); Cox (Merkel); Boyd (Indian); time, 2:08⅕.

Three-cornered match race, 7-mile professional, 61 class—Bowen (Merkel); Boyd (Indian); Cox (Merkel); time, 5:05⅖.

Three-mile consolation, professional, 61 class—Swartz (Indian); King (Indian); Patterson (Merkel); time, 2:17⅕.

One-mile exhibition, professional, 61 class—M. Fredericks (Indian); time, 44 seconds.

Ten miles, open, professional, 61 class—Boyd (Indian); Bowen (Merkel); Fredericks (Indian); time, 7:26⅗.

FAST TIME AT OMAHA.

WALTER BELL reeled off the fastest twenty-five miles ever made on the Omaha (Neb.) speedway on an Indian motorcycle in the closing event of the speed program given on May 30 by the Omaha Motorcycle Club. Bell negotiated the distance in 25:33 and the performance is considered a remarkable one in view of the high winds prevailing and the fact that the dirt track was not in the best shape for fast time.

Five races were pulled off before a fair crowd, and generous prizes hung up by the Omaha dealers caused the contenders literally to "eat dirt" in their struggle for supremacy. Summaries:

Ten miles, private owners—Ed. Nylen, first; George Anderson, second; Henry Hayman, third. Time, 10:40. Nylen and Anderson rode Indian machines, Hayman an Excelsior.

Five miles, single cylinder, private owners—Carl Adolfson, first; Mark Schwerin, second; Fred Bell, third. Time, 6:08. All Indians.

Fifteen miles, twin cylinder, trade riders—Walter Bell, first; Carl Mulmquist, second; Ed Nylen, third. Time, 15:27. Mulmquist rode a Reading-Standard.

Five miles, single cylinder, trade riders—Carl Adolfson, first; "Chief" Noah, second; O. Ramer, third. Time, 6:07. All Indians.

Twenty-five miles, free-for-all—Walter Bell, first; Carl Mulmquist, second; Hart Bowman, third. Time, 25:33.

WITH THE WINNERS.

GOODYEAR Blue Streak tires were to the fore again in the races held recently at Dongan Hills, Staten Island, by the Metropolitan Motor Racing Association. Johnnie Cox used them in winning the 5-mile pro. event, and Constant mounted a machine fitted with them when he won the mile time trial in 1:13⅕.

WINNIPEG'S SCHEDULE

Half a Dozen Attractive Racing Programs Are Assured Motorcyclists in Progressive Canadian City.

ARRANGEMENTS have been completed for a big race meet to be held at Winnipeg on July 1, at which the speedsters will compete for the championship of western Canada. The program has not been published in detail, but it is announced that races will be staged for open port machines as well as for stripped stock mounts and machines of private owners. These events will be held at the Kirkfield track. Races will also be held at Portage La Prairie in connection with the annual fair which is to be held on July 8, and at the Winnipeg Industrial Exhibition, July 18 to 23. It is likely that a meet or two will be put on at the Kirkfield track in the latter part of September.

Advices from Winnipeg are to the effect that all the dealers there have been held up on deliveries, and that there is a heavy demand for American-built machines. About 150 new machines have been sold since the season opened.

SEATTLE'S STRONG CARD.

FULLY 2,000 fans turned out for the meet held at Seattle, on May 30, under the auspices of the Seattle Motorcycle Club. Eight events were staged and 102 contestants were entered. Summaries:

Five miles, private owners—George Brennan, Excelsior, first; Ross Hadley, Indian, second; R. E. Chesley, Excelsior, third. Time, 6:45.

Ten miles, amateur, stripped stock—D. S. Cline, Reading-Standard, first; F. P. Zwick, Merkel, second; T. R. White, Excelsior, third. Time, 13:10⅕.

Four-mile novelty race, amateur, stripped stock—T. R. White, Excelsior, first; George Brennan, Excelsior, second; A. G. Taft, Excelsior, third. Time, 7:12.

Five miles, amateur, open—W. H. Pielow, Indian, first; George Brennan, Excelsior, second; Harry Meagher, Reading-Standard, third. Time, 6:23⅕.

Three miles, amateur, stock touring—A. G. Seels, Excelsior, first; H. F. Klopher, Reading-Standard, second. Time, 4⅘.

Australian pursuit race, amateur, stripped stock—A. G. Taft, Excelsior, first; George Brennan, Excelsior, second; R. E. Chesley, Merkel, third. Time, 10:13⅕.

Three-mile amateur handicap, open—R. F. Chesley, Merkel, first; A. G. Taft, Excelsior, second; F. P. Zwick, Merkel, third. Time, 3:39⅕.

Twenty-five miles, amateur, open—A. G. Taft, Excelsior, first; Ross Hadley, Indian, second; T. R. White, Excelsior, third. Time, 30:45.

Special event—3-mile race between Roy Batchelder, riding a 4 h. Indian, and A. G. Seels, on a 6 h. Excelsior, was won by Batchelder. Time, 3:54⅗.

Except in the three-mile amateur strictly stock touring, which was for the fifty-inch class, all the other events were for the 30-50 class.

The officials of the race were: Referee, E. L. Moore, representing F. A. M.; judges, Dr. A. W. Hawley, Dr. S. W. Case and Walter Gray; timers, L. D. Crossett, J. C. Fox and W. W. Boggess; starter, Fred Erickson; scorers, F. J. Fredell, Ralph Hawley, L. D. Coart, H. R. Messer; umpires, J. H. MacDiarmid, C. B. Reynolds, Geo. L. Douglass; clerk of the course, C. T. Hamilton; announcer, Albert Hess.

NORTH JERSEY RUN.

ARRANGEMENTS have been made by the North Jersey M. C., of Paterson, to hold its summer reliability run on Sunday, June 16, over a 206-mile course. The route and schedule will be as follows: Check out of Paterson at 6:30 a. m., at Port Jervis 9 a. m., at Kingston 12:30. The riders will dine in Kingston and then leave by ferry to Rhinecliff at 1:30 p. m. They will check at Fishkill at 3:50 p. m. and leave by ferry for Newburg at 4 o'clock. If there is no hitch in the running the squad will check in at Paterson again at 7 p. m. A gold medal will be awarded the most consistent rider, and each contestant finishing with a perfect score will receive a bronze medal. An entry fee of $1.50 will be charged.

TREAT FOR SAVANNAH FANS

Fine Card of Races on Grand Prize Course Is Being Arranged as July 4 Attraction.

SAVANNAH, GA.—Savannahians who enjoy motorcycle racing will be given a treat on July 4, when road races will be held over part of the famous Grand Prize course. At the last meeting of the Savannah club a special committee was appointed to arrange for the races. It is said that the longest event will be for 50 miles and the shortest for 10 miles. The course to be used is ten miles long and has only four turns in it. The records of last year when Hodge, on a single, made 57 miles an hour and Shrivalle made 68 miles an hour, will no doubt be eclipsed this year, for the course is in perfect condition. The proposed race to Statesboro and return, a distance of 120 miles, has been postponed to Labor Day. The event was originally carded for July 4.

The Central of Georgia Railway officials are trying to arrange with the club to hold a number of events at Tybee Island on June 22. Prizes will be offered by the railroad company. The beach is 2 miles long and is one of the finest on the Atlantic coast. Races have been held there several times in the past. The club will probably accept the offer.

As the time draws near for the annual meeting, which will be held June 18, the fight for nominations is warming up. Otto Kolb, now president, will not run again, and J. D. Ivy and McAuley are foremost among those mentioned for the office. Arrangements for 100 plates have been made at "The Casino" for the annual supper.

TRUE SPORTING SPIRIT.

WHEN the New Jersey M. C. endurance riders arrived in Trenton in their twice-around-the-clock grind on the eve of Memorial Day they were escorted to the motorcycle establishment of John Sykes, Jr., where the Central Jersey Motorcycle Club had prepared refreshments and arranged to entertain the road pluggers during their short stay in the city. Sykes, who is the Indian agent in Trenton, not only turned over his store for the reception of the endurance riders but assisted in every way possible to make their stop-over for checking a pleasant one. The reception arranged by the Trenton motorcyclists was doubly welcome in view of the fact that the Newark contestants were practically exhausted when they reached the New Jersey capital after riding the flooded roads along the eastern coast and across the State.

DES MOINES RACES.

DES MOINES, IOWA.—Over three thousand people witnessed the motorcycle races which were pulled off at the State Fair grounds here Decoration Day. The races were put on in conjunction with an aeroplane meet, but the aeroplane failed to fly and all the attention was given to the races. L. A. Scheibel, of Des Moines, mounted on an Indian, won two firsts, one of them in the five-mile stripped stock race. Verly Whittington, mounted on "Shorty" Matthews' Thor IV, won the five-mile feature race in 6:43. Two accidents furnished excitement. Max Cox, the Denver professional, in attempting to lower the track record for five miles on an Indian, was thrown into the fence and suffered injuries to his hip which put him out of the day's racing. Scheibel was thrown twice. He went into the fence at the north end of the track while trying to hold high speed on the turn. He recovered himself and remounted. He attempted to finish the race but was carried from the track after his second fall.

F. R. Jenkins, State F. A. M. commissioner, attracted attention by appearing with the first side-car in use here, in which his wife was seated. The meet was staged under the direction of the Des Moines Motorcycle Club.

MYERS PROMOTED RACES.

IN spite of cold, threatening weather, an enthusiastic crowd turned out to the motorcycle races held in Williamsport, Pa., on Memorial Day. The program was arranged by W. A. Myers, Indian, Thor and Excelsior agent in the Williamsport district, who has doubled his business for the present season by persistent and sometimes unique methods of calling attention to the motorcycle. C. S. Wilcox, William Thompson and W. E. Colt, all mounting Indians, finished in the order named in the 5-mile novice event; H. E. Dennis captured the second race at five miles on an Indian, with H. G. Moore and C. S. Wilcox, riding Indians, in second and third positions. The third event was at ten miles; Wilcox, Colt and Thompson finished in the order named: In trials for the track record Wilcox and Dennis were tied, each turning off a mile in 1:21. The races were held on a half-mile dirt track.

P. E. M. LANDS FOUR FIRSTS.

JANESVILLE, WIS.—More than 2,500 fans witnessed seven fast motorcycle races staged by the local club on May 30 at the grounds of the Janesville Park Association. Ideal weather and a perfectly conditioned track permitted of some of the fastest events ever held in this vicinity.

In four races the P. E. M. machines, manufactured by the Waverley company, of Jefferson, Wis., secured first honors. The excellent work of this machine and the P. E. M. riders, Thoms, Spitler and Prescott, featured the program. By winning the 10-mile event on his P. E. M. single Thoms carried off the silver cup offered for the fastest time of the day by a 30.50 machine. In this race Thoms turned off a mile in 1:05. In the 5-mile event for 61 cu. ins. machines, H. Pehrson romped off with first honors on a Flying Merkel; and Mike Cafferello, riding an Indian, took first place in the sixth and seventh events, at five miles, for 30.50 and 61 cu. ins. machines, respectively.

VANCOUVER RUN.

UNDER the auspices of the Vancouver (B. C.) Motorcycle Club, a successful run was held on Vancouver Island May 24, 25 and 26, many riders from neighboring towns participating. The first day was spent in Victoria, and the squad left on the following morning for Duncan's. Time was allowed at this point for luncheon and the riders then headed for Nanaimo, a coal mining town. The trip to Nanaimo was marked by numerous spills and broken pedals, but there were no serious mishaps. The squad pulled out of Nanaimo on the morning of the third day and crossed the Sooke mountains to Albeini. They returned to Nanaimo on the evening of the same day and then boarded the midnight boat for the trip back to Vancouver. About twenty riders finished the run.

BLANKENHEIM 6-HOUR WINNER

Rides 233 Miles in Time Allowed with Bomark a Good Second—Other Returns from Hawthorne.

CHICAGO, June 3.—There were seven starters in the big six-hour race on Friday, May 31, which was the feature of the North Shore Club's four-day meet at the Hawthorne track, beginning Memorial Day, and three riders finished the grind. B. M. Blankenheim (Excelsior) won the race by making 233 miles in the six hours, and Ed. Bomark (Indian) was second with 220 miles; A. H. Davis (Excelsior) was third with 186 miles to his credit. For a while at first it looked as if "Shorty" Matthews on his cup-winning Thor would be an easy winner, but in the sixtieth mile he broke a valve and dropped out.

Saturday's Events.

Though "Shorty" was forced to drop out on Friday he was back on Saturday and had things pretty much his own way, winning two five-mile races, a ten and a twenty-mile event. Joe Wolters won the professional race, and Williamson took the North Shore M. C. race from Blankenheim, the winner of the day before. Summaries:

Ten-mile free for all: Won by Matthews; Don Johns, second; time, 9:53.

Three-mile professional, first heat: Won by Kenney; Edwards, second; time, 3:12:4.

Second heat: Won by Joe Wolters; Armstrong, second; Kinnie, third; time, 2:53.

Third heat: Won by Wolters; Armstrong, second; Edwards, third; time, 2:50⅗.

Five-mile free for all: Won by Matthews; Bonnet, second; Williamson, third; time, 5:26.

Trade riders, five miles, stripped stock machines: Won by Matthews; Bomark, second; Williamson, third; time, 6:04.

North Shore Motorcycle Club race, five miles: Won by Williamson; Blankenheim, second; Stoerk, third; time, 6:29.

Twenty-mile free for all: Won by Matthews; Bomark, second; time, 19:44.

Sunday's Events.

Five miles, private owners, 30:50 Class: Won by Wink; Williamson, second; Cooley, third; time, 6:01.

Three miles, professional, Wolters, first; Armstrong, second; Kinnie, third; time, 2:46; second heat, Wolters, Kinnie, Edwards; time, 2:45; third heat, Wolters, Kinnie, Edwards; time, 2:51.

N. S. M. C. five-mile handicap: Williamson, first (one mile handicap); Caffarello, second (scratch); Stoerk, third (¾ mile); Blankenheim, fourth (1¼ miles); time, 6:01.

Two-mile F. A. M. national championship: Don Johns, first; Matthews, out; time, 2:01.

Twenty-mile free for all: Johns, first; Bomark, second; Stoerk, third; time, 19:37⅗.

TRADE CONTEST JUNE 24.

CHICAGO, June 11.—The Chicago M. C. officials have named June 24 as the new date for the six-day run for trade teams, recently postponed. The entry list promises to be large and interest in the event runs high. The recent postponement followed the announcements of several manufacturers that they could not have teams ready in time.

"ARRANGE pleasant runs and don't make them too stiff for the novice," is the slogan of the Lawrence (Kan.) Club.

SIX CLEAN SCORES

Ten Riders Finished Wichita Endurance Run but Only Half a Dozen Were Within Schedule.

SIX riders out of thirteen, who started in the 170-mile endurance run of the Wichita (Kan.) Motorcycle Club on Sunday, June 2, finished with perfect scores. Ten of the riders completed the trip, which was twice to Newton and return and twice to Augusta and return. John Branson, mounting a twin Excelsior, won the sweepstakes cup, riding in the trade riders' class. Branson was off but 6½ minutes from schedle time at all of the 16 controls, half of them secret.

G. E. Woodwell, on an Excelsior, was the only one of four private owners who started, to finish the race. He came in with a perfect score and was but 11½ minutes off on the various controls. Among the professional riders Wells Bennett, on an Indian, was the cup winner, finishing with a perfect score and a total of 13¾ minutes off schedule at controls.

Following is the full score:

Trade riders—John Branson, Excelsior, perfect score, off 6½ minutes at controls; Jim Trimble, Yale, perfect score, off 25 minutes at controls; F. A. Homer, Merkel, perfect score, off 25¾ minutes at controls; C. B. Hamilton, Indian, .999 score, one minute late, off 23¾ minutes at controls; Lloyd Stevens, Indian, .998, two minutes late, off 22½ minutes at controls.

Private owners—G. E. Woodwell, Excelsior, perfect score, 11½ minutes at controls; Will Braitsch, out, tire trouble; Harry Dobson, out, broken spark plug; Harry Cooper, out, tire trouble.

Professional riders.—Wells Bennett, Indian, perfect score, off 13¾ minutes at controls; W. T. Cunningham, Harley-Davidson, perfect score, off 17¾ minutes at controls; Max Wilson, Harley-Davidson, .998, lost intake valve cap, off 20¾ minutes at controls; Paul Garst, Harley-Davidson, .985, broke speedometer, off 15½ minutes at controls; The cup winners all rode twin cylinder machines, Branson a 7 h. Excelsior, Woodwell a 6 h. Excelsior, and Bennett a 7 h. Indian.

A JULY 4 PROGRAM.

THE Indianapolis fair grounds track will be the scene of another big motorcycle race meet again this year on July 4. Last year over 25,000 people witnessed the most successful meet ever held in Indiana, under the auspices of the Indiana Motorcycle Club on July 4, when President Taft was present. This year not as large a crowd is expected, and the program will not be held under the Indiana Motorcycle Club's auspices. Harry D. Tutewiler, playgrounds commissioner in Indianapolis, is planning the big meet at the fair grounds for the entertainment of the Indianapolis children on July 4. The children will be admitted free, but there will be a charge for the men and women. The management and plans for the race meet will probably be turned over to the Indiana Racing Association, in Indianapolis, which holds the F. A. M. sanction for races on the track on July 4.

TIEMEYER A COMER.

BALTIMORE, Md.—Freddie Tiemeyer, of the Maryland M. C., has been highly praised for his showing in the motorcycle races held at Bennings on Decoration Day. He is one of the best speed artists in Maryland and was expected to bring home the "bacon." He went against a field of crack riders and showed his mettle by capturing one event and running second in two others. While Feuerstein, of Norfolk, was the star of the meet, he was forced to go the limit by Tiemeyer at all times. As a result of his showing Tiemeyer is now hailed as the premier racing man in Maryland, taking the place of Chic Thomas, who was injured last August in a race at Electric Park and who seems to be out of the game.

HILL-CLIMB POSTPONED.

MINNEAPOLIS, Minn.—The Minneapolis Motorcycle Club has decided to postpone its hill-climb for two weeks, in order that the committee arranging the affair may find a more suitable hill. The climb was scheduled for Saturday, June 8, at the Columbia Heights hill, which was the scene of one of the recent automobile hill-climbs, but after being tried out by different members of the club it was thought the hill was not severe enough for the motorcycles.

A committee is now looking over possible courses at Golden Valley and also on the Cedar avenue hill, which many of the club members favor.

AN EARLIER START.

VICE-PRESIDENT PATTERSON, of the Central F. A. M. district, writes from Pratt, Kan., to announce that the big tour of the Short Grass Club through four States will be started on August 11 instead of August 17, as was originally stated. This change has been necessary in order to have the riders at Cheyenne, Wyo., in time for the Frontier Day program, which is expected to prove one of the most interesting features of the trip.

POINT BREEZE OPENING.

TO inaugurate the new Point Breeze saucer in Philadelphia, Pa., on Saturday, June 15, about 1,500 motorcyclists of the city and neighboring towns will parade through the principal streets, and later ride out to the track in a body. They will be guests of the management for the opening races. The parade will be headed by a band of 40 pieces. At the City Hall brief addresses will be made by city officials, and the program in general will be one of unusual importance for the riders of the district.

ARMSTRONG IN CLEVELAND.

CLEVELAND, Ohio, June 11.—"Red" Armstrong, of the Excelsior racing camp, has arrived from Chicago and introduced himself to Cleveland race followers by winning the only event in which he has competed so far. Incidentally he brought the record for the local four-lap saucer down to 42 seconds for the mile. Armstrong feels that there is a tendency to "freeze him out" of some of the events, but he intends to ride at every opportunity. He reports the track in the best of shape and unusually fast

RUN POSTPONED.

MINNEAPOLIS, Minn.—Because of the bad condition roads in this vicinity are in just now, A. R. Horn, chairman of the endurance run committee of the Minneapolis Motorcycle Club, has decided to postpone all road contests until some future date. The run was originally set for Sunday, June 2.

BANQUET FOR WINNERS.

PITTSBURGH, Pa.—There was a large gathering at a banquet in the Hotel Schenley on June 6 in honor of the winners at the race meet held under the auspices of the Pittsburgh *Press* and the local motorcycle club on June 1. The banquet, which was given by the management of the *Press,* brought the boys together under such satisfactory conditions that plans were taken up for another meet to be held on the Brunot's Island mile track. No date was decided upon, but the program will probably be given some time in July.

LOOKING DOWN the STRETCH

JUNE 15, Rochester, N. Y.—Flower City M. C. race meet; Crittenden Park track.

June 16, Worcester, Mass.—Worcester M. C. first reliability run; Worcester to Concord, N. H., and return.

June 16-17, Seattle, Wash.—Seattle M. C. annual endurance run; Seattle to Portland, Ore., and return, 352 miles.

June 29, New York City—Opening of Brighton Beach Motordrome.

June 28, Douglas, Isle of Man, Great Britain—International Junior Tourist Trophy motorcycle race; 150 miles.

June 29, Rochester, N. Y.—Rochester Motorcycle Club's race meet.

June 30, Baltimore, Md.—12-hour endurance run under the auspices of the Chesapeake M. C.; from Baltimore to Lancaster, Pa., and return.

July 1, Douglas, Isle of Man, Great Britain—Senior Tourist Trophy road race; 187 miles.

July 1, Hamilton, Ont.—Canadian championship meet by Canadian Motorcyclists' Association.

July 1, Winnipeg, Ont.—Races on a mile track, for championship of western Canada.

July 4, Elmira, N. Y.—Race meet under the auspices of the Elmira M. C.

July 4, Cortland, N. Y.—Cortland M. C. race meet on a half-mile track.

July 4, Detroit, Mich.—Motorcycle Club of the Detroit Wheelmen, one mile, State Fair track.

July 4, Marion, Ind.—Race meet under the auspices of the Marion M. C.

July 4, Indianapolis, Ind.—Indiana Racing Association's race meet on a one-mile track.

July 8, Portage La Prairie, Man.—Races at the annual fair.

July 13-14—Start of National tours from Albany, Baltimore, Chicago and Indianapolis for Columbus, O., finishing July 17.

July 17-21, Columbus, Ohio—Tenth annual F. A. M. national assembly and race tournament.

July 18, Columbus, O.—F. A. M. annual business meeting, Hotel Virginia, 9 a. m.

July 18-23, Winnipeg, Man.—Races at Industrial Exhibition.

July 29, Marion, Ind.—Marion Motorcycle Club's race meet.

August 6-9, Detroit, Mich.—Cycle Parts and Accessories Association annual summer convention.

August 17, Pratt, Kan.—Start of the 15-day tour of the Short Grass Motorcycle Club.

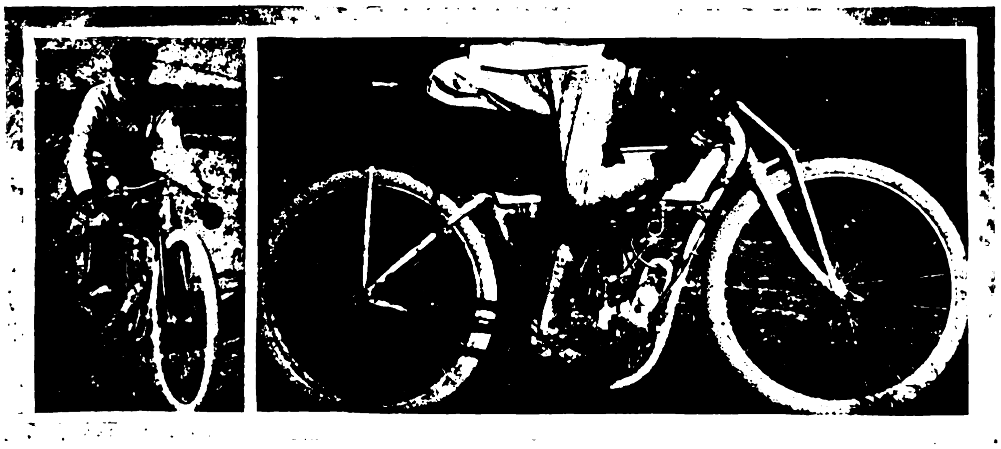
September 2, Detroit, Mich.—Race meet under the auspices of the M. C. of the Detroit Wheelmen on the State Fair grounds track.

TWO ECONOMY WINNERS.

IN an economy test conducted by the Washington (D. C.) Motorcycle Club on May 19 DeWight Willis and John K. Willis, of the Capitol City, finished first and second, respectively, on twin Excelsiors. The former rode 16 miles on a pint of gasoline and the latter covered 12½ miles. Tanks and carbureters were emptied by the officials before the allotted amount of fuel was distributed for each machine, competitors were in full view of the judges throughout the test and the course was carefully measured. It will be noted that at the rate of 16 miles to a pint of gasoline the winner would have ridden 128 miles on a gallon.

A COMBINATION MEET.

WASHINGTON, D. C.—Local branches of organized labor have arranged an interesting motorcycle and automobile program to be run at Benning's track on July 4. Local motorcyclists are entering for the various events.



Payne (to the left), and Geisey, Winners in Pittsburgh Meet at Schenley Park.

Brush and Immel, Pittsburgh Riders.

HILL-CLIMB IN CALGARY

Canadians Will Compete on Two Stiff Grades in the Near Future—Banff Run Postponed.

CALGARY, Alta., Canada.—The Calgary M. C. intends to hold two hill-climbs during the month of June, one at Pinkham Hill, Calgary, and another at a long hill near Cochrane, Alta., about 25 miles west of Calgary. Both hills have excellent surfaces. Pinkham Hill is one of those "engine-killing" grades, there being a long, steady grade and then two or three hundred feet of steep incline. Only one single has ever been over this hill, a 3½ Bradbury. No single has ever been over the Cochrane Hill; only a few have tried, and they have failed. This hill is a long, winding climb, the grade being about the same all the way to the top. The surface is good.

The run to Banff, scheduled for May 24-25-26, had to be postponed on account of bad roads following a heavy rainstorm. However, several members of the club have since gone up and report the roads in excellent condition, and in several places the 7 h. twins were opened wide. Until last year no motorcycles nor autos were allowed to enter Banff, which is in the National Park, in the heart of the Canadian Rockies.

D. W. Trotter, formerly of Chicago, and now a grower of prize seed oats, has built at a cost of about $4,000 a mile a straightaway track two and a half miles in length, there being a half-mile start, a mile run, and a mile stop, and some fast time is looked for from the two-wheelers as well as the autos. It is probable that only stock and stripped stock machines will be used, although a ported machine or two may find its way to the track and stir things up.

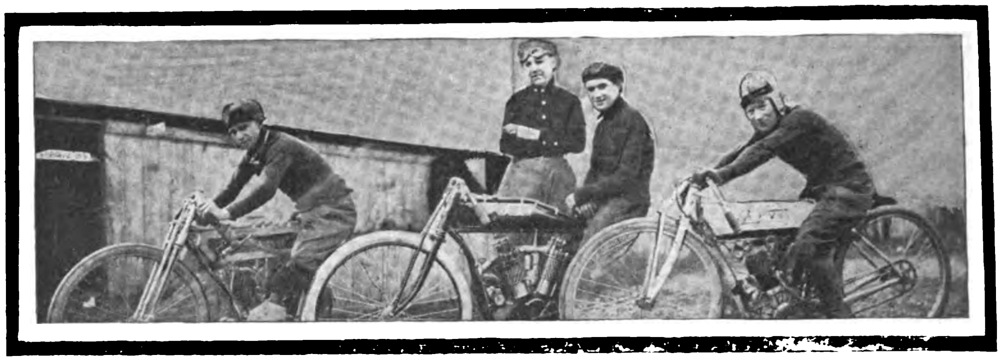
WITH CALGARY DEALERS.

CALGARY, Alta, Canada.—H. H. Trail and C. G. Parr, the former handling the three leading English machines, Bradbury, Rudge and Triumph, and the latter the Harley-Davidson, are about to go into their new garage in the Lougheed Block.

F. W. Sanguine, Indian, R.-S. and Pope agent, seems to be doing a flourishing business, judging by the number of Indians which buzz around town.

J. D. Ryan, of 617 Seventh avenue E, has closed with the Henderson people.

J. P. Patterson, Box 2388, is representing the American Motor Co., of Brockton, Mass. His 8 h. twin demonstrator is sold and he is now waiting for another.



At Riverview, Chicago.—Kinnie, Chapple, Albright and Matthews.

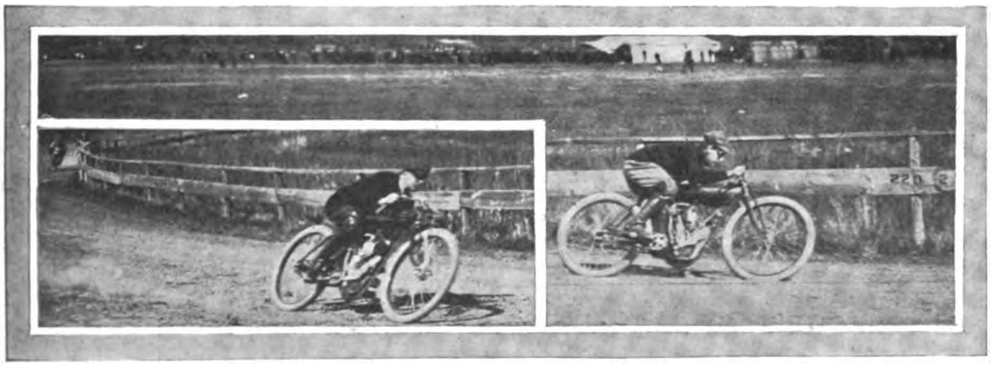
BAKER STILL WINNING

Indianapolis Speedster Adds to Long String of Victories at Evansville and Vincennes Race Meets.

ERWIN G. BAKER, of Indianapolis, has been having things his own way of late in county race meets staged in Indiana towns. On June 7 Baker stopped off at Evansville with his Indian racer, and defeated his old rival Johnny Sink, formerly of Indianapolis, in a match race of five miles on the fair grounds track. It was the first time this season that the pair had got together. Sink rode an Excelsior and gave Baker a hard fight for the prize. Baker finished the five miles in 6:57. Baker also won four other events at Evansville. One was a five-mile open in which he negotiated the distance at his ease in 7:14; another event was a five-mile stock race for which his time was 7:15; a fourth win was in the ten-mile open, which was done in 14:00, and the fifth event was a half-hour race, in which time Baker went 21 miles.

On Sunday, June 2, Baker rode at Vincennes. The Knox County Racing Association held the meet on the half-mile track and Baker won the ten-mile challenge cup race in 13:37. He was trailed by Scanling, of Terre Haute; Borrowman, of Vincennes, and Albright, of Mt. Carmel, Ill., in the order named. In the three-mile obstacle race, in which the riders had to ride a little, drink some "pop" and push their machines, Scanling took first on his Indian, in 5:58, with Albright (Thor) and Borrowman (Indian) following. Baker took the one-mile time trials in 1:15⅗, and made 11½ miles in the 15-minute race.

At Terre Haute on Decoration Day Baker won three events on the half-mile track. He went a mile in 1:12⅖, which was a new track record. He won the five-mile free-for-all in 6:20⅕, and the 25-mile free-for-all in 38:43.



At the River Park Meet in Winnipeg, May 11. The smaller picture shows Jim Cruikshank winning the three-mile race; in the other Bill Pelham is capturing the five-mile event.

SEYMOUR A CHICAGO IDOL

In Spite of Spectacular Fall Californian Keeps Up His Winning Streak on Riverview Saucer.

CHICAGO, June 10.—Ray Seymour, the California whirlwind, had an opportunity this week to display the speed of his eight-valve Indian. He was a consistent winner from his arrival here up to the sweepstakes event on Saturday, June 8, when a collision with Wolters sent them both sliding out of consciousness and apparently out of the races for some time to come. However, Seymour surprised the great crowd last night by appearing and continuing his streak of luck as if nothing had happened. Wolters will be back in the races in a day or two. Summaries:

Saturday night, June 1.—First heat, 9-mile professional race, Seymour, first; Wolters, second; Graves, third; time, 2:01; second heat, Wolters, first; Balke, second; Graves, third; time, 2:06⅕; final, Seymour, first; Wolters, second; Balke, third; time, 2:03.

Nine-mile professional, class B: First heat, Wm. Samuelson, first; Kinnie, second; Armstrong, third; time, 2:09; second heat, finished in same order; time, 2:11⅗; third heat, same order; time, 2:11.

Exhibition race by Seymour, one mile, 40 secs.; previous track record, 40⅕.

Jas. B. Bowler sweepstakes, Seymour, first; Wolters, second; Balke, third; time, 6 miles, 4:10⅘.

Sunday night, June 2.—Nine-mile professional, Class A; first heat, Seymour, Graves, Balke; time, 2:02⅗; second heat, Seymour, Balke, Chapple; time, 2:03; third heat, Seymour, Balke, Chapple; time, 2:06.

Nine miles, Class B, first heat, Kinnie, T. Samuelson, Albright; time, 2:15⅘; second heat, W. Samuelson, Armstrong, Edwards; time, 2:12⅕; third heat, W. Samuelson, Kinnie, Armstrong; time, 2:10⅖.

Match race between Armstrong and T. Samuelson, first and second heats won by Samuelson; time, first, 2 miles, 2:29⅗; second, 1:29⅘.

Elsie Janis sweepstakes, Seymour, first; Balke, second; W. Samuelson, third; time, 4:16⅗.

FOLLOWING THE MOTORCYCLE.

DETROIT, June 8.—A one and one-quarter mile board track, banked 45 degs. for automobile racing, will be constructed within five blocks of the heart of this city, within the next few weeks. A number of motorcycle tracks are banked more steeply than this, but no other circuit for automobiles has such an angle.

RICHMOND COUNTY PROGRAM

Constant Wins After Spill and Cronin and Yeager Ride Close Races At Dongan Hills.

WELL-MATCHED machines in the trade rider and private owner events furnished the main interest at the meet of the Richmond County Motor Racing Association on the Dongan Hills fair ground track on Sunday, June 9. John Cronin and Louis Yeager, on Indian singles, figured in neck-and-neck finishes, Cronin winning the private owner event and riding in second place in the 7-mile race for trade riders. Yeager took second place in the 3-mile and private owner events and third in the 7-mile spin for the tradesters. John U. Constant captured both trade rider races and the final, a free-for-all handicap, without difficulty. In the latter he fell, but remounted and led the field home. Haas and Coughlin, fresh in the pro ranks, contested the 5-mile professional event, the former winning out. Summaries:

Three-mile novice—50 cubic inches: Won by Earl Taylor, 4 R. S.; second, C. H. Groning, 6 Harley-Davidson. Time, 5:01⅕.

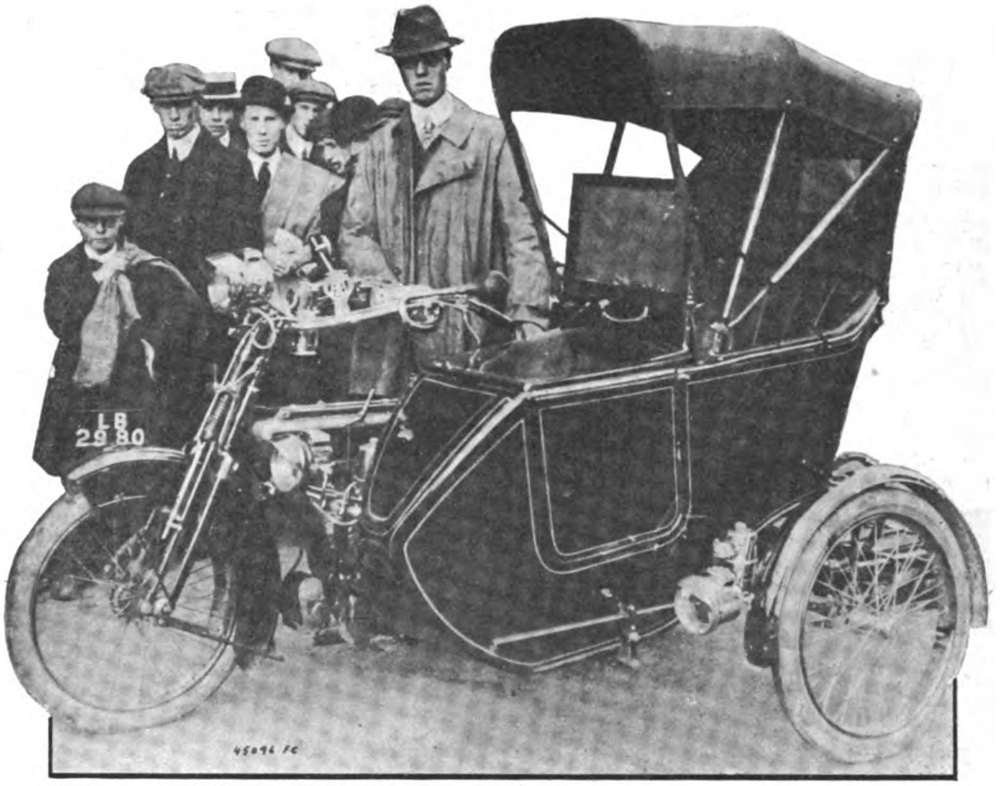
Five miles, private owner, 50 cubic inches: Won by John Cronin, 4 Indian; second, Louis Yeager, 4 Indian; third, C. H. Groning, 6 Harley-Davidson. Time, 8:16⅘.

Three miles, trade riders, 30.50 cubic inches: Won by J. U. Constant, 4 Indian; second, Louis Yeager, 4 Indian; third, John Cronin, 4 Indian. Time, 5:08.

Five miles, professional, 30.50 cubic inches: Won by Geo. Haas, 4 Indian; second, Eugene Coughlin, 4 Indian. Time, 7:32.

Seven miles, trade riders, 30.50 cubic inches: Won by J. U. Constant; second, John Cronin, third, Louis Yeager. Time, 10:32⅘.

Five-mile handicap, free-for-all, 30.50 cubic inches: Won by J. U. Constant (scratch); second, John Cronin (1 minute); third, Louis Yeager (1 minute). Time, 6:49⅗.



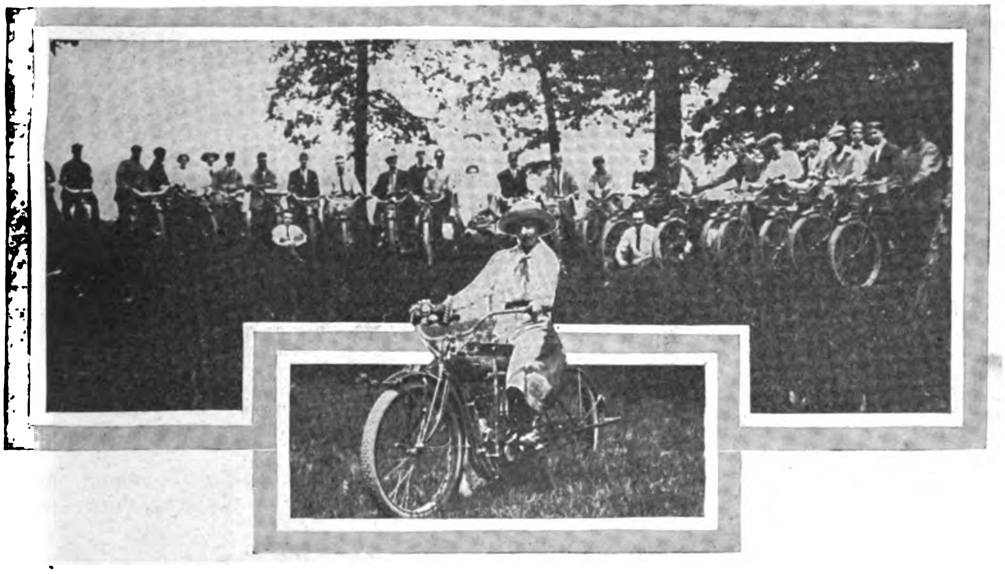
Underwood & Underwood Photograph.

LONDON'S SIDE-CAR HANSOM.

"'ANSOM! Keb, sir? 'Ansom! This way to the original and only motorcycle keb in the whole o' Lunnon. Righto! 'Op in, sir, and we're off."

In such picturesque fashion does one London cabby now seek his fares, and his vehicle is the remarkable combination of side-car and hansom cab shown in the accompanying photograph. The outfit is the only one of its kind in the world, as far as is known, and that it attracts much attention, even in a city where unusual side-car types are plentiful, goes without saying.

It is stated that this motorcycle hansom affords greater comfort than the most luxurious horse-drawn cab and that it has numerous advantages over the taxi-cab from the passenger's viewpoint. It is highly attractive in appearance, as will be inferred from the picture, and its economy in operation is not the least important feature. It is stated this unique and comfortable outfit will open the way for others on similar lines.



SYKES PLAYED HOST.

JOHN SYKES, JR., Indian agent in Trenton, N. J., recently arranged an outing in which many of the riders of the city participated. A highly enjoyable trip was made into the country, and when the squad had worked up a record-breaking appetite Sykes led the way to a satisfying dinner. Mrs. G. A. Frounfelker, who appears in one of the accompanying photographs, is Trenton's first woman rider. She is a full-fledged enthusiast and insists that it would take a mighty fine automobile to dampen her affection for the motor two-wheeler.

RACES AT PORTSMOUTH.

IN connection with a horse-racing meet of the Portsmouth (Ohio) Driving Club a number of motorcycle events were staged.

BRIGHTON TRACK IMPROVED.

BROOKLYN, N. Y.—The old Brighton Beach race track, at Brighton Beach and Ocean Parkway, has recently been put in fine shape. The loose dirt and sand, which heretofore caused numerous spills, has been removed and the roadbed improved, making the track safe to ride upon and quite fast. As the track has been closed since last fall, the announcement that it is now open and in such splendid condition, will be welcomed by the "speed boys" around New York. Last Sunday over 200 motorcyclists visited Coney Island, and only one of the riders took advantage of the fine condition of the track to try out his new machine.

The entrance to the track from the Parkway is locked, which led most of the riders to believe the track was still closed. However, the automobile entrance on Neptune avenue is open and entrance to the track may be obtained through this gate.

BAD GRADE CONQUERED.

IN Miamisburg, Ohio, there is a stony hill which until very recently balked all the efforts of local motorcyclists. David Gaiser, an Emblem rider, finally decided to tackle the grade and succeeded in topping it. His climb was witnessed by a large gathering of motorcycle enthusiasts, and he has now made arrangements to ride it again in an official test. Gaiser mounts a 4 h. Emblem with V-belt drive.

PORTLAND RACE MEET

Berreth, Brant and Maskell Furnish Thrills, the Latter Reeling Off a Mile in Fifty-four Seconds.

PORTLAND, Ore.—Portland motorcycle fans in large numbers turned out on June 2 to witness a series of exciting races at the Country Club. Ed Berreth, on a Harley-Davidson, and Harry Brant, riding a Thor, provided the features of the day. Brant displayed skill on the turns, gaining almost 100 yards at each curve, but this lead was reclaimed by Berreth on the straightaway stretches. Berreth finished the last lap half a length in the lead. The race was over a three-mile course.

Nowotny, driving an Indian, and Brown, guiding a Merkel, had a mix-up on the first lap and both dropped. Brown ran into Nowotny, caught his handlebars in the frame and carried Nowotny's wheel for a quarter of a mile around the track. The fastest time of the day, a mile in 54 seconds, was made by Vern Maskell, riding a 7 h. Indian. He was riding against the individual winners of the other events and was to make eleven miles to their ten. His time for the eleven miles was 10:33⅖.

The best time for the mile by any of the 4 h. machines was made by Ed Berreth, who circled the oval in one minute flat. C. Zob, driving an N. S. U., finished in all races in which he entered. The track was a little soft and the riders had some difficulty in keeping their machines upright. Gus Peppel, driving the Excelsior 6, damaged his machine and suffered cuts about the head. His was the most serious accident of the day. Summary:

Five miles, 4 h. stock machines—Berreth, Harley-Davidson, first; Allen, Pope, second; Brown, Merkel, third. Time, 7:19⅖.

Three miles, 4 h. ported machines—Ed Berreth, Harley-Davidson, first; Harry Brant, Thor, second; Nowotny and R. C. Brown, collided, dropped out. Time, 3:16.

Three miles, one-eighth-mile handicap to Gus Peppel, with 6 h. Excelsior, against Vern Maskell, with 7 h. Indian; Maskell, first. Time, 3:03⅕.

Five miles, 4 h. stripped stock—Chester Soules, Merkel, first; H. G. Gill, Harley-Davidson, second; E. H. Allen, Pope, third. Time, 6:01⅘.

Five miles, 4 h. ported machines.—Brown, Merkel, first; Brant, Thor, second; Nowotny, Indian, third. Time, 5:21⅘.

Five-mile race between A. J. Edwards, driving an E. M. F. 30, and Peppel, 6 h. Excelsior. Peppel, first. Time, 6:16.

Three miles, 4 h. ported machines.—Berreth, Harley-Davidson, first; Nowotny, Indian, second; Brant, Thor, third. Time, 3:22⅕.

Five-mile stripped stock, belt-drive—H. Soules, Merkel, first; Hill, Harley-Davidson, second; Allen, Pope, third. Time, 5:58.

Ten-mile handicap, winners of day's events—Maskell, Indian, first (11 miles); Brown, Merkel, second; Berreth, Harley-Davidson, third. Time, 10:33⅖ for the 11 miles. Officials—Jimmy Dunn and Ed Shockley, judges; C. J. Cook, announcer; Dad Foss, S. G. Noles and E. T. Carswell, timers.

AN HOUR CHAMPIONSHIP.

THE feature of the race meet to be held by the Detroit Motorcycle Dealers' Association at the State fair grounds on June 23 will be a one-hour F. A. M. national championship race, recently awarded to the Detroiters by the Federation officials. The track has shown 49 seconds for the mile and big things are expected when the speedsters go after the hour mark. This event will be backed up by a strong card.

OPENING OF BRIGHTON BOWL.

ANNOUNCEMENT is made that the new Brighton Beach motordrome will be opened with a big meet on Saturday, June 29, and that other programs are about complete for Sunday, June 30, and Wednesday, July 3. Four events will be carded at each meet, and it is the intention of the management to show a line-up of top-notch speedsters. It is stated unofficially that one of the features at the opening meet on June 29 may be a match race between Frank Hart, the amateur champion, and Don Johns. The latter has shown wonderful form in Pacific coast performances, but has not been seen in action as yet in the East.

FRED EURY, riding a Harley-Davidson, won the two open events in the races of the Ft. Recovery M. C., held at Celina, Ohio, on May 30.

WINNIPEG'S OPENING CARD.

FOLLOWING is the program outlined for the meet of the Winnipeg (Manitoba) M. C. to be held July 1 at the Kirkfield track: Private owners' race, 5 miles, 30.50 machines; private owners' race, same distance, 61-cu. in. machines; private owners' race, 5 and 6 h. machines, 5 miles; 5 miles for stripped stock machines, 30.50 class; one-mile time trials; stripped stock 25-mile race for Venice cup, open; stripped stock 10-mile race for Cruikshank cup, 4 h. machines; stripped stock 5-mile race for Crabtree cup, open; 25-mile race for 'Olympia cup, open; stripped stock 10-mile race for 7 h. machines.

The same rider and machine will be permitted to compete in both private owners' and stripped stock events. The riders have been instructed to register their track number with the club secretary and they will retain the same number throughout the season. Announcement has been made that all cups and trophies must be in the hands of the club committee before the races, or the events for which they are to be awarded will not be started. In the time trials each rider will be allowed only one attempt and no one machine may be used by more than two contestants during the tests.

BIG CROWDS CHEER CLEVELAND RACERS

Carslake Loses His Goggles When Near Record Time in Twenty-Five Mile Whirl—Sensational Jockeying Features the Programs

CLEVELAND, Ohio, June 1.—Racing tonight was at its best, hot finishes and fast time being made. Just before the start of the first two-mile heat of the four-cornered match race, while the riders were getting together, Carslake blew a rear tire and Huttinger, who was trailing him, ran over his machine. Carslake rolled over the machine to the bottom of the track, while Huttinger righted his mount and continued without falling, amid cheers from the spectators. Carslake was furnished with another machine for the event. The amateur race went to Henikman in fairly fast time, with Roehl a close second. Hollenback and Klebes made their last appearance on the Cleveland track by trying to break Carslake's record of 43 seconds for a mile, and failed. They went to Philadelphia for the opening of Point Breeze track. Summaries:

First heat of four-cornered matched race, 3 miles: Hollenback (Indian), first; Carslake (Indian), second; Huttinger (Indian), third. Time, 2:15⅖. Final heat: Klebes (Indian), first; Hollenback (Indian), second; Carslake (Indian), third. Time, 2:17⅘.

Five-mile amateur for 7 h. stock machines: Henikman (Indian), first; Roehl (Indian), second; Huntsbery (Merkel), third. Time, 4:49⅕.

Two-mile invitation professional: Standen (Indian), first; Seliga (Indian), second; Hunter (Indian), third. Time, 1:37.

Time trials against Carslake's record of 43 seconds for mile: Hollenback, 45⅕; Klebes, 45⅘.

First heat of 5-mile free-for-all pro., 2-mile heats: Carslake (Indian), first; Gibson (Indian), second; Knapp (Indian), third. Time, 1:34⅕. Second heat, Klebes (Indian), first; Seliga (Indian), second; Hunter (Indian), third. Time, 1:31⅗. Final, Seliga (Indian), first; Hunter (Indian), second; Knapp (Indian), third. Time, 4:00⅖.

SUNDAY evening, June 2.—A large crowd witnessed tonight's racing despite threatening weather. Reckless riding on the part of Standen caused Referee McConnell to severely reprimand the rider for his cutting and seesawing upon the track. Summaries:

First 3-mile heat of four-cornered match race: Carslake (Indian), first; Seliga (Indian), second; Klebes (Indian), third. Time, 2:16 flat. Second heat, Carslake (Indian); Seliga (Indian); Klebes (Indian). Time, 2:25.

Five-mile amateur for 7 h. machines: Roehl (Indian), Huntsbery (Merkel), Henikman (Indian). Time, 4:45⅗.

Two-mile invitation professional: Hunter (Indian), Standen (Indian), Gibson (Indian). Time, 1:34⅗.

Time trial against Carslake's record of 43 seconds: Standen, 44⅕.

First 2-mile heat of 5-mile free-for-all professional: Carslake (Indian), Knapp (Indian), Gibson (Indian). Time, 1:33⅕. Second heat, Standen (Indian), Hunter (Indian), Seliga (Indian). Time, 1:36. Final, Carslake (Indian), Standen (Indian), Knapp (Indian). Time, 3:49.

WEDNESDAY evening, June 5.—Another record-breaking crowd filled the Luna saucer when R. S. McConnell called the start of a fine line-up of racing tonight. A 25-mile race, the feature of the program, was captured by Carslake in the fast time of 17:15⅖. He would have made faster time but for the fact that he lost his goggles during the nineteenth mile, and near the end he had to shut down on account of not being able to see. A hundred laps around the quarter-mile saucer is a nerve wrecking grind, and Carslake was nearly all in when he was picked from his machine. Huttinger, who looked to have second place safely under his hat, was unfortunate in the eighteenth mile in dropping his countershaft, thus putting him out of the running. Standen blew a tire early in the fray. In the 5-mile amateur, Huntsbery broke the track amateur record by 5⅖ seconds, his time being 4:40⅖.

The three-cornered professional match race between Huttinger, Knapp and Gibson, was won by Knapp in straight heats.

ENGLISH NOTES

BY BRITISHER

The manner in which English manufacturers have solved the starting problem; the decompressor—Ingenious accommodations for the feet—Unofficial records no longer taken seriously in England.

NOTHING has so retarded the progress of motorcycling in the favor of the general public as exhibitions of difficult starting. They have grown accustomed to see a grimy, sweating individual in heavy overalls frenziedly shoving a two-hundred-weight machine up a slight grade, rolling from side to side in his efforts to run and balance at the same time. Sometimes no result rewards these perspiring exertions; sometimes after a sensational gallop of twenty yards there is a huge bang in the silencer, the machine balks suddenly, and the rider heartily ejaculates—(unsuitable matter deleted.—Ed.). When the machine does respond by bursting into song, the whole street is electrified by the rider's efforts to reach the saddle. Ninety-nine times out of a hundred his foot finds the pedal, and he comes down somewhere about the saddle, and after preliminary wobbles roars gleefully off. The hundredth time he misses the pedal, and starts over again. On rare occasions he goes down in the mud on top of the machine, which seizes the opportunity to get the first wallop and pummel him; and once in a blue moon he lets go of the machine, which proceeds solus down the street until it collides with a lamp or a cop. These fierce joys were all in the game to the old brigade; but if we put ourselves in the pants of some staid old citizen with a corporation and a family, it is easy to guess how such spectacles have militated against the progress of motorcyling in certain sections of the community.

Free Engine to the Rescue.

The invention of the free engine was the first determined attempt to bring in these millions of potential customers. We told them that these starting troubles were due to engines which had lapsed into bad tune, because a duffer was the owner, and that only a novice could mull the jump-mount; and we offered them free engine clutches and starting gear, so that they could sit cozily in the saddle, slide in the friction cone, and move off like a ten thousand dollar automobile. We have since begun to learn that a free engine doesn't make a certain start if the owner lets his propulsion unit get dead out of tune; and that a free engine with single gear does not ensure a safe start on stiffish grades. However, the British trade is now producing a new fitment, guaranteed to make an engine start easily provided nothing is broken, that some sort of a spark occurs in the cylinder, and the carbureter is providing a mixture that by any stretch of the word can be termed explosive.

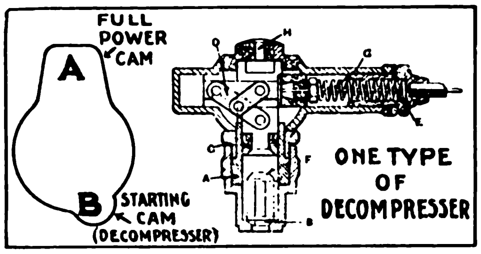
The Decompressor.

Its name, "decompressor," is the sole genuine objection to the device. It is based on two principles:

1. You need a smaller charge, or a less highly compressed charge of explosive vapor to start the engine than is required to propel the machine plus its rider.
2. If you reduce the compression by a good deal, the engine may very easily be revolved.

Consequently the decompressor allows a *portion* of the normal working charge to escape on the compression stroke. Two main plans of securing this end are in use in Great Britain at present. One is applied to engines specially designed for this kind of starting; the other may be applied to any existing engine which has a mechanical inlet valve of the side-by-side type.

Let us examine the permanent fitment first. The exhaust cam is duplex, as shown in the drawing. The big hump is the normal cam, operating the valve when full power is wanted; the tiny hump is the decompressor cam. When the engine is working under load, this cam revolves idly—it hits no rocker lever. But by operating a pedal, placed adjacent to the footrest, you can force down a rocker lever onto this cam, which will then open the exhaust valve a trifle on the compression stroke, allow part of the inhaled charge to escape via the exhaust valve, and so reduce the compression. What remains of the charge is, however, sufficient to start and run the engine under a very light load.



An Easily Fitted Type.

The other fitting is screwed into sparking plug hole, and may be attached to any engine possessing two valve plugs, by substituting a drilled cap for a solid cap. It is operated from the handlebar by a Bowden wire and handlebar lever. The toggle mechanism locks the movable valve down on its seat normally, so that the cap functions as a solid valve plug. When the wire is operated to lift the movable seating, the compression of the engine opens the lower valve on each compression stroke, and allows part of the charge to leak out into the atmosphere; what remains is sufficient to start the engine, and even to propel machine and rider at a very slow pace on level ground.

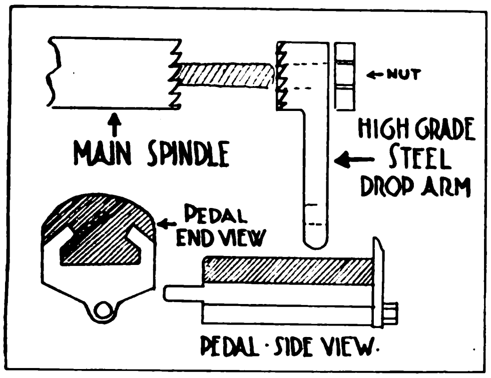
Now consider the decompressor in action. I have a 3½ h. racing machine fitted with a permanent decompressor, controlled by a foot pedal. I put the decompressor in action, set the ordinary control levers in the ordinary way, and walk alongside the machine *at not more than two miles per hour,* without even troubling to lift the exhaust. A whuffling sound immediately salutes my ears, but the machine does not gather pace; it is firing regularly at 2 m. p. h. on partial compression. If the road be level, I step leisurely on board, and kick the pedal, simultaneously opening the air lever, and we move off at 10 m. p. h. (opening the air lever with the decompressor in action would stop the machine, as the suck on partial compression is not enough to draw gasoline out of the jet if the air holes are open). To get a start uphill, more trickery is needed; I usually give full throttle and full spark, and jump aboard in such fashion that my toe cuts out the decompressor as soon as my body hits the saddle.

Or take another machine in my stud; this has no pedaling gear, and a separately spoked rear belt-drum, which can be freed from the hub. As the machine stands in the road, if I pull this belt-drum up three inches, the engine starts. Or again; last week I was riding a fiery untamed road racer of 8 h., geared 3 to 1, a perfect brute to start on full compression, which often balked even on falling grades. With a decompressor I can walk this roadburner round and round the tiny grass plat at the back of my house. The British trade will push the decompressor for all it's worth this fall, and the result will be evident in a great influx of new and elderly customers, who have previously shied at the starting troubles so uniformly associated with motorcycles in the public mind.

Accommodation for the Feet.

We have four different plans of disposing of the rider's feet on our machines. The two worst are plain footboards and a single pair of fixed rests. Footboards are bad, because they always bear the brunt of a fall, and if they are sprung and padded, they are necessarily expensive to repair or replace; also because it is difficult to get any resistance with the whole of the sole of the foot, and so the rider's feet usually bobble up and down on them. A single pair of rests is bad, because it allows no variation of position.

One good compromise adopted by the Rudge designer is to fit ordinary pedaling cranks and pedals, modified by a cute device on the crank axle, which enables the left-side crank to be kicked down to assume a position parallel and similar to that of the right-side crank, and at the same time to be instantaneously released for propulsive or starting purposes by touching a catch. This device is very attractive on paper, but in use has its drawbacks; for one thing, ordinary pedals are the flimsiest things in the world, owing to their slender spindles, and always suffer badly in a tumble; for another, this plan results in two swinging foot supports, and there is no chance for that braced position which helps the rider in his steering in emergencies or in speed work. Probably the best all-round plan is that now standard on our road racer machines, which consists of two pairs of stout footrests, one pair well aft, the other well forward. These afford three changes of position (just think that out), and on the best machines no material damage can result from a fall.



Here is a description of my own set. The main spindles are made of heavy unbreakable, unbendable steel, rigidly mounted on the main frame. The ends of the spindle are formed in the shape of a toothed face from which a screw-threaded bolt protrudes. On these I slip four-inch drop arms of vanadium steel, which have a toothed face on their upper ends. These toothed faces can be notched into the dittos on the main spindles at any angle I please, so enabling me to adjust my position to suit my leg length. The lower ends of the drop-arms carry short horizontal spindles, each bearing a broad rubber or leather pad, which is a genuine support to the instep, and armed with an end plate, which prevents my boot slipping off in speed work. The rubbers or leathers slide in grooves, and are easily replaced when worn. The drop-arms are the only bendable part of the whole affair, and are easily straightened cold if a fall bends them.

Unofficial Records.

During the past three years there has been a perfect glut of unofficial records, usually undertaken to advertise some rider or some machine, and very sketchily authenticated. Some have been speed records between one town and another, for choice from Lands End to John o' Groat's; others have been time events, and have aimed at compressing the maximum distance of riding into six days. The Auto-Cycle Union has now forbidden these attempts, and will impose heavy penalties on any rider, timekeeper, manufacturer or other individual concerned in any future "records."

A press report of the last one shows how these record rides are sinking into contempt: "Mr. W. J. Clarke, of Horncastle, informs us that he has ridden 3,008 miles in six consecutive days round the following circuit (routes given). He tells us that he used a Win-Precision machine with Villiers free engine, Kempshall tires, Druid forks, Eisemann magneto, Oleo plugs, Senspray carbureter, Garner exhaust whistle, Xlall pan seat, Parson's tire repair outfit, Stanley rubber belt, Cox-Walker electric light, Pratt's gasoline, Castrol oil, Bowden control, Burberry overalls, Pigott boots, Chappell goggles, and lived principally on Oxo, and Blakey's malted oats." The editor remarks that Mr. Clarke omitted to name the maker of his socks, hat, cigarettes, toothbrush and underclothing.

There is some talk of forming a motorcycling Roads Records Association, parallel to the pushbike organization, which for many years past has authenticated all road records on pushbikes. There are undoubtedly a few road records which are of real sporting interest, and worth persevering with; and the making of alleged records without proper supervision casts grave aspersions on such rides as are genuine and meritorious. Some of the sportsmen who have broken end to end records under reliable timing are exceedingly indignant at the aspersions cast on their achievements by irregular attempts. Without doubt much heartburning would have been saved if at an earlier stage in our history we had appointed a sporting body to supervise record rides; and perhaps the tip may save American riders future trouble.

The Edinburgh Run.

I REMEMBER the start of the first London to Edinburgh run in 1902, when the wiseacres of the trade were laying 5 to 2 against one motorcycle per four entrants traveling the 400 miles of flat good road from London to Edinburgh in 24 hours. Last week 166 cars and motorcycles started, and 141 made the ride in 22 hours, inclusive of leisurely stops for food at four separate controls. The promoting club records a heavy loss on the event every year, even with a guinea entry fee, and the provision of 141 gold medals, however thin, is likely to cause a revision of the prize list. I only allude to the run as a matter of club policy. Here is a soft run over very tame roads. The scenery is poor, there are no hills, and the speed schedule is a beggarly 20 miles an hour; yet 200 entries and 166 starters are procured! What's the secret? The medal has a certain reputation because the trial started in the early days of the sport. It is a very sociable event, because it is limited to the members of one club. It is a very soft ride, and so appeals to the motoring novice who wants to win his spurs in competition work. Club secretaries, don't leave out the timid novice in framing your program. He values an odd medal per season more than the boys whose bureaus are littered with gold cups and a live club caters for all classes. The victors include 90 singles, 34 sidecars, and 12 cyclecars (three and four wheeled motorettes of about 8 h., listed at less than 500 dollars).

Will Motorbikes Fly?

ENGLISH engineers have apparently settled down to the conviction that the human biped cannot by muscular means generate enough horsepower to propel himself along above ground. The Frenchmen are less pessimistic, and their Aero Club has recently offered a prize of 10,000 francs for competition among small aeroplanes, propelled solely by pedaling gear of the cycle type. The event has secured 200 entrants, though it is very dubious at the moment whether any of them will attain actual flight. Some of them are practising at Juvisy, and we were all thrilled this week by headlines announcing that one of the aspirants had actually accomplished flight on his "aviette," as the Parisians term the winged cycles. Detailed reports simmered down to a "flight" of 3 ft. 6 in., at a height of 8 in. from the ground! The wiseacres are chuckling and asking "Who said hops?" But we ought perhaps to remember that the 50 h. aeroplane began with tiny hops, and possibly this jump is pregnant with possibilities. One thing is obvious—if the winged cycle, relying on one man power, ever flies, the 7 h. motorcycle should evolve into a regular bluebottle buzzer. Perhaps our grandsons will simply unfurl the wings of their motorcycles when they reach a patch of deep sand, or a hairpin bend, or deep mire. These winged motorbikes have great notions attached them. Imagine that you take out your second-best girl in a sidecar, and meet your Sunday girl; or that a cop is trying to decipher your registration number! A short flight would get the motorcyclist out of many an embroglio.

A BROAD-GAUGE CAMPAIGN.

ONE of the most generous and commendable plans recently brought to light for boosting the cause of motorcycles in general is being put into effect by the Melrose Motorcycle Agency, in Detroit, Mich. This firm offers the large show window at its garage for the use of any dealer in the vicinity who may wish to display the machine he represents for a period of a week. No lines are drawn, and any agent in the field may take advantage of the opportunity. Not only will the machine be displayed, but the Melrose agency will keep a supply of the dealer's literature on hand during the time that his machine occupies the window. Five agents have already spoken for space and the plan promises well. The Melrose firm has the Henderson agency in Detroit.

H. Mason, Jr., of the Melrose agency, recently referred to the display plan as follows: "We believe that by assisting all the agents on a broad scale we will be waging an educational campaign. Our desire is to have all makes of motorcycles brought prominently before the public, and when a general demand is created we will take our chances with the others in making sales. We feel that we have a fine offering in the Henderson, and while business is lively now we know that it will be much better as the people become acquainted with the advantages of the single-tracker. To foster this acquaintance we are willing to give all the boys a helping hand."

RAN INTO A TRAP.

THE weather man was good enough to allow about twenty members of the Toronto Motorcycle Club to get away for a little informal run to Hamilton on Sunday, May 26, and all would have passed off very enjoyably if the county police had not also made a few arrangements of their own. The "joy-riders" ran into a trap and a few days later practically the whole party were hailed into the Country Court where they were summarily tried, found guilty, fined and lectured in the usual way.

COTTRELL'S UPKEEP RECORD

Los Angeles Rider Shows That His General Outlay Is Less Than Three-Quarters of a Cent Per Mile.

CHARLES M. COTTRELL, a Los Angeles motorcycle enthusiast who has operated a Reading Standard single for the last ten months, has prepared an unusually interesting expense table in which he proves that his upkeep expenditures while riding 5,400 miles averaged only three-quarters of a cent per mile. Mr. Cottrell travels over country roads throughout the Los Angeles district in the course of his business, and is enthusiastic over the saving he has brought about through the use of the motorcycle. He is satisfied that he can average 110 miles per gallon of gasoline.

As a rule the motorcyclist who undertakes to prepare an upkeep account overlooks many of the smaller items of expense, but Cottrell has not erred in this direction and his table is doubly valuable because of its completeness. His actual outlay on the machine for ten months was $38.85, slightly less than the rate of three-quarters of a cent a mile he refers to. His schedule is in full as follows:

Accessories.

Leggins	$2.00	
Gloves	2.25	
Pump connections (two)	.20	$4.45

Running Expenses.

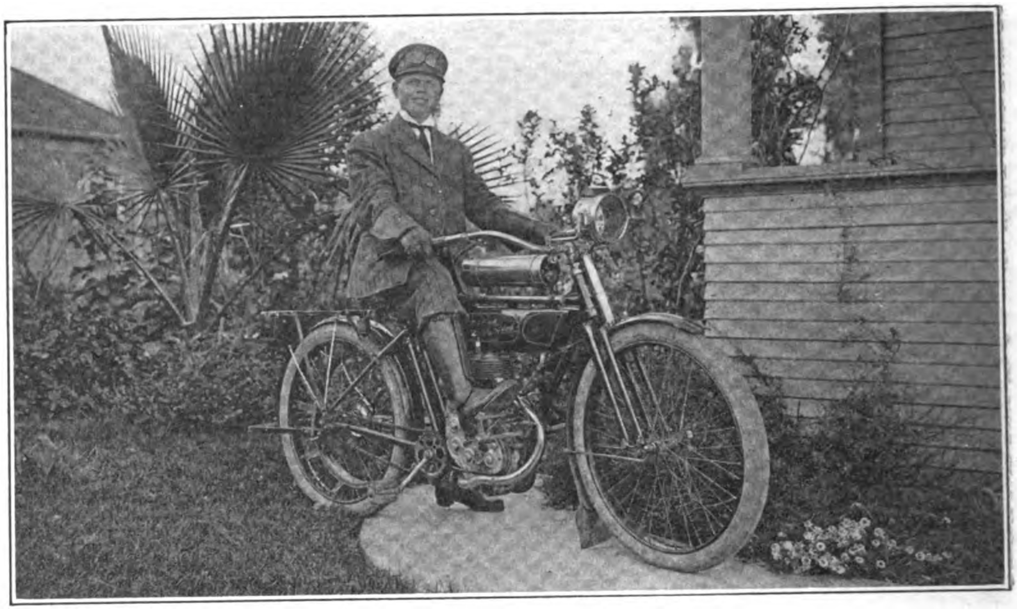
Gasoline (49 gals.)	$9.30	
Cylinder oil	5.85	
Belt dressing	.25	
Belt oil	.25	
"Three in one" oil	.70	
Hard oil	.10	
Resin and varnish for brake	.15	
Prest-O-Lite charge	.60	17.20

Repairs.

Lagging (3 times)	$1.85	
Puncture	.50	
Tape for horn	.05	
Patches	.15	
Lagging screws	.10	
Time replacing mudguard	1.50	
Cable anchored	.10	
Extra link	.10	
Belt shortened	1.00	
New tire	11.15	
New cable	.50	
Crank-hanger nut	.20	17.20
Total		$38.85

SEEK MORE REVENUE.

IN order to get all the revenue possible from the State's motor car and motorcycle manufacturing plants without damaging the industry, a special committee of the Pennsylvania Legislature is addressing inquiries to the manufacturers asking for information to guide the lawmakers in a revision of the State's revenue laws. It is desired to revise not only the laws, but the system of administration of tax collection, so as to increase the income. Some of the manufacturers believe a tax on gross revenue would best fit the case, while others, objecting to a statement of earnings, favor the more simple method of an assessment of the real estate and the personal property, and a definite percentage of tax thereon.



C. M. Cottrell, of Los Angeles, Whose Up-Keep Average is Only Three-Quarters of a Cent a Mile.

TANDEM RECORD LOWERED.

CHARLES FULLER GATES, F. A. M. referee on the Pacific coast, writes to announce that the professional and amateur record-breaking trials recently made on the Playa del Rey saucer by Ray Seymour and Lon Claflin on an Indian machine were under his direct supervision and that every official precaution was taken. He also states that Seymour and Percy H. Powers, using a stock Indian belonging to E. W. Hoag, of Los Angeles, lowered the tandem record from 55⅖ seconds for the mile to 51⅖.

FOR FORESTRY WORKERS.

PHILADELPHIA, PA.—The State Forestry Commission has recently purchased from the Reading Standard Co., of Reading, fifty twin motorcycles for use in the mountainous districts of Pennsylvania.

VERY BUSINESSLIKE.

These Seattle Girls Look the Part, and Are Enthusiasts. Photograph Sent in by C. F. Keith.

LEADERS ARE NEEDED.

"IT is hoped," writes the Bangor Oracle, "that proprietors of all registered shops within striking distance of the routes of the four national tours to the F. A. M. assembly will take it upon themselves to lead a goodly number of local riders to the convention city. Ample time is allowed them in which to confer with the motorcyclists of their towns so that jolly parties may be made up. Then, too, many local riders who otherwise would not attend would be glad to have some leading spirit make the necessary arrangements and conduct the party. The local dealer or repairer is, logically, the one who should do this."

GALION RIDERS ORGANIZE.

MOTORCYCLISTS of Galion, Ohio, formed a club on May 31 and elected the following officers: C. C. Finley, president; H. E. Freese, vice-president; A. G. Flannery, secretary-treasurer; A. D. Diamond, captain; James Gill, lieutenant. The club held a social run to Lewistown on June 9, and other trips will be made to Cedar Point on June 23 and to Columbus on July 4. The squad will also attend the F. A. M. assembly in Columbus.

WANT NEW RULING.

THE Chicago Motorcycle Club, together with the automobile organizations in that city, is backing a movement to obtain legislation providing for all motor vehicles to halt when approaching a street car which has stopped to permit passengers to alight or get aboard.

GAVE DOUBLE SERVICE.

THAT the motorcycle covers twice the territory of a bicycle is the experience of a large drug company in Texarkana, Ark., which found that one motorcyclist could do the work of two bicycle messengers. Incidentally the business was increased and deliveries made more promptly.

SAN JOSE EDICT.

CHIEF OF POLICE KIDDER, of San Jose, Cal., has announced that any motorcyclist who uses a muffler cut-out on the city streets will land in jail, and "Sunny" Jim Margeson, of the motor squad, is now prepared to make an example of the first offender.

IN THE SANTA CLARA VALLEY.

SAN JOSE, Cal.—With hundreds of miles of country roads, many of them unsurpassed in the State; with scores of delightful spots within easy reach of any part of the valley in a few hours' ride, almost any day in the year, the Santa Clara Valley is fast coming to the front as a Mecca for motorcyclists. There has been a strong movement here away from the smaller automobile and a consequent turning to the motor two-wheeler.

Just a year ago the San Jose Motorcycle Club was formed with C. D. Reade as its head, and it immediately became popular. Its membership jumped from 25 to 50 and it now boasts a membership of 100. Scarcely a Sunday or a holiday passes that from 25 to 40 machines, many of them carrying two passengers, do not make a run to one of the many points of interest nearby. It may be to Santa Cruz, the seaside resort less than 40 miles from San Jose; it may be to Half Moon Bay, another seaside spot, justly popular; or it may be to the famous Lick Observatory, 26 miles distant, where is situated upon the mountains, 4,200 feet above sea level, one of the largest telescopes in the world. No matter where it leads, however, the route is over an excellent macadam or oiled road.

With hill-climbs, impromptu races, where conditions will allow; with basket luncheons served under the trees or by some swift-flowing stream, and with a good proportion of the parties made up of ladies, it is no wonder that motorcycling in the Santa Clara Valley is rapidly growing popular.

RIVAL CLUBS HOLD MEETS.

THE Santa Cruz Cyclery, which handles the Excelsior and Indian motorcycles at Santa Cruz, have sold out all the machines in stock and are awaiting shipments. Santa Cruz, Watsonville and San Jose are all live motorcycle towns. Each has a well-established club and anything pertaining to motorcycles seems to interest the general public. Great rivalry exists between riders of Watsonville and Santa Cruz, the cities being about twenty miles apart. At Capitola there is a half-mile dirt track and almost every Sunday stirring races are held between the motorcyclists of the two cities. The interest is as keen as it was during the bicycle days and great crowds attend the events.

CENTRAL CALIFORNIA MEET.

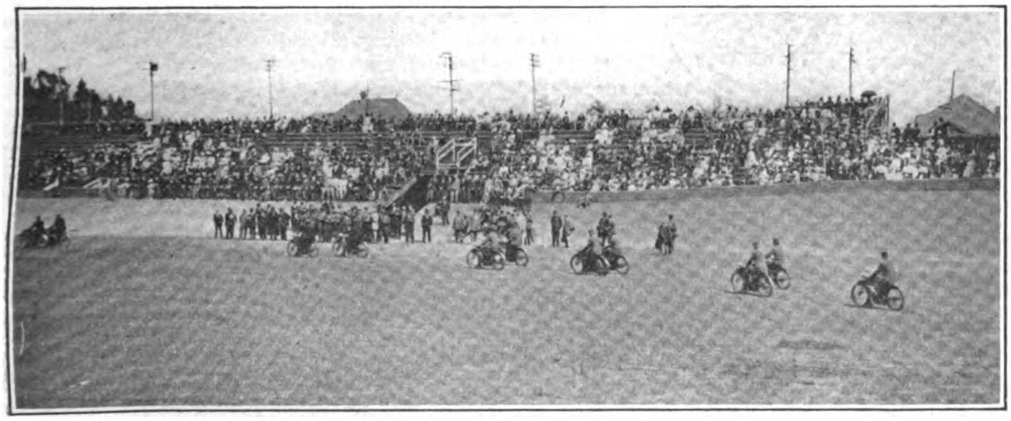
SAN JOSE, Cal.—The biggest motorcycle event of the year for this district is being planned for this city on June 23, when not less than 3,000 riders are expected to gather here. It will be the annual meet of the motorcycle clubs of Central California, and races will be run on the track of the San Jose Driving Park, upon which Disbrow recently broke three world's dirt track auto records. All of the larger Central California Clubs will compete. San Francisco, Oakland, Alameda, Stockton, Sacramento and Fresno each will send a team to compete with San Jose and there is a strong possibility that there will be some record-smashing before the event comes to a close. The local club has planned a barbecue to be served at noon on the day of the races, and has arranged a big dance to close the day's festivities.

BICYCLE MEN INTERESTED.

A STATEMENT appearing in the *Daily Consular and Trade Reports* is to the effect that many manufacturers of bicycles in England have taken up the production of motorcycles and accessories during the last year. It is pointed out that there is little competition from outside sources in this field in view of the fact that the motorcycles produced in the United Kingdom are superior to most of those built on the continent. While there has been a steady increase in the demand for American-built machines in the British Isles it has not developed sufficiently to cause the home manufacturer serious worry, and with the bicycle men turning to the production of motorcycles there are indications that the Britisher will be able to turn out practically all his own power two-wheelers for some time to come.

WILLIAM L. PICKETT, a motorcycle policeman at Beverly, Mass., has the distinction of patrolling the district in which President Taft's summer home is located, and it goes without saying that the motorcop keeps a sharp eye on the residence of the chief executive.

THE newly organized Atlanta, Ga., motorcycle club is supporting an ordinance providing that all classes of vehicles be equipped with headlights.



MOTOR-COPS ON REVIEW.

WHEN the annual inspection of the Los Angeles (Cal.) police department was held recently one of the most striking features of the program was the exhibition given by the motorcycle officers. They performed a series of evolutions before the reviewing stand with a precision which demonstrated their perfect control of the mounts, and the city officials and other spectators were deeply impressed. The members of the motorcycle squad wear a neat khaki uniform, with a cap of the same material, and it is admitted that they are a credit to the force from a viewpoint of appearance as well as of general service. The accompanying photograph shows the motorcops passing the official stand in review.

BROOKLYN'S FAIR RIDER

Miss Sophia Heyen Mounts a Merkel Twin and Does not Balk at Making Long Road Jaunts.

BROOKLYN, N. Y.—Miss Sophia Bertha Heyen, 14 years of age, of 88 Wyona street, whose photograph appears herewith, has the distinction of being the only fair "solo" rider on Long Island. Miss Heyen was an ardent bicycle rider until she recently took a trip on the tandem attachment of her brother's motorcycle. She was so well pleased with her experience that she immediately decided to have a machine of her own. She is now the proud possessor of a new 1912 6 h. twin Flying Merkel equipped with Eclipse free engine, V-belt and 2¼-inch tires.

Miss Heyen has perfect confidence in her machine as evinced by the fact that she rides it daily to and from the high school she attends, and at "week ends" it is a customary sight to see her taking extended trips through the surrounding country. Miss Heyen does not lack escorts, as the boys are always to be found ready to accompany her on the pleasure jaunts. It is needless to state that when application is made for honorary membership for her in the local F. A. M. Club, she will be gladly welcomed.

POINTERS FROM A COP.

AFTER a tour of some of the largest cities in the country, P. E. Thomas, a Dayton, Ohio, policeman, recently told the Springfield department that the motorcycle is the best modern way of increasing efficiency among patrolmen.

THE LaPorte, Ind., police department has its first motorcycle officer. Verne Fenton, an experienced motorcyclist, was appointed by Chief Meinke.

THE "BIG FOUR" OF THE AUGUSTA CLUB

President Chester Story.

Vice-President E. W. Watson.

Secretary Hugh Saxon.

Captain L. H. Fourcher.

EASTON CLUB BOOMING.

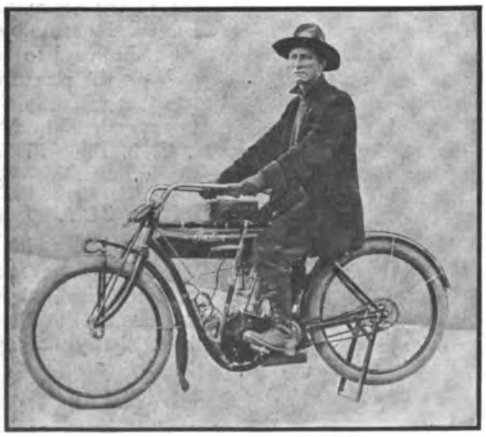
REPORTS from Easton, Pa., are to the effect that the local club is enjoying a boom, and the riders have entered upon the present season with remarkable enthusiasm. Hoffman and Boyer, two veteran motorcyclists of the city, are leaders in the club affairs. Twenty-four members have been lined up so far and there are indications that at least ten more will be taken in before August 1. The first outing of the season was held May 19, to Milford, Pa., sixteen of the boys participating. On June 9 a number of the club riders enjoyed a jaunt to Newark, N. J., where they visited the headquarters of the New Jersey Motorcycle Club.

WILMINGTON CLUB'S OUTING.

FOURTEEN members of the newly formed Wilmington (Del.) Motorcycle Club escaped the heat of the city on Sunday, June 2, by riding to Augustine Pier, where they remained several hours enjoying the cool breezes. On their trip the members passed through Newark, Cooch's Bridge, St. Georges and Kirkwood.

LOW UPKEEP RECORD.

CHESTER A. SCROGGS, of Sacramento. Cal., one of the State fish and game commissioners, has demonstrated the usefulness of the power two-wheeler to such good effect in connection with his duties that the officials have placed an order for seven more machines. Scroggs has covered 4,000 miles over rough mountain roads on the machine shown in the photograph, and has paid only $2.25 for repairs.



AUGUSTA CLUB'S PROGRESS

Georgia Squad Has Jumped from Small Charter List to Membership of Eighty-five—The Officers.

ONE of the most active and successful clubs in Georgia is the Augusta M. C., which has boosted its membership to 85 riders from a charter list of 17. Of late several social runs have been held and in each instance a large attendance was obtained. The club made its debut last New Year's day at a race meet which was held for the purpose of raising funds for a permanent organization, and since that time its progress has been rapid. The organization was perfected on February 11. Chester Story was elected as the first president and his associates are E. W. Watson, vice-president; Hugh Saxon, secretary-treasurer; L. H. Fourcher, captain.

No time was lost in arranging for club quarters and the squad now occupies comfortable rooms in the Irish-American bank building, which is so conveniently located that the boys find it easy to drop in at headquarters almost every evening. The officers are all consistent workers who believe that a club, to be worthy of a place in the F. A. M. ranks, should always be up and doing. Acting on this policy they are planning several outings and considering a race meet or two for June and July.

Augusta Club's Emblem.

CHESAPEAKE 12-HOUR RUN.

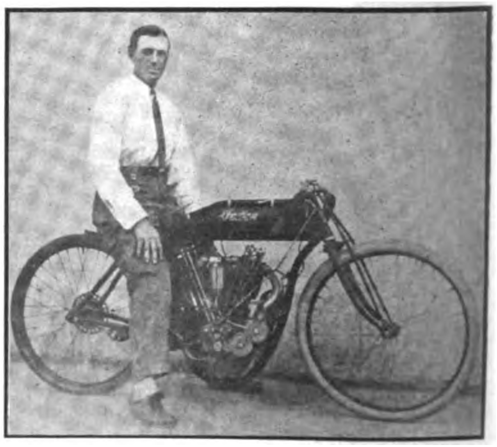
ENTRY blanks are out for the 12-hour endurance run to be held on June 30 by the Chesapeake M. C., of Baltimore, Md., and there are indications that a big squad of riders will start over the 200-mile course, to Lancaster, Pa., and return. Ten prizes have been offered, all of practical value to motorcyclists, and the run officials look forward to a desperate contest for them.

HIS HAT NOT "IN THE RING."

CHAIRMAN Estabrook has found time in the rush of summer organization work—heavier now by far than it has ever been in the past—to announce modestly that he is not a possible candidate for F. A. M. presidential honors. The Bangor enthusiast has been mentioned in connection with the nomination, but he is so completely wrapped up in the multifarious and exacting duties of his present office that he would not feel justified in making a change. Besides, no official position would allow him to leave the marks of his industry and earnestness upon the history of the Federation to better effect than the one he now occupies, so that from every angle his present decision evidences the broad-gauge philosophy which has featured his work in the past.

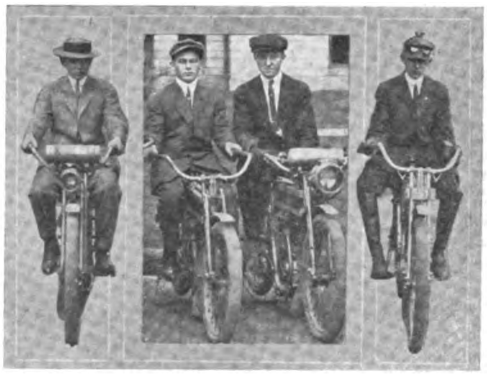
SIDNEY CLUB'S BANQUET.

ABOUT twenty-five motorcyclists of Sidney, Ohio, and vicinity recently enjoyed a banquet given under the auspices of the Sidney M. C. Among those present were the following: Hon. Chas. Wyman, J. B. Swain, J. L. Adler, Paul Monroe, Elmer Unum, Frank Tebbe, James Rostron, Howard Brautigam, Jesse Laughlin, Homer Monroe, Frank Unum, Leo Peters, Alfred Yarber, Ormond Blake, Burte Foote, Burt McDaniel, Clifford Alton, Robert Smith, Frank Miller, Thomas Schmidt, Jean Carothers and Kerr Fulton.



Lon Claflin, Who Recently Established a Row of New Amateur Records.

CHAMPAIGN (ILL.) CLUB A LIVE ONE



IN two of the accompanying photographic lay-outs the artist has shown some of the members of the Champaign (Ill.) Motorcycle Club as they might appear from the viewpoint of an aeroplanist. In the third set of pictures he returns to terra firma. Reading from top to bottom at the left the riders are Jones, Folsom, Rusher, McMein, Hart, Hansen, Pastel, Shaw, Klockner and Dick. At the right, from top to bottom, are Applegate, Ellis, Kirkwood, Kilby, Benst, Hoag, McGaughey and Wilson. In the center lay-out, reading from left to right, are George Reid, secretary-treasurer; O. V. Seed, president; F. W. Baum, road captain, and J. Bohn. Ellis is vice-president, and Dick first lieutenant. Hansen and Baum started on June 5 for a European tour by motorcycle.

CLOSE CALL FOR RIDER LOST IN DESERT

Los Angeles Motorcyclist Was Unconscious in Waste of Burning Sand When Found by Automobile Scout Party.

A. E. WEEKS, a motorcyclist of Los Angeles, Cal., tells a remarkable story of his recent attempt to follow the route of the proposed National Highway from Los Angeles to Phoenix, Ariz., across the desert. Near Middle Wells he struck sand which prevented him from riding, and he was compelled to push his machine. Overcome by exhaustion and thirst a short time later, he collapsed, and but for the timely arrival of an automobile party, which was making the same trip as an experiment, he would undoubtedly have perished in the desert. His story of the trip and his rescue follows:

"I left Los Angeles Sunday, May 12, on a 3 h. 1909 Curtiss motorcycle for Phoenix, and found the road good as far as Whitewater ranch; from there I had to ride on the Southern Pacific track to within two miles of Indio, where the road is good to Mecca; beyond Mecca I found the road impassable until I reached Salton Sea. Three miles up the tracks I rode the firm wet sand to Salton, then had to go back to the track until about half way between Imperial Junction and Glamis, where the road was good into Glamis. From Glamis to Yuma is railroad all the way, although I could have taken the road from Ogilby, it meant twenty extra miles. I arrived at Yuma at 3:30 p. m., Saturday, and helped to welcome the big car the Los Angeles *Times* is sending across the continent.

"I left Yuma Sunday morning just ahead of the *Times* car, and continued ahead of them to Dome, where the car stopped to boost the National Highway. I sped on to Castle Dome and obtained a good lead; made no stop at Castle Dome, intending to keep ahead of the *Times* car as far as possible. Found the road good across the mesa, but many by-roads without signs, that were confusing. However, I got past Deep Well and Middle Wells, although I was quite thirsty, I thought I could stand it until I reached Palomas, as I was making the best time since leaving Los Angeles. When about ten miles from Middle Wells, I struck sand that I couldn't ride, and started to push my motorcycle through it. The hot sun and exertion got the best of me, and the next thing I remember distinctly, I was in the *Times* car and Mr. Smith was giving me water, a few drops at a time. When I was myself again I started for Phoenix.

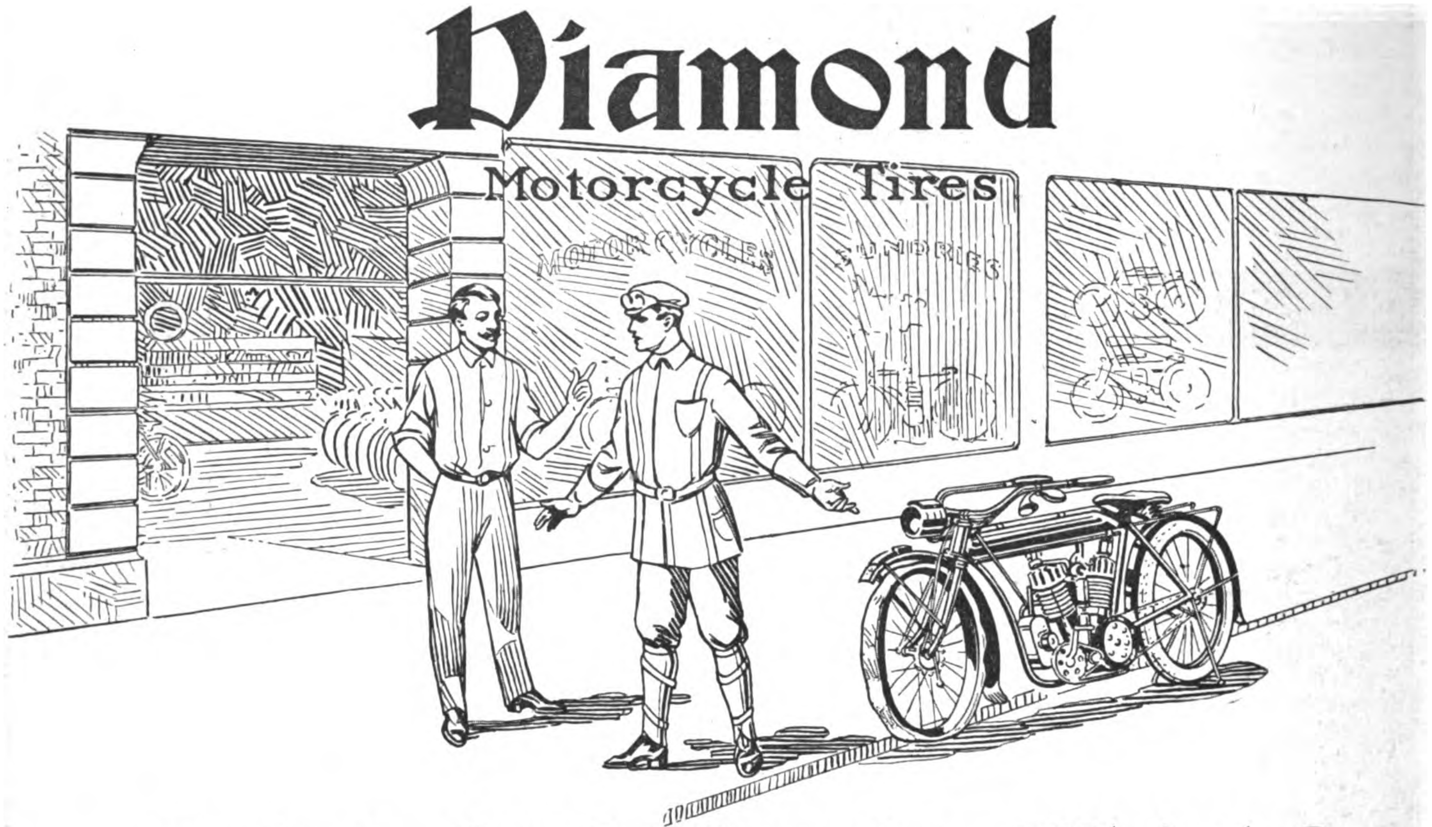
"Words cannot express my gratitude to Mr. Smith and that good old *Times* special car. When the good work they are starting is finished, motorcyclists can cross the desert, but until then they take a desperate chance with their lives. I consider that I was saved by pure luck. A less observant man than Mr. Smith never would have noticed me, and I would certainly have died in that waste of burning sand."

MOTORCYCLE INSURANCE.

INSURANCE against fire and transportation risks for a motorcycle can be obtained for the sum of $5 from P. H. O'Connor, 154 Nassau street, New York City. A theft clause on the policy, costing an additional $5, can also be obtained. The fire and transportation risks covered are: Fire arising from any cause whatsoever; loss or damage by stranding, sinking, burning, derailment or collision while in the hands of a transportation company. This includes the machine and its equipment. The insurance against theft covers loss or damage to the motorcycle in its entirety. The single or dual policy holds good anywhere in the United States or Canada. The company back of the policy is the Insurance Company of North America.

ST. PAUL RACE SERIES.

ST. PAUL, Minn.—The Minneapolis Motorcycle Club has leased the Hamline race track in this city and will put on a series of meets during the summer, together with the contests that have been arranged for the Anoka track. The first meet will be held on July 4, when many of the West's crack racers will be seen on the mile and also the half-mile courses. Otto Frykman, of the Minneapolis Motorcycle Club, and formerly connected with the Detroit club, has secured the lease on the State Fair track and is planning a series of four or five meets to interest Twin City motorcycle enthusiasts. He is now making arrangements for some of the fast Chicago and Detroit racers to appear here during the meet.



Price Or Mileage - Which?

When buying a tire do you buy on a price or mileage basis?

Do you get what you pay for?

A cheap tire will in the long run cost more than the higher-priced one.

Diamond motorcycle tires are built up to a standard not down to a price and distributed through reliable dealers only—the dealers who are looking to your profit as well as their own.

Their profits on Diamond tires may be a little less than on others but they are looking for your continual patronage.

Like the tires they sell you; they can be depended on.

You can't get mileage out of a tire unless it is built into it.

Diamond motorcycle tires are built of fabric specially woven of long staple Sea Island cotton and pure Para rubber compounded according to formulæ which are the result of 14 years experience in rubber compounding.

They are miniatures of the famous Diamond auto tire, the largest selling single brand of tires in the world.

The first tire for motor driven vehicles made in America was a Diamond. Diamond quality is today as it was then the standard of comparison.

If you want a tire scientifically constructed for all around work, you are looking for the Diamond.

The universal demand is evidence that we have accomplished our purpose—Greatest Mileage. The cost is no more than for other standard makes.

Diamond tires are made in two treads—studded and corrugated—but only one quality!

Single clinch only and in all sizes to fit the 28" x 2½" rim, including the 29" x 3" specially adapted for tandem riding, side cars, heavy riders and delivery machines.

Send For Our Motorcycle Book. It's Worth Having

We could build them cheaper
—But we won't.
We would build them better
—But we can't.

MOTORCYCLE OF THE FUTURE

THE writer, when consulting the Standard Dictionary the other day, out of curiosity looked up the word "automobile." This particular edition of the Standard was issued in 1901, just eleven years ago. "Automobile" was defined simply as an adjective: "self-propelled." There was no reference whatsoever to the automobile as we know it today. And the 1901 Standard was the most accurate and up-to-date dictionary of that period.

Eleven years ago, and no definition, in the best dictionary, of "automobile," nor, of course, of the motorcycle. Automobiles were then being built, even exported in small quantities, but the business was of such little consequence at the beginning of the century that the leading dictionary-compilers of their day entirely overlooked the motor four-wheeler, although the dictionary in question contains the definitions of some 250,000 words and phrases.

Since then, with the rapid perfection of manufacturing methods, not only has the automobile been placed in the hands of more than half a million American users, but the growth of the industry is also shown in the constantly increasing volume and value of the exports and in the decrease of imported cars since the passage of 1906. In that year the high-water mark of imports was reached with $5,488,690 of foreign automobiles and parts. Each year since 1906 has marked a lower total of imports until the commencement of the present fiscal year. In the meantime, exports have made new records each year, reaching the total of $12,965,049 during the fiscal year ended with June, 1911. While the present fiscal year is not completed, the figures for the first nine months ended with March, 1912, exceed the total figures for 1911. According to the governmental report the export figures for the period covered are $14,189,948. Reckoning on the usual rate of export between April 1 and June 30, the total for the year will be approximately $20,000,000.

No close analysis of these figures is necessary to absolutely satisfy even the doubting Thomases of the tremendous possibilities of the motorcycle industry. Thus far, we have only skimmed the surface of the wonderful opportunities which surround the motorcycle as a means of recreation and an instrument for the transaction of business in a thousand and one ways. For the motorcycle represents something more than a fad.

Concretely stated, the motorcycle stands for rapid, convenient and economical locomotion. It combines these attributes in happier proportions than does any other piece of mechanism. It possesses the speed of the automobile and, though without some of the conveniences of the latter, it scores heavily in a comparison of the costs of acquisition and maintenance respectively of the two types of vehicles. There is such a big difference in the matter of expense that neither machine is, strictly speaking, a competitor of the other. For every individual who professes to graduate from the motorcycle into the automobile class, there are ten who can afford motorcycles, but unable to do justice to the economic responsibilities involved in the purchase and maintenance of a car.

The motorcycle of ten, fifteen and twenty-five years hence may be nothing like the motorcycle of today, but, at the risk of posing as a prophet, the writer feels fully justified in predicting that the changes will represent simply higher development of the motor-driven two-wheeler as a means of rapidly, conveniently and economically transporting people and things from place to place.

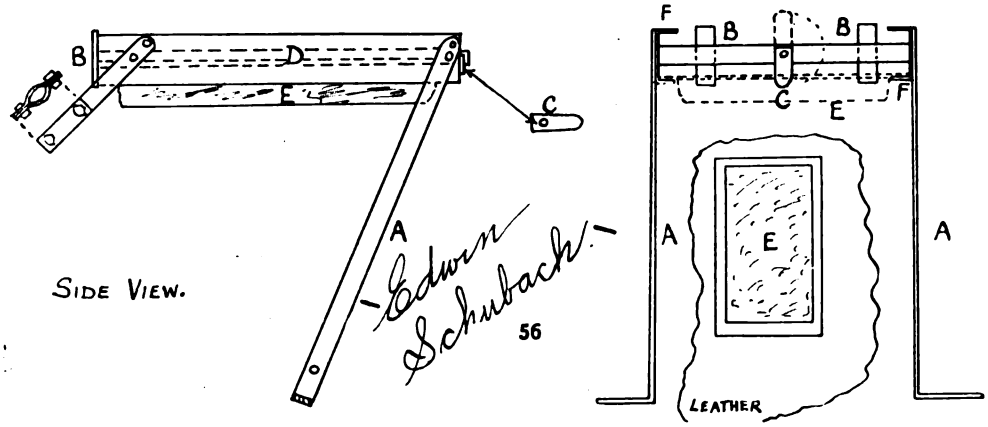
In proportion as these characteristics of the motorcycle are developed will the number of machines in use increase. The impossibility of conceiving of a substitute for the motorcycle is perhaps the strongest argument in behalf of its permanence. There may be, of course, radical changes in construction and design, but where is the imagination that can picture the three important qualities above mentioned in anything other than the motor and two-wheel combination? Or, possibly, one wheel, or three?

Suppose even, as a result of ingenious inventions which may dispose of some of the complications found today in the transmissions and the steering of automobiles, the use of four wheels becomes universal? Even then we shall still have the motorcycle and the automobile, though the line of demarkation may be not so clearly perceptible as it is today. For if it ever becomes necessary or advisable to add to the number of wheels fitted to a motorcycle, none will be better qualified than the motorcycle manufacturers to make the change, gradually, of course. If the two-wheeler of today should perchance become the four-wheeler of tomorrow, it will be a motorcycle still, because it will possess the economical advantages which now distinguish it from the automobile. That will be the case for the simple reason that no motorcycle designer will take four wheels into serious consideration until, if ever, the means are available for manufacturing and marketing such a contrivance at a much lower cost than the cheapest standard automobile.

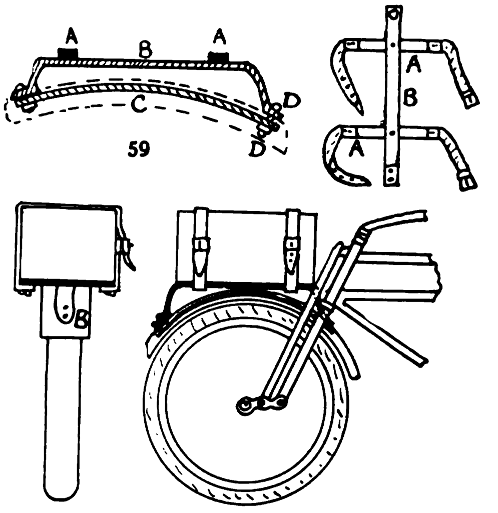
Now it is practically certain that the difference in cost between the two types of motor vehicles will always be as great as it is today. If the automobile is not now being manufactured as cheaply as it ever will be, then the same applies to the motorcycle in proportion. That is not to say that the motorcycle of the future is to be much cheaper than the 1912 models. We know too little about manufacturing to even hazard a guess on this score; but it seems to be only common sense to argue that everything within the reach of the auto builder, aiming at price reductions, is also attainable by the motorcycle manufacturer.

LAST OF THE LUGGAGE CARRIER DESIGNS

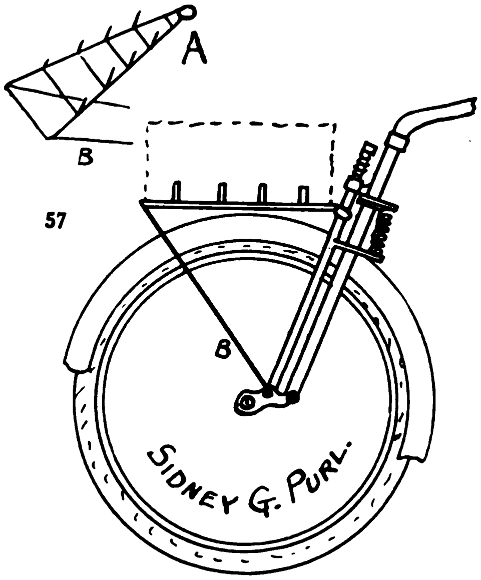
Eleven More Good Suggestions, Submitted Before Close of Contest—Winners of First and Second Prizes Will Be Announced in the Next Issue of Motorcycle Illustrated.



56

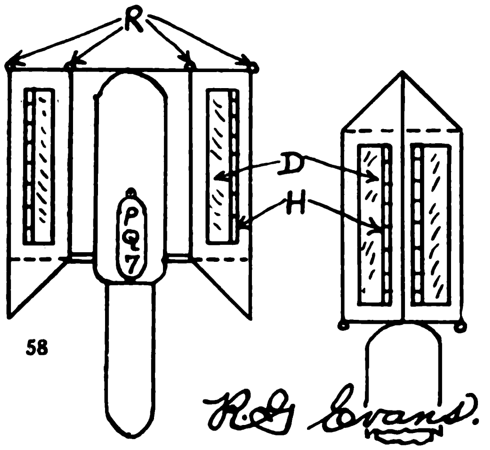


59

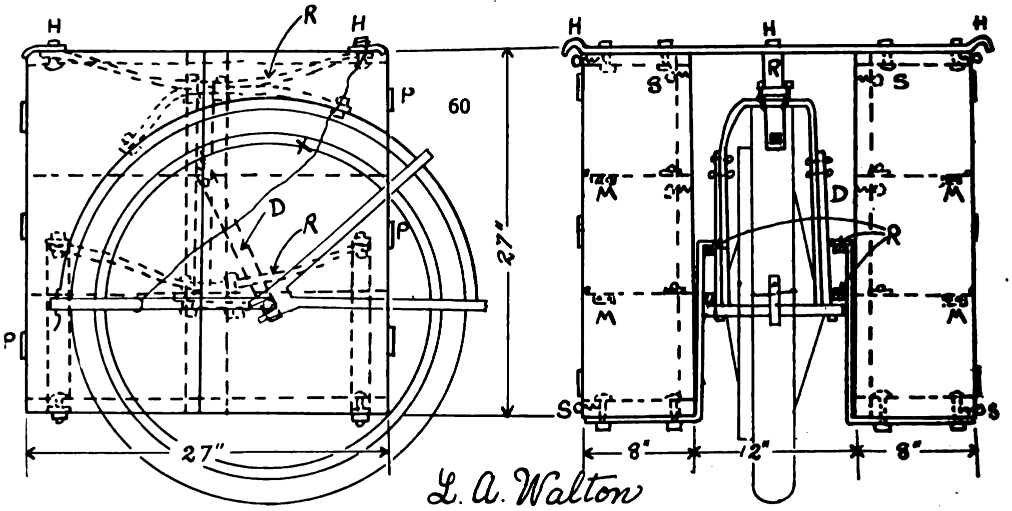


57

56. Rear carrier combining luggage and tandem attachments. Stirrups for latter are attached to A A, tandem seat is E. Seat is slid underneath as in left-hand view when not in use and slides in F F when in service. B B are stops at front end and C is a swing-stop to hold seat E in place, D is the carrier frame. Inset shows details of seat; there is an inch margin all around leather padding. Pieces D are 12 x 1½ x ⅛-inch stock; B are 3 x 1 x ¼-inch, and C is 2 x 1 x ⅛-inch steel with ¼-inch hole. Legs A are 1½ x 5/16-inch steel. Contributed by Edwin Schubach, Chicago, Ill.



58

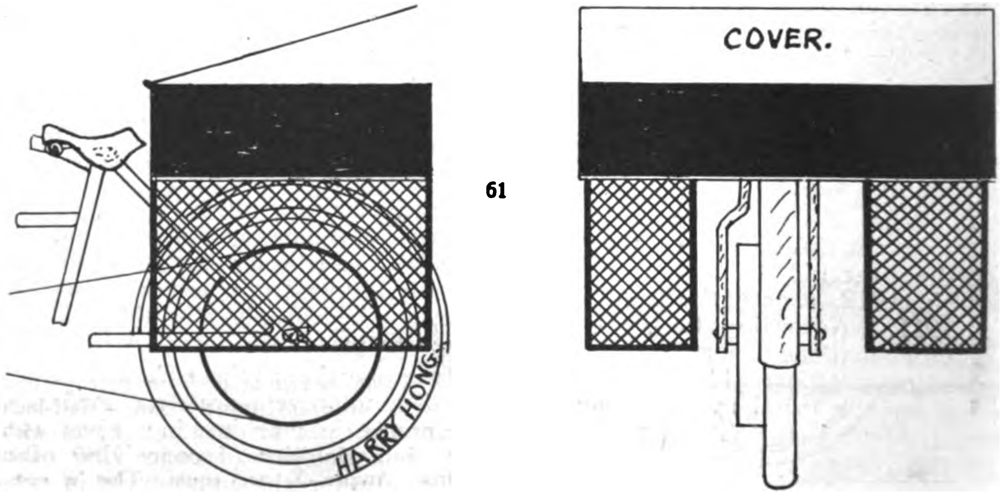


60

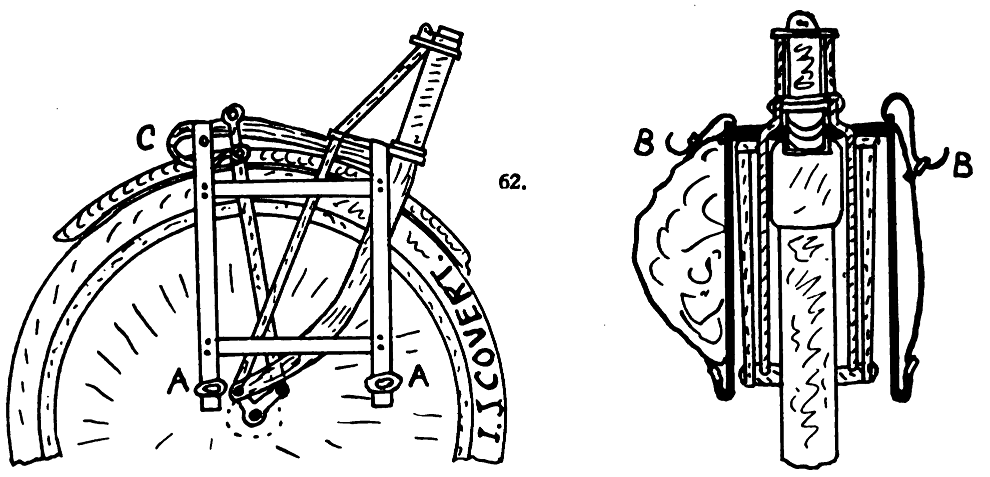
57. Front carrier with lips projecting from cross-members as shown at A. Stays to rigid portion of rocker and clamp to recoil barrel. Used in R. F. D. work for carrying sacks, etc. Made of galvanized iron stock. Contributed by Sidney J. Purl, Georgetown, Tex.

58. Folding rear carrier with two positions, to fit over regular tubular "stock" carrier. Hinges are fitted at R R and H H. Dimensions of boxes 15 x 5 inches, length not stated. Doors D D fitted in rear. When in down position, extra luggage can be strapped on top. Up position is used when it is raining, etc. Contributed by R. G. Evans, Elkhart, Ind.

59. Front carrier, fitted to mudguard, box shown strapped on. A B is the iron frame, C the bar fitted on under side of mudguard and D the fastening at the rear. Attached as



61



62.

shown in detail in upper corner. To be used when tandem attachment is fitted or when other luggage is carried at the rear. Contributed by Jas. A. Hart, Philadelphia, Pa.

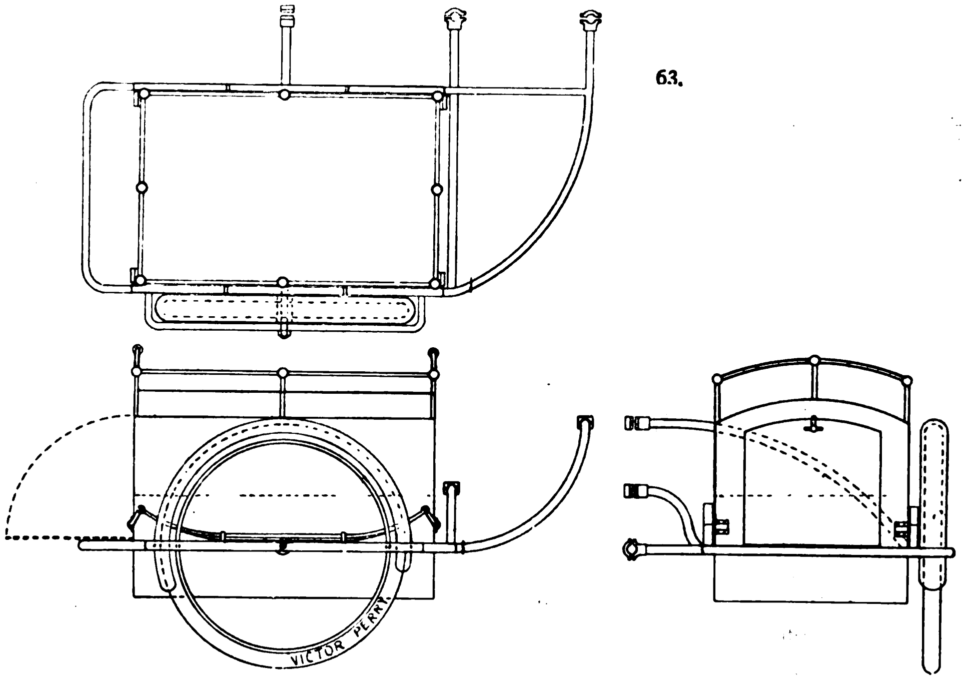
60. Rear carrier with springing, divided into compartments by folding shelves. Each pannier has two doors at sides. D is a brace to rear axle, M M shelve hinges, R R springs, H H hooks and P P door hinges. Screweyes or buttons are shown at S S, and X is a rope for operating the stand. Extra luggage to be roped on top, using hooks H H. Contributed by L. A. Walton, Fruitvale, Oakland, Cal.

61. Rear carrier, with top box and wire netting panniers. Lid hinges at front and rear door can be fitted if desired. Box of ⅞-inch lumber and of dimensions to suit user. Contributed by Harry Hong, Chicago, Ill.

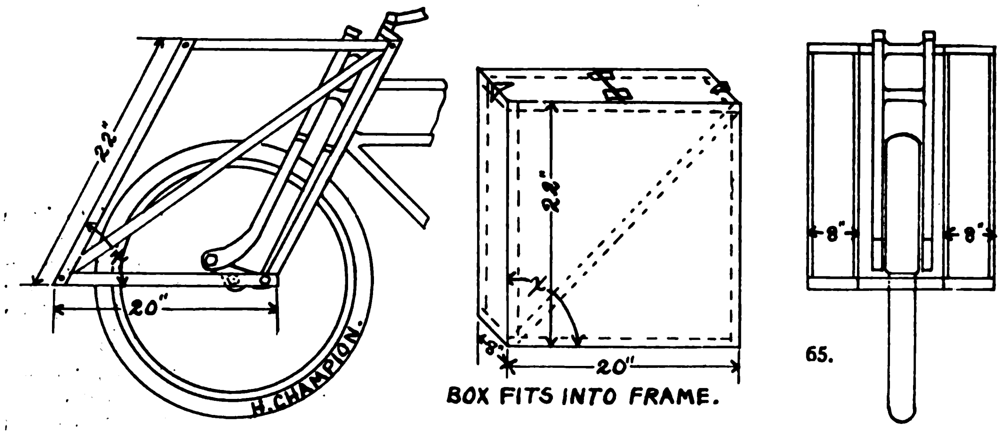
62. Front carrier with pannier-arranged frames. Front members clamp to coach-spring as shown and straps B are attached to A. Used for light packages. Contributed by I. J. Covert, Fishkill Landing, N. Y.

63. Side-car attachment, with underslung body and side half-elliptic springs. Body supported by shackles and frame forming housing for wheel. Mudguard bolted to wheel housing. Knockout axle. Body 24 x 34 x 26 inches, rear door fitted, frame extends rearward to support open door or can be used for extra luggage. Railing on top of body. Frame of 11-guage tubing, welded and clamped to machine by adjustable fittings. Shelf in center of body. Contributed by Victor Perry, Batavia, N. Y.

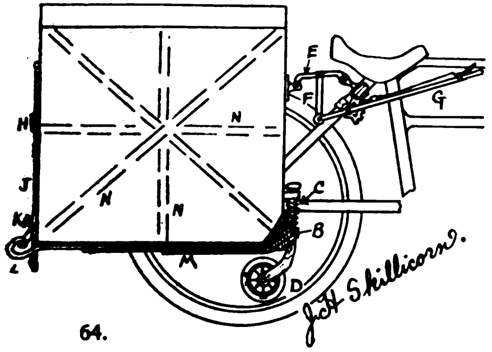
64. Rear carriers with spring suspension, operated from saddle. Bumpers are fitted at B on each forward corner, small wheels D are fitted with springs C, and used to trundle carrier when detached. E is a spring and F a link connecting to lever G. M is a longitudinal flat spring with rear scroll end attaching to body at L. Springs M clamp to rear stays at the front. Handles H are fitted for trundling detached carrier. J is a leg for resting carrier and K a wing nut for securing J. Steel frame fitted to body with cross-braces N N N. When load is heavy, during stops or in slippery places, carrier is lowered by lever G until caster wheels D touch. Capacity 150 to 200 pounds. Contributed by J. H. Skillicorn, Albany, N. Y.



63.



65.



64.

65. Front carrier attached to rigid portion of forks or front construction. Half-inch square rods used for framing. Boxes with lids fit inside frame, capacity 7,040 cubic inches. Angles X are equal. This is contributed by Henry Champion, Rhinelander, Wis.

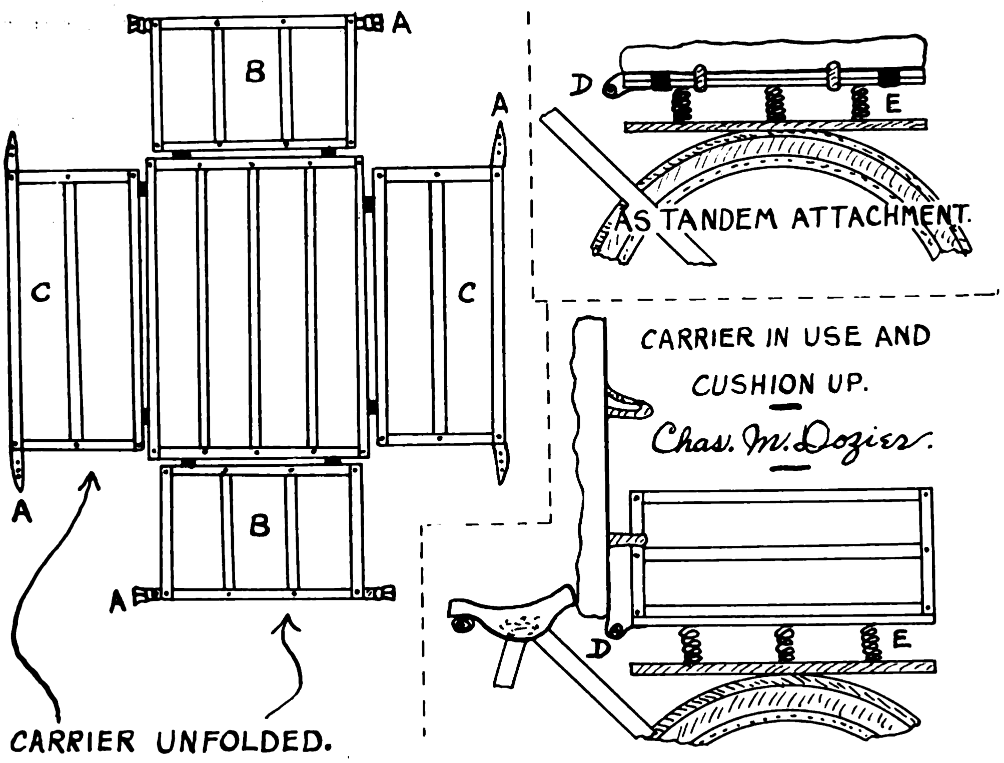
66. Combined tandem and luggage carrier, supported by volute springs E E. Sides C and B strap together by straps A. Base dimensions 12 x 9 inches; sides C, 10 x 6 inches; sides B, 6 x 7 inches. When used as tandem sides fold down and cushion is strapped over them; when used for luggage cushion forms backrest as shown, hinging at D. Contributed by Chas. M. Dozier, New Straitsville, Ohio.

A CORRECTION.

ORA V. BROWN, who contributed luggage carrier design number 10, writes as follows: "The legs in my carrier design are held up in either position by a square notch in the leg in which fits a similarly shaped piece working under the action of a coil spring. They are fastened to the frame with fiber pins and spring hooks and not by pins as was stated in the write-ups of my design. The carrier is also to be fitted over an ordinary luggage carrier and not on the loop brace."

RICHMOND COUNTY MEETS.

ARRANGEMENTS have been made by the Richmond County Motor Racing Association of Staten Island to hold regular Sunday meets at the Dongan Hills track from now on, and some promising cards are being framed. Mercier, Constant, Cox, Graves and Coughlin are to ride.



Luggage Carrier Design No. 66.

McCARTHY ON THE TRAIL.

BALTIMORE, Md.—The Nemesis of the motorcyclists in this city is Deputy Automobile Commissioner J. J. McCarthy, who, on his speedy motorcycle, hangs around the boulevards and pikes every Sunday and nearly always traps some speeding rider. McCarthy is determined to compel the boys to have some respect for the law, and states that he will keep after them until they stop burning the roads. On Sunday, June 2, he gathered a few into his net on the boulevard between this city and Annapolis.

One of the boys gave him a chase of four miles before he was caught, and this little excitement set him back $5 and costs. The fines have been very small heretofore, but McCarthy will see that they are plastered on a little more heavily if offenders continue to violate the law. These arrests happened during the run of the Indian and Maryland clubs to the State Capitol. William Wood, F. A. M. Commissioner for Maryland, has lectured the boys several times for speeding, but some of them have paid no attention to him.

CAMPAIGNING BY MOTORCYCLE.

THE motorcycle has at last invaded politics in southeastern Kansas. Charlie Ise, candidate for the office of County Attorney of Montgomery County, has just purchased a Flying Merkel motorcycle with which to make his campaign tours of the county. Ise expects to cover the county about five times between now and election time, and says that he will have visited every rural voter at least that many times before the primaries. The candidate believes he can wage his campaign at a less expense and see more people than by the use of a team and buggy or an automobile.

PREPARING FOR VISITORS.

PHILADELPHIA, PA.—The passenger traffic committee of the Merchants and Manufacturers' Association has recently announced that the Pennsylvania and other railroads in the Trunk Line have provided special seashore excursions that will enable merchants in many small towns and cities in the eastern part of the United States to stop off in Philadelphia and buy their fall and winter stock. This announcement has been well received by the motorcycle and supply dealers of this city, and many have had circulars prepared for distribution in the towns affected.

READING RACE MEET.

THE Reading (Pa.) Motorcycle Club will hold a race meet in the fairgrounds on July 4. The success of the meet last year encouraged the members to arrange for a similar event this year. A number of professional out-of-town riders will be secured. A parade will be held prior to the meet and all owners of motorcycles have been invited to participate. The club held a picnic on May 25.

CLEVELAND CLUB MOVES.

THE Cleveland M. C. has moved to Luna Park for the summer sessions. The clubrooms consist of a large meeting room, a reception room, kitchen, cardroom, poolroom and bath. Regular meeting will be held on the first and sixteenth of the month.

THE Cleveland M. C. is taking up the matter of holding a club meet on the Luna Stadium in the near future. The date as yet not being decided upon, but it will probably be early in July before the F. A. M. convention, as nearly all the Cleveland riders will attend the convention.

THE K-V Motorcycle Company, of Cleveland, Ohio, has received its demonstrator and reports the sale of two machines during the first week. Much interest is being manifested in this 4-cylinder machine.

THE Lister Motorcycle Co., of Cleveland, Ohio, recently delivered a Harley-Davidson machine to the Illuminating Company, of Cleveland, for use in the repair department.

SQUIER IN HERO ROLE.

ONCE more Geogre H. Squier, of the Yale staff, has demonstrated that folks who give him credit for being a man of action make no mistake. While in Pittsburgh recently attending a convention Squier was strolling down a main thoroughfare with Harry Neff, local Yale and Thor agent, when a runaway team attached to a private carriage dashed down upon them. Without a second's hesitation Squier grabbed one of the horses and was dragged a considerable distance before he was able to bring the frightened animals to a stop. Then before the four occupants of the carriage could reach him George lost himself in the crowd. His efforts to keep the incident under cover were unavailing, however, and the owners of the runaway team finally located him at his hotel. There he was duly thanked. Later his friends about town looked him up and at every turn he was complimented upon his ready courage until he left the city.

FOR SPEEDY SERVICE.

THE *Daily Earth*, a newspaper at Coffeyville, Kan., has added a motorcycle to its news and circulation departments. The machine is used on the news end of the paper until press time, after which it is used by the circulation department. By using the two-wheeler the paper can go to press later than the other afternoon publication, thus making possible a scoop and making the paper more interesting. At the same time the carrier boys, who are taken out to their routes on the machine, get the paper delivered before the other paper's carriers do. The machine is equipped with a tandem attachment.

FINES FOR CUT-OUT USERS.

CHIEF OF POLICE MICHAEL MEALEY, of Minneapolis, Minn., has started after the motorcyclists with the open muffler, and arrests have been numerous in the past few weeks. Five riders were arrested a week ago and all paid a fine of $3, but the municipal judge says that if the nuisance is not stopped soon some more serious penalty will have to be imposed.

A PERFECT SCORER.

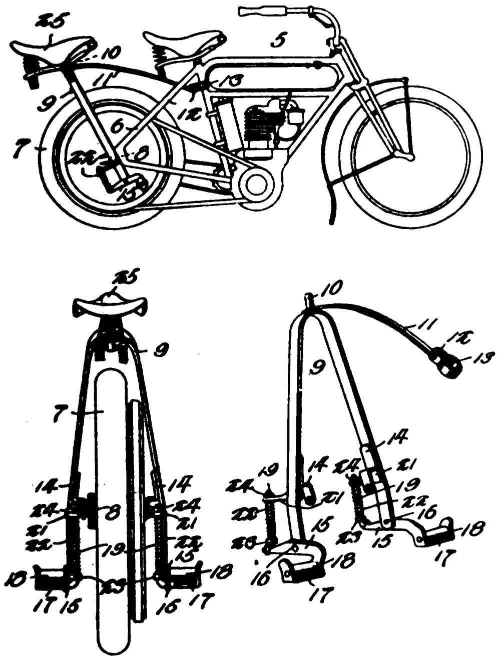
JOHN BEVERIDGE, JR., of Mt. Vernon, N. Y., appears in the accompanying photograph on his 6 h. Flying Merkel with which he carried off a gold medal for finishing with a perfect score in the recent run of the Invincible M. C., of Brooklyn, N. Y., to Southampton and return. Beveridge has been riding for several years and has just placed an order for a new 7 h. Merkel.

PATENTS

Two New Tandem Attachments, and a Muffler That Could Be Fitted to Motorcycles.

PATENTS for two improved motorcycle tandem attachments have recently been obtained by Californians, Frank R. Covey and Charles F. Hoag, of Riverside, being the designers of one and Frank E. and Robert Palin, of San Mateo, offering the other. Samuel W. Forney, of Pulaski, Va., is also listed with recent patentees of motor fitments, his product being a muffler which is credited with maximum efficiency and minimum back pressure.

The Covey and Hoag attachment, covered by patent No. 1,027,992, is described as follows: Fig. 9, in the diagram showing side view of a motorcycle, is an inverted fork from the upper surface of which rises a stud or stem 10 to which is swivelled one end of a resilient arm 11, the opposite end being formed with an upturned perforated ear 12 which is fastened to the collar 13. The latter is arranged to embrace the seat-mast tube, as shown in the diagram. Spaced from the ends of the fork 9 and fastened to its inner face are offset bearing-lugs 14, the free ends of which are slotted to receive the axle. Mounted upon the fork-ends are spring foot-rests, as shown in the rear-view diagram. The spring action is afforded by the operation of the foot-rest on the pivot 16, the shock being taken up by the springs 22. The springs work over guide rods 19 and are adjustable by the nuts 23 and 24. A saddle of ordinary construction is mounted on the stem 10 and the attachment is then complete. Owing to the form of the flexible arm 11, extending from the top of the tandem fork to the frame proper of the motorcycle, and the springing arrangement of the pedals, which are fitted with roller treads, the inventors claim superior comfort-giving qualities for their device.

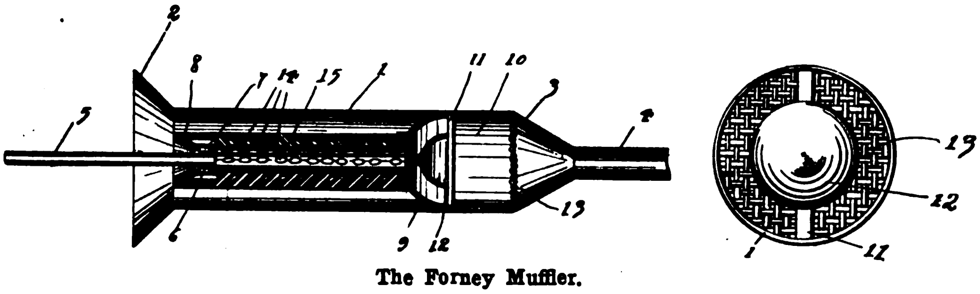


Covey and Hoag Attachment.

An Improved Muffler.

The Forney patent covering an improved muffler is No. 1,027,469. One of the accompanying diagrams shows a cut-away side view, and the other presents sectional end view. Fig. 1 in the longitudinal diagram designates the main casing which is built with a flaring front section 2 and a tapering neck 3 which terminates at the exhaust pipe 4. Leading into the casing is the exhaust pipe 5 which has mounted upon it a collar 6 bearing radiating arms 7 which serve to support the rear end of the pipe 8. From this point the pipe is enlarged until it terminates in the bell portion 9 which flares outward until it reaches the walls of the muffler shell. The bell portion and the tapering end of the casing enclose a chamber 10 which has extending across it the brace 11 bearing the deflector 12 which aids in breaking up the exhaust gases as they pass out of the exhaust pipe into the chamber 10. A screen 13 is placed at the point where the shell begins to taper, to further break up the gases and to assist in bringing about a thorough mixing of the gases with the air in the chamber 10.

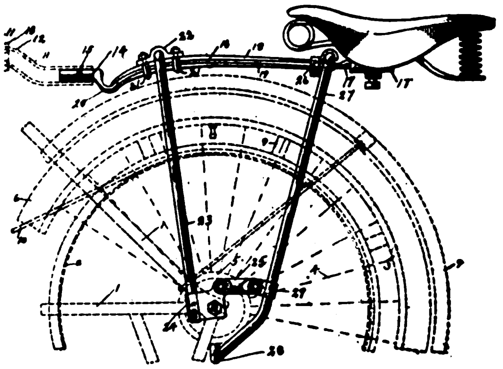
Radiating from the enlarged section of the exhaust pipe are small forwardly inclined air receiving branch pipes 14 which communicate through a supplemental inner casing with the open space enclosed by the main casing. As the machine to which the muffler is fitted moves forward, air is caught by the bell-shaped front section of the muffler casing and passed through the branch pipes 14 into the exhaust pipe 8 where it mixes with the exhaust gases. Additional air is caught by the flaring front end of the exhaust pipe 8 and taken in to assist in this work. It is the inventor's claim that the rush of air through the flaring pipe-end 8 and the branch pipes 14 will practically do away with back pressure in the disposition of the gases. After passing around the deflector 12 and through the screen 13 the gases enter the tapering section of the casing and pass out through the discharge pipe 4. The Forney muffler is designed primarily for automobiles, but nothing appears to prevent its adaptation to the motorcycle.



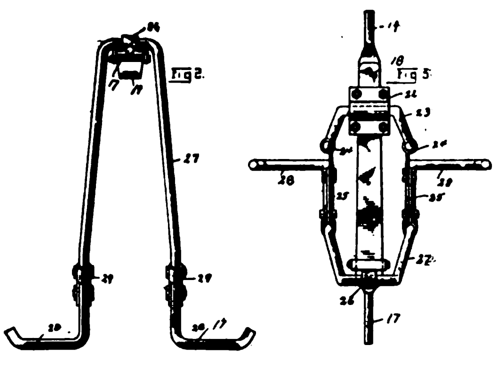
The Forney Muffler.

Leaf-Spring Tandem Seat.

Frank E. and Robert A. Palin, of San Mateo, Cal., are the designers of a new spring tandem attachment, intended to provide a staunch and simple springing arrangement for the extra seat, and recently covered by a patent grant. In this device the rear end of a horizontal bar 11 is shown extending back from the frame proper; this bar has a threaded hole into which a heavy tube 12 is screwed, a locknut 13 being supplied to hold the tube in position. The tube is curved downward so that its rear end is on the proper plane to receive a pin 14 on the front end of the tandem attachment spring. The pin 14 and the tube 12 are held together by a pin 15. The pin 14 is an extension of the spring proper 16, which has another extension at the rear 17 for the tandem saddle. Above and below the spring 16 are the spring leaves 18 and 19, the latter curving upward at the front 20 to hold it securely in place. The springs are held together by the clips 21, these clips also holding a strap 22 in position so that a U-shaped yoke may pass through and be held in position. The ends of this yoke have holes to permit of adjusting the spring with respect to the supporting bracket 24. The connecting link is 25.



Palm Leaf Spring Tandem.



TIPS AND TOPICS

Starting on the Magneto.

QUITE often we hear riders complain of the difficulty experienced in starting their motorcycles, and if the refractory machine is fitted with a magneto it is likely that the trouble is at once blamed to this fitting. As a matter of fact, this silent member may be in no way to blame, and through a process of elimination the real difficulty will often be located in the carbureter. It is true that when a rider pedals his motor over slowly the magneto will not generate a spark of such intensity as will a battery system under similar conditions; in consequence of this, when a carbureter is so adjusted as to supply a weak mixture with the motor turning over slowly the spark generated by the magneto is not sufficiently intense to ignite the charge drawn in. A similarly weak mixture might be ignited by a battery system, however, provided the batteries were strong.

Look to the Carbureter.

THESE points being clear, the rider who experiences trouble in starting should examine his carbureter at once and adjust it so that a richer mixture is provided. This should be done before much time has been given up to exhaustive pedaling and equally exhaustive profanity. By way of simplifying the operation of obtaining a richer mixture a cover of some sort could be fashioned to fit over the air intake for the purpose of reducing the amount of air drawn in, and in this way a mixture rich in gas particles would be afforded. With a properly adjusted carbureter one quick thrust upon the pedal will usually start a well-designed magneto equipped motorcycle, but a slow, lifeless push upon the pedals will do little toward getting a positive start on any machine.

Driving at a Slow Pace.

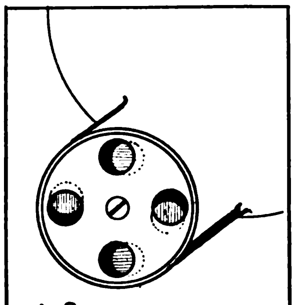
DO not infer from the foregoing that I would blame all troubles upon the carbureter; far from it, but there is no getting away from the fact that the mixing apparatus can make or unmake the best of motorcycles. One quite often finds it impossible to keep the motor down to slow speed and at the same time have it fire regularly. This is not always the fault of the carbureter, although I must admit that under such conditions I would first seek the trouble in the mixer. Sometimes the difficulty may be traced to the ignition system, where the spark plug gaps may be found too small. Increasing the gap, almost to three sixty-fourths of an inch, has been known to effect a remedy under these circumstances. In this connection some experimenting must be done, however, as a large gap conduces to hard starting in view of the fact that proportionately more electrical force is required to jump a spark across a broad gap than a small one.

Spark Plug Efficiency.

SPEAKING of spark plugs, one frequently meets an enthusiastic rider of a twin mount who boasts that he has not removed the plugs from the motor since he uncrated the machine; in the interim he may have covered 5,000 miles. When we hear such a remark it is to be taken for granted, perhaps, that the speaker does not really know the difference between a motor which is running well and one which is not up to its best work. It is gratifying, of course, to have a plug so well constructed that it will give no appreciable trouble during a whole season, but if we are to expect perfect firing we must not put the plugs to such severe tests. To get the best out of the ignition system I would advise changing the plugs once every month, provided, of course, that one rides regularly.

Relay System of Plugs.

AN excellent plan is to have two sets of spark plugs, one in use and the other in reserve; the latter, by the way, thoroughly protected from knocking and rattling about with other articles in the tool-bag. The wise rider may keep the reserve set of plugs at home where they will come to no harm and carry an extra plug or two for emergency use on the road. The first set, after twenty or thirty days' use should be taken out and cleaned with a dry bristle brush; if sooted or gummed they should be given a gasoline bath which will assist materially in the process of rejuvenation. The electrodes should be examined carefully, for if they are not of the best material and they are used with a high-tension magneto, there is a possibility that they will be burned away slightly, which will make a closer setting necessary; between one-thirty-second and one sixty-fourth of an inch is the proper gap for magneto-equipped motors. The reserve set of plugs will now be used in place of those that are being cleaned, and at the end of another month the change is made again. In addition to prolonging the life of the plugs indefinitely the motor will show a remarkable improvement in efficiency. Leading plug makers will tell you that their products will last an entire season without attention if the engine is operated properly, and this cannot be denied; but there is a vast difference between merely having the motor run and getting the best possible results from it. It pays to change the plugs regularly.



A SUGGESTION FOR AN AIR-SHUTTER TO ASSIST IN OBTAINING A RICH STARTING MIXTURE

Repairing a Control Rod.

LAST season I had a machine fitted with grip control and rods to complete the operating system, and on one of my trips, for no apparent reason, the spark control rod broke close to the bell-crank joint or lug. To tie it with wire seemed a bit shoddy and also ineffective, so that for a moment I was puzzled. As I placed my tool kit on the road a small three-eighth inch nut caught my eye and offered a simple solution of the problem. The nut made a good fit on the threaded end of the rod remaining in the lug and served as a union when the other broken end of the rod was screwed into it. A soft copper wire washer was fashioned and placed under the nut so that it was kept in a fixed position. The nut had five or six threads and was deep enough to hold both ends of the rod securely.

Failure to Answer Throttle.

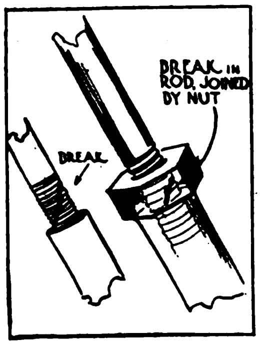
NOT long ago, while the writer was strolling along an avenue with his mind temporarily off motorcycles, he was hailed by an overheated rider who asked him to inspect a second-hand machine which he had just purchased and which did not respond to the throttle. The owner had found it necessary to assist his mount by pedaling when climbing a hill, and he was at a loss to know why his motor did not "pick up." The machine in question should have tackled the hill in a manner to gladden a rider's heart, but upon giving the engine a try-out on the stand I found that opening the trottle did not give the expected burst of speed. The lever that operated the throttle was without undue play and the twist of the grip actually did open the gas valve to the fullest extent. Upon dismantling the carbureter, however, I found the trouble at once. The gauze at the air intake was so dirty that I am positive no air found its way into the mixing chamber. As a result the mixture was far from what it should have been.

One Case Where the Rule Failed.

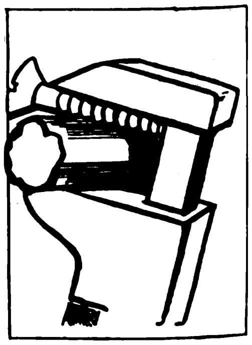
THE latter statement recalls a similar case in which I gave a rider the advice noted above, but cleaning the air intake screens did not overcome his motor's sluggishness. It happened that he brought his machine over to my office and I gave it a personal inspection. After going through the usual preliminaries I began to think I had tackled a difficult problem, but, as will be shown, the trouble was not beyond remedying. I removed the inlet valve dome so that I might inspect the valve, which was of the automatic type and here I located the difficulty. The valve stem was slightly bent, so that only a hair-line opening was allowed on the suction stroke, and as a result very little gas could be taken into the cylinder. Under the conditions, opening the throttle had little or no effect.

An Emergency Stillson.

THERE are times when a rider is called upon to unscrew a large sized pipe or cylindrical bar, and on many of these occa-



Control Rod Repair.



Emergency Stillson.

sions it is impossible to procure a Stillson wrench. Under such conditions an ordinary monkey wrench can be made to serve the purpose by placing a screw between the top jaw of the wrench and the bar or tube and screwing the lower jaw up tightly. While a large machine screw will answer on most occasions an ordinary wood screw is better, as its threads are considerably sharper and will therefore grip the bar more firmly. The illustration shows the method clearly.

MOTORCYCLE EXPORT FIGURES.

WASHINGTON, D. C.—Reports issued by the Department of Commerce and Labor giving the monthly exports of domestic merchandise and the imports from foreign countries, show a steady increase in the demand for American made motorcycles. While the exports of motorcycles and bicycles, and parts of each, showed a slight falling off for April, as compared with April of 1911, yet the figures for the ten months ending with April in 1912, show a big increase over the same period in 1911, and almost double the figures for the same period in 1910. The export figures are as follows:

April, 1911, $107,698; April, 1912, $105,722; ten months ending with April, 1910, $486,670; 1911, $715,150; 1912, $877.014.

The imports of bicycles and motorcycles, and parts were: In April, 1912. $17,464; ten months ending April, 1912, $123,907.

TWO CANADIAN MEETS.

J. W. CUNNINGHAM, of London, Ontario, has been selected as referee for the first Dominion championships to be held at Hamilton, Ontario, on Monday, July 1. J. M. Scott, of Toronto, chairman of the competition committee of the C. M. A., will act as starter.

The Toronto M. C. will hold a race meet at Toronto on the Saturday following the championships at Hamilton. This will enable the racers from the States to take part in two big meets in Canada with only one trip. It is anticipated that "Shorty" Matthews, Thor, will be among the starters at both tournaments.

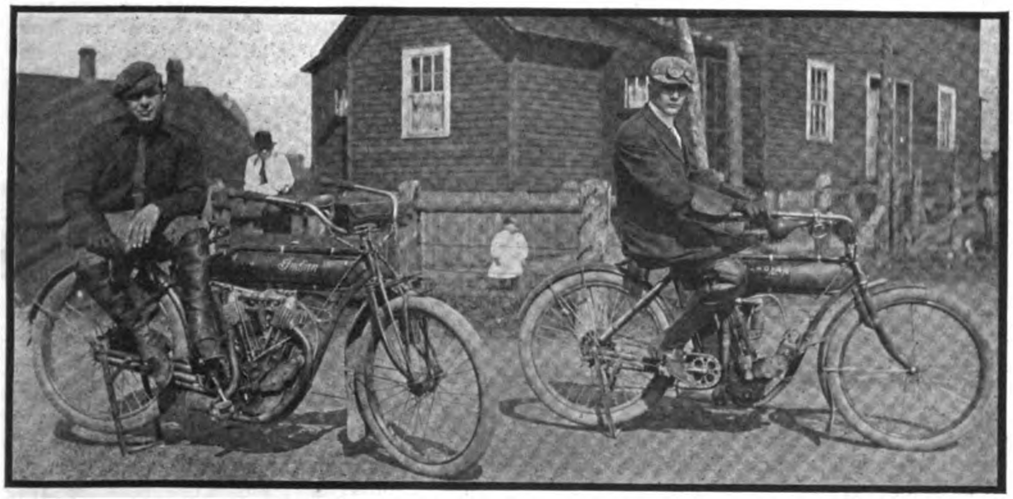
THE Vokes Hardware Company of Toronto, has purchased four Flanders' motorcycles for the use of city salesmen.

POPE TANDEMITES.

AMONG others, Pope riders are taking very kindly to tandem riding, and the hearty little single whose home is Hartford is daily demonstrating its capacity for double service. The photograph herewith was taken in Sacramento, Cal.

THAT BIG OUTING.

BALTIMORE, MD.—The riders of Indians in this town are anxiously awaiting for Howard A. French to announce the date of the "big feed" and athletic pow-wow he is going to pull off early in July. The event is a certainty and all the boys desire to know is the time and the place. Some of the athletes are already in training. Matt Gault and George Louis will contest in the running broad jump; "Yellow" Rasmers, a former Lehigh star, is preparing for the short and long distance running events; John Johnson seems to have a strangle hold on the championship belt for high diving and swimming, while the sedate F. A. M. Commissioner of Maryland, William Wood, will unequivocally be the real thing in the quiet and gentlemanly quoit game which will take up the attention of some of the boys.



MICHIGAN ORGANIZERS.

W. A. SULLIVAN and Edward McLogan, of Calumet, Mich., are leaders in the movement to organize a motorcycle club for Houghton and Keweenaw counties. In the accompanying photograph they are returning from a jaunt over country roads. The plans for an inter-country club were launched some time ago at Calumet and neighboring towns, and there are indications that they will bear fruit before the summer is over.

SECRETARY GIBSON HONORED.

TORONTO, CAN.—As an evidence of the esteem in which Canadian riders, generally, hold Dr. G. B. Gibson, secretary-treasurer of the F. A. M., the Toronto M. C., at its last meeting, formally made G. B. an honorary member of the club. Simultaneously he became an active member of the Canadian Motorcyclists' Association.

It was decided, at this meeting, to hold a pleasure tour to Hamilton, on July 1, to take part in the Dominion championships to be held there on that day. Fifteen riders were admitted to membership.

About one hundred of the club's members assembled on the University campus the other evening to pose for a picture. The riders were busily lining up when the police put in an appearance and the boys vanished. The members held a big street parade on the same night, the procession attracting much attention. Several riders costumed themselves and made a hit. On this occasion one of the "fathers" of the club piloted a machine and sidecar, in which his wife and three children were passengers.

ORR KEEPS MOVING.

CHARLES F. ORR, one of Toronto's many promising sons, is building up quite a business connection in the motorcycle trade. Orr first landed the Ontario agency for the Graton & Knight Manufacturing Company, makers of Spartan belts, after which he proceeded to close with the Persons Manufacturing Company, saddle makers, for the Toronto branch. He has also secured the Toronto connection for the Minneapolis motorcycle, and although his first shipment is only on the way now, Orr has already made several sales of Minneapolis delivery vans to local merchants.

DEMONSTRATING samples of F. N. four cylinder machines are on their way to Toronto, and will be placed on view at the show rooms of the Virtue Motor Sales Company, Yonge street.

IMPROVED LAMP SERVICE.

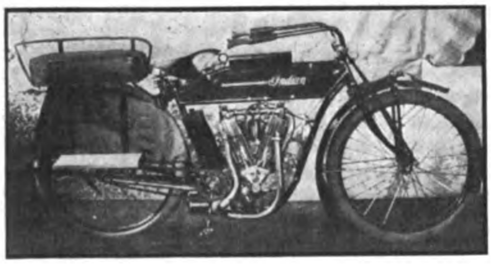
RECENT tests with peroxide of hydrogen as an aid to the fuel solution in acetylene lamps have shown that it may be relied upon to increase the candlepower materially, sometimes as much as 50 per cent. A. R. Myhill, who conducted the experiments, found that half an ounce of peroxide of hydrogen of 20 volumes strength added to 20 ounces of water increased the lighting efficiency by half, and it is evident that the process is one deserving of serious consideration by motorcyclists who use their machines to any extent at night. Peroxide of hydrogen is simply water with an extra molecule of oxygen; the latter will pass off upon the slightest provocation, and for that reason the solution should always be kept in a bottle of brown glass with a scrupulously clean stopper.

In addition to its value as an aid to the lighting outfit, the solution is invaluable as a germicide, and should be carried by tourists and others who are likely to sustain cuts and scratches under conditions where emergency treatment must be relied upon. Peroxide of hydrogen may be bought in any quantity at all drug stores, and for the lighting experiments a weak solution should be prepared at first. As its effect is noted the strength may be increased until it is about that noted above, half an ounce to 20 ounces of water.

BOWEN SIDE SEAT.

DEPARTING in several important details from the lines of similar fitments marketed in the past, a light, strong and well-sprung side seat, now being manufactured by Bowen Brothers, of Utica, N. Y., will undoubtedly assist in the popularizing of passenger-carrying on motorcycles during the present season. The most noticeable improvement over types of side saddles heretofore used lies in the position of the attachment when fitted to the machine. It is so placed that the passenger's weight is directly over the rear axle, thus insuring ease of control of the mount and reducing frame strain to the minimum.

The Utica firm places special emphasis upon the comfort-giving qualities of its device. The seat proper in the Bowen attachment is equipped with 4-inch springs, which are credited with taking up the heaviest road jolts. The seat is upholstered in brown leather, and a light brass rail, nickel-plated, forms a low guard on the off side of the cushion. The latter is 12½ inches wide and 20 inches long. A large rubber-covered foot-rest, supported by heavy angle irons, adds much to the comfort and appearance of the attachment, and a leather mudguard amply protects the passenger from dust and mud and also prevents the skirt of a woman rider from becoming tangled in the spokes of the wheel.

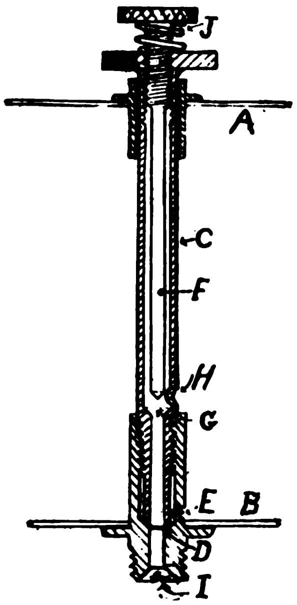


The Bowen seat may be attached to any make of motorcycle. As it is intended particularly for touring and long road trips, the manufacturers have provided an incidental attachment for carrying a suitcase.

EMERGENCY TANK VALVE

New Castle Inventor Markets Device to Prevent Stalling on the Road Through Fuel Shortage.

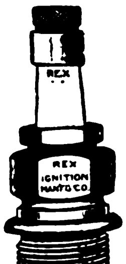
WILLIAM E. WALDRON, of New Castle, Pa., has a patent pending for a gasoline tank needle-valve of simple construction which is intended to prevent a motorcyclist from being caught on the road without sufficient fuel to reach a garage. The valve is set in the tank as shown in the accompanying illustration, with its threaded lower extremity screwed into a seat in the tank bottom. When the hollow outer stem of the device is screwed down it closes the fuel outlet at the floor of the tank, and gasoline must be taken through a hole about an inch up on the stem. When the supply of fuel is lowered to a point where it will no longer flow through this hole, the motor will "starve" and the rider will thus be notified that he has only about an inch of gas in the bottom of his tank. He then unscrews the outer valve stem out of its seat and opens the hole at the floor of the tank so that the remaining fuel will find an outlet and feed his motor until he can replenish the supply. Obviously, the object of the valve is to provide an emergency supply of gasoline without in any way altering the original tank and fittings and without the necessity for gauging the fuel. The inventor is now prepared to supply the valves for Indian, M. M., Reading-Standard, Excelsior, Merkel and Marvel machines, and will adapt his device to other makes.



In the illustration, A and B are the tank lines; C is the outer valve stem, and D the outer valve seat. E is the outer valve feed at the floor of the tank; F is the inner valve stem; G is the inner valve seat; H is the inner valve feed, and I shows the outlet to the carbureter. J is a lock spring for the valve stem.

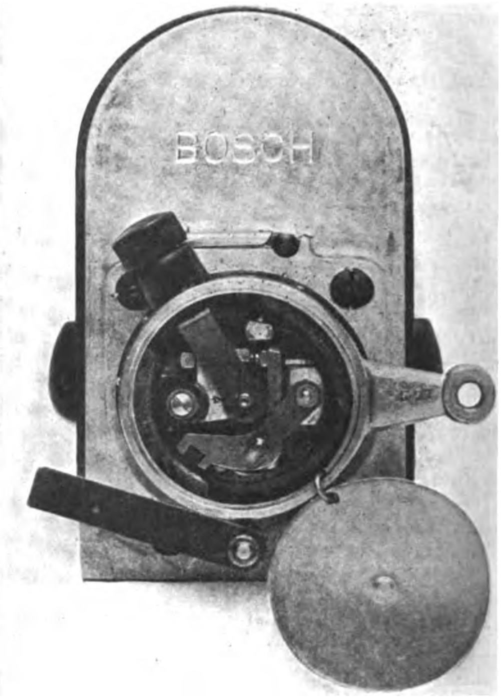
REX SPARK PLUGS.

EXTREMELY simple in construction and guaranteed not to short circuit, the Rex spark plugs, made by the Rex Ignition Mfg. Co., of 1779 Broadway, New York City, are finding favor with motorcyclists who realize that a machine is only as dependable as its ignition system. The Rex plug is soot-proof, and the ease with which its porcelain may be changed is another feature not to be overlooked. The electrode is of imported wire. The thoroughness with which every Rex plug is tested in the company's inspection department justifies the claim that the product will live up to its slogan, "The King of Spark Plugs."



A BOSCH IMPROVEMENT.

IT is not known what occasion first called forth the saying, "the little things are the ones that count," but it is given point and very forcefully illustrated by the new arrangement for holding the contact breaker box cover on the enclosed types of Bosch magnetos now being supplied to manufacturers. No doubt there are many riders who have experienced the loss of their contact breaker box cover on the road, through the spring that held it having been accidently turned to one side, either when the machine was stored or when the motorcycle was pushed up against some obstruction that struck the breaker box cover.



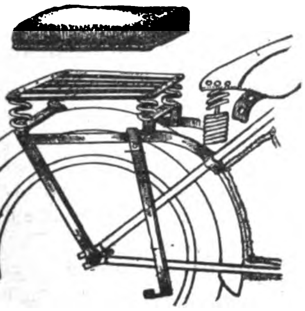
Certain machines were at one time arranged so that the magneto came very close to the belt and when the motorcycle was operating at high speed the belt would vibrate laterally and cause the spring to be knocked out of place and the breaker box cover to be thrown into the dust and lost. Having had this situation brought to its attention on numerous occasions, the Bosch Magneto Company has arranged to eliminate the possibility of trouble by securing the cover with a small ring. The cover, which is shown hanging free from the contact breaker box, fits snugly in the circumference of the casing in the usual way. When intact the cover is held in position by the flat spring, which is shown in the illustration pushed to the left of the magneto. If the cover is to be taken off the flat spring is turned sideways, as shown, and by pulling lightly on the ring the cover can be very easily removed.

A hole is bored at the base of the cover and at a corresponding part of the casing, the ring, as shown in the illustration, being drawn through both holes so that the cover will not be detached from the magneto when it is removed from the casing. The ring is large enough to allow sufficient freedom of motion as not to interfere with the manipulation required for adjusting the contact points, etc.

ANOTHER fire department, that in Porterville, Cal., has installed a motorcycle.

HOWELL COMBINATION TANDEM ATTACHMENT.

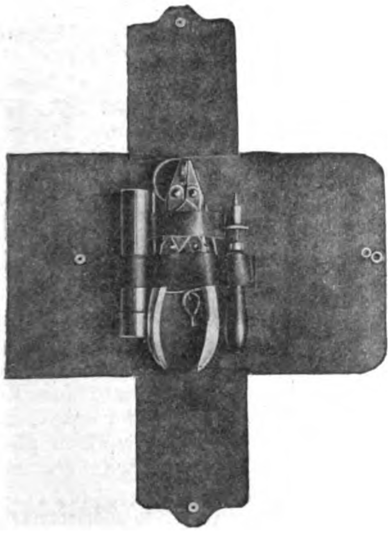
LEE & CO., of Danville, Ill., have brought out an attachment under the name of Howell's Combination Tandem Attachment and Luggage Carrier, which is here illustrated. The frame is attached to the rear axle by side members and by curved top-members to the rear forks of the motorcycle. The stirrups are fitted in position well forward of the rear hub, and this, combined with the location of the attachment over the wheel, brings the rider over the vertical center of the wheel, relieving tire strain, etc. The main frame is supported above the lower frame on four coil springs, one at each corner, and this arrangement is designed to further relieve the machine of strains, no matter whether a passenger or luggage is in place on the carrier. The springing further obviates the transmission of any jolts, no matter what bumps are encountered.



For passenger carrying, a finely upholstered leather cushion with curled hair filling is provided, and the passenger may ride astride or pillion-wise (sidewise). The arrangement of the stirrups or foot-rests gives a perfect sitting position, and the rests can be quickly attached or detached. The cushion can also be quickly removed or replaced, there being no straps to unbuckle, etc. The whole attachment is strong and durable, and can be had in nickel-plate or in enamel colored to match the machine. It is adapted for easy attachment to any motorcycle.

SOMETHING NEW IN REPAIR KITS.

THE accompanying cut shows the Cinch Tire Repair Kit which is becoming very popular. It consists of a piercing tool, stretcher, closing pliers and 12 plugs. The complete kit in size and weight is very convenient for carrying about, measuring 7 inches by 4 inches. It is recommended for its durability as well as its efficiency. The Sun Motor and Supply Co., of 307 Amsterdam avenue, is selling them.



READING MEET JULY 4.

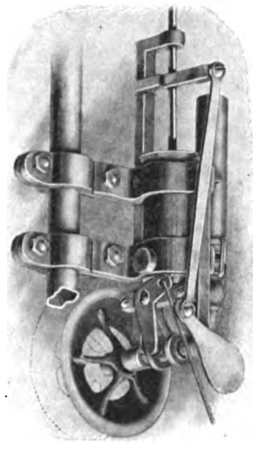
THE Reading Club will hold a race meet July 4 on the Reading (Pa.) Fair Grounds half mile dirt track. The program:

Five-mile novice, 30.50 stock machines. Open to those who have never won a prize. Ten-mile private owners', 30.50 stock; ten-mile club event, 30.50, stripped stock machines; for members of Reading club only; ten-mile trade riders, 30.50, stripped stock; one mile time trial for track record, 30.50, open port or 5 h. p. twin stock; half hour trade riders, 30.50. Entrance fee for all races, 50 cents. Entries close July 2.

On Sunday, June 16, the club will hold a reliability run from Reading to Philadelphia, to Easton, to Allentown and return to Reading, for club members.

A NEW WHISTLE.

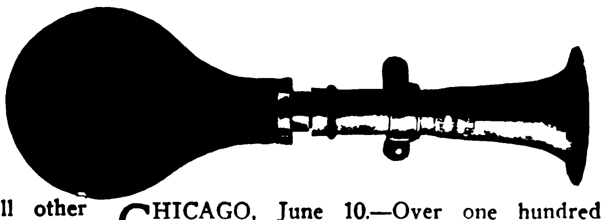
THE cut shown below is of a very efficient motorcycle whistle manufactured by the H. & H. Specialty Co., of Cainfield street, Newark, N. J. They are marketing it under the name of the Peerless Motorcycle Whistle, and certainly judging by the range and intensity of its sound it must evidently stand high among noise producers. It is operated by simply pulling a string which brings the wheel in contact with the rubber tire, the rotation of which pumps air into and through the whistle. The Peerless Motorcycle Whistle is easily fitted to any motorcycle, is substantially and durably made and, it is claimed, produces a whistling sound that can be heard half a mile. The marked success their bicycle whistle of a somewhat similar design met with, induced the H. & H. Specialty Co. to manufacture the motorcycle whistle.



A New Whistle.

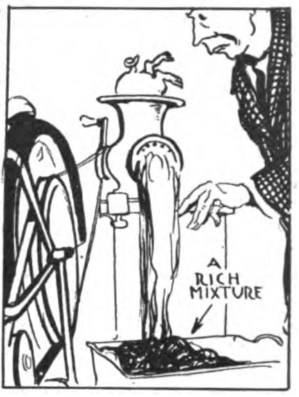
A WARNING TO HEED.

THOSE who desire a warning signal that can be heard above the heavy roar of traffic and that is decidedly new, will be pleased with the Acme Siren, which is imported by the Sarco Engineering Co., of Broad street, New York. Besides being extremely efficient it is practically indestructible, comprising a heavy gauge brass horn, nickel plated, and a large Para rubber bulb. The sound is produced by the quick revolving of a reed in the horn and ranges from a low melodious note to a piercing alarm dominating all other sounds. The horn is made in two sizes, 11 inches long by 2⅝ inches wide, and 16 inches long by 4⅜ inches wide. Prices and particulars to dealers will be submitted on request, and also a handsome small plate glass mirror will be sent free.



Chopping Meat By Motorcycle

JOSEPH H. ZIELINSKI, of 2856 North Hamlin street, Chicago, reports that he has been successfully using an Excelsior motorcycle for the last two years to operate a meat-chopping machine, and that the system has allowed him to cut down expenses. Zielinski uses his single-tracker for business trips about the city and into the suburbs and at other times hitches it to the meat chopper. He uses one long belt, running from the front pulley over the belt rim of the motorcycle and out to a driving wheel on the meat chopper. A smaller belt extends from the chopping machine to a fan placed beside the motorcycle which is trained on the motor to prevent overheating. Thus the same drive operates the chopper and assists in cooling the motorcycle engine. Zielinski states that he rigs up the machine with the chopper in a few minutes, and that he can turn out about 300 pounds of chopped beef per hour, a record not excelled by the best electrical motor-driven chopper of the same size on the market.



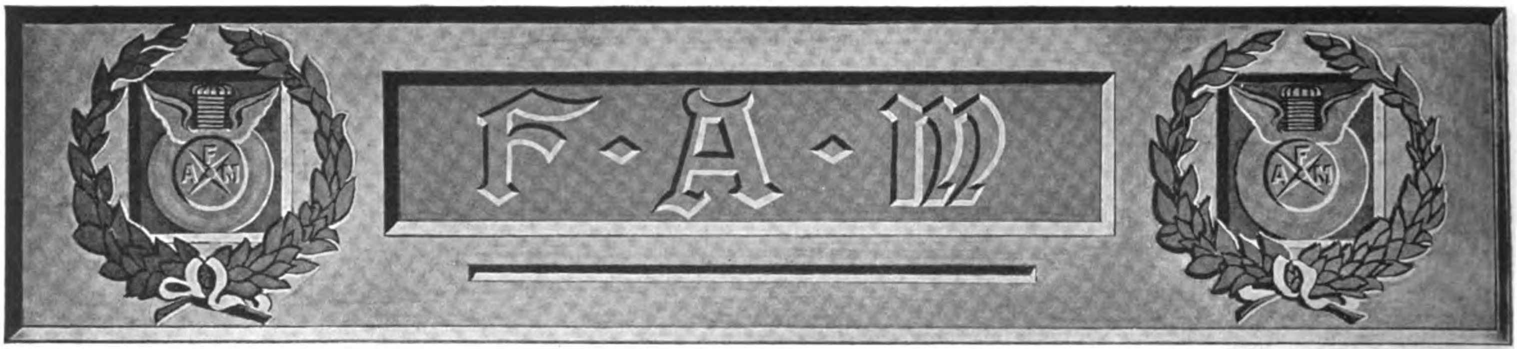
BAKER TO RIDE SAUCERS.

INDIANAPOLIS.—When the southwestern F. A. M. tour passes through Indianapolis on its way to Columbus, probably as many as forty or fifty riders will join the body and complete the tour. As Columbus is but a day's run from Indianapolis, the trip is expected to prove a popular one and Indianapolis will have a good representation.

Plans are being made by the Indiana Motorcycle Club and the National Athletic and Cycle Club of Indianapolis for entertaining the riders who make the first leg of the tour from Louisville to Indianapolis on July 15. Both clubs will give smokers and the tourists are promised a warm reception.

E. G. Baker, who is the southwestern tourmaster, will make his debut at Columbus in board track racink when he enters the national meet there. Baker has been a successful entrant in F. A. M. national meets for the last few years on dirt tracks.

CHICAGO, June 10.—Over one hundred motorcyclists met in pretty Palos Park yesterday to enjoy a club picnic given by the Englewood M. C. All riders were invited, irrespective of club connections, and all enjoyed the fete immensely. Many brought friends en-tandem.



ROBISON A LEADER

Baltimore Enthusiast Will Head Southeastern Tour on Trip to F. A. M. Convention in July.

WITH three of the four tourmasters chosen and one route planned in all its details, the 1912 F. A. M. national tours to the National Meet at Columbus, July 17-21, are beginning to take definite shape. J. A. Robison, 1810 West Mosher street, Baltimore, Md., will lead the tourists from Baltimore to Columbus, this being the Southeastern division. The tourmaster for the Northwestern division, which will run from Chicago to Columbus, has not yet been named, but this official will be selected without delay. As previously announced, the Southwestern tour will be led by Irwin Baker, of Indianapolis, and the Northeastern by Robert S. Morton.

Each tourmaster is expected to plan his route so that his riders will reach a town 40 or 50 miles from Columbus on the night of Tuesday, July 18. This will leave only a short trip for Wednesday morning, and will enable all of the riders to reach Columbus at practically the same hour, fresh and smiling. Each tourmaster is determined to make the ride one of real pleasure, and "have a good time" is to be the slogan of the tours. The speed is to be such that every rider, even an amateur, can easily keep up, and slow enough to guarantee that the ride will be one of pleasure and not work. If a rider cares to stop and enjoy the scenery at any point he may do so, and then continue whenever he is ready. He cannot exceed a certain speed, but, on the other hand, he will be permitted to travel as slowly as he desires. There will be no checking in. Each rider will be checked out every morning, and that will end his red-tape for the day.

Entry blanks will be sent to all F. A. M. members, and each tourmaster will have a supply. These blanks are to be filled in and mailed by the riders to the tourmaster of the tour in which they expect to participate. The tourmaster will hold these entry cards and will thus know just when and where each rider will join. When a rider joins, his card will be O. K.'d and returned to him. He will present it to the tourmaster each morning for another O. K., and will thus have proper credentials when he arrives at Columbus.

Secretary Gibson, of the F. A. M., will have a temporary office at the Hotel Virginia in Columbus, and, as at Buffalo last year, he will be glad to receive and hold baggage for F. A. M. members who wish to send it on ahead while they ride to the convention city.

E. M. Estabrook, chairman of the F. A. M. membership committee, has announced that he has four Old Sol lamps, to be given to the four clubs having the largest number of members in the tours at the finish.

NEW BOSCH TROPHY

Handsome Cup Will be Awarded to Rider Making Best Average Showing at F. A. M. Meet.

ALTHOUGH full details of the offer are not yet ready for announcement, Advertising Manager A. H. Bartsch, of the Bosch Magneto Company, states that a handsome trophy will be offered by the company to the rider who makes the best average showing in the F. A. M. races at the annual convention. A cup was awarded by the well-known magneto house under similar conditions at the 1911 meet and Frank Hart carried it off. Later it was stolen from the window of a tire company's headquarters in New York where it was on display, and no clue has since been obtained to its whereabouts. Under the conditions the Bosch company is undecided whether to make the new trophy a reproduction of the cup which was so stolen, or to follow another design. A decision will be arrived at without delay and a formal statement of the company's proposition will then be made.

The Bosch trophy has "no strings on it," as the saying goes; it will be a valuable and conservative donation to show the Bosch company's appreciation of the winning rider's efforts, and the speedster who piles up the greatest number of points during the Federation meet at Columbus will become its owner without further questions or qualifications.

CLUB WINNERS FOR MAY.

CHAIRMAN ESTABROOK announces that eighteen clubs affiliated with the F. A. M. during the month of May, those standing highest in membership being the Humboldt M. C., of Chicago; the Evansville (Ind.) M. C., and the Bound Brook (N. J.) M. C. Accordingly these squads will receive the Old Sol prize lamps for May, two going to the Humboldt club, with its 46 members; one to the Evansville organization, 42 members, and one to the Bound Brook club, which brought in 21 riders.

In addition to the clubs just mentioned the Cream City M. C., of Milwaukee, and the Motorcycle Touring Club, of Philadelphia, are new arrivals in the Federation ranks. The former was affiliated with 21 members and the latter with 12. The Humboldt and Bound Brook clubs are on a 100 per cent. basis in the F. A. M.

ORGANIZATION TIMBER.

FIVE more enthusiasts have notified Chairman Estabrook that they are sowing club seed in their districts and that early crops may be expected. They are H. G. Freck, of Convoy, Ohio; Leo M. Brushingham, 438 N. Eighth street, Olean, N. Y.; R. A. Fogg, of Bridgton, N. J.; E. C. Cumbie, 106 S. St. Andrews street, Dothan, Ala., and William M. Johnson, 5209 Lakewood avenue, Chicago.

FIGURES TELL THE STORY

Secretary Gibson's Statistics for May Show a Total of 986 New Members—Indiana Sets the Pace.

F. A. M. MEMBERSHIP statistics for May have been compiled by Secretary Gibson as follows: New members, by districts—New England, affiliated, 35; unattached, 18; renewals, 35; Atlantic, affiliated, 210; unattached, 60; renewals, 104; Peninsular, affiliated, 18; unattached, 19; renewals, 9; Lake, affiliated, 341; unattached, 71; renewals, 124; Gulf, affiliated, 10; unattached, 3; renewals, 8; Central, affiliated, 52; unattached, 5; renewals, 23; Southwestern, affiliated, 63; unattached, 14; renewals, 35; Pacific, affiliated, 34; renewals, 11; Canada, affiliated, 9; renewals, 1; Insular, affiliated, 18. The total number of attached riders taken in during the month was 790; the unattached members numbered 196, and the renewals footed up to 250.

This expansion was contributed to by the various States as follows: New Hampshire, 2; Massachusetts, 36; Rhode Island, 6; Connecticut, 9; New York, 90; New Jersey, 76; Pennsylvania, 66; Maryland, 14; Virginia, 2; West Virginia, 14; District of Columbia, 8; Ohio, 113; Indiana, 125; Illinois, 118; Missouri, 10; Wisconsin, 23; Michigan, 23; South Carolina, 2; Tennessee, 3; Georgia, 20; Florida, 13; Arkansas, 1; Louisiana, 6; Texas, 3; Kentucky, 2; Oklahoma, 1; Minnesota, 8; Nebraska, 11; Iowa, 14; California, 73; Colorado, 4; Montana, 9; Idaho, 3; Oregon, 8; Washington, 19; Canada, 9; Philippine Islands and Panama, 18.

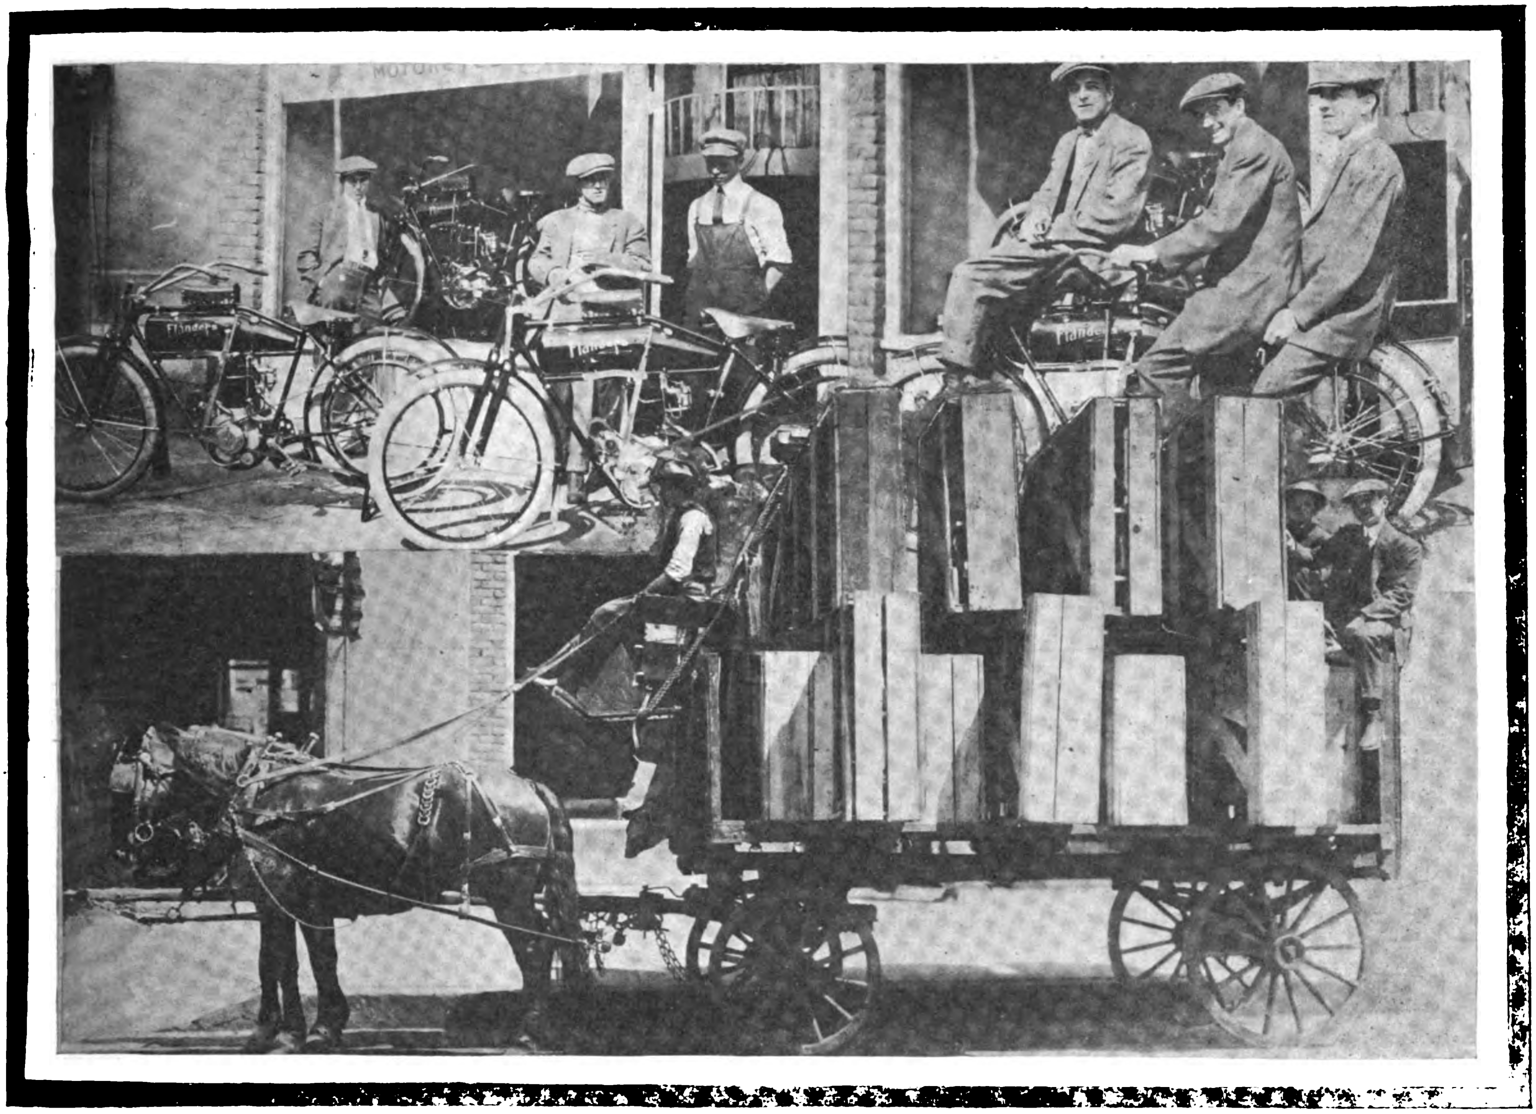
Seventeen clubs affiliated with the F. A. M. during May as follows: Santa Cruz, Santa Cruz, Cal., 15; Red Bank, Red Bank, N. J., 14; Kings County, Hanford, Cal., 15; Hobart, Hobart, Ind., 6; Galion, Galion, Ohio, 16; Aksarben, Omaha, Neb., 5; Somerville, Somerville, N. J. 18; Evansville, Evansville, Ind., 42; Fulton, Fulton, Ind., 17; Portsmouth, Portsmouth, Ohio, 18; Martinsburg, Martinsburg, W. Va., 14; Cream City, Milwaukee, Wis., 20; Warren, Warren, Pa., 12; Panama Canal, Canal Zone, Panama, 18; Motorcycle Touring, Philadelphia, Pa., 11; Bound Brook, Bound Brook, N. J., 21; Humboldt, Chicago, Ill., 46.

OHIO IN THE LEAD.

OHIO recently forged ahead of New York in point of F. A. M. membership and is now the premier State for Federation riders. Latest reports from Secretary Gibson show that Ohio's lead is about 50 over the brigade in the Empire State.

ON THE REGISTERED LIST.

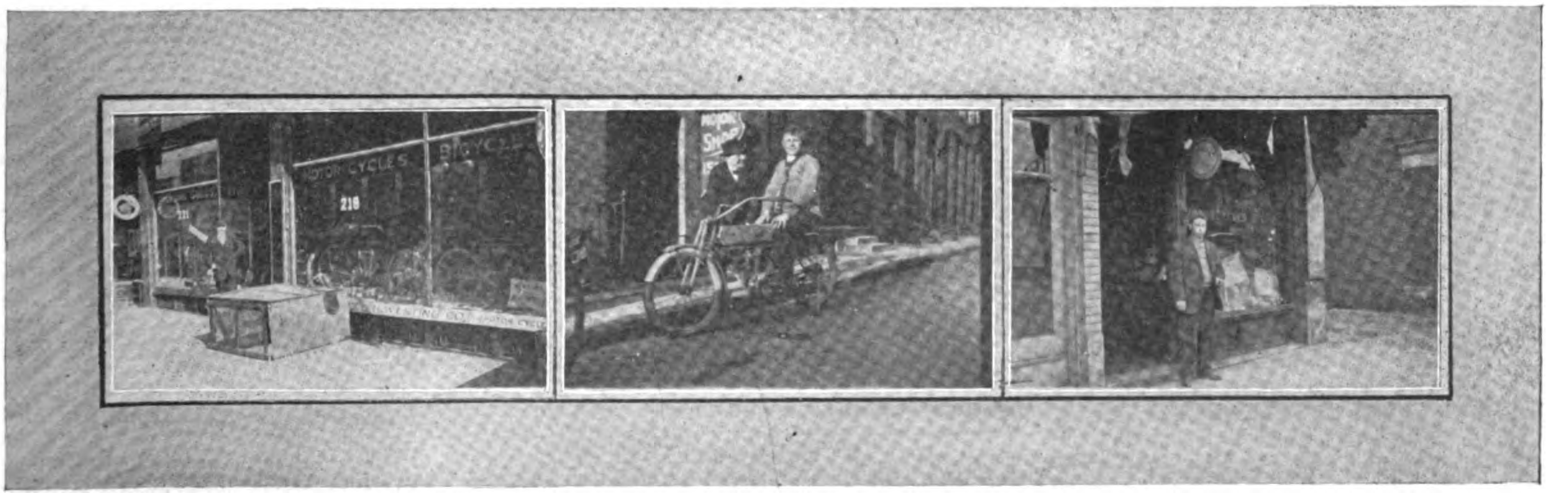
J. L. QUINN, 233 Franklin street, Michigan City, Ind., and the C. A. V. Kendall Cycle Co., of Edgar, Neb., recently placed their shops on the F. A. M. registered list.



ARTHUR CHAPPLE, well known in the ranks of professional motorcycle speedsters, has been traveling the Middle West in behalf of the Flanders Manufacturing Company for some time past, and that he has allowed none of the proverbial grass to grow under his feet is evident from the accompanying photographs. "Chap" went out to Denver recently to boost Flanders sales in a district where the Pontiac product had not been systematically introduced and in a week he had launched a rapid-fire campaign. Instead of taking only a few machines, enough to supply each representative with a demonstrator, Chapple was backed up by a carload of Flanders 4's, and one of the accompanying pictures shows the machines arriving in the Mile-High City. The other photograph shows the headquarters opened by Chapple for the purpose of handling the carload shipment and serving dealers of the vicinity promptly.

"Chap" remarks that his system of selling machines during the winter and riding them during the summer months has worked out to perfection, and he is of the opinion that he "has something" on the other Eastern boys who must jump to the Pacific coast or take up shop or factory work when wintry winds close the Eastern tracks.

WITH the revival of motorcycling in France, brilliant scarlets and yellows figure in enamels for two-wheelers.



Three Indianapolis Trade Leaders: H. L. Dipple (Harley-Davidson); Gus Habich (Thor and Excelsior); G. H. Westing (Indian).

NATIONAL SHOW CIRCUIT

Promoters from Eleven Cities Held Conference and Arranged Schedule for 1913 Motor Exhibitions.

MOTORCYCLE manufacturers and riders, as well as automobile magnates, will be interested in the announcement that the recently proposed scheme for a national show circuit has been approved by promoters in eleven cities. As in the past, the two national exhibitions will be held in New York and Chicago, the New York show being scheduled for January 11-18, and the Windy City display February 1-8. The other shows will be local exhibitions, but will have the backing and co-operation of the Automobile Board of Trade. The schedule for 1913, as approved at a recent conference of promoters in New York, is as follows:

Cleveland, January 4-11; New York, January 11-18; Philadelphia, January 20-25; Detroit, January, 27-February 1; Chicago, February 1-8; Minneapolis, February 10-15; Kansas City, February 17-22; St. Louis, February 24-March 1; Pittsburgh, March 3-8; Boston, March 8-15; Buffalo, March 17-22.

DUFFIELD-McCHESNEY.

MUIR B. DUFFIELD, secretary of the recently formed Triumph Mfg. Co., was married on June 5 to Miss Ruth McChesney, of Detroit. Immediately following the ceremony Mr. and Mrs. Duffield left on a wedding trip to the Pacific coast. They will return about June 20, as the pressure of business incident to launching the new Triumph necessitates Mr. Duffield's presence at the factory.

A WATSONVILLE BOOMER.

O. W. HUNSUCKER, who handles Excelsior and Flanders machines at Watsonville, Cal., and who has been in the motorcycle business for several years, has recently taken on the agency for the Regal automobiles. Hunsucker reports that he has not been able to supply the demand for motorcycles this year.

READY FOR A SPIN.

IN the accompanying photograph W. T. Marsh, of the American Motor Company, of Brockton, Mass., appears with his two children, ready for a Sunday morning spin. The facial expressions of the youngsters tell the story of their enthusiasm too clearly to necessitate comment in this direction, and as for Mr. Marsh, he has excellent reasons for believing that no rider can occupy the saddle of an M. M. twin without a feeling of satisfaction. As a result the little family party is at peace with the world.

ANOTHER U. S. PLANT

United States Tire Company Plans Increase In Capital and Erection of Mammoth Factory.

ALTHOUGH the United States Rubber Company, through the United States Tire Company, is operating four immense tire plants at the present time, plans are under way for the erection of still another plant, which, when completed, will have the greatest output of any factory of its kind in the world, say the company officials. This announcement has been made by President Samuel P. Colt, of the United States Rubber Company, in connection with a plan to increase the capital stock of the company from $75,000,000 to $120,000,000. Details regarding the new tire plant will be forthcoming in a short time.

The factories operated by the United States Tire Company at present are located in Hartford, Conn.; Detroit, Mich.; Providence, R. I., and Indianapolis, Ind. These big plants have a daily output of tires running into the thousands.

"The proposed new factory," says J. M. Gilbert, general manager of the United States Tire Company, "will increase our output about 5,000 tires daily. At the present time, by working three eight-hour shifts in all of our plants and utilizing every available bit of our equipment, we are barely able to take care of the trade. The number of cars and motorcycles in operation is increasing very rapidly, and the demand for tires is bound to grow."

TWO TWIN MODELS.

EXPERTS of the Davis Sewing Machine Company, of Dayton, Ohio, are at work on designs for two motorcycle models, 7 and 9 h. twins, which they intend to produce for the 1913 season. It is stated that the company counts upon turning out about 2,500 motorcycles for the coming year, and is to start deliveries in the fall of 1912. Spacke motors are to be used.

MORE THAN DOUBLED.

W. A. JOHNSON, of the Pierce Cycle Co., reports an increase of 150 per cent. in the company's business for May over the corresponding period in 1911. Improved designs are now in hand for the 1913 output, and it is the intention to increase manufacturing facilities by 50 per cent.. This will permit of marketing at least 3,000 machines, both single and four-cylinder types.

DEMAND FOR MOTORCYCLES.

THE Elko Auto Company, of Elko, Nev., is contemplating putting in a standard line of motorcycles. The company states that there has been an extraordinary demand for motorcycles in their section of the country, and that the motorcycle business has increased in Elko over 100 per cent. in the last year.

SETTING A HOT PACE.

McFARLAND & DISDEN, local agents at Watsonville, Cal., for the Indian, are selling all the machines they can get. They report a wonderful outlook in their section of the State.

BENTE & BAUMGARTNER, agents in San Francisco for the Excelsior, have disposed of all the machines of their first shipment from the factory that reached there about May 5.

Harold Turner, Newly Appointed Sales Manager of the Minneapolis Motorcycle Company.

WILL NEED EXTENSION.

T. W. HENDERSON is responsible for the statement that if sales of the Henderson four continue to increase at the present rate it will soon be necessary to double the size of the company's new factory, which now has a capacity of 2,500 machines a year. Robert Wheat has been taken on by the Henderson company as a traveling representative to cover New York and New England. He was formerly associated with Mr. Henderson in the automobile field.

BIG TWIN IN DEMAND.

THE Motorcycle Sales Company, 623 Lackawanna avenue, Scranton, Pa., recently received its first shipment of the new Harley-Davidson 8 h. chain-drive twins. The Scranton company has sold many machines to the letter carriers of the city for urban use as well as R. F. D. routes.

WAITING FOR MORE.

POWELL BROTHERS, who handle the Harley-Davidson in San Jose, Cal., have disposed of all the machines they have received from the factory and are awaiting for additional shipments. This company has recently moved into a fine new store.

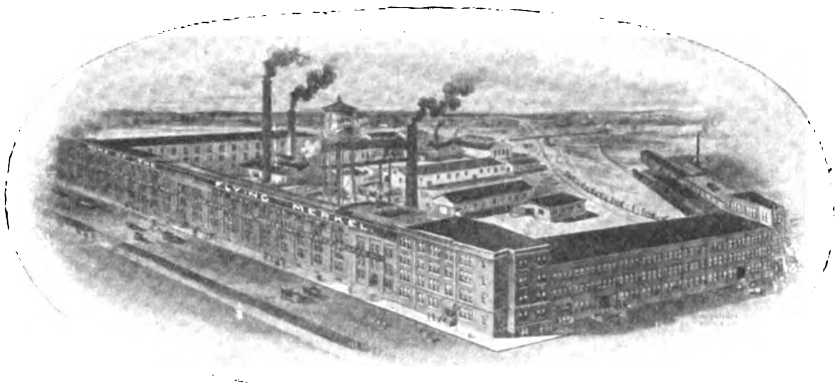
REGISTERED SHOPS.

SIX repair-shop owners took out certificates of registration with the Federation during the week ending June 8, as follows: Zilbermann & Fogarty, 924 Canal street, New Orleans, La.; J. A. Muenzer, 431 San Benito street, Hollister, Cal.; Louis L. Luce, 522 I. street, Hoquiam, Wash.; Barna & Ziesemer Co., 1114 Douglas avenue, Racine, Wis.; Bauer-Jackson Auto Co., 126 LaFayette street, Utica, N. Y.; Carl F. Goudy, Fairbury, Ill.

TWO rural mail carriers out of Oglesby, Tex., are now making their deliveries on a 25-mile route in two hours and a half.

BIG MIAMI EXTENSION

Ground Will Be Broken at Once for Structure to Cost $250,000 and Double Capacity.



A CONTRACT for the erection of a large extension to the plant of the Miami Cycle & Mfg. Co., at Middletown, Ohio, was awarded a week ago, and work is to start without delay. The new structure will practically double the capacity of the plant, with regard to Flying Merkel motorcycles as well as Racycle and Hudson bicycles and Musselman coaster brakes. The contract calls for the completion of the building on or before September 1, so that the company will have sufficient time to prepare for its greatly increased 1913 output. The extension will have 55,000 square feet of floor space, and is to be of reinforced concrete construction.

In the front of the new building on the first floor will be located the company's general offices. This section will have a frontage of 85 feet and a depth of 50 feet, and will be four stories in height. The executive offices and the accounting and purchasing departments will be on the ground floor, while the second floor will be given up to the sales and advertising departments, the superintendent's and timekeeper's offices and the production department. A new feature of the sales department will be a sales room where a complete line of the company's products will be given an attractive display. On the third floor of the office section there will be a finished stock room, and the fourth floor will be devoted to the experimental and draughting departments.

The factory extension will be 185 feet long over all, 60 feet wide and three stories high. To facilitate the handling of material from floor to floor a number of electric elevators will be installed and two new automobile trucks will be put into service to facilitate shipments. A garage for these trucks has just been completed on the company's property. It is estimated that the total outlay for the new structure will be $250,000.

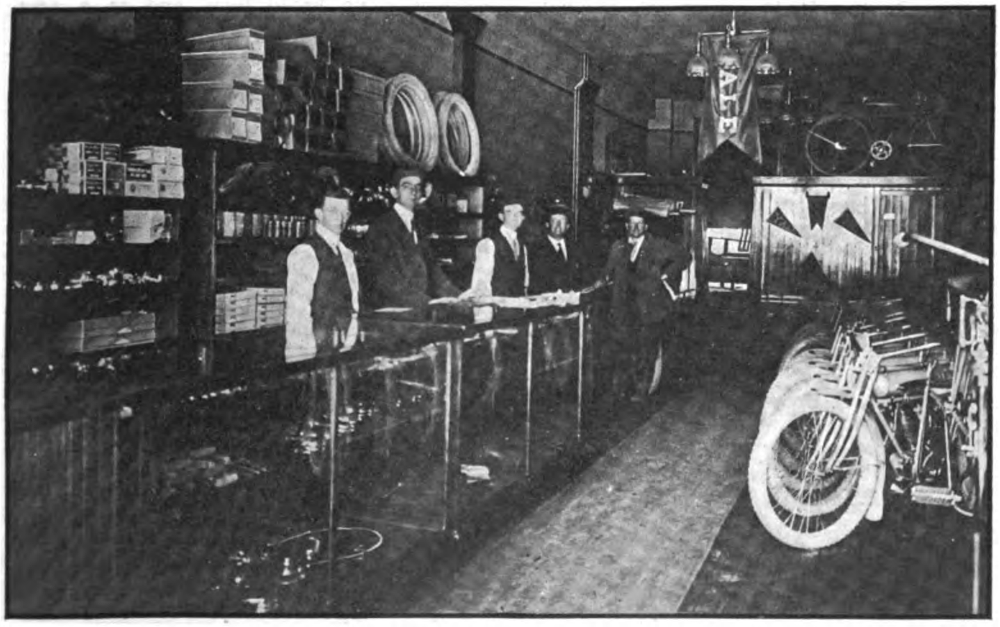
MANUFACTURERS IN BUSY SESSION

M. M. A. Hears Report on Freight Rates, Decides on Trophy for F. A. M. Meet and Discusses 1913 Shows—Coffman Scores Hit as Host.

SEVERAL matters of special import engaged the attention of the Motorcycle Manufacturers' Association at its meeting in Toledo, Ohio, on June 5, and fifteen factory representatives participated in a lively business session before taking up the social program arranged for them by President A. B. Coffman, in whose honor the meeting was slated for the Ohio city. The session was to have been held at the Hotel Secor, but as the Democratic convention was being held in the city on June 5 it was found advisable to accommodate the manufacturers at the Toledo Club, where they found ideal arrangements:

Those who answered roll call were: A. B. Coffman, Consolidated Mfg. Co.; E. J. Knight, of the Thor staff; J. W. Ash, of the Miami Cycle & Mfg. Co.; W. G. Schack, representing the Emblem interests; Arthur Davidson, of the Harley-Davidson Motor Co.; H. M. Musselman, traveling representative for the Pope Mfg. Co., and J. F. Cox, also of the Pope staff; A. J. McCullom, New Era; Edward Buffum, from the Hendee Wigwam; W. F. Remppis, Reading-Standard; Don C. McCord, Flanders; W. A. Johnson, Pierce representative; S. A. Falor, of the Goodyear staff; J. T. Welch, of the United States Tire Co., and H. T. Roberts, who is now operating his own accessory sales business in Chicago.

The meeting was called to order at 10 a. m., and about two hours later the business schedule had been disposed of. The traffic committee of the association reported that the Interstate Commerce Commission had acknowledged receipt of a petition requesting an adjustment for lower freight rates in the territory east of the Mississippi river, and had advised the carrying companies in the district mentioned to satisfy the complainants or submit answers in writing. Then followed a general discussion relative to the national tours to the coming F. A. M. convention. It was decided that a standard medal shall be awarded to every rider who checks out at the starting point on the last day of the run to the convention city and who finishes the trip by checking in at Columbus. Arrangements were also made to award an M. M. A. trophy for the winner of the 5-mile amateur race in the Federation meet. This prize must be carried off three times in succession by a contestant at the annual F. A. M. championships before it becomes his permanent property.



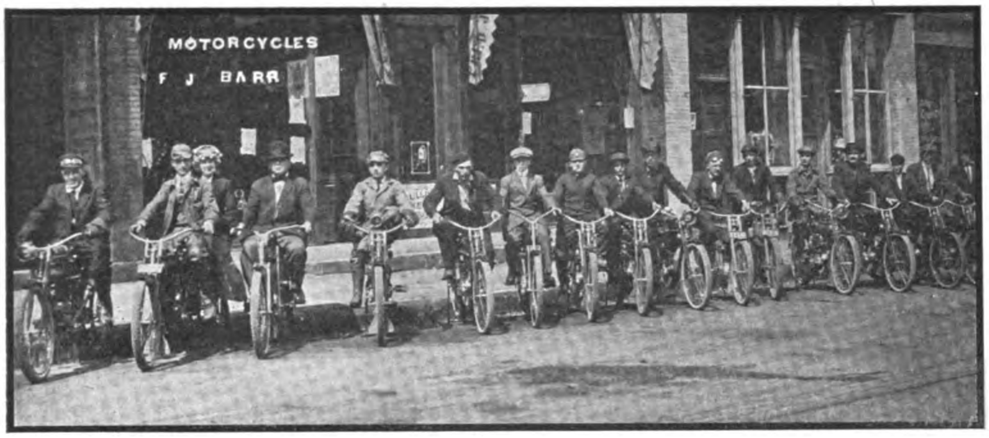
Retail Store, in Toledo, of the Consolidated Manufacturing Company.

Secretary J. F. Cox was authorized to obtain detailed information relative to the proposed exhibition of motorcycles at the Panama Exposition, to be held in San Francisco in 1915, in order that data may be submitted to the members at the next session of the association.

Letters from mayors in many of the larger cities throughout the country were on hand to the effect that everything possible will be done to co-operate with the M. M. A. in discouraging the use of the muffler cut-out. When reference was made to plans for the next national shows in New York and Chicago Secretary Cox reported that the sentiment of the manufacturers appeared to be against independent motorcycle exhibitions, if proper consideration can be obtained from the automobile show promoters.

The Triumph Mfg. Co., recently organized to produce the Triumph motorcycle, was admitted to membership in the association.

After enjoying luncheon, with President Coffman as host, the manufacturers were escorted by him on an automobile trip to Maumee, Waterville, Petersburg, Fort Meigs and return. At Fort Meigs the boosters left their automobiles long enough to have photographs taken and then continued the trip, arriving back in Toledo at 4:30. From that time until 6:30 the members called on their dealers in the city, and the program closed with a dinner tendered by Mr. Coffman. Shortly after 8 p. m. the visitors were ready to leave for their home cities.



A MERKEL SQUAD.

DAVENPORT, Iowa, is not without its squad of motorcycle enthusiasts and that the Flying Merkel contingent is well to the fore is evident from the accompanying photograph, taken in front of Fred J. Barr's establishment. Barr is the Merkel agent in Davenport, and prior to a recent Sunday run the boys lined up at his headquarters long enough for the camera man to snap a picture.

READING STANDARD SALES.

PHILADELPHIA, PA.—The Reading-Standard Motorcycle Company, located at Broad street and Susquehanna avenue, reports business to be one hundred per cent. better this year than in 1911. The company has recently received an order from the United Gas Improvement Company for eight new machines, and an order from the Keystone Plumbing Supply Company, which intends to equip all its salesmen with motorcycles. The Philadelphia Electric Company recently ordered ten more Reading Standard machines which will make fifty they have in use.

BRACKER'S WAITING LIST.

W. F. BRACKER, agent at San Jose, Cal., for Excelsior motorcycles has disposed of all the machines he has received from the factory and has a waiting list of fifty-five. Since the first of the year Mr. Bracker has enlarged and modernized his shop and has employed a number of expert workmen in the mechanical end of the business. William Lee has been placed in charge of the Bracker sales department.

TAKES YALE AGENCY.

BURNET C. COGEL, formerly in the motorcycle business in Minneapolis, Minn., has moved to Red Wing, Minn., where he has accepted the agency for the Yale motorcycle and will push its sale not only in Red Wing, but in the surrounding territory, as well as in Dakota, Wabasha and all points in Goodhue county, for which he has exclusive selling rights. He received his new demonstator a few days ago.

RAPID INSTALMENT SALES.

SELLING motorcycles on the instalment plan is the latest scheme of C. T. Peterson, owner of the Peterson Cycle Hospital, and agent for the Pierce and Iver Johnson motorcycles in Minneapolis, Minn. The plan has never been tried before in the Twin Cities, and Mr. Peterson reports a brisk sale of machines. He is the maker of the famous Coyote bicycles which are known throughout the Northwest.

S. E. NORTNER, 127 Western avenue, has taken the agency for the Pope in Minneapolis, Minn.

NEW GOODYEAR BRANCHES.

THE Goodyear Tire and Rubber Company, of Akron, Ohio, now has sixty-six direct factory branches in the United States and Canada. The Goodyear company occupies up-to-date and elaborate quarters in most of the large cities where its branch houses have been established, and a uniform plan of construction has now been adopted both in the exterior and the interior. The Philadelphia (Pa.) branch house is looked upon as one of the most modern tire branch houses in the country.

A new building is being erected in Detroit, Mich., on Jefferson avenue, and new Goodyear quarters are being prepared in New York, Boston, Chicago and other large cities. The Detroit building is a five-story structure, 198 by 47 feet, and contains 200 windows. It is being built of white stone and red pressed brick.

NEW HENDERSON AGENTS.

THE Henderson Motorcycle Co. has recently added the following to its list of agents: Gray Motorcycle Co., of Seattle, Wash.; Inland Motorcycle Co., Spokane, Wash.; Rowe Bros., Aberdeen, Wash.; Neal, Clark & Neal, Buffalo, N. Y.; W. H. Vandeveer, Wilmington, Del., and the Miller Bros. Auto Supply House in Washington, D. C. Rowe Bros. have already placed an order for six Henderson machines to be used in Aberdeen, Wash.

TO NAME COAST AGENTS.

A FACTORY representative of the Henderson Motorcycle Company, of Detroit, was recently in San Francisco for the purpose of securing an agent for the Henderson in that city. It is understood that no definite arrangements were made, but the company will place an agent in 'Frisco within the next two months. It is the plan of the Henderson company to have a coast distributor and agents in Los Angeles, San Francisco, Sacramento and several other cities in California.

NEW WAGNER AGENCY.

THE Wagner Motorcycle Company announces that the agency for their machines in Porter, Minn., has been taken by Speight Bros., who are in a general motorcycle and bicycle repair business at that place.

SWENSON'S NEW QUARTERS.

B. A. SWENSON, of Providence, R. I., opened his new motorcycle headquarters on June 8 in the building he recently completed at Broad, Blackstone and Friendship streets, and hundreds of motorcyclists of Providence and vicinity took advantage of the well-known dealer's invitation to drop in for an inspection of the establishment. No expense has been spared in the equipping of the quarters, and every department evidences the care and thoroughgoing methods which have long been recognized as fundamentals of Swenson's business policy. The Providence M. C. will occupy rooms over the store, which have been fitted by Swenson in keeping with the special requirements of the club.

LIVELY JANESVILLE FIRM.

TWO motorcycle boomers of the new school are H. H. McDaniel and A. W. Dunwiddie. of the McDaniel Co., Harley-Davidson agents in Janesville, Wis. These enthusiasts have registered their shop with the F. A. M., and when not busy with a rapidly growing trade they are preaching the Federation doctrine throughout their district. They are also to the fore when the riders of their city arrange a road or track contest. For the races held by the Janesville M. C. on May 30, McDaniels acted as manager and Dunwiddie as clerk of the course.

TIED UP BY STRIKE.

ST. PAUL (Minn.) motorcycle dealers have been greatly disturbed the past two weeks over the freight handlers' strike which has been going on in the Midway district. Freight is at a standstill and pretty nearly every agent in the city is behind on deliveries of machines because of it. Minneapolis agents are in the same fix and are being besieged every day with the question, "When is my machine going to be delivered?" Railroad men refuse to allow anybody to handle the freight but the regular employees, and agents are wondering what they can do.

A FULL-FLEDGED BOOSTER.

IN Austin W. Burges, of 1103 Capitol avenue, Houston, Texas, the Lone Star State has a motorcycle dealer who is doing his full share to advance the cause of the power two-wheeler along broad lines, and as a result motorcycles are rapidly coming into their own in his district. Burges is Indian distributor for southern Texas, and when he feels inclined to make an announcement he does not hesitate to use a full page of newspaper advertising. In addition to the Wigwam line he carries a full stock of parts and accessories.

RUN DOWN BY TEAM.

FRED BENTE, of Bente & Baumgartner, agents for Excelsior motorcycles in San Francisco, broke his leg in an accident recently. Mr. Bente was trying out a machine when he was run into by a team and thrown against the curbing. Mr. Bente has been in a hospital for several weeks, but has almost fully recovered.

PAST CENTURY MARK.

A. C. BANTA, the energetic Indian agent of San Jose, Cal., has so far this year disposed of 103 motorcycles. San Jose is one of the best motorcycle cities in the State, owing to the very good roads in that vicinity, and to the fine weather that usually prevails.

Harley-Davidsons

won first and third in both single and twin classes in the big 90 mile Decoration Day road race from Colorado Springs to Pueblo and return.

TWIN CYLINDER CLASS

FIRST—A. W. Stratton, Harley-Davidson, Time 1:54

(Average speed 47.4 miles per hour)

SINGLE CYLINDER CLASS

FIRST—G. Luby, Harley-Davidson, Time - - 2:03

(Average speed 43.9 miles per hour)

In the twin class, out of 13 starters, only 5 finished. This gives some idea of the poor condition of the roads on which Stratton averaged 47.4 miles per hour—the fastest road race of this length on record.

The Harley-Davidsons were STOCK

JULESBURG TO BUTTE.

J. P. McDOWELL.—From Julesburg go to Ovid, Sedgwick, Crook, Proctor, Iliff and Sterling; next to Atwood, Merino, Mill Rose, Brush, Hardin, Orchard, Goodrich, Weldona and Fort Morgan. From there go to Greeley, then to Lucerne, Eaton, Ault, Pierce, Nunn, Dover, Carr, and then to Cheyenne, Wyo. Distance, Julesburg to Sterling, 62 miles; Sterling to Brush, 42.3 miles; Brush to Fort Morgan, 9.5 miles; Fort Morgan to Greeley, 56.5 miles; Greeley to Cheyenne, 60.2 miles. From Cheyenne go next to Manassa, then to McPhees Crossing, Islay, Horse Creek P. O., Altus, Iron Mountain, Jordan, Diamond, Chugwater, Bordeaux, Gibson, Wheatlands, Uzz Uva, Buckhorn, Hartville Junction, Badger, Cassa, Glendo, Foxton, Guthrie, Labonte, Douglas, Fetterman, Inez, Careyhurst, Glenrock, Big Muddy, Strouds and Casper.

From Casper go next to Cadoma. Hobart P. O., Powder River, Wolton, Richards, Moneta, Lost Cabin, Depass, Glance, Thermopolis, Arapooish, Kirby, Winchester, Neiber, Colter and Werland; then on through Wellington, Alamo and Basin. From Basin follow the Missouri River railroad to Sheep Mountain and keeping in the same wagon road go on to Lovell. From Lovell go to Cowley Station, Byron, Penrose, Garland and Frannie. From Frannie go to Scribner, Mont. Continue on to Bowler, then to Fromberg and Absaroke, Columbus, Merrill, Reedpoint and Big Timber, following the line of the Yellowstone river. From Big Timber go to Hunters Hot Springs, then to Livingston and Boseman; from there go to Central Park, Manhattan, then to Three Forks of Missouri river. From the latter place go on to Cold Spring and Whitehall. From Whitehall go next to Cedric, Grace, Donald, Penfield, Jonney and Butte. We cannot give the mileages, but you will run over all kinds of roads except macadam and asphalt, with dirt predominating and some alkali.

FEDERAL DISTRICT RIDING.

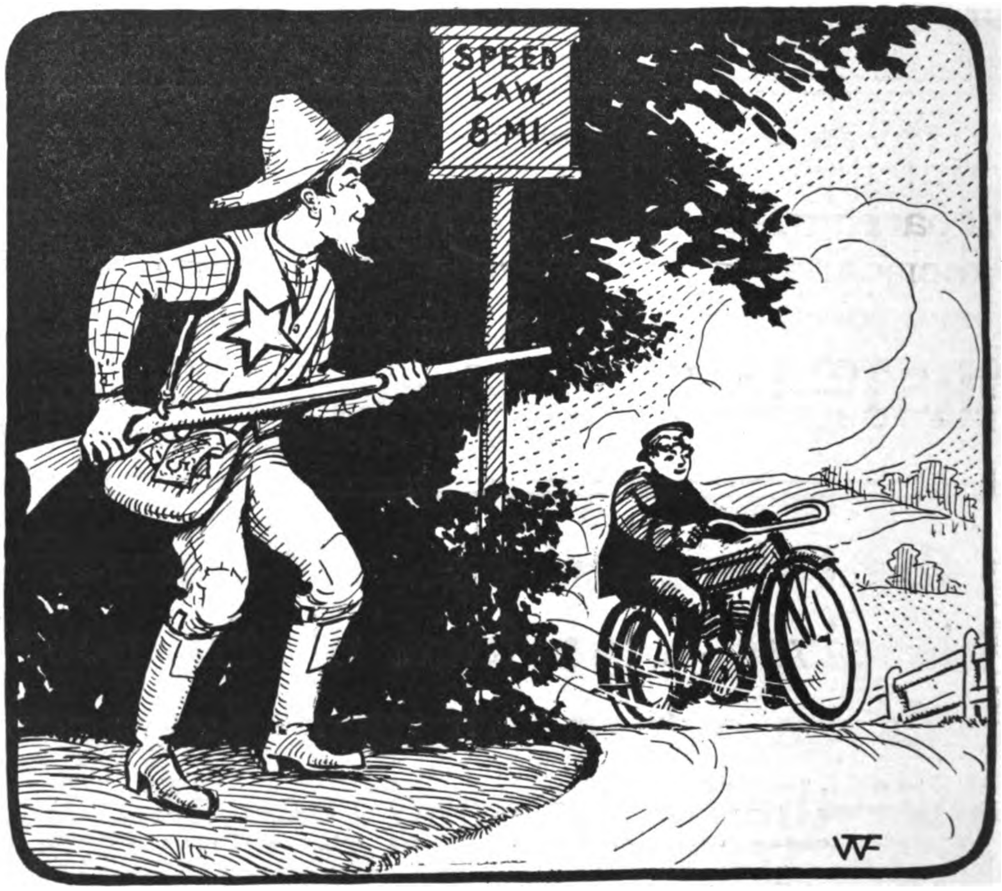
R. T. PHILLIPS—According to our latest information, as an Ohio rider you will be exempt for 10 days in Washington and the Federal District. No passenger-attachment for the machine is at present permitted; this applies to tandem, tank-seats, etc. Passenger carrying is forbidden and sirens and whistles are prohibited. For registration annually, apply to the Automobile Board, Washington. The fee is $2. Examination must be passed before the local board. All sections of the motor vehicle laws are enforced, therefore ride solo only.

LOS ANGELES TO SALT LAKE.

W. A. and L. H. VanBuren, two Pierce riders of Salt Lake City, Utah, recently completed a severe trip from Los Angeles to their home, going by way of Saugus, Palmdale, Mojave, Olanche and Big Pine, Cal.; Tonopah and Ely, Nev.; and Milford and Provo, Utah. The trip totaled 1,000 miles, about one-quarter of the distance being through sand. Mountains were crossed, creeks were forded and at several points the natives informed the riders that motorcycles had never before been seen in their districts. The VanBurens mounted 1910 models and were not compelled to tinker with them on the road except to grind in the valves. They had many falls, but were always able to continue riding. Fourteen gallons of gasoline were used on the journey, so that the route was covered at the rate of about 71 miles to the gallon. In view of their success on this trip the VanBuren's are planning to make other runs into little-known territory.

TOURISTS FROM HARRISBURG.

BALTIMORE, Md.—D. L. Ruker and J. D. Harbold, of Harrisburg, Pa., dropped into town on Friday, May 31, on their way to Atlantic City. They left their home town on Wednesday and went to Washington by way of Chambersburg, Shippensburg, Hagerstown and Frederick. They said they found the roads in bad shape, but were able to make fair time. They ran over from the capitol to this city on Friday and took the boat from here for Philadelphia, arriving in the Quaker City early Saturday morning. They proceeded to the City-by-the-Sea at once, spent the day and night there and returned home by way of Philadelphia on Sunday.



This Form of Game-Hunting is Very Popular in Rural Districts.

ASHLAND, PA., TO FREDERICK, MD.

HARRY M. DUSCH.—From Ashland go to Gordon (Schuylkill County), then to Buckley, Newcastle and Broad Mountain. From thence go to St. Clair and Pottsville. Roads rather poor and mountainous, distance about 25 miles. From Pottsville go to Seven Stars, Cressona, Adamsdale, Landingville, Auburn, Port Clinton, Hamburg, Five Locks, Mohrsville, Leesport, Berkley, Muhlenberg, and Reading. Distance 38 miles, fair to good hilly roads with some clay.

From Reading go next to Douglassville, Pottstown, Limerick, Collegeville, Fairview, Barron Hill, North Philadelphia Station, and then City Hall, Philadelphia. Distance, 57 miles, practically all macadam route. From Philadelphia go to Baltimore, following route 63 to Havre de Grace, Md.; then to Baltimore as follows: Havre de Grace, Churchville, Belair, Towson, Woodbrook Station, and Baltimore. The distance from Philadelphia to Baltimore is 108.4 miles. From Baltimore to Frederick, follow route 80; the distance is 47.5 miles. Total distance, Ashland to Frederick, about 228 miles.

Who recommended your lubricating oil? *That is vital*

Motorcycle lubricants are like motorcycle parts.

They must fit the machine they are used on.

The correct oil can't be determined by simple tests. Most motorcyclists must depend on advice.

Dealers who handle Gargoyle Mobiloil can give you the specific recommendations of the Vacuum Oil Company—the recognized leaders in lubrication.

We supply them with a guide chart (printed on the right). The chart was prepared after a careful analysis of every American motorcycle and practically every foreign make. It will show you the correct grade of lubricating oil for your machine (summer and winter).

GARGOYLE

Mobiloil

A Grade for Each Type of Motor

In power-engineering circles these recommendations from us would be accepted as authoritative. You may feel assured that, in quality, the oils specified on the chart set a world standard.

They are put up in barrels, half-barrels, and in 5 and 1 gallon sealed, white cans.

The oils for motorcycle use (refined and filtered to remove free carbon) are named:

Gargoyle Mobiloil "A"
Gargoyle Mobiloil "B"
Gargoyle Mobiloil "Arctic"

All are branded with the Gargoyle, which is our mark of manufacture.

This list shows the right oil for your motorcycle.

Explanation: In this schedule the letter opposite the name of motorcycle indicates the grade of Gargoyle Mobiloil that should be used. For example, "A" means "Gargoyle Mobiloil A." "Arc" means "Gargoyle Mobiloil Arctic." Recommendations cover all types of the same make unless otherwise stated.

DISTRIBUTING WAREHOUSES IN THE PRINCIPAL CITIES OF THE WORLD

BOSTON TO LOUISVILLE, KY.

JOHN N. BURFORD—From our Touring Number see route 10, Boston to Pittsfield. Follow this to Worcester and Springfield. From Springfield go to Windsor Locks (13.5), then to Windsor (19.1), and Hartford (25.6), over macadam roads for the greater part of the way. From Hartford go to Farmington (9.2), Plainville (13.8), Southington (18.7), Plantville (20.1), and Waterbury (30.5). From Waterbury go to Watertown (5.8), North Woodbury (12.9), Southbury (18.2), Sandy Hook (24.2), Newton (25.7), and Danbury (35.1). Roads—Hartford to Waterbury, mostly State macadam, steep ascent on Southington Mt.; Waterbury to Danbury, fair to good dirt, with sand stretch near Sandy Hook. Distances in parenthesis are from local starting town in each case.

Follow last portion of route 33 to New York, beginning at 62.1, Danbury. The total distance from Danbury to New York is 74.5 miles. From New York follow route 38 to Lakewood, then reverse route 64, Philadelphia to Lakewood. From Philadelphia to Baltimore see answer to Harry M. Dusch in this issue (route 63, etc.). From Baltimore to Washington the route is over macadam except one poor sandy stretch. Baltimore (00.0), (11.9) Relay, (23.9) Laurel, (37.0) Blagdensburg, (44.0) Washington. From Washington to Richmond, Va., take either routes 97 or 98, the latter is to be preferred.

From Washington follow route 99 to Cumberland, 139.7 miles. From Cumberland go on to Oakland via Alleghany Grove (5.0), Clarysville (8.5), Vale Summit (10.5), Gilmore (14.0), Laconing (16.0), Phoenix (21.0), Westernport (23.0), Bloomington, Backbone Mountain (25.0), Wilson (40.0), Deer Park (43.5), Mountain Lake Park (47.0), Oakland (49.0). Roads fair to good, hilly and rolling. From Oakland go to Elkins via Gortner (8.5), Sunnyside (10.8), Aurora (17.0), White (24.0), St. George (33.0), Hobson (38.5), Montrose (44.5), Kerens (48.0), Gilman (51.5), Elkins (55.0). Fair to poor roads, hilly and rolling. From Elkins go to Lewisburg via Valley Bend (12.0), Huttonsville (17.5), Elkwater (24.0), Valley Head (32.0), Mace (40.0), Linwood (43.0), Cloverlick (53.0), Warwick (60.0), Marlington (65.0), Mill Point (72.5), Renick Valley (84.5), Falling Spring (89.0), Frankford (94.5), Maxwellton (100.0), Lewisburg (105.0). Fair to poor, level, rolling and hilly roads.

From Lewisburg go to Charleston via Alta (8.0), Clintonville (12.0), Meadow Bluff (15.5), Little Sewell Mountain (19.0), Ravenseye (32.0), Clifftop (35.0), Winona (39.5.), Lansing (42.5), Ansted (47.5), Ganley Bridge (55.5), Ferris (57.0), Harewood (63.5), Hugheston (69.0), Cedar Grove (70.0), Diamond (75.0), Belle (77.0), Malden (82.3), Black Hawk (84.7), Charleston (87.7). Roads mostly good, level, with fair rolling parts. From Charleston go to Guyandot via Arbutus (0.3), St. Albans (11.5), Edna (18.0), Culloden (25.5), Milton (32.0), Floding (36.0), Wilson (43.0), Guyandot (47.0). Roads rolling and good. From Guyandot go to Gallipolis via Proctorville, Ohio (1.5), crossing the Ohio river, then to Athalia (8.0), Crown City (13.5), Swan Creek (18.5), Bladen (24.0), Angola (26.0), Clipper Mills (31.0), and Gallipolis (35.0). Good, level roads.

From Gallipolis go to Chillicothe via Rodney (6.0), Adamsville (10.0), Thurman (16.0), Rocky Hill (24.5), Jackson (32.0), Leach (40.0), Brox Cors. (43.5), Richmondale (46.5), Peppers (51.5), Chillicothe (60.0). Fair to good level roads. Take route 127 reversed (Touring Number) to Cincinnati. Take route 129, Cincinnati to Lexington, Frankfort and Louisville, Ky.

CROSS AND BENNETT, at Pratt, Kan., ready to start on pathfinding trip for the summer tour of the Short Grass Club.

JAMAICA TO NEWTON, N. J.

H. M. MACK.—Come over to New York from Jamaica, via Richmond Hill, Woodhaven and Brooklyn, using the Brooklyn Bridge. Take the ferry to Jersey City and going to Five Corners in that town proceed out the Turnpike to Newark. From Newark go out Broad street to Bellevue, then go on to Bloomfield, Montclair, Caldwell, Franklin, Parsippany, Denville, Rockaway and Dover. From Dover go to Mine Hill, then to Kenvil, Ledgewood, Netcong, Stanhope, and Cranberry Lake Station. Continue on to Andover and Newton.

A Massachusetts license will be valid in New Jersey, but a New Jersey license is to be preferred. Get a yearly one from the Bureau of Tours, Automobile Club of America (New York City) at Fifty-fourth street near Broadway. For a Massachusetts license communicate with the State Highway Commission, Boston. The fee is $2.

GRAND RAPIDS TO WASHINGTON.

S. C. DE GROOT.—We refer to the route numbers in our Touring Number herewith. Follow route 107 backwards from Grand Rapids to Detroit. From Detroit take route 111 to Toledo. From Toledo take number 104 reversed to Cleveland. From Cleveland take route 105 to Canton (57.2 miles). From Canto go to (7.0) Louisville, (18.4) Alliance, (31.9) Salem, (40.6) Columbiana, (48.5) Unity, O., (57.2) Darlington, Pa., (66.0) Beaver Falls, (67.5) New Brighton, (70.5) Rochester, (79.4) Economy, (84.5) Sewickley, and (98.1) Pittsburgh. From Pittsburgh follow route 99 reversed to Washington.

ON THE RIGHT TRACK.

HOUSTON, Texas, has about 300 motorcyclists who are doing everything in their power to convince the general public that the power two-wheeler is not necessarily a noisy, evil-smelling contraption. So consistently have they labored that Houston is at last feeling a motorcycle boom, and it is expected that the city will have 500 riders before the summer is over.

JERSEY CITY TO ELMIRA.

WM. F. CLOSSEY.—Go from Jersey City to Newark, then to Irvington, Springfield, Summit, Chatham, Madison, Convent and Morristown. From the latter city go next to Mendham, then on through Chester, German Valley, Hackettstown, Vienna, Danville, Butzville, Bridgeville, to Delaware. From Delaware cross to Myers Ferry, then go up to Portland, Slateford, and Delaware Water Gap. Go next to Stroudsburg and Bartonsville; then to Tannersville, Scot Run, Swiftwater, Blakeslee, Stoddartsville, Bear Creek, Glen Summit and Ashley to Wilkesbarre.

From Wilkesbarre go to Luzerne, then to Kunkle, Bowman Creek, Tunkhannock, Wyalusing, Wysox, Towanda, Athens, Pa., Waverly, N. Y., Lowman and Wellsburg to Elmira. The middle section of this portion of the route is hilly, necessitating care in riding.

AN ENDURANCE WINNER.

M. J. TOEWS, of San Diego, Cal., appears in the accompanying photograph with the Pierce single on which he recently made a perfect score in the endurance run of the San Diego M. C. over a 386-mile course. The regulations called for 18 hours' continuous riding, and during 7½ hours it was necessary to have lamps lighted. A schedule of 20 miles an hour was maintained by both twins and singles. The course was heavy, and steep grades and patches of deep sand were encountered. Out of 18 entrants 13 finished with clean scores, only three of this number riding single-cylinder machines.

CHESAPEAKE OUTING.

BALTIMORE, Md.—With ideal weather the members of the Chesapeake M. C. went on a long hike to Harpers Ferry, W. Va., on Sunday, June 2. The boys thoroughly enjoyed the long ride over the Blue Ridge mountains and made excellent time going and coming. An early start was made because of the long grind, and although the riders returned home tired they were well pleased with their experience.

LONG TRIPS POPULAR.

THOUSAND-MILE trips by motorcycle are now almost as common as centuries were a year or two back. Not long ago John Gettman, of Pomona, Cal., started on a trip which will carry him through nearly every State in the Union, and close with a tour of Europe. From Milwaukee another motorcyclist, James Williams, started recently on a journey on which he expects to pass through all the Southern States, and about a dozen Pacific coast riders have more or less definite plans laid for transcontinental trips.

ANOTHER SNUB FOR CUPID.

AURORA (Ill.) police officials say that young motorcyclists of the city have developed a habit of spooning while they are chugging about the city with fair companions perched upon the handlebars of their machines. As a result a ban has been placed upon tank and handlebar riding in Aurora.

HALF PRICE FOR 1200 GOODRICH MOTORCYCLE CASINGS

"Goodrich" is a word to conjure with in the rubber trade and their product is the envy of all other tire manufacturers. Their inspection is so rigid that even so slight a defect as a mould mark on a casing won't pass muster and it is classed as a "second" though the intrinsic value may be in no way effected.

These casings, while not guaranteed, are, we believe, practically perfect and they carry our recommendation. This means much as our constant effort is to sell only satisfactory goods. The name is on every casing and the word "second" is inconspicuously stamped on the side, near the bead.

Single Clinch—White Tread

Priced Each Size, Inches	Corrugated	Bailey Tread	Large Stud
26 x 2¼	$4.00	$4.25	——
26 x 2½	4.50	4.75	$5.00

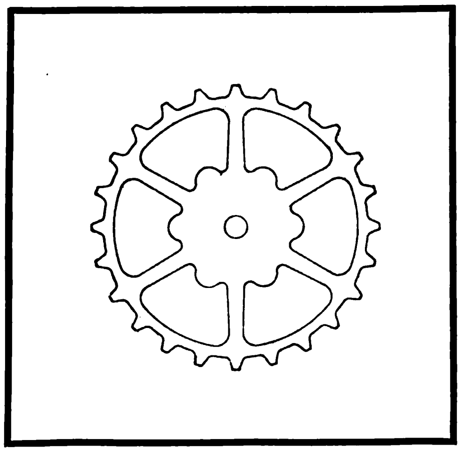
SPROCKETS



Hydraulic Pressed Steel Co.

Cleveland, Ohio

A STRAIGHTFORWARD LETTER.

ROBERT E. TOWNSEND, an R. F. D. carrier out of Davenport, Iowa, writes the following thoughtful letter in support of the motorcycle as an economical means of distributing mail:

"I have been using a motorcycle on my trips for the last five years and am well acquainted with the ups and downs of the machine as a mode of transportation. They are not practicable where roads are very stony or sandy, yet they will do better in such places than you would really imagine. If you have fairly good roads and do not average over 50 to 60 pounds of mail per trip, the motorcycle is altogether the best and cheapest way of getting over your route. If you have more mail than you can pack in a No. 2 mail sack you have about the limit of a motorcycle.

"As for cost, the motorcycle has it on any other mode of conveyance. If you will not tinker with it, it will be as faithful as any horse and not likely to 'get sick,' and it always goes at its duty cheerfully. It requires less than half the length of time required to cover your trip with a horse, and, furthermore, the department will give carriers a shorter schedule for as much of the year as it is practical to use their machines."

TO WILMINGTON, N. C.

HENRY D. W. REICHART—In our list of tours you will find the following: 79, Baltimore to Washington, D. C.; 98, Washington to Richmond, Va.; 91, Richmond to Raleigh, N. C.; 85, Raleigh to Pinehurst, etc., continuing on to 117.8 Rockingham. There turn east to Hamlet, going on to Laurinburg, Lumberton, Clarkton and finally reaching Wilmington. The roads from Rockingham are poor, the distance is somewhat over 100 miles. Other road conditions are poor, as seen by reference to the information at the head of each tour. Allowing about 100 miles per day, and not including stops for sight-seeing tours, you should take eight days. The comparison between the New York-Philadelphia section and the roads in the South is very much to the detriment of the latter.

SEYMOUR'S RECORD.

A READER—Ray Seymour holds the world's record for 25 miles. His time for this distance, made recently on the Playa del Rey saucer in California, is 16:27. This is a mile track. Carslake's time of 17:15⅗, made on the four-lap track in Cleveland, may be regarded as a record for a track of those dimensions.

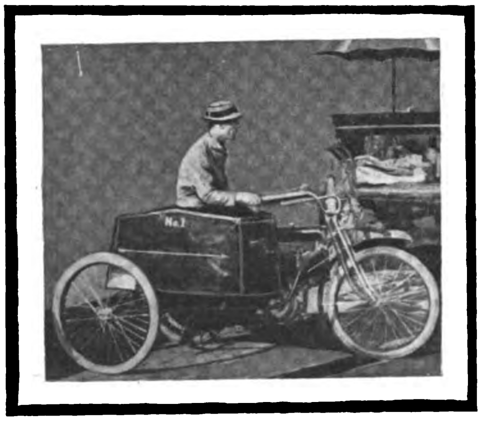
LOSS OF COMPRESSION.

"IN your Manual Trouble Chart you do not mention the fact that a scored cylinder may be, as it sometimes is, the cause of loss of compression."—Albert H. Seekt, Northam, Nev.

MOTOR-COP ON DUTY.

LIMA, OHIO.—The twin cylinder motorcycle which was purchased by the Lima police department last year to stop automobile speeding has again been placed in service and Detective Armstrong has been assigned to ride it.

W. E. KLUG, a well-known rider of Jefferson, Ind., is working hard in the interest of a local club which he hopes to announce presently.



IN the accompanying photograph is shown a type of commercial side-van which is rapidly coming into favor in Los Angeles, Cal.

A MOTORCYCLE PARADE.

WASHINGTON, D. C.—The Capitol Motorcycle Club featured a motorcycle parade during the festivities here in connection with the unveiling of the Columbus statue, when probably 40,000 visitors were in the city. Fifty machines, all decorated, were in line, and the procession of motor vehicles attracted much attention. The start was at 908 Pennsylvania avenue, the route leading along historic Pennsylvania avenue to the Capitol; north to Union Station via New Jersey avenue; west to the Treasury building via Massachusetts and New York avenues, and thence to the clubrooms at the starting point.

USED BY SOLICITORS.

KESSLER & MILLER, Rochester (Ind.), agents for The Home Insurance Company, are proving to their satisfaction that the motorcycle is a practical necessity to their business, and that at the same time it affords a measure of relief from the tediousness of business and injects fresh inspiration and pleasure into the daily routine. These boosters are making excellent progress in forming a 100 per cent. F. A. M. club.

MOONLIGHT RUNS.

WASHINGTON, D. C.—Sociability trips are making a great hit this season with members of the local motorcycle clubs. The Washington Motorcycle Club has inaugurated moonlight runs which are proving very popular. One a few nights ago, to Glen Echo, over the Maryland line, and on to Bridgeport and return, was very successful. It will be repeated in a short time.

SCOTHORN PAID A FINE.

SECRETARY FRED SCOTHORN, of the Coffeyville (Kan.) Motorcycle Club, is the first member of that club to be arrested and fined for riding without a light. Hale Fletcher, vice-president of the club, is the assistant chief of police of Coffeyville and he saw Scothorn riding without any light or number. Fletcher arrested Scothorn who was fined five dollars.

MANY FARMERS IN RANKS.

ST. PAUL, Minn.—That Minnesota is becoming more and more of a motorcycle State is the report of Julius A. Schmahl, Secretary of State, who in his last schedule shows that the State has 3,200 machines registered this year as compared to 2,800 last year. Mr. Schmahl also states that 25 per cent. of the machines belong to farmers.

MOUNTS FOR DEPUTY SHERIFFS.

MINNEAPOLIS, Minn.—No longer will deputy sheriffs in Hennepin County be satisfied with the old horse-drawn vehicle in which to make their rounds, for Sheriff Joe Langum has announced that he is going to modernize his department and is in the market for motorcycles. Deputies in the Lake Minnetonka district will be equipped with the machines in order to aid in quieting any night revelers or tramps at the summer resort.

RUBBING IT IN.

JUDGE FOSTER, of the City Court in Bridgeport, Conn., gives notice that motorcyclists who break traffic ordinances in his bailiwick need expect no judicial mercy. A motorcyclist of the city was recently fined $25 and costs for passing a trolley car on the wrong side.

STOLEN MACHINE FOUND.

C. J. HENDRICKSON, of Middletown, N. J., who reported the theft of his 4 Excelsior machine from his place of business in Red Bank now states that the mount has been recovered. It was found about two miles outside Red Bank in a condition which indicated that the thief was unable to ride it farther owing to lack of mechanical knowledge. It had not been seriously damaged, however.

READY FOR THE TOUR.

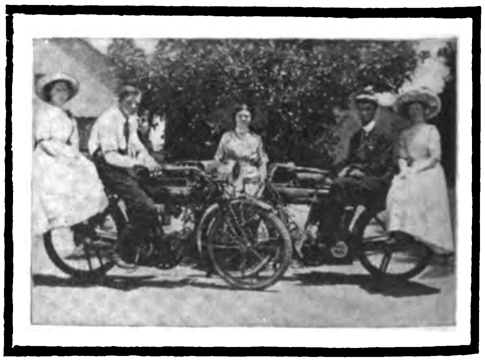
MISS HELEN WHITE, of Indianapolis, purchased a Pope motorcycle from the George C. Detch Wheel Company a few days ago for the express purpose, she said, of going on the southwestern F. A. M. tour to Columbus next month.

YALE CLUB IN TOLEDO.

J. W. SCHROEDER, of 246 Wasam street, Toledo, Ohio, has just completed the organization of the Yale Motorcycle Club and will bring it into the Federation during the current month.

IN SAN DIEGO COUNTY.

FROM San Diego County, Cal., where tandems and good weather are equally plentiful, comes the accompanying photograph. It shows Harold Carmalee and his tandem passenger on the left, another feminine enthusiast in the center and George Loekyer and his road companion on the right. Loekyer forwards the picture and explains that the girls of his district never need a second invitation to make use of a passenger attachment. The photograph was obtained on an outing near Hill.



MACK BROTHERS, of Reno, Nev., who recently entered into the motorcycle business, have sold over twenty machines so far.

The chief qualifications tires must possess are

Low { **Original Cost**
Up-Keep Expense

and

Service-giving qualities;—their ability to take you over all kinds of roads—through sand, mud, snow, over stones and slippery pavements.

Kokomo Tires

are built with a view to meeting the requirements of the most exacting motorcyclist. Sixteen years' experience in the making of good tires has resulted in the production of a low-cost, durable, efficient tire that has been proven by many tests to have longer life, to require less attention and to be more adaptable to the severest conditions than any other motorcycle tire on the market today.

"That Willing Winning Worker"

Actions speak louder than words.

Here's a little action. At Seattle, the other day, an R-S Tourist, single cylinder, belt drive, won first in the ten-mile open and third in the five-mile open, against **special racing machines. The R-S was the only stock machine to win.**

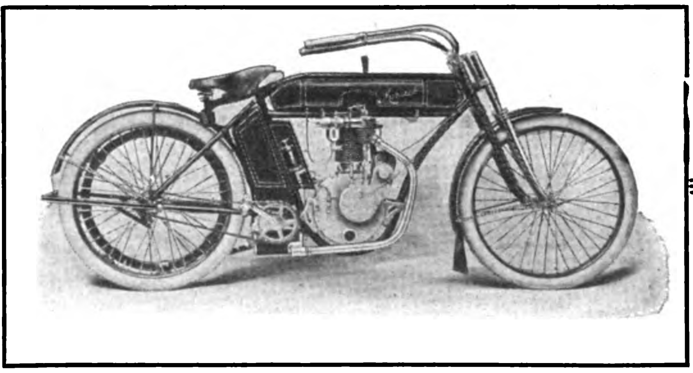
R-S

Another.—Our agent, **W. E. Dewey, at Omaha,** Nebraska, in an accident **broke his open port racing machine and had nothing to enter but our regular twin.** He stripped his machine and put it up against five or six other **machines, some** open port. He won **second in the 15 and 25-mile** events.

It's a cinch for the R-S—this trick work. It doesn't surprise us in the least—nor the thousands of other R-S riders with whom such things are everyday occurrences. ***Write for complete literature.***

Reading Standard Company

306-340 Water St., Reading, Pa.



The Monarch "Big 5"

"The Big Single with Twin Power"

Time and again, the MONARCH has demonstrated its undoubted superiority to the ordinary run of single-cylinder machines by staying with twin machines on grinding road, endurance and reliability runs.

THE MONARCH CAN TAKE A SIDE-CAR WHERE SOME TWINS WOULD BALK

No hill too steep, no road too rough for the sturdy MONARCH. It is the ideal side-car machine.

The MONARCH is built by veterans in the motorcycle manufacturing field—and veteran riders. Thus the purchaser of a MONARCH gets the benefit of years of both motorcycle manufacturing and riding experience. That's a vital point, and one which you should consider carefully. Our booklet gives more information.

Ives Motorcycle Corporation, Owego, Tioga Co., N. Y.

The Acme Siren

Range

The slightest pressure of the finger tips on the bulb starts The Acme "going." From a low wail to a piercing shriek, the ACME lets 'em know you're coming. Its sound rises above all traffic noises and pierces through the strongest wind.

ACME No. 1—Nickel-plated; 11 inches long; diameter of bell, 2⅝ inches $5.00

Simplicity

No intricate mechanism to get out of order. No wires to break, bend or become rusty. Massively constructed of nickel-plated brass, and tremendously durable.

The Acme is the ultimate choice of every rider.

Write for booklet.

ACME No. 2—Polished brass; 16 inches long; diameter of bell, 4⅜ inches $7.50

Formerly The Waverley

Frame Hung On Leaf Springs (Automobile Construction)

Greatest improvement in motorcycles! Four special vanadium steel long leaf springs—extremely elastic—absolutely unbreakable—frame is rigid—no hinges—and rides on these leaf springs with a silent, velvety action delightful to the rider. No other construction can possibly equal this in pleasure of riding.

A trial will instantly convince you!

Most efficient single cyl. motor ever built. Has overhead valves, positive mechanical oiler, free-engine clutch, Bosch armored magneto, and automatic carbureter. Cylinder and head of semi-steel specially heat treated, connecting rod, crankshaft, etc., of vanadium steel. You can get into speed from a standstill without any jerks. Speed? 56 seconds to the mile!

We want live agents and are offering special introductory inducements in open territory. All machines of perfect workmanship, thoroughly tested and guaranteed satisfactory. Catalog and terms promptly mailed at your request.

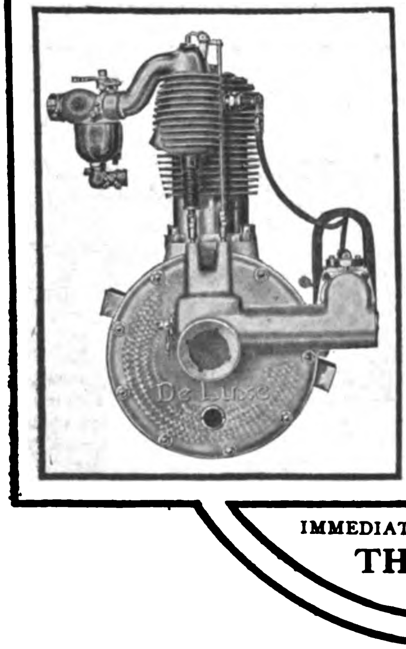
A REVOLUTION IN MOTORCYCLE MOTOR DESIGN



In bringing out our DE LUXE line of motorcycle motors, we have introduced a large number of improvements, and offer these motors as the most advanced now before the trade.

NOTEWORTHY IMPROVEMENTS.

- One-piece crank shaft.
- One-part crank case with cover.
- Improved cam and magneto drive.
- Oil tight motor.
- Large Valves.
- Simplified design throughout.
- Reduced number of parts.
- Silent Motor.
- Large ball bearings mounted in steel lined pockets.
- Equipped with Bosch Magneto.

These improvements in design, together with the high grade materials used in construction, the modern methods of manufacturing applied, and the remarkable performance of these motors in road tests mark a revolution in motorcycle motor building.

IMMEDIATE DELIVERIES ON MAJESTIC SIDE-CARS

OBERWEGNER MOTOR COMPANY.
Per A. Oberwegner, Mgr.
139-141 Michigan St., Toledo, O.

MAJESTIC MFG. CO., Worcester, Mass.

Gentlemen: After putting your Majestic Side-car through three months of continual hard usage, attached to a 1912 EXCELSIOR AUTO CYCLE, we have nothing but praise to offer.

This car has withstood the severe conditions without a particle of trouble. It is a big hit with the ladies, and we have sold a large number of machines on the strength of this Side Car.

The writer has had considerable experience with both former American and foreign made Side Cars, but your Majestic Side Car proves to us that you have studied the conditions carefully before you marketed same. Very truly yours,

OBERWEGNER MOTOR CO.

Havermeyer Place, Greenwich, Conn., 4/26/12.

TO THE MAJESTIC MFG. CO.

Gentlemen: Yours of the 22nd received and contents duly noted. I take pleasure in offering my approval of your meritorious Side-Car. It has filled a long-felt want, and I consider it all the makers claim for it. I am riding a Twin M M and attain a maximum speed of 45 miles per hour; furthermore, my friends all aver "The ride exceeded their most sanguine expectations." Yours truly,

GEO. BARNES.

THE MAJESTIC MANUFACTURING CO.
Worcester, Mass., U. S. A.

Dear Sirs: Yours of 20th received some days ago. In regard to side car I cannot say very much yet as I have not had much time to use same. But I can say that car certainly is a dandy. I had it attached to a 4 H. P. 1910 Indian; went along good with about 165 lb. passenger; made long steep grade with very little throttle. Of course I had to gear machine about 8 to 1 on account of several bad hills. No trouble to get anybody to ride in it either. If there is anything in this letter that you can use you are welcome to do so.

Yours very truly, D. L. SANDRETTO.

Lancaster, Pa., April 24, 1912.

THE MAJESTIC MFG. CO., Worcester, Mass.

Dear Sirs: Replying to yours of April 16th would say I have tried the Majestic Side-car, first on Single Cylinder Motorcycle, and it worked well on good roads. Then I attached the Side-car to a 1912 twin Reading Standard, and making an extra arm of tubing from under the seat of the Motorcycle to the tandem attachment and, connecting the rocker arm of the Side-car to the extra tube under seat of motorcycle, have run over good and bad roads fifty miles on one gallon of gasoline, carrying three men—one operator—one on Side-car and one on Tandem attachment—taking all hills and at different times speedometer registered 38 to 40 miles per hour. Yours truly,

JOHN H. TRAGESSER.

MAJESTIC MANUFACTURING CO., WORCESTER, MASS.

THE "MILITAIRE" is built in *anticipation* of the logical evolution of the motorcycle. It is the result of keen study of traffic and other conditions in this country, and we unhesitatingly affirm that the "MILITAIRE" is better fitted to cope with road conditions than any other motorcycle on the market. It is radical, we admit, but so was Fulton's steamboat, and Marconi's wireless, and Westinghouse's brake.

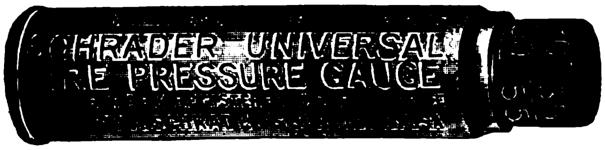
Have You Had Trouble With Your Tires?

A very large percentage of all punctures and blow-outs occur from improper tire inflation.

WOULD YOU PAY $1.00 TO OVERCOME

delays, difficulties and expense resulting from these misfortunes?

Schrader Universal Tire Pressure Gauge



(Made under patent dated March 1, 1898.)

Accurately registers at all times the exact air pressure in tires.

Simply hold gauge to tire valve for a second and recording sleeve will indicate air pressure and remain fixed until pushed back into place by the finger.

Carried easily in vest or change pocket, being only 2½" long. So simply constructed as to almost never become out of order, and if it does go wrong it will immediately tell by the action of the indicating sleeve that it needs repairs. Leather case comes with it.

PRICE $1.00 EACH

Guaranteed Simple and Absolutely Accurate

Can be obtained from all tire manufacturers, jobbers and dealers, or

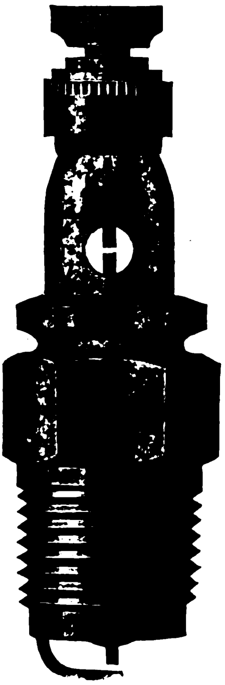
Let this Spark Plug solve Your ignition troubles



$1.00

The ***J. D.*** Visible Spark Plug lays bare all ignition trouble. The "visible gap" is an open window, giving you a full view of the internal workings of your spark plug. If the spark is seen jumping the gap, look for your trouble between the gap and the sparking point. If there is no spark in the gap, your trouble lies behind. This new great plug also facilitates timing, intensifies spark, uses only minimum current, and cleans itself when you widen the gap by turning knurled adjusting nut. Gap can also be entirely closed.

One look tells everything

The "visible gap" feature, so far as being incorporated in a plug, has always seemed as far away as perpetual motion. The visible feature has been marketed as a separate device for years, but this is the only plug embodying the visible feature in a practical manner. It is simple—merely a hole in the porcelain, and a spiral action to regulate length of gap in the central electrode which carries the current. The hole in no way lessens the strength, and the current in jumping the gap loses nothing of its intensity.

Every part is made in our own factory—even the porcelain being produced in our potteries from imported clays and other ingredients. This unequivocal guarantee goes with every one: ***"Your money back or a new plug if you are not satisfied."***

If your dealer hasn't the J. D. Visible yet, send your money direct to us for a set, specifying size wanted, and we will ship them prepaid. Remember, the price is only $1 for this plug.

Take No Chances

Your season's enjoyment depends on your motorcycle proving dependable in every part. You know what an unreliable belt would mean to you. It will pay you to equip with the belt which never stretches or shrinks and has the life of two ordinary belts. Wetprufe belts are pliable, not affected by grit—are absolutely waterproof.

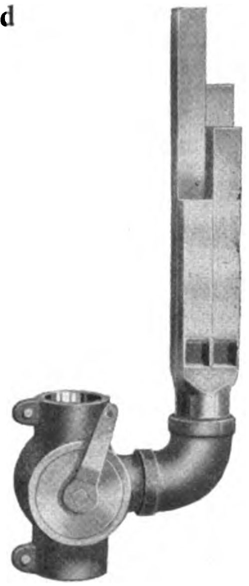
TRINITY CHIMES

An Exhaust Horn with a Musical Tone
Warns Without Giving Offense
A Hair-Raiser When Needed

There is absolutely nothing about the Trinity Chimes to get out of order—no moving parts, no batteries, no wire connections. It never fails. It costs nothing to operate. It is operated by a three-way valve which is supplied with the horn. Its four tubes give a perfectly blended chord of pleasing harmony. Its body is a brass casting. The tubes are brass-wedged into slots in the casting, and instead of being of flimsy construction and supported separately, they are carefully brazed together, building up a unit of such strong construction as will last a lifetime. It is furnished in triple nickel-plate, highly polished.



Get the best horn at a lower price; don't spend more for one not so good.

THROWING AWAY PROFITS

Dealers who sell machines on which they can not secure deliveries are throwing away their profits.

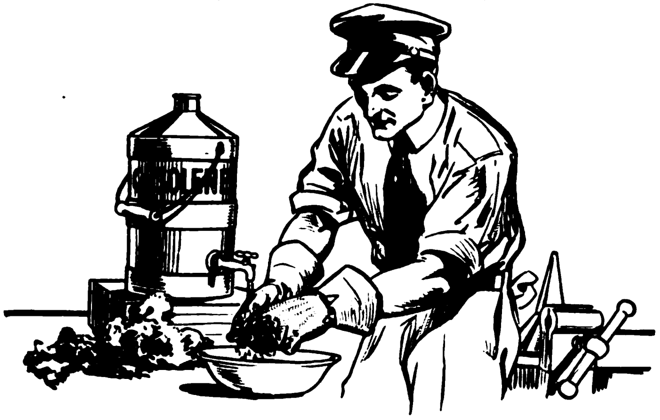
Over a year ago we commenced to make parts for our 1912 models, other makers started six months later. We are prepared to make deliveries; they are not.

PIERCE

Single and Four-Cylinder Motorcycles are so far ahead of all other makes in strength, power and speed, that comparisons are impossible.

The only 1912 riders who are wholly satisfied are Pierce riders. Send for complete catalog.

The Pierce Cycle Company, Buffalo, N. Y.



These Motorcycle Gloves are Washable

You don't have to be careful of Grinnell Gloves. Wear them when you tinker around your Motorcycle. Keep your hands clean. They are easily washed in soap water or gasoline, drying out soft and pliable.

Grinnell "Rist Fit" Gloves

increase the pleasure of cycling. They are made of velvet coltskin, that insures a non-slip grip on handle bars. Cuffs of smooth stiff leather. These gloves are always comfortable. Our patented "Rist-Fit" keeps your cuff from sagging. Our **Ventilated Back** insures cool hands on hottest days. For style and class they have no equal.

GET A PAIR ON APPROVAL

See Grinnell Gloves at your dealers. If he hasn't them, write us his name—tell us the size, style glove you wish and color—black or tan. We'll send a pair on approval, prepaid.

Write for samples of leather and catalog showing our up-to-date styles.

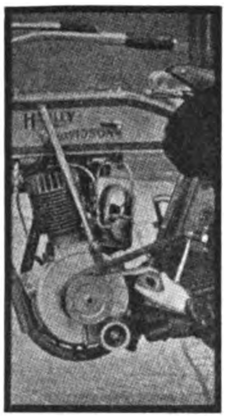
Imported Single-Jet B & B Motorcycle Carbureter

Fits Any Machine—Entirely Controlled from Handle-Bar

The B & B carbureter affords simplicity, efficiency and ease of control at all times. With a B & B you needn't bend down and take your hands from the bars in order to adjust your mixture. Instead, adjustment of the flow of gas and air to fit changing speeds is possible without the rider changing his upright position. Price is low, and material and workmanship the finest.

Write for catalog, price and agency terms

A. J. MUSSELMAN, IMPORTER, 1305 Wells Street, CHICAGO



ARE you troubled with belt slipping, Mr. Rider? Do the screws in your lagging cut grooves in your belt? We can overcome this for you, also prevent your belt from getting glossy. The only cure today is

ABESTO PULL-E-TAPE

Applied in a minute, self vulcanizing. Dealers, this is something for you, get our proposition—it is as good as our Tape. 50c per Roll—send for some today and save your belt. State width.

KRAFT KNITTING COMPANY
150 East Exchange Street Akron, Ohio

Insist On Standard Pedals

Our products for the Cycle Trade include:

Emergency Axles, Sager Motorcycle Toe Clips, Diamond E Spokes, Bridgeport and Standard Pedals, Sager and Standard Toe Clips.

No other pedals give that "turkish carpet" feeling to the feet. The deep rubber corrugations in the big cushions keep the feet where they are put—they eliminate jars, bumps and other disagreeable features when negotiating rough roads.

With one eye to *durability* and the other to *comfort* we have succeeded in producing the ideal motorcycle pedal.

Write for our catalog. Standard quality plus Standard output mean big business for you, Mr. Dealer.

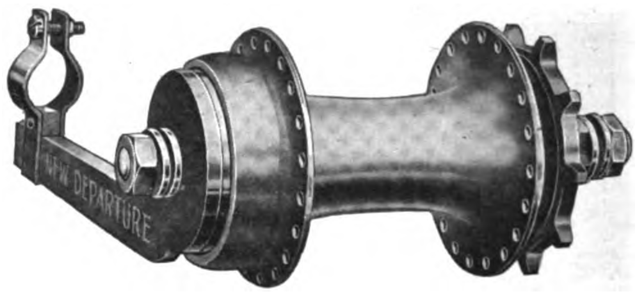
NEW DEPARTURE

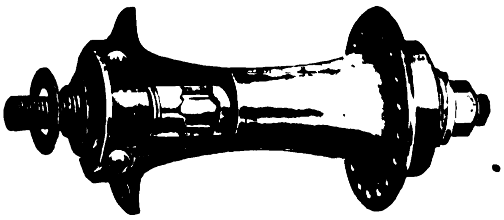
Motorcycle Specialties

INTERNAL EXPANDING BAND COASTER BRAKE



The internal expanding band type, employing exactly the same principle as the emergency brake in the automobile. It operates against the forward movement of the wheel, hence, cannot lock, wind or bind. Riders prefer it because of its superior efficiency, reliability and strength. It is built for service beyond extreme requirements of riding. The 1912 model is absolutely the last word in a coasting and braking device for motorcycles of modern type.

"KNOCK-OUT" AXLE HUBS FOR FRONT WHEELS



The ideal front hub, constructed entirely of specially treated steel and gives maximum strength and wear. The axle is in a sheath and can be removed instantly without disturbing the adjustment or removing any other part of the hub. It runs on eighteen ¼-inch steel balls and is highly finished throughout. Motorcycle dealers and repairers should stock this hub. It has behind it the New Departure guarantee.

SUPERIOR BALL BEARINGS

New Departure ball bearings are an American product of guaranteed merit and offer advantages over the foreign-made bearings in price and other considerations. This bearing is made in standard sizes and can be used to replace any single row bearing of standard bore, diameter and width. Automobile garages and motorcycle repair depots should stock this bearing and save money.

HAMMONDSPORT NEW YORK

P.E.M. LEADS THEM ALL!

In every race meet in which the P.E.M. has been entered this year, its first season, this wonderful motorcycle has captured the big end of the first and second places. Just read this record—Deeds talk louder than claims.

JANESVILLE, WISC.—Big Decoration Day Meet. Six events, The P.E.M. took four firsts. In event 5, A P.E.M. "single" won by over 13 seconds a 10 mile race against a field of "twins."

MILWAUKEE, WISC., June 8th—The P.E.M. took first in novice, first in Private Owner and Second for Stock Machines (in this latter event the winner was a stripped machine with a trade rider).

OSHKOSH, WISC., June 9th—In Six events on a half mile track P.E.M. won five firsts and two seconds.

There is a reason of this regular consistent winning—and that is the superiority of the P.E.M.—Easy riding on bad tracks because of the "leaf-spring" hung frame.
High powered Engine because of high compression due to overhead valve mechanism. Positive chain drive with free engine clutch.
If you want to be a winner on the track or on the road—you must ride a P.E.M.
Write today for booklet and special rider agency offer.

WAVERLEY MFG. CO., Waverley Place, JEFFERSON, WIS.

Don't buy a Motorcycle in too big a hurry

Take your time. You don't have to purchase a Motorcycle every month or every season, so don't rush in and take any old make simply because you can get ***immediate*** delivery. Buying in a hurry often means repenting at leisure.

Excelsior Auto-Cycle dependable and well-built

A really good motorcycle can't be built in a hurry—that's why we refuse to sacrifice quality for quantity. To *know* what a machine can and will do demands constant care, skilled workmanship, exhaustive tests and sharp inspection. Every bearing on the whole Excelsior Auto-Cycle is either hardened and accurately ground or is a reamed bronze bushing. Any material showing the slightest flaw is instantly rejected by our careful inspector. Every motor is put through four rigid tests—including our famous dynometer test—all under expert attention.

Thousands of Excelsiors making good

When you receive an Excelsior Auto-Cycle you know beyond the shadow of a doubt that it is absolutely *right* and *dependable*—ready to take rank with the thousands of other Excelsiors that have stood the test of time and service.

Excelsior excels in competition

In the last month our record for *Reliability* and *Speed* was proved in the races at Hawthorne,—*Economy* in the test at Washington, D. C. Besides,—on June 15th the Excelsior "7" won the Stanley Hill Climb at Cincinnati by 5 fat seconds over its nearest competitor, and *on the very same day* the Excelsiors ran away with every race at Shenandoah, Iowa. It's not a case of *one lone Excelsior* winning, they're all doing it—and they've been doing it consistently from Washington, D. C., to Los Angeles, Cal.

Your problem is not how *soon* you can get a Motorcycle, but how to get the *best*. Don't buy your Motorcycle in a hurry and regret it afterwards—insist on an EXCELSIOR—there is no machine "just as good"—your dealer can make a reasonably prompt delivery.

Write today for our free catalog illustrating and describing the full line of Excelsior models. Let us hear from *you at once.*

The Proper Mount for One or Two Riders

POPE MOTORCYCLES

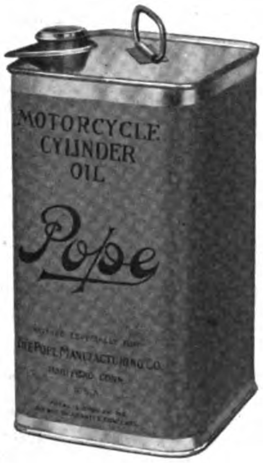
Model H, with Imported Magneto, $165

The pleasure of tandem riding depends upon a motorcycle's reserve power and durability of construction.

A motorcycle must not only be strong enough to support the combined weight of two riders, but it must have the reserve power to carry them anywhere a motor vehicle could reasonably be expected to go.

Pope Motorcycles have the reserve power and strength to carry two riders up steep hills and over rough roads without faltering. The pleasures of tandem riding can be realized to the fullest extent by Pope riders. This is how a Pope Motorcycle, ridden by Forrest Layne, of Lenox, Iowa, stands the test of tandem riding:

> "I took a 174-lb. passenger and myself, weighing 140 lbs., on a 100-mile trip through some of the hilliest country, where the slopes were very near straight up and down. We did not have to walk one hill or pedal to keep the engine going."



ALL POPE DEALERS SHOULD CARRY POPE MOTORCYCLE CYLINDER OIL

Refined especially for lubrication of Pope machines. Attractively put up in fancy cans.

The best results are always obtained by selecting an oil adapted to the particular motor in which it is to be used. This oil has been selected after exhaustive tests and has been found to meet the requirements of the Pope Motorcycle. Its exclusive use is strongly recommended.

1-Gal. cans for rider's use.

5-Gal. cans for shop use.

Be Sure It Is

PREST-O-LITE

"The Light Universal"

Ask Any Experienced Motorcyclist

He will tell you the advantages of Prest-O-Lite on your machine.

One accident on the road at night, due to poor light, costs many times the price of Prest-O-Lite.

If you are going to ride after dark, don't trust to the poor, unsatisfactory, unreliable light of a generator.

Don't get any "imitation" lighting system that is not backed by complete service.

Don't experiment. Don't take chances. Profit by the experience of thousands and get Prest-O-Lite—

When you buy your machine

Insist Upon Prest-O-Lite!

It is the ONLY gas tank that is backed by universal service

If you are a "stay-at-home," the chances are you don't need *any* light on your machine.

But if you are going out on the open road—if you are really to realize the joys of your motorcycle—you must have service.

You will find Prest-O-Lite Exchange Stations in practically every city, town and village in the country. 15,000 agencies that guarantee you service no matter where you go.

And one point more—the best time to get Prest-O-Lite is when you buy your machine.

Ask the dealer how much it will cost you to have Prest-O-Lite put on.

If you want any further information about Prest-O-Lite we will gladly send you our Motorcyclist's Booklet, showing how the small tank is easily attached to any machine. Ask for it today.

Price of Tank $10

EQUIPPED WITH GAUGE.

PREST-O-LITE

Dimensions: Length, 13¼ inches; diameter, 4 inches; weight, 3¾ pounds.

Our Handy Rule and Gasoline Gauge sent on request. Measures gasoline in tank; flexible for measuring tires, etc.

The Prest-O-Lite Company

EXCHANGE AGENCIES EVERYWHERE

On June 13th we contracted to deliver a large quantity of EMPIRE CHECKERED tread tires to HARLEY-DAVIDSON MOTOR COMPANY, between that date and May 1, 1913.

Specify EMPIRES when you order your machines. SIMPLY TELL your dealer you want EMPIRE TIRES and EMPIRE RED inner tubes. Then you know you have the best, because

Empire Tires
WEAR LONGEST

They give more mileage and less trouble than any other tire made.

Empire Tire Co.

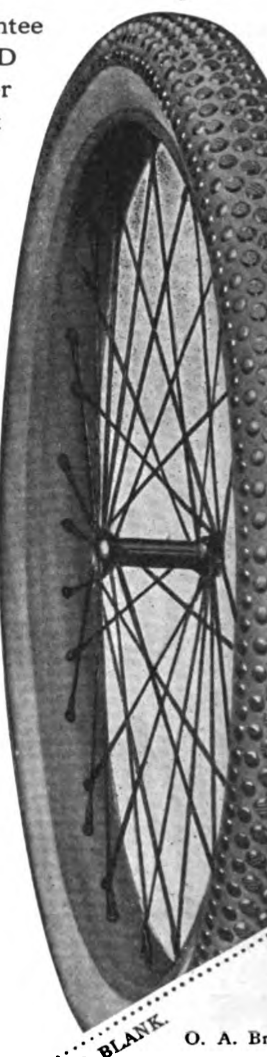
Factories: Trenton, N. J.

TIRE PROTECTION WITH A GUARANTEE

No longer is it necessary for motorcyclists to worry about PUNCTURES, BLOW-OUTS, GLASS CUTS, SKIDDING and unnecessary tire expense, which heretofore has MARRED the pleasure of all motoring—"BRICTSON" DETACHABLE TREADS will eliminate all this.

10,000 Mile Guarantee

SEND FOR COPY OF SAME



Yes, we will give you a 10,000 mile written guarantee with every "BRICTSON" MOTORCYCLE TREAD on a daily mileage basis of twenty-five miles per day. Can you get this kind of a guarantee on your rubber tires? Figure this guarantee out and you will see that it covers a period of 400 days.

Design and Construction

Made of select, specially prepared chrome tanned leather, soft and pliable, which gives with the "BRICTSON" the full benefit of the pneumatic tire. Studded on the surface with small neat-looking steel studs, designed to give perfect traction as well as a perfect "non-skid." There are layers of the best tire fabric between the layers of leather, which add strength and keep the tread from stretching. In addition to all these important features, the "BRICTSON" is lined perfectly smooth on the inside so there are no rivets or studs in contact with the rubber casing, making it impossible for the tread to injure the casing in any way.

The "BRICTSON" is the only scientifically constructed tread in that it CANNOT slip or slide on the rubber casing in ANY direction, owing to the patented, scientific method of fastening. It is held in position on the rubber casing by equal tension from all points of the circle, and for this reason may be adjusted to PERFECTLY fit the casing over which it is applied, which CANNOT be accomplished with any other method of fastening, and also envelops the entire casing, excluding sand, stones, mud, or even water from coming in contact with the rubber casing.

The "BRICTSON" is the ONLY TREAD THAT HAS PERFECT TENSION ADJUSTMENT FROM ALL POINTS OF THE CIRCLE, which other tread manufacturers have tried to imitate with metal contrivances that only detract from the appearance of the tread, add weight, and destroy the pneumatic feature, but still do not accomplish the desired result.

The "Brictson" Exclusive Patented Way of Fastening

The "BRICTSON" has no HOOPS, HOOKS, BUCKLES, SPRINGS, or any other unnecessary metal contrivances to add weight, break or eat into the rubber casing; neither is it cemented, laced, vulcanized, riveted or fastened to the rubber casing in any way—NATURAL INFLATION OF THE TIRE DOES THE TRICK—Simply clamped between the head of casing and rim—strictly Quick Detachable.

PRICES: One-half the price of a rubber casing and guaranteed three times as long. Compare the following prices:

26 x 2¼	$5.50	28 x 2¼	$6.50	28 x 2¾	$7.00
26 x 2½	6.00	28 x 2½	6.75	28 x 3	7.25
		29 x 3	7.50		

Other sizes on application.

Ask Your Dealer for "Brictson" Detachable Treads

Ask the best dealer in your town to show you the famous "BRICTSON" Guaranteed Detachable Tread. If for any reason he cannot supply you, fill out the attached ORDER BLANK, pin your check to same, mail it, and I will ship you the treads on TEN DAYS' FREE TRIAL, and if you don't find them perfectly satisfactory within 10 days from receipt of treads, return them and I will cheerfully refund your money. "Old Sol"

I AM HAPPY—I am smiling. I am the vanquisher of darkness. Perched on your handlebars, I beam out into the night and lo! the darkness flees before me.

I unerringly guide you through rain and storm. I point to the rough bumps, the treacherous ditches. I warn you in time.

The powerful gleam of my smile goes far ahead, cutting through the darkness like a knife.

I am well made. My frame is made of heavy gauge brass.

My face is a Mangin Mirror lens, accurately ground to my maker's specifications.

I do not rattle or jar loose. I grip my seat firmly, no matter how fast or how roughly we are going.

I have many brothers — some stronger and some not so strong. My big brother, "Old Sol" No. 8, has a light throwing capacity of 1,500 candlepower.

I am the motorcyclist's ideal lamp.

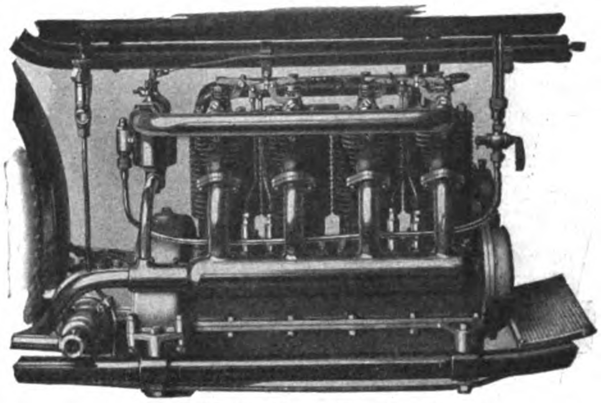
The Henderson asks nothing but the chance to "show"



The 4-Cylinder, 7 H. P., Free Engine Henderson—$325

HENDERSON MOTOR CYCLE

The Henderson asks you to take nothing for granted.

See for yourself. Prove to yourself that the Henderson is, as we say, the last limit of comfort, silence, flexibility and general efficiency in a motorcycle.

Test out the vibrationless power of its four-cylinder motor.

See how it takes the hills; how it never lets up pulling, even when throttled down to five miles an hour.

Make yourself the judge. Make the Henderson "show."

See the local dealer; or write for his name.

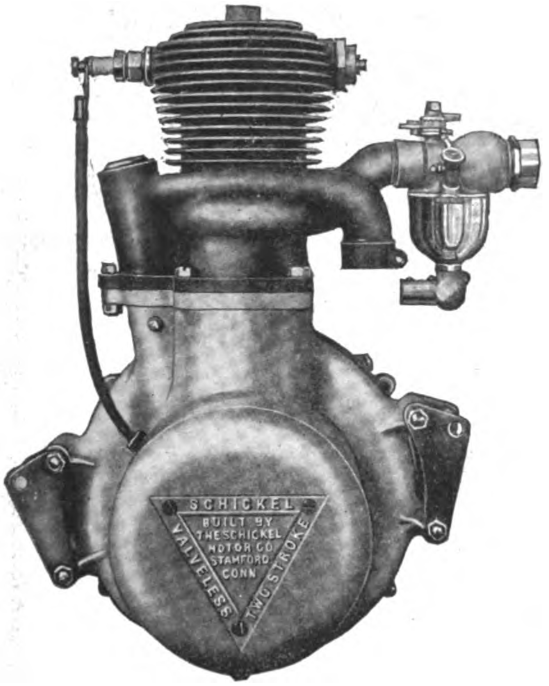
MOTORCYCLE TALKS

Service No. 8

(NOTE: This is the eighth instalment in the series of talks now appearing in the motorcycle papers dealing with those practical features that you should look for in the machine that you require for everyday service.)



A TEN SECOND LOOK

Time yourself and take a ten second look at this motor. Describe accurately what you saw.

Take a ten second look at any other motor. How much of it can you describe?

"Simplicity is the keynote of mechanical perfection."

Service Builders

Efficiency ***Reliability*** ***Simplicity***

All Found in the Schickel

The Perfect Oiling System

The oil is mixed with the gasoline in the tank and together they enter the crank case where the separation takes place. Incorporated with the gasoline filler cap is a cylindrical receptacle to measure the proper amount of oil to be used. There are no pumps, sight feeds, tubes nor gearing to look after on this oiling system and under or over oiling is impossible.

The Completely Enclosed Magneto

The direct-connected Eisemann high-tension magneto is completely enclosed in a dustproof, waterproof and oilproof case. An exclusive feature with the Schickel Valveless Two-stroke Motor, is the rocking magnetic field. The timing of the spark is regulated by rotating the magneto about the armature shaft, which produces a maximum spark for any position of the spark lever.

The Valveless Motor

The SCHICKEL is mechanically quiet when delivered to you and remains so forever. The entire absence of gears, valves, cams, rocker-arms, etc., eliminates any chance for wear with attendant noise and trouble.

He Asked for Service

A man asked for a machine for service, but he didn't get it. They sold him a machine that did stunts—remarkable ones too.

But STUNTS are accomplished at an extravagant waste of money and time. They call for specially tuned machines and trained riders.

SERVICE is realized only when the greatest economy is effected, both in money and time—without sacrificing quality.

EVERY 1912 SCHICKEL MOTORCYCLE IS EQUIPPED WITH A 5 H. P. VALVELESS TWO-STROKE MOTOR—DESIGNED AND BUILT FOR SERVICE.

The thought has been uppermost in the mind of the man who designed the Schickel motor that service must be the first consideration. In harmony with the motor, every Schickel feature has been designed for service.

TOURING IN THE NORTHWEST

THE unusually interesting photographs on this page were obtained by J. C. Jeffers, president of the Olympia (Wash.) M. C., on a recent tour of 2,025 miles through Washington, Oregon and Idaho. Mr. Jeffers was accompanied by Coelburn Westover, another Olympia rider. They were three weeks on the road, enduring all kinds of hardships and climbing rough grades which ranged from 8 to 40 per cent. Some of the hills encountered were five miles long, and the stages which cross them are drawn by eight and ten horses. President Jeffers and his partner mounted 1912 Indian sevens.

Picture No. 1—A road near La Grande, Ore., not at all an unusual type. 2—Slippery going near Boise City. 3—One of the few good roads. 4—Near Waterville, Wash. 5—Log "hotel" at Paradise. 6—Getting rid of some of the mud at Baker, Ore. 7—The start from Olympia. 8—On a grade near Paradise; note the inscription on the rock.

Getting rid of some of mud at Baker Ore.

J. Johnson	6 Excelsior	A Competitor's Tires	1000

Notice how United States Tires Predominate?

Fifteen perfect scores and ten of them made on tires produced through our co-operative method of manufacture.

The riders who participated in this long, monotonous grind characterize it as the "hardest endurance run ever laid out." Nine rivers, three deserts and fourteen mountain passes were crossed.

Every inch of the way was a severe test of the staying qualities of the tires with which the machines were equipped. This was indeed a survival of the fittest.

Doesn't the big majority of United States four-factory-tested tires at the finish of such a contest strike you as being convincing proof of their dependability and all-around superiority?

'Tirely Satisfied
Thank You

Wednesday, July 17.

Leave Newark at 8:30 a. m.; through Granville to Columbus—arriving at 11 a. m. 30 miles.

WITH the appointment of F. S. Ellett, of Elmira, N. Y., as tourmaster of the Northeastern division, to succeed R. S. Morton, who found it impossible to serve, the plans for the four national tours to the Columbus convention are practically complete. Immediately after being notified of his appointment Tourmaster Ellett started work upon the itinerary for his division, and it is printed in full with the routes for the three other tours, on this page. As the full itineraries have been printed and sent broadcast from the office of National Secretary Gibson it only remains for motorcyclists to fill out the entry blanks, which accompany the touring directions, and forward them without delay to the tourmasters in charge of their respective divisions.

S. J. Chubbuck, of Toledo, has been appointed a lieutenant in charge of the Detroit and Toledo riders, and those who will join the division between Toledo and Lima. This squad will leave Toledo at 6.30 a. m. on Tuesday, July 16, and will reach Lima at noon to join the main body of Chicago riders. W. W. Ingram has been appointed as lieutenant to Tourmaster Campbell for the Chicago division. During the last week interest in all the tours has been enlivened and the officials in charge are of the opinion that surprisingly large squads will be turned out for the trips to the convention city. Entry blanks can be obtained from any tourmaster; from Secretary G. B. Gibson, 24 Main street, Westboro, Mass., or from Guernsey Van Riper, tour secretary, 920 Hume-Mansur building, Indianapolis, Ind.

ROBISON IS HUSTLING.

BALTIMORE, Md.—J. A. Robison, of the Maryland M. C., tourmaster of the Southeastern division of the F. A. M. National Tour, is working hard to make this end of the trip a success. Seven riders have stated positively that they will go. They are: Messrs. Fisher, Stubbs, Congdon, Sprecker, Hepbron, Horn and Ambach, all well-known local riders. A score or more of Baltimore boys will probably be added to this squad before the start is made, while the indications are that others will join at Hagerstown.

The journey from this city over the Alleghenies will be anything but a joy ride, but after Pittsburgh is reached the going will be ideal. A section of the road—about fifty miles—this side of Pittsburgh is in miserable condition. This is the road on which so many of the cars in the Glidden tour came to grief.

OUTLINE OF F. A. M. ASSEMBLY PROGRAM

Business and Amusement Schedule, as Arranged at Conference in Buckeye Capital, is Well Balanced—Morton Resigns as Tourmaster of Northeastern Division and is Succeeded by F. S. Ellett, of Elmira—The Chicago Itinerary.

OFFICIALS of the F. A. M., tourmasters for the national tours and Columbus motorcyclists are working hand in hand to perfect plans for the great gathering of riders in the Buckeye capital July 17-21, at the annual meet of the Federation. The routes for two of the national tours have been announced, and Jesse A. Campbell, head of the Chicago-Columbus division, has now completed his itinerary. His route, as were those of Tourmasters E. G. Baker and J. A. Robison, has been arranged with a view to reaching the convention city about 11 o'clock Wednesday morning, July 17. Those who will participate in the big trip from the Windy City to Columbus will start from Chicago Monday morning, July 15. The riders will make South Bend, Ind., by noon, and ride to Ft. Wayne for the night control. Tuesday, July 16, they will depart from the Indiana city and go via Van Wert to Lima, O., where they will stop for lunch. Then they will travel through Sidney, Piqua and Troy and make the second night control at Springfield, O. On Wednesday morning they will ride from Springfield to Columbus.

Some racing and other entertainment will be on tap for the riders when they reach Columbus to stay from Wednesday to Sunday. During the past week F. I. Willis, chairman of the F. A. M. press committee, and Chairman J. P. Thornley, of the competition committee, met at Columbus with the motorcyclists and completed a number of important arrangements. At this meeting the tentative program for the convention was gone over and outlined as follows:

July 15, 16 and 17—Tourists en route to Columbus.

July 17—Arrival of riders in Columbus at noon. Afternoon: registration, distribution of badges and assignments, at the Virginia Hotel. Night: smoker at the Motordrome.

July 18—8:30 to 10:30 a. m.: organization of business sessions. 10:30 a. m. to 12:30 p. m.: parade of all riders; photographs. 1 p. m.: barbeque at Alentangy Park. 8 p. m.: races at the Motordrome.

July 19—9 a. m. and 1:30 p. m.: business sessions. 5 p. m.: dinner to manufacturers and F. A. M. officials. 8 p. m.: races at Motordrome.

July 20—9 a. m.: final business session. Afternoon: open. 8 p. m.: races.

July 21—Sunday afternoon: races.

Secretary Van Riper has received word from the Albany (N. Y.) Motorcycle Club to the effect that the club is anxious to cooperate with the riders who start from that city on the northeastern tour. Albany motorcyclists expect to provide entertainment, information and assistance for the riders in every possible way. Although the Albany club is the first to make known officially its desire to co-operate, motorcycle organizations in practically every city through which the tourists will pass will be of great assistance to the tourists. This is expected to add greatly to the pleasure and enjoyment of the big tours.

F. A. M. RACING SCHEDULE

Chairman Snyder, of Columbus Committee, Announces Program for Four Days of Racing

COLUMBUS, Ohio, June 22.—The complete race program for the F. A. M. meet has been announced by W. H. Snyder, general manager of the Columbus Motordrome, where the events will be staged. The races will be held on the half-mile board track which is being erected at Arlington, on the outskirts of the city. The work of construction is progressing rapidly and assurances are given by Jack Prince that it will be ready for testing in a few days. The full race program follows:

FIRST DAY.

Five-mile Novice, 61:00 cu. in. limit, stripped stock machines open to private owners who have never won a first prize. One prize, gold medal.

Ten Miles for the F. A. M. Amateur Championship, 61:00 cu. in. limit. Qualifying heats.

Ten-mile Professional, 61:00 cu. in. limit, free-for-all. Prizes, cash; first, second and third.

Five Miles for F. A. M. Amateur Championship, 61:00 cu. in. limit. Qualifying heats.

Ten-mile Amateur, 61:00 cu. in. limit, open to trade riders and private owners; restricted to belt-driven machines. Prizes, first, second and third.

One Mile for F. A. M. Amateur Championship, 61:00 cu. in. limit. Qualifying heats.

In all events for stock machines drop handlebars may be substituted, and mufflers and muffler pipe removed. Brakes must be loosened so as not to hold, and pedals may be made stationary. No other alterations from the stock model will be allowed. In stripped stock events all parts may be changed with the exception of the engine and frame, which must not be altered in any way, and must be strictly up to stock specifications.

SECOND DAY.

Five Miles, Stripped Stock Machines, 30:50 cu. in. limit, open to private owners. Prizes, first, second and third.

Five-mile F. A. M. Professional Championship, 61:00 cu. in. limit, qualifying heats.

Five Miles for M. M. A. Amateur Trophy, 61:00 cu. in. limit; cup presented by the Motorcycle Manufacturers' Association; to be won three times in succession before becoming permanent property of rider; open to trade riders and private owners.

Ten-mile F. A. M. Professional Championship, 61:00 cu. in. limit, qualifying heats.

Ten Miles for Trade Riders, 30:50 cu. in. limit, stripped stock machines.

25-Mile Professional Championship, 61:00 cu. in. limit, qualifying heats.

THIRD DAY.

Five-mile Novice, 61:00 cu. in. limit, stripped stock machines only, open to private owners who have never won a first prize.

Ten-mile F. A. M. Amateur Championship, 61:00 cu. in. limit; final heat; prizes, gold, silver and bronze medals.

Ten-mile Professional, 61:00 cu. in. limit. Cash prizes, first, second and third.

Five-mile F. A. M. Amateur Championship, 61:00 cu. in. limit, stripped stock machines.

Ten Miles, trade riders, 30:50 cu. in. limit, stripped stock machines.

One Mile for F. A. M. Amateur Championship; final heat.

FOURTH DAY.

Five Miles, Private Owners, 61:00 cu. in. limit, stock machines. Three prizes.

Five-mile F. A. M. Professional Championship, 61:00 cu. in. limit; final heat. Prizes, gold, silver and bronze medals.

Ten Miles, Trade Riders, 61:00 cu. in. limit. Three prizes.

Ten Miles for F. A. M. Professional Championship, 61:00 cu. in. limit; final heat. Prizes, gold, silver and bronze medals.

Ten Miles, Trade Riders, 61:00 cu. in. limit, restricted to belt driven machines. Three prizes.

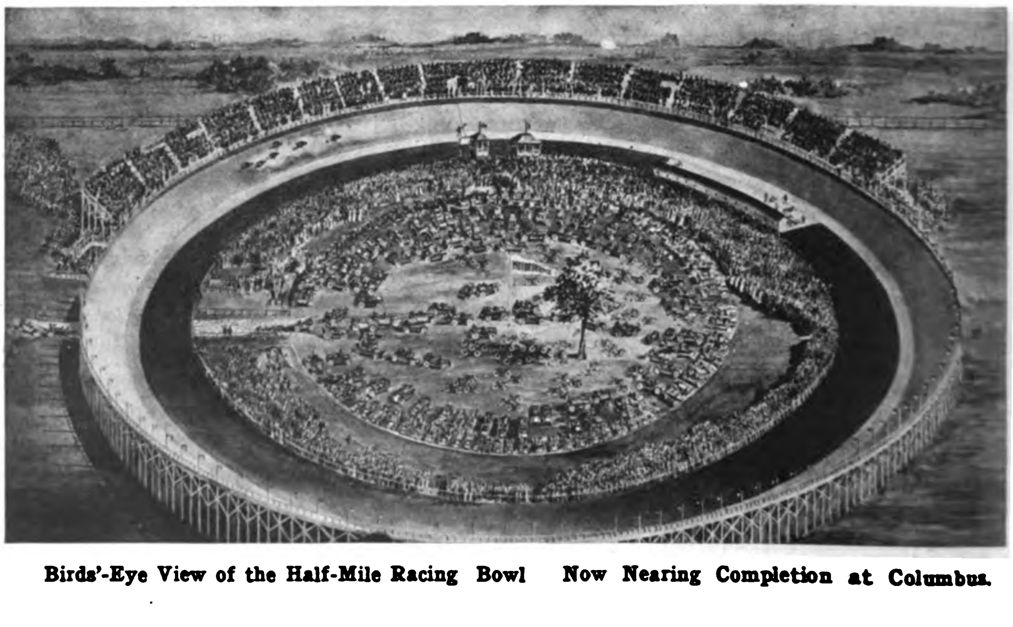
Twenty-five Miles for F. A. M. Professional Championship, 61:00 cu. in. limit; final heat. Three prizes.

READY FOR BIG CANADIAN MEET.

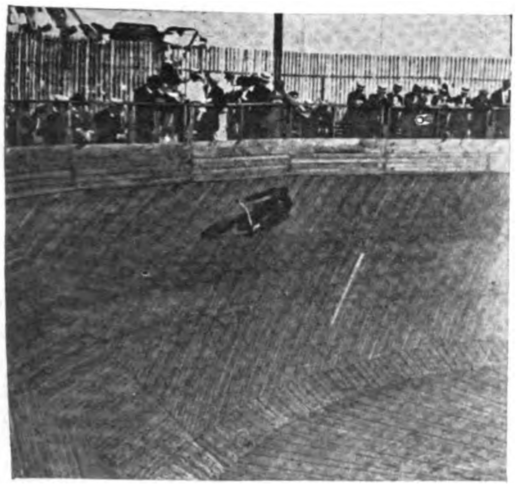
THE official ratification of the nomination of Dr. G. B. Gibson, secretary-treasurer of the F. A. M., to an honorary membership in the Toronto M. C. was duly made at a rousing meeting of that club on Wednesday evening, June 15. Fifty members were present at the meeting, and eight new riders were admitted.

The program of events for the club's next race meet, to be held on the Exhibition half-mile track on Saturday, July 6, was announced. There will be nine events, including a twenty-mile grind, a side-car race and an unknown distance contest. In all there will be about 100 miles of racing. Entries for this meet close on Tuesday, July 2.

The club will tour to Hamilton on Monday, July 1, for the National meet there. A number of American stars, including "Shorty" Matthews and Don Klark, have entered for this tournament.



Birds'-Eye View of the Half-Mile Racing Bowl Now Nearing Completion at Columbus.



A HAIR-RAISING FEAT.

"DOC" Campbell is shown above, speeding about the diminutive board saucer at Dreamland Park, Coney Island. The track is twenty laps to the mile, and several times daily Campbell amuses himself by chasing and passing an automobile on its treacherous surface.

AN AMENDMENT

Under Proposed Change F. A. M. Officials Will Be Elected by Majority Vote of Directors Present.

NOTICE is hereby given that at the coming F. A. M. assembly the chairman of the National Committee on Legal Action will propose an amendment to Article 5, Section 4, of the constitution, relative to the election of officers. This section in its present form simply states that the candidate who "has received the highest number of ballots cast shall be declared elected," etc. It is the intention to amend the section so that it will read as follows:

"In the election of the president and secretary-treasurer a *majority* vote of the *total* number of directors present shall be required. In the election of directors simply the highest number of votes cast shall determine the result."

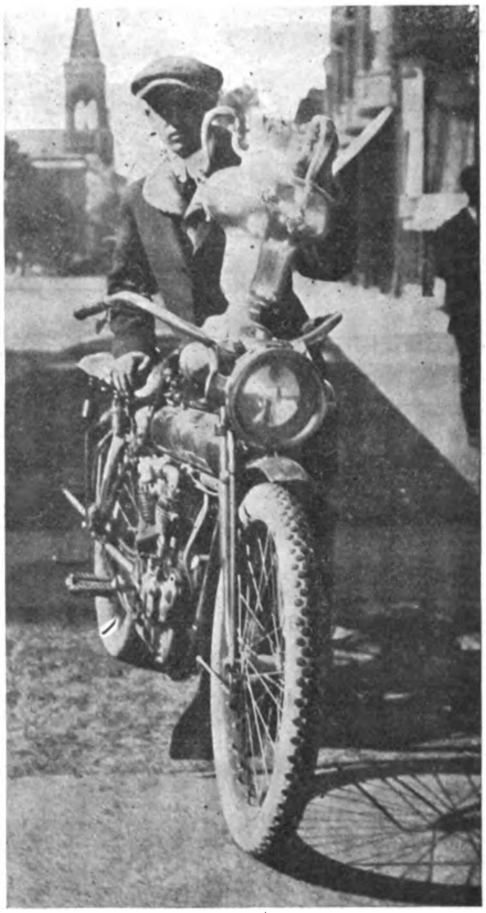
This change is advisable and necessary because of the fact that with two or more candidates in the field for president or secretary-treasurer a contestant might receive the highest number of votes cast and still stand as the choice of the minority.

HUYCK AND HIS CUP.

IF Fred Huyck were a little more compact in build and the cup awarded him for the recent Chicago-Milwaukee endurance run were a bit taller, Freddie and the trophy would just about break even as to bulk. This is proved by the accompanying photograph, which shows Huyck, the handsome cup and the Flying Merkel machine on which he won it.

AERO-MOTORING.

OF course, this is a freak photograph, showing Arthur Shaw apparently flying through the air on his Eagle, a natural occupation for a machine so named.



Fred Huyck, His Huge Cup and Trusty Merkel.

KERR AND HIS EMBLEM.

IN the accompanying photograph Fred T. Kerr, Emblem agent in Toronto, Can., appears on the Emblem flier, with which he competed in the races held recently at London, Ontario. Kerr was snap-shotted before the anxious expression had left his face after the close of an exciting contest.

CLEVELAND BULLETINS

Seliga Springs Surprise by Refusing to Let Carslake Shake Him in Special Race.

CLEVELAND, Ohio.—Saturday, June 22.—For the first time at the Luna Motordrome, Carslake was beaten tonight—beaten by a Cleveland boy, Frank Seliga. Seliga took the honors of the night with his victory over the Australian in the feature event, and by his capture of first place in the invitation race. A five-mile amateur race was the feature event on the bill-of-fare, Carslake attempting to finish one-half lap ahead of his closest competitor. Not only did he fail to lead by the necessary one-half lap, but Seliga and Smiley were continually at his wheel. Summaries:

Three-mile amateur for 7 h. stock machines—Roehl (Indian), Henikman (Indian), Norton (Indian); time, 2:56.

Five-mile free-for-all, professional—First heat, Carslake (Indian), Smiley (Indian), Huttinger (Indian); time, 1:30; second heat, Gibson (Indian), Knapp (Indian), Hunter (Indian); time, 1:31; final, Carslake, Smiley, Knapp; time, 3:51⅖.

Three-mile invitation, professional—Seliga (Indian), Smiley (Indian), Knapp (Indian); time, 2:19; this race went one lap over three miles, and was interesting throughout.

Two-miles against track record of 1:30—Seliga; time, 1:29⅗; Carslake; time, 1:29 flat.

Five-mile handicap, professional — Seliga (Indian), Smiley (Indian), Gibson (Indian); time, 3:45.

Carslake clipped the two-mile track record by one second, making the eight laps in 1:29. Seliga attempted to lower this but failed, his time being 1:29⅘. Roehl won the amateur event.

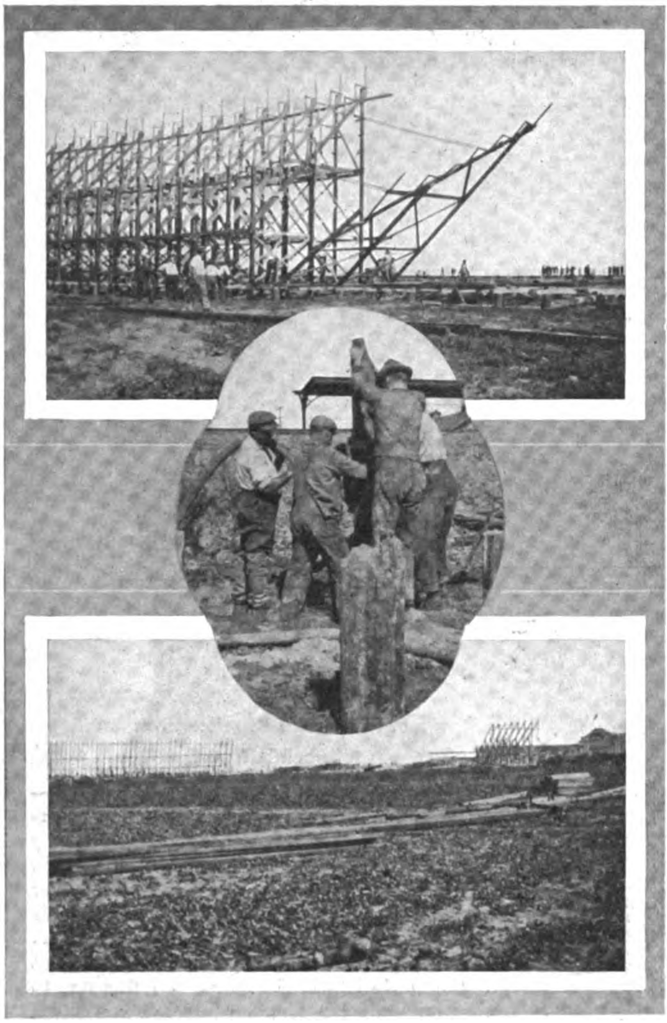
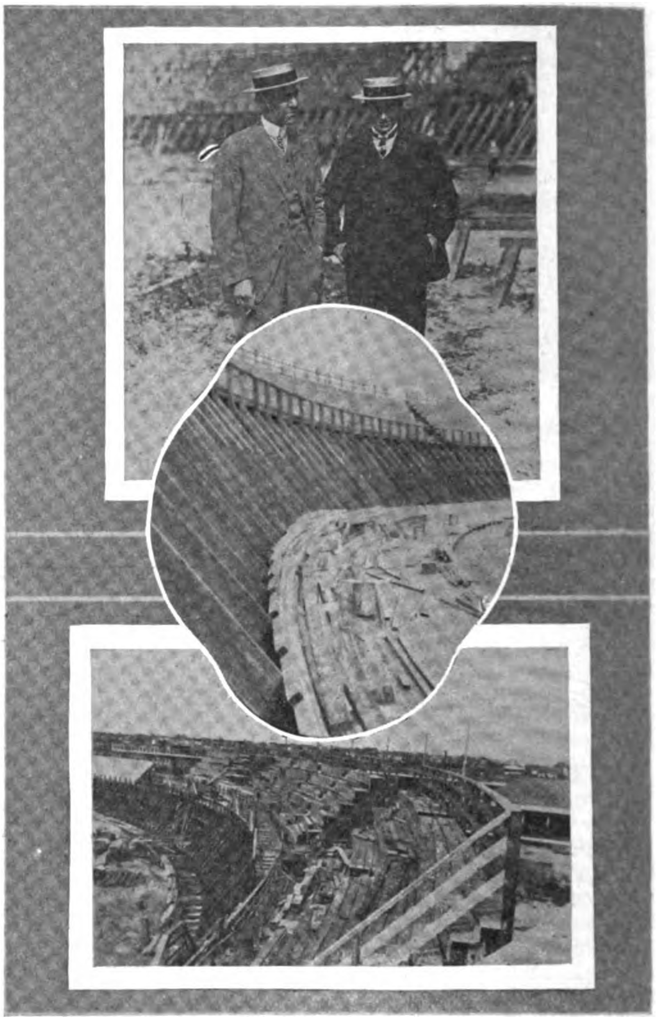
READY FOR OPENING MEET ON THE BRIGHTON BEACH MOTORDROME



The pictures to the left show the Brighton track as it appeared about two weeks ago.

At the top, right, are shown Chapple and Albright. Below them are two scenes of the track which is now nearly completed.



ALTHOUGH considerable work remains to be done on the new Brighton Beach motordrome, the management is going ahead with its arrangements for the opening meet, scheduled for next Saturday, June 29. The saucer is located at the end of the Brighton Beach broadwalk, close to the Giant Racer roller coaster, and within a few minutes' walk of the elevated trains. A small army of carpenters, under the direction of William Jarvis, superintendent of the track construction, is working at top speed and excellent progress is now being made in laying the flooring.

Manager Wellman announces that the opening night will find him ready with a strong card, the big feature of which is to be a match race between Arthur Chapple and Johnnie Albright, the Western speedster. In the professional events Billy Wray, Ferdie Mercier, George Haas, Johnnie Cox, Al Graves, Bob Motter and Frank Zimmerman will furnish the thrills. Among the amateur stars will be John U. Constant, the Indian champ, James B. French, William Annis, Michael Costello, Reggie Lyons, Charles J. Davis and Johnnie Van der Houtan. The amateur events will be run in heats of five miles.

Superintendent Jarvis states that no expense has been spared in the effort to make the Brighton bowl the fastest and safest in the country, and he is convinced that several problems which have bothered the builders of similar tracks in other parts of the country have been solved at Brighton. The track is being built of spruce timber, the frames being of 2 by 13 material and the planking 2 by 3. Over 1,500,000 feet of lumber will have been used when the track is finished. From the viewpoint of a novice the banking of the bowl is rather startling; from the strip of level planking at the inner edge the track surface shoots upward at an angle of 53 degrees.

Seating accommodations have been provided for 10,000 fans, the bleachers seating 7,000 and the grandstand 3,000. The seats are arranged in tiers, rising to a height of 40 feet, so that a spectator on the top tier will be able to see the riders at all times except when they are directly in front of him on the near side of the track. At this point it will be difficult for him to obtain a view of the speedsters owing to the unusually steep banking of the bowl proper. Completely encircling the bowl is a promenade 20 feet wide, affording easy access to any seating section.

REFERRING TO ARMSTRONG.

WITH reference to the suspension of Earle Armstrong, the Excelsior rider who is involved in the Cleveland motordrome tangle, the Excelsior Motor, Mfg. & Supply Co., has written the following letter:

"As to the merits of Armstrong's suspension we do not care to make any comments at present as Dr. Thornley has written Mr. Armstrong to get a full statement of the facts. We believe that when he knows all of the circumstances he will not feel that drastic measures are necessary.

"Armstrong is not on our payroll, and we have no interest in the case outside of the fact that Armstrong is a warm personal friend of most of the persons in our company. We would regret seeing so clean and fast a rider taken out of the game, and hope that Dr. Thornley, in whose hands the matter rests, will show leniency."

WEDNESDAY, June 26.—As the result of a frank statement of his side of the case by Armstrong, Chairman Thornley has written the latter that his suspension will hold until the F. A. M. Assembly in Columbus next month, when the entire matter, including the charges preferred against Kraemer, will be thrashed out before the delegates. In this connection, Dr. Thornley has written Armstrong as follows:

"You will remain suspended until the F. A. M. Meet, and after that it is impossible for me to say what will be done with your case. Personally I am not anxious to punish you severely or drive you out of the sport. Your reputation up to the present time as far as I know has been of the best, and if a way can be found to show you leniency I will be only too glad to avail myself of it. The whole matter will have to be threshed out at the F. A. M. Convention, and after that it might be possible to do something to mitigate the severity of your punishment."

CONSTANT IS FIRST IN ONE-HOUR GRIND

Brooklynite Takes Championship Event in Detroit Against Strong Field by Riding 66⅝ Miles—Don Klark, in Second Place, Also Breaks Record—Fastest Mile by Don Johns.

JOHN U. CONSTANT, of Brooklyn, N. Y., now has another championship to his credit. By winning the one-hour race in the meet held on the fairgrounds track in Detroit on Saturday, June 22, the Indian speedster has established his claim to recognition as a top-notcher for long distance work as well as over the five and ten-mile routes. As the one-hour grind was an F. A. M. championship event it attracted unusual attention, and the big crowd that gathered at the Detroit course testified to the rapidly growing interest in the single-tracker by cheering the riders from time to time as they spun around the track.

Constant not only won the event, but hung up a new dirt track record, his distance being 66⅝ miles. The previous record, held by Freddie Huyck, of Chicago, was 61½ miles. Constant rode the most remarkable race of his eventful career. His machine gave him no trouble and there were only two or three occasions on which he was not traveling wide open. His work on the turns was the classiest seen in or near Detroit for many a day, and his miles were reeled off in from 54 to 56 seconds.

Don Klark, the Detroit boy, also mounting an Indian, was second in the one-hour race, turning off 65¼ miles in sixty minutes. Klark rode an excellent race and there were times when his friends entertained hopes that he would succeed in taking a lead on the flying Brooklynite. Don Johns, Excelsior, did some spectacular work but was forced out in the forty-ninth mile when his oil pump was disabled. Johns made the best mile of the race, in 52⅕ seconds. "Shorty" Matthews dropped out because of trouble with the motor of his Thor in the thirty-fifth lap. E. G. Baker, Indian, was in third place, riding 62⅕ miles. Weitzman, mounting a Flying Merkel, gave a good account of himself and finished in fourth place, with 52½ miles to his credit. Constant, Klark and Baker rode throughout the hour without a stop.

In the fifteen-mile race for the Detroit Motorcycle Dealers' cup, Klark romped home in the lead with "Shorty" Matthews and his Thor in second position. Matthews protested the race because the starter signalled to him with the wrong flag on the fourteenth lap, but as Klark continued to the finish without a mishap it was the opinion among the fans that "Shorty" would not have been able to change his position. Klark had what seemed to be a safe lead when the flag referred to was used. Summaries:

Ten-mile handicap, 30:50 class: Don Klark, Indian, first; Matthews, Thor, second; Weitzman, Merkel, third. Time, 9:46.

Fifteen miles, for Dealers' Cup: Klark, Indian, first; Matthews, Thor, second; Weitzman, Merkel, third. Time, 14:31⅗.

Ten-mile novice: Vanberg, Indian, first; Hill, Indian, second; McCafferty, Indian, third. Time, 9:52⅕.

One-hour national championship: Constant, Indian, first; Don Klark, Indian, second; E. G. Baker, Indian, third; Weitzman, Merkel, fourth.

SEVERE SEATTLE RUN

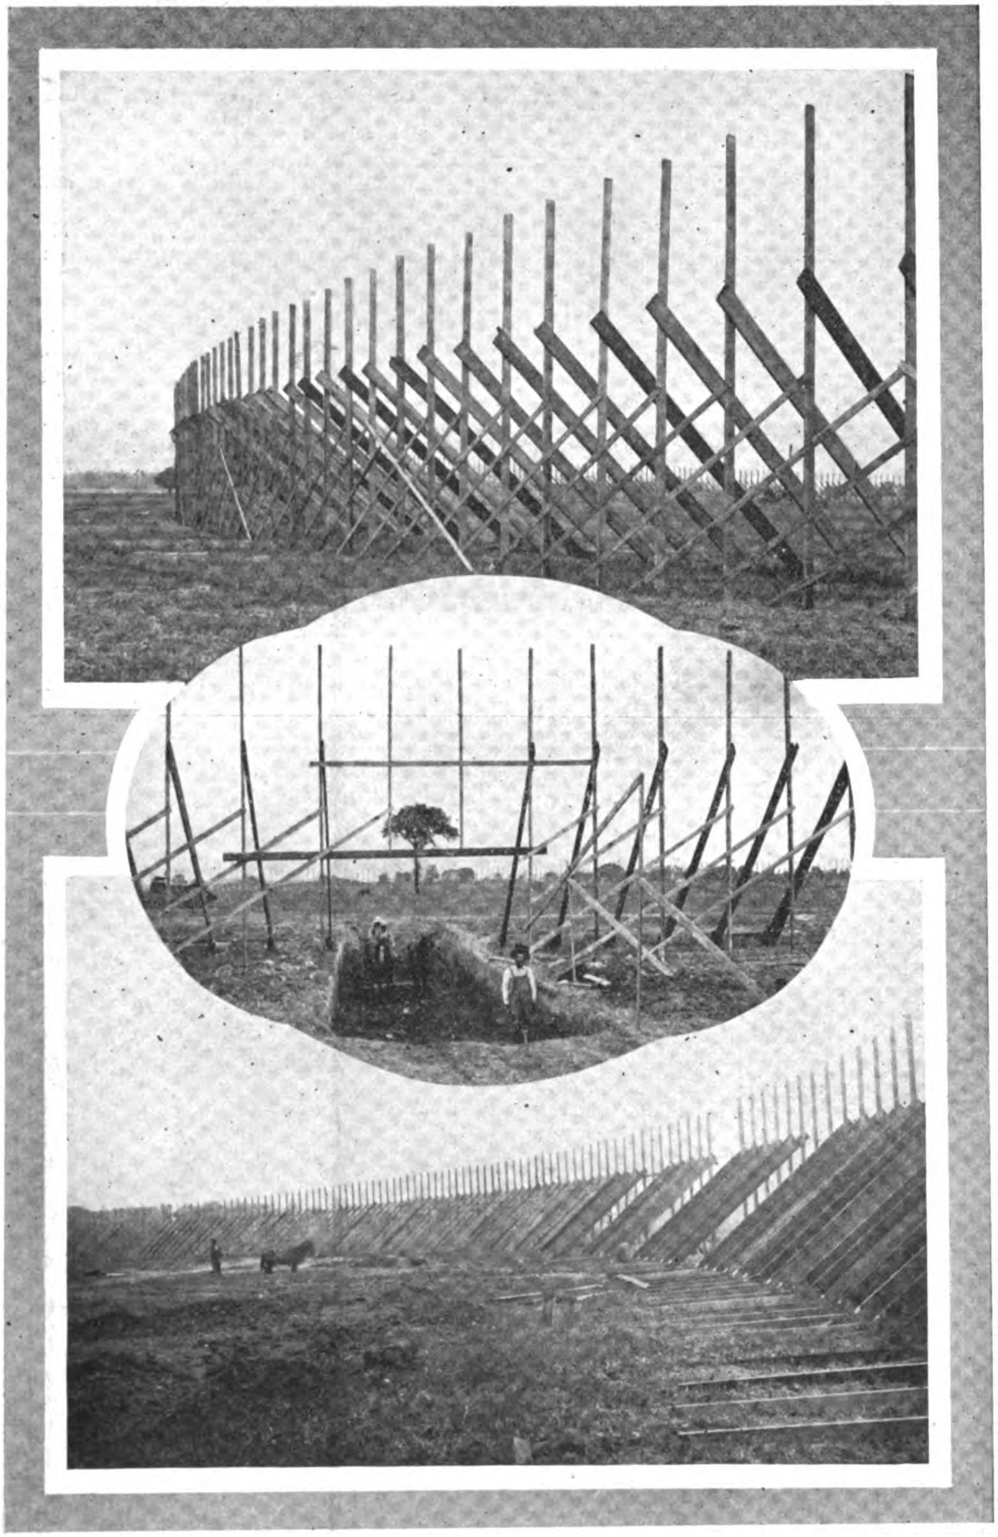
Twenty-eight Contestants Found Hard Going on Endurance Trip to Portland and Return.

SEATTLE, Wash.—After making a trip of 404 miles over rough roads in 28 hours, Arthur Whisner and Ray Day, of Tacoma, reached Seattle on the night of June 17 with perfect scores in the third annual endurance contest pulled off by the Seattle Motorcycle Club. They won the two sets of tires offered by the United States Tire Company. They were the only Tacoma motorcyclists entered in the run. Only two other riders, Fred Mercer and L. W. Conners, of Seattle, made the run with perfect scores. Whisner rode a 7 h. Harley-Davidson and Day was mounted on a 7 h. Flying Merkel. They reported at every checking station en route without being a half minute off schedule, and when their machines were inspected by the judges on their return to Seattle, not a single defect was found. The riders found the Pacific Highway exceedingly rough in the southern part of Washington. Heavy rains had torn up the roads and traffic had caused deep ruts to form.

Eighteen riders of the 28 who started from Seattle on the morning of June 16 finished in Portland at 7 p. m. the same day, seven coming in with perfect scores for the first half of the trip. The start was made from the Union Depot, Seattle, and the route lay through Tacoma, Roy, Yelm, Centralia, Chehalis, Toledo, Castle Rock, Kelso, Kalama and Goble. The seven men who netted perfect scores into Portland were: N. P. Fogh, Ray Cattrell, R. E. Prentice, Ray Day, A. R. Whisner, H. H. Armstrong and Fred Mercer. Although not numbered among the regular racers, N. C. Christopher and his cousin, Miss Carrie Christopher, riding tandem, arrived in Portland on the night of June 16 from Seattle ahead of all the contestants in the endurance run, and with a perfect score. Other riders in the contest who reached Seattle on the return with perfect scores but with motor defects were, Ray Cathrall and W. G. Taft, on Excelsior sevens.

THE INDIAN CLUB, OF BALTIMORE, MD.

Top Picture—Members and Friends in the Mountains of Western Maryland. Below—The "Flying Squadron" of the Club—President Gault, Roger Wilkens, Nelson Johnson and Fred Wilkens.



The Columbus Track in Course of Construction.

SEEK TO CHANGE LAW.

WASHINGTON, D. C.—The National Capital Motorcycle Club is enthusiastic over the success which attended the race meet on Decoration Day, at the Benning's track. A report just made to President T. Mitchell Dodson shows a net profit of $1,700. The National Capital Club is now planning to bring about a change in the regulations governing the use of the motorcycle in the District of Columbia. At present no rider is permitted to carry a woman passenger on his machine, no matter what kind of a carrier is provided. The commissioners will be asked to amend their rulings so that a woman passenger may be carried if the machine is equipped with a regulation tandem seat, a design of which will be submitted with the request. At present two men may ride on a single machine.

NEW ENGLAND F. A. M. MEETING.

THE mid-summer meeting of the New England District of the F. A. M. will be held at the clubrooms of the Boston Motorcycle Club, 206 Massachusetts avenue, Boston, June 29, at 8 p. m. On the afternoon of the same day the club will conduct a hill-climbing contest on Robbins road, Arlington.

SURPRISES DUE, SAYS PRINCE

Veteran Track Builder Tells Just Why He Expects New Columbus Bowl to Break All Records.

COLUMBUS, Ohio, June 20.—Since the announcement was made that the Columbus half-mile saucer will prove to be the fastest in existence motorcyclists throughout the country have been a bit curious to learn just how it differs in construction from other American bowls on which records have been broken, and for that reason the statement of Jack Prince, given below, is interesting.

"The Columbus track is being sloped at an angle of 45 degrees," said Prince in an interview a few days ago, "and in order for a quarter-mile saucer to be as fast as this half-miler it would be necessary for the former to be built at an angle of 70 degrees. This much should be obvious. According to our figures the Columbus track will permit of a speed of one mile in 30 seconds, and it should be perfectly safe even when the rider is traveling at right angles to the planking. There is absolutely no danger of skidding, and with very little experience a racer will be able to take the high banking with perfect confidence. The fact that the diameter of the bowl is 880 feet should permit of more satisfactory service from tires, as the centrifugal force exerted against the track from a machine on a half-mile circuit at 90 miles an hour, for instance, is only half that which would be exerted at the same speed on a quarter-mile saucer. As a result tires will be less likely to burst on the half-mile track.

"I predict that within three weeks the performances on the Columbus track will bear out all my claims," continued the veteran builder of speedways. "I erected the first saucer track for bicycle racing fifteen years ago, as well as the first motordrome and the first board track for automobiles, and the benefits derived from all this experience are embraced in the Columbus track. You may take my word for it; when the speedsters start to spin the Columbus bowl there will be a bunch of surprises for followers of motorcycle racing."

A GENEROUS INVITATION.

FROM the Central Jersey M. C., of Trenton, N. J.: "Please tell the boys that we are anxious to have them drop in at our clubrooms whenever they pass through Trenton. If they are touring we will strive to give them practical assistance and send them on their way rejoicing, and if they simply run in from a neighboring town we will make an effort to impress them so that they will hanker to see us again. In other words, we want to show motorcyclists in general that we know how to be hospitable, and we ask that they put us to the test. Our rooms are located in the Woolworth building, 24-26 South Broad street."

DES MOINES SHOW.

DES MOINES, Iowa.—One of the biggest and best automobile shows in this state is to be held at the Iowa State Fair in this city, August 22-30. Indian, Excelsior, Harley-Davidson, Merkel, Thor, Pierce and Minneapolis machines will be included in the motorcycle section.

MOTORCYCLE IMPROVEMENT CONTEST

First Prize, $50 in Cash

Second Prize, $25. Third Prize, $15
Fourth Prize, $10. Total, $100

WITH a view to reaping a goodly harvest of new ideas, aiming to perfect the motorcycle, MOTORCYCLE ILLUSTRATED inaugurates with this issue its first annual Improvement Contest. This contest will be conducted each year during the summer months, at the time when riders are learning by actual experience on the road, and manufacturers are seeking to ascertain what improvements are likely to be most popular in next year's models. The success of the Luggage Carrier Contest and the excellence of the many suggestions offered, has convinced the publisher of this paper that the ideas of the everyday rider are worth bringing into the limelight of publicity.

Accordingly, four cash prizes of $50, $25, $15 and $10 respectively, totaling one hundred dollars, will be awarded to those who propose the best four suggestions for the improvement of the present-day motorcycle. And in this connection it should be stated that our readers, no matter how gifted with mechanical ingenuity, should not attempt to design entire machines, but rather devote their efforts to the perfection of important details. This is not to say that new designs of motorcycles in their entirety are not wanted; on the contrary they will be welcomed by the editor of this contest. But to design a new machine that will be a distinct improvement upon any on the market today is sure to be a herculean task and, in any event, only the product of years of thought and steady application on the part of a mechanical genius. Still, it is not at all impossible that a contest of this character may bring out such a man and such an idea.

It is probable, however, that the prize-winning suggestions will have to do with details overlooked by the clever designers who make it their business to perfect the motorcycle. Therefore, it behooves every reader of MOTORCYCLE ILLUSTRATED to consider and analyze his own machine, and machines in general, from that point of view. Moreover, though the test of mechanical perfection will be applied to every suggestion received, on the other hand, liberal credit will be given for ideas in the rough, and their value will be measured on the following basis:

First of all comes the question, To what extent is this necessary? Then the three considerations of comfort, safety and convenience; then adaptability to different machines or their parts or accessories; mechanical perfection; reliability; cost of manufacture; durability; simplicity, and neatness. In measuring the total value of each idea or design, one hundred points will be the mark of perfection, and the scoring will be done as follows:

Necessity and desirability	**25 points**
Safety, comfort and convenience	**15 points**
Adaptability	**10 points**
Mechanical perfection	**10 points**
Reliability	**10 points**
Manufacturing cost	**10 points**
Durability	**8 points**
Simplicity	**7 points**
Neatness	**5 points**
Total	**100 points**

The terms "simplicity" and "neatness" do not refer to the form of the drawings or descriptions representing the ideas themselves, but to the finished result as applied to a motorcycle. In other words, competitors need not be draughtsmen. On the contrary, although drawings should be submitted whenever they help to make the idea clear, still such a sketch need only indicate roughly the idea it is intended to convey. Our staff artists will not only work out in finished form all rough drawings, but also make new drawings for accurately described designs.

Cash prizes will be awarded as follows:

First Prize	**$50**
Second Prize	**$25**
Third Prize	**$15**
Fourth Prize	**$10**
Total	**$100**

In addition to awarding these prizes, MOTORCYCLE ILLUSTRATED will pay at least $1 for *every* suggestion published, immediately after it appears. Those who do not want their names published may contribute anonymously, but should an anonymously contributed suggestion prove to be one of the best four, the name of the proposer will have to be published in order to make him eligible for a prize.

CONDITIONS OF THE CONTEST.

1. All are eligible and each contestant may submit as many suggestions as he desires.
2. The idea submitted must embody an improvement of the motorcycle or one or more of its parts and accessories.
3. Sketches should accompany descriptions, but the former need not be artistic. Rough drawings will serve the purpose. Descriptions, however, should be clear, accurate and to the point.
4. While it is not required, contestants are advised, in addition to accurately setting forth their ideas, to state why and to what extent they consider them as scoring points because of their (1) necessity, (2) safety, comfort and convenience, (3) adaptability, (4) mechanical perfection, (5) reliability, (6) manufacturing cost, (7) durability, (8) simplicity, and (9) neatness.
5. In the event of a tie for any prize on the above method of scoring points, such a tie will be broken by considering the extent to which the suggested improvements would respectively add to the popularity of the sport or the commercial value of motorcycles.
6. The prize winners will be determined on the point system as outlined above by the editors of MOTORCYCLE ILLUSTRATED who, in making their announcements, will give the detailed scores of at least the best twelve suggestions.
7. At least one dollar will be paid for every suggestion published.
8. Competitors are requested to address all their communications to Editor Improvement Contest, MOTORCYCLE ILLUSTRATED, 51 Chambers street, New York City.

WINNERS IN CARRIER CONTEST

Judges Award First Place to Ingenious Device Submitted by Ohioan—Side-Car Attachments, While Not Within Conditions of Contest, Receive Honorable Mention—Descriptions of Leading Nine Designs.

AFTER minute examinations individually, followed by collective discussion and comparison, the judges announce herewith the winners of the Luggage Carrier Contest, which was opened in our issue of April 4. Over 80 designs were submitted; 66 have been published, while the remainder were unsuitable for various reasons. The designs in many cases were only in outline, and in others were complete to the smallest detail. Of those published, it was difficult to determine the winner, and in accordance with the announcements at the beginning of the contest (especially with reference to condition number 2), the following list of requirements was used in determining the winners:

Condition.	Points.
Adaptability to any machine	5
Lightness	5
Durability under service	8
Capacity	12
Neatness	3
Detachability and accessibility	5
Comfort and safety of rider	5
Simplicity	2
Cost	5
Total	50

The conditions are here re-stated: "1—A perfectly efficient luggage carrier—to afford the maximum of service with the least possible sacrifice of appearance, accessibility, the rider's comfort and safety, together with his ability to make light deliveries economically and with despatch.

"2—The idea submitted must embody a luggage carrier suitable for attachment to a motorcycle, and adapted for conveniently carrying a number of small parcels of moderate weight.

"3—Prizes will be awarded according to the *practical value* of the *ideas* presented and not the symmetry of the drawings."

The winning design, submitted by Murray C. Goddard, of Unionville, Ohio, has the disadvantage of being somewhat weighty, but it is not nearly so heavy as other designs along the same general lines. It is accessible from both sides and top; is readily removable and very adaptable. The rear wheel can be removed without dismounting the carrier, a feature not present in the majority of designs submitted. The second prize idea, that of S. Gustasne, is rather limited in its adaptability; it needs the undoing of straps for any part of the top load, while the side-bags are limited in their capacity. These bags, however, are extremely easy to attach or detach, and are fitted with handles for facilitating this work. For light loads as in R. F. D. and similar work, this is the best design submitted. Number three idea (Alan H. Sawyer) is most ingenious, giving a large surface on the side-panels for advertising the business involved, but unless modified it is accessible only from the top, without unfolding. Parcels at the bottom of the carrier can only be reached by going down from the top. It has the advantage of lightness and simplicity, but the folding feature would tend toward shakiness after some service. L. A. Osborne's design, next in order, is light and easily constructed, but difficult to attach and detach, and has the same disadvantages as to loading as that of Sawyer. I. J. Covert's contribution is excellent, but is adaptable only to machines having the cradle spring-fork; the load must be strapped on by two or more straps and careful arrangement is necessary to prevent spilling of the parcels. It is very safe, simple, and if the side loads are well balanced, it is neat, and does not affect the steering.

POINTS SCORED BY LEADING COMPETITORS.

Name.	Adaptability.	Lightness.	Durability.	Capacity.	Neatness.	Detachability & Accessibility.	Comfort and Safety.	Simplicity.	Cost.	Total.
First prize, $25.—Murray C. Goddard, Unionville, Ohio	5	3½	7	10	2	4	4½	2	3	41
Second prize, $15.—S. Gustasne, Orient, Iowa	4	5	7	6	3	5	4½	2	4	40½
No. 3.—Alan H. Sawyer, Millers Falls, Mass	5	4	6	9	2	5	3	2	4	40
No. 4.—L. A. Osborne, Columbia Station, Ohio	4	3	7	10	2½	4	3	1½	4½	39½
No. 5.—Victor Perry, Batavia, N. Y	5	1	7½	11	3	5	5	1	1	39½
No. 6.—Harry Rhoads, Akron, Ohio	5	1	7½	11	3	5	5	1	1	39½
No. 7.—I. J. Covert, Fishkill Landing, N. Y	2	5	7	7	2	5	4½	2	4½	39
No. 8.—Edward Pommer, Minneapolis, Minn	5	5	7	4	1	4½	5	2	5	38½
No. 9.—R. C. Newmann, Chicago, Ill	5	4	6	6	1	5	4½	2	4½	38

Edward Pommer's design is ingenious, being of the folding type, but is not particularly neat and projects too far to the rear, if heavy loads are used. In service it would become loose and the cord lacings fold poorly. For very light loads it is excellent. R. C. Newmann, who contributes the ninth design, has the load too far to the rear, resulting in considerable wear on the rear wheel and tire. While strong and light, by its accessibility there would be a temptation to overload.

The side-cars, contributed by Messrs. Perry and Rhoads, are excellent in design. The first is underslung, giving low center of gravity and is capable of greater load-capacity than the other. The front springing of the Rhoads car is well thought out. Both designs deserve honorable mention, but the judges decided not to consider them as luggage carrier within the meaning of the contest conditions; they are delivery vans, hence their classification as above.

It will be noticed that out of a total of 50 points the winner received only 41. This signifies that there is room for even better designs; that none are ideal. The chief weakness in general seems to be in the lack of adaptability, while a great deal of simplicity throughout the whole number of designs has been sacrificed to carrying capacity. In many cases clever designs were submitted apparently without considering the wear on the tire and frame, and the cost or skill necessary to construct them.

HUSTLING OFFICIALS.

WASHINGTON, D. C.—Much of the success which the National Capital Motorcycle Club, of this city, has attained is due to the enthusiasm and popularity of E. Mitchell Dodson, president of the organization.

President E. Mitchell Dodson.

President Dodson's associate officers are: Paul A. Draper, vice-president; T. O. Wanslebeu, corresponding secretary; S. B. Eaton, recording secretary, and H. B. Cohen, treasurer. All of the associate officers are "live wires" and entitled, together with the president, to much credit for the prosperous condition of the club. The club was organized in 1907 and affiliated with the F. A. M. September 1, 1908. It has over 100 members.

CHAMPAIGN CLUB REORGANIZED.

THE Champaign Motorcycle Club, of Urbana, Ohio, has recently been reorganized and now numbers about thirty active members. New officers have been elected. The club takes up its work under auspicious circumstances and will presently join the F. A. M. in a body. F. A. Harenberg is secretary.

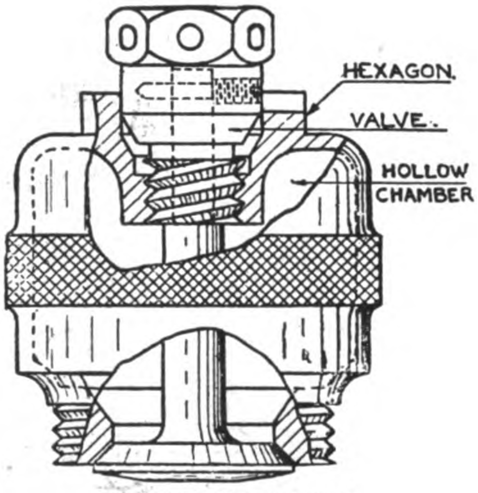
ENGLISH NOTES

BY BRITISHER

More on the decompressor and its fittings.—Methods of carrying spare belts.—Tires in Six Days' Trial observed to determine their reliability.—A Transmission experiment and detachable tanks.—Various accessories in general use.

WITH further reference to my notes on decompressors, and inquiries received on that subject, the Amac decompressor can be procured for $6 from the Amac Co., Talford street, Aston, Birmingham, England, or without handlebar control for $4.50. The handlebar control is recommended, especially on clutchless machines, as it permits the percentage of the charge which escapes from the cylinder to be varied by the handlebar lever, thus enabling a single-geared machine to be run at different degrees of slowness. The cheaper type has a lever fixed on the decompressor itself, insulated from heat, and similar in shape to a compression tap lever. This lever has only two positions, off and on, and with the decompressor in action, the power is so far reduced that the engine would not develop vim enough to carry a rider up a gentle grade; this cheaper device is therefore only suitable for starting, and for slow driving on a dead level. Both devices are applicable only to engines possessing an idle orifice drilled with sparking plug thread, e. g., a second valve cap, or a second spark plug hole.

Appended is a cut of another device which is not a genuine decompressor, but which has its uses. As the design shows, it does not under any circumstances provide a compression leak; the engine is gastight whether the device is open or shut; but when the lever is open, it increases the suction area of the cylinder, and reduces the compression ratio. Thus some riders use engines with a compression of, say, 80 pounds per square inch, which are not particularly flexible in city traffic, but run with tremendous ginger on the open road. By fitting one of these devices, and opening its lever (not shown in cut), the engine compression can be reduced to, say, 70 pounds per square inch, whereupon the machine becomes more flexible and docile for city traffic. As soon as the traffic is cleared, the lever can be cut, and the racing compression is instantly restored. This device (know in Great Britain as the "P. & P."), thus converts a single-compression engine into a double-compression engine. Its action is obviously simple. It adds a small hollow chamber to the cylinder, which can be opened or closed by operating a screw-down valve.



P. & P. Decompressor.

This device costs $4 from A. W. Gamage, Ltd., Holborn, London, England. It can easily be made by any clever amateur mechanic, and many English motorcyclists have made and fitted devices of this kind for themselves in order to render racing machines more manageable in city riding.

Another Decompressor.

ENGLAND'S premier motorcycle factory, the Triumph, has got its testers busy with a very neat and simple decompressor for next season, which merits description. The Triumph cams are cut out in the web of the timing pinions, as per sketch, and the web is scolloped out half an inch, to give good wearing surface for the travel of the roller on the end of the lever which hoists the tappet. The decompressor consists of a short additional cam on the inlet valve pinion, as shown in sketch. Whereas the full power cam spreads the whole width of the web (one-half inch) the decompressor cam is only one-quarter inch wide, and as the valve-lifting lever can be moved five-eighths inch by an external pedal, it is obvious that it can be made to hit both cams, or by being moved out a little it can clear the decompressor cam. The carrying stud of the lever has room to slide in its bearing, and is normally so held by a spring that it misses the decompressor cam. For starting purposes or slow running, this spring is cut out by a small cam, operated by an external pedal mounted on the crankcase, and the lever then rides on the decompressor cam. As the profile drawing shows, this cam holds the inlet valve just a shade open on the commencement of the compression stroke, and thus leaves the engine to fire on a reduced charge. This machine can circle round the backyard of a city tenement—if they ever have yards—with the engine firing every time.

Carriage of Spare Belts.

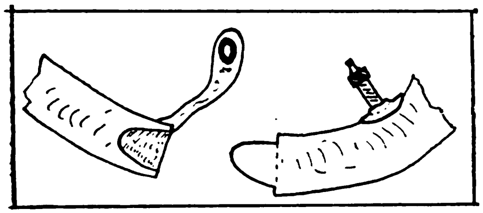
IT still passes the wit of man to devise a really neat and handy method of storing one or two spare belts on a motorcycle, and in a big endurance run the machines are unsightly, being freely swathed with spare belts from stem to stern. Four principal methods are in vogue: Mounting a round tin belt-box vertically at the tail of the carrier, on which the registration numbers are painted, so that the box also serves as a number-plate; bolting to the machine a round leather box, resembling a dude's collar case, in which one or two belts can be coiled around a central well, which contains a spare inner tube; lapping the belts round the tank, and hooking them by the fasteners to the top tube of the frame, so that they serve as kneegrips; looping them round the handlebar. At the start of a big endurance run most machines carry two or three belts neatly arranged in one of the first three fashions. On the last day the prevolence of belt troubles is exemplified by the fact that most of the handlebars are swathed with worn, cut, and broken belts which the riders have not found time to repack. Rubber belts rule the roost, and so protection from dirt and rain is non-essential.

Fitting Decompressors.

SEVERAL correspondents ask for particulars of decompressors suited for fitting to their existing machines. It is surely plain by now that a decompressor's action consists in permitting a fractional percentage of the charge to escape on the compression stroke. Such leakage can be obtained either by holding one of the valves a shade open (which necessitates a special valve gear, with control arrangement) or by opening an orifice at the top of the cylinder at the right moment. The first principle can only be obtained on engines specially designed for the purpose and is therefore inapplicable to existing engines. The second requires a plug-hole in the cylinder, not at present employed for any vital purpose; such holes only exist on engines with side-by-side valves, having two valve caps, of which one is otiose, and may be replaced by a sparking-plug-cap. Such engines are not common in America, where the automatic inlet or overhead inlet rule the roost.

Butt-Ended Tubes.

BUTT-ENDED tubes are becoming practically universal in competition work, as the high speeds maintained by the modern motorcycle render a simple puncture a serious matter. Before the rider can bring his machine to a stop, the tube is out of the cover, and lashing itself round the hub with disastrous results. In the early days of slip-jointed tubes, we found that the butts were very apt to fray through by chafing; today we have realized that this effect is easily checked by fitting a tab and eye slip to one butt, mounting the valve near the end of the other butt, and threading the eyed tab over the valve. This locks the butts together with sufficient rigidity for all ordinary emergencies.

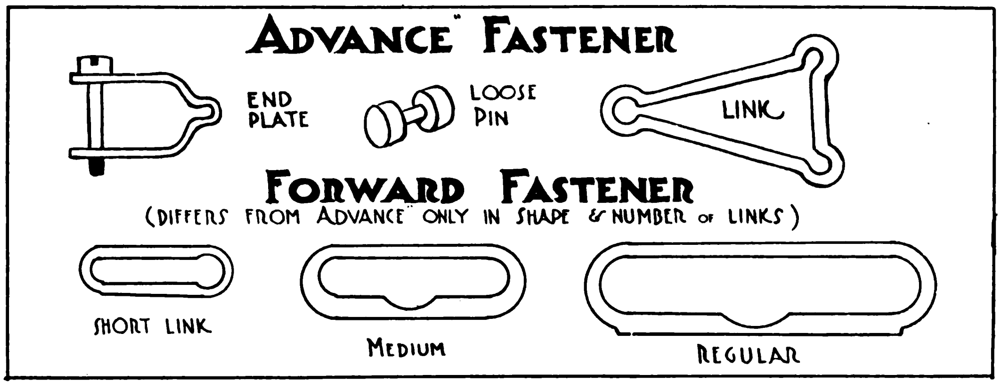


Butt-end Tube.

Adjustable Pulleys.

EVERY single-geared machine on the British market can now be purchased with an adjustable pulley, consisting of a fixed flange, mounted on the pulley-barrel. On the pulley-barrel two threads are cut; the first is the inner thread, and is left hand, and carries the loose flange; the second is the outer thread, screws with a right-hand thread, and carries the locknut. The range of motion permits gears ranging from about 4 to 6½ on an average, and most riders employ either an adjustable fastener with several links of different lengths, or alternately fit two fasteners in their belts, and hook in either a 5-inch or 6-inch bit of belting between the fasteners, in order to adjust the belt length to the size of the pulley in use at a given moment.

The pulleys fall into two classes, viz., those which require a tool to alter the gear, and those which are finger-operated. The latter class are infinitely preferable, but as most of them are private patents, the large motorcycle factories rely on cheap tool-operated types, which incur no patent royalties. The finger-operated types employ spring catches to lock the loose flange; for instance, this flange may have an internal ratchet cut in its bored centre, released by a catch working a sliding pawl. The tool-operated types are fairly satisfactory if they are well made, and have a sound hexagon cast on them, with a strong spanner which is a good fit. But it is obvious that when two parts, having right and left-hand threads are screwed up against each other, and continually tightened by belt-pressure and a wedging drive, there are the possibilities of a very tight lock indeed; and unless both nut and spanner are admirably manufactured, this lock is sometimes remarkably awkward to shift.



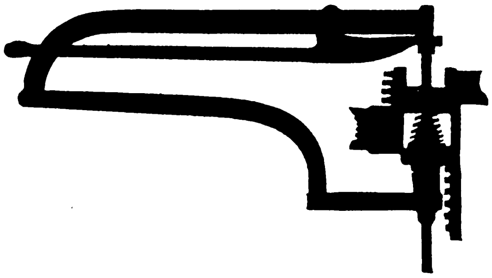
Two Types of English Belt Fasteners.

A Pair of Knapsacks.

ONE of the latest popular accessories among the sporty boys consists of a belt worn around the flowing waterproof cape, on which are mounted two little leather bags, each measuring about 6 inches by 3 inches by 2 inches. The one carries a rolled canvass tool kit, including belt shortening outfit, spare fastener, tiny wrench and screw-driver; the other contains a patchquick tire outfit with three one-minute tire levers. The fitment thus avoids the necessity of opening the main toolbags for any ordinary roadside repairs. Some of the ripest "nuts" take off the carrier and main toolbags altogether, and travel with nothing but the knapsacks and a spare valve in the breast pocket.

New Valve Grinding Tool.

CUSTOMERS of our bigger factories have done with valve grinding forever. We have a system by which we return worn valves to the makers, to be refaced in automatic power-driven machines, and receive a refaced valve by return of post for a nominal fee. But many of us deal with less modern factories, and we are all delighted with the new Bowden tool, of which a cut is appended. The cut is practically self-explanatory. The two arms are gripped by the left hand, and they steady the valve firmly on its seat. The arm attached to the toothed quadrant can be oscillated by the right hand at an enormous pace, while if the pressure of the left-hand grip is momentarily relaxed, the spring through which the valve is threaded, lifts it off its seat, and the slightest movement of the rotary arm shifts the face in its relation to its seating and to the abrasive.



Tire Tests in Big Six-Day Trial.

OUR governing body has at last tackled the task of differentiating good and bad tires. It has yet to go the whole hog, and publish frank comments on the behavior of all tires ridden in the big drive; but it is nibbling the cheese cautiously to start with, and offers special cups and awards for any tires specially earmarked for notice. It is open to any firm to enter tubes and covers for special watching; those entered will be indelibly marked, and their running stops and final condition will be honestly recorded and given publication. It remains to be seen how the tire trade will welcome the innovation. If a few free lance firms enter tires, the implication of any abstinence will be that the abstaining firm's wares are unworthy of notice; and possibly a few of the young mushroom concerns will force the hands of the old established leviathan firms. At present a lot of really shoddy tires are made and supplied, and an additional nuisance is due to the price-cutting bogey. There are several tire firms who can turn out 2¼-inch covers capable of lasting from three to six thousand miles on the back wheel of a 3½ h. machine, but these tires are slow and costly by comparison with the standard light patterns. Their heaviness prevents firms with racing aspirations using them, and their price limits their use on cheap machines sold in the teeth of fierce competition. These slow and expensive covers will reap a rich ad. from the awards in the big run, supposing the rich firms do not crab the notion completely.

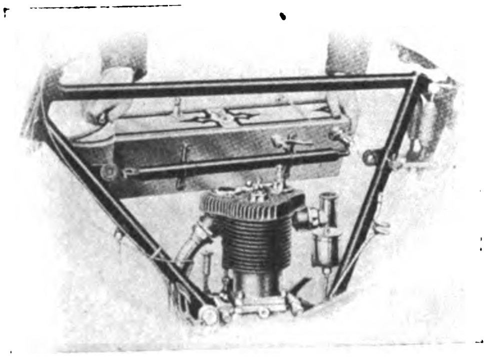
A Transmission Experiment.

I HAVE latterly been driving a 2¾ h. single-geared machine with a two-step transmission and ball-bearing countershaft. Readers will probably ejaculate "why go to the expense, weight and friction of a two-step transmission on single gears?" Let me explain why I think this design has a great future in all countries. The chain-drive has certain obvious merits; but in its most refined forms it is neither so smooth nor so safe as the belt. It owes its unpopularity in America, and its small and vanishing grip on the British public, to the unreliability and dirtiness of the belt. Given a belt which did not slip, seldom required adjustment and wore 4,000 miles, and the chain-drive would immediately become extinct; because the belt runs so smoothly, and does not cause a smash if a wheel locks or the engine seizes.

The two-step transmission in question gives exactly this ideal transmission. The primary drive is by a light chain (easily enclosable in a light aluminum case, of the type used for some magneto drives), to a ball-bearing countershaft, and the sprockets give a 50 per cent. reduction in gear ratio. On the countershaft is mounted an 8 inch belt pulley, made preferably of wood, which wears well owing to the increased contact area, and weighs and costs less than metal. The effect of this huge pulley on the belt is incredibly good. I have used a five-eighth-inch rubber, canvas-cored belt on this machine for 3,000 miles, and it is still equal to new, while it has only been tightened once, by the simple procedure of changing a medium hook for a long hook in the adjustable fastener. The design revolutionizes belt drive, and should be destined to have the most far reaching effects on design. Most belt-users know that after rushing a watersplash, or when negotiating a stiff hill with a small pulley in rainy weather, the belt slips abominably. But with this two-step transmission I have never had any belt-slip whatever, except when the belt was far too loose; and thanks to the huge contact area provided by an eight-inch pulley, the belt will grip when it is very slack indeed.

Detachable Tanks.

WITH the popularity of big engines and low saddle positions, the problem of rendering the cylinders detachable from the machine without unshipping the crankcase, grows annually more acute. Of the several methods employed, the following are the most popular: 1. Keeping the middle frame high, so that there is good clearance between the cylinder and tank, and sloping the tail of the frame, so as to drop the saddle; this is essential with a double-top railed frame, but it limits the gasoline capacity, and tends to increase the width of the tank, and cramp the rider's thighs unnaturally wide apart.



2. Mounting all projections, such as stoppers, oil pump, tire pump clip, etc., on one side of the tank, so that the tank can be swung up to that side by simply loosening the bolts of its clips.

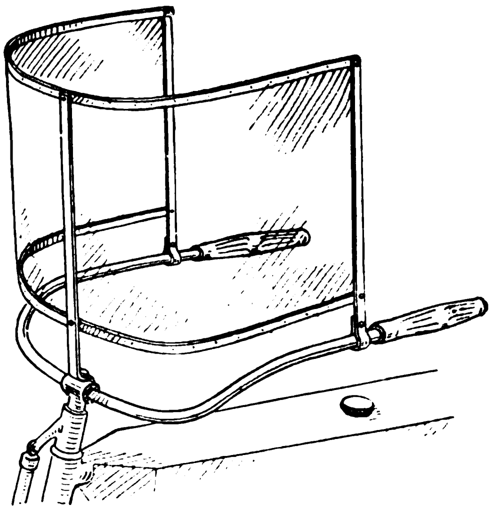
3. Cutting the lower horizontal tube of the two rails at each end, and fixing it by bolts, so that the tank can be removed bodily by undoing two nuts; this adds five inches to the frame clearance, without weakening the frame in the least.

Should Ladies Race?

TWO or three of the fair sex have taken very nasty tosses in some of our recent hill-climbs, usually owing to imitating man's lurid cornerwork without possessing male nerve and experience. There is now a strong movement in favor of debarring girls from competing in sprint events on road or track. What do the Suffragettes say? Surely if a woman deserves a vote, she has a right to accomplish graceful parabolas over the handlebars of a motorbike when the mood takes her.

A MOTORCYCLE WINDSHIELD.

FOR the motorcyclist who feels that a windshield would add to his comfort on the road a simple attachment has been designed, suitable for fitting to the handlebars of any make of machine. It has been worked out by Harry C. Kelley, of Pittsfield, Mass., and is described in a recent issue of *Popular Mechanics*. The frame shown in the accompanying illustration is made of copper strips, ⅛ inch thick and ½ inch wide. The frame is fastened to the handlebars and covered with celluloid, the edges of which are held by small bolts.



A Windshield Suggestion.

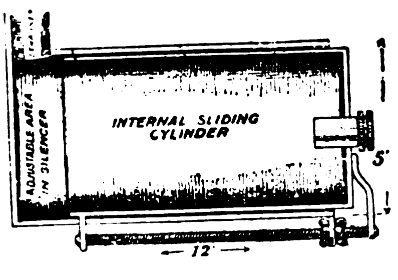
FIXING ENGLISH MUFFLER STANDARD

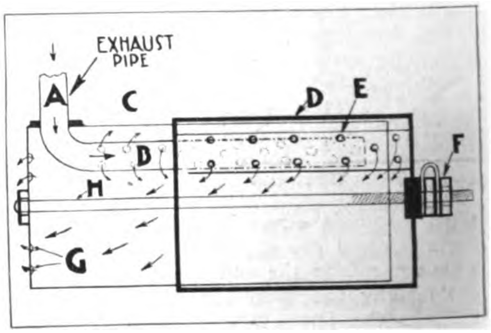
Manufacturers and the A. C. U. Will Determine by Tests How Much Noise Should Be Tolerated, and Build Silencers Accordingly.

By Britisher

THE English government has awakened to the public complaints against open muffler work by cars and motorcycles, and is ready to put its foot down. It has already published an order making it a penal offense to drive an automobile on the open muffler, or with a muffler which permits the engine to make an aggravating noise. British motorists view the order with some alarm, as there is no legal standard by which the amount of noise regarded as excessive can be decided, and the matter at present rests with individual magistrates, policemen and civil complainants for definition. So far there have been no prosecutions under the order, and common sense will rule matters except in the police-harried districts, e. g.: certain districts of Surrey, where police, inspired by a venomous hatred of all motorists, and supported by prejudiced benches of justices, may make things exceedingly unpleasant.

At present the order does not touch motorcycles, but the government officials announce that two-wheelers are to be included in the near future. The present respite is intended to give the Manufacturers' Union a chance to consult with the Auto-Cycle Union and see what can be done. It is realized at present that a car can easily be silenced, since its emergency gears permit the silencer to choke the engine a little without causing it to fail on hills; but the majority of motorcycles have no low gears and, owing to the small amount of space available on a two-wheeler, it is difficult to construct a muffler which shall be efficient without smothering the engine's efficiency. High awards for silence have been gained by motorcycles in open competition, but up to date these awards have been purely farcical. The really efficient mufflers all cause serious back pressure; and the winning machines are either provided with cut-outs, which are opened on all occasions when no judges are about, or else the engine is run in a semi-strangled condition with the muffler shut, and the lowest gear of a three-speed hub is utilized to climb exceptional hills.





Official Muffler Test.

Now that legal action is threatened, the trade and the governing organization have hastily rushed through regulations for a muffler test. Two typical machines are taken as the medium of the trial—a 3½ h. Triumph and 3½ h. Rudge. The engines will be taken out of the frames and mounted on the bench, with forced draught cooling and a fan brake. They will be run at 1,000 revolutions a minute, and an adjustable silencer, roughly, as shown in the sketch, will be attached. The drawing shows a silencer of a common two-barrel type. but possessing a telescopic action. A is the exhaust pipe from the engine, continued to a length of 10 inches (BB) within the main barrel C, and freely drilled with holes throughout its length. The primary barrels B and C each slide into two other barrels of slightly larger diameter, E and D; these auxiliary movable barrels slide along the central rod or bolt H, and so push into or draw out of the two primary barrels, E sliding over B, and D sliding over C. Thus the overall length of the silencer can be considerably varied within wide limits, so varying both the cubical contents of both expansion chambers, and varying the number of holes in the smaller chamber, B and E. The final outlet holes at G are not adjustable. This silencer will be adjusted with the engine running, by moving the lock nuts at F, which convey the moving barrels with them along the screw thread by means of a hook intermediate to the nuts.

Basis of the Trials.

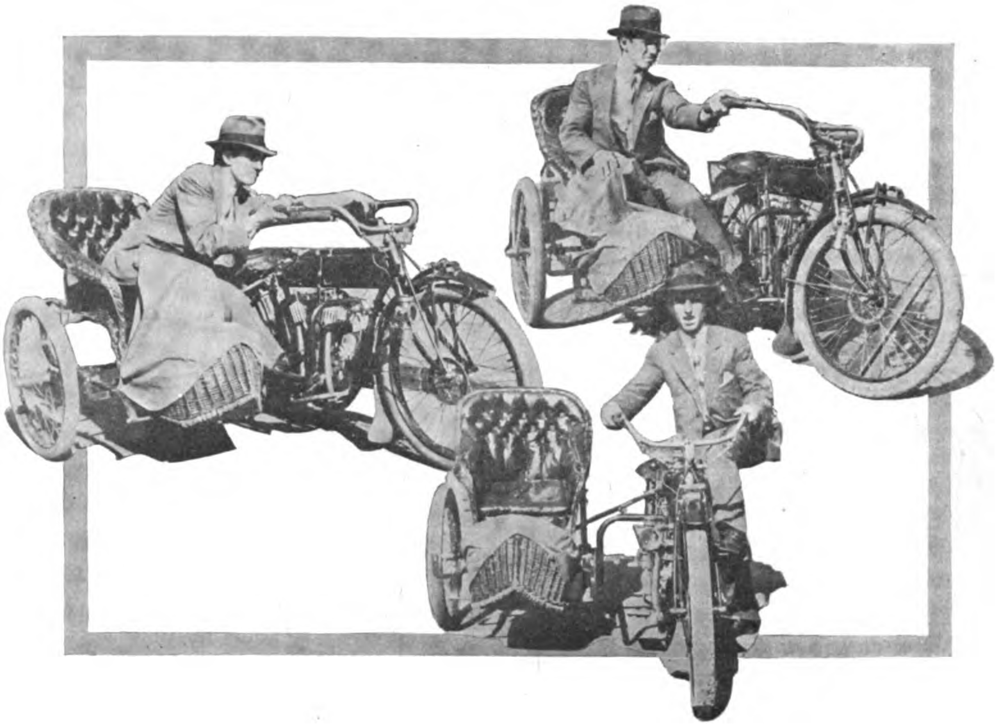
When the judges have adjusted the muffler to give what they consider a desirable degree of silence at 1,000 r. p. m., the telescopic silencer will be locked rigid and will constitute the standard for the trial. No muffler which makes more noise than this standard will be considered worthy of an award. The competing silencers will then be tested against the standard for noise; the ear will be relied upon, no mechanism being employed to register sound. After this, marks will be awarded for size, weight, practicability, strength of construction, liability to soot up, ease of cleaning and cost of manufacture, and these merits will be checked by exact pony brake tests, aiming at registering the exact degree of back pressure thrown upon the engine by any given design. It is not expected that a muffler of motorcycle size will be discovered capable of attaining a desirable degree of silence without producing any back pressure at all. It is simply desired to unearth a design of silencer which will satisfy the expected government regulations without unduly smothering the engine. The test is mainly intended to give an impetus to the production of scientific muffler design, combining quietness with efficiency.

DOING MISSIONARY WORK.

H. CONBOY, of Alameda, Cal., who appears in the accompanying photograph mounting the bicycle, is a motorcycle booster with a practical turn of mind. Recently he towed a friend on the bicycle over a 100-mile route and demonstrated the pleasure-giving qualities of the motorcycle so effectively that the bicyclist went back to Alameda and purchased a motor two-wheeler. The picture shows Conboy and his bicycling friend beside one of the good roads in the Santa Clara valley, the friend on Conboy's Harley.

CONSTANT SATISFIES POLICE JUDGE

Brooklyn Speedster, Arrested for Driving His Motorcycle from Side-Car, Gives Demonstration Which Wins His Discharge



ALTHOUGH they may not be aware of the fact as yet, side-car enthusiasts in the metropolitan district owe a vote of thanks to John U. Constant, the Brooklyn speedster, for the manner in which he stood his ground and established a precedent when arrested recently for alleged improper handling of his passenger outfit. On the evening of Decoration Day Constant was driving his machine on Bedford avenue, Brooklyn, and operating it from the side-car. The spectacle of a riderless motorcycle being directed by a side-car occupant proved too novel for a traffic cop, and Constant was ordered to halt. He did. He was then given a lengthy lecture on reckless driving, "doing tricks," etc., etc., until his ordinarily genial disposition was worn to a ragged edge, and he felt called upon to deliver a few remarks anent the general cussedness of patrolmen.

Result: Constant was placed under arrest. The officer requested that his victim drive him to headquarters in the side-car, but John refused to warm to this suggestion, and stated that it was up to the minion of the law to call a patrol wagon and have the motorcycle outfit taken to the station house. The officer then decided to issue a summons to Constant, but refused to accept a deputy sheriff's badge as a means of identification. A brother patrolman was then called upon, who agreed to stand guard over the motorcycle and side-car while Constant was being taken to headquarters. The speedster then decided to carry the patrolman to the station house, where a complaint of reckless riding was lodged.

As the complaint came under the motor vehicle law, the acting sergeant informed the patrolman that he was not justified in bringing in an alleged offender who could identify himself, and directed the officer to issue a summons on the strength of the deputy sheriff's badge held by Constant. This riled the complaining patrolman, who stated wrathfully that he would "see the thing through" and make it unpleasant for the motorcyclist. Constant took the summons and chugged off, still driving his machine from the side-car.

When the case was brought up on the following day, Constant explained to the presiding judge that the machine was under perfect control at all times, and that he had been operating it from the side-car from time to time for a month previous to his altercation with the patrolman. He stated that he had been seen by nearly every member of the motorcycle squad, who understood the mechanical conditions involved, and that none of the motor-cops had attempted to hold him up. It was obvious that the motorcycle officers were better able to arrive at a decision than a foot patrolman, and the judge was duly impressed. He was shown pictures of side-cars taking rough roads and steep grades in England, and was finally convinced that the motorcycle and its passenger attachment do not constitute the dangerous contraption which holds a place in the minds of some imaginative non-riders.

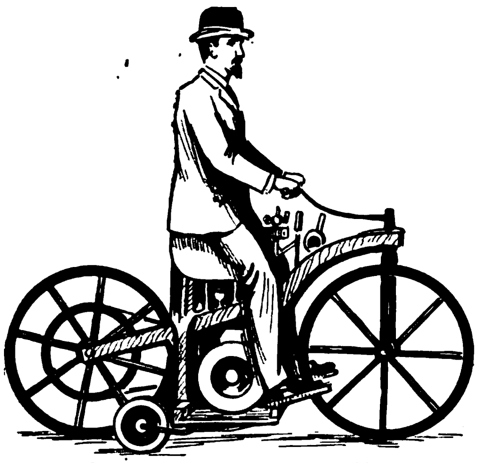
Motorcycle Officer Winch was called to testify as to the propriety of Constant's method of driving, but the complaining patrolman objected on the ground that Winch was a friend of the defendant. Winch then informed the judge that Constant's outfit was in front of the court building, and that he was prepared to demonstrate it. Evidencing a sense of fairness not always met with in police courts, the judge adjourned court for fifteen minutes, and the party went down to the street, where Winch performed a series of difficult evolutions with the machine, driving it from the side-car. Constant then gave an exhibition, turned sharp corners and stopped the outfit in its own length. The Brooklynite closed the programme by inviting the judge to hop in for a ride. His honor laughingly excused himself on a plea of official business, and then resumed the court session. Without further parley Constant was discharged.

WHAT MOTORCYCLISTS OWE the BICYCLE ERA

BY W. F FARWELL.

IN these days of rapid development and well-nigh perfect motor-driven vehicles we are apt to overlook the debt we owe the bicycle and the men who worked out and solved the innumerable problems confronting them at the dawn of a new era in road locomotion. The patent records of the last fifty years show that many of the important features of the automobile and motorcycle were invented or applied in some form by the early builders of bicycles and tricycles.

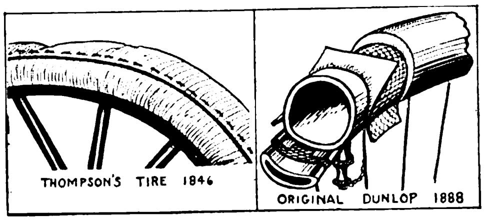
Although steam coaches were in use in England between 1820 and 1860, and despite the fact that a number of steam bicycles and tricycles were built in this country and in England and France in the early eighties, the great impetus to motor vehicle construction came with the successful application of the gas engine to the bicycle and tricycle by two Germans—Gottlieb Daimler and Carl Benz—working independently. In 1885 Daimler fitted his small air-cooled motor to a wooden bicycle. This first machine was really a motorcycle, with two small wheels projecting out on either side of the footboard to steady the mount. Power transmission was by a belt to the back wheel as in the modern motorcycle. In 1886 Benz fitted a water-cooled motor to a tricycle.



DIAMLER MOTORCYCLE - 1885

Advent of the Pneumatic Tire.

John Thompson, a Scotchman, is credited with the invention of the pneumatic tire in 1846. His product was a crude affair, with a leather cover bolted onto the wooden rim of the wheel. It was not consistent in service and proved a commercial failure. The first really practical pneumatic tire was the Dunlop, invented by John B. Dunlop, a veterinary surgeon, of Belfast, Ireland, and patented in 1888. The surgeon's young son complained to his father of the excessive vibration he experienced in riding his small bicycle over the rough pavements of Belfast, and the idea occurred to the elder Dunlop that compressed air might be utilized to solve the problem.



THOMPSON'S TIRE 1846 ORIGINAL DUNLOP 1888

Accordingly he began a series of experiments and finally constructed a set of tires for his son which proved quite satisfactory, as compared with the tires previously used. So pleased was the inventor that he continued his tests until he produced the tire which revolutionized cycling and paved the way for the world-wide tire industry of today. The first tires were not detachable and were very difficult to repair, which led to the introduction of the wired-on and clincher types in 1890.

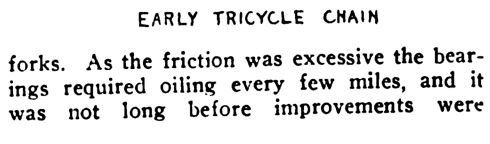
Introducing the Shaft Drive.

Although almost forgotten now, the tricycle was very popular during the eighties and was manufactured in a wide variety of types. The early machines had two large side driving wheels, 50 to 60 inches high, and a small 18 or 20-inch steering wheel in front or rear. A number of the features of the modern motor car were first applied to this style of vehicle. The problem of driving both side wheels evenly, and still permitting one to outrun the other when rounding a curve, led to the invention of the differential gear by James K. Starley, of Coventry, England, in 1877.

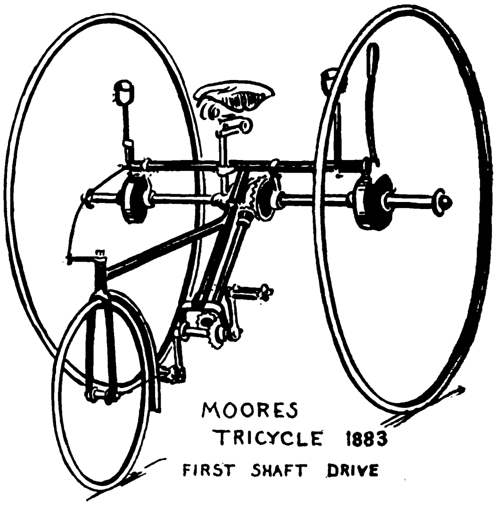
The drive by bevel-gear shaft was first applied to Moore's "Orbicycle," a tricycle driven by a central shaft with differential on the axle. One of these machines was exhibited at the Stanley Cycle Show of 1883. This display, by the way, is the "Daddy" of all motor shows, having been held in London annually since 1878.

First Roller Bearings.

Bearings were first made plain, as might be expected, the axle of the wheel running through holes in the hardened ends of the forks. As the friction was excessive the bearings required oiling every few miles, and it was not long before improvements were sought in these parts. About the year 1875 some one invented the roller bearing, which was applied to the front wheel of the old high-wheel bicycle. This type of bearing was used by the leading manufacturers for several years, and in 1877 the ball bearing made its initial appearance. Several firms introduced them at about the same time in both single and double types. The accompanying illustration shows one of the earliest, the Premier double ball bearing.



EARLY TRICYCLE CHAIN



MOORES TRICYCLE 1883
FIRST SHAFT DRIVE

The ball-bearing pedal was first produced by Rudge, founder of the Rudge-Whitworth Company, of Coventry, England, but for several years it was considered a luxury, and it was not generally used until the middle eighties. The cost of a pair of pedals at that time was $10 to $12.

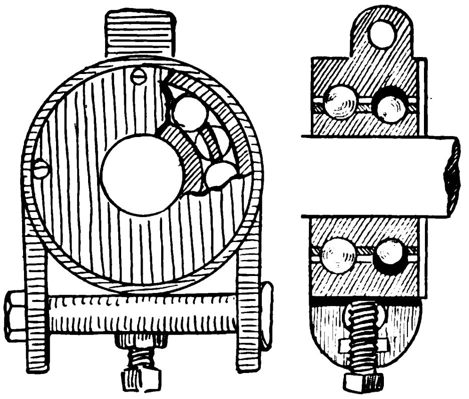
Chain and Wheel Construction.

Chain driving, though old in application, was not developed until the cycle makers saw the necessity for improving upon the primitive chain shown in the illustration, but once the matter was given proper consideration, rapid strides were made until something approaching the present efficient and smooth-running roller chain was obtained.

The old velocipede, or "boneshaker," wheels were built of hickory, but as the front wheel began to increase in size it was necessary to find some means of making the wheels lighter and stronger, and this led to the introduction of the wire-spoked suspension wheel as used on bicycles, motorcycles and some motor cars today. This principle was used in the Phantom bicycle (English) in 1869, one of the first machines on which solid rubber tires were fitted.

Differential Steering.

Differential steering was first applied to the Dublin tricycle in 1876. It had a large wheel

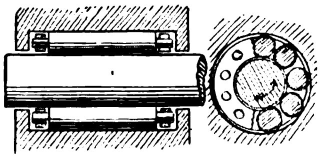


BALL BEARING 1877

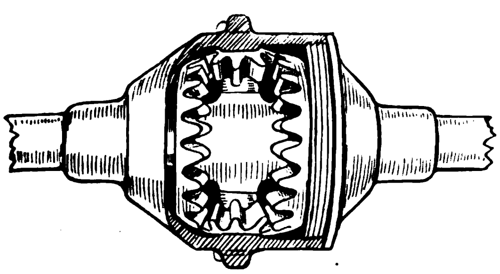
in the rear and two smaller front steering wheels, which were connected by the differential type of steering apparatus. A later machine, the Olympia tandem tricycle, put out in England in 1887, showed a curved transverse axle and steering knuckles connected to the steering tube, very similar to the system employed on modern motor cars and tri-cars. As far back as 1874 Starley made a bicycle with a two-speed gear in the driving hub, and later this device was commonly used on the chain-driven tricycle. The band brake was also used on all tricycles.

The fight for good roads in this country was started by the pioneer cyclists and manufacturers. The League of American Wheelmen. Colonel Albert A. Pope, of the Pope Manufacturing Company, and others contributed large sums of money for the purpose of encouraging and directing legislation looking to road improvements and the opening of public parks in the larger cities to wheelmen. Progress was quite slow in this direction, but the agitators were not to be discouraged, and their efforts finally bore fruit. They blazed the trail which has since been followed by automobile and motorcycle enthusiasts. Last, but not least, the development of the bicycle industry gave us the men, who were capable of graduating into the motorcycle and motor car ranks, and who later, in some cases, turned their attention to the aeroplane.

On the whole it cannot be denied that the motorcycle owes much to the early bicycle and tricycle, and while the power two-wheeler of today may sniff disdainfully in its muffler as it passes a humble push-bike on the road, the latter is entitled to most respectful consideration. It was a pioneer, and while we must leave the pioneers behind us, we should always be prepared to look upon them with a kindly eye. Let us so regard the bicycle.



ROLLER BEARING 1875



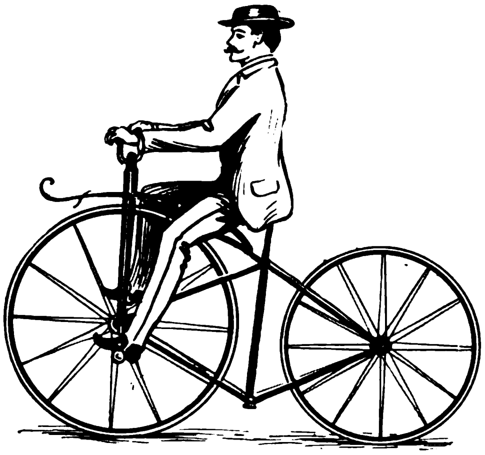
STARLEYS BALANCE GEAR - 1877

GOOD ROADS BOOMERS.

DES MOINES, Iowa.—Every automobile and motorcycle dealer in Polk County is to be solicited as a member of the Polk County Good Roads Club, which began its existence recently as the result of the activity of the good roads sub-committee of the Greater Des Moines Committee. Members will carry attractive white, red and gold buttons on the radiators of their automobiles and the front of motorcycles. The membership fee will be $2 and each membership will mean two loads of gravel placed on the roads of the county. H. H. Polk is chairman of the membership committee.

TORONTO'S BIG SQUAD.

THE License Department at Toronto has just issued Motorcycle Tag No. 1500, in spite of the fact that many prospective riders are still hoofing it, thanks to late factory deliveries. Last season the number of licenses issued barely exceeded 1,000, but it is fully expected that 2,000 machines will be marked before the present summer is out.



PHANTOM BICYCLE 1869

BIG DEMAND FOR VANS.

MINNEAPOLIS, Minn., June 22.—H. F. Turner, of the Minneapolis Motorcycle Company, reports a big increase in business in the past week, especially of the Minneapolis delivery tri-cars. Stanley T. Kellogg, of Bridgeport, Conn., was in Minneapolis a few days ago closing the agency for Minneapolis machines. He expects to sell 1,000 of the machines before the present season closes.

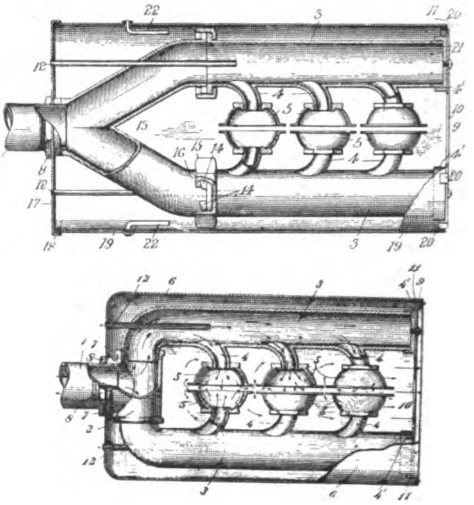
The G. & L. Cycle Company, of Seattle, Wash., sent L. C. Gregory to this city last week to close the agency for the Minneapolis light delivery cars and motorcycles for the State of Washington. Mr. Gregory placed a standing order for fifteen machines a week.

The company's demonstrators have also been busy this week giving exhibitions to the local merchants who are elated over the delivery tri-car. Manager Turner reports many sales pending and hopes to close two or three large deals with two of the large department stores in this city.

UTOPIA CLUB'S RUN

BROOKLYN, N. Y.—On Sunday, June 30, the first annual summer run of the Utopia Motorcycle Club, of this city, will be held. The route is laid out to cover some of the finest roads on Long Island. The start will be from 1604 Bushwick avenue, corner Eastern Parkway, at 9 a. m. sharp, and the dinner stop will be made at Patchogue. Handsome gold fobs will be awarded to all who finish. Entries may be sent to Captain Louis Deck, 1604 Bushwick avenue. Entry fee is $1.50.

ANOTHER MUFFLER



JOHN T. GILMER, of Florala, Alabama, recently obtained patent No. 1,018.044 on an improved muffler which is described as follows: To the end of the exhaust pipe 1 is secured a T-coupling 2 from the opposite sides of which extend tubes 3, having their outer end closed by caps. The tubes 3 project from the coupling laterally with respect to the exhaust pipe, and are then carried rearward and outwardly in parallel planes. The dimensions of the tubes and the coupling are capable of variations, but for best results the combined diameters of the two tubes should be greater than the diameter of the exhaust pipe 1 so that the gases passing into these tubes may be permitted to expand. Extending inwardly from the opposed surfaces of these muffler tubes 3 is a series of branches or nozzles 4, which have their terminals arranged directly opposite each other, these branches being fitted in pairs. To the ends of the opposed members of each pair of nozzles are secured caps or spreaders 5, which are threaded upon the nozzles so that they may be adjusted to and from each other to vary the size of the opening left between their edges and thereby control the escape of the expanded gases. The number of nozzles may be varied according to the requirements of any particular engine.

NEW CANADIAN CLUB.

A PARTY of Toronto and Hamilton motorcycle officials journeyed to Berlin, Ontario, on Saturday, June 15, to attend a meeting of riders and succeeded in organizing the Twin City M. C., of Berlin and Waterloo, with a membership of eighteen. The new club unanimously decided to affiliate with the Canadian Motorcyclists' Association, and the constitution of the Toronto club was adopted in its entirety. The members of the new organization are planning to take part in the motorcycle and bicycle race meet at Waterloo on Dominion Day, July 1.

Those present at the meeting included: President K. R. Spencer, of the C. M. A.; J. M. Scott, Toronto, chairman of the competition committee, C. M. A.; President Johnston, Toronto M. C.; Herb Marshall, an old-time bicyclist; Walter Stoner and Dan Davis, of Toronto.

The Winnipeg club is now said to be in favor of affiliation with the C. M. A., word to that effect having been received at headquarters of the association. Individual riders in all parts of the country are falling in line.

LOS ANGELES GRIND SEEN FROM TIRE CAR

Manager Lingenfelder, of Goodyear Branch, Tells Graphic Story of Hardships Suffered by Participants in Three-Day Grind Through Sand and Over Rocky Grades.

I STARTED on this trip for the sole purpose of taking care of all the participants. I left Los Angeles in company with J. U. Widrin, sales manager of the Los Angeles branch of the Willys-Overland Motor Car Company, in an Overland "30." I had a supply of Goodyear tires, a Goodyear air bottle and a fine disposition. The car was plastered with Goodyear tire signs, which aided us greatly in making the necessary speed through small towns. Town constables did not molest us during the entire trip, and believe me, we had to make some speed to keep up with the two-wheeled machines.

We left Los Angeles after the last rider had checked out, in order that we might look after any of the boys who met with tire trouble or other mishaps, and we never saw any of the perfect score men until our arrival in Bakersfield, the first night's control. We arrived there at seven o'clock, 180 miles from Los Angeles. We had only traveled 11 miles out of Los Angeles when we caught up with one of the boys who had a loose rear mudguard. We inquired if we could do anything for him, but he did not need help. We then went on to San Fernando, the first checking point, where we found a number of the boys waiting to check in; one of them was 35 minutes ahead of time. We did not wait for the last man to check in, as we knew it would not be long before they would overtake us. At Saugus, 34 miles from Los Angeles, three roads lead to Bakersfield, one via Mint Canyon, one via Soledad Canyon and the other by way of Elizabeth Lake. The course was through Mint Canyon, but one of the boys lost a perfect score by taking the Elizabeth Lake road and riding 22 miles out of his way. We tried to stop him, but could not attract his attention, his only thought being to make the next control on time.

Our next stop was Acton, where this rider caught up with us. There we took on gas, as after leaving this point gasoline costs 40 cents a gallon. The rider referred to made a perfect score after leaving this point, but his detour cost him several points. We met one rider sitting on the roadside just outside of Acton who was all in, and for once I was glad I knew how to ride a motorcycle. His trouble was that he had gone through a ford and short-circuited his magneto and had pedaled so long in endeavoring to start his machine that he was completely exhausted. Mr. Widrin took the wheel of our car and carried this rider to the top of the grade while I rode the machine up for him. I knew that my riding would disqualify him, but he insisted that he wanted to finish the run and had lost so much time in endeavoring to start the machine that he was only too glad to have me help him out. After this we saw nothing but motorcycle tracks until we reached Del Sur, 87 miles from Los Angeles, where we found a lonesome motorcycle near the road in two pieces. There was no rider in sight until we came to a farmhouse down the road, where the unfortunate rider was sitting on the porch with a sorrowful look on his face. He said there was nothing we could do for him, so we continued the journey. Just outside of Fairmont we passed the United States tire car and hurried on for Bailey's Ranch, where we figured on getting lunch. After leaving Bailey s Ranch we met a rider with three holes punched in the left side of his crankcase. We waited to see if the machine would run, and, to our surprise, he started off, and that was the last we saw of him until we arrived in Bakersfield. He had to go over a sandy road where it was nearly impossible for us to get through.

We arrived in Bakersfield covered with dust and grease and tired out. The tire car left Bakersfield the next morning at eight o'clock. after we had purchased a canteen, as we had been informed that this day's run would be even worse than the day previous. It proved to be the worst road I have ever driven over, and I am wondering yet how the motorcycles ever got through. The bad roads started at a little town 28 miles out of Bakersfield, called Wasco, and you can tell my Eastern friends to shy clear of the road from Wasco to Lost Hills—about 25 miles of nothing but dust and sand, the reason being that 18-mule teams traverse this road daily, hauling material to the oil fields. We finally arrived at Lost Hills—a saloon—where we took on water (and other wet goods).

About the most enjoyable feature of the trip was the unfailing sense of humor of my friend Widrin, who was equal to every occasion; I had taken pains to explain to him before leaving Los Angeles how pleasant the trip would be. After leaving Lost Hills we ran onto a road equal to any boulevard, and for 50 miles we followed a telephone line and the road, never even getting sight of a house. On this road it was necessary to open and close five barbed wire gates on account of cattle grazing, and after having ridden through the sand and over an almost impossible series of bad roads one of the boys plunged through one of these gates, severely cutting his throat and almost putting him out. However, he managed to get through to San Luis Obispo, where we missed him, and did not learn of his accident until we reached Santa Maria at 8 p. m. Five miles out of San Luis Obispo he broke down on account of magneto trouble, and as he had spent all of his money in San Luis Obispo getting his machine repaired, I hired an automobile in Santa Maria to bring him in, and bought him a ticket to Los Angeles.

Saturday morning we arose at five o'clock to see the riders off. After seeing the last man under way we started for Santa Barbara, determined to keep right after the riders. We arrived in Santa Barbara just ten minutes after the last man checked in; all of them made the trip to this point with a perfect score. We stopped at the Arlington Hotel in Santa Barbara for lunch and certainly did enjoy getting a decent meal once more. Between Santa Maria and Los Angeles there are four very steep mountain grades, and certainly some of the most beautiful scenes in California.

One of the boys broke a valve at Carpenteria and 'phoned to Fred Low, the Santa Barbara Excelsior agent, who went out and brought him in. While Mr. Low was having a new valve made this rider set about cleaning his machine up, and flooded his engine with gasoline. He turned it over without shorting his magneto and set fire to the machine and also to the repair shop, and for a few minutes the boys had quite an exciting time putting out the blaze. We reached Los Angeles at 7.30 p. m., about an hour behind the last man, and found that out of forty-two starters fourteen had made perfect scores and five other riders had finished with but a few points charged against them.

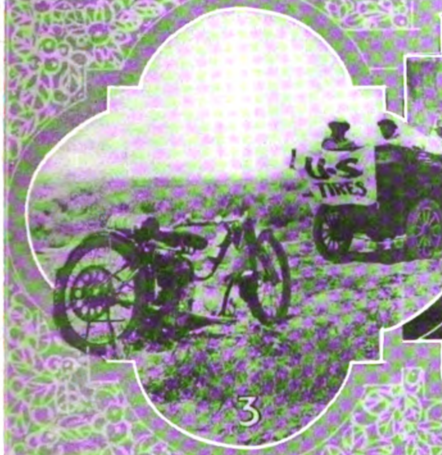
Our object in going on this run was to assist in making it a success, and while we returned to Los Angeles with our supply of tires intact, we found it a pleasure to help the boys whenever they were in need of assistance. In conclusion I want to say that if I ever go on another motorcycle run, I want to go in an airship so I can make detours and short cuts and head the riders off.

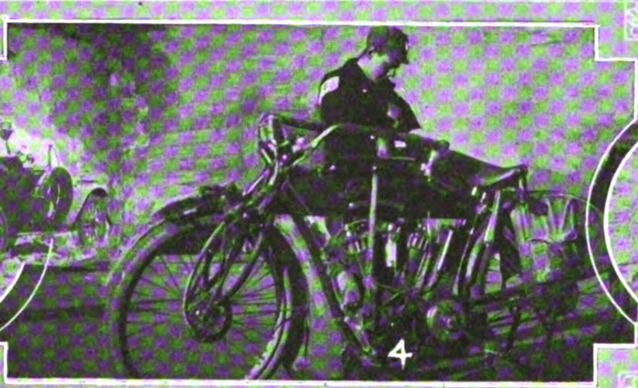
FINAL STANDING

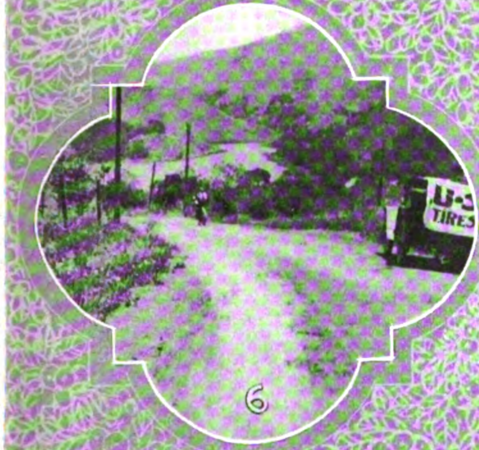
Officials Approve List of Twenty-two Finishers in Recent Los Angeles Endurance Contest.

AT a recent conference between Charles Fuller Gates, F. A. M. representative on the Pacific Coast, the endurance run committee of the Los Angeles M. C. and A. H. McCulloh, who acted as official scorer, the tally sheets for the recent three-day grind of the Los Angeles club were checked carefully and the list of perfect scorers was officially approved. It was decided unanimously to eliminate the controls at Acton and Del Sur, where mistakes were made in the schedule, and regard these as registering points only. The final standing of the ride finishers is given as follows:

Professional class: Paul J. C. Derkum, 7 Indian, U. S. tires, 1,000 points; Amateur class: R. D. Bissett, Excelsior, U. S. tires, 1,000 points; A. J. Menegay, Indian, U. S. tires, 1,000 points; W. C. Vaughn, 7 Merkel, U. S. tires, 1,000 points; O. Bosshart, Indian, U. S. tires, 1,000 points; K. Verrill, 5 Yale, Goodyear tires, 1,000 points; C. Biggs, 6 Excelsior, Goodyear tires, 1,000 points; H. Shafer, 5 Thor, Goodyear tires, 1,000 points; W. S. Bryson, 6 Merkel, Diamond tires, 1,000 points; F. Johnson, 6 Excelsior, Goodyear tires, 1,000 points; T. Johansen, 7 Indian, U. S. tires, 1,000 points; Jas. Leonett, 7 Indian, U. S. tires, 1,000 points; L. T. Clark, 7 Indian, U. S. tires, 1,000 points; E. Knappe, 7 Indian, U. S. tires, 1,000 points; G. L. Ledbetter, Indian, U. S. tires, 1,000 points; Chas. Wride, 7 Indian, U. S. tires, 998 points; Wm. Kuhn, 7 Indian, Goodyear tires, 987 points; H. Lightcap, 7 Thor, Goodyear tires, 955 points; Ray Little, 4 Harley-Davidson, U. S. tires, 950 points; F. E. Holdridge, Excelsior, Goodyear tires, 886 points; H. H. Redfield, 5 Minneapolis, U. S. tires, 666 points; G. C. Speer, 7 Indian, Goodyear tires, 666 points.







THAT LOS ANGELES GRIND.

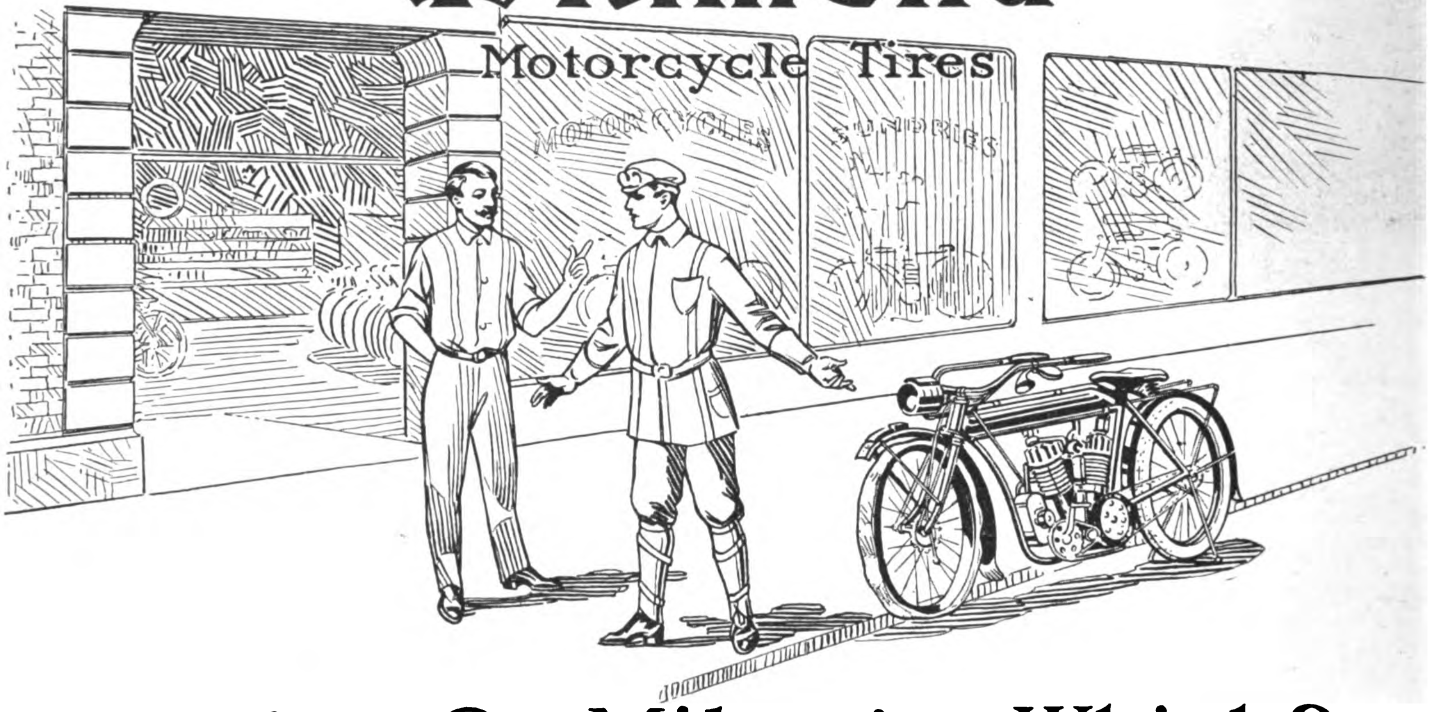
Diamond



Price Or Mileage - Which?

When buying a tire do you buy on a price or mileage basis?

Do you get what you pay for?

A cheap tire will in the long run cost more than the higher-priced one.

Diamond motorcycle tires are built up to a standard not down to a price and distributed through reliable dealers only—the dealers who are looking to your profit as well as their own.

Their profits on Diamond tires may be a little less than on others but they are looking for your continual patronage.

Like the tires they sell you; they can be depended on.

You can't get mileage out of a tire unless it is built into it.

Diamond motorcycle tires are built of fabric specially woven of long staple Sea Island cotton and pure Para rubber compounded according to formulæ which are the result of 14 years experience in rubber compounding.

They are miniatures of the famous Diamond auto tire, the largest selling single brand of tires in the world.

The first tire for motor driven vehicles made in America was a Diamond. Diamond quality is today as it was then the standard of comparison.

If you want a tire scientifically constructed for all around work, you are looking for the Diamond.

The universal demand is evidence that we have accomplished our purpose—Greatest Mileage. The cost is no more than for other standard makes.

Diamond tires are made in two treads—studded and corrugated—but only one quality!

Single clinch only and in all sizes to fit the 26" and 28" rims, including the 29" x 3", specially adapted for tandem riding, side cars, heavy riders and delivery machines.

Send for Our Motorcycle Book. It's Worth Having.

We could build them cheaper
—But we won't.
We would build them better
—But we can't.

The Diamond Rubber Co. of N. Y. - Akron, O.

NET PAID CIRCULATION, THIS ISSUE, 11,315

THE FEDERATION.

A NEW era in the history of the Federation of American Motorcyclists will be opened when the 1912 National Assembly convenes in Columbus next month. Throughout the country, to officials and members of the organization has come a realization of the fact that mere growth, however rapid, is nothing as compared with progressive development. A strong membership is truly necessary, but without service it is but little. Active recruiting work is most desirable, but it is more important to renew one old membership than to get two new members. And the old members will stick only provided they get a fair return for their investment, however small that may be.

★

IN a fraternal organization, success in the final analysis is dependent upon the rendering of service. Only a minority can be expected to support an organization simply to "boost things along." The spirit of good fellowship, however admirable, of itself never did and never will insure the permanence of a society of men. The majority, in default of getting at least double value for what they have given, will soon lose interest and fall by the wayside. And the effect of their influence is far worse than the lack of support for which those who have never been interested are responsible.

★

THE above is not written in a fault-finding spirit; on the contrary, it is the writer's firm conviction that the F. A. M. has done nobly, considering the immensity of the task it has undertaken. Now that it has reached a most satisfactory membership total, real organization is in order, and the problem is by no means an ordinary one. The first aim should be to effect a closer and more compact inter-relation of its constituent parts, and it is our belief that this can be best accomplished by making the State Commissions the units of the association, directly responsible to the national officers for conditions in their respective territories.

THIS will place the responsibility where it belongs, and induce the State heads to take more interest and a greater pride in their work. Competition will be keen among the commissioners to achieve the best results, not only in the way of increasing membership, but also in the matter of producing genuinely constructive work. The State Commissioners will then co-operate more actively with the National Committees, which, with two exceptions, have accomplished very little. The writer makes this statement advisedly, as he is chairman of one of the National Committees, and knows that it is impossible to produce satisfactory results under existing conditions. He knows that the work of his own committee has been far below the standard, the Competition and Membership Committees being the only two which deserve any credit whatsoever. These two committees have at least had some co-operation, without which a National Committee chairman is a mere figure-head.

★

AT Columbus this condition of affairs will be remedied, and the criticisms which have been directed against the F. A. M. will be heard no more. Membership growth will be more rapid than ever because of a larger percentage of renewals, which, after all, is the only way of measuring the concrete value of an organization of this character.

ADVERTISING—4.

There may be exceptions to prove the rule, but we cannot recall an advertised business in which the leading firms are not also the most consistent advertisers.

And can you think of as many as three lines of business which are not advertised? Or as many as six in which the leaders are not liberal users of space in class journals?

Through class journal advertising a firm secures a footing in a trade more quickly, easily and economically than by any other means. Thousands of firms owe their development during the vital first two or three years of their existence almost entirely to trade paper advertising.

Such a paper as Motorcycle Illustrated, *appealing to an appreciable number of a certain class of buyers, offers a comparatively large circulation, without any waste whatsoever, at a remarkably low cost to advertisers in its field.*

There is between such a paper and its advertisers an intimate relation, for they have many things in common. That relationship makes the closest kind of co-operation inevitable. The value of the right kind of co-operation is so generally recognized that it need not be demonstrated.

★

FEDERATION SPECIAL.

THURSDAY, July 11, Motorcycle Illustrated will issue its annual Federation Special in honor of the F. A. M. Meet in Columbus. This number will be characterized by many special features and it will be worthy of its title in that it will, after giving a brief history of the Federation, and explaining what it is now, seek to point the way to a vastly greater future. The experiences of similar organizations, their successes and failures and the lessons they teach, will be recited, with a view to impressing upon the officers of the F. A. M. the needs of that organization. The Federation Special of Motorcycle Illustrated will be printed throughout on coated paper, elaborately illustrated and filled from cover to cover with editorial matter of the highest quality and the greatest practical value to motorcyclists. For advertisers this issue promises to be a wonder, as it will not only reach a particularly high class of buyers, but will also attain circulation figures never before reached by this publication, which means that the Federation Special of Motorcycle Illustrated will be the most widely read number of any motorcycle journal ever issued in this country. Advertising forms close Saturday, July 6.

With the Publisher

Our Touring Service, Questions and Answers and Improvement Contest

OUR TOURS SERVICE.

WE have practically perfected arrangements for giving readers of MOTORCYCLE ILLUSTRATED more efficient, prompt and accurate touring service. Answers to touring questions of general interest will, as heretofore, be published in our Touring Department; replies to inquiries of a special nature will be made by mail. The advent of the touring season has resulted in our receiving requests for information for as many as twenty-five tours a day, far more than we were in position to properly handle. But appreciating that a publication owes its readers the best possible personal service it can render, we have been for some time at work perfecting details to the end of our being able to mail answers to touring inquiries the same day they are received. That is not yet always possible, but it will be shortly. In the meantime our readers are invited to let our editors help them in laying out their vacation trips. We have a mass of valuable touring information on file, and feel qualified to give accurate data for every part of the country.

A BOOK OF TOURS.

IN response to hundreds of inquiries for our Spring Touring Number, an edition of 13,500, which was exhausted two days after the issue appeared, we have reprinted the fifty maps and 350 tours in one volume, with an attractive touring cover. We have entitled it "Motorcycle Tours in the United States," and copies will be mailed postpaid to any part of the United States upon receipt of 15 cents in coin or stamps. The tours of which this book is made up cover every tourable section of the United States and include all the best roads in each State. The important points of interest in the country are mentioned, and mileages and road directions are given. The book has 56 pages, the same size as those of MOTORCYCLE ILLUSTRATED, and every rider who failed to get a copy of our Spring Touring Number should acquire immediate possession of "Motorcycle Tours in the United States," 15 cents a copy, and easily worth ten times that amount.

SOMETHING NEW.

TWO attractive new features are to be found in this issue of MOTORCYCLE ILLUSTRATED, our first annual Improvement Contest and a special departure from the every-day method of conducting Questions and Answers. From past experience we know that both will prove interesting, instructive and, therefore, valuable. The Improvement Contest will be conducted throughout the summer months, and the closing date will be announced in the near future. The announcement of the contest, the prizes, the method of scoring and the other rules will be found on page 25. It is our opinion that every rider knows at least something about motorcycles that no other rider has a definite and distinct knowledge of. The purpose of the Improvement Contest is to bring out that something. Taking our Luggage Contest as a criterion, it is safe to predict that hundreds of riders will compete for the Improvement Contest prizes. But even those who do not win any of the special prizes will be paid something for every suggestion deemed worthy of publication. Read the rules carefully and then, for the general good of the greatest sport on earth, let us have *your* idea. Describe it, embody it in a sketch, if possible, and send it in.

H. T. ROBERTS,

Who will referee the National Meet in Columbus. Charles Fuller Gates, of Los Angeles, will be the honorary referee.

TURNING THE TABLES.

IN order to add still further to the value of our Questions and Answers Department, the editor will in each issue put a question of his own, inviting readers to compete for the prizes which will be given for the best two answers published in each issue. The primary purpose of this feature is educational, and its practical value can hardly be overestimated. The starters are comparatively easy questions, although the editor of the Questions and Answers Department assures us that he has some genuine posers in mind. Of course, he will try to answer all questions as heretofore, either through his department, or by mail, or both. Don't hesitate to ask questions. If we can answer them, we shall; if they are beyond us, we shall simply admit it.

OUR SENTIMENTS.

HERE'S a confession, also a prophecy. Until recently the publishers of MOTORCYCLE ILLUSTRATED, although constantly in touch with trade developments, lacked a complete understanding of the actual extent of this business. We have no hesitancy in admitting it, now that we know. Certain definite information has come to hand which proves the substantiability of the motorcycle business beyond all peradventure of doubt. These doubts, despite the assertions of many to the contrary, have been harbored more or less in the minds of all, at least to the extent of a person's questioning the permanency of this trade. Let those, manufacturers and others, who may have, openly or otherwise, entertained Thomasian thoughts, forthwith forget that they have ever been so foolish.

And here's the prophecy:

Less than five years from date there will be more motorcycles in use than there are automobiles now. In less than ten years, the combined yearly output of motorcycles will exceed that of motor four-wheelers during the same period.

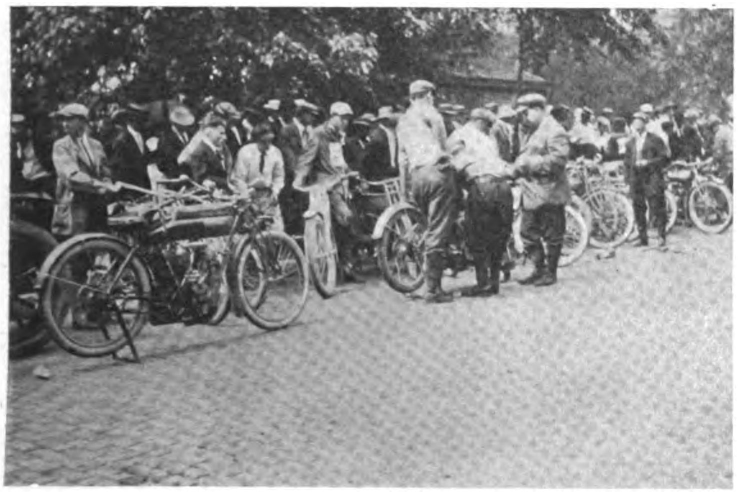
ATLANTIC DISTRICT MEETING.

ANNOUNCEMENT is made that a meeting of the Atlantic District of the F. A. M. will be held at the headquarters of the Elmira M. C., Elmira, N. Y., on July 3. Both afternoon and evening programs have been prepared, and a large attendance is expected. District Vice-President La Salle will preside.

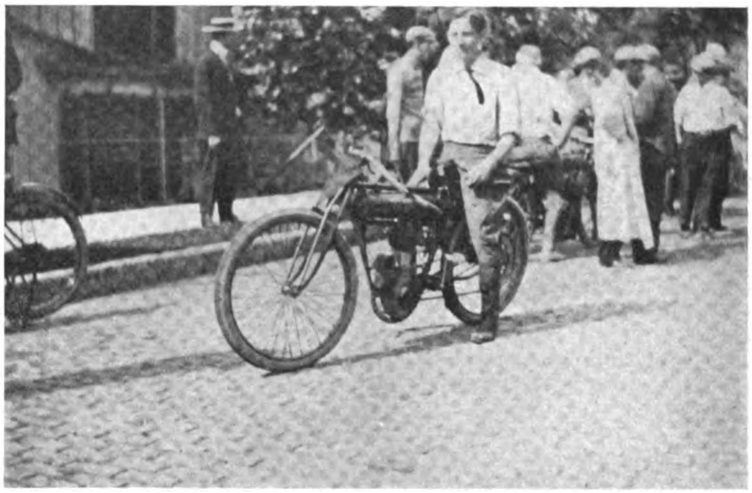
WANSTRAT AND JONES WINNERS OF CINCINNATI HILL-CLIMB.

Joe Wanstrat (Excelsior), Winner in "61" Class.

Line-up Before the Trials.



"Tuning up" for the Climb.



Vernon Jones (Merkel), Winner of 30.50 Event.

TWO motorcycle races were listed on the hill-climbing program of the Cincinnati Automobile Dealers' Association given on Saturday, June 17, and reports of the contests indicate that the riders of the motor two-wheelers attracted their share of attention. There were four entries for the first motorcycle event, open to machines of 30.50 cu. ins. Vernon Jones, mounting a 1911 Flying Merkel, made the ascent of 2.340 feet in 39 seconds; Pat McManus, Indian, was in second place, his time being 39⅕ seconds; Olin Ross, Indian, made the climb in 45⅗ seconds, and Sol Wise, Curtiss, was clocked at 47 seconds. The grade was about 11 per cent.

Six riders participated in the second motorcycle event for machines of the 61 cu. ins. class. Wanstrat, Excelsior, shot up the hill in 30 seconds, and Leaf, Indian, made the same time. Ross, Indian, made the climb in 30⅖; Heineman, Indian, in 31⅘; Oberding, Indian, in 32 seconds and Altnordoff, Indian, in 32⅘ seconds. The tie for first place was run off with Wanstradt leading in 29⅘ seconds; Leaf went up in 34⅗. A large crowd of automobile and motorcycle enthusiasts witnessed the trials.

A SOCIAL JAUNT.

ONE of the recent Sunday sociability runs of the National Capital Club of Washington, D. C., was to Ridgeville, Md., a distance of thirty-eight miles, and return. About fifty riders participated. At the last meeting a number of such runs were mapped out. The question of attending the Columbus convention was also discussed, quite a few members indicated their intention to attend. An endurance contest is to be held some time in July.

KEEPING ON THE MOVE.

THE Washington (D. C.) Motorcycle Club has adopted the policy of permitting no Sunday, when the weather is fair, to go by without a sociability run. The last run of this character was to Frederick, Md., fifty members participating. Dinner was enjoyed at Ridgeville.

BOSCH TROPHY RULES

Simple Point System Will Give All Riders Even Chance for Handsome Cup at Columbus.

FOLLOWING are the regulations which will govern the awarding of the handsome cup to be donated by the Bosch Magneto Co. to the rider scoring the greatest number of points in the F. A. M. championship races at Columbus:

The winner of the one-mile championship will receive four points, the second three points and the third two points.

The winner of the two-mile championship will receive six points, the second four points and the third three points.

The winner of the five-mile championship will receive seven points, the second five points and the third three points.

The winner of the ten-mile championship will receive eight points, the second six points and the third four points.

The winner of the hour championship will receive twelve points, the second seven points and the third five points.

It will be necessary for the winner of the trophy to compete in all events, the point system thus allowing the man who may receive only a third place in the one-mile race to still have a good chance to win the trophy. The motorcyclists of the United States will be deeply concerned in this contest, as the interest at the meet will be sustained throughout the four racing days, due to the fact that the winner of the trophy will not be known until the last championship race is run. The cup has been designed by the Gorham Manufacturing Co., of New York City, and is now nearing completion in the hands of this company's experts.

SERIOUS CHARGES

Hippodrome Contract Brings Earle Armstrong and Cleveland Track Management Under F. A. M. Fire.

As the result of efforts by officials of the new Cleveland saucer to stage races on a hippodrome basis and dictate sweeping terms to the riders, a number of the speedsters have "kicked over the traces" and the track management will be hard pushed to explain its position. Earle Armstrong, of the Excelsior racing camp, brought the dissatisfaction to a head on June 8 when he was refused permission to compete on the ground that his machine was too fast. In afternoon tryouts he had spun around the track in from 40 to 43 seconds for a mile, better time than had previously been made, and in the evening the management, through George I. Kreamer, who is acting as track manager, announced that it did not intend to have its stable of racers "cleaned up" by Armstrong. The latter appealed to Agent Zucker, Excelsior representative in Cleveland, and lengthy arguments followed. Finally Armstrong was allowed to ride an exhibition mile, which he turned off in 42 2-5 seconds.

The situation simmered until the following Sunday night, when "Shorty" Matthews dropped into Cleveland with his racing Thor. More conferences followed and Armstrong and Matthews were permitted to ride, but not until the former had signed an agreement to accept $35 win or lose and to gauge his speed so that if winning he would not lead by more than a machine's length. In the event of the latter stipulation being violated he forfeited his claim to the money. This contract, signed by Armstrong and Kreamer, the latter representing the track management, is the most serious piece of evidence so far produced. When a copy of it was placed in the hands of Chairman J. P. Thornley, of the F. A. M. competition committee, he at once made an investigation which led him to suspend the rider from competing in F. A. M. sanctioned events for a year, or until such time as he succeeds in justifying his action before the Federation competition committee. Chairman Thornley also informed the management of the Cleveland track that he would be obliged to refuse further sanctions unless a satisfactory explanation is given of the conditions under which the Excelsior rider was forced to compete.

On the Wednesday evening following the signing of the contract Armstrong was matched against "Brownie" Carslake, and in striving to live up to his agreement the Excelsior racer "pulled" his machine until the motor overheated and finally stalled near the tape. Carslake won by a yard or two. This riled Armstrong and before going out for the final he informed the track officials that he was going to open up and win, regardless of the margin. Accordingly he lapped Carslake and rode home at top speed. After the race Armstrong was "put on the griddle" for violating his contract, and was told that he would be barred from racing unless he adhered to the letter of the agreement. He replied that he could not be barred from the track under such conditions, if it was to be operated under an F. A. M. sanction, and later forwarded all the data to the Excelsior company. The company in turn placed the matter in the hands of Chairman Thornley.

CONNER SCORES AGAIN.

L. W. CONNER, the Pierce rider, who appears in the accompanying photograph, went up to Seattle, Wash., on June 17, from his home in Los Angeles, and finished with a perfect score in the endurance run between Seattle and Portland, Ore. Conner rode his Pierce single and was the only rider in this class to reach Portland with a clean score. Seven singles started. There were thirty entries in all, and only three scored perfectly, two Merkel twins getting through on schedule in addition to Conner. The run was over some of the worst roads imaginable, and because of heavy rains it was necessary to call off the return run from Portland to Seattle. The total mileage between the cities is 202 miles, and the average speed maintained was 24 miles an hour.

ON THE COMMERCIAL LIST.

THE number of Winnipeg's commercial motorcycles is steadily increasing. The Winnipeg police department has just added two Indian sevens to the six already in service, and a single-cylinder Excelsior has been purchased by the city for the use of the playgrounds commissioner. The Vulcan Iron Works has purchased an Indian machine for the use of their city traveler, and a number of other firms have intimated that they will soon install motorcycle outfits for commercial use.

CYCLE TRADES PROGRAM

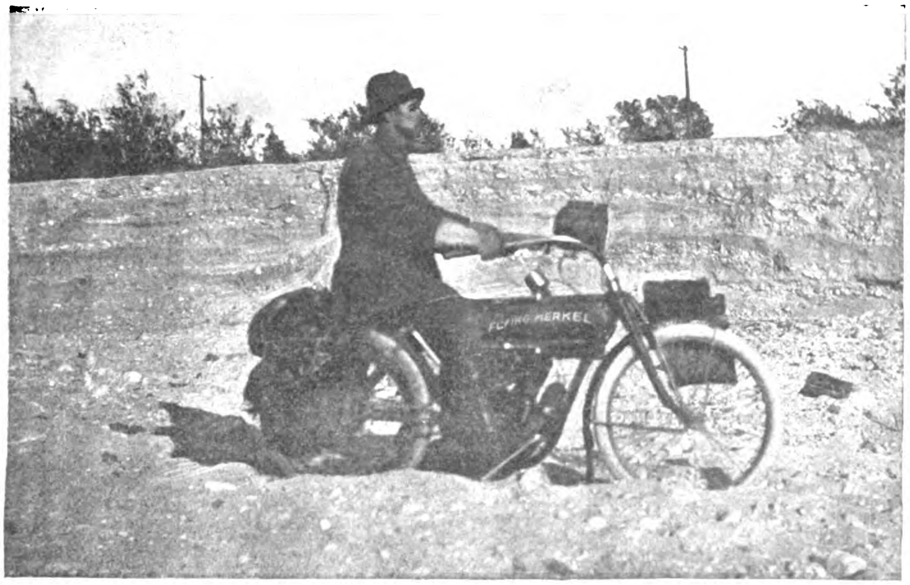
Chairman Surre Reports That Plans for Detroit Convention Include Features of Unusual Interest.

CHAIRMAN SURRE, of the committee in charge of arrangements for the sixth annual convention of the Cycle Trades Industries, to be held in Detroit, August 6-9, inclusive, reports that the program for the assembly has been almost completed. While it is impossible to give a detailed outline of the program at present, it is certain that there will be "something doing" from Tuesday, the opening day, until the last horn blows on Friday.

The committee has chartered a large pleasure steamer for both daylight and moonlight sails on Lake St. Claire and the Detroit river, and a theatre party is to be another feature. In addition there will be the usual bowling tournament and baseball games. Reports from the Cadillac Hotel in Detroit are to the effect that a number of applications for accommodations have already been received, and there is every reason for believing that the coming convention will go beyond the highly successful assembly of last year which drew a large and enthusiastic gathering of trade boosters to Atlantic City.

ONE of the largest department stores in Minneapolis, Minn., has adopted a motorcycle for delivery purposes.

Earle Armstrong (on the machine) and Victor Gibson.



TRAILING SMUGGLERS

Inspector Who Scouts Along Mexican Border on Motorcycle Sets a Hot Pace for Fugitives.

W. C. VAUGHAN, who appears in the accompanying photograph on his Flying Merkel seven, is undoubtedly one of the most picturesque figures mounting a motorcycle in this country today. He is an inspector in the service of the United States Immigration Bureau, and it is his duty to patrol the Mexican border for the purpose of apprehending smugglers. Vaughan's life is one of thrills and narrow escapes, and on more than one occasion the motorcycle has saved him when it appeared that his adventurous career was to be cut short by a band of wrathy smugglers. As Vaughan does most of his work single-handed, strategy is necessary, and it is his aim to capture the offenders by riding them down singly instead of encountering them in a party. In this service his motorcycle has proved invaluable. Former inspectors, mounted on horses, were outrun by the smugglers, but when Vaughan once takes to a trail on his motorcycle nothing but a serious accident will permit the fugitives to escape.

Vaughan lived in Japan for a number of years, and speaks Japanese and Chinese fluently. When he decided to take up the work along the Mexican border he also mastered Spanish. Thus equipped as a linguist, he is able to meet all the conversational demands of his position. For the rest, he is a wiry, cunning scout of steel nerves. At all times Vaughan carries a sawed-off automatic shotgun and a brace of pistols, and not infrequently he is called upon to use them. As he finds it necessary to camp in the open for weeks at a time, he is obliged to transport a full camping outfit on his machine; his method of carrying equipment is shown in the picture. It will be noted that Vaughan has eliminated pedals and provided footboards on his motorcycle. He uses an Eclipse free-engine clutch in conjunction with a self-starter, and states that he could not dispense with these adjuncts.

Riders who complain of having to carry the equipment necessary for an ordinary tour will do well to study the make-up of Vaughan's regular kit, which is arranged as follows: Large automobile headlight, Prest-O-Lite tank, extra oil and gasoline tank, extra belt, valve springs and numerous other small parts; large assortment of tools, large pump, two extra tubes and tire repair outfit; one automatic shotgun and 100 shells for it; two Mauser automatic pistols and 100 rounds of ammunition for them; a camera, six tins of canned goods, salt, pepper, coffee, condensed cream, etc.; coffee-pot, skillet, plate, knife and fork, change of underwear and other clothing; rubber blanket, potatoes, onions, flour, bacon, dried fruit and soap; water canteen, three pairs of handcuffs, a roll of bedding and a heavy overcoat.

Vaughan is a familiar figure in every town in Southern California and Mexico, and when not on the trail of smugglers he has done much to advance the cause of the motor two-wheeler throughout that section of the country.

A SORELY NEEDED LAW.

ONCE more the necessity for legislation to provide for rear lights on all road vehicles at night has been brought home forcibly, this time in St. Louis, Mo. L. G. McKellopes, 18 years old, while riding a motorcycle with a party of friends on the outskirts of the city, ran into the rear of a big brewery truck and was instantly killed. Several of McKellopes' companions struck his machine and were injured, but not seriously. There appears to be positive evidence that no lights were visible from the rear of the truck, and as it was traveling slowly it did not make enough noise to warn the motorcyclists.

CLIMBED HILL WITH PASSENGER.

FRANK D. STAUFFER, of Columbia, Pa., reports that he recently carried a tandem passenger up the famous Chickies Hill, near Columbia, on his single-cylinder Reading-Standard. Stauffer weighs 140 pounds and his passenger weighed 110 pounds. The hill has given automobile tourists much trouble, and Stauffer takes justifiable pride in his accomplishment.

IN order to effect a saving in time for the meter-repair man of the Salt Lake City Water Company, the company furnished him with a motorcycle.

DEPUTY GETS F. A. M. CHECK.

NATIONAL SECRETARY GIBSON reports that the F. A. M. has just paid its fifth award of $25 for the recovery of a motorcycle stolen from a member of the Federation. On April 20 a motorcycle owned by Harry J. Towne, of Baldwinsville, N. Y., was taken and Deputy Sheriff Charles F. Chapman, of Onandaga County, N. Y., had the case turned over to him. Chapman took up the trail, made an arrest promptly and recovered Towne's machine. The thief is now in the Elmira Reformatory, and Deputy Sheriff Chapman has a $25 check from Secretary Gibson.

A BOOM FOR CAMPBELL.

CLEVELAND enthusiasts, who are never contented unless they are boosting, and who seldom err in choosing an object for their uplifting efforts, are now waging a dignified but determined campaign in behalf of Jesse Campbell as a candidate for election to the F. A. M. Board of Directors. That they have picked a likely nominee cannot be denied, and the Clevelanders feel confident of having him seated in the governing board of the national organization before the Columbus convention is brought to a close.

WANTED TO SEAL CUT-OUTS.

BALTIMORE, Md.—The mufflers on all motorcycles in this city will hereafter be closed. The City Council has passed an ordinance involving this decree. The question of closing the mufflers has long been agitated, but only recently the City Council took interest enough in it to frame an ordinance. The clubs here backed the measure, but they were greatly surprised that the framer of it had included a provision whereby the mufflers must be sealed. This clause was objected to at the last moment, and it was eliminated.

IN A NEW FIELD.

U. S. GOVERNMENT FOREST SUPERVISOR P. G. REDINGTON, of North Fork, Cal., has recommended that motorcycles replace horses for the use of the men who patrol the Government forest reserves.

CREDITABLE SERVICE RECORD.

E. HEPLER, of New Orleans, La., came into possession of the Reading Standard machine shown in the photograph in 1910 and he is still using it regularly. What's more to the point, he asserts that it has never had a general overhauling.

"ROCK-ROLLING" PARTIES.

C. E. WILLIAMS, of Douglas, State F. A. M. commissioner for Arizona, forwards the accompanying photographs with a view of proving that road improvements in his district are not being entirely overlooked. The motorists shown in the pictures compose "rock-rolling" parties which recently went out over the roads in the vicinity of Douglas for the purpose of clearing away stones and other obstacles. The "rock-rolling" trip referred to covered nearly 100 miles of roadway. Commissioner Williams reports that several other trips along similar lines are being planned and that the road between Douglas and El Paso and on to Phoenix will be in fair condition in a month or two. In the immediate vicinity of Douglas the roads are oiled and kept in repair by the county and State authorities, and it is stated that they are in condition for motorcycling at all times of the year.

NEW TRACK OPENS WITH FINE CARD

John Constant Wins First Race On Point Breeze Bowl, Sharing Honors of Meet With Klebes and Vanderbury—Big Crowds Attend.

PHILADELPHIA, Pa.—About six thousand racing fans attended the opening meet on the new Point Breeze saucer on June 18, for which a highly satisfactory card of events was prepared. Harry Klebes, of Philadelphia, mounting his 7 Indian, gave a fine account of himself and cleaned up in the free-for-all races. John U. Constant, of Brooklyn, N. Y., won the first event, at five miles, on his Indian. Summaries:

Five-mile amateur event, for 61.00 class stripped stock machines—Constant, Indian; Davis, Indian. Time, 4:46.

First heat of 7-mile, professional, Class B event—Klebes, Indian; Vanderbury, Indian; Hollenback, Indian. Time, 1:29⅗.

First heat of 8-mile, professional, Class C—Klebes, Indian; Vanderbury, Indian; Hollenback, Indian. Time, 1:42⅗.

Five-mile event, professionals, 30.50 class—Klebes, Indian; Vanderbury, Harley-Davidson, did not finish. Time, 2:51⅕.

Second heat of Class B, professional, two miles—Klebes, Indian; Vanderbury, Indian; Vidette, Indian. Time, 1:32.

Second heat of Class C, professional, two miles—Klebes, Indian, Vanderbury, Indian; Vidette, Indian. Time, 1:42⅗.

Eight-mile open, trade riders, 61.00 class—Constant, Indian; Davis, Indian. Time, 7:18⅘.

Final heat of Class B event, three miles—Klebes, Indian; Vanderbury, Indian; Vidette, Indian. Time, 2:21[illegible].

Final heat of Class C event, four miles—Klebes, Indian; Vanderbury, Indian; Vidette, Indian. Time, 3:09[illegible].

Three-mile exhibition by Eddie Hasha; time, 2:01⅘.

PHILADELPHIA, Pa.—Daring riding by Harry Klebes, on an Indian, featured the races held on Saturday afternoon and evening, June 22, on the new motordome at Point Breeze Park. His desperate sprints carried him to victory in every event on the program but one, and he did not compete in that race. The large crowd of spectators was treated to three spills in addition to brilliant struggles for leadership in the seven races.

Prior to the start of the fourth race Springler took a tumble that landed him on the soft turf inside the track. He arose uninjured, but his machine was sufficiently damaged to keep him out of the contest.

One of the worst spills occurred before the start of the sixth race. Springler also figured in this. He was saved from possible serious injury only by the cool headed daring of Pancoast, another rider. Springler in trying to climb the track lost control of his machine and rolled down toward the running board. Directly behind him came Pancoast tearing along at nearly a mile-a-minute gait. When he saw Springler's predicament he quickly shut down his engine, applied the brakes, and in trying to avoid the racer who was shooting along the track he plunged into the other motorcycle, leaping from the seat of his own machine at the same instant. He shot into the air and landed high up on the track, sliding fifteen feet before rolling down to the running board. Both riders arose uninjured and when Pancoast continued he was wildly cheered.

Harry Klebes.

The next thrill followed before the seventh race when the riders were tuning up Thomas, a Pacific coast champion with a reputation for dare-devil riding, had trouble with his steering gear and was flung over the handlebars of his machine into the high grass inside the track. He was uninjured, but his machine was damaged and he withdrew from the race.

Klebes and Thomas furnished one of the most exciting contests of the afternoon in a five-mile match race. Klebes jumped to the front after the riders had circled the track three times for the first mile. He was soon nosed out by the Westener and for ten laps they were neck and neck. Thomas then increased his lead to about twenty feet, but on the last lap the Quaker boy opened up and shot across the line, a winner by a slight margin. Eddie Hollenback, who was prevented from entering several of the races because the officials questioned the horsepower of his Indian engine, won the fourth race on a Bradley with ease, defeating Pancoast and Pratt. Summaries:

Class B, three miles—Won by Klebes; second, Thomas; third, Vidette. Time, 2:10⅘.

Five miles, professional, 30.50 class—Won by Klebes; second, Reuss. Time, 4:50⅘.

Class C, four miles—Won by Klebes; second, Thomas; third, Vidette. Time, 2:54.

Class D, six miles—Won by Hollenback; second, Pancoast; third, Pratt. Time, 5:02⅗.

Class B, four miles, final heat—Won by Klebes; second, Vanderbury; third, Thomas; fourth, Vidette. Time, 3:02⅗.

Match race, five miles—Won by Klebes; second, Thomas. Time, 3:45⅗.

Class C, four miles, final heat—Won by Klebes; second, Vidette; third, Vanderbury. Time, 2:59.

EIGHT CLEAN SCORES

Eccles and Coes, with Side-Car Outfit, Were Among Those Who Finished Worcester Club's Endurance Run.

EIGHT riders, out of nine that started, scored perfectly in the first of a series of endurance runs held by the Worcester (Mass.) Motorcycle Club on Sunday, June 23. Thirteen riders had signed up for the contest, but four failed to appear in time for the getaway. The route was from Worcester to Concord, N. H., via Lowell, Mass. Checking stations were located at Lowell, 50 miles; Nashua, 64 miles; Manchester, 82 miles, and Concord, 100 miles; the turning point was reached at noon, the start having been made at 7 a. m. One hour was allowed at Concord and the return trip was taken up at 1 p. m.

Following is the list of contestants: Howard L. Clark, 7 Indian; M. S. Ripley, 7 Excelsior; F. I. Kidder, 5 Indian; Paul Rhode, 4 Thor; Warren B. Bye, 6 Excelsior; C. Nelson Robinson, 7 Indian; C. H. Anderson, 7 Excelsior; C. C. Clark, 6 Excelsior; W. E. Eccles and Russel R. Coes, with 7 Indian and Majestic side-car. It is worthy of note that Eccles and his passenger made the trip in good time and experienced no more difficulty than the other riders.

Howard Clark was the first rider to check in at Worcester on the return trip; he arrived at 5:20 p. m., having made the run from Lowell in one hour and twenty-five minutes. He was followed by Ripley at 5:32; Kidder at 5:38, and Rhode at 5:39. Eccles and Coes, with the side-car, checked in fifth. They reached Worcester at 5:44, with 17 minutes to spare. Bye rolled in at 5:55; Robinson at 5:56, and Anderson, 6:02. According to the records at hand this is the longest endurance run held in this country in which a side-car participated and finished with a perfect score. In addition to Coes' weight of 145 pounds the side-car carried about 25 pounds of supplies and tools, so that the passenger attachment really served as a "trouble wagon."

ACTIVITY IN TRENTON

Riders of Capital City Are Planning Joint Outing with Newark Squad—Side-car Is Popular.

TRENTON, N. J.—An unusually busy session of the Central Jersey M. C. was held on June 14. A committee was named to arrange for an endurance run to be held in July and a second committee was authorized to confer with officials of the New Jersey M. C., of Newark, with reference to a joint outing. The club members are now making weekly trips to Philadelphia to attend the motorcycle races which are benig held on the new Point Breeze motordrome. Plans are being taken up for a summer camp, at which riders and their friends may sojourn when they find it possible to get away from the city for a day or two.

In spite of the advanced season local motorcycle dealers are rushed with orders, and it is worthy of note that the side-car is becoming quite popular throughout this district. John Sykes, Jr., Indian agent in Trenton, has received an order for a side-car from the State Geographical Survey Department. It is to be used by State Chemist R. B. Gage. The chemist is preparing to obtain specimens of road material from all parts of the State, and it is believed that the side-car will prove invaluable in this service.

ON TUILERIES BOWL

Patterson Shows Well at Denver, and Boyd, Fleckstein and Cox Figure in Thrilling Matches.

DENVER, Col.—The largest crowd of the season packed the grandstand and field at Tuileries Park on Sunday, June 23, to witness the first program of races put on for three weeks. Rain caused the postponements. Andy Patterson, although forced to retire from the first race on account of a broken gas pipe, was the star of the afternoon, winning two open races. Due credit, however, is given Jim Cox, for the extraordinary showing he made with a comparatively slow machine. He took second place in every event entered and gave the winner a close rub. The match races between Boyd and Fleckstein and Patterson and Cox were hair-raisers throughout, first one and then the other leading.

Ed. Swartz, of the Indian camp, and Al. Sharp, one of the track timers, were returning to the city on a tandem after tryouts on the track when in the dark they ran into the rear end of a buggy and sustained serious injury. Both riders have broken bones and painful cuts and bruises. Summaries of June 23 races:

Two-mile amateur, singles, stock, 30.50 class—R. Barclay (Merkel); T. Hurlbut (Indian); time, 2:30⅗.

Three-mile open, professional, 61 class—L. Bowen (Merkel); J. Cox (Merkel); G. Boyd (Indian); time, 2:13⅕.

Five-mile open, professional, 61 class—Patterson (Merkel); J. Cox (Merkel); G. Boyd (Indian); time, 3:30⅗.

Five-mile match race, professional, 61 class—G. Boyd (Indian); L. Fleckstein (Indian); time, 3:53⅕.

Five-mile match race, professional, 61 class—Patterson (Merkel); J. Cox (Merkel); time, 3:31⅘.

Motorcycle Racing and Baseball Vie for Popularity Among the Denver Folk, As Eviden

MANY THRILLING STUNTS ON CHICAGO SAUCER

CHICAGO, June 24.—Excitement marked the week's racing at Riverview Motordrome. Ray Seymour, the California wonder, kept to the front easily on Wednesday and Saturday nights but was compelled to drop out last night because of a broken cylinder.

In the six-mile G. O. P. Sweepstakes on Saturday night Wolters, who was putting up an excellent fight for first place skidded into a rut which broke down his rear wheel. For a second he continued his flight on the crankcase of the motor but was soon collecting splinters from the track boards. In last night's Lake View Sweepstakes Wm. Samuelson repeated the stunt at about the same place on the track, sliding across the bowl just in front of Wolters, who fortunately was able to turn sufficiently to escape a nasty mix-up. Samuelson also came through without serious injury.

Results of races on Sunday, June 23.—Four-mile amateur: Bethke, first; Wenk, second; Trafsky, third. Time, 4:07⅕. Nine-mile professional, Class A, first heat: Balke, first; Wolters, second; Wm. Samuelson, third. Time, 2:10⅕. Second heat: Wm. Samuelson, first; Balke, second; Wolters, third. Time, 2:11. Third heat: Balke, first; Wm. Samuelson, second; Wolters, third. Time, 2:10⅕. First heat of nine-mile professional, Class B: Arthur Mitchell, first; T. Samuelson, second; Edwards, third. Time, 2:10⅘. Second heat: Mitchell, first; T. Samuelson, second; Edwards, third. Time, 2:10. Third heat: Mitchell, first; T. Samuelson, second; Edwards, third. Time, 2:12⅘. Lakeview Sweepstakes, six-mile free-for-all: Balke, first; Arthur Mitchell, second; Wolters, third; T. Samuelson, fourth. Time, 4:22.

CHICAGO, June 13.—At this writing Ray Seymour is still king of the Motordrome. Last night the Californian won every heat and race in which he started, showing his rear wheel to Balke, Wolters, Hasha and the other stars. In the Harroun sweepstakes Seymour won handily, riding the four miles in 2:53⅕. Balke was in second place, with Dave Kennie third and Joe Wolters fourth. Summaries:

Class A, professional; 9-mile race, run in three heats, 3 miles each; first heat—Seymour, first; Balke, second; Hasha, third. Time, 2:07⅘.

Class B, professional; 9-mile race, run in three heats, 3 miles each; first heat—T. Samuelson, first; Edwards, second; Renel, third. Time, 2:10⅗.

Second heat of Class A—Seymour, first; Hasha, second; Balke, third. Time, 2:04.

Second heat of Class B—Kennie, first; Humiston, second. Time, 2:12⅘.

Third heat of Class A—Seymour, first; Balke, second; Wolters, third. Time, 2:04⅘.

Third heat of Class B—T. Samuelson, first; Kennie, second; Edwards, third. Time, 2:12⅗.

Four-mile amateur race—Trafsky, first; Mitchell, second. Time, 4:26⅘.

Ray Harroun sweepstakes, 4 miles, free-for-all—Seymour, first; Balke, second; Kennie, third; Wolters, fourth. Time, 2:53⅕.

CHICAGO, June 16.—When is some rider going to beat Ray Seymour? That is the question upon the lips of thousands of motorcycle race followers in this city as a result of the Californian's sensational performances since his arrival here. Last night's meet added new victories to Seymour's string. He started in the two Class A pro. events on the program and won both, hands down. The first of these was a 9-mile contest, run off in three heats, and thrice Seymour showed the field the shortest way around the bowl. Then he came out and captured the big race of the night, the Convention sweepstakes at six miles. On the fourteenth lap of the sweepstakes Balke blew a tire and went down. He landed clear of the other flyers, however, and did not carry any one down with him. Balke was uninjured, and quickly getting to his feet he walked into the judges' stand while the big crowd gave him a cheer. Meanwhile Seymour rode on to victory. Billy Samuelson finished in second place, several lengths behind the California speedster. Dave Kennie, a comer among the younger professionals, was third, hugging Samuelson's rear wheel. Johnnie Albright, of Denver, was a good fourth. Seymour turned the six miles in 4:23⅗.

In a match race, which was an added attraction last night, Albright won over Arthur Mitchell. Each won a heat over the two-mile route, but in the three-mile final the Denverite came through with a rush and passed Mitchell near the tape. Trafsky, a frequent winner of late among the amateurs, annexed the four-mile race after an interesting contest in which Williamson and Wenk chased him home in the order named. Summaries:

Nine-mile professional race, Class A; three heats, 3 miles each; first heat—Seymour (Indian), first; Graves (Excelsior), second; Wolters (Excelsior), third. Time, 2:04.

Nine-mile professional race, Class B; three heats, 3 miles each; first heat—Kennie (Thor), first; T. Samuelson (Indian), second; Armstrong (Excelsior), third. Time, 2:13.

Second heat of Class A—Seymour (Indian), first; Graves (Excelsior), second; Balke (Excelsior), third, Time, 2:04.

Second heat of Class B—W. Samuelson (Indian), first; Edwards (Merkel), second; Humistons (Thor), third. Time, 2:14⅕.

Third heat of Class A—Seymour (Indian), first; Balke (Excelsior), second. Time, 2:07.

Third heat of Class B—Edwards (Merkel), first; W. Samuelson, second; Armstrong (Excelsior), third. Time, 2:10.

Four miles, open to amateurs only—Trafsky (Flanders), first; Williamson (Indian), second; Wenk (Thor), third. Time, 4:29.

Convention sweepstakes, six miles, free-for-all—Seymour (Indian), first; W. Samuelson (Indian), second; Kennie (Thor), third; Albright (Indian), fourth. Time, 4:23⅗.

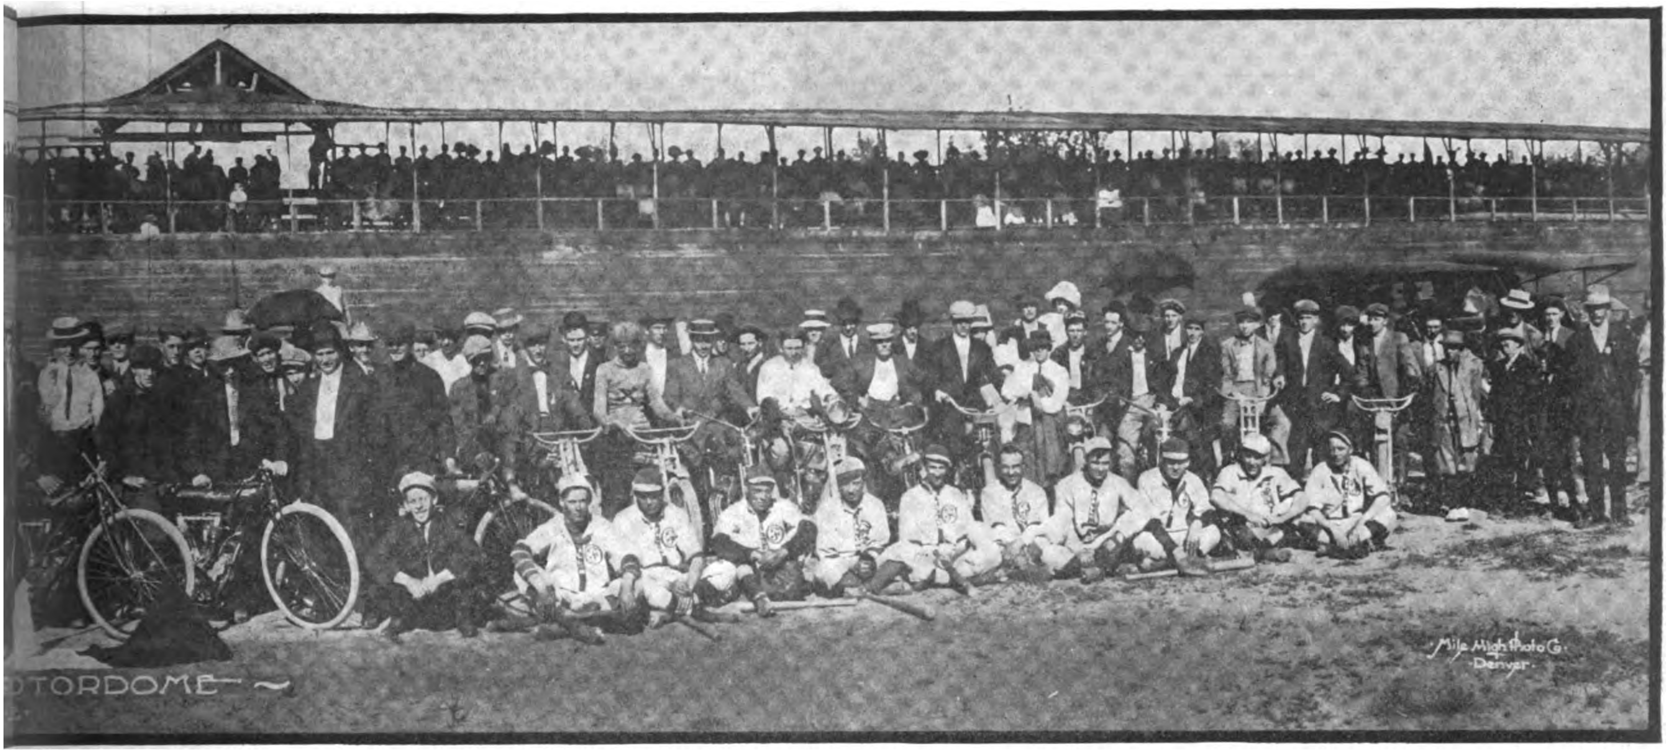
Match race: Arthur Mitchell and John Albright; best two in three heats—First heat, 2 miles, won by Mitchell; time, 1:40. Second heat, 2 miles, won by Albright; time, 1:34⅘. Third heat, 3 miles, won by Albright; time, 2:20.

LIMA'S HOLIDAY RACES.

LIMA, Ohio.—Motorcycle racing will be a feature of Lima's Fourth of July celebration, according to the decision of the Lima Motorcycle Club. Five hundred dollars will be offered in prizes.

TWO-DAY MEET AS TEST.

SPRINGFIELD, Ill.—After being rained out on two occasions the Illinois State Board of Agriculture is again going after the motorcycle racing game with hammer and tongs. To square matters for the inclement weather of 1910 and 1911 State fairs, which resulted in the postponement of the motorcycle races, a big two-day meet will be held on the fair grounds track July 3-4.



TORDOME
Mile High Photo Co. Denver.

d By the Photograph Above, Taken One June Afternoon At the Tuileries Motordrome.

HABICH'S ANNUAL OUTING.

GUS HABICH, of Indianapolis, is going to act as host for about 200 riders on Sunday, June 30, weather permitting. Habich has planned a big motorcycle run to his camp along White River, about sixteen miles north of Indianapolis. The run has been advertised in the local newspapers for the past week and a big crowd is expected.

Habich has invited riders in general, and they will line up on Washington street at 8:30 a. m. for a photograph before proceeding to the picnic grounds where Habish will have a novel program. The usual picnic frolic will take place and an event which is being kept "dark" is scheduled as the chief event.

TO HOLD JOINT MEET.

ST. PAUL, Minn.—The St. Paul and Minneapolis motorcycle clubs have been holding meetings during the past week to arrange for the motorcycle speed contests that will be held on the Hamline track, at the State Fair grounds in this city, on July 4. Everything points to a most successful meet and the clubs are now striving to get a squad of professional or trade riders to enter the meet. However, as July 4 is such a crowded date in the motorcycle racing world it is doubtful whether any of the professionals will be able to get to the city before the August races. Recently the Minneapolis M. C. distributed about one hundred entry blanks. The committee has had large posters printed to advertise the affair and it is expected that the attendance at the meet will be the largest ever recorded in the Twin Cities.

WILLIS-MATTHEWS-TULLIS.

RACES held by the Akron (Ohio) M. C. on June 8 drew a large crowd, and proved unusually successful from a competition standpoint. Dan Willis captured most of the stock events, and "Shorty" Matthews led in the two events in which he was entered. Dave Tullis set the pace over the tape in the two other open events. The weather was ideal for racing. Summaries:

Five-mile stock event, 30.50 class—Willis, Indian, first; Wagoner, Harley-Davidson, second. Three-mile open race, 30.50 class—Matthews, Thor, first; Tullis, Thor, second. Ten-mile stock event, 30.50 class—Willis, Indian, first; Wagoner, second. Five-mile open, 30.50 class—Matthews, Thor, first; Tullis, Thor, second. Ten-mile stock race for club championship—Won by Charles Starner, Indian. Ten-mile open—Tullis, Thor, first; Willis, Indian, second. One-mile novelty stock race—Willis, Indian; Maranville, Indian. Fifteen-minute open race—Tullis, Thor; Willis, Indian; Maranville, Indian. The club will hold its next races on July 27.

SAVANNAH CLUB RACES.

SAVANNAH, Ga.—Five events, ranging from 20 to 30 miles, will make up the July 4 racing card of the Savannah club on the Grand Prize course. The route to be used will be six miles long, with four turns. Riders from Jacksonville, Fla.; Dublin, Columbus, Augusta, Atlanta and Macon, Ga., have agreed to compete. One of the prizes will be a loving cup, donated by S. N. Harris, Indian agent in Savannah. It will be awarded for the main event between twin machines.

TYBEE BEACH RACES.

SAVANNAH, Ga.—Plans are practically complete for beach races to be held at Tybee, Ga., on Saturday, June 29, under the auspices of the Savannah M. C. Prizes are being donated by the Central of Georgia Railway Company. The events will range from one to three miles.

THREE MOTORCYCLE EVENTS.

THE program of events for the thirtieth annual championships of the Canadian Wheelmen's Association at Waterloo, Ontario, on July 1, includes three motorcycle races, with distances three, five and ten miles. These races are being sanctioned by the C. M. A.

ECCLES BLAZED THE TRAIL.

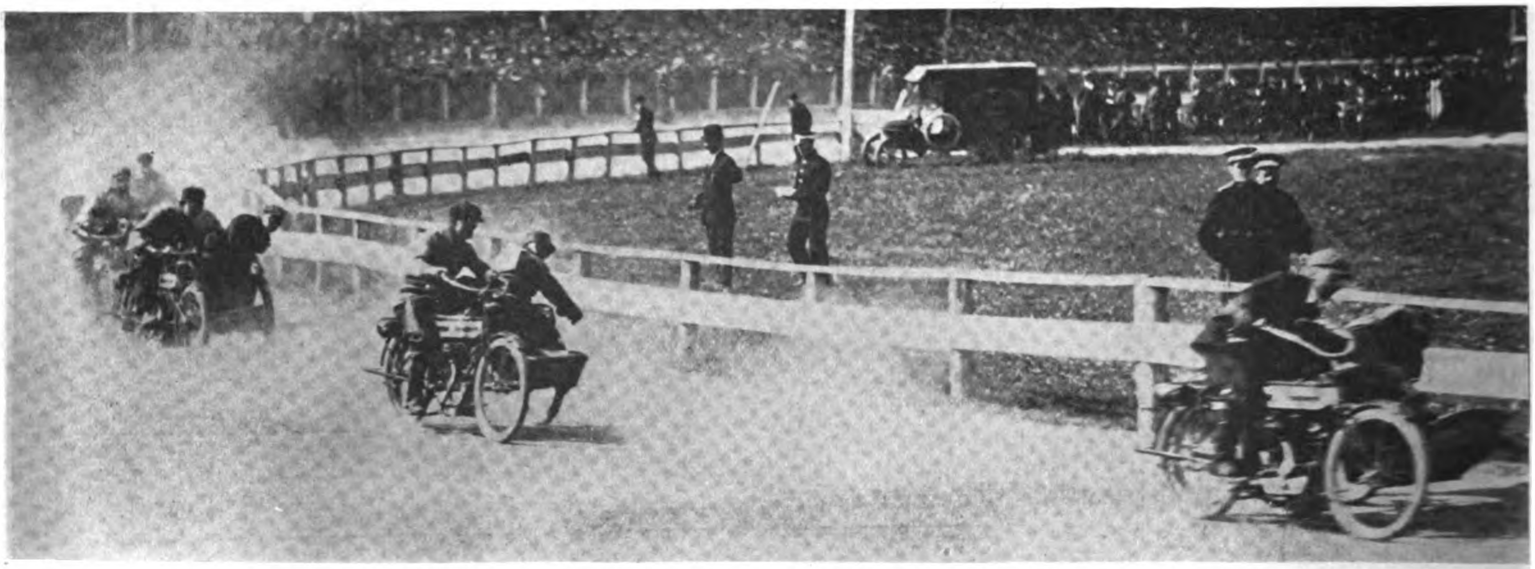
BECAUSE of inclement weather the 200-mile endurance run of the Worcester (Mass.) M. C., scheduled for June 16, was postponed. A number of the entrants reported at the checking station before the scheduled starting time, but the run committee had decided to call the contest off. The boys who turned out in the rain arranged for a impromptu endurance run of their own, however, and a fair-sized squad made a trip to Mount Wachusett, about 20 miles from Worcester. They enjoyed a fine dinner at the turning point and then chugged homeward through mud, miniature lakes and a dense fog. It is worthy of note that W. E. Eccles, sales manager of the Persons Mfg. Co., with his Indian 7 and side-car, succeeded in completing the run, including the climb to the summit of the mountain. Russell R. Coes was his passenger. This was the first trip made up Wachusett mountain by a motorcycle and side-car.

COLE HAD A "SURE THING"

SO acknowledged has the prowess of Harold Cole, the young Excelsior speedster of Toronto, as a racer, become that on the occasion of a certain race not long ago this rider not only received the first prize before he took part in the event, but actually made use of the reward in the contest. The prize was a motorcycle tire. The race was not conducted by the Toronto M. C.

TO PROTECT PROMOTERS.

TORONTO M. C. officials are looking into the proposition of insurance as a protection against loss by rain on the occasion of future race meets. The plan would be to take out a policy in Lloyds against the weather, for the sum of $500 to cover the expenses of the meet. As far as is known this plan has not yet been applied to a motorcycle meet.



The First Side-Car Race in America. Photo Was Taken in Toronto, Canada. Note Size of Crowd.

FRANKLIN'S NEW RECORDS.

ON the Brooklands track, in England, June 20, C. B. Franklin, riding a 7 h. Indian, made the following world's records:

Two hours, 131 miles, 1,735 yards; four hours, 254 miles, 1,638 yards; five hours, 310 miles; six hours, 373 miles, 1,725 yards. The rider covered 250 miles in 3 hrs., 51 min., 3 sec.; 300 miles in 4 hrs., 42 min., 31⅖ sec.; 350 miles in 5 hrs., 36 min., 2⅕ sec.

This gives the Indian every world's record from one mile up, including the record so much coveted in England of 300 miles inside of 300 minutes. The only stops made were for oil and tires.

MARYLAND CLUB OUTING.

BALTIMORE, Md.—The Maryland M. C. will hold its annual outing at Tinley's, on the Middle river, next Sunday. The boys will ride down on their machines, but after they get there they will lay them aside and take up athletic events.

IMPORTANT TESTS

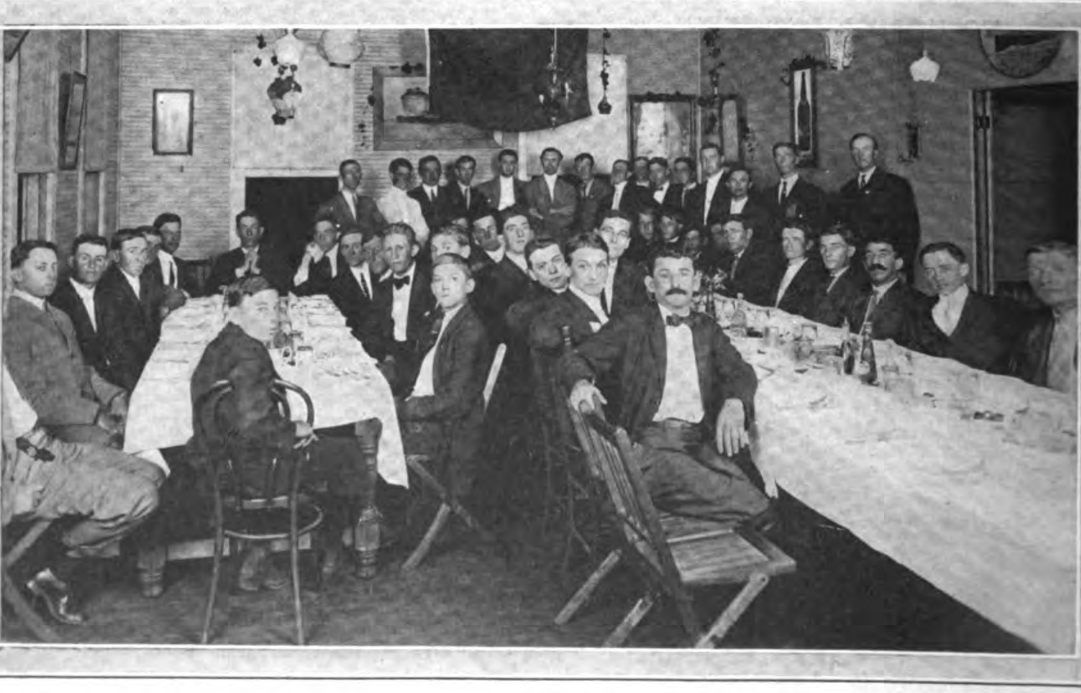
Postal Authorities at Washington Are Making Trials of Motorcycle's Adaptability for Mail Collections.

WASHINGTON, D. C.—The Postmaster General has ordered tests made here of motorcycles for mail collection purposes. The department, if satisfied with the tests, will order the time-honored horse outfits done away with and the motorcycle will be adopted. Every point for and against the motorcycle is being carefully weighed. Assistant Postmaster Robinson, of Washington, believes the motorcycle will be a success for time saving and operating economy. The department can only recommend the substitution of the motorcycle for the horses, as it has no authority to order purchases; but if the recommendation is strong enough it is regarded as certain that carriers will adopt the motorcycle for collection purposes. At present thirty-four horses are being used in the collection of mail here. The government allows $420 yearly for each horse and cart. Mail collectors, who would own the machines, it is argued, would find the cost of a motorcycle to be approximately that of a good horse, and the cost of upkeep would be very much less. If the post office department is satisfied with the tests now being made it will go further and experiment to ascertain the exact outlay for the maintenance of the machines.

The postmaster at Springfield, Mass., is having experiments made of night mail collections with motorcycles at his own expense, the department having granted him authority to make the experiment. In brief, if all experiments being made are satisfactory the post office department will recommend to every large postoffice in the country that it substitute the motorcycle for the horse in mail collections.

MOTORCYCLISTS in Philadelphia recently held a successful secret time run.

Secretary O. A. Meyer.



Officers and Members of the Savannah Club at Annual Banquet.

SAVANNAH CLUB'S NEW SET OF OFFICIALS

SAVANNAH, Ga.—At the annual meeting of the Savannah M. C., one of the liveliest the club has known, the following officers were elected for the coming term: G. R. Rossignol, Jr., president; J. D. Ivy, first vice-president; George Baker, second vice-president; O. A. Meyer, secretary; John Balmer, treasurer; O. W. Stacey, captain; Richard Clark, first lieutenant. After the business session a fine supper was served, during which the retiring president, Otto Kolb, addressed the members.

The committee in charge of the races to be held on July 4 reported that prizes valued at $400 have been obtained and that five events will be staged. The races will be held on the Grand Prize course and will range from 20 to 30 miles. Riders from Atlanta will be among the entrants.

President G. R. Rossignol, Jr.

1st Vice-president J. D. Ivy.

Treasurer John Balmer.

2nd Vice-president George Baker.

Captain O. W. Stacy.

1st Lieutenant Dick Clark.

THESE ARE BUSY DAYS.

SECRETARY GIBSON'S office staff recently completed the task of addressing 15,000 envelopes in which literature concerning the national tours to the Columbus convention will be forwarded to members of the F. A. M. as soon as all the information is available. The secretary has also mailed credentials to State commissioners and affiliated clubs, and has given formal notice of the assembly dates thirty days in advance, as required by the by-laws.

Secretary Gibson's office in Columbus during the convention week will be on the second floor of the Hotel Virginia, at a point directly accessible from the main corridor. It is announced that the secretary will be prepared to care for mail, telegrams, etc., addressed to F. A. M. members if they are forwarded through his office.

The fiscal year of the F. A. M. will close on July 1 and work will then be started on the annual reports to be submitted at the convention.

A FLANDERS FOLDER.

UNDER the caption "Flanders '4' is no Mollycoddle," the Flanders Mfg. Co. has prepared a highly attractive folder in colors which shows one of the company's testers hurdling two pieces of scantling for the purpose of testing the fork of a machine. The three pictures which make up the set have been given wide publicity, but they appear in colors for the first time in the new folder. These pictures, which were recently reproduced in this paper, are remarkable in every way.

Visiting Riders and Members of the Auburn (N. Y.) Club on Recent Outing.

A DAYTON OUTING.

COLUMBUS, O.—A party of about fifty motorcyclists of Springfield and Dayton, Ohio, made Columbus its stopping place on Sunday, June 9. The riders left Dayton at 7.30, and when they passed through Springfield they were joined by a score of riders from that place. The members of the Columbus Motorcycle Club entertained the party while in the Buckeye capital by taking them to the site of the new board track. O. W. Rockfield was captain of the Dayton party.

NEW CERTIFICATES.

CERTIFICATES have been issued to the following registered shops:

Geo. M. Stopper, 426 Market street, Williamsport, Pa.; Louis E. Schoene, 1023 Main street, Evansville, Ind.; Koch Outfitting Co., Evansville, Ind.; W. A. Rogers, Stamford, Tex.; Black Hills Motor Co., 65 Sherman street, Deadwood, S. Dak.; Emerson C. Eckert, 668 Cleveland avenue, Ravenna, Ohio.

TO MAKE HURRY CALLS.

TWO agents of the Ohio Humane Society, at Cincinnati, are to be equipped for making faster responses when reports of cruelty to animals are made. They are to be given motorcycles.

NEW INDIANAPOLIS CLUB

Dealers of the City Are About to Launch Organization and Open Attractive Club Quarters.

INDIANAPOLIS, Ind.—Plans are on foot in Indianapolis for the formation of a new motorcycle club. A meeting of all the motorcycle dealers in the city was held at the Hotel Denison recently when the matter was discussed. There are 800 motorcycle riders in Indianapolis, and only one club at present.

It is the dealers' intention to rent clubrooms where all modern facilities can be had, such as shower baths, swimming pool, pool and billiard tables, music and reading rooms, assembly hall, etc. The dealers think the clubhouse should be located at the outer edge of the city, somewhere in the vicinity of Riverside Park, where it will be easily accessible by street car when the weather is not favorable for motorcycling. The membership dues are to be fifty cents per month, and the club is to be so conducted that any member may drop in with his wife and family and enjoy an evening with the boys. All riders over 18 years of age are to be eligible for membership. Riders wishing to join the club may do so by leaving their name and address with any motorcycle dealer in the city, or with the temporary secretary, J. H. Kinney, 232 N. Illinois street.

SPRINGFIELD OFFICERS.

SPRINGFIELD, Ill.—At the annual election of the Illinois Motorcycle Club recently Carl D. Franke was elected president, after a close contest with S. A. Wight, who was later elected vice-president. J. H. McCrea was re-elected secretary-treasurer. James Ingels was elected road captain, with Rudolph W. Blucke as first sergeant. Runs will be made every Sunday and medals will be awarded to all who complete the full schedule.

Mr. Wight bears the distinction of having ridden everything with two wheels that travels, and he is still an enthusiastic rider, taking to the motorcycle game like a duck to water.

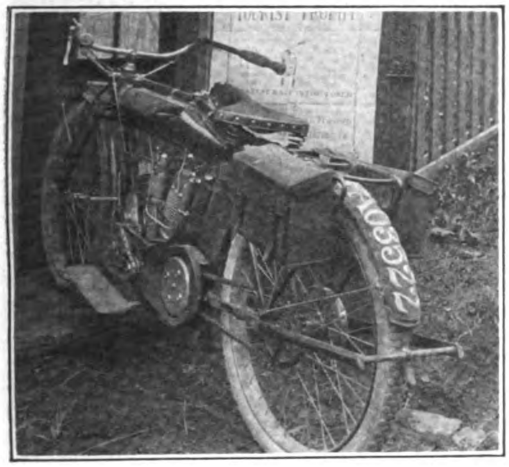
It is planned to give a smoker and lunch on the night of July 3 for the visiting riders who will be here to attend the State fair races. A clubhouse proposition was sent to a committee and definite action in this matter will be taken at an early date. The club was recently reorganized and is in a flourishing condition. It is the intention to rent suitable quarters in the downtown district, where the boys will be able to drop in and fraternize whenever they are at leisure.

GARAGE AND TWO HANDY "WRINKLES"

Pennsylvanian Describes Improved Motorcycle License Plate and Luggage Bags Made From a Discarded Sample Case.

IN the accompanying photographs, forwarded by W. D. Pratt, of Brownsville, Pa., are shown a neat garage and a machine equipped with two "wrinkles" which Pratt believes can be used to advantage by the average rider. The "wrinkles" referred to involve the luggage bags which are shown in position on either side of the carrier, and the license number plate which is fastened to the rear mudguard. Pratt writes as follows:

"A friend who is a traveling salesman gave me a leather sample case for which he had no further use, and for a time I thought it would be equally worthless to me. I put on my thinking cap, however, and finally decided to utilize the case in connection with luggage-carrying on my motorcycle. I found that by cutting it into equal sections I could make two stout leather boxes, each 5 x 8½ x 11½ inches, and, being of a mechanical turn of mind, I set about converting the sample case into the carriers shown in the photograph. I fastened stout straps, one inch wide, to the back of each box at points where they would buckle around the luggage carrier top and back-stay, and in this way it was a simple matter to place the boxes in position. Being identical in size and general make-up they did not detract from the appearance of the machine, and I don't mind saying that they proved their value immediately. It is surprising how many articles I can pack into them. Our harness maker informs me that a pair of such boxes can be turned out in a first class manner, ready to attach, for $6. The outlay for mine was much less, of course, in view of the fact that I had the case to begin with.



"The other 'wrinkle' referred to is the license number plate. Our Pennsylvania laws require a figure and letter 3 inches high by ⅜ inch thick, and to paint them on the machine and change them each year becomes bothersome. The operation is also detrimental to the appearance of the motorcycle. To get around this difficulty I drilled ⅛-inch holes in the mudguard, one inch apart, then obtained a strip of harness leather 14 inches long and the same width as the mudguard. With a leather punch I made holes in the leather strip to correspond to those in the mudguard. My next move was to a hardware store, where I bought the aluminum letters and figures necessary (just the size required by law), and placed them on the leather strip by pushing the prongs on their backs through the leather and riveting them. The finished plate was then laced to the mudguard with porpoise leather shoe strings. This makes an attractive attachment, and when it becomes necessary to change it I have only to remove the figures and letters, place new ones in position and lace the plate on the mudguard once more. The fact that it is easily kept clean is a big point in its favor.

"The garage illustrated represents an outlay of $10. It is built of second-hand lumber, and I did much of the work myself at odd times. Even this labor proved to be recreation for me, in view of the fact that I am a photographer by profession. On coming home to dinner one day I discovered that a friend living next door had painted his fence, and that on reaching the end he had sighed, after the manner of Alexander, for more fence to paint. Not finding any, he went ahead and painted my garage, thereby proving himself an exceptional neighbor. There is a door at either end of the garage, so that it is easy of access, and both doors have strong locks.

"Another feature worth noting: The garage is connected with my house by wires which control a burglar alarm system, and anyone who tampers with the doors at night is likely to find me sticking my head out of a window with a trusty Colt in my hand, ready to ask a few questions. To sum up, I believe that every bit of care given a motorcycle pays big interest. Treat your motorcycle as you do your watch, or with proportionate care, and your mechanical troubles will vanish."

DAYTON RACE MEET

EIGHT events are scheduled for the race meet of the Dayton (Ohio) M. C., to be held July 13, and the manner in which entries have been turned in so far is highly encouraging to the officials. The races will be staged on the half-mile dirt track at the fair grounds.

ON THE REGISTERED LIST.

HARRY A. GROSS, 41 South St. Clair street, Dayton, Ohio, has a fine repair shop, which is open to attend to the wants of motorcyclists twenty-four hours daily. It is an F. A. M. shop, too, having certificate 119, issued in 1909. It was omitted from the published list of registered shops.

NEW AFFILIATED CLUBS.

CHAIRMAN ESTABROOK, of the membership committee, has added the following new clubs to his list:

Columbia (S. C.) M. C., F. S. Habenicht, secretary, 1101 Taylor street; 15 members. West Texas M. C., Stamford, Tex., E. E. Duke, secretary; 23 members, 100 per cent. Austin M. C., Chicago, Ill., F. G. Sherman, secretary, 5502 Iowa street; 29 members, 100 per cent. North Pennsylvania M. C., Philadelphia, Pa., H. A. Wheatley, secretary, 3301 Ridge avenue; 16 members, 100 per cent. Indian M. C., Mobile, Ala., Oron Overton, secretary, 519 Dauphin street; 32 members. Union City (Ind.) M. C., Chancy Beery, secretary, Franklin street; 18 members, 100 per cent. Chanute (Kan.) M. C., I. D. Meeker, secretary, 19 South Wilson street; 15 members, 100 per cent. East Side M. C., East St. Louis, Ill., C. H. Heinz, secretary; 30 members, 100 per cent. Indian M. C., Cincinnati, Ohio, Joseph Thuenker, secretary, 432 Main street; 12 members.

CLUB ORGANIZERS.

AMONG enthusiastic motorcyclists who are now organizing clubs are the following active local spirits: C. P. Wyatt, Albuquerque, N. Mex. (address Box 603); E. C. Brunkhorst, 228 Ohio street, Sedalia, Mo., and A. C. Wagner, Celina, Ohio.

HASHA'S MOTOR STOLEN

CONSIDERABLE mystery surrounds the theft of the motor from Eddie Hasha's Indian racing machine at the new Point Breeze motordrome in Philadelphia, following the opening meet there on June 18. Taking it for granted, no doubt, that it would not be possible to use the machine without being at once detected the thief removed the engine and left the frame behind. This is one viewpoint; others which have been suggested only add to the mystery and give the incident a more unpleasant aspect. The stolen motor, No. 32, is the one with which Hasha recently gave some of his most sensational performances on western tracks. It was of the eight-valve type, and was one of the fastest turned out of late from the Hendee factory. Dealers and riders in Philadelphia and vicinity are requested to keep a sharp lookout for the engine, which will be easily recognized from its special construction.

BENEFITS FOR EMPLOYEES.

BENEFITS will hereafter be paid to all employees of the Excelsior Motor Manufacturing & Supply Company who may be hurt in the service of the Excelsior company, regardless of the technicalities that formerly protected the employer. This action was taken by the Excelsior people in accordance with the new Workingman's Compensation Act which recently went into effect in Illinois. It is a big step toward close harmony between men and management.

"This is in keeping," said Fred Whitfield, secretary of the Excelsior company, "with our policy of building up a permanent organization for the future. We have great faith in the future of the motorcycle and believe that even now people have not awakened to its possibilities."

Fred Whitfield, Secretary of the Excelsior Company.

Mr. Whitfield is one of the new men in the motorcycle business. He is a well-known Chicago lawyer who broke into the motorcycle business only through his practice. Last fall he took temporary charge of the financial side of the Excelsior company's affairs during its reorganization for Ignaz Schwinn, the present owner of the company. Mr. Whitfield was so pleased with the work and the future it offered that he accepted the position of secretary of the new Excelsior company. He has given up a large law practice and is devoting all of his time and attention to the motorcycle business.

FIFTY COMMERCIAL VANS.

H. F. TURNER, sales manager for the Minneapolis Motorcycle Company, reports the sale of fifty tri-cars to the Fred W. Van Sicklen Company, of Indianapolis. With this announcement goes the sale of another machine to the Grieves Company, of Minneapolis, which has also adopted the motorcycle for business purposes.

MANUFACTURERS OF "MEN-DO."

THE Liberty Rubber Company, of Orange, N. J., manufacturers of the Men-Do tire and tube repair outfit and of rubber cements for all purposes, besides other rubber specialties, are erecting a new factory in Orange, to be devoted exclusively to the manufacture of their specialties. The new building will be located on Standish avenue, and will be fireproof. It will be equipped to manufacture and ship over 1,000,000 Men-Do outfits a year.

The Liberty Rubber Company was recently reorganized in order to increase its capitalization. The management, however, will remain the same. The officers of the company are Harold T. Ray, president and general manager, and Charles A. Whelan, who is president of the United Cigar Stores Company, as secretary and treasurer. The selling organization of the concern was recently increased by the addition of four traveling salesmen.

FOR MERKEL VISITORS.

FOR keeping a record of visitors at the plant of the Miami Cycle & Mfg. Co., in Middletown, Ohio., a "guest register" has been provided in which interesting data is sometimes found. A few days ago the book showed that Charles Ferguson and Raymond Ray, of Cleveland, mounting a Yale 7 and a Thor 4, respectively, had dropped in for an inspection of the big factory. The boys left Cleveland early in the morning and covered 257 miles in ten hours' riding on the first day. They stopped at Springfield overnight. On the following day they finished the run to Middletown in five hours. After viewing the Merkel plant they started for Cincinnati to return to Cleveland via Indianapolis.

W. D. Andrews, the well-known Buffalo distributor for the Flying Merkel, was also a factory visitor recently.

SHOMO IN OKLAHOMA.

SALESMAN SHOMO, of the Indian staff, accompanied by Mrs. Shomo, recently arrived in Oklahoma City, Okla., on their long business tour of the South and Southwest. They are making the trip by motorcycle, and it goes without saying that they will have many an interesting story to tell when they again greet their northern friends. Shomo's latest bulletins from the Southwest were to the effect that there is a surprising growth of interest manifest in the motor two-wheeler.

CYRUS B. TULLIS.

CYRUS B. TULLIS, brother of W. F. Tullis, the latter New York branch manager of the Continental Rubber Works, died in Denver the early part of this month. C. B. Tullis was well known in the motor field, having been connected with Morgan & Wright in the early days and later with the B. F. Goodrich Company as branch manager in Denver and Buffalo and then as general traveling man for the Akron company. Until the time of his last illness, Mr. Tullis was associated in business with his brother.

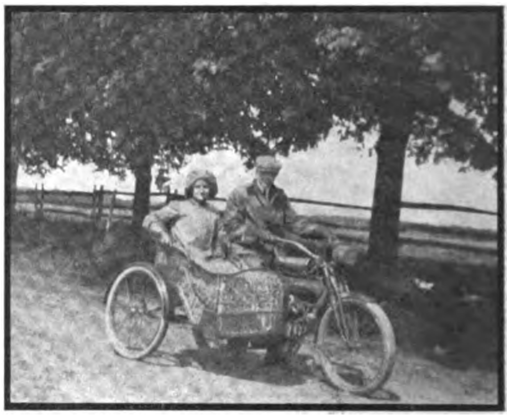
ANOTHER OHIO AGENT.

GILBERT RICKETTS, of Mt. Pleasant avenue, Lancaster, Ohio, has been appointed agent for the Indian for Fairfield county by the Barr Motorcycle Company of Columbus, Ohio, central Ohio distributor for the Hendee machines.

BAXTER SIDE-CARS.

THREE different styles of body, all in wicker, are features which leave a variety of choice to purchasers of Baxter side-cars, now being manufactured at 119 Broadway, Cambridge, Mass., by the Baxter Side-Car Company. The number one body or car has a single side-entrance and is upholstered in red or green leather cloth. It is constructed with a covered front portion, which affords splendid protection from the weather, in addition to forming a receptacle for clothing, light luggage, etc. The number two model has only a slight "toe" or front portion, while the number three has a shallow front. The bodies are all roomy and comfortable. The prices are respectively $70, $65 and $55. All are mounted on the Baxter side-car frame.

This frame has also a number of original and interesting features. It is of the girder type with quick detachable joints and hub. A 4-inch steel mudguard is fitted, and the axle tube is cranked to permit of proper alignment of the side-car and motorcycle. The wheel hub is turned from a solid steel bar. All parts of the side-car can be furnished separately and are with the whole outfit applicable to any machine.



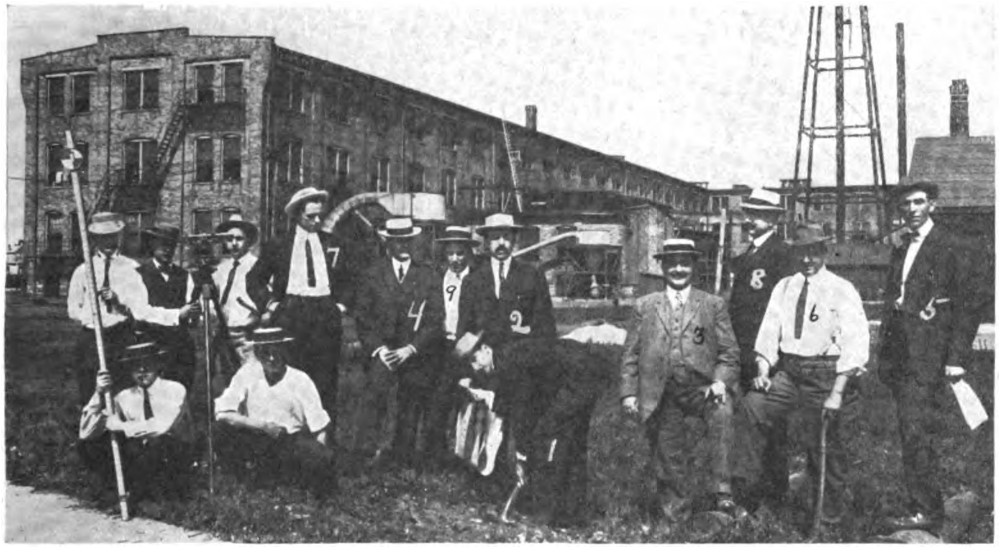
The Baxter Side-Car Company was recently incorporated, and its plant is that of the old Mason and Hamlin Piano Works, near Harvard University grounds. The photograph shows Miss Erna J. Miller in a most comfortable position in one of the baskets, with F. J. Drier, Jr. piloting the happy outfit. This picture was taken on one of the runs of the Motorcycle Touring Club of New York at Cold Spring Harbor, N. Y., June 2.

BAXTER INCORPORATION.

BAXTER SIDE-CAR COMPANY, Boston, Mass.: To manufacture and deal in motorcycles, etc.; capital, $20,000. Directors and officers: William P. Everts, president and treasurer, 57 Equitable bldg., Boston, Mass.; John R. Lazenby, 57 Equitable bldg., Boston, Mass., and Edward T. Roche, Boston, Mass.

A "SEAMLESS" LIFE ASSURED.

IN a recent flight over Ohio the stork dropped in at the residence of B. G. L. Dodge, of the Standard Welding Co., in Cleveland, and left an eight-pound boy in charge of Mrs. Dodge. An official report is to the effect that the youngster is to be a "bottle-fed" baby and that he will take his nourishment through Standard tubing in order that his life may be "Seamless."



MIAMI STAFF BREAKS GROUND.

K. R. JACOBY, president and general manager of the Miami Cycle and Manufacturing Company, who appears in the center of the group in the accompanying photograph, is going through the ceremony of breaking ground for the new Miami building, which is to greatly increase the output of the Middletown factory. President Jacoby is No. 1; No. 2 is Treasurer H. S. Wise; No. 3 is Vice-President A. H. Walburg; James W. Ash, secretary and manager of sales, is No. 4; J. F. Merkel, chief engineer, No. 5; C. F. Miller, superintendent, No. 6; F. L. Valiant, advertising manager and assistant sales manager, No. 7; W. D. Andrews, Buffalo distributor, No. 8, and J. F. Steuer, Pacific coaster brake missionary, No. 9.

ROBERTS' LUCKY SEVEN.

H. T. ROBERTS announces the addition to his list of the Eclipse free engine pulley and other Eclipse goods, including front hubs, coaster brakes and fittings. Roberts is now selling the output of no less than seven factories which, beside the Eclipse, are as follows: Troxel Manufacturing Company, of Elyria, Ohio, saddles, tool boxes and specialties; Hide Leather and Belting Company, of Indianapolis, belts and other leather goods; Young American Rim Company, St. Anne, Ill., wheel rims and flat and V-type pulley rims; International Stamping Company, of Chicago, mudguards; Tucker Wood Rim Company, Sidney, O., steel-lined wood rims for motorcycles; Heitger Carbureter Company, Indianapolis, Heitger carbureters.

HORSEY "NO-CEMENT" PATCH.

HUNDREDS of experienced motorcyclists are now reducing puncture repair troubles to the minimum through the use of the Horsey "No-Cement" patch, produced by the Horsey Manufacturing Co., of 5606 Euclid avenue, Cleveland, Ohio. With this patch the whole repair operation need not consume over five minutes, and the tube is as strong at the point over which the repair is made as in any other section. Continued use has a vulcanizing effect upon the patch. After the inner tube has been prepared by roughening and cleansing with gasoline the protecting cloth is removed from the face of the patch, and the latter is soaked with gasoline. This softens the cement, and the patch is applied to the inner tube for a few seconds until the surface to be repaired, as well as the face of the patch, is smeared with cement. The patch is then removed until the gasoline evaporates, when the cement will be sufficiently "tacky" to hold firmly and make a lasting repair. After being replaced and allowed to dry it will hold indefinitely, say its manufacturers.

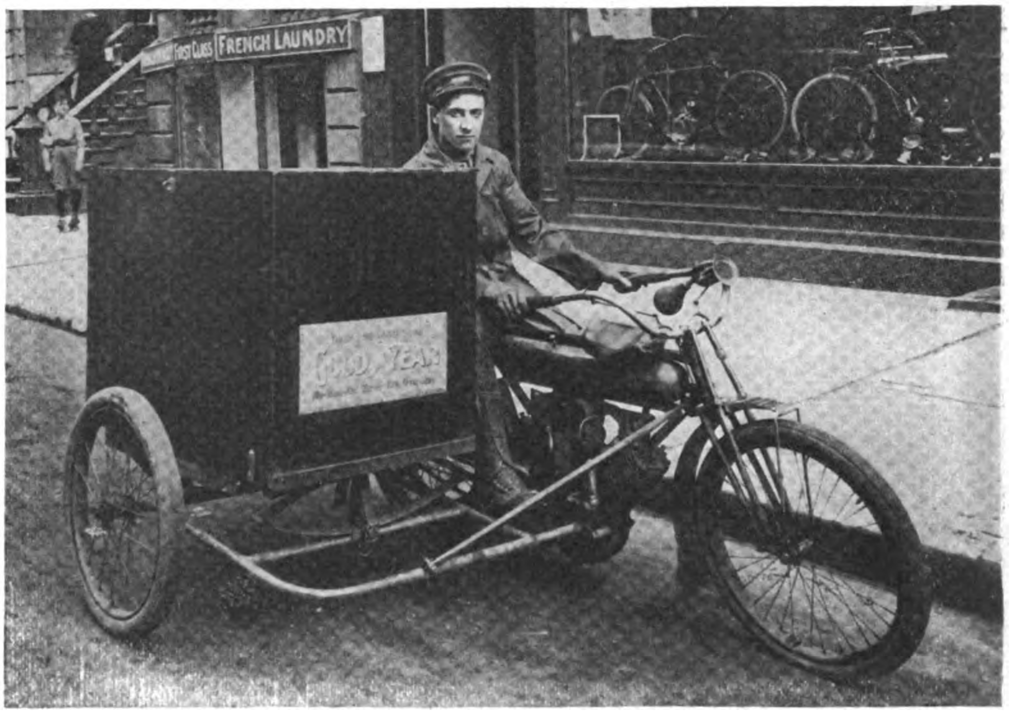
CHICAGO SHOW PLANS

President Coffman Comes to New York to Obtain Good Space for Motorcycles.

PRESIDENT A. B. COFFMAN, of the Motorcycle Manufacturers' Association, was in New York this week, determined to get early action relative to the Chicago Show. Mr. Coffman's plans are to secure for the manufacturers of motorcycles and accessories the entire section which, in the past, the motorcycle manufacturers have had to share with some twenty automobile accessory concerns. With the latter eliminated, it is figured that a much more effective motorcycle display will be possible.

TO DOUBLE EMBLEM OUTPUT.

W. G. Schack, of the Emblem Manufacturing Company, was in New York last week, from whence he went to Washington. Mr. Schack, always conservative, expressed unbounded confidence as to the bigness of the 1913 output of motorcycles, fully agreeing that this year's figures would be more than doubled. At least, that will be the case with his company, as the new Emblem factory will provide 100 per cent. better facilities than are now available, with a proportionate increase in the output of Emblem machines. This attitude of the Emblem folks, by the way, is representative of the general trade tendency—looking forward to big things.



TIRE COMPANY'S SIDE-VAN.

THE Republic Tire and Shoe Co., 956 Eighth avenue, New York City, has had the side-van illustrated herewith in service since the first part of February of this year, employing it for both city and suburban deliveries of their products. The machine used is an M. M. 7 h. twin with side-car frame attached by a fork-piece to the rear axle, by an intermediate coupling to the forward crankcase bolt and by a cross-brace to the down tube close to the steering-head at the front, following the 1912 side-car construction of the M. M. product. There is an intermediate cross-bar in the frame and a full-elliptic spring attached thereto serves to suspend the van body. Semi-elliptic springs are used at the side, these being fitted to the side members of the frame. The body or box has very high sides, so that tires or like goods can be loaded upright. The normal load is 300 pounds per trip, from three to four trips being made per day. The outfit has given satisfaction to the owners, having replaced a light automobile delivery wagon at about one-half the cost of operation, etc.

ECLIPSE CLUTCH LICENSE.

ANNOUNCEMENT is made by the Eclipse Machine Co., of Elmira, N. Y., that the Aurora Automatic Machinery Company, maker of the Thor, has admitted the validity of the Ellett patents on motorcycle engine clutches, for which the Eclipse company is the exclusive licensor, and an arrangement has been made by which the Aurora company will produce clutches for its machines under the Ellett patents. After having its patent attorneys look into the situation the Thor manufacturers were convinced that they were infringing on the Ellett clutch patents, and as a result they have obtained a license from the Eclipse company under which they will continue to produce the clutches as at present fitted to their machines.

The Eclipse company has just closed a contract with H. T. Roberts, of Chicago, under which he will handle all the Eclipse motorcycle products, including the Eclipse coaster brake, Eclipse hubs, Eclipse head fittings and the Eclipse free engine clutch. The company will maintain its own selling organization as in the past, this being a provision of the contract with Mr. Roberts.

Thor MOTORCYCLES

Sales Manager Freeman and Assistant Davis, of the Aurora Automatic Machinery Company.

BIG AUBURN OUTING.

MOTORCYCLISTS from Utica, Syracuse, Cortland and Rochester gathered in Auburn, N. Y., on Sunday, June 9, where they were entertained by the members of the Auburn club. The squad, numbering about 100 riders, was escorted to points of interest near the city by the Auburn boys, and a side trip was made to Island Park, where a group photograph was obtained. Several feminine enthusiasts occupied tandem seats, and from a standpoint of sociability the outing was the most successful ever held by motorcyclists in the cities mentioned.

AN INDIANA AGENT.

IRA C. NOEL, of Goshen, Ind., is proprietor of the attractive motorcycle establishment shown in the accompanying photograph. Noel's store is on the main street of the flourishing little Indiana city, and he has built up a thriving business, mainly in connection with Flanders 4 machines for which he has the agency in his county.

JULY 4 PROGRAM.

COLUMBUS, Ohio.—W. H. Snyder, manager of the Columbus Motordrome Company, has announced a fine program for the opening race meet, which will be held July 4. The meet will be staged in the evening after an elaborate display of fireworks.

SAVES THE CITY'S MONEY.

CITY FORESTER GETZ, of Fort Wayne, Ind., appears in the accompanying photograph with the Excelsior machine on which he makes his rounds of the city for the purpose of keeping in touch with the men who are setting out and improving shade trees. He has several gangs of workers under his supervision and the motorcycle has solved the transportation problem for him. He is operating his machine at about one-fourth the outlay necessary for a horse and buggy.

IN MELROSE, NOT DETROIT.

THROUGH an oversight the address of the Melrose Motorcycle Agency, whose proprietors outlined a generous co-operative plan for dealers in the June 13 issue of MOTORCYCLE ILLUSTRATED, was incorrectly stated. The firm has its attractive garage and showroom in Melrose, Mass., but owing to the fact that it is featuring the Henderson four, manufactured in Detroit, the company was credited with a headquarters in the Michigan city.

FLANDERS IN TACOMA.

TACOMA, Wash.—H. C. Fuller, for many years in charge of the electrical department at the mills of the St. Paul & Tacoma Lumber Co., has opened a shop on Tacoma avenue, with a line of Flanders motorcycles. These machines are new to Tacoma. The first Flanders machine was brought to Tacoma some weeks ago, and is now in use by the Studebaker Corporation in the service department, where it has been used in answering hurry calls from stranded motorists.

NEW HAVEN ROAD TRIP.

PLANS have been completed by the New Haven (Conn.) M. C. for a 150-mile endurance run, to be held on Sunday, June 30. It will be open to members only. The run will start from the clubrooms, at Boyer's garage, on State street, at 6 a. m. Following is the route: To Woodbridge, Seymour, Oxford, Roxbury, New Milford, Danbury, Newton, Derby, Waterbury, Thomaston, Bristol, Plainville, Southington, Meriden and return to New Haven. The committee in charge of arrangements for the run is made up of B. Lattin, J. Rausch, M. Cohen and A. Cavallaro.

AWARDED A MOTORCYCLE.

COLUMBUS, Ohio.—Feibel Bros., proprietors of a department store at High and Russell streets, Columbus, have given a motorcycle in a popularity contest which attracted considerable attention. F. S. Atkinson was the winner, having received 450,377 votes. Earl Brown was a close second with 437,000 votes.

200-MILE RUN TO LANCASTER.

BALTIMORE, Md.—All arrangements have been completed for the 200-mile reliability run to Lancaster, Pa., of the Chesapeake M. C. next Sunday. The riders will leave the headquarters of the club early in the morning. There is a large entry list and the list of prizes is a very attractive one. The York M. C. is expected to enter a large number of its riders.

VISITED CHELSEA PLANT.

RECENTLY a number of Flanders dealers from Detroit and vicinity dropped in at the Chelsea (Mich.) plant of the Flanders Company, and A. A. Farnsworth, of the sales department (seated, in the center of the picture), escorted them through the big plant. The photograph was taken at the factory entrance.

At the close of their inspection the dealers were duly impressed by the scale on which Flanders machines are produced.

ATLANTA RIDERS OFF FOR FOREIGN TOUR

Four Southern Enthusiasts, Two of Them Mounting a Tandem Machine, Sail for Denmark to Begin Five Months' Trip—Their Story to Appear Serially in Motorcycle Illustrated.

FOUR dyed-in-the-wool touring enthusiasts, A. H. Coolidge, D. McKie, D. M. Hudson and E. M. Coolidge, of Atlanta, Ga., arrived in New York City on June 8 after a highly successful trip from the Southern metropolis, and almost before their motors had cooled they had made arrangements to sail for Copenhagen, Denmark, to begin an Old World jaunt which will consume about five months. The Atlanta riders had laid their plans carefully, and when they sailed from New York on June 20 it was with the conviction that the first leg of their long trip could not have been more satisfactory. They had no trouble worthy the name on the northward run from Atlanta, despite the fact that McKie and Hudson mount a tandem machine. Two storms were encountered, but little time was lost, and the tourists arrived in Manhattan keen for anything that Europe may have to offer in the way of tourable roads.

The tour takes on additional interest because of the fact that McKie and Hudson will use the tandem machine throughout the entire trip, and it is likely that before they again set foot on American soil they will have established a record for this form of passenger carrying. They mount a 7 Indian, of which McKie is the pilot. On the long run from Atlanta Hudson was troubled with extremely sore wrists and forearms, due to the unusual strain of gripping the handlebars of the tandem attachment, but otherwise he had no complaint to make. A. H. Coolidge mounts a 7 Indian and E. M. Coolidge rides a Thor 6. The patriotic combination of red and blue Indians and white Thor attracted considerable attention.

The tourists left Atlanta on June 1 and pulled into New York City eight days later without having made special efforts to keep up to a speed schedule. In the metropolis they encountered Frank Hart, the Indian speedster, who was about to start for Bridgeport, Conn., with his 7 Indian and side-car. He offered to pilot the riders as far as Bridgeport, and on this trip Hudson rode with Hart as his passenger. From Bridgeport the Atlanta boys proceeded to Springfield where they visited the Hendee wigwam. They were given a cordial reception and the officials at the big factory assisted them materially in their preparations for sailing.

From Copenhagen the tourists will go to St. Petersburg and neighboring cities in Russia, and will then return to Stockholm, Sweden, in time to witness the Olympic games. Their touring arrangements in this district will depend entirely upon road conditions, but it is the intention to visit the main points of interest where they are accessible to the motorcycle. The next leg of the tour will carry the riders into Germany. After making the most of the good roads in the Kaiser's domain they will visit France and Switzerland and continue southward into Italy. Plans for riding through other continental countries will be perfected after the motorcyclists have had an opportunity to study touring conditions. It is their intention to close the trip with a sojourn in England.

On their arrival in New York City the tourists visited the office of MOTORCYCLE ILLUSTRATED and made arrangements to write the complete story of their trip exclusively for this publication. They will forward photographs and instalments of their narrative as they proceed over their European route, and owing to the tandem feature of the tour their story should prove exceptionally interesting. The first instalment, dealing with the run from Atlanta to New York City, will appear in an early issue.

EIGHT out of nine of the winning machines in the race meet held by the Toronto Motorcycle Club on June 8 were equipped with the Bosch magneto.

MOTORCYCLES B.A.SWENSON BICYCLES Etc.

B. A. Swenson's New Store in Providence, R. I.

Master Harry Sonneborn, representing the Sonneborn family of motorcyclists, of La Porte, Ind.

TOURING BEE IS BUZZING

Many Baltimore Enthusiasts Plan Long Motorcycle Jaunts for July—A Nova Scotia Trip.

BALTIMORE, Md.—The touring bee is buzzing in the bonnets of many of the local motorcyclists, and they will soon take to the highways. Roger Wilkens, the city's chief exponent of the wanderlust, is striving to have some of the riders accompany him on a motorcycle trip to the wilds of Nova Scotia. His plan is to live in the open all during the trip, and he will take a tent for every-day use.

Edward Rasmers contemplates taking to the road for three or four days around the Fourth of July. His destination will be Bethlehem, Pa., where he will join many of his college chums of other days. He will travel by way of Philadelphia and Delaware Water Gap. Another rider who will hit the trail for New England during July will be Charlie Kirwan, while William Wix plans to go off around the Fourth for White Caves and Bedford Springs, Pa. He may also traverse a part of the route of the National Tour.

"Bill" Tiese, of Laurel, is back home after an absence of several months in Norfolk, Va. He plans to spend his vacation awheel and will join forces with H. W. Feige. They will first meet the Southeastern division of the National Tour at Hagerstown and proceed on to Columbus. After the annual meeting they will head for Winnipeg, Canada, by way of Chicago.

Touring

TOUR TO DENVER AND RETURN.

WINONA Subscriber — From Winona cross the Mississippi to Bluff Side, Wis., going on to Marshland Center, Gales, Decord, Holman, Onalaska, La Crosse, Shelby, Chaseburg, Esofea, Springville and Viroqua. From the latter place go next through Liberty, Viola, Ash Ridge, Buckeye, Gillingham, Richland Center, Twin Bluffs, Gotham, Lone Rock, Hillside, Arena, Mazo, Maine, Black Earth, Cross Plains, Lake Mendota and to Madison. Distance, Winona to Madison, 169 miles.

Referring to the routes in our Touring Number, take number 174 to Chicago. From Chicago take route 152 to Champaign, and then route 162 reversed from Champaign to Springfield. To work this out call Champaign 0.0; Savoy 4.2; Monticello 22.6, etc. From Springfield go to St. Louis, over route 240 reversed. From St. Louis take number 239 to Mexico, Mo.; then number 230 reversed to Kansas City. From Kansas City, Kan., take route 243 reversed to Topeka. From Topeka take route 237 reversed to Salina. From Salina take number 236 reversed to Oakley. From the latter place take route 225 reversed to Hugo, Col. From Hugo go to Denver via 246 reversed.

Pueblo can be reached from Denver by means of route 265, taking it reversed out and direct on return. Wichita can be reached from Salina via Newton. We advise against your going to Yellowstone Park on the machine as neither motorcycles nor automobiles are allowed in the park. Denver to Laramie, Wyo., via route 248. Laramie to Rawlins, Wyo., over route 262. From Rawlins go to Bell Spring, then to Ferris, Pathfinder, Alcova, and Casper. From Casper go to Shannon, then northwest by road to Pumpkin and Middle Buttes, continuing on parallel to the Bellefourche creek to Moorcroft. From there go on to Linden and Sundance. Go through the Sundance National Forest, keeping Green Mt. on the right to a fork in road 10 to 15 miles from Sundance. There turn left and continue toward Schoolmarm and Table mountains and reach Aladdin. From Aladdin go on to road junction, where turn right and go to Bellefourche, S. D. Estimated distance from Rawlins to Bellefourche, 341 miles.

You are in the Black Hills district. Go on to Deadwood, then to Rapid City and Interior. From Interior go to Kadoka, Okadon, Presho, and Oacoma. Cross the Missouri to Chamberlain, then go to Kimball and Mitchell, continuing on to Sioux Falls. From Bellefourche to Sioux Falls we can only give outline directions as above. From Sioux Falls go to Canton, S. D., then to Beloit, Iowa, and Doon. From Doon go to Lakewood, Rock Rapids, Sibley, Ocheyedan, Lake Park and Spirit Lake. Distance estimated, Canton to Spirit Lake, 99½ miles. Now take route number 195 reversed from Spirit Lake to Mason City. From Mason City take route number 198 reversed to Minneapolis-St. Paul (Twin Cities). Follow route 197 as far as 128.4 Winona.

OLYMPIA RUNS

Women Enthusiasts Figure in Outings to Points of Interest Near Washington's Capital City.

OLYMPIA, Wash. — Motorcycling in Olympia and vicinity is fast becoming the leading sport. The weather during the past two months has been ideal for touring, and there is scarcely a road in this district that cannot be traveled with ease by a motorcycle. The Olympia Motorcycle Club at the present time has 28 members, and riders are being constantly added. Each member is an enthusiastic booster and also a member of the F. A. M. Following are the club's efficient officers: Joe Jeffers, president; Dr. Lydia, vice-president; Milo Drake, secretary; F. H. Scott, treasurer; W. G. Ashley, captain; Fred Levee, first lieutenant; Ed Loft, second lieutenant, and Fred Anderson and Patty Miles, directors.

At a recent banquet held by the Olympia Motorcycle Club for its members and their friends, much enthusiasm was displayed, especially by the women riders. Many trips for the coming summer were planned, and in other ways was it shown that Olympia is fast coming to the front in the motorcycling game.

A most enjoyable run was held recently from Olympia to Union City, a distance of 32 miles. Union City is located on Hoods Canal, at the foot of the picturesque Olympic mountains. After enjoying four hours of beautiful scenery, bracing mountain air and a splendid big feed at the hotel the riders made the return trip in good time to Olympia. Another run was made recently to Centralia, "The Hub City." On each of the runs the riders take their time and derive all the pleasure possible from the outing. The captain sets the pace and anyone who passes him is fined.

MOTOR PARKWAY OPEN.

BROOKLYN, N. Y.—Motorcycle riders of New York and vicinity will welcome the announcement that the improvements to the Long Island Motor Parkway have been completed. The speedway is now open for the full length of the Parkway, extending from Floral Park to Lake Ronkonkoma, a distance of approximately forty miles. This is an ideal outing for a day's trip.

SEATTLE TO BALTIMORE.

R. R. SPRAGUE.—From Seattle take route 272 to Walla-Walla; then route 273 to Pocatello, Idaho. Next take route 264 to Granger, Wyo. From Granger follow on to Rock Springs, Wyo., through Azusa, Bryan, Peru, Fish Cut, Green River, Wilkins, Canada. The itinerary of this route can be taken from route number 266. You will have to study out reversed routes from those given in the Spring Touring Number. Take route 266 in reverse, thus: Call Rock Springs 00 miles; then Point of Rock will be 27.6 miles, etc. Route 266 takes you from Rock Springs to Rawlins, Wyo. Next take route 262 also reversed to Cheyenne, and follow that with route 263 Cheyenne to Denver. This route has to be worked out reversed, as above.

From Denver follow route 246 direct to Hugo, Col. From Hugo take route 225 to Oakley, Col. From Oakley take route 236 to Salina, Kan. From Salina take route 237 to Topeka, and route 243 from Topeka to Kansas City, Kan. Next take 230 from Kansas City to Mexico, Mo. From Mexico, Mo., take route 239 reversed to St. Louis, Mo. Follow this over route 241 from St. Louis to Terre Haute, Ind.

From Terre Haute take route 214 reversed to Indianapolis, Ind.; then route 134 reversed from Indianapolis to Columbus, O. From Columbus take route 146 reversed to Pittsburgh, Pa. From Pittsburgh take direct route 148 to Hagerstown, Md. From Hagerstown take the first portion reversed of route 80 to Baltimore. Allow 100 miles per day for runs except in Idaho, Colorado, Wyoming.

Almost any good carrier obtainable from the agent will serve your purpose for the trip. Use khaki clothing, carrying a blanket and sweater and canteen. Don't forget goggles; ones that will not hurt your eyes; try them before purchasing.

SCRANTON TO PHILADELPHIA.

HARRY LADWIG.—From Scranton go to Lackawanna (6 miles), then to Pittston (9), cross river to West Pittston (10), Kingston (17), then Wilkesbarre. From Wilkesbarre follow Route 70, Wilkesbarre to Reading; then take Route 62 reversed, beginning at 56.7 Reading. Call this 86.0 Reading; then Baumstown will be 94.1; Douglassville 98.5; Pottstown, 102.9; Limerick, 110.0; Fairview, 119.0; and Philadelphia 142.7 miles from Wilkesbarre. The roads from Scranton to Wilkesbarre are good clay with some gravel. Total distance, about 162 miles.

START FOR FOREIGN TOUR.

AKRON, Ohio.—James Hogg and William Shaw, of Urbana, Ill., passed through Akron recently on their way to New York, from which point they will sail for a tour of southern Italy. They will travel by way of London, Paris and Venice. Hogg, who has made several long trips in the past, has plans laid for continuing around the world and returning home via San Francisco, but Shaw expects to return by the Atlantic route late in October. The tourists are riding twin machines fitted with Diamond 29 by 3-inch tires. In Akron the riders were entertained at the Diamond factory, where they were deeply interested in the production of the tires to which they have pinned their faith for their long, foreign jaunt.

J. R. BURNS.—Communicate with the Canada Cycle Company, of Toronto.

OFFICERS FOR BIG TOUR.

FOLLOWING are the officers who will be in charge of the various divisions participating in the big annual tour of the Kansas Short Grass Club, which is to start August 7 and extend over a period of two weeks:

Eastern Kansas division, Guy Elliott, Topeka, captain; Lewis I. Tower, Topeka, lieutenant; Nebraska division, Charles Gabus, South Auburn, captain; North Kansas division, Dice Morrow, Otego, captain; Roy Smith, Concordia, lieutenant; Western Kansas division, Ward Clark Logan, captain; L. I. Goodrich, lieutenant; Central Kansas division, P. E. Zimmerman, Lindsborg, captain; Edward Anderson, Salina, lieutenant; Southern Kansas division, Earl Clark, Pratt, captain; G. E. Woodwell, Wichita, lieutenant; Colorado division, George Bartlett, Colorado Springs, captain; Automobile division, Charles Barton, Pratt, captain; I. S. Puckett, Pratt, lieutenant. Dr. B. J. Patterson, of Pratt, Kansas, vice-president of the central division of the F. A. M., will be commanding officer of the tour. He will ride unattached.

QUICK TRIP TO PORTLAND.

TACOMA, Wash.—Ray Day, Tacoma agent for Flying Merkel motorcycles, was the original early bird on Sunday, June 16, when, ignoring his customary "ham and," he plugged forth at 4:45 in the morning on his way to Portland. Under him was a single-cylinder Merkel and ahead of him 188 miles of "don't care" roads to Portland, where he planned to size up the entries in the motorcycle race meet held there that afternoon. Seven hours' running is the record he claims for the trip, as he arrived in Portland at 1:15 Sunday afternoon, in ample time to see the races. The roads, he says, were in very good condition. One puncture cost him 15 minutes; breakfast at Chehalis took 45 minutes, and more time was lost in crossing the Columbia river on a ferry between Kelso and Goble. While in Portland the agent met A. E. Bierly and J. N. Harrell, of North Yakima, Wash., who are now on their way on Merkels to San Francisco, from which city they will tour across the continent to New York.

AN ALASKAN TRIP.

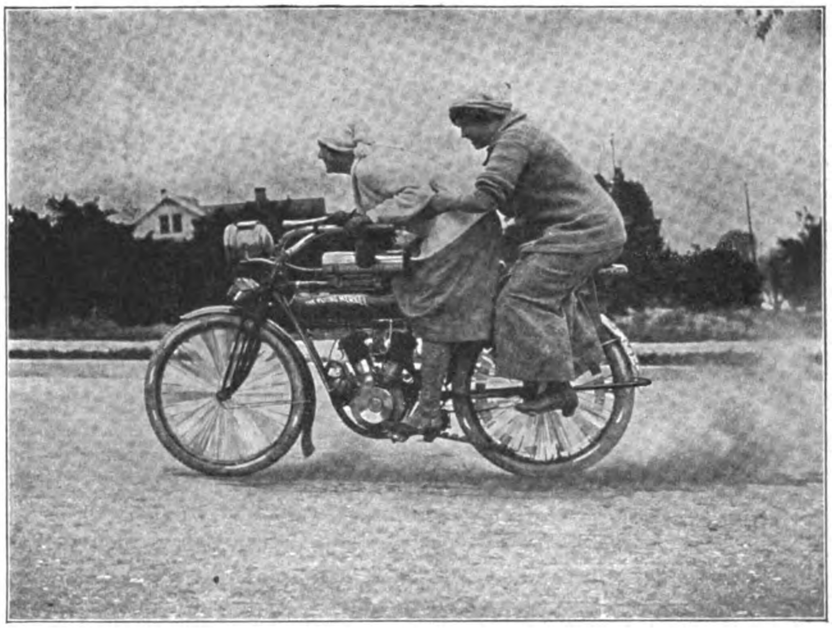
UNDER a heading "The first motorcycle to reach Perseverance," the *Daily Alaskan*, of Juneau, Alaska, prints an account of a motorcycle trip recently made by William Merchant. Riding his Pierce machine, Merchant made a run to Perseverance Mine in 45 minutes from Juneau over the roughest of roads and hills. He was given an ovation because of the fact that the mine had not hitherto been reached except by wagon and team, and then only after the hardest kind of going.

LICENSE REGULATIONS.

H. S. MORRISON.—You will be obliged to take out a license in Massachusetts, obtainable from the State Highway Commission, at Boston. The fee is $2. Non-residents are exempt for ten days in Massachusetts if registered in their home State; but as New York riders are not registered you will have to take out a Massachusetts license, not being able to claim exemption under the laws of that State as a non-resident. The fact that you come from New York is not held valid as exempting you from registration.

A HOT PACE.

FROM Los Angeles, Cal., comes the photograph herewith which shows two fair enthusiasts cutting out a lively clip on a Flying Merkel machine. Although they are full-fledged motorcyclists the girls did not like the idea of having their names used in connection with the picture, and for that reason the illustration will have to be taken at its face value. The photograph was snapped as the girls were chugging along over one of the fine boulevards of which Los Angeles is justly proud.



A WESTERN TOUR.

MINNEAPOLIS, Minn.—Arrangements for a tour of the West by eight riders from this city have been practically completed and under the leadership of A. R. Horn, who has had some experience in transcontinental touring, the party expects to leave Minneapolis the middle of July for a trip to the Rockies. The course as laid out now will be to Omaha, to Wichita, Kan., St. Louis, Mo.; El Reno, Okla.; Denver, Col., and back to Minneapolis by way of the Dakotas. The riders will carry a complete camping outfit part of the way in preparation for a stay in some of the picturesque spots that will be passed through en route to Denver. They expect to be gone about two months.

PENNSYLVANIANS ON TOUR.

BALTIMORE, Md.—Louis J. Eagle, Jr., and William Ridings, of Landsdowne, Pa., passed through this city recently on their way South. They came down by way of Philadelphia, Wilmington, Del., and Havre de Grace, Md. From this city they struck out for Middletown, Va. They stated that they expect to be on the road about four weeks and will make their tour down and back by leisurely stages. They reported sand a foot deep between Elkton and Perryville, and advise all motorcyclists to take the long route from Philadelphia to this city by way of Lancaster and York.

GATES ON CROSS-COUNTRY TRIP.

CHARLES FULLER GATES, F. A. M. referee on the Pacific Coast, has made arrangements to ride his two-speed Indian across country to the Columbus convention, and later he will proceed to New York. It is his intention to visit his old home in western New York State, and he will also spend some time in the metropolis. The western boomer will follow the route of the Ocean-to-Ocean Highway to Columbus. Plans for the complete mapping and maintenance of this road are now being boomed by Arizona and southern California.

PARK RIDGE TO ELMIRA.

CHAS. LATTERMAN.—Route from Park Ridge to Elmira, N. Y.: From Park Ridge go to Hillsdale, then to Westwood, and Hackensack. At Hackensack join route 35 (Spring Touring Number, issue of May 16) New York to Delaware Water Gap. Follow to 98.1 Water Gap. From there take the route to Scranton, Pa., 52.7 miles over fair mountain roads. Water Gap 0.0; Stroudsburg 3.6; Analomink 8.9; Henryville P. O. 13.0; Paradise 15.8; Mt. Pocono 19.9; Tobyhanna 24.9; Gouldsboro 30.5; Moscow Station 40.9; then through May Aug Park; reaching Scranton 52.7 miles.

From Scranton take the following route to Binghamton, over fair to poor dirt and gravel roads with macadam and pavement near Scranton and Binghamton. Scranton 0.0; Providence 2.8; Chinchilla 5.9; Clarks Summit 7.6; Wallsville 14.1; Glenwood 20.4; Hartford 30.7; New Milford 37.9; Great Bend, Pa., 44.7; Kirkwood, N. Y., 50.3; Binghamton 59.3 miles. From Binghamton go next to Elmira over good roads, mostly macadam; distance 63.6 miles. Binghamton 0.0; Endicott 9.2; Appalachin 16.5; Owego 24.3; Lounsberry 29.9; Smithboro 35.2; Waverly 45.0; Chemung 49.5; Lowman 55.6; Wellsburg 56.7; Elmira 53.6 miles. Total distance about 279 miles.

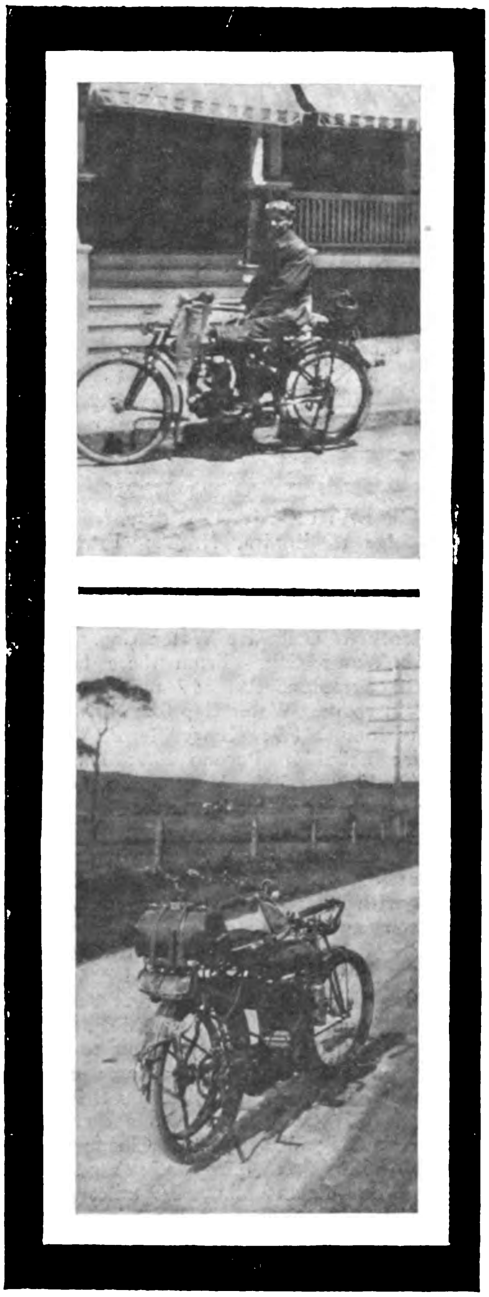
GREENSBURG, PA., TO LONG ISLAND, KAN.

LLOYD CULBERTSON.—From Greensburg go to Pittsburgh, via Adamsburg, East McKeesport, Wilmerding, and Wilkinsburg—32.3 miles over mostly macadam roads. Take Route 144 (Touring Number of MOTORCYCLE ILLUSTRATED), Pittsburgh to Canton, O.; then Route 126 to Lima. From Lima take next Route 118 to South Bend, Ind., and on to Chicago via Laporte, New Carlisle, Pinhook, Westville, Valparaiso, Hobart, Highlands, Hammond, South Chicago and Jackson Park. The distance is 101.6 miles.

From Chicago take Route 153 to Davenport, Iowa. Then Route 166, Davenport to Des Moines; following this with Route 188 to Omaha, Neb. From Omaha take Route 186 to Kearney, Neb., and from Kearney go to Newark, Minden, Keene, Wilcox, Ragan and Huntley to Alma (Harlan county). From Alma go to Woodruff (Phillips county, Kan.), then to Long Island.

A PENNSYLVANIA TRIP

New Jersey Motorcyclist Finds Some Rough Going on Rocky and Hilly Roads of Keystone State.



WILLIAM A. HARDIN, of Atlantic City, N. J., writes the following interesting account of a motorcycle trip made recently from the Jersey coast resort to Allentown, Pa., and return on his Haverford machine. He left Atlantic City at 1.10 p. m. on June 1 and bowled along without a hitch for about seven miles, when he found that dirt had accumulated under the auxiliary air valve of his machine. After remedying this trouble he resumed the trip and completed it without further mechanical annoyance. From the Jersey coast he passed through Mays Landing, Egg Harbor and Hammonton on the way to Camden, finding the roads in good condition and nearly all of macadam. Hardin pulled into Camden about 4 p. m., crossed over to Philadelphia and remained there for the night.

On the following morning he took to the road again at 9.30, going out North Broad street to the Bethlehem pike, on which he rode to Allentown. At the end of Broad street he missed a turn and proceeded about two miles out of his course. On striking the trail again he found rough roads and numerous hills, but succeeded in climbing them, with one exception. The grade which balked him started at a sharp turn which was littered with loose stones and it was impossible to approach the hill at anything but slow speed. This stretch afforded some of the roughest going ever encountered by the traveler, but he managed to pull through and finally reached his destination.

He stopped at the Allen Hotel until Friday, June 7, when the return trip was started. Hardin rode through Nazareth and Easton and crossed the Delaware river at Phillipsburg into New Jersey. From Phillipsburg he proceeded to White House over bad roads. The road was so rocky in places that he was obliged to dismount and push his machine. On this leg of the journey he lost his tail lamp and broke the tandem attachment with which the machine was fitted. Hardin stopped overnight near White House and stored his machine in a stable. He was on his way again the following morning at 7.30. He had only traveled about a mile when he encountered a long hill which had recently been covered with crushed stone. His rear wheel could not find traction and another walk was necessary. This hill ended the rider's troubles, however, and the remainder of the run into Atlantic City was made without incident.

Hardin does not regard his trip in the light of a "grind," but he does feel that it is a fair sample of the test to which a rider is put when he attempts to ride the hilly roads of Eastern Pennsylvania and Western New Jersey. To cover 373 miles Hardin used four and three-quarter gallons of gasoline and eleven pints of oil, his outlay in this direction being $1.30. The rider experienced no trouble with his 28 by 2¼-inch Kokomo tires.

FORT WAYNE TO DETROIT.

H. C. SCHERER.—The route from Fort Wayne to Toledo is over good dirt roads with some macadam and the chief towns passed through are as follows. Distances are from Fort Wayne: 0.0 Fort Wayne; 15.3 Maysville; 25.9 Hicksville; 47.0 Defiance; 58.8 Okolona; 66.2 Napoleon; 83.3 reach Maumee River; 97.2 Haskins Station; 106.0 Perrysburg; 115.6 Toledo. From Toledo to Detroit, 115.6 Toledo; 126.3 Erie; 131.8 LaSalle; 141.1 Monroe; 150.8 Old Port; 163.0 Trenton; 168.0 Wyandotte; 173.1 Fort Wayne; 175.9 Detroit. The roads from Toledo to Detroit are fair dirt surfaces. You need not touch Adrian, the route going via Napoleon, Ohio. The roads are fair to poor at Adrian and vicinity. The route is direct from Toledo to Detroit.

TO NIAGARA FALLS.

J. WISSLER.—Follow the route to be taken to Buffalo by the 1912 Eastern (F. A. M.) tour from Albany. Go to Albany over the Hudson River route as suggested. From Buffalo go to Niagara Falls following route 30 (Spring Touring Number) as far as the Falls (23.4 miles).

We suggest a steel body side-car for your purpose. You may have to use a 5 or 5¼ to 1 gear, although the 4¾ to 1 high gear should take you almost anywhere. Experiments on the roads out through New Jersey will give you an idea whether the 4¾ gear is suitable or if a higher is needed. The side-car is naturally much more comfortable for the passenger than the tandem attachment, but the consumption of gasoline will be greater with its use.

GRADE PERCENTAGE.

Editor MOTORCYCLE ILLUSTRATED:

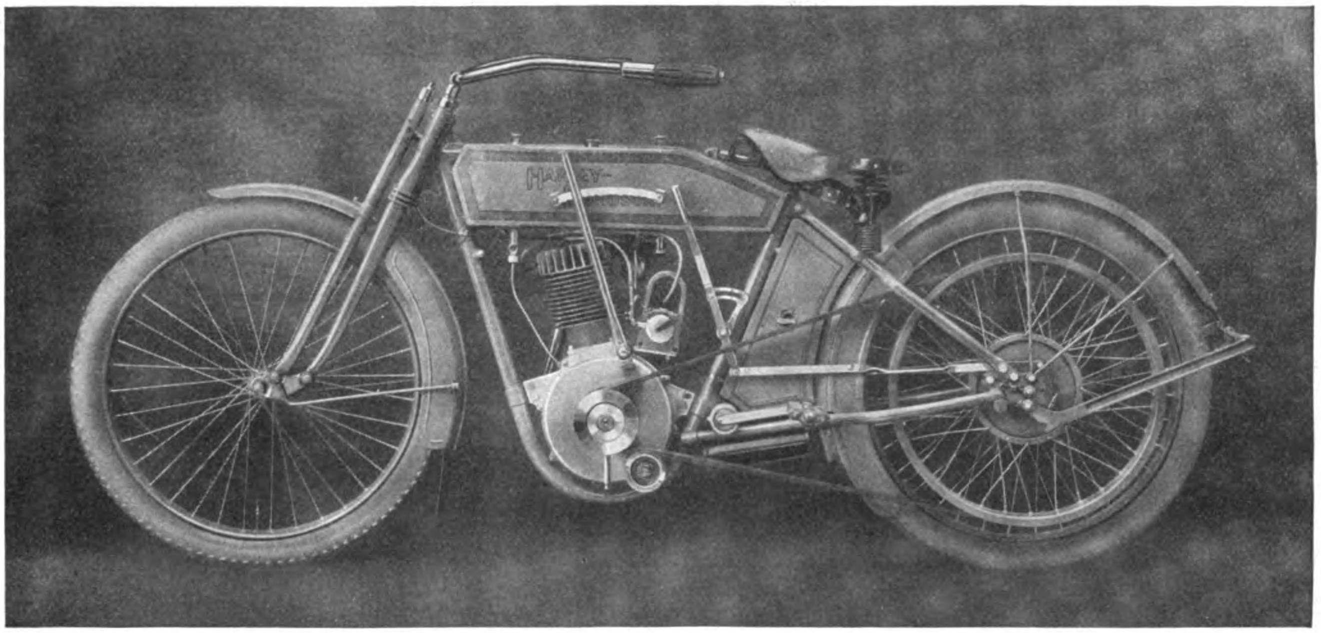
I NOTICED in your May 2 issue a communication from "A Reader" regarding grade percentage. He says that the grade of the banking of the Los Angeles track (50 degrees), figures out at 76.6 per cent. instead of over 100 per cent. as stated on page 40, March 7 issue. I do not see where he can find any such rules as he mentions; 100 feet by tangent 50 degs. = 119.17 per cent. Thus the grade must be over 100 per cent. J. P

YALE RIDERS IN SOMERVILLE.

M. B. DOOLEY, Yale agent in Somerville, N. J., forwards the accompanying photograph of a squad of Yale riders ready for the start of a recent Sunday run into the country. It will be noted that the Yale contingent in Somerville is of creditable size, which in itself is proof of the claims made by Dooley's friends that he is one of the liveliest dealers in his section of the State. Somerville has an F. A. M. club, by the way, which is growing steadily.

NEW COMPANY FORMED.

COLUMBUS, Ohio.—The O. & H. Tire Company, of East Palestine, has been incorporated with a capital stock of $50,000, for the purpose of manufacturing motorcycle and automobile tires among other things. The incorporators are: J. A. Shumate, C. A. Oatsdean, C. F. Hanoble and A. S. Mauk.



The United States Government has just purchased another Harley-Davidson for use in the Reclamation Service.

The Government now uses Harley-Davidsons in the Reclamation Service, Geological Survey, Navy Department, Forestry Service and in the Fish and Game Commission.

Uncle Sam is following the lead of the more progressive municipalities and public service corporations who have learned to buy motorcycles on the basis of SERVICE RENDERED and NOT merely PRICE.

An interesting phase of this Government business is that, not long ago, before the Government was as familiar with motorcycles in general as they are now, they were buying machines that sell for less than Harley-Davidsons, which machines in some places have been replaced outright with Harley-Davidsons.

Harley-Davidson Motor Company

Milwaukee, Wisconsin

RAIN SPOILED AN OUTING

Pleasure Trip of Augusta Club Developed into an Endurance Contest with Only Four Survivors.

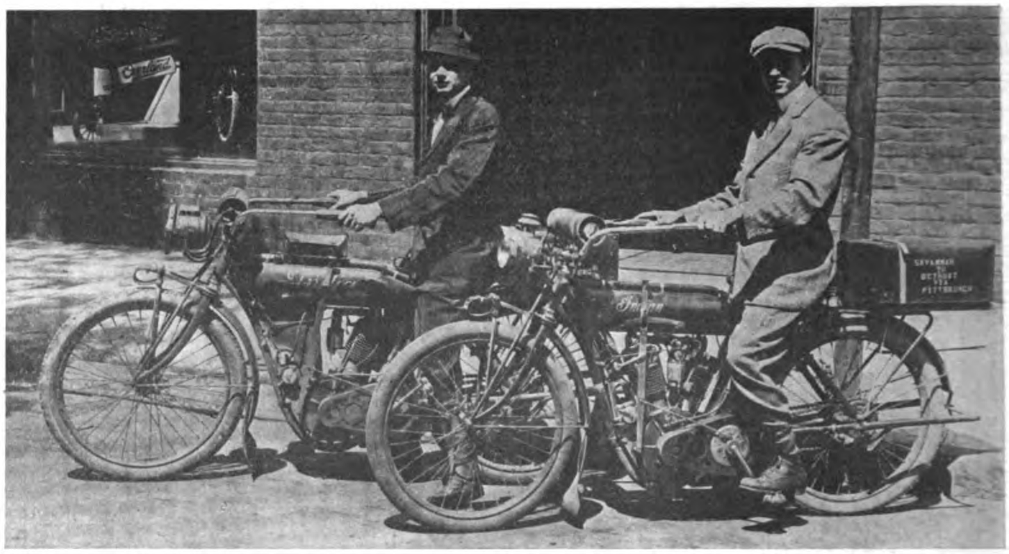
OWING to heavy rains the plans of the Augusta (Ga.) M. C. for the club run and barbecue slated for Sunday, June 15, were completely upset, and it is likely that a program along similar lines will be given later in the season to square matters with the weather man. Rain the greater part of the night before and a downpour in the morning, just before the start, kept a great number of the motorcyclists from attempting the trip, but eighteen riders got under way. Four of them survived the mud and slush of the slippery roads, ate barbecue and returned to Augusta with "perfect scores." The others fell out at various points along the route, some of them coming back by train and some, after finding the roads well-nigh impossible, taking a back track.

The route lay through Boneville, Thomson and Washington, then 12 miles beyond to the place of entertainment, a total distance of 71 miles. At Boneville, 28 miles from Augusta, three of the riders gave up the fight, and rode back to Augusta after a breathing spell. At Thomson, three miles beyond Boneville, a dozen of the riders held a consultation as to the advisability of giving up the run and returning. The twelve being unable to come to a verdict, seven of the boys fell out, four taking the train and three returning awheel. Eight of the motorcyclists finally reached Washington, after a six-hour battle against the worst possible road conditions, all tired, hungry and covered with mud.

Here it was learned that the place of entertainment was still twelve miles distant. On this information four of the boys expressed themselves as satisfied with the day's work, and after getting dinner at a restaurant they returned to Augusta by train, shipping their machines. The remaining four continued the fight and in another hour were enjoying the reward of their toil in the form of a most delightful barbecue dinner. The hosts of the occasion, Messrs. McNeill, Ramsey and Anderson, had prepared an elaborate spread for fifty riders, and were greatly disappointed when the road conditions prevented the Augusta boys from being on hand. The four riders on the return trip found the road had dried out considerably and they made much better time. All declared when they reached home that they felt as if they had done a day's work. One of the boys said he wouldn't take the same kind of a trip again for a month's salary, and he draws a pretty good salary at that.

Three invitations to attend race meets have been received by the Augusta Motorcycle Club within the past week, all to be given on the Fourth of July. The Savannah M. C. writes that it will celebrate the day with a card of five events, all strictly for amateurs, and that it will have prizes aggregating in value something over $300. The Columbus (Ga.) club will put on half a dozen events on the mile track at the driving park in that city. They expect to have professional as well as amateur events, and will have entries from Macon, Birmingham and Atlanta. The club is offering handsome prizes in the way of cups and motorcycle accessories. The Columbia (S. C.) club will celebrate the glorious Fourth by holding its first F. A. M. meet. The program will include five events and will be run on a mile track. The feature event will be a fifty-mile race, for which they are offering a big sterling silver cup as a prize. In the meantime the Augusta club is busying itself on preliminary plans for a big club meet to be held on July 4 on the Georgia-Carolina fairgrounds track.

Earl McCone, of Savannah, holder of the record for the fastest time made by a motorcycle between Augusta and Savannah, and winner of many racing events in this section, passed through Augusta on June 16 on the first leg of the long motorcycle ride he is taking in Detroit, via Pittsburgh. His companion is Henry Kuck, also of Savannah.



Earl McCone (at the left) and Henry Kuck, Jr., Starting on 2,000-Mile Journey from Savannah, Ga., to Detroit, Mich.

MUST HAVE LICENSES.

ST. PAUL, MINN.—Steps to enforce the law requiring every motorcycle in Minnesota to be registered with the Secretary of State will be taken by the Minnesota State Motor Vehicle Association, through its club and individual members throughout the State. Members of the association have been notified that in many towns of the State motorcycle owners are found who refuse or neglect to register their machines or to properly display their license number on the rear of the machine, as required by the law. Automobiles are also coming under the ban of the association which has found many offenders. The registration of motorcycles at office of the Secretary of State shows about 3,225 machines, but it is said that outside the cities may be found many machines which have never been licensed or else are displaying an old number.

Secretary of State Julius A. Schmahl says that the enforcement of the law is up to local officials. The State association therefore is going to make an attempt, out of fairness to those who do obey the law, to get all machine owners to register with the secretary.

OFFICIAL PLATES REQUIRED.

THE Toronto police authorities have issued a warning to all motorcycle riders that no number plates other than those issued by the department can be used on any machine. No more make-shift plates will be allowed, and a minimum fine of $50 has been fixed for a violation of the ruling.

OFF ON 2,000 MILE TRIP

Savannah Motorcyclists Are Now on Their Way to Detroit via Pittsburgh—A Southern Tour.

SAVANNAH, Ga.—Earl McCone, mounting an Indian single, and Henry Kuck, Jr., piloting a twin Indian, left this city recently for a 2,000-mile jaunt to Detroit, Mich., and are now well out on the route which is to lead them to the City of Straits. The trip is being made via Pittsburgh and will consume about ten days, according to final calculations of the riders. McCone, popularly known as "Mac," has long been to the front among Savannah motorcyclists, and Kuck is equally enthusiastic, although his riding career has been shorter.

From Savannah the tourists rode to Augusta, Columbus and Charlotte, where they connected with the National Highway to Salisbury, Greensboro, Ridgeway, Rock Mount, Va., Roanoke, Lexington, Stanton, Martinsburg, Buffalo, Erie, Pa., Toledo, Cleveland and Detroit. McCone is riding the same machine on which he went from Savannah to New York in 1910, while Kuck is using a 1911 machine. McCone holds the record between Savannah and Philadelphia, of five days, being in the saddle of his machine only 72 hours during the trip.

He also holds the record between Savannah and Augusta, a distance of 143 miles, which he made in four hours and nineteen minutes, beating an automobile by nineteen minutes. Another trip for which he won fame was made between St. Louis and Denver when he made the first motorcycle run between these places. Besides this he holds several track records in St. Louis, his home city.

J. D. Ivy and O. W. Stacy, both mounting Excelsior twins of 1912 make, left Saturday, June 22, on a 700-mile trip through Georgia and Florida. They expect to be gone about two weeks.

AN attractive racing program will be given under the auspices of the Reading (Pa.) M. C. at the fair grounds on the afternoon of July 4.

A plain talk on Carbon Deposit.

There are three mistaken ideas on carbon deposit.

(1) Light colored oil is commonly supposed to leave the least carbon deposit. (2) Heavy-bodied oils are often avoided through fear of excessive carbon deposit. (3) Claims that some lubricating oils are "non-carbon" are often accepted as sound.

Our experience has clearly shown that:

(1) Color is an unsafe guide in determining the amount of carbon in an oil.

(2) The body of the oil does not determine the amount of carbon deposit. The heaviest oil that can be properly used gives the most efficient motorcycle lubrication.

(3) "Non-carbon" oils do not exist. Lubricating oils are a hydro-carbon product. Were all carbon eliminated, **the oil could not lubricate.** The **free** carbon is the only carbon that can be safely removed.

The amount of carbon deposited in the cylinders depends partly on the carburetion and gasoline combustion, partly on the oil, partly on its fitness for the motorcycle.

Unfortunately, the more the layman tries to comprehend carbon deposit, the more he is bewildered. He needs authoritative guidance.

Equipped with the experience gained from our authoritative position in lubrication, we studied every make of American motorcycle and many foreign makes.

We found that no one grade of lubricating oil would suit all motorcycles. We produced our Gargoyle Mobiloils in several grades, and prepared a schedule showing the correct grade for each make of motorcycle.

The complete schedule is printed on the right.

We refined and filtered these oils to remove free carbon. Aside from furnishing the correct oil for each motorcycle, that is the most that any producer can do toward eliminating carbon deposit.

We can say without fear of successful contradiction, that these oils establish a world standard for motorcycle lubrication.

GARGOYLE

Mobiloil

A grade for each type of motor

Gargoyle Mobiloils are put up in barrels, half-barrels, in 5 and 1 gallon sealed white cans. They are named:

Gargoyle Mobiloil "A"
Gargoyle Mobiloil "B"
Gargoyle Mobiloil "Arctic"

All are branded with the Gargoyle, which is our mark of manufacture. They are handled by the higher class garages, auto-supply stores and others who supply lubricants.

TO THE TRADE

By carrying Gargoyle Mobiloils, with our chart of recommendations, you can say to the owner of any motorcycle: "I can give you the correct grade of oil for your machine. It is recommended by the Vacuum Oil Company—the recognized leaders in lubrication."

By handling Gargoyle Mobiloils you also get the benefit of the strongest advertising campaign ever run for automobile and motorcycle lubricants. In addition to all the leading automobile and motorcycle magazines, we are running our large-space advertisements in the Saturday Evening Post, Collier's, Literary Digest, Life and Scientific American. Later we will advertise in leading monthly magazines.

VACUUM OIL CO., Rochester, U. S. A.

General Sales Offices, 29 Broadway, New York City.

Distributing warehouses in the principal cities of the world.

The list below shows the right oil for your motorcycle.

Explanation: In this schedule the letter opposite the name of motorcycle indicates the grade of Gargoyle Mobiloil that should be used. For example, "A" means "Gargoyle Mobiloil A." "Arc" means "Gargoyle Mobiloil Arctic." Recommendations cover all types of the same make unless otherwise stated.

Questions and Answers

In order to add interest and value to this Department, an entirely new feature is introduced herewith. The Editor will, as heretofore, answer all inquiries to the best of his ability. In addition, however, he will in each issue propose a question of his own, and invite the readers of Motorcycle Illustrated to test their ingenuity and mechanical knowledge in answering them.

Two cash prizes of $5 and $3, respectively, will be awarded every two weeks for the best and second best answers to each question. All the good answers will be published.

The decision in each case will be made by the Editor of this Department, and prizes will be awarded to the two readers whose replies are most thoroughly characterized by clearness, accuracy and brevity. A new question will appear in each issue. Answers will be published the *second* issue following the number in which each question is asked. For example, answers to the question published in this, the June 27 issue, will be printed four weeks hence, in the issue of July 25. We cannot guarantee the publication of any answer received more than three weeks after the publication of the question.

For a time, the questions will be of a general nature, having to do with fundamentals. Later, however, problems of a specific nature will be considered. In this connection readers of Motorcycle Illustrated are requested to suggest questions which they would like to have their fellow-riders answer.

All communications should be addressed to: "Editor Questions and Answers, Motorcycle Illustrated, 51 Chambers street, New York."

Question No. 1.—Define, briefly and accurately, the general design and operation of a carbureter. Answers to this question will be published Thursday, July 25, and should be received at this office not later than Thursday, July 20. The answer to Question No. 1 is limited to 150 words, and should be written so that a novice will clearly understand its meaning.

MOTORCYCLES FOR WOMEN.

E. S. I.—You would do better to have a regular motorcycle frame reconstructed for ladies' use. Go to a good bicycle or motorcycle machinist and have the top and brace-tubes fitted somewhat as follows: Top-tube from the steering head to about half to three-quarters of the way down the seat-mast. Brace tube from head to about centre of top-tube; remainder of brace-tube from top-tube to original fixture of latter on seat-mast tube. Motor attached to loop but inclined either very far forward or in line with seat-mast tube. The tank will be fitted forward in the angle between the top and brace tubes; they will, of course, have to be shaped accordingly. If the motor is inclined forward, a second thin tank will be fitted in the angle between the seat-mast tube and rear brace tube. Or a second loop tube and short brace tube can be fitted in place of the regular "diamond" members (brace and top tubes).

Following are makers of ladies' machines. There are no agents for them in this country: Douglas Bros., Kingswood, Bristol, England (2¾ h. twin Douglas); Wm. Hobart Bird & Co., Coventry, England (2½ h. single Hobart); Bradbury & Co., Ltd., Oldham, England (2½ h. single Bradbury); H. & A. Dufaux, Geneva, Switzerland (2¼ h. single Motosacoche).

SPARK TIMING—STARTING

W. NOVA SCOTIA—A readjustment of the spark timing will probably help in the matter of running slowly and starting, but this will be had at the expense of speed. The tension of the inlet valve spring is too weak, or carbon deposit would not appear where you state. It is better to keep the tension of any inlet valve spring the same as that when the machine left the manufacturer's hands; therefore, if you can, return the spring to its original tension or get a new one. The latter is the more advisable.

Quite a number of machines of this make are hard to start, and this seems to be due to the design originally. It is necessary to "warm up" the motor on the stand before starting, and riders usually do this or run with the machine. The readjustment mentioned above will be in the direction of giving more retard to the spark (supposing that your mixture is O. K. and the exhaust valve opens and closes at the proper time). Move the piston to compression dead-center and note the position of the contact-maker cam in relation to the contact-blade with the spark at full retard. Change the relative position of the cam and casing so that the full retard will occur later in the travel of the cam; i. e., away from the cam in the direction of its travel. In driving, use the throttle and follow it up with the spark, relying on spark for very slow running only. Don't retard the spark any more than is necessary. We suggest that you get a copy of our 1912 *Motorcycle Manual*, which will enable you to remedy practically all troubles encountered on the motorcycle.

BELTS AND PULLEYS

HARRY B. WILKOW—The assertion that a new pulley will be necessary as often as a new belt is needed is ridiculous, and may have been given from malice or from sheer ignorance. A moment's thought should convince you of this. If the motorcycle or the pulley is of reliable manufacture, a V-belt should last for as much as 5,000 miles if given proper care.

A BATTERY-CASE.

JOHN HERRICK—Write the Hendee Mfg. Company, Springfield, Mass., with regard to the battery-case for the 1909 machine mentioned. Your local dealer of the Motorcycle Equipment Company, Hammondsport, N. Y., may be able to get you one at or below your price.

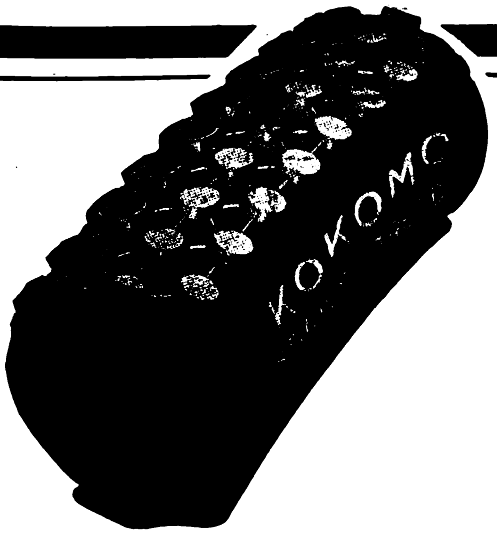
A NEBRASKAN OBJECTS.

Editor Motorcycle Illustrated:

On page 77 of your Spring Touring number I notice a letter headed "Beware Nebraska Roads." In my opinion this letter was entirely uncalled for. I do not say that there are no poor roads in Nebraska, all States have them, but, as a rule, Nebraska roads are fairly good. If "A Nebraskan," in a fit of grouch, wanted to talk about the roads why didn't he locate exactly the "log-jam" roads he speaks of, instead of condemning the roads of the State in general? I can show him between 25 and 30 motor cars owned by farmers in the vicinity of Fullerton and any number of town cars. I have heard tourists refer to the fact that we are well supplied with automobiles, and we all know that the automobile is not likely to be popular where the roads are bad.

This spring the roads were not as good as usual owing to the lateness of the season which hampered the farmers and prevented them from dragging the roads as is their custom. However, I feel that the roads in this district are about as good as the average. Perhaps I don't know a poor road from a good one, but I rather think I do, and I don't think it fair to make the sweeping denunciation of Nebraska road conditions embraced in the letter of "A Nebraskan."

Fullerton, Neb. Chas. D. Miles.



The chief qualifications tires must possess are

**Low { Original Cost
Up-Keep Exponse**

and

Service-giving qualities;—their ability to take you over all kinds of roads—through sand, mud, snow, over stones and slippery pavements.

KOKOMO TIRES

are built with a view to meeting the requirements of the most exacting motorcyclist. Sixteen years' experience in the making of good tires has resulted in the production of a low-cost, durable, efficient tire that has been proven by many tests to have longer life, to require less attention and to be more adaptable to the severest conditions than any other motorcycle tire on the market today.

Literature sent upon request.

MAKING QUICK DELIVERIES

BOB GILBERTSON, of Minneapolis, Minn., conducts a quick-delivery service which gives his patrons unfailing satisfaction, and the accompanying photograph shows just how he does it. In the picture he is loaded to capacity and ready to start on one of his delivery trips. He makes from twenty to forty stops and covers from 60 to 120 miles daily. Gilbertson makes his rounds regardless of weather conditions. For the last two years he has used a Yale single, but he is now mounting a Yale twin of the current season's output.

MAC SET THE PACE.

PERCY A. McBRIDE, the popular motorcycle salesman of Toronto, appeared in an entirely new role recently, on the occasion of an alarm of fire while he was out for a spin on a Henderson four-cylinder machine. One fireman had been left behind, but Percy came to the rescue with an invitation to hop on, which the gallant one did, taking a position on the tank saddle of the machine. McBride, with the uniformed fire fighter in front using both hands on the horn, let 'er out, with the result that he was soon scooting by all the vehicles on the road. The improvised "motor fire truck" got to the scene ahead of the rest of the brigade, and the fact that it proved to be a false alarm did not detract in the slightest from the machine's performance.

THE PROPER SPIRIT.

IN C. Elmer Von Eiff, Los Angeles has a boomer with the proper spirit. When the beautiful California city was referred to in the Spring Touring Number of MOTORCYCLE ILLUSTRATED the pesky type sneaked in a statement to the effect that "Los Angeles has a population of more than 60,000." As a matter of fact, the city has more than 300,000 inhabitants, and Von Eiff promptly forwarded a correction. It is such readiness to stand by the city at all times that has worked wonders for Los Angeles and its rapidly growing clan of motorcyclists.

RED BANK, N. J., has its first motorcycle policeman.

A MOTORCYCLE MERCURY.

SAN JOSE, CAL.—Mounted on a 7 h. Excelsior motorcycle, C. D. Reade, president of the San Jose Motorcycle Club, made a remarkable run recently in getting the returns of a special "wet" and "dry" election held in Santa Clara County. Reade left San Jose at 6 o'clock and loafed along the road for the first half hour he was out, making but 30 miles. He then started to "jig it up" for the next ten miles over a stiff grade, to a small town situated in the Santa Cruz mountains. He gathered his information there, made stops at eight other places, in the meantime telephoning the information gathered to the San Jose *Mercury*, and after stopping for a hasty lunch blew into the office at 9 o'clock, having covered 90 miles in three hours. Similarly good runs were made by H. Manchester and William Zettle, two other crack amateur riders of the local club. This is the first time that the motorcycle has been used here for gathering election returns to any extent but the showing made was so good that the San Jose *Mercury* has decided to use this means of collecting the data exclusively in the future.

SPEEDY R. F. D. RIDER.

R. M. JOHNSON, the R. F. D. carrier shown in the photograph, covers a route of 23 miles out of Aspermont, Texas, and makes stops at 60 boxes in half an hour on an average. Recently Johnson made the trip referred to in 23 minutes. Not long ago he rode from Stamford to Aspermont, 41 miles, in 50 minutes. Most of Johnson's riding is done in hilly country and over roads that are none too good, so that his performances are all the more remarkable. He rides an Excelsior twin and the picture shows him with his 1911 mount. The records referred to were made on a new Excelsior, recently put into service.

IN THE NICK OF TIME.

IF the motorcycle were human it would probably be a candidate for several Carnegie hero medals. In Woodsocket, La., Ralph Plazo owes his life to the prompt response of Dr. George W. Ashton, who came to the scene of the accident on his motorcycle. Plazo was rendered unconscious by a fall from a buggy, an artery was severed and the physician, with the aid of his two-wheeler, reached the side of the patient just in time to cheat death.

SCOUTED ON MOTORCYCLES

Montana Riders Broke New Trail into Rainy River Country and Decided to Settle There.

TWO riders of Butte, Mont., have just accomplished a nervy trip of exploration into the new country of the Rainy River district in northern Canada, for the purpose of locating farm homesteads. The travelers were Frank Davis, Harley-Davidson, and Leonard Wood, Yale, both experienced farmers, who, hearing of the possibilities and future of the great wheat-growing section of the Rainy River country, undertook to spy out the land by means of the motorcycle. After leaving their erstwhile home, they crossed the international boundary line into the Province of Alberta, where they passed through the thriving western cities of Edmonton and Calgary, thence on to Edson, and over the Government road to their destination, where the put-put-put of a motorcycle had never been heard before.

Their main difficulty after leaving Edson was to keep supplied with fuel. But these hardy travelers rigged up extra tanks on their machines, in which sufficient gasoline was carried to take them through. The homeseekers did not make a selection of a homestead before they set out upon their trip, but looked over the country in the land of their adoption, until they found a couple of good half sections. The tourists created quite a stir wherever they went, as their mode of travel was an entirely new one for the purpose.

FAVOR NEW ORDINANCE.

MOTORCYCLISTS of Lawton, Okla., are assisting the officials of their city in the enforcement of a recently-passed motor vehicle ordinance, one of the clauses of which places a ban upon the muffler cut-out. The Lawton squad is growing steadily, and several outings have been planned for the near future.

AN ALAMEDA WINNER.

M. NEWMAN, of Alameda, Cal., appears in the accompanying photograph with the Pierce four on which he scored perfectly in the recent Alameda endurance contest. This run was held June 9 over a 200-mile course, from Alameda to Oakland, through a tunnel 1,300 feet long to Dublin, to Pleasanton, over Mission San Jose Grade, through Niles and return to Alameda. This course was covered twice in 10 hours' riding.

M·M

King of Motorcycles

The machine that satisfies the old riders—read what this one says:

Baldwin, L. I., Feb. 8th, 1912.

AMERICAN MOTOR COMPANY,
Brockton, Mass.

Gentlemen—The machine I purchased from you in June, 1909, for use in the Police Department, has been in service for 40,000 miles. At the same time there were five machines of another Eastern make. While I have been riding this machine, the other machines have been duplicated twice. One year the M-M earned more in fines than the other five put together. These fines were collected from automobiles, one being a 90 H. P. Simplex that was traveling better than 60 miles an hour over country roads and gave the M-M a chase of over 28 miles, catching the victim in that distance. Have always found the M-M ready to start at all times and start very easily for a twin cylinder machine with magneto. I don't think there is an easier starting or more flexible machine on the market, and I have ridden nearly all of them.

Yours very truly,
OTTO W. PAYNE,
Nassau Co. Police Dept.

MOTORCYCLE TIRES CARBURETERS SPARK PLUGS
BATTERIES HUBS

WILL A. HEBB
MOTORCYCLES AND REPAIRING
Everything in the Motorcycle Line

EMPIRE RUBBER CO.,
Trenton, N. J.

Gentlemen:

Here is a true statement, and, as you are well aware, unsolicited.

Mr. Roger Wolfinger has on his Curtiss motorcycle in use to-day and which looks as if it may still give a couple of hundred miles' service, one of your Empire Motorcycle tires purchased of you and put into use by myself in June or July, 1908. This tire has been in service, with the exception of a few winter months, all of this time. Same tire was on in my New York City to Hagerstown Run, coming through with but one puncture on that trip. The number of miles this tire has stood will be hard to equal. Size 28"x2½".

Yours very truly, WILL A. HEBB.

DOESN'T THIS CONVINCE YOU?

Gentlemen:-

Goodrich 29 x 3 Large Stud Motorcycle Tire, #2777, was placed on our PIERCE SINGLE Demonstrator October 2, 1911. Since that time this tire has run, on the back wheel, 3933 miles and the studs are just worn off on the tread.

When you consider that this tire has been used every day; has been in one endurance contest; has covered at least one third of the above distance with tandem rider, and has not caused a moments trouble, it is something we can recommend to the motorcycle rider.

Yours very truly,

THE PIERCE CYCLE COMPANY,
Fred L Baum
Mgr. Pacific Coast Branch.

Mott Rims for Strength

THE superiority of the Mott motorcycle rim lies in the little points that the average riders never notice, but that show up strongly in hard service. For instance, take the way the spoke holes are punched. On Mott rims this is carefully and accurately done so that there is ample strength to hold the nipple securely. Sketch No. 1 shows the idea. Most other ribs come out like No. 2. This part of the work is hurried over, carelessly done, and as a result the holes are counterpunched too deep, making a weak spot, which often allows the nipples to pull through the rim.

Mott thoroughness shows up in the tests. Note the wheels that come through the severe endurance runs in the best condition. You'll find them fitted with Mott rims. To be sure of satisfaction, specify Mott rims for your machine.

WRITE US FOR FULL DETAILS
THEY WILL SETTLE THE RIM PROBLEM FOR ALL TIME

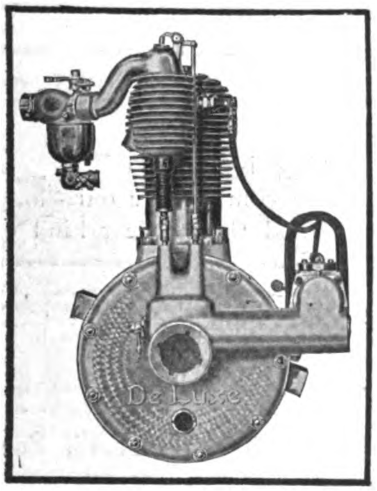
A REVOLUTION
IN MOTORCYCLE MOTOR DESIGN



In bringing out our DE LUXE line of motorcycle motors, we have introduced a large number of improvements, and offer these motors as the most advanced now before the trade.

NOTEWORTHY IMPROVEMENTS.

- One-piece crank shaft.
- One-part crank case with cover.
- Improved cam and magneto drive.
- Oil tight motor.
- Large Valves.
- Simplified design throughout.
- Reduced number of parts.
- Silent Motor.
- Large ball bearings mounted in steel lined pockets.
- Equipped with Bosch Magneto.

These improvements in design, together with the high grade materials used in construction, the modern methods of manufacturing applied, and the remarkable performance of these motors in road tests mark a revolution in motorcycle motor building.

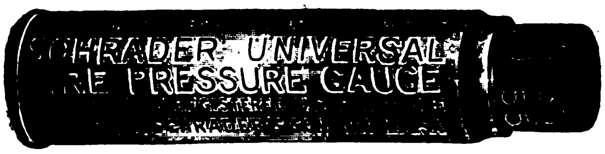
Have You Had Trouble With Your Tires?

A very large percentage of all punctures and blow-outs occur from improper tire inflation.

WOULD YOU PAY $1.00 TO OVERCOME

delays, difficulties and expense resulting from these misfortunes?

Schrader Universal Tire Pressure Gauge



(Made under patent dated March 1, 1898.)

Accurately registers at all times the exact air pressure in tires.

Simply hold gauge to tire valve for a second and recording sleeve will indicate air pressure and remain fixed until pushed back into place by the finger.

Carried easily in vest or change pocket, being only 2½" long. So simply constructed as to almost never become out of order, and if it does go wrong it will immediately tell by the action of the indicating sleeve that it needs repairs. Leather case comes with it.

PRICE $1.00 EACH

Guaranteed Simple and Absolutely Accurate

Can be obtained from all tire manufacturers, jobbers and dealers, or

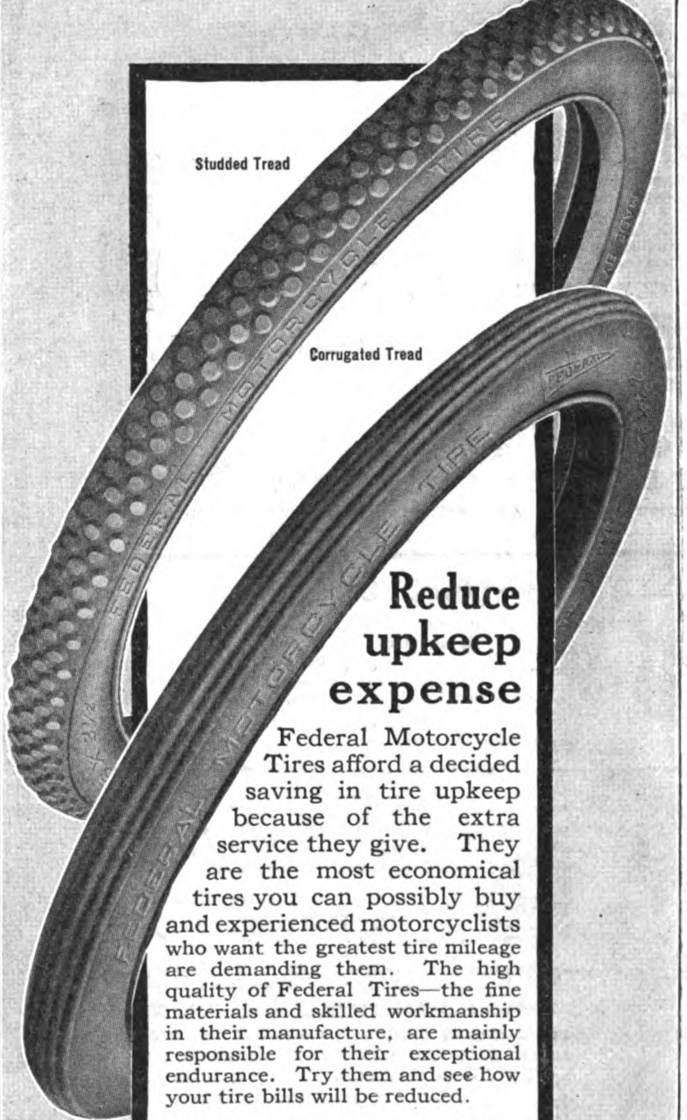
FEDERAL "Extra Service" TIRES



Reduce upkeep expense

Federal Motorcycle Tires afford a decided saving in tire upkeep because of the extra service they give. They are the most economical tires you can possibly buy and experienced motorcyclists who want the greatest tire mileage are demanding them. The high quality of Federal Tires—the fine materials and skilled workmanship in their manufacture, are mainly responsible for their exceptional endurance. Try them and see how your tire bills will be reduced.

Federal Tires come in both Corrugated and Studded Treads in all sizes and in single and double clinch types.

They are supplied through leading dealers everywhere. Interesting tire book mailed on request.

TRINITY CHIMES

An Exhaust Horn with a Musical Tone
Warns Without Giving Offense
A Hair-Raiser When Needed

There is absolutely nothing about the Trinity Chimes to get out of order—no moving parts, no batteries, no wire connections. It never fails. It costs nothing to operate. It is operated by a three-way valve which is supplied with the horn. Its four tubes give a perfectly blended chord of pleasing harmony. Its body is a brass casting. The tubes are brass-wedged into slots in the casting, and instead of being of flimsy construction and supported separately, they are carefully brazed together, building up a unit of such strong construction as will last a lifetime. It is furnished in triple nickel-plate, highly polished.

Get the best horn at a lower price; don't spend more for one not so good.

Imported Single-Jet B & B Motorcycle Carbureter

Fits Any Machine—Entirely Controlled from Handle-Bar

The B & B carbureter affords simplicity, efficiency and ease of control at all times. With a B & B you needn't bend down and take your hands from the bars in order to adjust your mixture. Instead, adjustment of the flow of gas and air to fit changing speeds is possible without the rider changing his upright position. Price is low, and material and workmanship the finest.

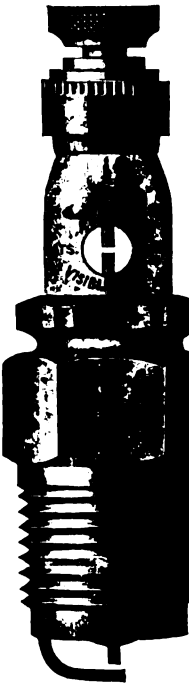
Let this Spark Plug solve Your ignition troubles



The ***J. D.*** Visible Spark Plug lays bare all ignition trouble. The "visible gap" is an open window, giving you a full view of the internal workings of your spark plug. If the spark is seen jumping the gap, look for your trouble between the gap and the sparking point. If there is no spark in the gap, your trouble lies behind. This new great plug also facilitates timing, intensifies spark, uses only minimum current, and cleans itself when you widen the gap by turning knurled adjusting nut. Gap can also be entirely closed.

One look tells everything

The "visible gap" feature, so far as being incorporated in a plug, has always seemed as far away as perpetual motion. The visible feature has been marketed as a separate device for years, but this is the only plug embodying the visible feature in a practical manner. It is simple—merely a hole in the porcelain, and a spiral action to regulate length of gap in the central electrode which carries the current. The hole in no way lessens the strength, and the current in jumping the gap loses nothing of its intensity.

Every part is made in our own factory—even the porcelain being produced in our potteries from imported clays and other ingredients. This unequivocal guarantee goes with every one: ***"Your money back or a new plug if you are not satisfied."***

If your dealer hasn't the J. D. Visible yet, send your money direct to us for a set, specifying size wanted, and we will ship them prepaid. Remember, the price is only $1 for this plug.

IMMEOIATE DELIVERIES ON MAJESTIC SIDE-CARS

OBERWEGNER MOTOR COMPANY.
Per A. Oberwegner, Mgr.
139-141 Michigan St., Toledo, O.

MAJESTIC MFG. CO., Worcester, Mass.

Gentlemen: After putting your Majestic Side-car through three months of continual hard usage, attached to a 1912 EXCELSIOR AUTO CYCLE, we have nothing but praise to offer.

This car has withstood the severe conditions without a particle of trouble. It is a big hit with the ladies, and we have sold a large number of machines on the strength of this Side Car.

The writer has had considerable experience with both former American and foreign made Side Cars, but your Majestic Side Car proves to us that you have studied the conditions carefully before you marketed same. Very truly yours,

OBERWEGNER MOTOR CO.

Havermeyer Place, Greenwich, Conn., 4/26/12.

TO THE MAJESTIC MFG. CO.

Gentlemen: Yours of the 22nd received and contents duly noted. I take pleasure in offering my approval of your meritorious Side-Car. It has filled a long-felt want, and I consider it all the makers claim for it. I am riding a Twin M M and attain a maximum speed of 45 miles per hour; furthermore, my friends all aver "The ride exceeded their most sanguine expectations." Yours truly,

GEO. BARNES.

THE MAJESTIC MANUFACTURING CO.
Worcester, Mass., U. S. A.

Dear Sirs: Yours of 20th received some days ago. In regard to side car I cannot say very much yet as I have not had much time to use same. But I can say that car certainly is a dandy. I had it attached to a 4 H. P. 1910 Indian; went along good with about 165 lb. passenger; made long steep grade with very little throttle. Of course I had to gear machine about 8 to 1 on account of several bad hills. No trouble to get anybody to ride in it either. If there is anything in this letter that you can use you are welcome to do so.

Yours very truly, D. L. SANDRETTO.

Lancaster, Pa., April 24, 1912.

THE MAJESTIC MFG. CO., Worcester, Mass.

Dear Sirs: Replying to yours of April 16th would say I have tried the Majestic Side-car, first on Single Cylinder Motorcycle, and it worked well on good roads. Then I attached the Side-car to a 1912 twin Reading Standard, and making an extra arm of tubing from under the seat of the Motorcycle to the tandem attachment and, connecting the rocker arm of the Side-car to the extra tube under seat of motorcycle, have run over good and bad roads fifty miles on one gallon of gasoline, carrying three men—one operator—one on Side-car and one on Tandem attachment—taking all hills and at different times speedometer registered 38 to 40 miles per hour. Yours truly,

JOHN H. TRAGESSER.

Nov. 24, 1911.

Herz & Co.,
Lafayette & Houston Sts.,
New York City.

Gentlemen:-

My recent experience with the Herz Plug, in connection with the Motorcycle Trade Tour, has convinced me that the Herz is distinctly superior to any other plug which has come to my attention. I propose to recommend it heartily to both riders and dealers.

On the first stage of my trip, a plug of another make was used, but soon fouled and was replaced by a Herz Plug which gave perfect satisfaction for a distance of over a thousand miles--most of it under very trying conditions. Despite the continued over-supply of oil which was injected into the cylinder, this plug did not foul or cause the slightest difficulty of any kind.

It is unfortunate that an accident prevented the completion of the trip, but the Herz plug clearly demonstrated its superiority beyond the necessity of any further test.

Very truly yours,

HF-[illegible]

A Motorcycle Tire Machine That Prevents Human Mistakes

There are two kinds of motorcycle tires.

One is hand-stretched. That is, the plies of fabric, of which the tire is built up, are stretched, one at a time, by hand, over an iron core. Naturally some of those plies are drawn tighter than others. The tight ones take up most of the strain—soon break down under it. This is the common type tire.

The other kind—the Goodyear—is built up on a tire building machine. Every ply goes on at the same tension. Every ply bears an equal part of the strain. The strength is uniform—the tire *lasts*. This is the *Goodyear* type tire.

And this is the *tire* for which the 13 leading motorcycle manufacturers in America have made contracts for their 1912 output. The tire that holds all world's records—amateur and professional. The tire that you will come to eventually.

By Countless Tests The Most Durable Tires in Existence
GOODYEAR
Motorcycle Tires
Made By The Makers of No-Rim-Cuts

Extra Thick Treads for Endurance

Goodyear Motorcycle Tires are results of over 13 years successful auto tire building experience.

You get more *wear* out of them because they are built with extra thick treads. These treads have a toughness—a puncture resistance that is equalled by no other tire on the market.

To prove this, we test our tread and the tread of every other make tire on an endurance machine. If ours isn't toughest, doesn't outlast all others it never reaches the market. So in our claim for the greatest endurance, we are merely stating a fact that any one can verify.

Our tires are also made larger than most others. Hence there is extra strength to take care of overloads, and extra cushioning effect to make the tires ride easier.

Without a penny of extra cost, they offer you the strength and endurance of best auto tires adapted to motorcycle needs by the world's greatest tire experts—the same motor tire builders who built such service into Goodyear No-Rim-Cut Auto Tires.

You ought to investigate these money and trouble-saving tires at once. They fit all standard rims. They *satisfy* with a service rendered by no other tire.

Leading Motorcycle Tires

Endurance built in by Goodyear Tire Machine

We do not exaggerate when we say that Goodyear Motorcycle Tires lead.

They lead in endurance and in performance.

They hold every world's amateur and professional speed record; hundreds of tests in factory and field have proved them the most durable tires in existence.

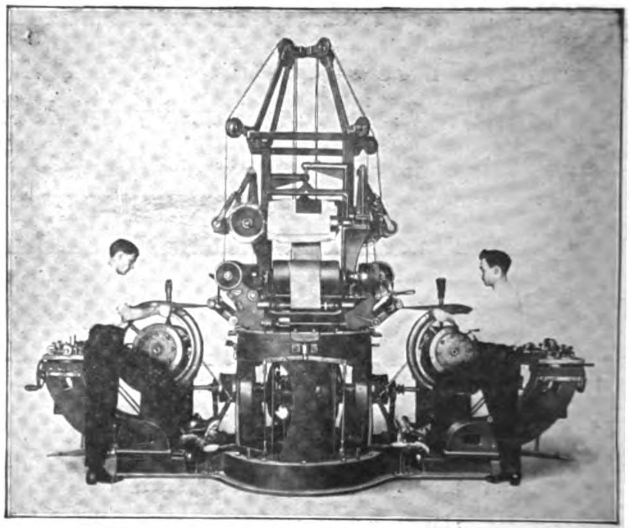
The 13 largest Motorcycle Manufacturers have contracted for Goodyear Motorcycle Tires for their this year's output. Every third new machine this year will be tired with Goodyears.

Made on the Goodyear Tire Machines, these "little brothers" to No-Rim-Cuts offer tire buyers an unusual service.

We wish you could go through other motorcycle tire factories—and then go through **ours.**

We would like you to compare our policy and our methods with those commonly used.

We would like you to watch step by step, the fascinating process by which from a wealth of tire building experience the world's master auto tire builders perfect these tires for **motorcycles.**



GOODYEAR TIRE MACHINE.

OUR TIRE-MACHINE

You would see the most perfectly equipped factory in the world—and on all sides you would see signs of growth, development, improvement.

For instance, you would see among other special machinery, a new patented device for stripping the feather edge off the semi-cured tire beads before they are built into the fire.

And you would see the Goodyear Tire Machine—the only machine that eliminates human error in tire construction.

TIRES OF UNIFORM STRENGTH

In building a tire, a number of plies of fabric are stretched, one at a time, over an iron core. To secure uniform strength and endurance every successive ply must be stretched on at **uniform tension.** If one ply is loose and the next one tight, the tight ply gets all the strain—eventually gives way, and the tire is soon ruined.

Our tire machine builds **perfection** into the tire.

Hour after hour, day after day this machine with unfailing accuracy stretches on ply after without slightest variation in the tension. No hidden **loose** plies to shirk their duties. No over strained plies to **give way.** Nothing but supreme uniformity; and as a result a proved **durability** equalled by no other tire in the world.

GOODYEAR

Motorcycle Tires

Bulletin: At Los Angeles, Feb. 11, Goodyears make clean sweep, lowering 2 World's Records; 2-mile, 1:19⅗; 4-mile, 2:40⅘. Hasha wins both on Goodyear Tires.

YOU PAY NOTHING EXTRA

Goodyear Motorcycle Tires are built for standard rims and are supplied by all first class dealers at the same price you would pay for any standard tire.

You pay nothing extra for the painstaking workmanship—nothing extra for the years of successful auto tire building experience—nothing extra for the tire perfection and greater endurance rendered by the tire machine which was made and is controlled exclusively by us.

All this you get for the mere price of the tires alone—tires that are past the **experimental stage—saving** tires that reduce to the very minimum punctures and all other tire troubles.

With such tires as these at your command it is folly to chance lesser tires.

ASK FOR OUR BOOK ON MOTORCYCLE TIRES.

This book tells all about the Goodyear Quintette of Motorcycle Tires—"one for every road condition."

It will also safeguard your pocket book against tire wastes that mean not only financial loss but a loss of pleasure and service not to be measured in dollars and cents. Send today for the book.

The Verdict of the People

The Great Majority of Motocycle Riders
have recorded their verdict that

THE INDIAN

Is the Best Motocycle

Of 20,353 Motocycle riders in the 11 States that require registration, 32.9% ride Indians. The nearest competitor shows only 13.9% and the third on the list 11.84%. The rest are divided between 25 manufacturers and miscellaneous concerns.

It is only fair to assume that similar percentages exist in those states not requiring registration.

You can't make a mistake if you join the Great Experienced Majority of Indian Riders.

How Goodyear Motorcycle Tire Machines Insure Perfection—Cut Tire Costs

Goodyear Tire-making MACHINE sets a new standard for tire endurance. Hundreds of comparative tests prove Goodyears the most durable motorcycle tires in existence.

The Goodyear Tire-making machine affords the only method by which efficiency, not faults, can be built into motorcycle tires. It is the invention of tire-making experts—the result of 13 years' tire-making experience. The Goodyear No-Rim-Cut—today's most popular auto tire—proves the success of this tire-making machine.

GOODYEAR
Motorcycle Tires

Makes Flaw-Proof Tires

This tire-making machine is saving thousands of dollars which motorcyclists have heretofore been obliged to waste on faulty tires.

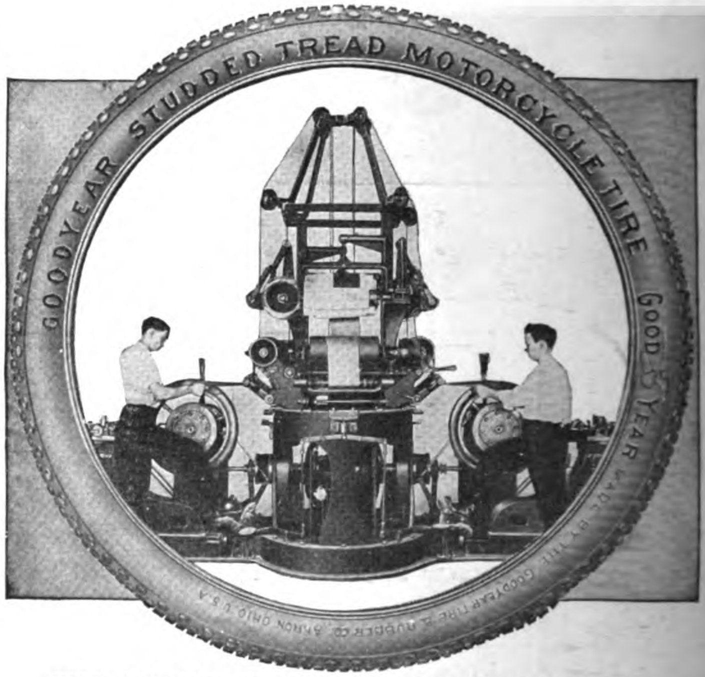
In building a tire, a number of plies of fabric are stretched, one at a time, over an iron core. If one ply is stretched tighter than another, the tight ply gets undue strain when in service and breaks down. The tire is then quickly ruined, for each and every ply must be stretched on at the same tension if the tire is to **last.**

The usual way to stretch these plies is **by hand.**

But no human being working hour after hour can always pull the fabric the same. Uniform tension, so vitally important to the life of the tire, is thus **out of the question.**

But the Goodyear Tire Machine **can**—and does insure this **uniformity.**

This machine stretches on every inch of every ply at exactly the same tension. There can be no **one** ply **tighter than another.**



GOODYEAR STUDDED TREAD MOTORCYCLE TIRE
GOODYEAR
GOODYEAR TIRE & RUBBER CO. AKRON OHIO U.S.A.

THE GOODYEAR TIRE MAKING MACHINE

All plies share the strain alike. And the **tire lasts.** Do you not see why such tires are bound to give most service and most satisfaction? Do you not see how these **machine-made-perfect** tires will **cut your tire cost?**

Economy Tires for All Rims

Our motorcycle tires are built to fit the standard rim. The beads are moulded, semi-cured, to exact duplicates of your rim. So they **fit absolutely.** And all are built on the Goodyear Tire Machines.

As a result of the masterful methods used, Goodyears will save you a **raft** of tire trouble and tire expense. Yet these premier tires cost you no more than any standard tire. **Remember that.**

BULLETIN
Los Angeles, Cal., March 17, 1912.

More Enduring Motorcycle Tires Goodyear Tire Machines Cut Tire Costs

Goodyear Motorcycle Tires are the most satisfactory tires you can buy, the results of over 13 years' Auto Tire building experience. Countless tests have proved them the most durable Motorcycle Tires in existence.

Because of their endurance, 20 big and well-known motorcycle makers have contracted for these tires.

Because of their endurance one out of every three new machines you see this year will be equipped with them.

Goodyears are built on the Goodyear Tire Machine. This is the secret of good tires.

The Goodyear Tire machine does away with all liability of tire flaws due to human errors. It means a tire of flawless, uniform strength and dependability.

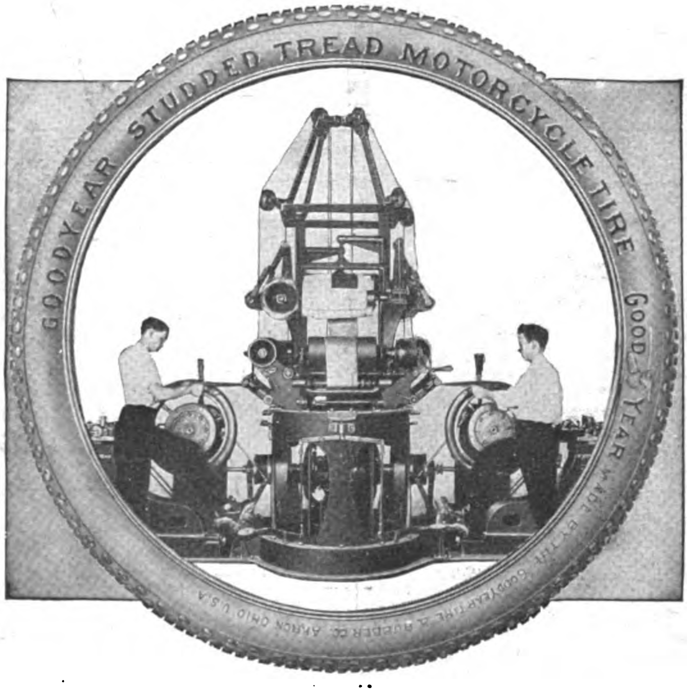
Hence Goodyear Motorcycle Tires are saving Motorcyclists thousands of dollars, and an enormous amount of trouble due to faulty tire construction.

In building a tire a number of plies of fabric are stretched, one at a time, over an iron core. If one ply is stretched tighter than another the tight ply gets undue strain when in service and breaks down. The tire is then quickly ruined, for each and every ply must be stretched on at the same tension if the tire is to last.

The usual way to stretch these plies is by hand.

But no human being working hour after hour can always pull the fabric the same. Uniform tension, so vitally important to the life of the tire, is thus out of the question.

But the Goodyear Tire machine can—and does insure this uniformity.



GOODYEAR STUDDED TREAD MOTORCYCLE TIRE
GOOD YEAR
MADE BY THE GOODYEAR TIRE & RUBBER CO. AKRON OHIO U.S.A.

With this machine the tension is determined by **weights.** These weights do not vary. Hence the **tension** cannot vary, and every inch of every ply gets the same unvarying pull.

With this assured uniformity of tension goes a corresponding uniformity of strength. And this means the amazing durability that has made these tires leaders, both in popularity and sales.

These tires have **back** of them the same years of experience and the same expert workmanship that built perfection in the Goodyear No-Rim-Cut Auto Tires. Yet they cost you no more than any Standard tire.

Built for Rims You Ride

Goodyear Motorcycle Tires are made for standard rims. The beads are moulded, **semi-cured,** on exact duplicates of your rim, so they fit absolutely. All are built on the Goodyear Tire machine.

Our book on Motorcycle Tires explains all. Contains a mass of money-saving facts on tire buying. You should write for it at once.

Modern Motorcycle Tires
Goodyear Tire Machine Insures Perfection

Countless tests have proved Goodyears the most durable tires in existence.

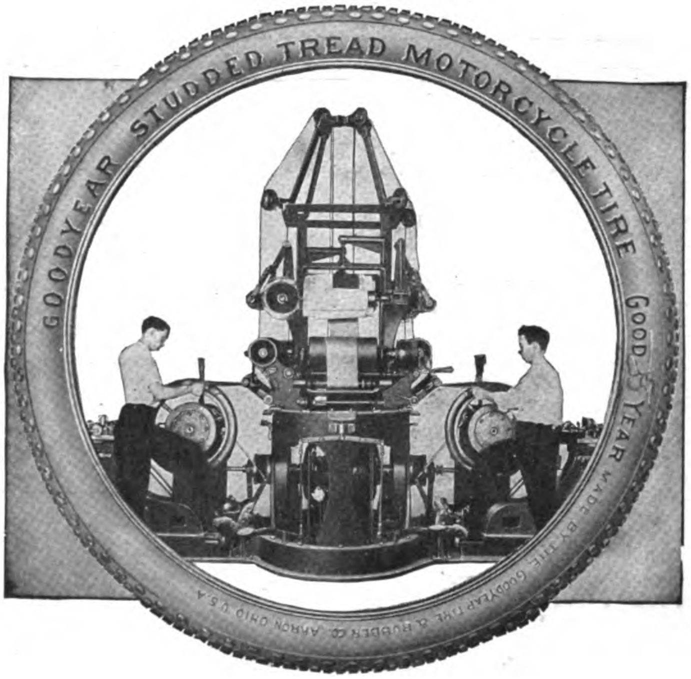
These tires, built on the Goodyear Tire Machine, also hold every world's amateur and professional speed record. They stand on a pinnacle of performance never before approached in the history of motorcycle tires.

These premier tires have helped mete out success to the biggest star performers in the racing field — men who in turn have standardized and popularized these tires by using them almost exclusively.

Twenty big motorcycle makers contracted for Goodyear Tires for their output this year. Every third new motorcycle will be thus equipped.

Goodyear Motorcycle Tires are the machine built tires. Like No-Rim-Cut Auto Tires, they owe their greater endurance to this scientific method

The Goodyear Tire Machine



GOODYEAR STUDDED TREAD MOTORCYCLE TIRE
GOODYEAR
MADE BY THE GOODYEAR TIRE & RUBBER CO. AKRON OHIO U.S.A.

A tire to be **good must** be made of good **rubber** and good **fabric.**

But that is not all.

Everything depends on the way the **goodness** is **assembled** — the method used in building it into the tire.

All motorcycle tires are made of a number of plies of fabric, one stretched on over the other, all built up on an iron core.

If every ply is stretched at the same tension—no **one** ply can get undue strain. All are taxed alike. And the tire is a unit of uniform strength.

It thus stands to reason that the method best calculated to insure uniform tension of plies, **produces strongest tires.**

This is why Goodyear Motorcycle Tires lead in strength and endurance. They are built on a machine. This machine banishes the errors of the hand stretching method and stretches on every inch of every ply with a tension as unvarying as the great weight that does the pulling.

And the tire **lasts.**

Best fabric, best rubber properly compounded, the tire-machines and master workmanship backed by over 13 years' auto tire-building experience are distinctive features of Goodyear Motorcycle Tires.

Yet with all this in their favor—with all their enormous saving of trouble and expense, those tires cost you no more than any other tire you might buy.

Built to perfectly fit the standard rim—five great tires for as many different road conditions.

Our book on motorcycle tires tells all. Better write for it today.

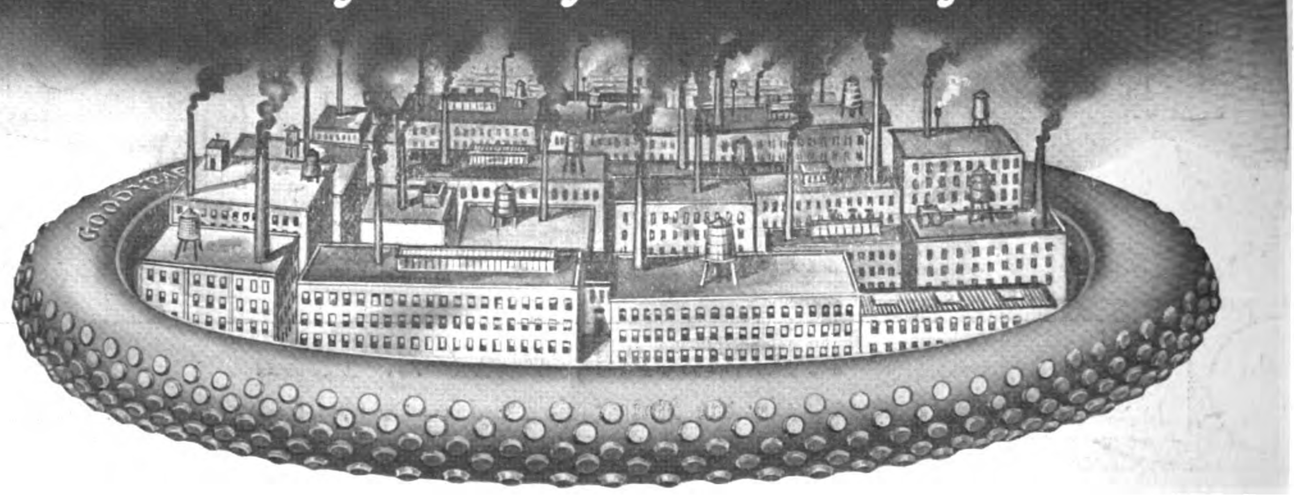
21 Motorcycle Manufacturers Corraled by Goodyear Motorcycle Tires



The Tires That Are Built On Tire Machines

Goodyears—the machine-built motorcycle tires—are sweeping everything before them. Their quality has already convinced 21 big and well known motorcycle manufacturers who have made contracts for Goodyear Tires. Riders everywhere are profiting by the enormous saving and superior service rendered by these most durable of all motorcycle tires.

GOODYEAR
AKRON, OHIO
Motorcycle Tires

Hold All World's Records

The unequaled popularity of Goodyear Motorcycle Tires is based upon actual **merit** that is saving motorcyclists an endless amount of tire trouble and expense.

For these tires have put an end to the many painful results of faulty tire construction. They are **the** perfect tires.

The toughest fabric, the livest rubber, and advanced tire-building methods conceived by the experts who have the Goodyear **No-Rim-Cut Auto Tires** to their credit—all these factors have combined to make Goodyear Motorcycle Tires what they are today—by countless tests the **most durable tires in existence.**

They are built on Goodyear Tire-Machines.

These machines do away with all the faults common to **hand-stretched** tires. With this machine all the stretching of the fabric is done by **weights.** These weights do not **vary.** Hence the **tension** of the various plies of fabric does not vary.

By Countless Tests The Most Durable Tires in Existence

As a result, the tire is a unit of uniform strength. No too-**tight** ply to break down under the incessant strain of service. No too-**loose** ply to shirk its duty. All plies share alike on the strain. And the tire lasts.

You can thank this machine for the marvelous tire perfection you now have.

Over 13 years auto tire building experience are back of Goodyear Motorcycle Tires. Yet they cost you no more than you would expect to pay for ordinary tires. Such durable tires as Goodyears would be an economy at any price, because they reduce tire troubles to a minimum.

All Goodyear Motorcycle Tires are built on the tire machines, and all road conditions are met by Goodyear Tires.

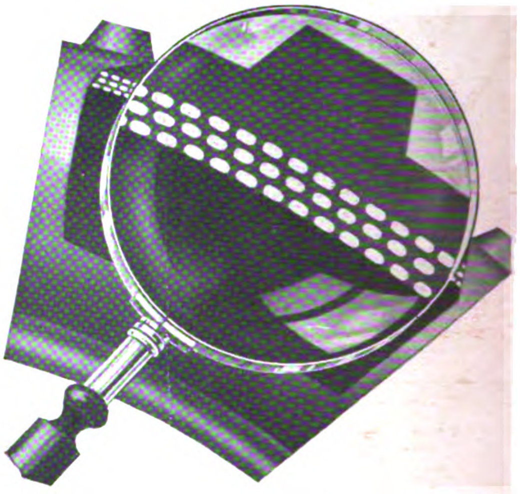
COLUMBUS GETS F. A. M. MEET (See page 113 of this issue)

The Popular Tires for Motorcycles



THE GOODYEAR WAY, THE PLIES LIE EVEN.

Never during tire history have Motorcycle tires forged to the front as rapidly as have Goodyears—the motorcycle tires built on **tire machines**.

These tires are sweeping everything before them. Their speediness has cinched every world's record; their dependability has gained the confidence of thousands of riders.

And practically all the motorcycle manufacturers of the country have now made contracts for them.

The number of manufacturers to contract for these **saving** tires has leaped in the month past from 21 up to 27.

By a wholesale reduction of tire repairing, these tires will save motorcyclists many thousands of dollars during the coming year.

By Countless Tests The Most Durable Tires in Existence

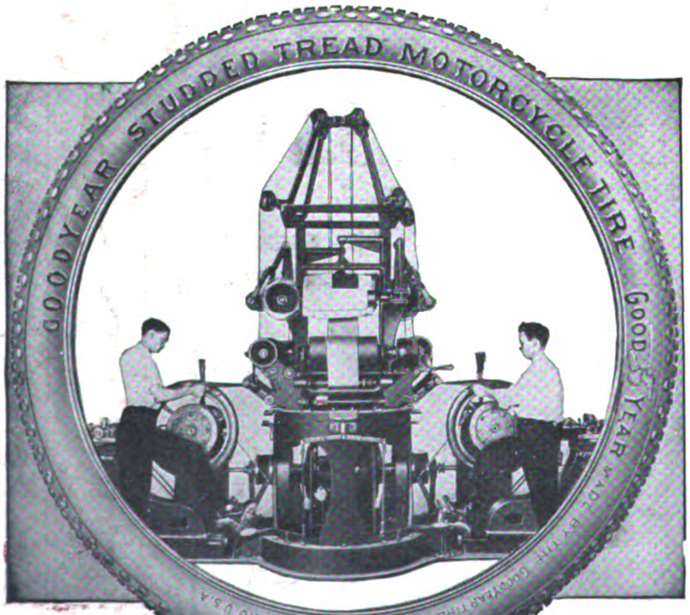
Above is shown a cross section of a Goodyear tire, enlarged; below, the Goodyear Tire Machine that renders **possible** the flaw-proof tire.

This machine stretches on every ply of fabric at the same tension. There can be no more **variation** in this tension than in the weights themselves that do the **stretching**.

GOODYEAR
AKRON, OHIO
Motorcycle Tires

Note the different layers of fabric, how smoothly they lie—how free from air spaces — wrinkling — irregularities. No too-**loose** plies to shirk duty. No too-tight plies **over-strained.** No chance for a break and a **blow-out**—the SURE RESULTS of such defects in **hand**-made tires.

Nothing but a single unit of unequaled strength. And a tire that outlasts all others.



THE GOODYEAR TIRE MACHINE.

Out of 13 Years' Experience No-Rim-Cut's Little "Brothers"

For over 13 years we have been studying the tire problem and from every angle. We have spent vast sums of money in sifting down principles, materials, methods, theories. Our aim was the ideal—the tire of perfect service. We focused on the problem, the brains and skill of the world's greatest tire experts.

One outcome is Goodyear No-Rim-Cut Auto Tire—a tire which leaped into astonishing popularity with a record of sales that in one year's time—1911—exceeded all others.

Another outcome is the Goodyear Motorcycle tire—offered you today at the price you'd expect to pay for any standard tire.

Let us tell you more about these tires. They hold more world's records than all other tires combined.

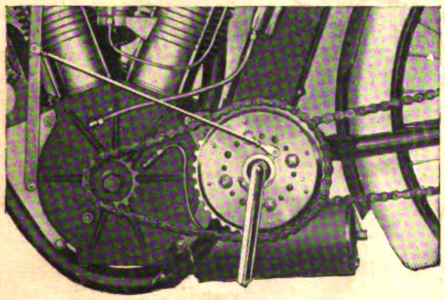
"The Motorcycle With A Thousand Speeds!"

The *Indian* Motocycle



This is how an enthusiastic rider describes his 1912 Indian

The Indian's "flexibility" of speed-control is mainly due to

The Variable Speed and Free Engine Clutch

This device, shown above, enables the Indian rider to regulate his speed from 4 to 60 miles an hour by merely moving the clutch lever the right degree. By this action the clutch can be "slipped" and the machine driven at the speed best suited to the moment.

In other words, the Variable Speed and Free Engine Clutch is the means by which the motor power is fed to the machine at the will of the rider.

This feature supplied without extra charge on all 1912 model Indians

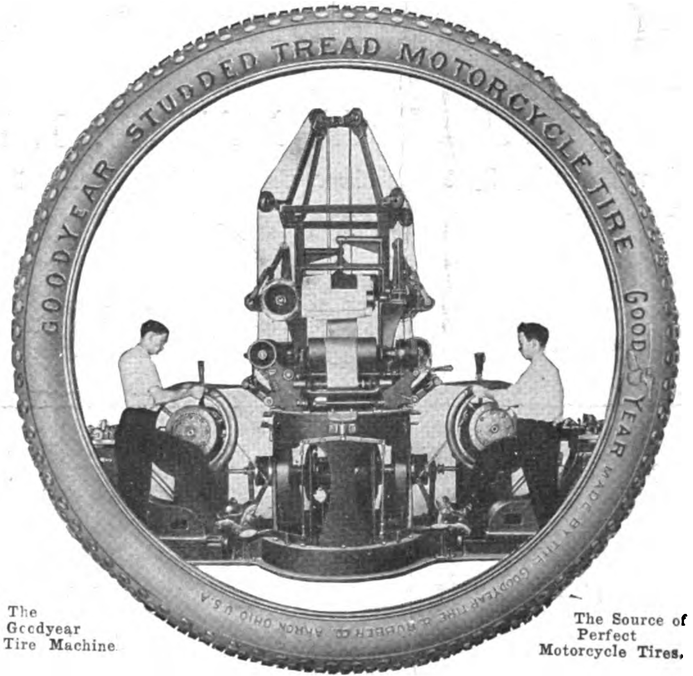
The Wisdom of Riding Goodyear Motorcycle Tires

Tire equipment used to be a matter of but little concern to the average motorcycle buyer. It was a mere 'detail,' left almost wholly to the agent or the manufacturer.

But costly experience has taught motorcyclists that this indifference does not pay. And today they are insisting on Goodyears.

The result is they are now **saving** what used to be **frittered away** in short-lived tires and **repair bills;** and they are now getting the service limit out of their machines due to the perfect and unequalled service rendered by the **tires.**

For countless tests have proved Goodyears to be the most durable tires in existence.



GOODYEAR STUDDED TREAD MOTORCYCLE TIRE
GOODYEAR

The Goodyear Tire Machine

The Source of Perfect Motorcycle Tires.

Perfections—Not Experimentations

Goodyear Motorcycle Tires are built on a foundation of over 13 years' automobile tire making experience.

During this period the brains and energy of the world's greatest tire experts have been directed toward the perfection of an auto tire that would wear longer, run easier and be more durable than any other. We achieved success in the Goodyear No-Rim-Cut—a tire that with sales of over 1,100,000 has leaped into amazing popularity.

No-Rim-Cuts "Little Brothers"

Goodyear Motorcycle Tires are "Little Brothers" to these No-Rim-Cuts.

They are built with the same painstaking care of detail and selection of material and by the same **scientific method**—on the **Goodyear Tire Machines.**

These machines do away with the faults common to **hand-stretched** tires. With this machine all the stretching of the fabric is done by **weights.** These weights do not vary. Hence the tension of the various plies of fabric does not vary.

As a result, the tire is a unit of uniform strength. No **too-tight** ply to break down under the incessant strain of service. No **too-loose** ply to shirk its duty. All plies share alike in the strain. And the tire lasts.

Hold Every World's Record

Goodyear Motorcycle Tires not only lead in wearing qualities and mileage, but they lead in **speed.** These tires hold every world's record, amateur and professional. They are ridden by practically all veteran riders and racers. Read "extra" below.

The Economical Tires

If you want the utmost of tire service you should insist on Goodyear. They cost you no more than you would expect to pay for ordinary tires. They are an economy at any price.

Six great tires—one for every road condition.

Tires That Make Motorcycling Popular

Goodyear Motorcycle Tires have simplified motorcycling.

They have incomparably reduced the danger of punctures and blowouts.

These Motorcycle Tires are built on Goodyear Tire Machines. This advanced and scientific method results from 13 years' tire experience, from which was evolved the Goodyear No-Rim-Cut Auto Tire.

Only by this method can the perfect—the FLAWLESS Tire be produced.

The Most Durable Tire in Existence

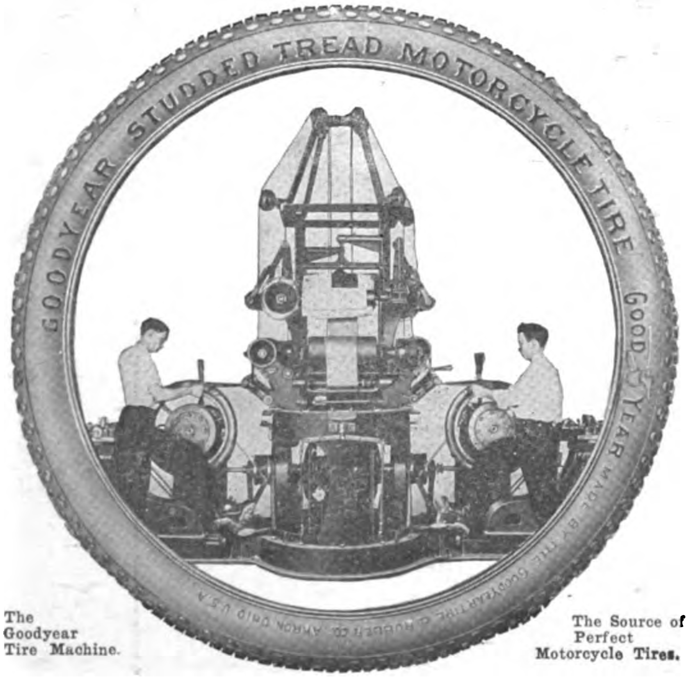
The durability and comparative freedom from tire troubles offered by Goodyear Tires have gone a long way in popularizing this great and exhilarating sport of motorcycling.

Countless tests have proved these machine-made Goodyears to be the most durable motorcycle tires in existence.

Our Durability Test

In these tests we place our tire on an endurance machine. We wear it down by hundreds of thousands of revolutions on a surface more TRYING than the average road. And we subject EVERY OTHER MAKE of tire to the same test.

If our tires are not more durable than others, these tests tell the truth.



The Goodyear Tire Machine.

The Source of Perfect Motorcycle Tires.

Thus no one can question the greater wearing qualities of Goodyear Motorcycle Tires.

Twenty-seven Motorcycle Manufacturers have contracted [illegible] these tires for 1912—still another convincing proof of Goody[illegible] superiority.

Goodyears Hold Every World's Speed Record

Goodyear Motorcycle Tires have proved as invincible on the race track as they have in endurance runs. Every world's record, amateur and professional, is held by Goodyears.

With such tires as these offered at the common-tire price, [illegible] seems folly to take chances. You are sure to come to this tire SOME DAY. Why not save time and money by coming NOW—TODAY!

Write today for instructive Book describing the 6 great

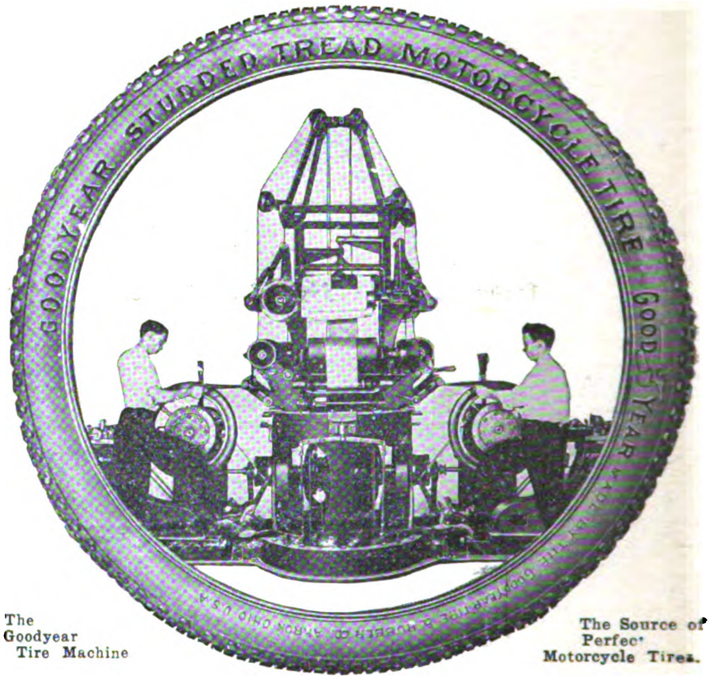
Machine Made Motorcycle Tires
Most Durable Tires in Existence

Thousands of motorcyclists are pinning their faith to Goodyear Motorcycle Tires. Other thousands will, just as fast as they find them out.

Twenty-seven motorcycle manufacturers are using "Goodyears." This means that approximately every other machine is now equipped with Goodyears.

Countless tests prove Goodyears to be the most durable tires in existence. They are the economical tires.



The Goodyear Tire Machine

The Source of Perfect Motorcycle Tires.

Made by Makers Of Goodyear No-Rim-Cuts

Motorcyclists can now have dependable tires—tires that as perfectly meet the demands of the motorcycle as the best-known auto tire meets the demand of the automobile.

Goodyear Motorcycle Tires are in reality small auto tires. They have over 13 years of auto-tire building experience back of them, and are made by the same experts who have perfected Goodyear NO-RIM-CUTS—today's most successful Auto Tires.

One of the big factors in Goodyear durability is the Goodyear Tire Machine, our own invention. This machine insures absolute uniformity of tension in stretching on the various plies of fabric. Every ply shares alike in the strain.

The result is a tire that stands hardest use and abuse. A tire that largely overcomes blow-outs—that is as puncture proof as any pneumatic can be made—that **lasts.**

There are a dozen other reasons why you should insist on Goodyear Tires. They are explained fully in our instructive book on Motorcycle Tires. Write for it today.

We Make All Kinds of Motorcycle Tire Accessories and Repair Outfits. Branches and Agencies in 103 Principal Cities

We're doing an enormous business on Eclipse Free Engine Clutches —but we can handle it and more

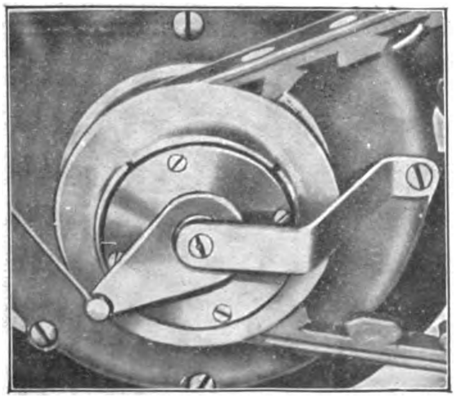
About four months ago, our chief engineer insisted that we increase our manufacturing facilities almost two-fold, in order to take care of the business, which, he asserted, would "snow us under" if we did not provide for it. We "pooh-poohed" the idea at that time. This was foolish. But we decided finally to do as he proposed. This was wise.

We always did have an abiding faith in our chief engineer's predictions, and this faith has been amply justified. The demand for the ECLIPSE FREE ENGINE CLUTCH is absolutely tremendous. But, as we said before, we can handle it—and more.

So we want to appeal to our dealers, as well as to those not yet "in the fold," to stock up as heavily as they possibly can on ECLIPSE FREE ENGINE CLUTCHES. You need have no fear of being "stuck" at the end of the season. You'll want more before that time.

Everybody knows what the ECLIPSE can do. How it eliminates the old style of running alongside the machine for half a block before the motor picks up, or pedalling frantically; how it enables the rider to negotiate the steepest hill, rough, sandy and muddy roads; how, when traffic riding, motor can be slowed down to a walk—and a hundred and one other features which have made the ECLIPSE as indispensable as a brake.

Another thing—we haven't had a complaint since we made the first ECLIPSE.



We hope to have your restock orders at once.

ECLIPSE MACHINE COMPANY
